

## Focused training and education for your customer base

**DLA Logistics Information Services offers complimentary training in different delivery methods for enterprise products and services.**

If your customers struggle with the status of their requisitions, or perhaps need a list of NSNs for a weapons system, Logistics Information Services can help. Our courses give the DLA customer a thorough understanding of several DLA products and services to allow them to do their job more efficiently. After the training, support is available for follow up questions or support.

The [Training Course Catalog](#) is a source of information that describes the courses of instruction offered. To better serve the DLA customer, the courses are delivered through Computer Based Training (CBT) on CD-ROM, Web Based Training (WBT), Video Tele-Conference (VTC) and Webinar. Under certain conditions, classes can be conducted at a custom-

er's work site, or a central/regional location and be designed to meet individual service or agency needs.

## WebFLIS transition and changes coming

**Both Restricted and Public WebFLIS are transitioning to comply with DOD regulations. Effective July 2014, Restricted WebFLIS will move to a new platform.**

It will continue to be accessible by Common Access Card (CAC), External Certificate Authority (ECA) or Federal Bridge. Pre-registration for the transitioned application will begin in May and instructions on how to pre-register will be provided.

Public WebFLIS will be shut down effective July 2014. Customers will access the same data by going to the Freedom of Information Act (FOIA) Reading Room or by using a search-

able product called Public Logistics Data on Portable Media (PUB LOG) FLIS Search. PUB LOG FLIS Search will be available July 2014.

The customers who have developed an automated process to query multiple items of supply in Public WebFLIS will not be able to develop this type of capability with PUB LOG FLIS Search. Only single queries up to 5 National Item Identification Numbers (NIINs) will be available. There will be 27 spaces available for single queries of multiple part numbers.
