

# Standards as Digital Data

COMPLEX PROBLEMS. PRACTICAL SOLUTIONS.

# Current State

---

- Standards (including standard parts descriptions) delivered as documents
  - PDFs, etc.
- Evolving away from documents
- New formats, differed technologies
- SDOs are at varying levels of technical readiness

# Standards as Digital Data Project

---

- Working on standard methods of part description
- Focused on consistency of description vs. technology platform
- Gathering metadata used by SDOs and OEMs to describe parts
  - Looking for commonality, best of breed
- Not looking for parts data, just the metadata used to describe parts
