Add to Section C-4, under ADDITIONAL REQUIREMENTS before "J. MAINTENANCE OF ACCEPTABLE PLANS":

SHIPPING AND COMINGLING OF LOTS:

a. **Formation of Lots:** In order to facilitate lot traceability at the assembler's plant, the following is required:

(1) Lots shall be shipped on a first produced (and accepted) first out basis. No product shall be older than three months at time of shipments, except when a product at the manufacturer's plant is pending disposition instructions and/or action (request for waiver, deviation, rework, reinspection, etc) and/or as authorized by the Contracting Officer.

(2) Each shipping case shall normally contain only one manufacturer's lot. If a partial shipping case remains at the end of the production day, dunnage shall be used to fill the remainder of the case and the outside of the case shall be marked indicating the number of pouches/items within. See the following sub-paragraph entitled "Mixed Code Lots" for exception.

(3) Each unit load shall contain only one production lot, as a rule. However, when a partial unit load remains at the end of a production day, the contractor is permitted to complete the unit load with another lot's material. In this instance a unit load may consist of two lots to facilitate shipment.

(4) When two lots are incorporated on one pallet, the lots shall be distinctly separated by the use of paper or other material suitable for this purpose. When this occurs, the contractor shall affix a unit load placard on two adjacent sides of the unit load, identifying each lot number on the load and the quantities of pouches/items within each lot.

(5) Assemblers shall assemble one (1) component lot at a time, i. e., one (1) component lot shall be used at each assembly line until it becomes necessary to place another lot of the same component on the assembly line to maintain assembly flow.

(6) Lot numbers and corresponding lot quantities shall be included on the shipping/receiving documentation. Thermostabilized items, water activity stabilized items and cheese spread shall also cite subcodes delivered.

b. **Mixed Code Lots:** In addition to the above, the following requirements shall apply to the shipment of "mixed code lots":

(1) A "mixed code lot" is defined as a lot consisting of small quantities of components representing different lots. These components usually accumulate as the result of sampling for the purposes of incubation, USDA standby samples or for similar reasons.

(2) Unit loads containing mixed code lots shall be identified by the use of unit load placards. The placards shall list all the lots and the quantities of pouches/items within each lot contained on the pallet. The placards shall be affixed on two adjacent sides of the unit load. Lot numbers and corresponding lot quantities shall also be included on the corresponding shipping/receiving documentation.
