

APPENDIX C-169

ZRY PREFERENCE TABLE

1. ORIGIN/SOURCE

This table depicts the type of catalog change code that will take precedence when more than one catalog change code has been received in different cycles but with the same effective date. An incompatible condition is indicated by the symbol N/A above the change code.

2. PURPOSE/USE

This table will be used as a guide to determine the type of catalog change code that took precedence in the computer. Thus, if information is available that two types of change codes took place on the item, this table will indicate the one change code that took precedence over the other.

3. REFERENCE

Chapter 48.

4. FORMAT

This table is formatted with the various types of change codes situated horizontally and vertically, with the change code that took precedence located in the body of the table.
