NBR	CMPNT	ITEM	PAGE	RATIONALE	DISCUSSION
1.		Gen		MILONAID	DISPOSITION
· · · · · · · · · · · · · · · · · · ·	A	Gen		The Army recommends the proposal be rewritten to address the immediate recommendations of the General Accounting Office (GAO) Final Report, GAO/NSIAD-88-11, "Army Inventory Management: Inventory and Physical Security Problems Continue," 9 Oct 87, (GAO Code 393175) OSD Case 7368 and the equivalent audits of the other services and DLA. This direction would facilitate implementation of the annual sample statistical inventory, revision to the policy affecting reversal of inventory adjustments, and the content of the Inventory Control Effectiveness (ICE) Report. As written, the thrust of the proposal is oriented in the long term and cannot realistically be implemented. Therefore, the Army recommends creation of two separate proposals (mid and long term goals).	Withdrawn. The JPING recognizes that phased implementation will be required. (Includes DLA comment.)
CANADA A ACCORD					. 4. 1
2.	AF	Gen	.*	The Air Force concurs with the subject proposal. Although numerous changes will have to be made to current data systems, these changes are in consonance with AFLC Inventory Management Policy and should assist in enhancing the accuracy of our wholesale inventory account.	Concur.
3.	A	Gen		AMCComi - Joemss G	Concur.
-	The state of the s	«*		The Defense Ammunition Directorate has no objections to the changes proposed in subject PMCL.	
4-	GSA	1	Encl 2 Pg 2 (12)	GSA has reviewed Proposed MILSTRAP Change Letter (PMCL) 114A, Revised Procedures for Physical Inventory Control and concurs with all proposed system changes except deleting the generation of DKA transactions.	This issue will be coordinated with the MILSTRAP Administrator
	THE REAL PROPERTY AND ADDRESS OF THE PROPERTY ADDRESS OF THE PROPERTY AND ADDRESS OF THE PROPERTY ADDRESS OF THE PROPERTY AND ADDRESS OF THE PROPERTY ADDRESS	And the Company of th		GSA does not agree with eliminating the Document Identifier Code (DKA) Physical Inventory Count. A DKA transaction does not generate any type of adjustment to our system, while providing us with an actual account of assets at the depot. We are then able to review each transaction in conjunction with our records prior to processing an increase/decrease inventory adjustment.	See attachment 1.
				If counts are generated to GSA by use of the D8/D9 adjustment transaction, this will automatically process a stock adjustment against our accountable record. This does not allow us to determine if GSA is actually the accountable service. Numerous count transactions have been received at GSA in the past from military services and were later identified as unauthorized returns and we could not assume accountability of material. Therefore, using the D8/D9 transactions for reporting counts would have an adverse impact on GSA's Financial Accounting System.	Encl 3

Attachment 2, Page 2

I-tem 1/0.

5. Disposition:

a. Controlled Inventory - Withdrawn.

b. Custodial Accountability - Delete and replace with Materiel Accountability.

c. Custodial Record - Rewrite. A record main tained by the storage activity reflecting standard catalog data, owner/ manager identification and on hand quantity by supply condition code for controlling assets in storage and aiding in inventory; will include 10t/serial number for ammunition.

d. Custodial Responsibility - Definition will be validated with the Joint Ordnance Commanders Monitions Supply Sub-Group (JocmsSG).

e. (Add) Physical Accountability - (Should be Materiel Accountability The act of safeguarding, answering for, and exercising proper quantitive and physical controls over DoD materiel, supplies, and equipment in the care and custody of DoD activities.

f. (Add Financial Accountability) - Withdrown.

6. Disposition: Concur. A. All material denials gor portial and complet quanties will be reported in the ICE Report as follows:

- (1) General Supplies: I, 2, 4, 5, 6, 7.
- (2) Ammunition: 1, 2, 5, 6, 7.

B. Delete line entry for Inline Denials/Bounceback in the ICE Report.

C. Navy will define internal management code 8 for possible inclusion/exclusion in the ICE Report.

ITEM	1		TEXT RE	COMMENT	2
NBR (TITEM	PAGE	RATIONALE	DISCUSSION
8-	A	GPN	7. B.	WILLUMANE	DISPOSITION
		1	pg 7-2	The Army nonconcurs in the proposed transfer of accountability from the inventory control points (ICPs) to the storage depots. The action may have serious impacts on Army materiel managers at the ICPs who may no longer identify, sudit, or control accountable balances for the materiel they manage. The Army made a decision to establish a check and balance system of accountable and responsible officers to ensure an accurate and auditable method for	See attachment 3.
		After retrieve months and proposed processing and an account.		inventory and adjustments to that inventory. This PMCL would eliminate that check and balance, by allowing the depot to both control and post accountable transactions without any ICP review, input, or challenge.	
		/. C -		The Army also has concerns about increased resource requirements in the current constrained resource environment. The Army has been unable to complete the inventory program for the past 2 years. This PMCL will require additional resources to accomplish the monthly reconciliation, the sample inventory, increased research requirements, and increased reporting requirements, but no additional resources are anticipated to support these	See attachment 3.
9.	A		7. B.3. 99 7-2	The Army nonconcurs with defining a line item as a National Stock Number (NSN) and Supply Condition Code. The purpose of the physical inventory program is to confirm the accuracy of records by NSN and differences in condition should have no impact on calculations of accuracy.	Withdrawn.
		(۵.۵، ۶		Nonconcur. As discussed in para le above, the term "supply condition code" should be deleted from this paragraph.	Withdrawn.
) L A			Revise to read: DoD materiel is managed and controlled by NSN, Storage Activity and supply condition code Type of Pack, and Date of Pack/Date of Expiration: therefore, inventories will be conducted and the results reported by NSN, Storage activity, supply condition code, type of pack and date of pack/date of expiration	Withdrawn. See item 6 (DLA). Add type of pack/date of expiration where applicable.

Attachment 3, Page 3

I tem No.

8. Disposition: In discussing the PMCL, it was determined that the Components, except Army, concurred with the principle of depot material accountability. To meet the objective of depot material accountability that was outlined in the Deputy Assistant Secretory of Defense (Logistics) letter of 17 Movember 1988, the JPIWG compromised and agreed to require the storage activity to initiate inter-Service/Agency D8A/D9A, Inventory Adjustment Increase Decrease (Physical Inventory) transactions for reporting physical inventory results to the owner/manager. The JPIWG also recognized that the Storage activity could continue to initiate intra-Service/Agency physical inventory count transactions for reporting physical inventory results to the owner/manager.

Disposition: The resource impact issue was discussed at length and it was determined that the PMCL was written to maximize our available resources. As proposed and ammended at the meeting, the location reconciliation process will not require additional resources. This is based on the requirement to perform location reconciliation monthly only on items that had any tronsaction activity affecting the record balance and the revised minimum research requirements. The quorterly ICE Report does not require an increase in workload because the data required is already used to compile the current ICE Report but is not reported. Additionally, the requirement to perform and report causative research results on all statistical sample adjustments has been deleted. Causative research will be performed IAW the revised minimum research require ments, but will not be reported. However, there is a one-time requirement to modify the report

Attachment 3, Page 3; Item No. 8 continued.

generation program and to program the annual statistical Sample requirements.

22	A	26(6)	C6a pg7-6	Nonconcur. Army cannot agree with canceling inventories in-process. This would not be conducive to an orderly inventory program and would be a waste of resources. The DODI 4140.35 requires the control of in-float transactions or use of a "shut-down inventory." Transactions such as disposal release/redistribution orders, rewarehousing, and cataloging changes are considered business as usual; therefore, must be accommodated by in-float controls. Insufficient resources/time are not valid reasons because they are foreseeable factors which should be considered during the scheduling process. The depot and ICP computers are capable of receiving inventory results whenever they are transmitted/received. Therefore, advance notices should not be necessary.	Withdrawn.

					Obs.a. (3). To obtain a statistically valid overall inventory performance figure for each Service/Agency, the following elements from each individual component sample inventory must be statistically combined: a. Sample size b. Population c. Actual estimated accuracy d. Confidence level (95%) A user-friendly PASCAL program that will statistically combine the above elements is available. It can be implemented either on a personal computer's hard disk drive or floppy disk drive. The logic for developing a similar program is provided below. The formulae were obtained from R.L. Scheeffer's "Elementery Survey Sampling". Formula for determining the overall estimated accuracy: $p = \frac{1}{N} \sum_{i=1}^{N} (N_i Q_i)$ where: $p = 0 \text{ overall estimated accuracy}$ $k = Number of substrata Formula for determining the variance of the overall estimated accuracy: V(p) = \frac{1}{N^2} \sum_{i=1}^{N} (N_i^2 \left(b_{i} / \frac{1}{V} \right)^2) where: N = 0 \text{ overall population} N = S \text{ Substratum estimated accuracy} k = Number of substrata Formula for determining the variance of the overall estimated accuracy: V(p) = \frac{1}{N^2} \sum_{i=1}^{N} (N_i^2 \left(b_{i} / \frac{1}{V} \right)^2) where: N = 0 \text{ overall population} D_{i} = S \text{ substratum bound on error of estimated accuracy} k = Number of substrata Formula for determining the error bound on the overall estimated accuracy: N = 0 \text{ overall population} N = 0 \text{ substratum bound on error of estimated accuracy} N = 0 \text{ overall population} N = 0 \text{ substratum bound on error of estimated accuracy} N = 0 \text{ overall population} N = 0 \text{ substratum bound on error of estimated accuracy} N = 0 \text{ overall population} N = 0 \text{ overall estimated accuracy} N = 0 \text{ overall estimated accuracy} N = 0 \text{ overall estimated accuracy} N = 0 $

DLSO will work with Navy to finalize the random statistical sample requirements, i.e., dollar accuracy, unit accuracy, and a statistical sample combine program.
