V. Agenda Items

1. 1514 is out for component review

a. 940R Version Update

- i. To resolve delays in customs clearance processing for Security Assistance (SA) customers, this change requires all Components to convert to the 4050 version of the 940R

- b. Originally a change for the Air Force only - however there were concerns from OSW that this will eventually be needed for all services.

2. 1515 was approved by OSW and published on DEDSO's website

- a. Related to Government Furnished Property Only – this will allow the 947I to send up to four changes on a product ID in one transaction.

3. Transaction Tracing ST02 Segment

- a. We are seeking Component input on standardizing the use of the EDI ST (Transaction Set Header) segment to establish a single, unique identifier for end-to-end transaction tracing, ensuring full audit completeness and accuracy. The ST02 is a 4-to-9 character alphanumeric control number assigned by the originator.
 - i. Are Components currently utilizing the ST segment in all transactions as a unique identifier for tracking?
 - ii. Can your legacy and modern systems successfully send and receive both the ST01 and ST02 elements?
- b. DAAS currently removes the ST segment during validation. DAAS is actively working to restore/retain this value for DLA-to-DLA transactions (specifically supporting WMS and EBS). During recent leadership discussions, the OSW emphasized the critical need for standardization. Implementing the ST segment across the board will aid in Audit Completeness and Accuracy standards.
