C20.3. BUILD REQUIREMENT. The assembly manager will use DLMS 650A Assembly Component Maintenance Structure to identify to the assembly activity, the specific medical assembly to be built. DLMS 650A may also be used by the assembly manager and assembly activity to enter corrections, provide missing data, or to send history data. This is the initial transaction establishing the requirement, and it identifies the end-item to be assembled, as initiated by a new requisition, or by changes to a previous one. The transaction provides the build directive number, unit assembly number, end-item nomenclature, cost estimate, total number of assemblies to be built, number of components in each, and DoD activity address code (DoDAAC) of the ship-to activity by providing the assembly activity sufficient information to start planning the end-item assembly.

C20.4. DUE-IN ESTABLISHMENT. The assembly manager will use the Defense Logistics Management Standards (DLMS) 527D, Due-in/Advance Receipt/Due Verification transaction to establish pre-positioned materiel receipt (PMR) information at the assembly activity. DLMS 527D PMR provides the procurement instrument identifier (PIID)\(^1\), contract line item number, national stock number (NSN), part number, build directive number, and other information necessary to ensure that the assembly activity receives the item in the correct build directive number. **When a PIID call/order number (F in 9th position) is used, provide the value in the PIID field.** The PMR also provides data to prepare the DLMS 527R Receipt transaction upon receipt of the materiel. Assembly managers and assembly activities will follow procedures in Chapter

---

\(^1\) **Use the legacy PIIN pending transition to the PIID. When using the PIIN, include the four-position call/order number. Refer to ADC 1161A.**
12. Due-in PMR, to establish advance receipt information and to maintain control of due-in materiel.

C20.5. RECEIPT PROCESSING. The assembly activity will report procurement and nonprocurement receipts to the assembly manager using DLMS 527R Receipt. This notifies the assembly manager that assembly components have been received for a specific build/assembly of the medical end item. Assembly activities must comply with Chapter 13 for maintaining control of receipts, to include the time standards for processing receipts, and for reporting discrepant/deficient receipts.

C20.6. COMPONENT PACKING CONFIRMATION. The assembly activity must use DLMS 650C, Component Packing Confirmation to notify the assembly manager that packing has been completed at the assembly activity.
C21. CHAPTER 21

STOCK READINESS PROGRAM

C21.1. GENERAL. This chapter provides general information supporting the DoD Stock Readiness (SR) Program. The authoritative source for detailed procedures pertaining to this program is DLAI 4145.4/AR 740-3/AFJMAN 23-231/NAVSUPINST 4400.100/MCO 4450.15, Stock Readiness. Under the SR Program, the Department of Defense requires uniform care of supplies, including the inspection and reporting of condition and serviceability of materiel, and the scheduling, controlling, and reporting of packaging and other cost reimbursable actions in support of the stock readiness program. This chapter provides an overview of the DLMS transactions that support the stock readiness program. Initial implementation is internal to DLA and its storage activities using Distribution Standard System (DSS). The DoD Components will phase in usage during modernization. All transactions must be processed through the Defense Automatic Addressing System (DAAS). Capability to support communication with non-DLMS owner/managers and non-DSS storage sites using email and web-based processing is authorized.1

C21.1.1. Stock Screening Request/Reply. The electronic stock screening request is used by materiel owners/manager to request storage activities to perform a screening action based upon specified criteria. The storage activity will provide an electronic response to the request with results of the screening or to report that materiel matching the screening criteria was not found. The DLMS 842C/I, Stock Screening Request and 842C/R Stock Screening Reply transactions replace the manual tracking and communication of screening requests and results where electronic capability is supported. This DLMS enhancement provides the DoD Components with the capability to use an electronic transmission method within their inventory management systems and improve tracking and management of screening actions.

C21.1.2. Storage Quality Control Report (SQCR)/Reply. The electronic SQCR is used by the storage activity to report storage quality issues requiring stock readiness work (e.g. repair, repackaging, testing, etc.) to the owner for approval. The DLMS 842S/Q, Storage Quality Control Report and 842S/R SQCR Reply transactions replace the SQCR, DD Form 1225, for information exchange under the DLMS. This DLMS enhancement provides the DoD Components with the capability to use an electronic transmission method within their inventory management systems and eliminates the exchange of hardcopy documents. This process includes both the storage activity report and the owner reply, including capability for an interim reply. The storage activity will provide a completion notice to inform the owner/manager that requested disposition has been completed.2

1 Refer to ADC 1045. Target implementation is 1Q FY 2017.
2 Ibid.
C21.2. APPLICABILITY AND SCOPE. This guidance is applicable to DoD Components owner/managers and storage activities. It applies to classes of supply that are managed by the DoD Components and stored at the storage activities, except Class V, Class VI, and Bulk Class III. Use is required for materiel stored operating under the DLA Distribution Standard System (DSS) and is supported by Component direction for other storage activities.

C21.3. STOCK SCREENING REQUEST/REPLY OVERVIEW. The materiel owner/manager will create a stock screening request to notify distribution activities to screen for potentially quality deficient/defective materiel. Triggers for stock screening actions include a Product Quality Deficiency Report (PQDR), Supply Discrepancy Report (SDR), the critical item management (CIM) process, or other notification of defect. The materiel owner/manager will identify materiel to be screened by NSN, part number/CAGE or other authorized form of materiel identification, and provide detailed instructions for the stock screening criteria (e.g., part numbers, vendor, markings, contract, etc.). Screening instructions may be defined by data elements within screening request or by narrative remarks. Materiel managers can create a stock screening request for all inspection types. Materiel owners may create a stock screening request only for Type Inspection Code P, which is used to request a special inspection at a single storage activity. Materiel owners will coordinate all other stock screening requests with the materiel manager.

C21.3.1. Under DLMS, the stock screening request is prepared using the DLMS 842C/I, Stock Screening Request. The owner/manager will create and transmit a separate transaction for each action and information copy recipient (i.e., 28 transactions prepared for 28 storage activities). The owner/manager will identify as the action recipient those storage activities known by the owner/manager to have the materiel in question in storage. An information copy will also be provided to all other storage activities that might possibly have the identified stock in storage. When directing a stock screening request to a DLA Distribution Center, all DLA Distribution Centers must be identified as either action or information copy recipients. This process will ensure that all applicable materiel is screened, to include, for example, DLA-managed materiel that is now owned by the DoD Components. The only exception to this is for Type Inspection Code P, which is used to request a special inspection at a single storage activity. For Type Inspection Code P, information copies will not be provided to other storage activities.

C21.3.2. The stock screening request will remain open in the owner/manager application until a reply is received from all the action activity replies indicating that the stock screening has been: completed with no defects found; completed with SQCR created; or completed with a “no stock” reply. An interim reply may be provided under exceptional circumstances with explanatory comments. When all action activity replies have been received, the request will be closed.

C21.3.3. Under DLMS, the stock screening reply is prepared using the DLMS 842C/R, Stock Screening Reply, to close the automated coordination of stock screening actions. Storage activities will send a stock screening reply transaction to the
owner/manager for storage activities identified for action. If no stock is stored at a particular storage activity, the storage activity will send a “no stock” reply where designated for action.

C21.3.4. If the storage activity finds stock within its location, the storage activity will automatically create an inspection workload using the data from the stock screening transaction. If the inspection type is critical safety item (CSI), the storage activity will automatically freeze the stock. When the inspection is complete, action storage activities will send a reply to the owner/manager with the results of the stock screening and close the screening request. When materiel is found matching the screening criteria, the reply will specify the quantity and condition of the materiel. Depending upon the results of the screening, the reply may indicate that an SQCR will follow.

C21.3.5. No screening reply is prepared by information stock screening request recipients. This is true regardless of the results of the screening. However, if defective materiel is located at a storage activity receiving only an information copy, an SQCR may be prepared for the materiel owner following guidance below.

C21.3.6. Detailed Requirements. The owner/manager preparing the stock screening request will assign a suspense date based on the inspection type. The owner/manager will specify screening criteria as appropriate. Only one procurement instrument identifier (PIID)\(^3\) (optionally including CLIN) or vendor may be specified per request. When a PIID call/order number (F in 9th position) is used, provide the value in the PIID field. The materiel owner/manager may specify up to five CAGE/part number or batch/lot number combinations associated with an NSN, (e.g., for CSI inspections). The owner/manager will assign an internal reference number for identification of the stock screening request, that may be used to associate the request with the triggering event. This reference number may be systemically assigned and will be perpetuated to the stock screening reply and any resulting SQCRs. A document number is required to ensure a DoD-wide unique control number. Both the stock screening reference number and the document number must be included in all transactions. In addition, when applicable, the Product Quality Deficiency Report (PQDR) report control number (RCN) or the SDR document number will be included to provide a cross reference when the screening action is triggered by a PQDR or SDR.

C21.3.6.1. Receipt Restriction. During Stock Screening Request creation, the owner/manager is required to identify if a receipt restriction is needed to identify and suspend materiel matching the screening criteria during receipt.\(^4\) If a receipt restriction is needed, the owner/manager will have the option to provide an expiration date of the receipt restriction. If an expiration date is not provided, the storage activity must be contacted to modify or delete receipt restrictions. Suspended materiel identified through

---

\(^3\) Use the legacy PIIN pending transition to the PIID. When using the PIIN, may include the four-position call/order number. Refer to ADC 1161A.

\(^4\) Refer to ADC 1045. Target implementation is 1Q FY 2017.
the receipt restriction will be reported to the owner via SDR receipt notification under Chapter 17 pending enhanced procedures to notify both the owner and the manager.\(^5\)

**C21.3.6.2. Inspection Types.**\(^6\) Stock screening requests may be prepared for the inspection types listed in Table C21.T1. Inspection type is identified within the screening request and reply by the Type Inspection Code. The suspense date for completion of the screening action by the storage activity will be based upon the type of inspection requested per Table C21.T1.

**C21.3.6.3.** The owner/manager request format performs four functions:

**C21.3.6.3.1. Stock Screening Request for Action.** This is the basic request sent to storage locations where materiel matching screening criteria is known to be held.

---

\(^5\) Ibid.
\(^6\) Ibid. Pending implementation, Code A (ASAM) will remain available for use.
C21.3.6.3.2. **Informational Stock Screening.** This is sent to storage locations where materiel matching screening criteria is not known to be held, but which may hold such materiel owned by other organizations.

C21.3.6.3.3. **Cancellation.** This cancels a previously transmitted request.

C21.3.6.3.4. **Additional Comments.** This identifies a follow-on separate transmission that provides clarification of the original request.

C21.3.7. The storage location reply format performs five functions:

C21.3.7.1. **No Stock Found.** Used by action storage activities to inform the owner/manager that no materiel matching the screening criteria was located.

C21.3.7.2. **Stock Screening Completed.** Used by action storage activities to inform the owner/manager that the stock screening action is complete and provide the results of the screening.

C21.3.7.3. **Interim Reply – Comments Provided.** This is used by exception when necessary to communicate with the owner/manager prior to completion of the screening action, e.g., to request additional time or clarification of the screening criteria.

C21.3.7.4. **Not Processed – Additional Comments Rejected.** This is used to provide notification that the additional comments from the owner/manager cannot be processed because the screening action has been completed and closed.

C21.3.7.5. **Cancellation.** This cancels a previously transmitted reply so that a corrected reply may be provided.

C21.4. **STORAGE QUALITY CONTROL REPORT PROCESS OVERVIEW.** The SQCR is submitted by storage activities when changes in the condition of stocks are discovered during stock surveillance, inspections/screening, or during distribution processes requiring stock inspection/screening. The SQCR is forwarded to the materiel owner to obtain disposition instructions, to include approval for reimbursable stock readiness work, e.g. repair, repackaging, testing, etc.

C21.4.1. **Triggers for preparation of the SQCR include:**

C21.4.1.1. Changes to an unserviceable condition when it is determined that there may be contractor liability for unserviceability under the terms of warranty clauses or unserviceability is due to a latent quality defect. Materiel in this condition must be transferred to SCC L (suspended litigation) pending negotiation with contractor(s) or receipt of disposition instructions.

C21.4.1.2. Transfers to SCC D (serviceable – test/Modification), E (unserviceable – limited restoration), F (unserviceable – repairable), G (unserviceable – incomplete), J (suspended in stock), and L (suspended – litigation).
C21.4.1.3. Changes in condition of dated, limited shelf-life materiel, medical, or subsistence items.

C21.4.1.4. The item in stock is unidentified or misidentified.

C21.4.2. Under DLMS, the SQCR is prepared by using the DLMS 842S/Q, SQCR. Where DLMS is not supported, the SQCR will be entered via WebSQCR\(^7\) to the materiel owner pending implementation of the DLMS or DAAS capability to convert transactions to email.

C21.4.3. Under DLMS, the SQCR response is prepared using the DLMS 842S/R, SQCR Reply. Where DLMS is not supported, the materiel owner will reply via WebSQCR.\(^8\)

C21.4.4. Upon completion of authorized reimbursable stock readiness work, the storage activity will provide a completion notice to the materiel owner.

C21.4.5. Detailed Requirements. The storage activity must prepare an SQCR for each item, reporting quantity by condition code. The storage location may also be provided (up to 20 locations may be identified per SQCR). Notification of SQCRs are forwarded to the appropriate materiel owner stock readiness (SR) coordinator for response by WebSQCR-generated email. The SQCR will use up to two discrepancy codes in conjunction with narrative remarks to identify the problem being reported. The SQCR will remain open in at the storage activity until disposition is received from the materiel owner. The SR coordinator reviews the item for excess stock position, cost of action in relation to the value of materiel, etc., and approves or disapproves the stock readiness action request. When disapproving the stock readiness request, the SR coordinator will concurrently provide disposition instructions for the materiel. When approving the SR request, the SR coordinator will reply to the storage activity for action. A disposition/status reply code is available in the DLMS format to communicate the reply to reduce reliance on narrative text and to facilitate automated tracking/trend analysis.

C21.4.6. Inspection Types. An SQCR may be prepared as a result of any of the following inspection types: SOF (including ASAM), special inspection, quality related (e.g., investigation resulting from a PQDR or SDR), SOU, CSI, visual (care of supplies in storage (COSIS)) shelf-life inspection (cyclic), or suspect counterfeit. The inspection type is identified within the SQCR and reply by the type inspection code.\(^9\)

---

\(^7\) Ibid. Pending implementation, SQCRs will be forwarded manually.

\(^8\) Refer to ADC 1045; target implementation is 1Q FY 2017. Pending implementation, the owner will return the SQCR form annotated with the applicable response information.

\(^9\) Refer to ADC 1045; target implementation is 1Q FY 2017. Pending implementation, the following codes will remain available for use:
- A ASAM
- O Outbound Shipment
- T Stock Readiness

</table>
C21.4.7. The storage activity will provide materiel identification by NSN manufacturer’s CAGE/part number, or other form of materiel identification authorized by the DLMS format. It will also support identification by description if needed. Data content is comparable to the DD Form 1225. When applicable, the report will include the stock screening request reference number as a cross-reference between the screening request and the resulting SQCR. The SQCR will use up to two discrepancy codes to identify the non-conformance situation. It provides the estimated/actual cost for repair or repackaging. Item unique identification (IUID) data requirements will be populated on the SQCR in accordance with DoD Supply Policy when NSNs have an IUID Indicator Y.\textsuperscript{10}

C21.4.7.1. The storage activity SQCR format performs five functions:

C21.4.7.1.1. Original Report (Transaction Set Purpose Code 00)
C21.4.7.1.2. Correction (Transaction Set Purpose Code CO)
C21.4.7.1.3. Cancellation (Transaction Set Purpose Code 01)
C21.4.7.1.4. Follow-up (Transaction Set Purpose Code 45)
C21.4.7.1.5. Reconsideration Request (Transaction Set Purpose Code 15). This is used when the storage activity does not agree with the requested action, allowing the storage activity an option to request further review by the owner.

C21.4.7.2. The SQCR reply format performs four functions:

C21.4.7.2.1. SQCR Reply. This is used by the materiel owner to provide disposition instructions on requested stock readiness work.

C21.4.7.2.2. SQCR Interim Reply. SQCR interim replies (Transaction Set Purpose Code 11) are used by the materiel owner to request additional information or clarification from the storage activity on requested stock readiness work. This requires inclusion of Reply Code 104 and clarifying narrative remarks. The submitting activity is encouraged to respond immediately, but no later than 31 days from issuance of the request. In a transactional response to the request for additional information, the submitting activity must provide a status update (Transaction Set Purpose Code SU) using Reply Code 321 to notify the action activity that the requested information is being provided or the submitter may provide clarification via off-line communication. No more than three request/response transactions per SQCR will be allowed. A fourth transmission of Reply Code 104 or 321 will result in systemic rejection and will require manual attention.

C21.4.7.2.3. Status Update. A status update (Transaction Set Purpose Code SU) is a form of reply prepared by the activity that submitted the SQCR. It is used by the storage activity to provide information to the materiel owner, often in response to

\textsuperscript{10} Refer to ADC 1045; target implementation is 1Q FY 2017.
an interim reply requesting additional information or clarification. Using the Status Update allows for two-way communication between the submitting activity and the owner.

C21.4.7.2.4. Completion Notice. A completion notice (Transaction Set Purpose Code CN), is used by the storage activity to communicate with the materiel owner that final action has been taken on the SQCR. This is equivalent to indicating the storage activity has closed the SQCR. The completion notice provides closing remarks and the date the closing action was completed.

C21.4.8. Missing Serial Number. In support of Financial Improvement and Audit Readiness (FIAR) compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Thus, capital equipment candidates located in storage without a serial number will not only require an SQCR, but will stop the equipment in the supply chain until a serial number is identified and the materiel is marked. Distribution centers must suspend the item in SCC J and prepare an SQCR. Cite the applicable discrepancy code and provide clarifying remarks with descriptive information for the item. If the storage activity is unable to determine the missing serial number from inventory records, the materiel owner is responsible for determining the appropriate serial number and providing disposition for marking the item (Reply Code 611).\textsuperscript{11}

C21.4.9. Quality Related Issues Identified as a Result of a Stock Screening Request Initiated by a Non-Owning Manager.\textsuperscript{12} When the DLA Distribution Center receives a Stock Screening Request, the inspection workload is automatically generated in DSS. The DLA storage activity must record the inspection results in DSS and forward to the item manager. If the inspection results identify non-manager owned suspected non-conforming materiel, the DLA storage activity will suspend the materiel and must prepare a SQCR to the item manager with an information copy to the non-managing owner. The SQCR will include Action Code 4A indicating the SQCR is for non-manager owned materiel. The Stock Screening Request number will be perpetuated on the SQCR. This process is primarily designed to allow the non-managing owner to obtain credit for non-conforming materiel that is located in a DLA storage activity and return that materiel to the manager’s ownership.

C21.4.9.1. Upon completion of the investigation, if the suspended materiel is found to be non-conforming, the manager will provide an interim SQCR response to the owner(s) using Reply Code 523 requesting original requisition numbers and asking the owner to create a ship-in-place MRO to the distribution center(s) where the materiel is located using the manager-provided document number. Concurrent with the SQCR interim reply, the manager will provide a prepositioned materiel receipt (PMR) to the applicable distribution center(s) identifying the manager as the activity to which the receipt transferring ownership will be directed. If the owner no longer knows the specific

\textsuperscript{11} Refer to ADC 1198A.
\textsuperscript{12} Refer to ADC 1084.
document number under which the materiel was requisitioned, a constructed document number may be used. When a constructed document number is provided, Standard Line of Accounting (SLOA)/Accounting Classification data content may be populated manually or referentially through the authoritative data source SFIS Fund Code to Fund Account Conversion Table maintained at DAAS.

C21.4.9.2. **Standard Line of Accounting/Accounting Classification Data Elements.** Under DLMS, logistics transactions with financial implications are required to carry discrete SLOA/Accounting Classification data elements. This requirement applies to the SQCR Reply where the original SLOA/Accounting Classification data was not previously provided as indicated by the use of a constructed document number by the non-manager owner requesting credit for suspended stock. Pending full implementation of SLOA/Accounting Classification across DoD logistics processes, WebSQCR will be responsible for populating the data elements available from the Standard Financial Information Structure (SFIS) Fund Code to Fund Account Conversion Table. The remaining SLOA/Accounting data elements identified in the SQCR Reply transaction will not be available for initial implementation of WebSQCR. When a constructed document number is provided in the owner’s SQCR reply, WebSQCR will match to the table to extract the following data elements based upon Service/Agency Code (in the first position of the document number DoDAAC representing the credit-to DoDAAC) and Fund Code:

- Department Regular Code
- Department Transfer Code
- Main Account Code
- Sub-Account Code
- Treasury Sub Class
- Sub-Allocation
- Availability Type Code
- Beginning Period of Availability/Program Year. If Availability Type Code X (no year funds) is identified in the SFIS Fund Code to Fund Account Conversion Table for the line of accounting, then the date provided will be interpreted as the Program Year and the Ending Period of Available will not apply.
- Ending Period of Availability. Not applicable if Availability Type Code X is identified (refer to Beginning Period of Availability above)

C21.4.9.3. In order to transfer ownership of the suspended materiel to the manager, the owner will provide a DLMS 940R Materiel Release Order (MRO) to the distribution center. The MRO must be formatted for shipment-in-place and should reflect the full quantity identified on the SQCR. Upon processing of the associated receipt, the presence of the SQCR control number in the PMR will trigger the generation of a correction to the SQCR data by the distribution center. The SQCR correction will
cite Action Code 4B and indicate the quantity transferred to ownership of the manager. Upon successful processing of the receipt for the nonconforming materiel, the manager will provide credit to the owner under MILSBILLS procedures.

C21.4.9.4. The manager will provide disposition for all suspended materiel via SQCR reply. Additionally, the manager will provide a DLMS 940R Materiel Release to the storage activity to trigger shipment or disposal action as required. Upon completion of the actions identified by the manager’s disposition instructions, the DLA Distribution Center(s) will provide a completion notice to the item manager with an information copy to the original owner.

C21.4.10.1. Owners/managers and storage activities that are not DLMS-capable will prepare the Stock Screening Request, SQCR, or associated reply using the DAAS-maintained WebSS or WebSQCR module within DoD WebSDR. The WebSS and WebSQCR will convert Web-entered Stock Screening Request, SQCR, and associated replies to DLMS transactions when directed to DLMS-capable Service/Agency systems. Activities lacking interface connectivity will receive email notification. Upon receipt of the email notification, authorized users must access the Web to obtain applicable information. Users who fail to access the Web within seven (7) calendar days of the notification email will receive a systemically-generated reminder email.

C21.4.10.2. Stock Readiness coordinators relying on WebSS and WebSQCR for information exchange must provide email addresses associated with each applicable non-DLMS owner/manager and storage activity Routing Identifier Code (RIC).

C21.4.10.3. WebSS and WebSQCR will block Web input and reject transactions associated with owner/manager or storage activity RICs that are not capable of receiving DLMS transactions or not registered for automated email notification.

C21.4.10.4. WebSS and WebSQCR will validate Web input and transactions for correct format and valid data content. Invalid Web input will be blocked and transactions rejected citing the applicable reply code.

C21.4.11. DAAS Query Capability. 13 WebSS and WebSQCR will include capability to query to provide historical information by: NSN, CAGE/part number, control numbers, PIID or CAGE, date open, date closed, storage activity, and owner/manager. The query function may be used to monitor storage activity responses to requested stock screening actions, displaying which activities have responded and which are outstanding. The stock screening request query will support drill down capability to review the associated SQCRs.

---

13 Query capability not currently available pending full implementation of ADC 240 and ADC 1045 supporting Web-enhanced Stock Screening Requests and SQCRs.
C22. CHAPTER 22

ASSET STATUS REPORTING

C22.1. GENERAL

C22.1.1. Purpose. This chapter prescribes asset status reporting procedures for the interchange of asset status information between the DoD Component wholesale and below wholesale distribution systems and owners/managers.

C22.1.2. Transactions. This chapter addresses the procedures applicable to the asset status reporting function using the DLMS 846I. The asset status reporting function is identified by the DLMS 846I Accredited Standards Committee (ASC) X12 beginning segment (1/BIA02/020) report type codes. Its DLSS (MILSTRAP) legacy counterpart identified by document identifier codes (DIC), is included for information purposes to allow for processing in a mixed DLMS/DLSS environment. Other formats such as Extensible Markup Language (XML) are also available See the Defense Logistics Management Standards Website for available formats on the DLMS IC page.

C22.1.2.1. DLMS 846I, Asset Status Inquiry/Report is used for the following transaction functions identified by the beginning segment Report Type Code:

C22.1.2.1.1. Request for Asset Status Report is identified by Report Type Code TI–Asset Status Inquiry. This transaction provides MILSTRAP legacy DIC DZE functionality, which was sent from an inventory control point (ICP) to Military Service designated central points to request reporting from bases, posts, camps and stations.

C22.1.2.1.2. Asset Status Report is identified by Report Type Code TJ–Asset Status Advice. This transaction provides MILSTRAP legacy DIC DZA and DZF functionality.

C22.2. IN STORAGE ASSETS

C22.2.1. Assets Within the Wholesale Distribution System

C22.2.1.1. For assets within the wholesale distribution system, Asset Status Report Transactions may be used between DoD Components by mutual agreement. Send Asset Status Report Transactions (legacy DIC DZA) between DoD Components based on mutually agreed schedules.

C22.2.1.2. Asset status transactions may be used between a Component ICP and a DLA storage activity by mutual agreement.

C22.2.1.3. Under MILSTRAP, due to the number of record positions in DIC DZA devoted to entries prescribed by the DoD Components for use within Component
distribution systems, each Component is authorized to procure a printed format suited to its needs. DoD Components must identify to Defense Logistics Management Standards any Component-prescribed data in DIC DZA that will be required in the Component’s modernized system using DLMS. This is necessary so that Defense Logistics Management Standards can incorporate the Component data in the DLMS 846I Asset Status Report Transaction.

C22.2.2. **Assets Below the Wholesale Distribution System.** Assets below the wholesale distribution system will be reported to the owner/manager when requested by the owner/manager.

C22.2.2.1. Use the Request for Asset Status Report Transaction with the appropriate asset status code to request, change, or discontinue asset status reporting from the below wholesale distribution system.

C22.2.2.2. For the total asset visibility program, use the Request for Asset Status Report Transaction to request the report of assets above the requisitioning objective using **DLMS 180M, Materiel Returns Reporting** *(Legacy Military Standard Requisitioning and Issue Procedures (MILSTRIP) DIC FTE)*. Use with the asset visibility program is based on agreement of the involved DoD Components.

C22.2.2.3. Transmit Request for Asset Status Report Transactions to central points designated by DoD Components. Each DoD Component designated activity will be responsible for notifying its reporting activities of the reporting requirements shown in the Request for Asset Status Report Transactions received from the other Components. The Component activities designated to receive the requests are:

C22.2.2.4. Always show dates for commencement of reporting (Asset Status Reporting Codes C and D) and change of reporting (Reporting Codes H and J) in the Request for Asset Status Report Transaction as the first day of a month. In these instances, send the request transaction not later than 60 calendar days before the commencement date.

C22.2.2.5. Provision is made for requesting earlier commencement of reporting by use of Asset Status Reporting Code M. In this instance, the DoD Components’ central points will ensure that reporting commences as soon as possible after receipt of the request.

C22.2.2.6. When a one-time asset status report is required on an expedited basis, the Request for Asset Status Report Transaction will contain Asset Status Reporting Code Z and the date the report is required. The DoD Component central point or the reporting activity in receipt of the request will take no further action if the date the report is required is already past.

C22.2.2.7. When a one-time asset status report is required for the asset visibility/redistribution program, the Request for Asset Status Report Transaction will contain Reporting Code N and the date the report is required. Use with the asset visibility program is based on agreement of the involved DoD Components.

C22.2.2.8. Use the Request for Asset Status Report Transaction to request termination of reporting by citing Asset Reporting Code E. Show dates for termination of reporting in the transaction as the last day of the month. Send the Request for Asset Status Report Transaction termination request not later than 60 calendar days prior to the termination date entered in the transaction.

C22.2.2.9. Activities below the distribution system (base, post, camp, or station) will use Asset Status Report Transactions to report assets to the requesting ICP. Report on hand balances by each separate supply condition of held materiel. Under the constraints of the MILSTRAP fixed length format, the DIC DZF Asset Status Report Transaction is designed to provide for use of multiple transactions when either or both of the following apply:

C22.2.2.9.1. More than two supply conditions of materiel are held.

C22.2.2.9.2. Requisitioning objective, due-in, or reserved quantities exceed 999,999.

C22.2.2.10. The asset status reporting code cited in the Asset Status Report Transaction will indicate the type of reporting being accomplished.

C22.3. INTRA-COMPONENT USE

C22.3.1 Intra-Army Use. Army also uses the DLMS Asset Status Report Transaction on an intra-Army basis for Army Single Stock Fund Asset Balance Reporting. This use serves a dual purpose:
C22.3.1.1  When used to report on the single stock fund to the national level systems, the Asset Status Report Transaction represents a report to update the requisitioning objective, reorder point, and retention limit.

C22.3.1.2.  When used during a logistics reassignment outside the Army by the losing item manager, the Asset Status Report Transaction informs the Army manager for Non-Army Managed Items (NAMI) of the requisitioning objective and safety level to be set in their systems to be able to monitor and maintain the single stock fund stocking levels.

C22.3.2.  Intra-Navy Use.  Navy also uses the DLMS 846I Asset Status Report Transaction on an intra-Navy basis for reporting allowance-based assets that are below the whole distribution system to the ICP.  This allows the ICP to determine when the activity requires more materiel due to being below its allowance.
C23. CHAPTER 23

CATALOG DATA SUPPORT

C23.1. GENERAL

C23.1.1. Purpose. This chapter provides general information regarding procedures and data exchange requirements for the communication of the DLMS Catalog Data Support.

C23.1.2. Transactions. This chapter addresses procedures applicable to the following Accredited Standards Committee (ASC) X12 transaction functions identified by the transaction set number and the beginning segment Transaction Purpose Code. There are no legacy 80 record position (MILS) equivalent transactions. See the Defense Logistics Management Standards Website for available DLMS Supplement formats on the DLMS IC page.

C23.1.2.1. DLMS 832N, Catalog Data Support, is used for the following transaction functions identified by the beginning segment Catalog Purpose Code (1/BCT01/0200):

C23.1.2.1.1. CP – Use to identify catalog data support communicated between DLA Disposition Services, DLA Disposition Services Field Offices, and Distribution Depots supporting Reutilization Business Integration (RBI). These catalog data support transactions identified by BCT01=CP are referred to in this document as DLA Disposition Services Catalog Data Support. See Chapter 16 for detailed procedures associated with this type of catalog data support.

C23.1.2.1.2. RC – Use to identify catalog data support communicated between DLA and maintenance/industrial activities (IAs) authorized by DLA IA support agreement supporting Supply, Storage, and Distribution (SS&D) for the Navy and Retail Storage and Distribution Interface (SDI) for the Marine Corps. These catalog data support transactions are referred to as IA Catalog Data Support.

C23.1.2.1.3. SC – Use to identify catalog data support communicated between DLA Disposition Services and DLA Disposition Services Field Offices supporting Reutilization Business Integration (RBI). These catalog data support transactions are referred to as Sales Contract Catalog Data Support. Note: Only the following detail level functional data is applicable to this process: Generic Name Description, Sales Contract Number, Sales Contract Line Item Number, Remaining Authorized Quantity, and Unit of Measure. See Chapter 16 for detailed procedures associated with this type of catalog data support.

C23.1.2.2. Reserved. (This is a placeholder for other Catalog Data Support transactions that will be identified by different Transaction Purpose Codes.)
C23.2. INDUSTRIAL ACTIVITY CATALOG DATA SUPPORT

C23.2.1. Navy Background. As a result of the 2005 Base Realignment and Closure (BRAC) decision, retail supply, storage and distribution functions and associated infrastructure supporting the Navy industrial/maintenance sites transferred to DLA. DLA is the material provider for all consumable items in support of the maintenance mission at these sites. To effectively manage materiel at these sites, DLA will maintain materiel master records identifying the materiel identification and associated characteristics for all DLA managed, non-DLA managed, and local stock number materials that are used by the Navy. Prior to the BRAC decision, Enterprise Business System (EBS) maintained materiel master records for all DLA managed items and some non-DLA Managed items; with this new requirement the DLA EBS will establish materiel master records for any non-DLA managed item requested by the Navy Fleet Readiness Centers (FRCs) and the Naval Shipyards (NSYs).

C23.2.2. Marine Corps Background. As a result of the 2005 BRAC decision, operating materiel and supplies storage and distribution functions and associated infrastructure supporting the Marine Corps Maintenance Centers (MCMC) industrial/maintenance sites transferred to DLA. DLA is the storage and distribution provider for most consumable items in support of the maintenance mission at these sites. To effectively manage materials at these sites, DLA Distribution Standard System (DSS) will maintain item data records containing the materiel identification and associated characteristics for all materiel used by the MCMC. Prior to the BRAC decision, DSS maintained item data records for all DLA managed items and most non-DLA-managed items; with this new requirement the DLA DSS established item data records for any item assigned a local stock number (LSN) by the MCMC.

C23.2.3. The catalog data exchange supports the following functions. Specific implementation varies by Service:

C23.2.3.1. Communication of Federal Logistics Information System (FLIS) and user unique data associated information for newly cataloged national stock number (NSN) materiel.

C23.2.3.2. Identification of non-NSN materiel by an LSN so that the LSN may be recognized for requisitioning, storage, and receipt processing.

C23.2.3.3. Communication of FLIS Catalog Change Notices to the Navy NSY and FRC sites. DLA will send change notices whenever an active materiel master record is updated in the form of DLMS 832N IA Catalog Data Support transactions. EBS will send notices for changes resulting from manual/programmatic updates (within EBS) and from systemic updates (from FLIS). FLIS changes include communication of replacement, superseded, and discontinued NSNs.

C23.2.3.4. Identification of NSN materiel by an LSN so that the LSN may be used for storage and distribution of materiel identified at the unit of use (that is, a unit of measure that is less than the FLIS unit of issue).
C23.2.3.5. Identification of MCMC LSNs to a unit of use LSN.

C23.2.3.6. Communication of a Service coordinated/approved substitute/interchangeable item as a result of DLA or other Service provided supply status to associate the substitute NSN with the primary NSN.

C23.2.3.7. Shipyard prepared queries to identify available DLA EBS materiel master matches on NSN, LSN, or CAGE/part number. This action may trigger an EBS query against FLIS. EBS responses will be returned in an DLMS 832N IA Catalog Data Support transaction.

C23.3. PROCEDURES – NAVY INTERFACE

C23.3.1. Upon data conversion, all the current LSNs and non-DLA managed materiel masters from the FRC and NSY systems will migrate to EBS. DLA managed items will be identified and materiel master record will extended to each site as applicable. This will provide a base line for the materiel currently used at the BRAC sites.

C23.3.2. The catalog data will be applicable to new item inductions, FLIS change notices for DLA items and non-DLA managed items, as well as Navy-assigned LSNs. Manual updates for user unique data elements will be included in the process. Since DLA will purchase, store, and sell these items to industrial activities, DLA will have this data resident in EBS and will provide visibility and updates to the Navy systems via the DLMS 832N IA Catalog Data Support transaction.

C23.3.3. EBS will also maintain site specific materiel master records for Depot Level Repairable, Nuclear Support Consumables, or Program Owned Material (even cognizance (COG)) items to provide updates pertaining to FLIS data or user unique data elements to the FRC or NSY sites. DLMS 832N IA Catalog Data Support change transactions will be provided to applicable sites based on FLIS updates or end user changes to user defined data elements for these items.

C23.3.4. Web-based Query. When new items are needed by any of these sites, the capability is required to create new materiel masters or update user defined data elements to existing materiel masters directly into EBS through a user unique screen. This application within EBS will prompt users for mandatory fields and user defined fields for new entries, that may be optional depending upon the site (FRC/NSY). The screen will allow the user to query the current EBS data base and determine if an NSN or LSN already exists within EBS.

C23.3.5. If an existing record is found, and EBS does not currently reflect the materiel master is extended to the user site, based on user response, the materiel will be extended to the user site and an DLMS 832N IA Catalog Data Support transaction will be sent to user site and identified as an ‘ADD’ record.

C23.3.6. When no record is found within EBS, the system will query the FLIS reference master data environment (RMDE) to identify any associated NSN. Once the
A materiel master is created in EBS, an DLMS 832N IA Catalog Data Support transaction will be sent to the applicable FRC or NSY site. If found, the user will have the option to build a materiel master record created with FLIS data and any mandatory user unique data elements in EBS based on user response/input. EBS will then format a DLMS 832N IA Catalog Data Support transaction. This DLMS 832N IA Catalog Data Support transaction will be identified as an ‘ADD’ and will be sent to the appropriate NSY/FRC site via DAAS.

C23.3.7. If no NSN is found in FLIS, the user will have the option to add a materiel master identified by an EBS assigned LSN. EBS has logic that defaults specific mandatory FLIS data elements, and prompts the user for those for which a default cannot be determined. EBS will then format an DLMS 832N IA Catalog Data Support transaction identified as an “ADD” and send it to the site identified by the user and also furnish a copy to the instance of DSS at the same site.

C23.3.8. Materiel Identification. Cataloging data will be categorized by two methods of materiel identification

C23.3.8.1. Items identified by NSN. For these, DLA will relay FLIS catalog information in the absence of a Navy-FLIS interface. DLA will also incorporate additional DLA/Navy unique content.

C23.3.8.2. Items identified by LSN. There will be four configurations of LSN materiel numbers within EBS.

C23.3.8.2.1. Items Cataloged with an NSN but issued to the Navy by Unit of Use. EBS will assign a unique LSN using the existing data associated with the original NSN. All transactions for this item will be recorded within EBS under the LSN. There will be a cross-reference on the materiel master from the LSN to the NSN, and on the NSN to the LSN. LSNs in this category will use the following construct: 5975-U0-000-1234.

C23.3.8.2.2. Items Identified within a Navy System (e.g., Materiel Access Technology (MAT) or Manufacturing Resource Planning II (MRP II)) by LSN. These LSNs will be migrated into EBS. EBS will continue to process transactions against these numbers and modification will be done through user unique screen application by end users. Updates will be sent to applicable sites based on these updates. LSNs in this category will use the following construct: 5315-L*-00-9876.

C23.3.8.2.3. Items with no current LSN or NSN assigned to the Cage and Part Number combination within EBS or FLIS. EBS will allow end users to create a materiel master for these items via the user unique screen application and systemically assign an LSN. Updates will be sent to applicable sites based on the initial creation and any subsequent updates based on end user input. These LSNs will be established based on Federal supply classification (FSC) with a serial number range of NL00000000001 through NL99999999999.
C23.3.8.2.4. Hazardous Materiel under Hazardous Material Management System (HMMS) Control System (RHICS). For items for which a materiel master is needed to identify hazardous materiel under HMMS, an LSN identifying the HMMS cataloged or created “LLN” numbers will be used if no NSN is assigned. LSNs in this category will use the following construct: 6810-LL-N00-0001.

C23.3.8.2.4.1. EBS will determine if there is an existing materiel master record of the RHICS materiel beginning with LLN (first 3 digits). When there is an existing materiel master, user will be prompted to enter user unique data elements to extend MMR and EBS will return a DLMS 832N Catalog Data Support transaction identified as an “ADD” record containing all agreed to data elements to build a record in MAT and pass a copy to DSS.

C23.3.8.2.4.2. If no materiel master exists for the HMMS hazardous materiel, the user will be prompted for mandatory fields and user defined fields for new entries using the HMMS data base elements. The key is that only one HMMS LLN number will be used for like material, thereby having only one LLN number per hazardous materiel for all users. When the query is for an LLN, the DLMS 832N Catalog Data Support transaction will be an output transaction to MAT and a copy will be furnished to the applicable DSS site.

C23.3.8.2.5. Navy Nuclear Material numbers will be created in EBS, via the user unique screen application and the user will assign an "LLR" material number. These materials are unique and will only have one per material. LSNs in this category will use the following construct: LL-R**-****.

C23.3.8.3. New Records. Upon creation of new materiel identification content applicable to this process, EBS will build the materiel master, apply the catalog data to the identified sites (extend to the user sites), and format an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code AA, New Catalog Record Added, that will be sent to the appropriate NSY/FRC site via Defense Automatic Addressing System (DAAS). EBS will provide a copy of DLMS 832N IA Catalog Data Support transactions for items identified as LSNs to the applicable DSS site.

C23.3.8.4. Modified Records. When the user entry modifies an existing record via the user unique screen application, the system will prompt the user to save changes. This will trigger EBS to generate a DLMS 832N Catalog Data Support transaction citing Catalog Purpose Code CC, Catalog Record Changed. This record will contain all applicable data elements to build a record within Navy systems (allowing overlay, vice transmission of only the modified content). If the change is to an existing LSN record previously provided to a DSS site, a copy of the change will also be furnished. The system receiving a transaction identified by Catalog Purpose Code CC that is unmatched to an existing record in the database will accept the transaction and process it as a new record.¹

¹ Refer to ADC 1176. Staggered implementation applies.
C23.3.8.5. **Transaction Query.** NSY sites will have the additional capability to inquire EBS materiel master records using an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code QU, Site Query for Catalog Record, to determine if NSN or LSN or CAGE Code and Part Number combination exists in the EBS data base when there is no existing record on the internal table within the NSY Navy system.

C23.3.8.5.1. If there is an existing materiel master within EBS for the inquired NSN, EBS will extend the materiel master to the inquiry site and return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code AA, New Catalog Record Added, containing all mandatory data elements to build a record in the MAT system.

C23.3.8.5.2. If there is no materiel master within EBS for the inquired NSN, EBS will inquire FLIS. When the response is positive, EBS will build a materiel master and return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code AA, New Catalog Record Added, containing all mandatory data elements to build a record in MAT system.

C23.3.8.5.3. If the response from FLIS for the inquired NSN is negative EBS will return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code NN, No record exists for NSN query. MAT will output for manual review.

C23.3.8.5.4. If there is an existing material master within EBS for the inquired LSN, EBS will extend the materiel master to the inquiry site and return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code AA, New Catalog Record Added, containing all mandatory data elements to build a record in MAT system.

C23.3.8.5.5. If the response for the inquired LSN is negative EBS will return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code NL, No record exits for LSN query. MAT will output for manual review. The user may at this point enter data into the EBS user unique entry screen indicating the need to create a record.

C23.3.8.5.6. If there is an existing materiel master within EBS for the inquired ‘Part Number/CAGE’, EBS will extend the materiel master to the inquiry site and return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code AA, New Catalog Record Added, containing all mandatory data elements to build a record in MAT system.

C23.3.8.5.7. If there is NO existing materiel master within EBS for the inquired ‘part number/CAGE’, EBS will invoke a query to FLIS.

C23.3.8.5.7.1 When the FLIS response is positive and only one NSN is returned, EBS will build the materiel master to the inquiry site and return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code AA, New
Catalog Record Added, containing all mandatory data elements to build a record in the MAT system.

C23.3.8.5.7.2. When the FLIS response is positive and multiple NSNs are returned, EBS will return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code MN: Multiple NSNs for Part Number/CAGE. MAT will output record for manual review. The user will determine which NSN is applicable for their use and will have the option to inquiry against the specific NSN or build the record through the EBS on-line input.

C23.3.8.5.7.3. When the FLIS response is negative, EBS will return an DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code NP, No NSN or LSN Found for Part Number/CAGE, to MAT for manual review.

C23.3.9 Special Processing at DAAS for Transactions to FRCs. In order to compensate for data mapping inconsistencies between DLA and the FRC, DAAS is required to apply special mapping logic to 832N transactions addressed to FRC locations. These transactions will be reviewed for drawing package information that must be re-used to create a unique part number/CAGE combination to be inserted in the outgoing transaction. The new part number (REF01 Code MF) will be created using existing data from the reference drawing number (REF01 Code QZ) or, if not available, the drawing number (REF01 Code DG). The associated manufacturer’s CAGE (REF04-W7) will be created using the drawing CAGE (REF01 Code ZM).

C23.3.10 Unit of Use. Unique functionality to be added in support of the 2005 BRAC decision at the NSY and FRC sites is the ability to issue and store material at a quantity and unit of use less than the FLIS unit of issue. In these instances EBS will apply unique logic to create a materiel master with an LSN. This record will contain all applicable FLIS and user unique data elements copied from the original NSN. The EBS materiel master records for both the LSN and NSN will reference each other.

C23.3.10.1. EBS will create an LSN record for all NSN items identified with a unit of use upon data conversion as a base line. After initial conversion, these records will be based on either a requisition alert or funded requisition from any NSY or FRC site identifying a unit of use requirement. An DLMS 832N IA Catalog Data Support transaction record will NOT be generated to the NSY/FRC sites, but will be forwarded to the applicable DSS site.

C23.3.10.2. The DLMS 832N IA Catalog Data Support record will reflect the assigned LSN and Unit of Use as well as the associated NSN and FLIS unit of issue. DSS will build an internal table cross-referencing the NSN and the associated Unit of Use LSN, FLIS Unit of Issue and the Unit of Use.

C23.3.11 Substitute Cross Reference. EBS will provide catalog data reflecting substitute reference during the status process. This will occur for both DLA managed substitutions and for other Service managed substitutions.
C23.3.11.1. When EBS processes a request from an NSY or FRC and determines the primary materiel identification number (e.g., NSN) is not available but an approved substitute is available, EBS will provide ‘BH’ status and format an DLMS 832N IA Catalog Data Support identified as a substitute record reflecting the primary NSN and reference the substitute NSN.

C23.3.11.2. When EBS receives a ‘BH’ indicating DLA will be sent an item previously identified as a Navy suitable substitute for a DLA funded requisition, the status will prompt EBS to format a DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code SN, NSN Substituted, reflecting the primary NSN and referencing the substitute NSN when a materiel master already exists in EBS.

C23.3.11.3. When a materiel master for the substitute NSN does not exist in EBS, a materiel master record will be created. Any user unique data elements will be copied from the primary NSN specific to that site. A DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code SN, NSN Substituted, reflecting the primary NSN and referencing the substitute NSN will be forwarded to the applicable site for updating of Navy systems.

C23.3.11.4. EBS will not maintain a cross reference to other service managed NSNs pertaining to Substitution.

C23.3.12. FLIS Change Notices. EBS will be responsible for providing all change notices to the Navy BRAC 2005 SS&D sites. These change notices will be generated as a result of FLIS data changes. Anytime a FLIS recorded data element in EBS is modified, a DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code CC, Catalog Record Changed, will be sent to all FRC/NSY sites that the material has been extended to within EBS. The changed data element will not be specifically identified. Each FRC/NSY system will update internal records accordingly.

C23.3.12.1. NSN Replacement. When an NSN is specifically identified as a ‘REPLACED BY’ the DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code RN, NSN Replaced, and both the former and new NSN will be identified. MAT and MRP II will update its systems as applicable for these records.

C23.3.12.2. When an NSN is specifically identified as ‘DISCONTINUED’ the DLMS 832N IA Catalog Data Support transaction will cite Catalog Purpose Code DN, NSN Discontinued; no Replacement. If a subsequent NSN is identified from the FLIS update, the DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code NS, NSN Superseded, will contain both the former and new NSN. MAT and MRP II will update its systems as applicable for these records.

C23.3.12.3. When an NSN is specifically identified as ‘When Exhausted use’ the DLMS 832N IA Catalog Data Support transaction will cite Catalog Purpose Code RS, Use NSN When Exhausted, and both the former and new NSN will be identified on the DLMS 832N IA Catalog Data Support transactions. MAT and MRP II will update its systems as applicable for these records.
C23.3.13. Unanticipated Situations Impacting Catalog Transaction Exchange

C23.3.13.1. If the connection between DLA EBS and FLIS, via FLIS Portfolio Data Warehouse (FPDW) is down, EBS will initially respond with a ‘Response Delayed’ status and recycle the query until the FPDW connection resumes and then provide the appropriate status at that time. This process is identified by a DLMS 832N IA Catalog Data Support transaction citing Catalog Transaction Purpose Code RD.

C23.3.13.2. If an unexpected error occurs that is not accounted for by existing response codes, a response of “Manual Action Required” will be provided by EBS and the transaction will output for manual review. This process is identified by a DLMS 832N IA Catalog Data Support transaction citing Catalog Transaction Purpose Code AR.

C23.4. PROCEDURES – MARINE CORPS INTERFACE.

C23.4.1. Upon data conversion, all the current local stock numbers and non-DLA managed materiel masters from the MCMC systems will be migrated to DSS. This will provide a base line for the materiels currently used at all MCMC sites.

C23.4.2. The catalog data will be applicable to MCMC-assigned LSNs. Since DLA will be storing and distributing these items to industrial activities (IAs), DLA will have this data resident in the DSS and the MCMC will provide visibility and updates to these LSNs via the DLMS 832N IA Catalog Data Support transaction.

C23.4.3. Web-based Query. When new items are needed by any of these sites, the capability to create new material masters or update user defined data elements to existing material masters directly into MCMC systems through a user unique screen. This application within the MCMC systems will prompt users for mandatory fields and user defined fields for new entries, which may be optional depending upon the site application. The screen will allow the user to query the current MCMC data base and determine if an NSN or LSN already exists.

C23.4.4. If no NSN or LSN exists in the MCMC systems, the user will have the option to add a materiel master identified by a MCMC assigned LSN. MCMC systems have logic that will default specific mandatory data elements, and prompt user for those for which a default cannot be determined. MCMC systems will then format a DLMS 832N IA Catalog Data Support transaction and send to the site identified by the user.

C23.4.5. Materiel Identification. Cataloging data will be categorized by items identified by LSN where no NSN is assigned.

C23.4.5.1. Items currently identified within MCMC systems ((Industrial Logistics Support Management Information System), and MRP II) as an LSN will be migrated into DSS. DSS will continue to process transactions against these LSNs and modification will be done through user unique screen application maintained by the MCMC systems. Updates will be sent to applicable sites based on these updates.
C23.4.5.2. For items identified by contractor and Government entity (CAGE) and part number combination (with no LSN or NSN assigned) within MCMC systems, MCMC systems will allow end users to create a materiel master for these items via the user unique screen application and systemically assign an LSN. Updates will be sent to applicable sites based on the initial creation and any subsequent updates based on end user input. These LSNs will be established based on the FSC with a sequentially assigned number in the LSN NIIN.

C23.4.5.3. A cataloging action is not required to establish unit of use LSNs for NSN materiel or for non-NSN materiel previously assigned an LSN. A DLMS 846A Asset Reclassification action will be used to re-identify the materiel and trigger the creation of an item data record under the new LSN within DSS.

C23.4.6. New Records. Upon creation of new materiel identification content applicable to this process, MCMC systems will build the materiel master, apply the catalog data to the identified sites (extend to the user sites), and format a DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code AA, New Catalog Record Added, that will be sent to the DSS via DAAS.

C23.4.7. Modified Records. When the user entry modifies an existing record via the user unique screen application, the system will prompt the user to save changes. This will trigger the MCMC system to generate a DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code CC, Catalog Record Changed. This record will contain all applicable data elements to build a record within the DSS system (allowing overlay, vice transmission) of only the modified content. The system receiving a transaction identified by Catalog Purpose Code CC that is unmatched to an existing record in the database will accept the transaction and process it as a new record.2

C23.4.8. Deleted Records. When the user entry deletes an existing record via the user unique screen application, the user will be prompted to save changes. This will trigger the MCMC system to generate a DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code DD, Catalog Record Delete. This record will contain all applicable data elements to delete a record within the DSS system.

C23.4.9. FLIS Change Notices. DSS will be responsible for providing change notice information via catalog data support transactions to MCMC sites for changes related to the NSN itself. MCMC systems will be updated as applicable for these records.

C23.4.9.1. NSN Replacement. When an NSN is specifically identified as a ‘REPLACED BY,’ the DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code RN, NSN Replaced, including the former and new NSN will be identified.

C23.4.9.2. When an NSN is specifically identified as ‘DISCONTINUED’ the DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code DN,

2 Refer to ADC 1176. Staggered implementation applies.
NSN Discontinued; no Replacement, will be provided. If a subsequent NSN is identified from the FLIS update, the DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code NS, NSN Superseded, will be provided containing both the former and new NSN.

C23.4.9.3. When an NSN is specifically identified as ‘When Exhausted use’ the DLMS 832N IA Catalog Data Support transaction citing Catalog Purpose Code RS, Use NSN When Exhausted, will be provided including both the former and new NSN.

C23.5. AIR FORCE GOVERNMENT FURNISHED PROPERTY ACCOUNTABILITY

C23.5.1. Air Force Background: The Air Force chartered the Government Furnished Property-Accountability (GFP-A) Capability Initiative to provide property accountability/control of Air Force-owned, contractor-managed and possessed property by implementing standard and integrated processes. This capability establishes and maintains accountable inventory records for GFP assets managed by the Air Force contractor inventory control points (CICPs), and makes them visible in the Air Force accountable property system of record (APSR).

C23.5.1.1. Air Force CICPs will use their own inventory management systems to send catalog data for local stock number (LSN) items to the Air Force APSR. The contractor is the source of this information, which is similar to standard catalog data. The Air Force APSR maintains the data fields used to track the contractor-provided catalog data. As the item manager, the Air Force CICP is responsible for identifying the appropriate values to be provided to the Air Force APSR. The Air Force APSR’s asset master record must mirror the asset information in the CICP’s IMS at all times.

C23.5.1.1.1. The Air Force CICPs will send catalog data when a new LSN is added to its contractual requirements, or when information for a previously assigned LSN changes. The Air Force CICP will transmit a DLMS 832N to the Air Force APSR after processing the update to reconcile the information between the two systems. The Air Force APSR will process the DLMS 832N and update its master record for the affected asset(s).
C24. CHAPTER 24

PRODUCT QUALITY DEFICIENCY REPORT PROGRAM

C24.1. GENERAL. This chapter provides general information supporting the DoD Product Quality Deficiency Report (PQDR) Program. The authoritative source for detail procedures pertaining to this program is DLAR 4155.24/AR 702-7/SECNAVINST 4855.5 series/AFI 21-115, Product Quality Deficiency Report Program (refer to the DLA PQDR Home Page). The DoD PQDR program requires DoD Component capture and exchange product quality deficiency information to facilitate root cause determinations, corrective actions, reliability analysis, and recoupment actions (contractor caused deficiencies). This chapter provides an overview of the DLMS transaction exchange supporting the PQDR program. Initial implementation will include the DLA Enterprise Business Systems (EBS), SECNAV Product Data Reporting and Evaluation Program (PDREP), and NAVAIRSYSCOM Joint Deficiency Reporting System (JDRS). Initially, all transactions will pass through the PQDR Inter-service Interface (PQDR II). Components developing new PQDR processing systems will comply with this DLMS standard to exchange data with other DoD PQDR systems.

C24.2. PQDR Transaction Set. The PQDR transaction set is used to move the PQDR (SF-368) data between points (originator/originating point, screening point, action point, and support point), facilitate PQDR exhibit movements, and exchange general information (interim responses, general correspondence, etc.). For each transmission, the receiving system will provide a transaction to the submitting system acknowledging data receipt. DLMS Supplement 842P, PQDR Data Exchange, replaces the system unique transactions currently used to exchange date. This DLMS enhancement provides the DoD Components with a standard electronic transmission method for reporting PQDRs across systems.

C24.3. APPLICABILITY AND SCOPE. This guidance is applicable to all DoD Components responsible for reporting and processing PQDR information. It applies to all supply classes not specifically excluded from PQDR reporting under DLAR 4155.24/AR 702-7/SECNAVINST 4855.5 series/AFI 21-115.

C24.4. PQDR OVERVIEW. The originator/originating point discovers a deficiency and submits the PQDR to the appropriate screening point. The screening point determines the appropriate action point (normally the item manager) and forwards the report for investigation. The action point will either investigate the report or assign the report to a support point (normally the Defense Contract Management Agency (DCMA)) for investigation. When required, the PQDR exhibits are moved between the exhibit holder and the investigating point. Throughout the investigation process, each point sends interim responses and other routine correspondence transactions to keep each interested activity updated with the current investigation status. Under DLMS, PQDR data is exchanged between information technology (IT) systems using the 842P PQDR
Data Exchange transaction. Once data is shared between systems, all subsequent transactions must be sent to each shared system.

C24.5. DETAILED REQUIREMENT. PQDR data exchanged electronically between EBS, PDREP, and JDRS will pass through the PQDR II. The sending system is responsible for complying with the 842P format and including the applicable data elements. The report control number (RCN) is the key identifier for each unique PQDR and will be perpetuated with each transaction. The PQDR II will validate each transaction for required data elements and reject incomplete transactions to the sending system. In addition, the PQDR II will maintain a record of the IT systems having received a prior transaction for each RCN and route a copy of all subsequent transactions to the IT system.

C24.5.1. PQDR Movement Transactions. The DLMS 842P moves the PQDR between the different investigating points.

C24.5.1.1. Originator Forwards to Screening Point (Transaction Set Purpose Code 00). Used when the originator forwards to screening point in another system or when originator and screening point do not exist within the same system. Note: EBS is not permitted to originate PQDRs.

C24.5.1.2. Forward from Screening Point to Action Point (Transaction Set Purpose Code FA). Used when the screening point forwards a PQDR to an action point and the action point does not exist within the same system.

C24.5.1.3. Forward from Action Point to Support Point (Transaction Set Purpose Code 4S). Used when the action point forwards a PQDR to a support point and the support point does not exist within the same system.

C24.5.1.4. Final Reply from Support Point To Action Point (Transaction Set Purpose Code 11). Used when the support point completes their investigation and returns the PQDR to an action point and the action point does not exist within the same system.

C24.5.1.5. Final Reply (Completion Notice) from Action Point to Screening Point (Transaction Set Purpose Code CN). Used when the action point completes their investigation and returns the PQDR to a screening point and the screening point does not exist within the same system.

C24.5.1.6. Not Processed (Misdirected) (Transaction Set Purpose Code 12) Use to indicate that a PQDR was received by the incorrect screening, action, or support point and could not be processed. Return misdirected PQDRs to the previous processing point.

C24.5.1.7. Retraction (Transaction Set Purpose Code 03). Used by screening and action points to change ownership of a PQDR action back to the previous processing point or location.
C24.5.1.8. Reply Rebuttal (Transaction Set Purpose Code RR). Used to rebut an investigation response. PQDR placed at the prior ownership level.

C24.5.2. Exhibit Movement Transactions. PQDR exhibit movement transactions provide status and control over exhibit movements. All PQDR processing points can use exhibit movement transactions. Use of this DLMS 842P for exhibit movement supplements the use of standard logistics transactions for receipt and shipment status. When information copies of the receipt and shipment status are provided to the PDREP-AIS, they will be used to update the exhibit movement and disseminated as appropriate.

C24.5.2.1. Exhibit Request (Transaction Set Purpose Code 13). Used to request the exhibit and provide shipping information. Refer to paragraph C11.20 for specific guidance for directed deficient materiel returns including document number assignment and associated transactions for prepositioned materiel receipt and materiel returns shipment status.

C24.5.2.2. Exhibit Shipped Notification (Transaction Set Purpose Code 14). Used to provide exhibit shipment information to the requestor.

C24.5.2.3. Exhibit Receipt (Transaction Set Purpose Code ER). Used to document exhibit receipt. Note: If sent as a late exhibit receipt, PQDR is reassigned to the sender’s level.

C24.5.2.4. Exhibit Tracer (Not Found) (Transaction Set Purpose Code 10). Used by exhibit requestor to request status or follow up on an exhibit request.

C24.5.2.5. Materiel Disposition (Transaction Set Purpose Code MD). Used to provide final material disposition instructions. Used by the support or action point after the investigation is complete.

C24.5.2.6. Exhibit Disposition Confirmation (Transaction Set Purpose Code ED) Used by the current exhibit holder to confirm compliance with material disposition instructions.

C24.5.3. General Information Transactions. The PQDR general information transactions provide information or status regarding the PQDR without changing ownership.

C24.5.3.1. Acknowledge/Status (Transaction Set Purpose Code 08). Used to acknowledge that a PQDR was received and provide current status to the sender.

C24.5.3.2. Interim Reply (Transaction Set Purpose Code 25). Used by support or action point to provide investigation status of the PQDR to the previous owner.

C24.5.3.3. General Correspondence (Transaction Set Purpose Code CO). Used to transmit general correspondence information concerning the PQDR status from the sender to the receiver, or to send corrections with an explanation of changes.
C24.5.3.4. **Follow-up for Status (Transaction Set Purpose Code 45).** Used to request status when a processing point has not provided investigation status via interim reply or the like.

C24.5.3.5. **Cancellation (Transaction Set Purpose Code 01).** Use when PQDR is cancelled in one system and cancelation needs to be propagated to other systems. Note: Only screening points may cancel a PQDR.

C24.5.3.6. **Delegate to Alternate Support Point (Transaction Set Purpose Code DA).** Used to delegate to another support point by the responsible support point without changing the responsible support point.

C24.5.3.7. **Redirect/Transfer (Transaction Set Purpose Code 47).** Used to redirect a PQDR to another screening point, action point, or support point within the component.

C24.5.3.8. **Reopen (Transaction Set Purpose Code RO).** Used when a PQDR is reopened by the system sending the transaction and needs to be reopened in receiving system. The screening point will send to notify other systems that a PQDR has been reopened. The other touch points (originator, action, or support point) will send when requesting the PQDR to be reopened.

C24.5.3.9. **Update (Transaction Set Purpose Code SU).** Used to send an update to correct or append specific data fields in another IT system.

C24.5.3.10. **Forward to Contractor (Transaction Set Purpose Code FC).** Used when support point sends PQDR investigation request to a contractor.

C24.5.3.11. **Information Copy (Transaction Set Purpose Code 22).** Used to send information copy of PQDR to another system. Used for dissemination to non-action activities outside of the PQDR process in another system. Used to provide PQDR to other agencies with a need to know. All data fields should be sent to present the entire PQDR to the receiver.

C24.5.4. **System Transactions.** System transactions are used to confirm data receipt and communicate transaction failures to the sending system.

C24.5.4.1. **Transaction Rejection (Transaction Set Purpose Code 44).** Used when the PQDR II determines that 842P transaction is non-compliant with this standard or when a recipient system of an 842P is unable to process a transaction due to its data requirements (i.e. duplicate RCN). This transaction is system generated. End users should use Transaction Set Purpose Code 12, Not Processed (Misdirected), to return with comment.

C24.5.4.2. **Confirmation of Transaction Receipt (Transaction Set Purpose Code 06).** Used by an automated IT system to confirm transaction receipt from another system.
C24.6. **Exhibit Tracking.** Systemic update of the PDREP-AIS for exhibit tracking is provided as a by-product of standard logistics transactions. When received at a distribution depot, the receipt transaction will identify the PQDR RCN and an information copy of the receipt will be provided. Similarly, when a DLMS shipment status transaction is prepared for the shipment of an exhibit, the shipment status will perpetuate the PQDR RCN from the release order.

C24.7. **PQDR Inter-Service Interface Query Capability.** The PQDR II will allow users to query the transaction history by RCN, the system inbox to view pending incoming transactions, and the system outbox to view pending outgoing transaction.
C25. CHAPTER 25
SECURITY ASSISTANCE PROGRAM

C25.1  GENERAL

C25.1.1. Purpose. The provisions of Military Standard Requisitioning and Issue Procedures (MILSTRIP) apply to all phases of requisitioning and issue to support the Security Assistance Program (also known as the Security Cooperation Program); however, this chapter provides special procedures and instructions for preparing and processing foreign military sales (FMS) and Grant Aid requirements (see Appendix 7.19), which are exceptions to other areas of the manual.

C25.1.2. Transactions. This chapter addresses the procedures and applicable transactions relevant to Security Assistance. See the Defense Logistics Management Standards Program Office Website for available formats on the DLMS IC page. The corresponding MILSTRIP legacy 80 record position transaction functionality is also provided for ease of interpretation by DLMS users and to support those working in a legacy environment. In addition to the listed MILSTRIP legacy transactions, the DLMS formats may incorporate functionality to support Component-unique transactions as noted in the implementation convention.

C25.1.2.1. The Requisition Transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0). This transaction provides the functionality of MILSTRIP legacy document identifier codes (DIC) A01, A02, A04, A05, A0A, A0B, A0D, and A0E.

C25.1.2.2. The Passing Order Transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code BM. This transaction provides the functionality of MILSTRIP legacy DIC A31, A32, A34, A35, A3A, A3B, A3D, and A3E.

C25.1.2.3. The Referral Order Transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code BN. This transaction provides the functionality of MILSTRIP legacy DIC A41, A42, A44, A45, A4A, A4B, A4D, and A4E.

C25.1.2.4. The Requisition Modification Transaction is identified by the DLMS 511M by beginning segment (1/BR02/020 Code AM. This transaction provides the functionality of MILSTRIP legacy DIC AM1, AM2, AM4, AM5, AMA, AMB, AMD, and AME.

C25.1.2.5. The Requisition Follow-Up Transaction is identified by the DLMS 869F by beginning segment (1/BSI08/020 Code IN. This transaction provides the functionality of MILSTRIP legacy DIC AT1, AT2, AT4, AT5, ATA, ATB, ATD, and ATE.

C25.1.2.6. The Supply Status Transaction is identified by the DLMS 870S by three different beginning segment (1/BSR01/020) Transaction Type Codes.
C25.1.2.6.1. Transaction Type Code 4 – Response to Requisition. This transaction provides the functionality of MILSTRIP legacy DIC AE1, AE2, AE3, AE8, AE9, AEA, AEB, AED, and AEE.

C25.1.2.6.2. Transaction Type Code 5 – Notice of Response to Direct Vendor Delivery. This transaction provides the functionality of MILSTRIP legacy DIC AB1, AB2, AB3, and AB8.

C25.1.2.6.3. Transaction Type Code 6 – Notice of Response to Supply Assistance. This transaction provides the functionality of MILSTRIP legacy DIC AE1, AE2, AE3, AE8, AE9, AEA, AEB, AED, and AEE.

C25.1.2.7. The Shipment Status Transaction is identified by the DLMS 856S by beginning segment (1/BSN06/0200 Code AS. This transaction provides the functionality of MILSTRIP legacy DIC AS1, AS2, AS3, AS8, AU1, AU2, AU3, and AU8.

C25.1.2.8. The Notice of Availability Transaction is identified by the DLMS 856N by beginning segment (1/BSN06/0200 Code AD. This transaction provides the functionality of MILSTRIP legacy DIC AD1, AD2, AD3, AD4, and ADR.

C25.1.2.9. The Notice of Availability Reply Transaction is identified by the DLMS 856N by beginning segment (1/BSR01/20 Code 8. This transaction provides the functionality of MILSTRIP Legacy DIC AD5.

C25.2. REQUISITION FORMATS

C25.2.1. Requisitions for FMS and Grant Aid materiel vary from the construction of requisitions in support of U.S. Forces. Codes peculiar to FMS and Grant Aid requisitions are listed in the designated appendices and in the military assistance program address directory (MAPAD) found in DLM 4000.25 Volume 6, Chapter 3, together with their meanings and applications. Specific FMS and Grant Aid requisition entries are as follows:

C25.2.1.1. Grant Aid

C25.2.1.1.1. Requisitioner Field (first six positions of the document number). All Grant Aid requisitions will contain a unique six-position identification code consisting of a combination of codes that identifies the SC implementing agency and provides specific requisitioning and shipping instructions for the source of supply and shipping activities. This identification code is the first six positions of the document number. DLM 4000.25 Volume 6, Chapter 3, Military Assistance Program Address Directory (MAPAD); DoD 5105.38-M, Security Assistance Management Manual (SAMM); and DoD 7000.14-R, DoD Financial Management Regulation, in combination, provide the interpretation of these codes.

C25.2.1.1.1.1. The first position will contain the FMS and Grant Aid service assignment code (Appendix 7.2) of the SC implementing agency responsible for administering the Grant Aid Program line.
C25.2.1.1.1.2. The second and third positions will contain the SC customer code (Appendix 7.18)\(^1\).

C25.2.1.1.1.3. The fourth position will contain the mark-for code, also known as the in-country code, to indicate the recipient or place of discharge within the country/activity (see MAPAD), with the exception of DLMS 511R (MILSTRIP legacy DIC A05/AOE) Requisition with Exception Data containing special one-time shipping instructions entered in the Remarks block of the requisition. In this instance, a requisition may contain a zero in the fourth position of the requisitioner field. The special instruction will include an address to receive documentation when documents are not to be forwarded to the ship-to address. The use of Requisitions with Exception Data will be limited to one-time situations where it is not practicable to designate the addresses by coded entries in the requisition and in the MAPAD.

C25.2.1.1.1.4. The fifth position will contain a numeric zero (0).

C25.2.1.1.1.5. The sixth position will contain the appropriate Grant Aid type of assistance/financing code (Appendix 7.19).

**C25.2.1.1.2. Supplementary Address Field (six character field)**

C25.2.1.1.2.1. The first position will contain Y to indicate that the data entered in the second through sixth positions are nonsignificant to the overall systems but are to be perpetuated in all subsequent documentation.

C25.2.1.1.2.2. The second through fifth positions will contain the record control number (RCN). This number is assigned by the appropriate Service activity and is constructed as follows:

C25.2.1.1.2.2.1. The first position of the RCN will contain the last digit of the program year in which the requisitioned item was approved and funded.

C25.2.1.1.2.2.2. The second through fifth positions of the RCN will contain the four-position program line item number (alpha/numeric) of the program.

**C25.2.1.2. Foreign Military Sales**

C25.2.1.2.1. **Requisitioner Field (first six positions of the document number).** All FMS requisitions will contain a unique six-position identification code consisting of a combination of codes that identifies the requisitioning country or international organization and provides specific requisitioning and shipping instructions for the source of supply and shipping activities. This identification code is the first six positions of the document number. DLM 4000.25 Volume 6, Chapter 3, Military Assistance Program Address Directory (MAPAD); DoD 5105.38-M, Security Assistance

\(^1\) Refer to Approved Defense Logistics Management Standards (DLMS) Change (ADC) 448B
Management Manual (SAMM); and DoD 7000.14-R, DoD Financial Management Regulation, in combination, provide the interpretation of these codes.

C25.2.1.2.1.1. The first position will contain the FMS and Grant Aid Service assignment code (Appendix 7.2) of the SC implementing agency responsible for administering the FMS case.

C25.2.1.2.1.2. The second and third positions will contain the SC customer code (Appendix 7.18)\(^2\).

C25.2.1.2.1.3. The fourth position will contain the mark-for code, also known as the in-country code. This code will be assigned and recognized in conjunction with the FMS offer release option code and the freight forwarder/country representative (FF/CR) code; see explanation in paragraph C25.2.1.2.3.. When a mark-for code is not applicable, a zero must be entered.

C25.2.1.2.1.4. The fifth position will contain the FMS delivery term code (see DTR 4500.9-R, “Defense Transportation Regulation” (DTR) or DLMS Dictionary Logistics Data Resources Management System (LOGDRMS) for code definition and applicable values) to convey the point of delivery condition negotiated under the case agreement, and must correspond to delivery terms specified in the applicable letter of offer and acceptance.

C25.2.1.2.1.5. The sixth position will contain the appropriate FMS type of assistance/financing code (Appendix 7.19).

C25.2.1.2.2. Supplementary Address Field (SUPADD) (six character field). Use of the legacy SUPADD will be retained until full DLMS implementation by all trading partners. DLMS transactions will carry redundant mapping of the discrete data element content concatenated to configure the SUPAAD.

C25.2.1.2.2.1. The first position will contain the security assistance program customer service designator (derived from Appendix 7.2). This is the customer country’s requisitioning Service, which is published in the DLMS Dictionary and MAPAD.

C25.2.1.2.2.2. The second position will contain the applicable FMS offer release option code (A, Y, or Z) or Code X to denote that the United States is responsible for transportation arrangements as determined by negotiations between the customer CR and the U.S. Service responsible for administering the FMS case, and as reflected in the case agreement. FMS offer release option codes are listed in DLMS Dictionary and DLM 4000.25, Volume 1, Appendix 2, Definitions with explanations of their application and recognition under FMS offer and release procedures.

C25.2.1.2.2.3. The third position will contain the FF/CR code to designate the recipient of shipments and documentation as published in the MAPAD.

\(^2\) Ibid.
This entry or the use of code X or W will be applied and recognized in conjunction with the mark-for code entry as explained in Paragraph C25.2.1.2.3.

C25.2.1.2.4. The fourth through sixth positions will contain the specific SC case designator consisting of a three-position alpha/numeric code. The first position must be alphabetic, and the second and third positions may be alphabetic or numeric. All correspondence (such as letters and messages) must include the appropriate case identifier composed of the two-digit SC customer code, one-digit SC implementing agency code, the three-digit case designator, and the three-digit SC case line item identifier as part of the identification data.

C25.2.1.2.3. Designation of Shipment Addresses for Foreign Military Sales. The means of expressing ship-to and/or mark-for addresses in requisitions are the entries shown in mark-for and FF/CR, respectively. The designation of such addresses will be consistent with delivery terms contained in the case agreement. Specific codes must not be utilized in requisitions until such time as the codes and corresponding addresses are published in the MAPAD.

C25.2.1.2.3.1. The Defense Automatic Addressing System (DAAS) will reject Requisitions, Referral Orders, Passing Orders, Requisition Follow-Ups, and Requisition Modifications containing Military Assistance Program Address Codes (MAPAC) that do not have valid ship-to and mail-to addresses in the MAPAD, to the submitting International Logistics Control Office (ILCO) using DLMS 870S (MILSTRIP legacy DIC AE9) Supply Status with Supply Status Code DP.

C25.2.1.2.3.2. The inventory control points (ICP) may reject requisitions received off-line (mail, message, courier, fax, telephone) which contain MAPACs that do not have valid ship-to and mail-to addresses in the MAPAD, to the submitting ILCO using DLMS 870S (MILSTRIP Legacy DIC AE3) Supply Status with Supply Status Code CX. This includes requisitions with exception data directing materiel to various shipping points.

C25.2.1.2.3.3. When shipment is to be made to a FF/CR or to a point designated by a FF/CR in response to a notice of availability (NOA), a specific code other than an X or W will be entered in the third position of the supplementary address. In this instance, the ship-to address will be the address listed in the MAPAD for the FF/CR or the address provided in response to the NOA. The mark-for address will be the address listed in the MAPAD for the code in the mark-for field (fourth position of the requisition document number). For those countries that do not publish clear-text addresses for mark-for codes, there will be no mark-for address, but supply and shipping activities will perpetuate the mark-for code in all related documentation. When a mark-for code is not applicable, a zero will be entered.

C25.2.1.2.3.4. When shipment is to be made to an assembly point or staging area, an XW will be entered in the second and third positions of the supplementary address and a clear-text address will be conveyed in a requisition with
exception data. See paragraph C25.2.1.2.3.2. The mark-for field, if required, will designate the mark-for address.

C25.2.1.2.3.5. When shipment is to be made to an address within the customer country, an XX will be entered in the second and third positions of the supplementary address and the in-country ship-to address will be the address listed in the MAPAD for the designated mark-for code. See paragraph C25.2.1.2.4.3.

C25.2.1.2.3.6. The foregoing instructions apply to all customer countries except Canada. For Canada, shipment address codes are contained in the second and third positions of the supplementary address.

C25.2.1.2.4. FMS Offer Release Option Codes

C25.2.1.2.4.1. FMS offer release option codes are used in requisitions for shipments to be made or offered to FF/CRs. These codes specify whether shipments are to be made automatically or under one of two types of NOAs and will be consistent with the conditions of the FMS case agreements. FMS Offer release option codes are not applicable to requisitions for Canada since FFs are not utilized for Canada and both the second and third positions of the supplementary address are used to denote shipment addresses.

C25.2.1.2.4.2. FMS offer release option codes and their explanations are listed in DLMS Dictionary and further clarified in DLM 4000.25, Volume 1, Appendix 2, Definitions.

C25.2.1.2.4.3. If, consistent with the conditions of the FMS case agreements, transportation arrangements for shipments are to be accomplished by the U.S. Service, an X will be entered in second position of the supplementary address in lieu of an FMS offer release option code. When an X is authorized and entered in second position of the supplementary address, an X or W, denoting shipment to an address within the customer country or shipment to an assembly point or staging area, must be entered in the third position of the supplementary address.

C25.3. REQUIRED AVAILABILITY DATES

C25.3.1. Requisitions for FMS and Grant Aid requirements for major weapons systems, end items, and concurrent spares will be prepared to reflect the amount of time remaining from dates of requisitions until required availability dates (RADs) become effective. In FMS cases, compute the RAD by adding the lead time stated on the letter of offer and acceptance (LOA) to the date of acceptance by the purchaser. For Grant Aid, compute the RAD by adding the ICP determined lead time to the date of the order.

C25.3.2. The requisition RAD is a three position value consisting of the character A in the first position followed by the number of months remaining from the date of the requisition to the computed RAD in the second and third positions. The RAD is identified in the DLMS 511R Requisition by the Date/Time segment (2/G6201/80 Code...
BD; in MILSTRIP legacy DIC A0_ transactions, it is identified in rp 62-64. The concatenated RAD value enables the source of supply, ILCO, and customer control of requisitions, provides for recognition of firm commitments to foreign governments, and helps ensure that materiel requirements are ready for delivery by the approved RAD. The actual date for calculation of the RAD will be the last day of the month depicted by the RAD entries in the requisition. Shipment of materiel will be made at the time of initial requisition processing to the extent that releasable assets are available, regardless of the number of lead time months shown in the RAD entry. Materiel not immediately available should be acquired and shipped by the last day of the month depicted by the RAD entries. However, depending on availability, materiel may be acquired and shipped after the RAD expires and cancellations are submitted. Appropriate status will be provided to the address(es) designated in the requisition.

C25.3.3. For Grant Aid, as soon as practicable, but not later than 120 days after receipt of an approved funded order, the Service/Agency (S/A) Departments will place a RAD on the requisitions for major items, and the associated support equipment and initial issue parts, as determined by the S/A.

C25.3.4. RAD time begins with the date of the requisition (i.e., the date contained in the requisition document number (See Appendix 7.14)) and does not have the effect of holding release of the materiel.

C25.3.5. Requisition originators will modify the RADs when contract forecast delivery dates indicate availability of items at a time other than designated by the previously established RADs. In inter-S/A actions, when requisitions or other documents bear a RAD with a shorter lead time than when the materiel will be available, the supplying S/A will promptly provide the requesting S/A with status reflecting the true availability date. This will be accomplished by use of DLMS 870S Supply Status (MILSTRIP legacy DIC AE_) with Supply Status Code BB, BV, or B3, as appropriate. The requesting S/A will adjust all records to reflect the new availability date information. When the supplying S/A is aware that the established RAD will not be met, that S/A’s source of supply will advise the appropriate ILCO that the RAD will not be met due to slippage and internal processing. The advice of RAD slippage will be furnished to the ILCO by letter, message, or DLMS 870S Supply Status (MILSTRIP legacy DIC AE_) with Supply Status Code B3.

C25.3.6. An extended required delivery date (RDD) in an FMS requisition will be expressed with the letter S in the first position, followed by the number of months from the date of the requisition before which delivery is required in the second and third positions. The extended RDD is identified in the DLMS 511R Requisition by the special requirements code (2/LQ01/140 Code AL); in MILSTRIP legacy DIC A0_ transactions it is identified in rp 62-64.

C25.3.6.1. The release date is defined as five days prior to the last day of the month indicated in the last two positions of the extended RDD. Releasable assets will be held until 50 days prior to the last day of the indicated month.
C25.3.6.2. In the case of DLA support, the extended RDDs will cause intentional holding of support. For those orders, the support date is calculated externally by DAAS upon receipt of the transaction and fed to DLA (RIC SMS). DAAS sends RIC SMS the actual Standard Delivery Date, which in the case of extended RDDs will cause the order to go into BP status and be held until 50 days prior to the release date.

C25.4. REQUISITION PREPARATION AND SUBMISSION

C25.4.1. Requisitions will be prepared and transmitted by Security Assistance countries and security assistance organizations (SAO) to the applicable ILCO in the appropriate MILSTRIP format as prescribed by the U.S. Service. The ILCO will transmit FMS and Grant Aid requisitions to the appropriate source of supply in the prescribed DoD MILSTRIP format.

C25.4.2. Requisitions prepared by the U.S. Service for FMS and Grant Aid requirements will be transmitted to the appropriate source of supply in the prescribed MILSTRIP format.

C25.4.3. ILCOs will enter a cooperative logistics program support category code (CLPSC) (Appendix 7.22) to applicable requisitions and passing orders, in order to convey programmed/non-programmed status of a requisition to an ICP/integrated materiel manager (IMM). The CLPSC is identified in the DLMS 511R Requisition by the cooperative logistics program support code (2/LQ01/140 Code 89); in MILSTRIP legacy DIC A0_ transactions it is identified in rp 72. Supply support provided under cooperative logistics supply support arrangement (CLSSA) agreements is intended to provide support to the requiring nation on the same basis that support is provided to U.S. Forces, within assigned priority (based upon force or activity designator (F/AD)) and with all other coding being equal. However, such support cannot be provided if it will impair the combat effectiveness of U.S. Forces. Consequently, CLSSA support is not to be provided on the same basis as for U.S. Forces until after the expiration of a lead time period necessary to augment U.S. Stocks to support the agreement. CLSSA requisitions received before the expiration of required lead time may be filled from existing supply source stocks only if stock levels do not drop below the established reorder point. If sufficient stock balances are not available to fill such requisitions without dropping below the reorder point, sources of supply will initiate procurement action to fill the CLSSA requirement. CLSSA requisitions received prior to expiration of the established lead times are considered to be "un-programmed" requirements. Un-programmed CLSSA requisitions and passing orders will contain CLPSC 2 (Appendix 7.22). CLSSA requisitions and passing orders received after expiration of the lead time required to augment stock levels will be processed in the same manner as U.S. demands. Such requisitions and passing orders are considered to be "programmed" requirements and will contain CLPSC 1. If the requisition does not identify a CLPSC code, the ICP/IMM will process it as an un-programmed requirement.

C25.4.4. Certain FMS and Grant Aid requisitions will be subject to a restriction in quantity when it is determined that the total requirement for an item will result in more
than 25 shipment units. This constraint is employed to preclude the assignment of non-MILSTRIP transportation control numbers (TCN) that occur when the number of shipment units exceeds 25 and that cause a loss of identity to the shipment. The DoD Components must specify the items of equipment to which the quantity restriction applies. Generally, these items are equipment such as wheeled/tracked vehicles or other items when a unit of issue of one each constitutes a single shipment unit.

C25.4.5. SA requisitions (identified by Service/Agency Code B, D, I, K, P, or T in the document number) will be reviewed for appropriate PD assignment by the ILCO prior to release. Specific procedures to accomplish this may be deferred until implementation of the Defense Security Assistance Management System (DSAMS). SA will not be revalidated by DAAS against the established edit table. However, any SA requisitions with PD 01, 04, or 11 will be displayed as suspected abuse in the Unauthorized Priority Designator Report under the appropriate Service/Agency heading with no activity name.

C25.4.6. Security Cooperation Enterprise Solution (SCES) Interim State Logistics Routing Solution

C25.4.6.1. Under the Security Cooperation Enterprise Solution (SCES) interim state logistics routing solution, if the Security Cooperation (SC) case designator indicates the FMS case is managed by SCES, the ILCO management information system will recode the FMS or Grant Aid requisition as a passing order (DIC A3_) and update the transaction with the applicable Defense Security Cooperation Agency (DSCA) RIC, distribution code, and fund code values based on the SC implementing agency code.³

C25.4.6.2. After validation, SCES will convert the passing order to a requisition and transmit the FMS and Grant Aid requisitions to the appropriate source of supply.⁴

C25.5. STATUS IN GENERAL

C25.5.1. Sources of supply will provide status only to the ILCO or other monitoring activities identified by the distribution code. The DLMS 870S (MILSTRIP legacy DIC AE3) will be used to provide supply status, and the DLMS 856S (MILSTRIP legacy DIC AS3) will be used to provide shipment status in response to follow-ups. However, the DLMS 870S (MILSTRIP legacy DIC AE8)/DLMS 856S (MILSTRIP legacy DIC AS8) will be used for status initiated by the source of supply or as otherwise delegated. It is the responsibility of the ILCO or monitoring activity to furnish status to the appropriate country status recipient.

C25.5.2. Status from the ILCO/monitoring activity to the MAPAD country status recipient will be transmitted through DAAS.

³ Refer to Approved DLMS Change (ADC) 1177.
⁴ Ibid
C25.5.3. Status to FMS customers is sent to the MAPAD type address code (TAC) 4 country status recipient.

C25.5.4. Status to Grant Aid customers is sent to the MAPAD TAC 3 purchaser/in-country SAO status recipient.

C25.5.5. The media and status (M&S) entry should be zero to preclude unnecessary status output. The transmission medium is determined by DAAS.

C25.6. STATUS UPON REQUISITION INITIATION OR SUBMISSION

C25.6.1. General. Status is provided by the ILCO to the customer when the requisition enters the supply system.

C25.6.2. Service Initiated Requisitions. When FMS requisitions are prepared and introduced by a U.S. Military Service, a supply status document representing the U.S. prepared requisition will be transmitted by the introducing U.S. Military Service to the appropriate MAPAD status recipient. The supply status document may also be prepared for Continental United States (CONUS)-generated Grant Aid transactions and, when prepared, will be transmitted to the appropriate in-country SAO.

C25.6.2.1. For MILSTRIP legacy DIC AE_, the supply status will contain code A, B, D, or E in the third position of the DIC to reflect the type of stock number being requisitioned.

C25.6.2.2. The latest available unit price should be entered in the DLMS 870S in the Baseline Item Data segment (2/PO104/150); in MILSTRIP legacy DIC AE_ transactions, it is identified in rp 74-80; however, this is an optional entry depending on the capability of the involved Military Service.

C25.6.2.3. Status Code BU will be entered in the DLMS 870S in the status code 2/LQ01/330 Code 81); in MILSTRIP legacy DIC AE_ transactions, it is identified in rp 65-66.

C25.6.2.4. The estimated shipping date (ESD) may be left blank. If provided, it is entered in the DLMS 870S in the Date/Time Reference segment (2/DTM01/240 Code 369; in MILSTRIP legacy DIC AE_ transactions, it is identified in rp 70-73.

C25.6.3. Customer Initiated Requisitions

C25.6.3.1. When country prepared FMS requisitions are forwarded to sources of supply by the ILCO, a DLMS 870S (MILSTRIP legacy DIC AE2) citing Status Code BW will be provided to the customer.

C25.6.3.2. When Grant Aid requisitions prepared by the in-country SAO are forwarded to sources of supply by the ILCO, a DLMS 870S (MILSTRIP legacy DIC AE1) citing Status Code BW will be provided to the customer/SAO.
C25.6.3.3. The latest available unit price may be entered in the DLMS 870S in the Baseline Item Data segment (2/PO104/150); in MILSTRIP legacy DIC AE_
transactions, it is identified in rp 74-80.

C25.6.3.4. The ESD may be left blank. If provided, it is entered in the DLMS 870S in the Date/Time Reference segment (2/DTM01/240 Code 369; in MILSTRIP legacy DIC AE_
transactions, it is identified in rp 70-73.

C25.7. FOLLOW-UPS AND STATUS RESPONSES

C25.7.1. As authorized, follow-ups, modifiers, and cancellations for FMS and Grant Aid transactions may be submitted by the CR or in-country SAOs to the sources(s) designated by the individual U.S. Military Service administering the FMS case or Grant Aid program line.

C25.7.2. When follow-ups are submitted to the ILCO/monitoring activity, the latest status information will be furnished to the CR by the ILCO/monitoring activity.

C25.7.3. FMS requisition status will be provided in the DLMS 870S Supply Status (MILSTRIP Legacy DIC AE2) or the DLMS 856S Shipment Status (MILSTRIP legacy DIC AS2).

C25.7.4. Grant Aid requisition status will be provided in the DLMS 870S (MILSTRIP Legacy DIC AE1) or DLMS 856S (MILSTRIP legacy DIC AS1).

C25.7.5. When current status information is not available on requisitions that were submitted to the supply system, the ILCO/monitoring activity may transmit the follow-up to the appropriate source of supply or provide interim status to the customer pending completion of ILCO/monitoring activity follow-up action. In either case, a supply status document containing Supply Status Code BW or BM (as indicated by the U.S. Military Service) and a blank ESD field may be provided to the customer. When requisitions have not been introduced into the supply system, the ILCO/monitoring activity will provide a written reply to the customer originated follow-ups.

C25.7.6. Security Cooperation Enterprise Solution (SCES) Interim State Logistics Routing Solution. Under the SCES interim state logistics routing solution, the ILCO management information system will forward follow-ups, modifiers, and cancellations to the applicable DSCA RIC based on the SC implementing agency code if the SC case designator indicates the FMS case is managed by SCES. 

C25.8. CANCELLATION AND REJECTION STATUS

---

5 Ibid
C25.8.1. Cancellation and rejection status from the source of supply will be provided to the ILCO/monitoring activity using the DLMS 870S (MILSTRIP legacy DIC AE3) and the appropriate status code.

C25.8.2. DLMS 870S (MILSTRIP Legacy DIC AE1/AE2) supply status transactions will not be produced by the source of supply on FMS and Grant Aid requisitions.

C25.9. STATUS ON FOREIGN MILITARY SALES NOTICE OF AVAILABILITY

C25.9.1. When FMS requisitions are processed and a NOA is forwarded to the FF/CR, a DLMS 870S (MILSTRIP legacy DIC AE2) supply status transaction containing Status Code BL will be furnished to authorized status recipients at the same time the NOA is forwarded.

C25.9.2. The BL status advises that the item is available for shipment and was offered to the FF/CR on the date entered in the DLMS 870S in the Date/Time Reference segment (2/DTM01/240) Date/Time Qualifier 169 – Product Availability Date; in MILSTRIP legacy DIC AE2 transactions, it is identified in rp 70-73.

C25.10. MODIFICATION OF FOREIGN MILITARY SALES OFFER RELEASE OPTION OR FREIGHT FORWARDER/COUNTRY REPRESENTATIVE

C25.10.1. Unusual circumstances may require a change in the country FMS offer release option code or FF/CR code for an FMS case or for individual requisitions within an FMS case. When this condition exists, either FMS customers or ILCO/monitoring activity may initiate a DLMS 511M (MILSTRIP legacy DIC AM_) Requisition Modification to change the coded data in FMS requisitions that have been released to the supply system.

C25.10.2. FMS requisition modification transactions will be initiated under standard MILSTRIP procedures. Entries in the requisition modifier transaction may differ from those in the original requisition only to reflect changes to one or any combination of the following:6

C25.10.2.1. Media and status, Industry Code segment (2/LQ01/140 Code DF) (MILSTRIP legacy rp 7)

C25.10.2.2. FMS offer release option code, Industry Code segment (2/LQ01/140 Code 95) (MILSTRIP legacy rp 46)

C25.10.2.3. Freight forwarder, Industry Code segment (2/LQ01/140 Code A6) (MILSTRIP legacy rp 47)

6 Revised requisition modifier procedures last reported as not implemented by the United States Marine Corps (USMC). Refer to AMCL 123C.
C25.10.2.4. Signal code, Industry Code segment (2/LQ01/140 Code DE)
(MILSTRIP legacy rp 51)

C25.10.2.5. Fund code, Accounting Data segment (2/FA201/286 Code B5) –
Fund Code (MILSTRIP legacy rp 52-53)

C25.10.2.6. Distribution code, Industry Code segment (2/LQ01/140 Code
AK) (MILSTRIP legacy rp 54)

C25.10.2.7. Project code, Industry Code segment (2/LQ01/140 Code 78)
(MILSTRIP legacy rp 57-59)

C25.10.2.8. Priority designator, Industry Code segment (2/LQ01/140 Code
79) (MILSTRIP legacy rp 60-61)

C25.10.2.9. Required availability date, Date/Time segment (2/G6201/80
Code BD) (MILSTRIP legacy rp 62-64)

C25.10.2.10. Advice code, Industry Code segment (2/LQ01/140 Code 80)
(MILSTRIP legacy rp 65-66)

C25.10.3. Modifiers that change the country FMS offer release option or FF/CR
must be submitted to procurement for manual amendment of contracts. Customers are
responsible for additional charges that may accrue. To limit manual processing and
avoid additional contract charges, modifiers that change the country FMS offer release
options or FF/CRs should be submitted only when the change is mandatory. When
LOAs have not been amended to reflect the changes, FMS customers must coordinate
with the Service ILCO/monitoring activity before requesting requisition modification.

C25.11. RELEASE OF FOREIGN MILITARY SALES SHIPMENTS

C25.11.1. General. U.S. shipping activities use the NOA to notify the designated
FF/CR addressee and the International Logistics Control Office (ILCO) (identified by the
SC Implementing Agency) that materiel is ready for shipment.

C25.11.1.1. The procedures for releasing shipments of FMS materiel from
storage activities are normally dependent upon the entry in the FMS offer release option
field of requisitions or related transactions. The exceptions to use of the FMS offer
release option code in the release of shipments are:

C25.11.1.1.1. When the shipment is unclassified and is to be
accomplished by parcel post/small parcel delivery service, the shipment will be released
automatically without an NOA and should be either insured, certified, or registered.
Evidence of shipment must be provided for all FMS shipments regardless of shipment

---

7 Refer to ADC1098, Updates to DD Form 1348-5 Notice of Availability (NOA) and Corresponding DLMS
856N NOA and 870N NOA Reply. DLMS implementation for SCES may be delayed until fully fielded to
all the ILCOs (estimated for January 2019)
size, weight, or value. Classified shipments always require use of an NOA, as indicated below.

C25.11.1.1.2. When an export release is required from the Military Surface Deployment and Distribution Command (SDDC) under DTR 4500.9-R, Chapter 203 (Shipper, Transshipped, and Receiver Requirements and Procedures), the shipping activity will submit a request for export release to the SDDC Operations Center before shipment. An NOA will be furnished to the FF/CR and will indicate that an export release has been requested. The export release provided by the SDDC releasing authority will include shipping instructions as coordinated with the FF/CR.

C25.11.1.1.3. When the shipping activity determines a need for a high degree of protection or control, or FMS Offer Release Option Code Z is indicated, the shipment must not be made until a response from the NOA is received. Examples of a shipment requiring a high degree of protection or control include materiel that is dangerous/hazardous, or sensitive; these types of shipments may not require an export release. Note that FMS offer release option Z procedures must be followed if any unusual transportation factors apply. This includes oversize or overweight shipments, hazardous materiel shipments, classified shipments, sensitive shipments, and ammunition, arms and explosives shipments or any other factor that mandates coordinated release procedures (this does include Canada).

C25.11.1.1.4. From SDDC, an NOA will be furnished to the FF/CR and the shipment will be held pending receipt of release and shipping instructions from the FF/CR. NOAs for classified shipments will be forwarded to the CR identified in the MAPAD.

C25.11.1.2. For shipments not subject to the exceptions outlined in Paragraph C25.11.1.1., the entry in the FMS offer release option field will prescribe procedures to be followed in releasing shipments of FMS materiel from storage activities. For FMS offer release options Y and Z, notification to the designated FF/CR is required prior to release of the shipment. For FMS offer release option A or X, the shipment will be released automatically, without providing an NOA to the FF/CR.

C25.11.1.3. U.S. shipping activities use the NOA to notify both the designated FF/CR addressee and the ILCO that materiel is ready for shipment. A manual NOA will be prepared for all FMS purchases except those customers specifically requesting mechanized NOAs such as the Federal Republic of Germany. Countries desiring to receive the mechanized NOA will submit a request to the Director, Defense Logistics Management Standards Program Office. All purchasers requesting the mechanized NOA will be identified in this paragraph. Procedures for NOA preparation are contained in Paragraphs C25.11.2. and C25.11.3.

C25.11.1.4. The NOA will identify the TCN assigned to the shipment, which will be created in accordance with guidance in DTR 4500.9-R, Appendix L. The manual or mechanized NOA document will be assigned an NOA notice number to reflect the number of times the NOA has been sent to the FF/CR.
C25.11.1.5. **ILCO Notifications.**

C25.11.1.5.1. To provide the ILCO visibility to NOAs, shipping activities will send a DLMS 856N (No MILSTRIP Legacy DIC equivalent for this notification process) to the ILCO, even if a manual DD Form 1348-5 was sent to the FF/CR.

C25.11.1.5.2. The ILCO will be identified as a party to receive copy in the DLMS 856N. The ILCO will be identified by the SC Implementing Agency Code in the first position of the document number. Authorized SC Implementing Agency codes are restricted to those identified in Appendix 7.2. When the ILCO is identified as a party to receive copy, DAAS will route a copy of the DLMS 856N to the Security Cooperation Enterprise System (SCES). SCES will then have the ability to associate NOA information with the applicable ILCO and FMS Case Designator.

C25.11.1.5.3. For those systems not capable of sending a mechanized NOA, send an information copy of the NOA to the ILCO via offline methods (e.g., phone, fax, email).

C25.11.2. **Manual Notice of Availability**

C25.11.2.1. DD Form 1348-5, Notice of Availability/Shipment, will serve as a cover document for individual copies of DD Form 1348-1A, DD Form 250, or DD Form 1149 applicable to each line item in a shipment unit. Together, these documents comprise the original NOA. The data to be entered on DD Form 1348-5 (See Appendix 6.4) are those that describe the shipment unit, while the supporting copies of the DD Form 1348-1A provide individual item data. All blocks of the DD Form 1348-5 from the top of the form to the portion captioned “CONSIGNEE INFORMATION” will be completed by initiating activities. All data blocks are self-explanatory, except that the “NOA Notice Number” reflects the number of times the NOA has been sent to the FF/CR. The TCN block represents the transportation control number, which is the TCN assigned to track the shipment. The shipping activity must complete the “SPECIAL REQUIREMENTS” section for materiel discussed in Paragraph C25.11.1.1.3. The manual NOA will be mailed to the notice recipient specified in the MAPAD, except that the NOAs covering classified shipments will be forwarded to the country representative. Distribution of DD Form 1348-5 is as follows:

<table>
<thead>
<tr>
<th>COPY NO.</th>
<th>USAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Retained by the shipping activity pending receipt of shipment release instructions.</td>
</tr>
<tr>
<td>2, 3</td>
<td>Furnished to the appropriate FF/CR address (as designated in the MAPAD to receive the NOA) for insertion of shipment release instructions on the third copy and return to the shipping activity. The second copy will be retained by the FF/CR. Copies of the DD Form 1348-1A, DD Form 250, or DD Form 1149 will accompany the DD Form 1348-5.</td>
</tr>
</tbody>
</table>
C25.11.2.2. Replies to manual NOAs will be performed by two different methods, contingent on the need for an export release. When an export release is required, the FF/CR will furnish specifying consignment instructions, if any, and coordinate these or other shipment or delivery instructions with the SDDC releasing authority. When an export release is not required, the reply will be accomplished by insertion of shipment release instructions on the third copy, which will be returned to the shipping activity. Shipment release instructions will provide for shipment or delivery of materiel to a single destination by shipment unit. Shipping activities will not split shipment units identified by shipment unit numbers to accommodate shipments or deliveries to multiple points. Instructions to FF/CRs regarding replies to NOAs will specify the need for coordinated instructions when an export release is required and include provisions for the following minimum data in the replies to other NOAs:

C25.11.2.2.1. The complete name and address of the consignee except when materiel will be picked up by the FF/CR.

C25.11.2.2.2. The date materiel is to be shipped or the date the materiel will be picked up by the FF/CR.

C25.11.2.2.3. The complete name and telephone number(s) of the individual(s) who will be available and authorized to receive materiel on behalf of the purchasing country, for the specific classified shipment covered by the NOA advising of the availability of a classified shipment.

C25.11.2.3. In instances where the shipment does not require an export release or the shipping activity determines there is no requirement for a high degree of protection or control and the FMS offer release option Y is indicated for the materiel, the shipment will be released to the FF/CR on the 15th calendar day after the NOA date, unless alternate shipping instructions are received. When an export release is required, the shipment will be held pending receipt of release and shipping instructions from the SDDC releasing authority, and if such instructions are not received within 15 calendar days after the NOA date, follow-up to both SDDC and the ILCO in lieu of transmitting a duplicate NOA. In instances where the shipping activity has determined a need for a high degree of protection or control or FMS offer release option Z is indicated, the shipment must be held pending receipt of release and shipping instructions from the FF/CR. If an NOA response is not received within 15 calendar days of the NOA date, the shipping activity will send a follow-up to the designated NOA recipient using the same TCN. The duplicate NOA will be annotated with the number 2 in the NOA Notice Number field to denote the second communication of the NOA and to indicate that release has been delayed due to non-response to the original NOA. Two copies of the annotated DD Form 1348-5 (Notice of Availability/ Shipment), together with the applicable DD Form(s) 1348-1A, DD Form(s) 250, or DD Form(s) 1149 will be held as a record of the non-response to the original NOA. If no response is received within 15 calendar days of the follow-up NOA, another follow-up will be sent with the number 3 in the NOA Notice Number field to indicate that release continues to be delayed due to non-response to the original and follow-up NOAs. File copies will be updated to reflect the non-response and submission of a second follow-up. Simultaneous with the second
follow-up, the appropriate ILCO will be contacted (offline) for assistance and follow-up action to obtain the NOA response. Upon receipt of the offline contact from the shipping activity, the ILCO must intervene, on behalf of the shipping activity, to obtain a response to the NOA so the open shipment action can be closed. NOTE: This follow-up procedure does not apply to Delivery Term Code (DTC) 8 releases. DTC 8 releases involve materiel, usually Sensitive Arms, Ammunition and Explosives, which follow special export procedures that require more time to process than can be encompassed by the above follow-up procedure.

C25.11.3. **Mechanized Notice of Availability.** Except for classified shipments or unclassified shipments to be accomplished by parcel post/small parcel delivery service, the mechanized FMS NOA is provided to customers having a need to receive mechanized data for FMS shipments when FMS offer release option Y or Z is indicated in requisitions or when an export release is required. The mechanized NOA consists of the following documents:

C25.11.3.1. The initial DLMS 856N (MILSTRIP legacy DIC AD1 and ADR) contains both shipment unit information and line item information as contained in the DD Form 1348-1A. When an export release is not required, indicate in the DLMS 856N beginning segment (1/BSN07/020 Code ENR); for MILSTRIP legacy transactions, use DIC AD1. When an export release is required, indicate in the DLMS 856N beginning segment (1/BSN07/020 Code ERR); for MILSTRIP legacy transactions, use DIC ADR. When export release instructions have not been received within 15 days of the NOA date, a follow-up will be made to the SDDC releasing authority. If the FMS offer release option Y applies, do not prepare or transmit to the FF/CR a DLMS 856N Delay NOA (MILSTRIP legacy DIC AD3). When FMS offer release option Z applies and release instructions have not been received within 15 calendar days of the initial NOA date, prepare and transmit a DLMS 856N Delay NOA citing beginning segment (1/BSN07/020 Code D50); for MILSTRIP Legacy transactions, a DIC AD3 will accompany the delay NOA detail documents.

C25.11.3.2. The DLMS 856N FMS NOA contains line item information as contained in the issue/release document (e.g., the MRO or DD Form 1348-1A). For MILSTRIP legacy transactions, the initial detail document contains a DIC AD2. When FMS offer release option Z applies and release instructions have not been received within 15 calendar days of the NOA date, a DLMS 856N Delay NOA will document all the line items using the hierarchical level loop (2/HL03/010 Code I); for MILSTRIP legacy transactions, a DIC AD4 will be prepared for each initial detail document that accompanied the initial key document.

C25.11.3.3. The DLMS 870N Notice of Availability Reply (MILSTRIP Legacy (DIC AD5)) will always be used when replying to a mechanized NOA other than those requiring export release. When replying to a DLMS 856N (MILSTRIP legacy DIC ADR), the specifying consignment instructions and/or other shipment or delivery instructions will be provided to the SDDC releasing authority to facilitate provision of a coordinated (export) release to the shipping activity. In replying to mechanized NOAs other than those requiring export release, the following rules apply:
C25.11.3.3.1. When shipment release is to be made to the addresses identified by coded entries in the MAPAD, the NOA Reply will contain a Shipment Release Code R in the industry code segment (2/LQ01/145 Code 96). For MILSTRIP legacy DIC AD5, the Shipment Release Code R is conveyed in rp 60.

C25.11.3.3.2. When shipment release instructions are being mailed under separate cover, the NOA Reply will contain a Shipment Release Code E in the industry code segment (2/LQ01/145 Code 96). For MILSTRIP Legacy DIC AD5, the Shipment Release Code E is conveyed in rp 60. The shipment release instructions may be communicated by letter, country designated forms, or other appropriate communications; however, such instructions must reach the shipping activity within 15 days for transactions coded with FMS offer release option Y. Otherwise, the shipment will be released automatically to the appropriate address contained in the MAPAD. The S/A implementation of these procedures will provide for such replies to be transmitted to the activity designated by the Routing Identifier Code (RIC) contained in the DLMS 856N Name segment (2/N101/220 Code CI). For MILSTRIP legacy NOA documents, the RIC is in rp 4-6.

C25.11.3.3.3. When a country replies to an NOA and rejects the shipment because the shipment unit contains materiel that will constitute a duplicate shipment, the shipping activity will withdraw the rejected materiel from the shipment and prepare a new DLMS 856N NOA (MILSTRIP legacy DIC AD1 and AD2 or ADR and AD2).

C25.11.3.3.4. Shipments from Procurement. RESERVED.

C25.11.3.3.5. Storage or staging charges may accrue when a NOA response (or failure to respond) requires the items to be held for an extended period of time. Any storage costs are charged to the FMS case.

C25.12. CONSOLIDATION AND MARKING OF FOREIGN MILITARY SALES AND GRANT AID SHIPMENTS

C25.12.1. Consolidation Requirements. The shipment planning process should recognize and assure compatibility of codes in requisitions and related documents when configuring shipment units.

C25.12.1.1. Exception to Consolidation. Requisitions beginning with an N (Not Mission Capable Supply (NMCS)) or E (Anticipated Not Mission Capable Supply (ANMCS)) in the Special Requirements Code or containing the value 777 (N or E in MILSTRIP Legacy rp 62, or 777 in rp 62-64), will not be held for consolidation, but the NOA requirements remain in effect.

C25.12.1.2. FMS Assembly Shipment Consolidation Eligibility. FMS assembly shipments may be consolidated into containers or shipment units if under the same SC implementing agency, SC customer code, mark-for code, FMS delivery term code, Security Assistance program customer service designator (in-country service
code), FMS offer release option code, FMS FF/CR code, FMS case and case line number, project code (if applicable), priority designator (PD), and distribution code.

C25.12.1.3. FMS Non-Assembly Shipment Consolidation Eligibility. The criteria for FMS non-assembly shipments are the same as for FMS assembly shipments with the following exceptions: non-assembly shipments may be consolidated regardless of case line number (CLN) and the distribution code is not considered.

C25.12.1.4. Grant Aid assembly and non-assembly shipments may be consolidated into containers or shipment units if under the same SC implementing agency, SC customer code, mark-for code, Grant Aid type of assistance/financing code, project code (if applicable), and PD.

C25.12.1.5. Consolidation will also be limited by the following conditions:

C25.12.1.5.1. Physical characteristics of items should be compatible with other items in the same shipment unit.

C25.12.1.5.2. Explosives or other dangerous articles must not be consolidated with other items.

C25.12.1.5.3. Aircraft, missiles, engines, and large (excess dimension) spares or assemblies for any item of equipment subject to special handling or construction, or requiring movement as a single shipment unit must not be consolidated with other line items.

C25.12.1.5.4. Radioactive or magnetic materiel must not be consolidated together or with other materiel.

C25.12.1.5.5. When shelf-life items are included in a consolidated shipment, the exterior of the consolidated shipping container must be marked under the multipack requirements of MIL-STD-129, "Military Standard Marking for Shipment and Storage."

C25.12.2. Address Marking. The manner of designating ship-to and/or mark-for addresses in requisitions is described in paragraph C25.2.1.2.3. After determining the specific coded entries and their use as a ship-to and/or mark-for address in a given requisition, the corresponding clear-text address for container markings must be obtained from the MAPAD.

C25.12.3. Issue Release/Receipt Document (IRRD) (DD Form 1348-1A or DD Form 1348-2) Continuation Page. All references in this chapter to DD Form 1348-1A and DD Form 1348-2 and its distribution will by direct association also apply to its continuation page as described in Chapter 29. The continuation page contains encoded information for the automated processing of multiple serialized items in a shipment.
C25.13. DOCUMENT DISTRIBUTION

C25.13.1. Military Assistance Program Grant Aid Documents

C25.13.1.1. DD Form 1348-1A. Documentation to accompany shipments will be two copies of DD Form 1348-1A, Issue Release/Receipt Document. See Figure C25.F1.

C25.13.1.2. DD Form 250. On direct deliveries from vendors, a copy of DD Form 250, Material Inspection and Receiving Report, procurement shipping and receiving document, will be forwarded to the SAO of the country.

C25.13.2. Foreign Military Sales Documents. DD Form 1348-1A. Documentation to accompany shipments will be two copies of the IRRD. See Figure C25.F1. For shipments requiring an NOA, three copies of DD Form 1348-1A will accompany the NOA.

Figure C25.F1. Distribution of DD Form 1348-1A

</tr>
</tbody>
</table>

C25.14. SPECIAL GRANT AID PROCEDURES

C25.14.1. When issues of excess materiel are made in support of reimbursable Grant Aid requisitions, the following actions must be initiated:

C25.14.1.1. Change signal code to D.

C25.14.1.2. Furnish BN supply status to designated address(es).
C25.14.2. When issues of DoD Defense Working Capital Fund (DWCF) stocks are made in support of reimbursable Grant Aid requisitions, type of assistance/financing code C is currently being used. DWCF activities are billing for those after the fact.

C25.15. CANCELLATION OF REQUISITIONS

C25.15.1. The rules governing cancellation of requisitions (see DLM 4000.25 Volume 2, Chapter 4, Paragraphs C4.4., C4.7.24, and C4.7.25) apply to FMS and Grant Aid except for special procedures herein.

C25.15.2. When individual line items with a Grant Aid program RCN are to be canceled, or FMS cases/programs are to be canceled, the canceling Agency/activity will submit single-line cancellation requests under the appropriate Service policy.

C25.15.3. FMS/Grant Aid single-line cancellation requests will be processed under DLM 4000.25 Volume 2, Chapter 4, Paragraph C4.7.24., except that:

C25.15.3.1. No tracer action will be initiated for FMS shipments to foreign purchasers that move in commercial transportation channels to commercial freight forwarders; they are therefore not available for cancellation after turnover to the commercial transportation carrier, post office, or freight forwarder. For shipments that have already shipped, storage activities will furnish supply sources with a DLMS 856S shipment status (MILSTRIP Legacy DIC AU_).

C25.15.3.2. Sources of supply must advise the ILCO of contractual agreements that will result in cost conditions if cancellations, diversions, or holding are accomplished. The ILCO decides whether the cancellation, diversion, or hold actions will be suspended or continued. Decisions to continue cancellations or diversions must be provided to the source of supply by narrative message containing the notation: “Decision for cancellation or diversion by ILCO.”

C25.15.4. FMS/Grant Aid mass cancellation requests will be processed under DLM 4000.25 Volume 2, Chapter 4, Paragraph C4.7.25, except that Security Assistance Program mass cancellation requests will be submitted with the required codes for identification of one of the following, for which cancellation of all requisitions is requested:

C25.15.4.1. SC implementing agency code and SC customer code

C25.15.4.2. SC implementing agency code and SC customer code and project code

C25.15.4.3. Federal supply classification (FSC) or federal supply group (FSG) when associated with a SC implementing agency code and SC customer code

C25.15.5. Transportation (such as the terminal costs associated with stopping, holding, and returning materiel to depots or storage) and procurement termination costs
incident to actual diversion/cancellation of FMS requisitions will be charged under DoD 7000.14-R, “DoD Financial Management Regulation.”

C25.15.6. Grant Aid shipments that meet the criteria for shipment diversion under mass cancellation conditions will be diverted to the pre-designated storage sites of the canceling Service by the Defense Transportation Service (DTS). Storage sites in receipt of Grant Aid cancellation shipment(s) will report the receipt(s) to the applicable Service ICP/ILCO and the materiel will be accounted for as suspended materiel pending receipt of disposition instructions. Service ILCOs will provide disposition instructions under the provisions of DoD 5105.38-M, “Security Assistance Management Manual” (Part II).

C25.15.7. Navy-sponsored FMS shipments from vendor sources will be diverted to pre-designated Navy storage sites by the DTS. FMS shipments sponsored by the other Services and Navy sponsored shipments from DoD/General Services Administration (GSA) storage activities will be diverted under DLM 4000.25 Volume 2, Paragraph C4.7.25.10.

C25.16. REPAIR AND REPAIR/REPLACE PROGRAM

C25.16.1. General. Purchasing countries can establish FMS cases to get items repaired, most commonly at the depot level. Purchasing country repair requirements are integrated with the repair programs of the military services and are accomplished by organic military repair facilities (i.e., Army maintenance depots, Air Force logistics centers, Naval aviation depots, Naval shipyards) or by civilian contractors. There are two concepts used in obtaining repairs under the FMS repairable program:

C25.16.1.1 Repair and Return. The FMS customer must request approval for repair through the ILCO from the item/repair manager before shipping materiel to the U.S. for repair. After receiving approval and shipping instructions from the item manager, the purchaser ships the materiel to the designated repair facility where it is entered into the repair queue. After repairs are completed, the item is shipped back to the FMS customer. In the repair and return program, the cost to the country is the actual cost of the repair in accordance with DoD 7000.14-R, Financial Management Regulation (FMR), Volume 15, Chapter 7.

C25.16.1.2 Repair and Replace. Under the repair and replace program, the unserviceable item is returned to the repair activity and, if it can be economically repaired or overhauled, a replacement item is issued from the U.S. Military Service’s stocks. The country’s unserviceable item is repaired or overhauled and returned to the U.S. military service’s stocks. Under this program, countries are charged the estimated average cost of repairs (also referred to as net cost or exchange price).

C25.16.2. Repair Service Value. The repair service value is the cost to repair or replace an FMS-origin item returned by an FMS customer. The estimated or actual repair unit cost, as appropriate for the type of repair program, will be identified for use in specific business processes including status, shipment, and preparation of the
subsequent billing statement by Defense Finance and Accounting Services (DFAS). If actual cost varies among multiple items in a shipment, off-line manual processing may be used to communicate the applicable values.

C25.16.2.1. Supply Status. When supply status (DLMS 870S/DIC AE_) is provided in association with a repair or repair/replace program, the repair service unit cost will be provided in place of the unit cost for the NSN (MILSTRIP legacy rp 74-80).

C25.16.2.2. Materiel Release Order (MRO). When the repaired or replacement item is located in a DoD storage activity, the activity directing shipment must include the repair service unit cost on the release order (DLMS 940R/MILSTRIP legacy DIC A5_) so that it can be perpetuated to the shipment documentation. The Air Logistics Complex has comparable ability via direct interface with a shipping Distribution Depot; for non-Air Logistics Complex locations, offline communications will be required to convey the repair cost information to the depot.

C25.16.2.3. Shipment Document. The repair facility and/or the storage activity will include the estimated or actual repair service unit cost on the shipping document. This is required for U.S. Customs export purposes. For DoD storage activities, the repair service value will be perpetuated from the MRO and will be properly identified on the DD 1348-1A/2 (see Appendices 6.1, 6.35, and 8.48).

C25.17. RETURN OF DISCREPANT FOREIGN MILITARY SALES MATERIEL

C25.17.1. Discrepancies in FMS shipments are reported on a Supply Discrepancy Report (SDR) (via SF 364, Report of Discrepancy, or equivalent under DLMS), by the receiving FMS customer through the applicable ILCO. The required data entries and procedures for processing SDRs are provided in DLM 4000.25, DLMS Manual Volume 2, Chapter 17.

C25.17.2. When it is determined that materiel reported on an SDR is to be returned to U.S. supply systems stocks, the U.S. source of supply will provide the SDR reply to the applicable ILCO for distribution to the FMS customer. The source of supply or the applicable ILCO will prepare DD Form 1348-1A to be used to return the materiel. The prepared form will contain entries shown in Appendix 8.50. All DLA shipments resulting in an SDR due to a wrong item received will be returned to a CONUS DLA depot as part of the SDR process.

C25.17.3. The DTS will be used to return discrepant FMS materiel when appropriate. This can be accomplished in two ways:

C25.17.3.1. If a transshipment point has not been specified and the SAO has the capability/capacity to perform this function, the SAO will arrange for movement through the DTS.

C25.17.3.2. If a transshipment point has been designated, the transshipment point will arrange for movement through the DTS.
C25.17.3.3. The transshipment point should be a U.S. Activity located in the FMS country that submitted the SDR and/or be reasonably accessible to the FMS country.

C25.17.3.4. At a minimum, the transshipment point will provide legible copies of the signed DD Form 1348-1A (evidencing receipt) to the U.S. source of supply, the appropriate CR listed in the MAPAD, and, if requested, to the consignor. The latter two copies may be reproductions of the copy furnished to the source of supply.

C25.17.3.5. Coordination between the U.S. source of supply and the ILCO is required prior to initial designation as a transshipment point of an S/A other than that of the source of supply.

C25.17.3.6. When the DTS is not used for return of discrepant FMS materiel, the holding FMS country will arrange for movement through the FF/CR to the activity designated in Block 3 of DD Form 1348-1A. CONUS inland shipments will be effected by the use of a collect commercial bill of lading (CCBL). Reimbursement of transportation charges between the holding FMS country and the FF/CR will be requested by the CR to the U.S. supply source identified in the DD Form 1348-1A.

C25.17.3.7. Regardless of the method of transporting return-eligible discrepant FMS materiel, all shipments pursuant to these procedures must be completed within 180 days of the date of document preparation entered in Block 5 of the DD Form 1348-1A.

C25.18. FMS TRANSPORTATION. FMS transportation guidance may be found in the Security Assistance Management Manual (SAMM), DoD 5105.38M and the DTR 4500.9-R, Part II.

C25.18.1. FMS detention and demurrage charges are located in the Security SAMM, Chapter 7.

C25.18.2. FMS document retention requirements are defined in the DTR 4500.9-R, Appendix E, Paragraph Q.
C26. CHAPTER 26

CONTRACTOR ACCESS TO GOVERNMENT SOURCES OF SUPPLY

C26.1. GENERAL

C26.1.1. Purpose. This chapter prescribes policies and procedures for requisitioning government furnished materiel (GFM) by or for contractors from the DoD Supply System. These procedures establish guidelines for requisitioners, authorized contractors, and Services/Agencies (S/As) to obtain GFM from DoD inventories to fulfill contract requirements. These procedures also support the use of MILSTRIP requisitioning by authorized contractors to obtain materiel from Government supply sources to be used as contractor-furnished materiel (CFM) under controls established by the authorizing Component and as specified in this chapter. Basic MILSTRIP requisitioning procedures are documented in DLM 4000.25, Volume 2, Chapter 4; those procedures are augmented by this chapter to identify additional requirements associated with GFM and CFM.

C26.1.2. Transactions. This chapter addresses the procedures and applicable transactions relevant to requisitioning GFM and CFM. See the Defense Logistics Management Standards Program Office Website for available formats on the DLMS IC page. The corresponding MILSTRIP legacy 80 record position transaction functionality is also provided for ease of interpretation by DLMS users and to support those working in a legacy environment. In addition to the listed MILSTRIP legacy transactions, the DLMS formats may incorporate functionality to support Component-unique transactions as noted in the implementation convention.

C26.1.2.1. The Requisition Transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0). This transaction provides the functionality of MILSTRIP legacy Document Identifier Codes (DIC) A01, A02, A04, A05, A0A, A0B, A0D, and A0E.

C26.1.2.2. The Passing Order Transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code BM). This transaction provides the functionality of MILSTRIP legacy DIC A31, A32, A34, A35, A3A, A3B, A3D, and A3E.

C26.1.2.3. The Referral Order Transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code BN). This transaction provides the functionality of MILSTRIP legacy DIC A41, A42, A44, A45, A4A, A4B, A4D, and A4E.

C26.1.2.4. The Requisition Modification Transaction is identified by the DLMS 511M by beginning segment (1/BR02/020 Code AM). This transaction provides additional functionality for requisition modifications.

1 Procedures to control access to DoD materiel inventories by defense contractors last reported as not implemented by USA (Retail). Refer to Approved MILSTRIP Change Letter (AMCL) 1A.
the functionality of MILSTRIP legacy DIC AM1, AM2, AM4, AM5, AMA, AMB, AMD, and AME.

C26.1.2.5. The Requisition Follow-Up Transaction is identified by the DLMS 869F by beginning segment (1/BSI08/020 Code IN). This transaction provides the functionality of MILSTRIP legacy DIC AT1, AT2, AT4, AT5, ATA, ATB, ATD, and ATE.

C26.1.2.6. The Requisition Inquiry is identified by the DLMS 869A by beginning segment (1/BSI08/020 Code AF). This transaction provides the functionality of MILSTRIP legacy DIC AF1, AF2, AF3, AF4, AF5, AFC, AFY).

C26.1.2.7. The Requisition Supply Assistance Request is identified by the DLMS 869A by beginning segment (1/BSI08/020 Code AR). There is no equivalent MILSTRIP legacy DIC.

C26.1.2.8. The MCA Validation Request is identified by the DLMS 517G by beginning segment (1/BR02/20 Code GI). This transaction provides the functionality of MILSTRIP legacy DIC AX1.

C26.1.2.9. The MCA Validation Response is identified by the DLMS 517G by beginning segment (1/BR02/20 Code GA). This transaction provides the functionality of MILSTRIP legacy DIC AX2.

C26.1.2.10. The Supply Status Transaction is identified by the DLMS 870S by beginning segment (1/BSR01/020 Code 4). This transaction provides the functionality of MILSTRIP legacy DIC AE1, AE2, AE3, AE8, AE9, AEA, AEB, AED, and AEE.

C26.1.2.11. The Requisition Cancellation Transactions is identified by the DLMS 869C by beginning segment (1/BSI08/020 Code AC). This transaction provides the functionality of MILSTRIP legacy DIC AC1, AC2, AC3, AC4, AC5.

C26.1.2.12. The Follow-Up on Requisition Cancellation Request Transactions is identified by the DLMS 869C by beginning segment (1/BSI08/020 Code AC). This transaction provides the functionality of MILSTRIP legacy DIC AK1, AK2, AK3, AK4, AK5.

C26.1.2.13. The Shipment Status Transaction is identified by the DLMS 856S by beginning segment (1/BSN06/0200 Code AS). This transaction provides the functionality of MILSTRIP legacy DIC AS1, AS2, AS3, AS8, AU1, AU2, AU3, and AU8.

C26.1.2.14. The Materiel Obligation Validation Request Transaction is identified by the DLMS 517M by beginning segment (1/BR02/20 Code AN). This transaction provides the functionality of MILSTRIP legacy DIC AN1, AN2, AN3, AN4, AN5, AN9, and ANZ.

C26.1.2.15. The Materiel Obligation Validation Response Transaction is identified by the DLMS 517M by beginning segment (1/BR02/20 Code AP). This
transaction provides the functionality of MILSTRIP legacy DIC AP1, AP2, AP3, AP4, AP5, AP8, AP9, APR, and APX.

C26.1.2.16. The Post-Post Requisition/Referral Order Transaction identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0 or BM) with Action Code J. This transaction provides the functionality of legacy DIC C0A, C01, CQA, CQ1, or comparable Component-unique DIC.

C26.1.2.17. The Requisition/Referral Order Image Transaction identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0 or BM) with Action Code F1. This transaction provides the functionality of legacy DIC CHA, CH1, or comparable Component-unique DIC.

C26.1.3. Establishing a Management Control Activity. The S/As must assign a unique routing identifier code (RIC) and distribution code to each management control activity (MCA) validating GFM and CFM requisitions.

C26.1.4. Violations. Any attempt to circumvent MCA validation requirements is sufficient cause to refer the violation to the appropriate criminal investigating activity to determine possible fraud, waste, and abuse. The sponsoring Service/Agency must refer all violations to criminal investigators and the monitoring MCA based on reports of rejected transactions or violations discovered during the post validation process.

C26.2. APPLICABILITY

C26.2.1. These procedures apply to all contractors and all S/A activities requisitioning GFM or CFM from DoD sources of supply.

C26.2.2. Ammunition production is excluded from GFM control.

C26.3. PREPARATION OF REQUISITIONS AND RELATED TRANSACTIONS FOR GOVERNMENT MATERIEL FURNISHED TO CONTRACTORS

C26.3.1. Requisition Initiation. Requisitions for GFM may be initiated by the responsible S/A or, subject to the terms of the contract, by contractors. Requisitions for GFM will be prepared and initially submitted by GFM requisitioners, both contractors and S/As, using MILSTRIP transaction formats to the S/A MCA designated for monitoring the contract. Transmission through the Defense Automatic Addressing System (DAAS) will be utilized to the extent practical.

C26.3.2. Identifying Requisitions for GFM Controls. Requisitions and associated transactions containing an S/A code designated for contractors, as specified in Appendix AP7.2 (Department of Defense activity address code (DoDAAC) in the document number or ship-to DoDAAC), will be processed under GFM controls and restrictions except when the signal and fund codes indicate that the issue will be for CFM with contractor reimbursement by other than an Army contractor. All Army contractor requisitions and associated transactions must be processed under GFM controls.
C26.3.3. Required Information. In addition to normal requisition data, GFM requisitions, including Referral and Passing Orders will contain the following:

C26.3.3.1. RIC of the MCA monitoring the contract, (2/N101/70 Code Z5) (MILSTRIP legacy rp 4-6).

C26.3.3.2. For contractor generated requisitions, contractor DoDAAC in first six positions of document number. Document number DoDAAC perpetuated to the ordered by activity (1/N101/70 Code OB) (MILSTRIP legacy rp 30-35).

C26.3.3.3. For S/A generated requisitions for GFM, contractor ship-to DoDAAC (2/N101/70 Code ST) which may also be perpetuated to the supplementary address (2/LQ01/140 Code A9) based upon signal code usage (MILSTRIP legacy rp 45-50).

C26.3.3.4. When applicable, a signal code to indicate issue without reimbursement, (2/LQ01/140 Code DE) (MILSTRIP legacy rp 51).

C26.3.3.5. When applicable, a fund code to indicate issue without reimbursement, (2/FA201/286 Code B5) (MILSTRIP legacy rp 52-53).

C26.3.3.6. Contract Information. All GFM requisitions for or by contractors must identify the procurement instrument identifier (PIID) and other appropriate contract data, as required. Components authorizing GFM may direct the inclusion of the manufacturing directive number (MDN) as supplemental to the authorizing PIID.

C26.3.3.6.1. Identification of the PIID in 2/GF03/70. When GFM is authorized under a PIID call/order number (F in 9th position), provide the value in the PIID field. In MILSTRIP legacy, the last eight positions of the PIID are mandatory in rp 73-80.

C26.3.3.6.2. When applicable, provide the legacy call/order number associated with the PIIN, in 2/GF07/70, (MILSTRIP legacy rp 69-72). Leave blank when the call/order number is the PIID with ‘F’ in the 9th position.

C26.3.3.6.3. Identification of the contract line item number, (2/GF01/70 Code C7). There is no MILSTRIP legacy equivalent for the contract line item number.

C26.3.3.6.4. At the option of the S/A, a manufacturing directive number (MDN), (2/GF01/70 Code W3) (MILSTRIP legacy rp 54-56).

---

2 Use the legacy PIIN pending transition to the PIID. Refer to ADC 1161A.
3 Refer to ADC 1014. Staggered implementation is authorized for the transition to the mandatory inclusion of the PIID (rather than MDN as an alternative to the PIID).
4 Refer to ADC 1014. Staggered implementation is authorized for the transition to the full DFARS compliant PIID (rather than the abbreviated contract number authorized under legacy MILSTRIP procedures).
C26.3.3.7. GFM non-national stock number (NSN) requisitions are identified by the applicable code qualifier at 2/LIN02/100. In MILSTRIP legacy, they must be identified with an E in rp 68; the legacy call/order number, if appropriate, in rp 69-72; and the last eight positions of the PIID in rp 73-80 (the MDN is optional).

C26.4. SUBMISSION OF GOVERNMENT FURNISHED MATERIEL REQUISITIONS AND RELATED TRANSACTIONS

C26.4.1. Frequency of submitting GFM requisitions is the prerogative of the requisitioner. GFM requisitions will be submitted, when necessary, to meet contract requirements.

C26.4.2. Initiating activities must submit all GFM requisitions (DLMS 511R/MILSTRIP legacy DIC A0_) and associated GFM transactions, regardless of origin (such as contractor or S/A initiated) to the appropriate S/A MCA for validation.

C26.4.3. After validating the GFM requisitions, the MCA forwards validated requisitions to the inventory control point (ICP). The MCA may pass transactions internally when the MCA and ICP are collocated. The MCA will send the transactions via DAAS when the MCA and ICP are not collocated. In those instances where a Component is performing the procurement/contract writing for another Component that includes the authorization for a contractor to order or receive GFM (or Army CFM), the Component providing the procurement/contracting service and the Component requesting the contract will coordinate efforts to ensure the requesting Component’s MCA has access to the necessary contract and applicable contract modification information to perform its management control and accountability functions over Government supply system materiel access.

C26.4.4. Modifier transactions are authorized for GFM requisitions only to modify the project code, priority designator (PD), advice code, and the required delivery date (RDD). Modifiers may not be used to change the ship-to/bill-to information. Modifiers are subject to GFM controls and validation procedures.

C26.5. MANAGEMENT CONTROL ACTIVITY PROCESSING OF GOVERNMENT-FURNISHED MATERIEL REQUISITIONS AND RELATED TRANSACTIONS

C26.5.1. The MCA must receive and validate GFM Requisitions, Passing Orders, Referral Orders, Requisition Follow-Ups (DIC AT_), and Requisition Modifiers, based on the criteria furnished by procurement/contracting offices and as indicated in Table C26.T1. The MCA will make changes, reject, or continue the processing action on the GFM transactions. The MCA may also receive Supply Status, Shipment Status, Materiel Obligation Validation transactions, Requisition Inquiry/Supply Assistance Requests (DICs AF_, Requisition Cancellations, and Follow-Ups on Requisition Cancellation Requests. All other DLMS transactions and legacy DICs received by the MCA must be rejected with Status Code CR.

C26.5.2. The MCA will maintain requisition history files to serve as an auditable record of GFM transactions. In addition, the MCA will generate reports as required by
C26.5.3. Under emergency conditions, such as a potential contract work stoppage, the MCA may receive telephonic requisitions, with PDs 01-08, for GFM. When this occurs, the MCA may telephone the requisitions to the appropriate source of supply (SoS) and validate the requirements afterward. Additionally, if the requisition is processed as a post-post action and, therefore, bypassed MCA validation prior to order fulfillment, the SoS retains responsibility for ensuring MCA validation is accomplished. If the post validation process reveals that the requisitioner is not authorized GFM, the following actions must be taken:

C26.5.3.1. Submit cancellation requests to the appropriate SoS for any unshipped materiel.

C26.5.3.2. Advise the appropriate criminal-investigating agency for determination of fraud waste, and abuse.

C26.5.4. Upon completion of the validation process, the MCA will identify itself as the RIC-From organization in the transaction, make the following changes and forward the requisitions, or internal requisition transactions (optional only when the MCA and SoS are collocated in the same system), cancellations, follow-ups, requisition modifiers, passing orders, or referral orders to the applicable SoS through DAAS:

C26.5.4.1. Insert the RIC-To of the SoS.

C26.5.4.2. Insert the distribution code of the MCA validating the transaction.

C26.5.4.3. Perpetuate all applicable contract data. Under DLMS, the MCA must include the PIID. Where required by the Component, the MCA may also perpetuate the MDN consisting of the MCA’s distribution code and two other alpha/numeric characters as assigned.\(^5\)

C26.5.4.4. For MILSTRIP legacy transactions, delete the data in rp 69-80.

C26.5.5. MCAs in receipt of MCA Validation Request transactions will validate the data contained therein. This validation process must be completed and an MCA Validation Response transaction created and forwarded to the applicable SoS within 15 days of receipt of the MCA Validation Request transaction. The results of the validation will be documented in the MCA Validation Response as follows:

C26.5.5.1. If the requisition has been previously validated, cite Advice Code 2M.

---

\(^5\) Refer to ADC 1014. Staggered implementation is authorized for the transition to the full DFARS compliant PIID (rather than the abbreviated contract number authorized under legacy MILSTRIP procedures) and for the transition to the mandatory inclusion of the contract number (rather than MDN as an alternative to the PIID).
C26.5.5.2. If the requisition has not been previously validated and the *legacy* call/order number/PIID (or MDN and/or CLIN, if required by the Component in addition to the *legacy* call/order number) is not present, cite Advice Code 2U.

C26.5.5.3. If the requisition has not been previously validated and the call/order number/PIID is present, validate the data elements as indicated in Table C26.T1, and generate the MCA Validation Response as follows:

C26.5.5.3.1. If the validation process reveals that the contract is not valid, respond with Advice Code 2U.

C26.5.5.3.2. If the validation process reveals that the requested quantity exceeds the contract authorized quantity, respond with Advice Code 2R and indicate the quantity approved for issue.

C26.5.5.3.3. If the validation process reveals that the requested quantity exceeds the contract authorized quantity, respond with Advice Code 2Q and indicate the total quantity is disapproved for issue.

C26.5.5.3.4. If the validation process reveals that the requested item, or contractor is not authorized GFM under a valid contract, respond with Advice Code 2V.

C26.5.5.3.5. If the validation process reveals that the requested item is authorized, respond with Advice Code 2M.

C26.5.6. MCAs in receipt of Supply Status with Status Code BF from the SoS will review for establishment of a valid requisition. If a valid requisition exists, a Requisition Follow-Up (MILSTRIP legacy DIC AT_) transaction will be generated. If a valid requisition does not exist, a report will be generated for internal review. Subsequent receipt of a valid requisition will be processed under the procedures/validation process indicated in Table C26.T1.

(If requisition originated in the MILSTRIP legacy format, then only the last eight positions of the PIID are mandatory.) When the procurement instrument is issued under the PIID call/order number (F in 9th position), this value must be provided in the PIID field.</td>
</tr>
</tbody>
</table>

**C26.6. SOURCE OF SUPPLY PROCESSING OF GOVERNMENT-FURNISHED MATERIEL REQUISITIONS AND RELATED TRANSACTIONS**

C26.6.1. An SoS receiving GFM requisitions, requisition modifiers, passing orders, referral orders, requisition follow-ups, and requisition cancellations, regardless of the method of transmission, will process such transactions under GFM procedures. A SoS in receipt of GFM requisitions for items not managed by their activities will reject the

---

6 Staggered implementation authorized; refer to ADC 1123. Pending implementation by all Services and Agencies, Army contractor requisitions for CFM will be forwarded for MCA validation except as noted in paragraphs C26.7.4. (for Army retail) and C26.8.2. (for use of the DAAS CFM Authorized Materiel Table).
requisitions with Status Code CH. The SoS will edit the GFM transactions for the
prescribed data elements and codes and correct, continue processing actions, or
provide the appropriate reject status.

C26.6.2. The SoS will validate all GFM transactions. The SoS in receipt of
requisitions, passing orders, referral orders, requisition modifiers, or requisition follow-
ups being treated as requisitions, containing a contractor’s Service/Agency code under
Appendix AP7.2, will perform the SoS/MCA validation process. (The SoS/MCA
validation process is not required when an internal requisition transaction is received
from a collocated MCA in the same system. However, the SoS must have safeguards
in place to ensure that only internal transactions generated by the collocated MCA are
accepted/processed.)

C26.6.3. Under emergency conditions, the SoS may receive telephonic
requisitions (PD 01-08) from the MCA or requisitioner. The SoS may process these
requisitions for immediate supply action. Subsequent to taking immediate supply
action, the MCA validation process will be performed. If the MCA Validation Response
is not received within 15 days of the MCA Validation Request or the advice code
indicates that the transaction is not authorized, refer the incident to the appropriate
criminal investigating agency.

C26.6.4. The SoS/MCA validation process is as follows:

C26.6.4.1. For each GFM requisition or transaction that is treated as a
requisition, the SoS will employ one of the following options:

C26.6.4.1.1. Create and forward an MCA Validation Request to the
MCA identified by RIC or distribution code in the requisitioners transaction. If the MCA
RIC and distribution code are not provided or invalid, reject with Status Code CL.

C26.6.4.1.1.1. If the requisitioners transaction contains a
distribution code but no MCA RIC, DLMS compliant sources of supply will use a DLMS
enhancement to address the MCA Validation Request to DAAS. DAAS (RIC SGA) will
be identified as the RIC-To.

C26.6.4.1.2. Create and forward an MCA Validation Request to DAAS
regardless of an MCA RIC or distribution code contained in the requisitioners
transaction. DAAS will perform edits regarding validity of the data.

C26.6.4.1.3. Use a combination of the above options: one for intra-
Component transactions and one for inter-Component transactions.

C26.6.4.2. Suspend further supply support action on the requisitioners
transaction pending receipt of the MCA Validation Response or until 15 days have
elapsed from the date of the MCA Validation Request, whichever occurs first.
C26.6.4.3. If the MCA Validation Response is not received and 15 days have elapsed, reject the requisitioners transaction with Status Code DR.

C26.6.4.4. Upon receipt of the MCA Validation Response, the SoS will process the suspended transaction using instructions provided by the advice or status code.

C26.6.4.4.1. If the Advice Code is 2U, reject with Status Code DB.

C26.6.4.4.2. If the Advice Code is 2R, process for the approved quantity indicated in the MCA Validation Response. Reject the quantity difference between the suspended transaction and the MCA Validation Response with Status Code DJ.

C26.6.4.4.3. If the Advice Code is 2Q, reject with Status Code DQ.

C26.6.4.4.4. If the Status Code is CL, reject with Status Code CL.

C26.6.4.4.5. If the Advice Code is 2V, reject with Status Code DN.

C26.6.4.4.6. If the Advice Code is 2M, process under applicable SoS procedures.

C26.6.4.4.7. If neither advice nor status code is provided or is invalid, reject with Status Code DR.

C26.6.4.5. If an MCA Validation Response is received and there is a record of the requisition, but an MCA Validation Request has not been submitted, discard the MCA Validation Response and generate an MCA Validation Request to initiate the validation process.

C26.6.4.6. If an MCA Validation Response is received and there is no record of the requisition, generate a Supply Status with Status Code BF.

C26.6.5. Follow-ups will be processed to determine the current status of previously submitted requisitions or cancellation requests. Time standards for dispatching status in reply to follow-ups are as indicated in Chapter 4, Paragraph C4.7.20.1.

C26.6.6. Requisition/referral order image transactions provided to DAAS for visibility/record history must contain GFM/CFM contract data as applicable.

C26.7. DEFENSE AUTOMATIC ADDRESSING SYSTEM PROCESSING OF GOVERNMENT-FURNISHED MATERIEL TRANSACTIONS

C26.7.1. DAAS will pass all GFM requisitions and related transactions to the identified MCA using the MCA RIC or distribution code provided in the transaction. If the RIC and the distribution code do not identify an established MCA reject with Status Code CL.
C26.7.2. DAAS will pass all MCA Validation Requests to the identified MCA using the MCA RIC or distribution code provided in the transaction. If the MCA is invalid, generate an MCA Validation Response with Status Code CL to the SoS. If the MCA Validation Request does not include the MCA RIC, DAAS will populate the MCA RIC (or DoDAAC) based upon the distribution code and forward the transaction accordingly.

C26.7.3. DAAS will pass all MCA Validation Responses to the SoS.

C26.7.4. **DAAS Special Processing for Army.**\(^7\)\(^8\) Pending implementation of MCA procedures in Army systems, DAAS will assist the Army by performing the MCA Validation Request/Response requirement for the Army wholesale MCAs and recording all transactions into a history file for eventual processing to the appropriate MCA using the following procedures:

C26.7.4.1. Process all Army contractor identified requisitions (MILSTRIP legacy DIC A0_) with the below listed first two positions of the DoDAAC in the document number or ship-to DoDAAC to the applicable Army MCA. Contractor requisitions with other than the DoDAAC entries indicated are considered Army retail and will be routed to the proper SoS with the DAAS RIC SGA or SHA identified as the MCA.

C26.7.4.1.1. If the first two positions of the document number or ship-to DoDAAC are CB, pass to RIC A81 (TACOM MCA)

C26.7.4.1.2. If the first two positions of the document number or ship-to DoDAAC are CL, pass to RIC A82 (AMCOM MCA).

C26.7.4.1.3. If the first two positions of the document number or ship-to DoDAAC are CG, pass to RIC A83 (CECOM MCA).

C26.7.4.1.4. If the first two positions of the document number or ship-to DoDAAC are CM, pass to RIC A84 (TACOM MCA)

C26.7.4.1.5. If the first two positions of the document number or ship-to DoDAAC area CK, pass to RIC A85 (TACOM MCA).

C26.7.4.1.6. If the first two positions of the document number or ship-to DoDAAC are CH, pass to RIC A86 (AMCOM MCA)

C26.7.4.2. For Requisition Modification and Requisition Follow-Up transactions containing a valid MCA distribution code as identified below, the DAAS RIC SGA or SHA will be entered into the MCA field and routed to the appropriate SoS. If a valid MCA is not identified and the transaction contains the entries cited above in the first two positions of the document number or ship-to DoDAAC, the transaction will be

---

7 Procedures to control access to DoD material inventories by defense contractors last reported as not implemented by USA (Retail). Refer to AMCL 1A.
8 DAAS special processing for Army to be terminated upon full implementation of MCA validation. Refer to ADC 1123.
passed to the appropriate MCA. If none of these conditions apply, the transaction will be considered retail and be routed to the appropriate SoS with the DAAS RIC SGA or SHA entered into the MCA field. The following are valid MCA distribution codes:

C26.7.4.2.1. I (India) - TACOM MCA  
C26.7.4.2.2. L (Lima) - AMCOM MCA  
C26.7.4.2.3. P (Papa) - CECOM MCA  
C26.7.4.2.4. S (Sierra) - TACOM MCA  
C26.7.4.2.5. Y (Yankee) - TACOM MCA  
C26.7.4.2.6. E (Echo) - AMCOM MCA  
C26.7.4.2.7. 8 (Eight) - USACEA MCA

C26.7.4.3. Upon receipt of an MCA Validation Request transaction, an MCA Validation Response transaction will be generated with Status Code 2M and returned to the RIC of the SoS submitting the MCA Validation Request transaction.

C26.8. CONTRACTOR REQUISITIONS FOR CONTRACTOR-FURNISHED MATERIEL

C26.8.1. Requisitions for materiel from a Government SoS for shipment to contractors that identify the contractor as the bill-to activity are subject to MCA controls. Pending full implementation by Services/Agencies, this requirement must be applied to Army contractor requisitions and may be applied to other Services/Agencies as this functionality is adopted within SoS systems. DAAS will validate transactions for Army contractor requisitions of CFM for those items that contractors are authorized to requisition as CFM as specified in this chapter, and for non-wholesale level supply as designated by the contractor-series DoDAAC. Pending full implementation of MCA validation for CFM, DoD Components will establish appropriate procedures for oversight of CFM requisitions in accordance with the Federal Acquisition Regulation. To support staggered implementation of full CFM validation, DoD Components authorizing CFM will advise contractors to construct requisitions using required data content comparable to GFM requisitions.

C26.8.2. DAAS Processing of CFM Transactions. The process described in this paragraph provides mandatory CFM controls for CFM requisitions where the bill-to activity, as identified in the requisition, is an Army contractor and the SoS is DLA. Upon

---

9 Staggered implementation authorized; refer to ADC 1123.
10 CFM requisitions are required to have data content comparable to GFM requisitions by January 1, 2017. Refer to ADC 1123.
full implementation of MCA validation for CFM, the following special DAAS processing procedures will be terminated; CFM will be validated in the same manner as GFM.\textsuperscript{11}

C26.8.2.1. DAAS will maintain a list of Service/Agency authorized contractor DoDAACs and the associated NSNs/DoD-managed part numbers for which these contractors may submit CFM requisitions on a CFM Authorized Materiel Table for use in validating requisitions regardless of method of payment.

C26.8.2.2. CFM contractor transactions that match the CFM Authorized Materiel Table by DoDAAC, but do not match by NSN or part number will be rejected with Status Code CL; requisitions that match on DoDAAC and NSN/part number will be processed as valid.

C26.8.2.3. DAAS will enter the DAAS RIC SGA or SHA as the validating MCA.

C26.8.2.4. DAAS will perform the MCA Validation Request/Response validation requirement for authorized CFM requisitions that match the CFM Authorized Materiel Table.

C26.8.2.5. DAAS will furnish CFM reports upon request for use by the contracting officer in verifying that quantities ordered are within the contract allowance.

C26.8.2.6. Army contractor requisitions that do not match the CFM Authorized Materiel Table will be processed by DAAS under the MCA waiver exception process or passed to the applicable MCA as described in C26.7.4.

C26.8.2.7. For DLA CFM, DAAS processing will be as identified in C26.8.3.

C26.8.2.8. CFM requisitions for other Service contractors will be passed to the appropriate SoS.\textsuperscript{12}

C26.8.2.9. NSNs listed in the CFM Authorized Materiel Table may be modified over the course of this agreement when the appropriate Army contracting officer provides such authority. Updates to the authorized list will be collected, consolidated into one Microsoft Excel file by the designated DLA Lead Center point of contact with proof of Army Contracting Officer concurrence and provided to Headquarters DLA Army Performance Based Logistics (PBL) action officer. DLA will coordinate updates to individual contractor lists with DLA DoD EMall and DAAS on a monthly basis. To optimize program changes, all additions to Army partnership lists will be made during an agreed-to monthly timeframe between DLA and support entities.

\textsuperscript{11} Refer to ADC 1123.

\textsuperscript{12} Staggered implementation is authorized for Service generation of outgoing requests for MCA validation for CFM. In order to support staggered implementation, Services must be able to respond to incoming requests for MCA validation beginning January 1, 2017. Refer to ADC 1123.
C26.8.3. **DAAS Processing of DLA CFM Transactions**

C26.8.3.1. DAAS is required to edit all incoming requisition, requisition modification, and requisition follow-up transactions containing a U-series contractor DoDAAC as the bill-to activity, to ensure the transaction contains a valid DLA MCA. If the transaction does not contain a valid DLA MCA, DAAS will reject the transaction using status code CL.

C26.8.3.2. If the transaction contains a valid DLA MCA, DAAS will route/pass the transaction based upon established DAAS rules to the appropriate SoS for further processing.

C26.9. **PREPARATION OF DOD EMALL REQUISITIONS BY CONTRACTORS.**

C26.9.1. **Account Setup.** Authorized contractors may establish DoD EMALL accounts to facilitate materiel requisition submissions. To register, go to the EMALL site and click on “New User Registration”. Access to DoD EMALL is fully Common Access Card (CAC)/Public Key Infrastructure (PKI) enforced. Details of the access requirements are listed on the registration pages of the EMALL site. Prior to establishing the account, the applicable contracting officer must ensure that the contractor is authorized access to Government supply sources and must agree to review monthly or quarterly reports prepared by the DoD EMALL monitoring contractor activity. The applicable contracting officer must also provide a list of approved NSN/part numbers associated with each account/contractor DoDAAC for Army authorized CFM. Pending full implementation of MCA validation for CFM, Army Contractors requisitioning from DoD supply sources will be processed under MCA validation controls.

C26.9.2. **Contractor GFM/CFM Validations.** DoD EMALL will validate that contractors are authorized to purchase materiel from DoD supply sources as a prerequisite for submission of EMALL orders.

C26.9.2.1. DoD EMALL requisitions for GFM will be subjected to prescribed rules for MCA controls within DoD EMALL or within DAAS.

C26.9.2.2. DoD EMALL CFM requisitions indicating corporate credit card method of payment are subject to special processing controls as described in C26.9.3.

C26.9.2.3. Additionally, CFM requisitions for Army authorized contractors will be validated to ensure that requisitioned NSNs or DoD managed part numbers are authorized regardless of the method of payment under CFM controls.

C26.9.3. **Corporate Credit Card Usage.**

---

13 Special processing unique to validation of contractor requisitions submitted via DoD EMALL will be terminated upon full implementation of MCA validation. Staggered implementation authorized. Refer to ADC 1123.
C26.9.3.1. The DoD EMALL program office will identify to DAAS all contractors authorized access to Government materiel for purchase as CFM using a corporate credit card as the method of payment.

C26.9.3.2. DAAS will maintain these DoDAACs as an authorized contractor edit table (referenced hereafter as the DoD EMALL CFM Table) to be employed during initial processing and for MCA Validation Request processing.

C26.9.4. Corporate Credit Card CFM Purchases and DAAS Processing. DoD EMALL requisitions for shipment to contractors using corporate credit card payment are assigned Signal Code B, Fund Code XP, and the ship-to DoDAAC perpetuated to the supplementary address of the DoD EMALL DoDAAC (SC4210). This configuration identifies a Government DoDAAC as the bill-to activity, thereby triggering DAAS and the DoD Component SoS processing systems to misinterpret such transactions as GFM requisitions.

C26.9.4.1. DAAS will validate these transactions against existing GFM edits and the DoD EMALL CFM Table to determine appropriate action.

C26.9.4.2. If the contractor requisition does not contain a valid MCA identification code and the DoDAAC is not listed in the DoD EMALL CFM Table, DAAS will reject with Status Code CL.

C26.9.4.3. If an MCA is identified by either a distribution code or a RIC, DAAS will forward the requisition to the SoS.

C26.9.4.3.1. The SoS will submit an MCA Validation Request to DAAS for validation following GFM MCA procedures (including Army CFM).

C26.9.4.3.2. DAAS will recognize the EMALL supplementary address and again employ existing GFM edits and the DoD EMALL CFM Table to take appropriate action.

C26.9.4.3.3. If the validation using the DoD EMALL CFM Table identifies the contractor DoDAAC as authorized by the contracting officer for ordering CFM using corporate credit cards, then DAAS will validate the requisition and respond to the SoS with an MCA Validation Response using Advice Code 2M indicating that the requisition is valid. The SoS will continue processing.

C26.9.4.3.4. If the contractor DoDAAC is not contained on the DoD EMALL CFM Table, but the requisition contains a valid MCA code, then DAAS will forward the MCA Validation Request to the MCA for validation.

C26.9.4.3.5. If the contractor DoDAAC is not contained on the DoD EMALL CFM Table or does not match the CFM Authorized Materiel Table, when applicable, and the requisition does not contain a valid MCA code, then DAAS will provide an MCA Validation Response with Status Code CL indicating that the transaction is invalid. The SoS will reject the requisition.
C26.9.4.4. For DLA contractor credit card purchases (identified by a DLA-assigned U-series DoDAAC in the document number), DAAS processing rules will be as described in this paragraph, except that the requisition will be validated against the DLA ICP MCA Table.

C26.9.5. DoD EMALL Reports. To support DoD requirements for oversight of materiel sold to contractors, the DoD EMALL program office will provide reports to monitor contractor activity. For contracts having a maximum total dollar ceiling, a DoD EMALL report will be provided to the contracting officer when the cumulative value of CFM ordered reaches 80 percent of the ceiling.

C26.10. INVENTORY CONTROL POINT/INTEGRATED MATERIEL MANAGER-DIRECTED SHIPMENT OF NON-REQUISITIONED GOVERNMENT FURNISHED MATERIEL BASED ON A BILL OF MATERIEL.

C26.10.1. ICP/integrated materiel manager (IMM)-directed shipments of GFM may be managed through the use of a bill of materiel (BOM) as identified under the terms of the DoD contract. In this context, the BOM identifies the raw materials/component parts needed to assemble/manufacture/repair the end item or final product. Based on the unit of allowance, the number/amount of GFM component materiel needed to accommodate the total number of end items to be manufactured/assembled/repaired on a specific contract/purchase order may be calculated and provided. This procedure eliminates the need for separate GFM requisitions for the component materiel and subsequent MILSTRIP MCA validation. Instead, this process allows the ICP/IMM to push the materiel to the contractor as required by schedule and/or usage.

C26.10.2. Upon contract award for production of an end item or final product, the BOM becomes the basis for determining the quantity of GFM required by the contractor. These deliveries will only include stocked raw material/component parts that the Government provides at no separate charge to the contractor for assembly/manufacture of the end item/final product. Under this process, the ICP/IMM will use internal control procedures to monitor consumption of raw material/component parts against the receipt of items awarded by contract.

C26.10.3. The ICP/IMM will prepare materiel release orders for stock shipment using document numbers based upon a DLA-established DoDAAC. The ship-to location cited in the release order will identify the contractor DoDAAC authorized to receive GFM. Under DLMS processing, the Materiel Release Order will include the authorizing PIID \(^\text{14}\), and CLIN, when applicable; this is not applicable to MILSTRIP legacy processing. When a PIID call/order number (F in 9th position) is used, provide the value in the PIID field. The storage activity will provide shipment confirmation to the ICP/IMM for monitoring GFM shipments and will prepare shipment status; under DLMS processing, the shipment status will perpetuate applicable contract data. For contractors without capability to accept legacy 80 record position/DLMS

\(^{14}\) Use the legacy PIIN pending transition to the PIID. When using the PIIN, may include the four-position call/order number. Refer to ADC 1161A.
transactions, status of the GFM component delivery will be provided upon request by the contractor. The assembled/manufactured end items may be shipped directly to customers or shipped to a storage location for future use.

C26.10.4. Use of the above business process does not relieve the ICP/IMM from management reporting requirements required by DoDM 4140.01, DoD Supply Chain Materiel Management Procedures. Materiel Receipt Acknowledgement is required for GFM, including pushed shipments, under MILSTRAP procedures.

C26.10.5. This process is discretionary and may not be applicable to all commodities and contracts requiring GFM. This process may only be used to support GFM requirements satisfied by the DoD Component issuing the contract (that is, by design, it does not support inter-Component materiel support).
C27. CHAPTER 27

MASS OR UNIVERSAL CANCELLATION OF REQUISITIONS

C27.1. GENERAL

C27.1.1. Purpose. This chapter provides procedures for the request, generation, submission, and processing of mass and universal cancellations of requisitions. It also provides procedures for the disposition of frustrated shipments and materiel resulting from mass and universal cancellation actions.

C27.1.2. Transactions

C27.1.2.1. Request for Mass Cancellation of Requisitions Transaction is identified by the DLMS 869C by beginning segment (1/BSI08/20 Code AC and 1/BSI09/20 Code AW).\(^1\) This transaction provides the functionality of the MILSTRIP Mass Cancellation Message (See Appendix 6.23). There is no MILSTRIP legacy document identifier code (DIC) equivalent.

C27.1.2.2. Request for Universal Cancellation of Requisitions Transaction is identified by the DLMS 869C by beginning segment (1/BSI08/20 Code AC and 1/BSI09/20 Code C).\(^2\) This transaction provides the functionality of the MILSTRIP Universal Cancellation Message (See Appendix 6.23). There is no MILSTRIP legacy DIC equivalent.

C27.1.2.3. Requisition Modification Transaction is identified by the DLMS 511M by beginning segment (1/BR02/020 Code AM). This transaction provides the functionality of MILSTRIP legacy DIC AM1, AM2, AM4, AM5, AMA, AMB, AMD, and AME.

C27.1.2.4. Materiel Release Order Modification Transaction is identified by the DLMS 940R by beginning segment (1/W0506/0200 Code NA and 1/W0507/0200 Code 2). This transaction provides the functionality of passing the MILSTRIP legacy DIC AM1, AM2, AM4, AM5, AMA, AMB, AMD, and AME from the source of supply (SoS) to the storage activity.

C27.1.2.5. Disposal Release Order Modification Transaction is identified by the DLMS 940R by beginning segment (1/W0506/0200 Code NE and 1/W0507/0200 NE).

---

\(^1\) Mass cancellation and follow-on transactions are DLMS enhancements. Refer to ADC 1132. Delayed implementation authorized.

\(^2\) Universal cancellation and follow-on transactions are DLMS enhancements. Refer to ADC 1132. Delayed implementation authorized.
C27.1.2.6. Inventory Control Point Requisition Modification Transaction is identified by the DLMS 511M by beginning segment (1/BR02/020 Code AM and 1/BR06/020 Code 2). This transaction provides the functionality of MILSTRIP legacy DIC AMJ.

C27.1.2.7. Universal Requisition Cancellation to Storage Activity Transaction is identified by the DLMS 940R by beginning segment (1/W0506/0200 Code ND) and DIC AC7 (2/LQ01/1300 Code 0). This transaction provides the functionality of MILSTRIP legacy DIC AC7.

C27.1.2.8. Universal Requisition Cancellation to Procurement Activity Transaction is identified by the DLMS 869C by beginning segment (1/BSI08/20 Code AC and 1/BSI09/20 Code C) and DIC ACM (2/LQ01/180 Code 0). This transaction provides the functionality of MILSTRIP legacy DIC ACM.

C27.1.2.9. Mass Requisition Cancellation to Storage Activity Transaction is identified by the DLMS 940R by beginning segment (1/W0506/0200 Code ND) and DIC AC6 (2/LQ01/1300 Code 0). This transaction provides the functionality of MILSTRIP legacy DIC AC6.

C27.1.2.10. Mass Requisition Cancellation to Procurement Activity Transaction is identified by the DLMS 869C by beginning segment (1/BSI08/20 Code AC and 1/BSI09/020 Code AW) and DIC ACP (2/LQ01/180 Code 0). This transaction provides the functionality of MILSTRIP legacy DIC ACP.

C27.1.2.11. Follow-Up to Storage Activity for Mass/Universal Requisition Cancellation Transaction is identified by the DLMS 940R by beginning segment (1/W0506/0200 Code ND and 1/W0507/0200 Code 82). There is no MILSTRIP legacy equivalent DIC.

C27.1.2.12. The Supply Status Transaction is identified by the DLMS 870S by two different beginning segment (1/BSR01/020) Transaction Type Codes.

C27.1.2.12.1. Transaction Type Code 4 – Response to Requisition. This transaction provides the functionality of MILSTRIP legacy DIC AE1, AE2, AE3, AE8, AE9, AEA, AEB, AED, and AEE.

C27.1.2.12.2. Transaction Type Code 5 – Notice of Response to Direct Vendor Delivery. This transaction provides the functionality of MILSTRIP legacy DIC AB1, AB2, AB3, and AB8.

C27.1.2.13. The Reply to Cancellation Request – Shipment Status is identified by the DLMS 856S by beginning segment (1/BSN06/0200 Code AS) and DICs AU1, AU2, AU3, AU4, AU5, AU8 (2/LQ01/3500 Code 0). This transaction provides the functionality of MILSTRIP Legacy DIC AU1, AU2, AU3, AU4, AU5, and AU8.
C27.1.2.14. The Reply to Cancellation Request – Materiel Release Confirmation is identified by the DLMS 945A by beginning segment (1/W0611/0200 Code NJ). This transaction provides the functionality of MILSTRIP Legacy DIC AU0, AUA, and AUB.

C27.1.2.15. The Reply to Cancellation Request is identified by the DLMS 945A by beginning segment (1/W0611/20 Code NR). This transaction provides the functionality of MILSTRIP Legacy DIC AG6.

C27.1.2.16. The Storage Activity Supply Status is identified by the DLMS 945A by beginning segment (1/W0611/20 Code NL). This transaction provides the functionality of MILSTRIP Legacy DIC AE6.

C27.2. APPLICABILITY

C27.2.1. Events such as base closures, termination of special projects, ship and unit inactivation, termination of agreements, and termination of vessel outfitting or construction can necessitate the requirement for mass or universal cancellation.

C27.2.2. Although these events may ultimately require mass or universal cancellation action, they are normally known to the affected activities well in advance of the effective date of such closures or termination action. In these instances, every effort will be made by the requisitioning activity to minimize the continued processing of requisitions by the sources of supply (SoS), and the subsequent entry of unwanted shipments into the Defense Transportation System (DTS), through initiation and processing of single line-item cancellations (See Chapter 4).

C27.2.3. When a total project (or total requirement for a single base) is no longer required and should be canceled and it is known that insufficient time remains to permit continued cancellation on a single line basis, a mass cancellation or universal cancellation request may be initiated.

C27.2.3.1. A mass cancellation permits continued supply action and shipment processing for selected requisitions.

C27.2.3.2. A universal cancellation serves to terminate all such processing, even requisitions previously identified for continued supply action and shipment processing under mass cancellation situations.

C27.2.3.3. Under extreme conditions, a mass cancellation may be superseded by a universal cancellation.

C27.2.4. Requisitions that require continued supply action and shipment processing under mass cancellation situations must be identified by the requiring
activity at the earliest date through submission of a Requisition Modification (DLMS 511M) citing Special Requirements Code 555³.

C27.2.4.1. The requisition may not be modified to cite Special Requirements Code 555 after the effective date of the requested mass cancellation; however, requisition modifications submitted to change other data elements when the Special Requirements Code 555 was previously entered must perpetuate the Special Requirements Code 555.⁴

C27.2.4.2. Requisitions containing, or modified to contain, Special Requirement Code 555 will receive processing precedence under Chapter C4.

C27.2.5. When a universal cancellation is initiated to supersede a mass cancellation and there are outstanding requisitions or requisition modifications citing Special Requirements Code 555, the SoS will provide a Universal Requisition Cancellation to Storage Activity (DLMS 940R/DIC AC7) or a Universal Requisition Cancellation to Procurement Activity (DLMS 869C/DIC ACM) for all outstanding requisitions, regardless of the presence of a Special Requirements Code 555.

C27.3. INITIATION OF MASS OR UNIVERSAL CANCELLATION OF REQUISITIONS

C27.3.1. Only designated personnel within an organization may initiate requests for mass or universal cancellation of requisitions. The Component’s requisitioning system will ensure that only authorized users initiate these requests. If there are any questions regarding the authenticity of a mass/universal cancellation, contact either the Component Supply PRC Representative or the customer support representative for the source of supply. Component Supply PRC Representatives are identified on the DLMS Website on the Supply Committee page. The mass or universal cancellation request will be accomplished by preparation of the DLMS 869C or the message format reflected in Appendix AP6.23.

C27.3.1.1. Inter-Component dissemination of requests for mass or universal cancellation must be coordinated in advance to determine if the DLMS 869C or message format will be used. If using the message format, the requesting Component must identify the authorized recipient from the Component to process the mass or universal cancellation. If it is not known, contact either the Component’s Supply PRC representative or the customer support representative for the source of supply to identify the point of contact.

C27.3.1.2. Intra-Component dissemination of requests for mass or universal cancellations must be performed by the authorized Component contact point. Intra-Component dissemination will include all Component supply sources, storage sites, and other activities within the DoD Component processing MILSTRIP documentation or shipments with capability to cancel requisitions or divert shipments. In addition, the

---

³ Code 555 identified in the required delivery date field for MILSTRIP legacy transactions.
⁴ Revised requisition modifier procedures last reported as not implemented by U.S. Marine Corps (USMC). Refer to Approved MILSTRIP Change Letter (AMCL) 123C.
designated Component contact points must ensure that the appropriate overseas theater, force, logistics, or type commanders are cognizant of mass or universal cancellation actions affecting their areas of responsibility.

C27.3.2. Due to the requirement to ensure that mass/universal cancellation requests are only initiated by authorized personnel, these cancellations must not be initiated through use of DOD EMALL, or its replacement system FEDMALL.

C27.3.3. **Required Data Content.** Requests for mass or universal cancellation action will be submitted to the applicable SoS for cancellation of all open requisitions applicable to specific projects or bases. The request for mass or universal cancellations will contain identification of the activity submitting the request, the effective date, and the required codes for identification of one of the following, for which cancellation of all applicable requisitions is requested:

- **C27.3.3.1.** One Project code and one ship-to DoDAAC
- **C27.3.3.2.** No project code and one ship-to DoDAAC
- **C27.3.3.3.** One project code and multiple ship-to DoDAACs
- **C27.3.3.4.** No project code and multiple ship-to DoDAACs
- **C27.3.3.5.** Multiple project codes and one ship-to DoDAAC
- **C27.3.3.6.** Federal supply classification (FSC), national stock number (NSN), local stock number (LSN), or CAGE/part number when associated with the address of the original requisition document number ship-to address and/or project code.

C27.3.4. Customers retain the authority to submit single line-item cancellation requests via DLMS 869C/DICs AC1/AC2/AC3 at any time before, during, or after the mass cancellation effective date.

C27.4. **CONTINUING HIGH PRIORITY DEMANDS DURING A MASS CANCELLATION**

C27.4.1. A need may exist to continue the processing of certain requisitions and shipments during mass cancellations such as high priority demands to satisfy not mission capable supply (NMCS) conditions (identified by Special Requirements Code 999 or N in the requisition). In addition, a need may exist to allow continued processing of requisitions for materiel required to effect base closure. In these instances, submit a requisition modification citing Special Requirements Code 555 to the SoS prior to the submission of the mass cancellation request. For Security Assistance, use of Special Requirements Code 555 is restricted to approved cooperative logistics supply support arrangement (CLSSA) requisitions with Type of Assistance Code U or V (the buying government has made cash payment to buy equity in DoD stocks). Sources of supply will not cancel requisitions that have been modified to contain Special Requirements Code 555 during a mass cancellation process. If submitting the mass cancellation
request via offline message, then cite one of the following selective criteria in the special instructions segment of the message:

C27.4.1.1. Project code(s) when associated with the ship-to DoDAAC being canceled

C27.4.1.2. Special Requirements Code 999 or N when associated with the ship-to DoDAAC being canceled

C27.4.1.3. FSC, NSN, or CAGE/part number when associated with the ship-to DoDAAC being canceled

C27.4.1.4. Specific requisition document number(s) and routing identifier code (RIC)-From the status received or the RIC-To which the requisition has been transmitted if status has not been received

C27.4.1.5. Specific priority designator (PD) when associated with the ship-to address DoDAAC being canceled

C27.4.1.6. Required delivery period (RDP) when associated with the ship-to address DoDAAC being canceled - conventional ammunition only.5

C27.4.2. Upon receipt of Requisition Modifications citing continued processing action during a mass cancellation, SoS, storage activities, and procurement sources must annotate the affected requisition(s) and all associated transactions/records with Special Requirements Code 555.

C27.4.3. Upon receipt of either the Request for Mass Cancellation transaction or the offline Mass Cancellation message citing selective criteria for continued processing action in the special instructions segment, the SoS must review all prospective cancellations to identify those for which continued processing has been requested. For continued processing of requisitions at storage activities, the SoS will provide a Materiel Release Order Modification (for MILSTRIP legacy processing, pass the Requisition Modification) to the Storage Activity. In the case of items scheduled for direct vendor delivery, the SoS must forward ICP Requisition Modifications (DIC AMP) to procurement sources.

C27.4.4. The DTS will continue movement of materiel to which Special Requirements Code 555 has been applied except when a universal cancellation has been announced.

C27.5. SOURCE OF SUPPLY PROCESSING MASS OR UNIVERSAL CANCELLATION REQUESTS

5 Use of RDP for conventional ammunition last reported as not implemented by U.S. Air Force (USAF). Refer to AMCL 148.
C27.5.1. Sources of supply are responsible for ensuring that requisition processing, procurement, and storage activities exercise the fullest practical resourcefulness in preventing the issue and shipment of unwanted materiel. The practical considerations involved in the processing of cancellation requests include such factors as time, packing and handling, related costs, and location of materiel for which cancellation is requested.

C27.5.2. The SoS must cancel all requisitions dated on or prior to the effective date announced in mass or universal cancellation requests for which materiel release orders (MROs), and/or purchase requests have not been submitted to storage or procurement activities. Provide a Supply Status transaction citing Status Code BQ or B4, as appropriate, as notice of accomplished cancellations to all eligible status recipients under Chapter 5 within the timeframe for furnishing status.

C27.5.3. The SoS will furnish Supply Status transactions citing Status Code B9 to all eligible recipients under Chapter 5 within the timeframes for furnishing status for:

C27.5.3.1. Unconfirmed cancellation of open MROs and open procurement actions.

C27.5.3.2. Materiel release confirmations (MRCs) that indicate shipment to OCONUS activities within 45 days of the effective date of the mass cancellation.

C27.5.4. Provide subsequent Supply Status transactions citing Status Codes BQ, B4, or B6 as notification for each line-item canceled or diverted. Cite Status Code B8 for each line-item that was not canceled or diverted.

C27.5.5. The SoS will provide storage activities with mass requisition cancellation transactions (DLMS 940R/DIC AC6) and universal requisition cancellation transactions (DLMS 940R/DIC AC7) for all unconfirmed MROs and MRCs that indicate shipment to OCONUS activities within 45 days of the effective date of the mass or universal cancellation.

C27.5.6. The SoS will provide procurement activities with mass requisition cancellation transactions (DLMS 869C/DIC ACP) and universal requisition cancellation transactions (DLMS 869C/DIC ACM) for all open procurement actions. These transactions are mandatory when purchase requests have been issued to another Component. If processed within an integrated Component system, equivalent internal transactions may be used.

C27.5.7. The SoS will not provide storage and procurement activities with cancellation requests when:

C27.5.7.1. In receipt of MRCs that show shipment has been accomplished by parcel post (USPS),

C27.5.7.2. In receipt of MRCs that show shipment to CONUS activities has been accomplished, and
C27.5.7.3. In receipt of MRCs that show shipment to OCONUS customers was accomplished more than 45 days prior to the receipt of the mass or universal cancellation request.

C27.5.8. The SoS will follow-up with the procurement or storage activity, as applicable, when no response to the original universal or mass requisition cancellation request has been received within three days. The SoS will follow-up to procurement activities via internal system communications or offline means (e.g., email, phone). For follow-ups to a storage activity, the SoS will use the DLMS 940R Follow-Up to Storage Activity for Mass/Universal Requisition Cancellation (there is no MILSTRIP legacy equivalent).

C27.6. STORAGE ACTIVITY PROCESSING OF MASS OR UNIVERSAL REQUISITION CANCELLATIONS

C27.6.1. Upon receipt of the mass or universal requisition cancellation transaction(s) from the SoS, the storage activity will identify all affected MROs where the items have not been released to a carrier for delivery to the consignee.

C27.6.1.1. For mass cancellation, the storage activity will not suspend processing of MROs identified for continued processing under paragraph C27.4.

C27.6.1.2. For universal cancellation, the storage activity will suspend further processing of all MROs, including any citing Special Requirements Code 555.

C27.6.2. For CONUS shipments, storage activities will accomplish cancellation for all items for which mass or universal requisition cancellation transactions are received from SoS and the items have not been released to a carrier for delivery to the consignee.

C27.6.3. Storage activities will advise the SoS of actions taken in response to cancellation requests. When a shipment has not been released to the carrier for delivery to consignee and cancellation is accomplished, the storage activity will send the SoS a Reply to Cancellation Request transaction (DIC AG6) citing Status Code BQ.

C27.6.4. For shipments already released to a carrier for delivery to the consignee not meeting the criteria stipulated in paragraph C27.5.7., the storage activity will generate a Reply to Cancellation Request – Shipment Status (DLMS 856S/DIC AU_) for routing by DAAS under standard MILSTRIP procedures for shipment status. It will also generate the Storage Activity Supply Status (DLMS 945A/DIC AE6) to the SoS.

C27.6.4.1. For CONUS shipments and those OCONUS shipments that meet the mass or universal cancellation criteria and have entered the DTS within 45 calendar days of the date of the mass or universal requisition cancellation request, the storage activity will cite Action Code W10 in the Reply to Cancellation Request – Shipment Status to indicate actions are being taken to divert the shipment.
C27.6.4.2. The Storage Activity Supply Status transaction to the SoS will cite Status Code B9 indicating that action is being taken to cancel/divert the shipment.

C27.6.5. When storage activities do not accomplish cancellation, the source of supply will be furnished a Storage Activity Supply Status transaction (DLMS 945A/DIC AE6) citing Status Code B8.

C27.6.6. Storage activities in receipt of transportation confirmation of shipment diversion transactions will send to the appropriate SoS a Reply to Cancellation Request transaction (DIC AG6) citing Status Code B6 for each requisition contained within the shipment unit. The transaction will also cite the DoD activity address code (DoDAAC) of the new consignee.

C27.6.7. Storage activities in receipt of transportation denial of shipment diversion transactions will generate a Reply to Cancellation Request – Materiel Release Confirmation (DIC AU0/AUA/AUB to the appropriate source of supply. This transaction will be prepared under Appendix AP8.14.

C27.6.8. Upon receipt of a DLMS 940R Follow-Up to Storage Activity for Mass/Universal Requisition Cancellation, the storage activity will respond with the appropriate transaction as outlined in the preceding procedures for storage activity processing of these cancellation requests.

C27.7. DIRECT VENDOR DELIVERY PROCESSING OF MASS OR UNIVERSAL REQUISITION CANCELLATIONS

C27.7.1. All rules governing the single-line cancellation of shipments from procurement also apply to requests for mass or universal requisition cancellation, except as modified herein. Where DLMS/DIC transactions are identified for exchange of reporting events between the SoS and the procurement activity, internal system or off-line communications (e.g., email, phone), are authorized when procurement systems are not capable of supporting the MILSTRIP transactions.

C27.7.2. The SoS will initiate universal requisition cancellation transactions (DIC ACM) and mass requisition cancellation transactions (DIC ACP) for all items scheduled for direct delivery, and for which purchase requests have been submitted, regardless of materiel costs, unless continued processing has been requested under Paragraph C27.4.

C27.7.2.1. Mass cancellation will not be requested for requisitions citing Special Requirements Code 555.

C27.7.2.2. Universal cancellation will be requested regardless of the entry in the Special Requirements field.

C27.7.3. Procurement activities will advise the SoS of actions taken in response to cancellation requests. When a shipment has not been released to the carrier for delivery to consignee and cancellation is accomplished, the procurement activity will
send the SoS a Reply to Cancellation Request transaction (DIC AG6) citing Status Code BQ or B4. Procurement activities will not initiate actions with the DTS to cause diversion of shipments at terminals.

C27.7.4. For shipments already released to a carrier for delivery to the consignee not meeting the criteria stipulated in paragraph C27.5.7., the procurement activity will generate the Storage Activity Supply Status (DLMS 945A/DIC AE6) to the SoS. The SoS will generate, on behalf of the procurement activity, a Reply to Cancellation Request – Shipment Status (DLMS 856S/DIC AU_) for routing by DAAS under standard MILSTRIP procedures for shipment status.

C27.7.4.1. For CONUS shipments and those OCONUS shipments that meet the mass or universal cancellation criteria and have entered the DTS within 45 calendar days of the date of the mass or universal requisition cancellation request, the SoS will cite Action Code W10 in the Reply to Cancellation Request – Shipment Status to indicate actions are being taken to attempt to divert the shipment.

C27.7.4.2. The Storage Activity Supply Status transaction to the SoS will cite Status Code B9 indicating that action is being taken to cancel/divert the shipment. This status will be perpetuated by the SoS in a Supply Status transaction to the requesting activity.

C27.7.5. Procurement activities in receipt of confirmation of shipment diversion transactions will send to the appropriate SoS a Reply to Cancellation Request transaction (DIC AG6) SoS citing Status Code B6 for each requisition contained within the shipment unit. The transaction will also cite the DoDAAC of the new consignee.

C27.7.6. Procurement activities in receipt of denial of shipment diversion transactions will send to the appropriate SoS a Reply to Cancellation Request – Materiel Release Confirmation transaction (DIC AU0/AUA/AUB).

C27.7.7. If the procurement activity is unable to transmit either the confirmation of shipment diversion or the denial of shipment diversion, it will be presented to the SoS via internal system communication or offline means (e.g., email, phone), at which time the SoS will update its records accordingly.

C27.7.8. Upon receipt of a DLMS 869C Follow-Up to Procurement Activity for Mass/Universal Requisition Cancellation, the procurement activity will respond with the appropriate transaction as outlined in the preceding procedures for procurement activity processing of these cancellation requests.

C27.8. DTS PROCESSING OF MASS OR UNIVERSAL REQUISITION CANCELLATIONS

C27.8.1. Diverting Outside the Continental U.S. Shipments. When outside the continental U.S. (OCONUS) shipments have already departed from continental U.S. (CONUS) ports, the responsibility for diversion or disposition is that of the consignee or the appropriate theater, force, logistics, or type commander. Notice to the latter will be
the transportation lift data provided by the DTS clearance authority. (See paragraph C27.9.4.)

C27.8.2. Diverting Continental U.S. Shipments. No attempt will be made to divert materiel destined to CONUS customer activities beyond the point of shipment.

C27.8.3. Designated Storage Points. All shipping DoD Components will designate storage points within their distribution system to receive shipments redirected as a result of mass or universal cancellation. Fund citations for bill of lading (BL) preparation must also be provided. These designated points and fund citations will be provided to Air Mobility Command (AMC), Military Surface Deployment and Distribution Command (SDDC), or theater commanders and will serve as predesignated consignees for any announced mass or universal cancellation. If more than one storage point is designated, instructions will be furnished to specify on a geographical basis the storage point designation in relation to each range of water and aerial ports (e.g., west, gulf, and east coasts). In addition, canceling DoD Components will designate a contact point(s) to provide disposition instructions on materiel that does not meet the automatic diversion conditions specified in paragraph C27.9. Designated points of contact will provide requested disposition instructions to DTS within 24 hours on materiel located at air terminals and within 48 hours on materiel located at water terminals.

C27.9. DISPOSITION OF FRUSTRATED SHIPMENTS/MATERIEL

C27.9.1. The disposition of frustrated shipments at water ports of embarkation (WPOE)/aerial ports of embarkation (APOE) that are the result of mass or universal cancellation action will be as follows:

C27.9.1.1. Shipments from DoD storage points or from commercial vendors acting under the direction of a DoD procuring activity will be diverted to the predesignated storage sites of the shipping/procuring DoD Component.

C27.9.1.2. Shipments from General Services Administration (GSA) commercial vendors acting under the direction of a GSA procuring activity will be disposed under normal excess/surplus/donation procedures. The shipments will not be diverted to GSA facilities.\(^6\)

C27.9.1.3. DTS attempts to divert/frustrate shipments will terminate 45 calendar days from the effective date of the mass or universal cancellation request.

C27.9.2. Certain strategic and tactical operations or political considerations may dictate that all shipments for a given consignee be stopped or diverted. In these most restrictive of shipment diversion situations and economic considerations (e.g., the comparison of accessorial cost of stopping, holding, and returning the materiel to storage activities), the value of the canceled materiel and the costs of the receiving activity to perform the necessary processing or reprocessing of the materiel are not

---
\(^6\) Refer to ADC 1142, Update to Remove General Services Administration (GSA) from MILSTRIP Materiel Returns Program (MRP)
controlling factors. In most situations, however, the strategic, tactical, or political environment is such that complete disregard of these economic considerations is not warranted.

C27.9.3. Transportation diversion procedures are established to permit diversion only if the materiel being shipped can be identified and located by TCN.

C27.9.3.1. Non-Consolidated Shipment Units. Shipment units eligible for cancellation that have not been consolidated into a container with other shipments will be stopped and diverted by the POE up to the point of lift. Diversion of cancellation eligible shipments at or beyond the port of debarkation (POD) will be the responsibility of the appropriate theater, force, logistics, or type commander.

C27.9.3.2. Consolidated Multiple Shipment Units. Individual line-items will not be removed from multiple-line shipment units (consolidated packs), nor will a shipment unit container be removed from a multi-container shipment (SEAVAN) type device. Shipment units cannot be diverted in the DTS if stuffed or loaded with other shipment units or on multiple shipment unit devices; such as, SEAVANS, container express (CONEX), MILVANS (Military Van), and Aircraft 463L pallets.

C27.9.4. For mass or universal cancellation requests that specify FSC, NSNs/LSNs, or part number data, the DTS will stop and frustrate, for the DoD Component review, all shipments of the canceling DoD Component for the affected consignees. Disposition of cancellation eligible shipments at or beyond the POD will be the responsibility of the appropriate theater, force, logistics, or type commander.

C27.9.5. The DTS will generate specified documentation for the following shipment categories:

C27.9.5.1. For all shipments that are diverted as a result of mass or universal cancellation, the DTS will contact the shipper to confirm shipment diversion. The confirmation of shipment diversion will contain complete Transportation Control and Movement Document (TCMD) data for each shipment unit and, if available, the contract number. In addition:

C27.9.5.1.1. For shipments that are diverted under pre-positioned instructions, the DTS will generate appropriate DTR 4500.9R, “Defense Transportation Regulation” transactions to the new consignee.

C27.9.5.1.2. For shipment units that are frustrated and were not diverted to a specific site, the DTS will send a request for disposition instructions to the appropriate Component contact points. In situations where the designated DoD Component contact point is a collocated liaison office, the request for disposition instruction transactions will be listed and provided to the contact point directly. After receipt of disposition instructions for such frustrated shipments, the DTS will prepare appropriate DTR transactions for the new consignee.
C27.9.5.1.3. For shipments in transit to, at, or between the POD and the OCONUS consignee, OCONUS DTS activities will request disposition instructions from the appropriate theater, force, logistics, or type commander’s designated contact point.

C27.9.5.2. For shipments in transit between WPOE/APOE and the OCONUS consignee less than 30 days, the DTS will generate a listing of the manifest shipment unit data, vessel/aircraft identification and departure date, water port of debarkation (WPOD)/aerial port of debarkation (APOD) and estimated time of arrival (ETA). This listing will be sent to the affected OCONUS command component, the appropriate WPOD/APOD, and to the designated contact point, if requested.

C27.9.6. Storage sites in receipt of diverted shipments will report the receipt to the appropriate SoS under Chapter 13. Reconsignment/disposition will be as directed.

C27.9.7. Specific instructions concerning materiel transportation charges and credit allowances are contained in the DoD 7000.14-R, “Department of Defense Financial Management Regulations (FMRS),” (Vol 11B), Federal Property Management Regulation (FPMR) 101-26.311, and FPMR 101-27.505. The Component initiating the cancellation requests applicable to U.S. Forces requisitions will be charged with the following:

C27.9.7.1. Transportation and terminal costs associated with holding, stopping, and returning materiel to storage,

C27.9.7.2. Procurement termination costs when it is determined that termination is in the best interest of the Government, and

C27.9.7.3. Excess transportation costs that may be incurred when moving cargo that is unaffected by the mass or universal cancellation action.
C28. CHAPTER 28

RESERVED
C29. CHAPTER 29

RELEASE AND RECEIPT OF MATERIEL

DD FORM 1348-1A

C29.1. GENERAL

C29.1.1. The Issue Release/Receipt Document, DD Form 1348-1A (or DD Form 1348-2 with attached shipping label), and continuation page are prepared by the supply/shipping activity. These documents are used to select, pack, ship, and receive materiel. They are also used as a receipt transaction and/or to provide a means to automate the capture of data using automatic identification technology (AIT) devices. The DD Form 1348-1A (or DD Form 1348-2) is mandatory for all shipments to DoD customers, including foreign military sales (FMS) and contractors, from DoD and General Services Administration (GSA) shipping activities, except as noted in paragraph C29.3. Additionally, the continuation page is a mandatory document to assist the processing of serialized items (see Appendix 6.36).

C29.1.2. The DD Form 1348-1A (or DD Form 1348-2) may be manually or mechanically prepared and will contain data elements prescribed herein for the various types of transactions.

C29.1.3. Use of carbonless paper for a preprinted DD Form 1348-1A (or DD Form 1348-2) is authorized at the option of the Service/Agency.

C29.1.4. Mechanically prepared DD Form 1348-1A (or DD Form 1348-2) must contain all required bar codes as outlined in C29.1.6 through C29.1.9 (and associated sub-paragraphs).

C29.1.5. For transfers to DLA Disposition Services Field Offices, at least one copy of DD Form 1348-1A (or DD Form 1348-2) must accompany the property and be in a legible, easy-to-read format.

C29.1.6. For the DD Form 1348-1A, see Appendices 6.25 through 6.29, Appendix 6.31 and Appendix 6.35. There are two methods for generating the form:

C29.1.6.1. Preprinted form. Data entries will be made by automated printer, typewriter, or hand scribed.

C29.1.6.2. Non-preprinted form. When this method is used, the form and data are printed simultaneously and will contain the prescribed data elements.

C29.1.7. The preprinted DD Form 1348-1A is 8-1/2 inches long (side to side) and 5-1/2 inches high (top to bottom). When printed on plain stock paper using laser, thermal transfer, ion disposition, cold fusion, or other nonimpact printers, the size may vary within a range of 7-3/4 to 9 inches long and 4 to 5 inches high (with one-sixth inch
tolerance). When such print technology is used, the in-the-clear/human-readable data must be easily read and the AIT entries must be machine readable. Margins of one-fourth inch and outside lines are preferred, but may be eliminated provided the DD form number remains readable. When printing three forms per 8-1/2- by 14-inch sheet of paper, the originator must ensure that the form, spacing, size, and data entered thereon are legible and capable of being interpreted by a Logistics Applications of Automated Marking and Reading Symbols (LOGMARS) scanning device.

C29.1.7.1. Block numbers are provided for data entry. Data to be entered in the data blocks are shown in Appendices 3.48 and 3.49. Block 27 will contain information facilitating item unique identification (IUID) in support of unique item tracking (UIT) and DoD supply policy in conjunction with the expanded content of the Portable Data File 417 (PDF417) two-dimensional (2D) bar code as illustrated in Appendices 6.35 and 6.36. For a single item shipment, include the clear-text, concatenated/single value unique item identifier (UII). Phased/staggered implementation is authorized pending DoD-wide implementation of DoD policy for the application of IUID in supply processes. As an interim approach, identification of the item on the Issue Release/Receipt Document (IRRD) by serial number alone is authorized. Additional optional information may include the item manufacturer’s contractor and Government entity (CAGE) code, current part number, and batch/lot number. Block 27 will contain all additional data and in-the-clear text that may be required and is not shown elsewhere on the form. The in-the-clear text may be used with the AIT encoded information for those activities possessing bar coding capability.

C29.1.8. The Code 39 (three-of-nine) linear bar code, and PDF417 2D bar code, and Macro PDF417 2D bar code, as defined in ISO/IEC 16388 Information Technology – Automated Identification and Data Capture Techniques – Bar code symbology specifications – Code 39 and ISO/IEC 15438 Information Technology – Automated Identification and Data Capture Techniques – PDF417 2D bar code symbology specification, are established as the standard symbologies for the automated marking and reading of items of supply, equipment, materiel packs, and containers in logistics operations throughout the DoD. This symbology will be applied using MIL-STD-129 (latest revision), unless otherwise authorized. When Code 39 linear bar code symbols are printed on DD Form 1348-1A (or DD Form 1348-2), all record positions of data elements that will be encoded, will contain a bar code character even if the position was blank on the source document. The specific technical information provided in MILSTRIP is not intended to be compressive and should be used in conjunction with the MIL-STD-129.
C29.1.9. IRRD (DD 1348-1A or DD Form 1348-2) Continuation Page. For shipment quantities of two or more serialized items, the responsible activity will prepare a continuation page to facilitate automatic data capture.

C29.1.9.1. In lieu of printing the PDF417 2D bar code in Block 27 of the DD Form 1348-1A (or DD Form 1348-2), the continuation page will contain a single PDF417 2D bar code or multiple Macro PDF417 2D bar codes (as required by data volume) for the included data.

C29.1.9.2. The continuation page will contain, at a minimum, the prescribed data elements outlined in Appendix 6.36. For systems capable of printing PDF417 2D bar codes, see Appendix 6.35 for a listing of encoded MH10.8.2 standard data identifiers for the data elements.

C29.1.9.3. The continuation page will also contain Code 39 linear bar coding with the respective human-readable interpretation (i.e., clear text) for the included serial numbers to satisfy legacy system requirements.

C29.1.10. IRRD (DD 1348-1A or DD Form 1348-2) Continuation Page for Ammunition and Explosives (A&E). For shipment of items categorized as A&E, the responsible activity will prepare a continuation page to capture additional data elements required for A&E management /accountability and facilitate automatic data capture. The continuation page may be produced by AIT systems on the same page as the 1348-1A if space permits, or separately.

C29.1.10.1. The continuation page will contain, at a minimum, the prescribed data elements outlined in Appendix 6.36 to include human-readable interpretation (i.e. clear text) data elements 28 through 42.

C29.1.10.2. In lieu of printing the PDF417 2D bar code in Block 27 of the DD Form 1348-1A, the continuation page may contain a single PDF417 2D bar code or multiple Macro PDF417 2D bar codes (as required by data volume) for the included data.

C29.1.10.3. The continuation page will contain, at a minimum, the prescribed applicable data elements outlined in Appendix 6.36. For systems capable of printing PDF417 2D bar codes, see Appendix 6.35 for a listing of encoded MH10.8.2 standard data identifiers for the data elements.

C29.1.10.4. Printing Code 39 linear bar code symbols for A&E is optional on the continuation page(s). All A&E hand held terminals (bar code imagers) in use support Code 39 linear, PDF417 and Data Matrix 2D barcode symbols. Serial, Lot, or any other required clear text data from either the DD Form 1348-1A or the continuation page will be included in the PDF417 or PDF417 Macro 2D barcodes.
C29.2. DOCUMENT DISTRIBUTION

C29.2.1. Actual copies utilized, other than the original and first carbon copy, will be at the option of the individual S/A. See Tables C29.T1 and C29.T2 for the distribution of the transactions.

C29.2.2. For transfers to DLA Disposition Services Field Offices, if all DD 1348-1A data is provided in automated transactions and/or available via digital image, one copy of the printed document must accompany the shipment; in accordance with the Paperwork Reduction Act, additional paper copies are not required including verification of receipt copies.

Table C29.T1. Distribution of DD Form 1348-1A (or DD Form 1348-2), Issue Release/Receipt Document, and Continuation Page to all Consignees other than DLA Disposition Services and Security Assistance

Upon receipt at the DLA Disposition Services Field Office, the copy will be used by personnel screening property for potential reutilization, transfer, or donation. It will remain attached to the property at the DLA Disposition Services Field Office. For manually generated copies, one copy will be produced and retained by the shipper unless an automated capability is available to track the serialized contents of the shipment and prove a shipment has been made.</td>
</tr>
</tbody>
</table>

C29.3. ISSUES FROM SUPPLY SYSTEM STOCK OR FROM DLA DISPOSITION SERVICES FIELD OFFICES; REQUISITIONS FOR LOCAL ISSUE FROM DLA DISPOSITION SERVICES FIELD OFFICES

C29.3.1. The DD Form 1348-1A (or DD Form 1348-2) will be prepared as a release document by the shipping activity (issues from supply system stock) or by the shipping DLA Disposition Services Field Office (DLA Disposition Services-directed issues from the local DLA Disposition Services Field Office). The requisitioner may also use this format when hand carrying requisitions for local issue from DLA Disposition Services Field Office. Minimum data entries are outlined in Appendix 8.48 for the DD Form 1348-1A (or DD Form 1348-2).
C29.3.2. To accommodate the various distribution systems and equipment, DD Form 1348-1A (or DD Form 1348-2) provides blocks for data entry. With the exception of Blocks 9, and 15, use of these blocks is optional, but when used, will contain information shown in Appendix 8.48.

C29.3.3. The continuation page will accompany the DD Form 1348-1A (or DD Form 1348-2) and must be attached to the material and shipment IAW MIL-STD-129 shipping document requirements for all shipments of two or more items which are tracked under a UIT program or in support of DoD policy of the application of IUID in supply business process. Minimum data entries are outlined in Appendix 6.36.

C29.3.4. By exception, when DLA Disposition Services property is sold to a Commercial Venture contractor, the DLA Disposition Services Field Office has the option to suppress printing of the DD Form 1348-1A. When no IRRD is prepared, DLA Disposition Services will utilize the Workload Location List in lieu of the IRRD as the document transferring ownership from the Government to the contractor. The Workload Location List will identify all document numbers associated with the Commercial Venture delivery order, materiel identification by national item identification number (NIIN), and applicable quantities. A copy of the Workload Location List will be retained by the field office.

C29.4. RETURNS TO STOCK AND TRANSFERS (EXCLUDING TRANSFERS TO DLA DISPOSITION SERVICES FIELD OFFICES)

C29.4.1. In addition to the release of materiel for shipment based upon a requisition, other situations such as the following necessitate release of materiel for shipment:

C29.4.1.1. Materiel returns from base to depot.

C29.4.1.2. Base-to-base movements.

C29.4.1.3. Retrograde or lateral system movements.

C29.4.2. The documentation copy and distribution requirements prescribed in Tables C29.T1 or C29.T2 will be used to effect returns and transfers. Entries will be as shown in Figure C29.F1 for all DLA and inter-Service/Agency (S/A) transactions.

C29.4.3. For intra-S/A use, the data prescribed in Figure C29.F1. must be entered. Other entries may be prescribed by concerned S/As; however, any such entries must relate to the columnar and/or block headings indicated in the form.
Figure C29.F1. Instructions for Completion of DD Form 1348-1A (or DD Form 1348-2), Used for Returns to Stock Transfers (Excluding Transfers to DLA Disposition Services Field Offices)

<table>
<thead>

For multiple uniquely identified items, use the continuation page per Volume, 2, Appendix 6.36(^3)</td>
</tr>
</tbody>
</table>

C29.5. TRANSFERS TO DLA DISPOSITION SERVICES FIELD OFFICES. Use DD Form 1348-1A (or DD Form 1348-2) as the disposal turn-in document (DTID) for all transfers to DLA Disposition Services Field Offices. See C29.2.2. for criteria to use automated distribution of DD Form 1348-1A (or DD Form 1348-2). Appendix 8.49 shows required entries required for single line item turn-ins. See Appendix 6.35 for PDF417 2D bar code content. A continuation page will accompany the DD Form 1348-1A (or DD Form 1348-2) for all shipments of two or more items that are tracked under a UIT program or in support of DoD policy for the application of IUID in supply business

\(^2\) Unit prices obtained via electronic interfaces which are not constrained by the MILSTRIP field size will reflect the unit price as 9 digits for dollars and 2 digits for cents. If total price exceeds available space for display on the printed form, the generating application may leave blank. Refer to ADC 221

\(^3\) For Security Assistance shipments, see Figure C25-F1.
processes. See Appendix 6.35 for PDF417 2D bar code content and Appendix 6.36 for the continuation page content.
C30. CHAPTER 30

PROCEDURES FOR SERIALLY MANAGED MATERIEL
REQUIRING OWNER VISIBILITY

C30.1. GENERAL.

C30.1.1. Purpose. This chapter covers the additional procedures required for serially managed materiel requiring owner visibility while physically located at DLA Distribution Centers, hereafter referred to as storage activities. See section C30.5. for the categories of serially managed materiel covered by this chapter.

C30.1.1.1. For these procedures, the serial number is mandatory in the DLMS transaction, as is the unique item identifier (UII), when available—the intent is to capture both serial number and UII. Many legacy items have not been marked with an assigned UII; therefore, the UII cannot be considered a mandatory data element until transition to management by UII is complete across the Department of Defense.¹ That is the context in which the term “serial number/UII” is used in this chapter.

C30.1.1.2. These procedures require record keeping by both the owner and storage activity and the constant transaction exchange at the item instance level (serial number/UII) to ensure that the records of both reflect the correct serial numbers/UIIs, by storage location, owner, and supply condition code (SCC).

C30.1.2. Transactions. This chapter addresses the following DLMS transactions with their functions identified by their beginning segment and transaction type code. Transactions identified support the business process, but may not actually be used to exchange serial number/UII. The procedures in this chapter require that a system transact business interchanges using DLMS transactions. The DLMS Implementation Conventions (IC) are available on the Enterprise Business Standards Office Website www.dla.mil/HQ/InformationOperations/DLMS/elibrary/Transformats/140_997/.

C30.1.2.1. Receipt Transaction is DLMS 527R with beginning segment (1/BR02/020) Transaction Type Code D4 – Receipt.

C30.1.2.2. Standard Supply Discrepancy Report is DLMS 842A/W with beginning segment (1BNR06/0200) Transaction Type C1 – Claim Information.

C30.1.2.3. Storage Quality Control Report (SQCR) is DLMS 842S/Q with beginning segment (1BNR06/0200) Transaction Type 03 – Report Message. Use

---

¹ The UII is an identifier used to uniquely identify an individual item used within the Department of Defense. The UII may be a DoD Recognized IUID equivalent [e.g., Vehicle identification number (VIN)] or a composite structure defined by the Department of Defense [refer to UII Construct 1 and UII construct 2]. Refer to DoD policy and supporting documentation for specific IUID guidance at www.acq.osd.mil/dpap/pdi/uid/index.html. Refer to the most current version of MIL-STD-130 for specific guidance marking of U.S. Military property.
beginning segment (1/BNR01/0200) Transaction Set Purpose Code to distinguish the purpose.

C30.1.2.4. Physical Inventory Request is DLMS 846P with beginning segment (1/BIA02/020) Report Type Code TC – Physical Inventory Request.

C30.1.2.5. Response to Physical Inventory Request is DLMS 846P with beginning segment (1/BIA02/020) Report Type Code DD – Distributor Inventory Report. This transaction is only used as a Response to Physical Inventory or follow-up when there is no record of stock number or no record of ownership (Management Code R), when physical inventory is in workload bank or in process (Management Code S), or when responding to follow-up when inventory is already complete (Management Code Y). The usual response to a request for inventory is a 947I Inventory Adjustment in accordance with Chapter 6.

C30.1.2.6. Transaction History Request Transaction (from owner/manager to distribution) is DLMS 846P with beginning segment (1BIA02/020) Report Type Code TF – Transaction History Request.

C30.1.2.7. Response to Transaction History Request Transaction (when no history available) is DLMS 846P with beginning segment (1BIA02/020) Report Type Code AD – Agent/Distributor Inventory Report.

C30.1.2.9. Location Reconciliation Request is DLMS 846R with beginning segment (1BIA02/020) Report Type Code LC – Location Reconciliation Request.

C30.1.2.10. Location Reconciliation Notification is DLMS 846R with beginning segment (1BIA02/020) Report Type Code X4 – Summary Report.

C30.1.2.11. Location Reconciliation History Notification is DLMS 846R with beginning segment (1BIA02/020) Report Type Code ZZ – Mutually Defined.

C30.1.2.12. Shipment Status is DLMS 856S with beginning segment (1/BSN06/0200) Transaction Type Code AS – Shipment Advice.

C30.1.2.13. Shipment Status Materiel Returns is DLMS 856R with beginning segment (1/BSN06/0200) Transaction Type Code FT – Material Return. For other types of materiel returns such as retrograde shipment for return of discrepant/deficient materiel or repair outside of the MILSTRIP Returns Program, use Transaction Type Code RD – Returns Detail. Must use the ASC X12 Version 4030 as this version allows the UII to be carried in single data field

C30.1.2.15. Materiel Release Confirmation is DLMS 945A with beginning segment (1/W0611/0200) Transaction Type Code NJ – Material Release Confirmation. Must use the ASC X12 Version 4030 as this version allows the UII to be carried in single data field.

C30.1.2.16. Inventory Adjustment is DLMS 947I with beginning segment (1/W1505/0200) Transaction Type Code NU – Inventory Adjustment and use of 2/W1901/0200 Quantity or Status Adjustment Reason Code. Must use ASC X12 Version 4030 as only this version includes the capability to carry UII.

C30.2. APPLICABILITY AND SCOPE.

C30.2.1. The provisions of this chapter apply to the Military Departments including Coast Guard and Defense Agencies (hereafter referred to as the DoD Components).

C30.2.2. This Chapter's procedures supplement (are additive) the procedures in DLM 4000.25, Volume 2, Chapters 4, 5, 6, 7, 11, 13, 14, and 17.

C30.2.3. The procedures in this chapter can only be implemented by Automated Information Systems (AIS) that have implemented the DLMS ANSI ASC X12 ICs or the equivalent DLMS XML business partner interchange transactions.

C30.3. EXCLUSIONS.

C30.3.1. Classified activities that determine the visibility of specific items may compromise operational security must request guidance from their DoD Components.

C30.3.2. DoD Small Arms and Light Weapons (SA/LW) Serialization Program. The DOD SA/LW Serialization Program unique item tracking (UIT) program has unique transaction requirements and procedures documented in Chapter 18. The SA/LW program is also subject to the item unique identification (IUID) transaction requirements, which are identified at paragraph C30.13.

C30.3.3. Items that are not assigned a national stock number (NSN) in the Federal Logistics Information Systems (FLIS).

C30.3.4. The procedures in this chapter do not directly address update of the IUID registry. The procedures for updating the IUID registry are contained in the DoD Procurement Toolbox found on the “Unique Identification” link at https://dodprocurementtoolbox.com. Wide Area Work Flow (WAWF) eBusiness Suite web based training video tutorials of different aspects of the IUID registry and baseline functionality are available at https://wawf.eb.mil (click on “Help/Training”).

C30.4. POLICY.

C30.4.1. DoD Instruction 8320.04, Item Unique Identification (IUID) Standards for Tangible Personal Property, dated September 3, 2015 states, “The unique item identifier (UII) will be used globally as the common data key in financial, property,
acquisition, and logistics (including supply and maintenance) automated information systems to enable asset accountability, valuation, life-cycle management, and counterfeit materiel risk reduction.”

C30.4.2. DoD Components will follow the IUID procedures identified in DODM 4140.01, Volume 9, “Materiel Programs”, and Volume 11, “Inventory Accountability and Special Management and Handing.

C30.4.3. The DoD Integrated Requirements Set (IRS) for IUID in Supply Business Processes documents the ODASD(SCI) vision for the integration of IUID at the transactional level.

C30.4.4. DOD established overarching guidance for the serial number convention and only alpha numeric (A-Z, 0-9), dashes, and forward slashes are allowed with a maximum field length of 30 characters. Spaces are not allowed. DOD Components must ensure future procurement actions require vendors to follow serial number convention guidance as applicable. ODASD (SCI) will update appropriate DOD policies to reflect these changes followed by the implementation of this change. Consequently, EBSO will develop a change to incorporate these changes in all applicable DLMS transactions and manuals.

C30.5. CATEGORIES OF SERIALLY MANAGED MATERIEL COVERED BY THIS CHAPTER

C30.5.1. DoD Unique Item Tracking Programs. The procedures in this chapter apply to items within a DoD level (inter-DoD Component) unique item tracking (UIT) program2.

C30.5.1.1. Unique Item Tracking Designator Codes.

C30.5.1.1.1. The UIT designator code indicates that an item is part of an established UIT program. In accordance with DODM 4140.01 policy, the DoD Components will not establish any new UIT programs. The FLIS is the authoritative source for UIT designator codes.

C30.5.1.1.2. DoD Components apply the appropriate FLIS UIT designator codes to NSNs in existing UIT programs. Table C30.T1. shows authorized UIT designator codes. Ensure that the integrated materiel manager (IMM) applies the UIT designator code to every NSN comprising the DoD level program, for which a UIT designator code is not already assigned. The IMM assigns UIT designator codes to a NSN based on direction by the DoD Component UIT central control point. The UIT designator code, in conjunction with FLIS IUID Indicator Y, provides the DoD Components a systemic means to identify that an NSN is subject to these procedures.

2 This chapter does not apply to the DoD Small Arms and Light Weapons Serialization Program (DoDSALWSP) pending implementation of weapon transaction reporting using standard supply logistic transactions. The Enterprise Business Standards Office will address DoDSALWSP use of standard logistics transactions by a proposed DLMS change.
For system to system updates of the UIT designator code, activities should subscribe to the UIT data through the FLIS Portfolio Data Warehouse which is Logistics Information Services Master Data Capability. To negotiate this XML Data Exchange/Subscription, send an e-mail request to J62FPDWPOMO@dla.mil

C30.5.1.1.3. Table C30.T1. shows the UIT Designator Codes

C30.5.1.2. DoD Small Arms and Light Weapons Serialization Program (DoDSALWSP). This chapter identifies DoDSALWSP as a placeholder. The future vision is to transition the DoDSALWSP to use of standard logistics transactions under these procedures where possible. However due to the existing unique small arms and light weapons (SA/LW) procedures and transactions, the Enterprise Business Standards Office, working in conjunction with the Joint Small Arms and Light Weapons Coordinating Group, will develop a separate proposed DLMS change to address this transition. Accordingly, these procedures do not apply to DoDSALWSP at this time. Refer to Chapter 18 for DoDSALWSP procedures and transactions.

C30.5.1.3. Security Risk Category I Non-Nuclear missiles and Rockets. Items subject to Security Risk Category I Non-Nuclear missiles and Rockets UIT program have a FLIS IUID Indicator (Y) and FLIS UIT Designator Code AAB.

C30.5.1.4. Radiation Source Tracking System Program (RASTS)\(^3\)

C30.5.1.4.1. Radiation Source Tracking System Program (RASTS) is a program established to provide regulatory and statutory compliance with Federal, state, and local regulations for the use of radioactive materiel in fielded chemical defense equipment and in industrial applications. It is designed to provide strict control and

\(^3\) Radiation Testing and Tracking System (RATTS) was replaced by Radiation Source Tracking System (RASTS). NRC licenses 12-00722-13 and 12-00722-14 covering Chemical Detection Equipment (CDE) and Tritium are obsolete terminated licenses and are replaced by NRC license 21-32838-01.
identification of all radioactive sources to comply with relevant Nuclear Regulatory Commission (NRC) license requirements.

C30.5.1.4.2. Identifying RASTS Items: Items subject to the RASTS UIT program have a FLIS IUID Indicator (Y) and FLIS UIT Designator Code AAC.

C30.5.1.5. Navy Depot Level Reparable (NDLR) Program

C30.5.1.5.1. The NDLR UIT program is the recognized inter-DoD Component program for select Navy-managed Depot Level Reparables (DLR).

C30.5.1.5.2. Identifying NDLR UIT Program Items: Items subject to the Navy DLR UIT program have a FLIS IUID Indicator (Y) and FLIS UIT Designator Code AAD.

C30.5.1.5.2. Interim Process for NDLR UIT Program. Navy and DLA Distribution previously activated the NDLR UIT program with a limited set of DLMS transactions. Navy and DLA Distribution will continue that process as an interim process, until they implement Chapter 30 procedures. DLMS will eliminate this interim procedure at that time. Navy’s target implementation date to transition to the Chapter 30 procedures for the NDLR UIT program is unknown.

C30.5.1.6. Aviation Component Tracking Program

C30.5.1.6.1. The Aviation Component Tracking Program is designed to ensure unique identification for U.S. Army Aviation equipment flight safety parts and for life managed or special interest items. It provides for control, improved accountability, and visibility of U.S. Army Aviation equipment.

C30.5.1.6.2. Identifying Aviation Component Tracking Program UIT Items: Items subject to the Aviation Component Tracking Program have a FLIS IUID Indicator (Y) and FLIS UIT Designator Code AAF.

C30.5.1.7. Tritium Unique Item Tracking Program

C30.5.1.7.1. The Tritium UIT Program identifies all primary and secondary items comprised of tritium throughout the Army, Army Reserve, National Guard, and Marines. This program is necessary to meet an Army requirement for location visibility of all tritium sources at all times.
C30.5.1.7.2. Identifying Tritium UIT Program Items: Items subject to the Tritium UIT Program have a FLIS IUID Indicator (Y) and FLIS UIT Designator Code AAG.

C30.5.1.8. Controlled Cryptographic Items (CCI)

C30.5.1.8.1 Controlled Cryptographic Items UIT Program. The CCI UIT program was established to meet National Security Agency requirements to maintain visibility of controlled cryptographic end items.

C30.5.1.8.2. Identifying CCI Items: Items subject to the CCI UIT program have a FLIS IUID Indicator (Y) and FLIS UIT Designator Code AAH.

C30.5.1.9. Positive Inventory Control (PIC) Nuclear Weapon Related Materiel (NWRM)

C30.5.1.9.1. Air Force program for providing positive inventory control for NWRM.

C30.5.1.9.2. Identifying PIC NWRM Items: Items subject to the PIC NWRM UIT program have a FLIS IUID Indicator (Y) and FLIS UIT Designator Code AAJ.

C30.5.1.9.3. Air Force Integrated Logistics Solution-Supply (ILS-S) (Retail Supply) and Supply Status. Air Force will use Supply Status (DLMS 870S) in Air Force ILS-S (Retail Supply), on an intra-Air Force basis to provide the latest status to the intended receiving activity, including UII and/or serial number in support of the PIC NWRM UIT program. For legacy items where the UII has not been marked in accordance with IUID policy, the serial number alone will be passed. The Defense Automatic Addressing System (DAAS) will enable transmission of information copies of the ILS-S Supply Status to the NWRM PIC Fusion Module to ensure the PIC NWRM UIT program has near real time access to UIIs and the associated serial numbers of NWRM item movements.

C30.5.1.9.4. Retail Supply and Transportation Interchange. (See DLM 4000.25, “Defense Logistics Management Standards Manual,” Volume 3, Chapter 2.) For designated supply trading partners (currently limited to the Standard Base Supply System (SBSS) – Cargo Movement Operations System (CMOS) interface):

C30.5.1.9.4.1. Use the DLMS 940R Materiel Release Order (MRO) to support the PIC NWRM UIT program. Pass UIIs and the associated serial number in the MRO for each item meeting the PIC NWRM UIT program criteria. For legacy items where the UII has not been marked in accordance with IUID policy, the serial number alone will be passed.

C30.5.1.9.4.2. Use an information copy (image) of the DLMS 940R MRO and DLMS 945A Materiel Release Confirmation in support of Air Force PIC Fusion program data requirements. The routing of an additional information only copy
of the DLMS standard transactions (940R and 945A) is authorized for forwarding PIC Fusion data needed for the Air Force UIT registry. This is a specific authorized use with unique identifiers to flag the transaction as information only.

C30.5.1.9.4. Interim Process for PIC NWRM UIT Program. Air Force and DLA Distribution previously activated the PIC NWRM UIT program with the limited set of DLMS transactions shown in Table C30.T4. Air Force and DLA Distribution will continue that process as an interim process, until they implement Chapter 30. DLMS will delete this interim procedure at that time. The Air Force target implementation date to transition to the Chapter 30 procedures for the PIC NWRM UIT program is unknown.

⁴ Refer to ADC 407, Requirements for Unique Item Tracking (UIT) in the DLMS Supply Status (870S) Supporting the Cargo Movement Operations System (CMOS) Interface (MILSTRIP/Supply/Transportation Interchange)
⁵ Refer to ADC 316C, Revise DLMS 940R Material Release and DLMS 945A Material Release Advice, to Support UIT for Air Force Positive Inventory Control (PIC) under the Retail Transportation and Supply Receipt and Acknowledgement Interchange
⁶ Ibid
⁷ Refer to ADC 347, Revise DLMS 527R Receipt, 867I Issue, 945A Materiel Release Advice, and 947I Inventory Adjustment to Support Unique Item Tracking (UIT) for Air Force Positive Inventory Control. DLA Distribution Standard System (DSS) has implemented ADC 347.
⁸ Ibid
⁹ Ibid
¹⁰ Ibid.
C30.5.2. Capital Equipment. Capital equipment does not fall under DODM 4140.01 IUID policy and is addressed separately within the affected Volume 2 chapters.\textsuperscript{11}

C30.5.3. Other categories of serially managed materiel requiring owner visibility at distribution centers may be identified in the future.

C30.6. OBJECTIVES.

C30.6.1. Establish visibility by serial number/UII, from point of entry into the DoD logistics systems through disposal, demilitarization, or shipment outside the control of the Department of Defense.

C30.6.2. Reestablish serial number/UII visibility over materiel previously shipped outside the DoD's control when it is reintroduced to DoD control.

C30.6.3. Require the use of standard logistics transactions to interface serial number/UII reporting between/among owners, the DoD Components, and suppliers. The objective is to populate accountability and owner records using standard DLMS logistics transactions.

C30.7. ESTABLISH INITIAL VISIBILITY BY SERIAL NUMBER/UII

C30.7.1. Establishing serial number/UII visibility may begin at any point in the supply chain. Customarily, "cradle to grave" serial number/UII tracking begins at the time of Government acceptance from the supplier/manufacturer.

C30.7.2. Alternatively, serial number/UII visibility may begin after items are already in the DoD logistics system. Examples are items that meet the criteria and are already in the inventory, or returns to inventory at any time after the item was originally accepted by the Government.

C30.8. REQUIREMENTS FOR SERIALLY MANAGED MATERIEL REQUIRING OWNER VISIBILITY AT DLA DISTRIBUTION CENTERS

C30.8.1. General Requirements. The DoD Components will:

C30.8.1.1. Maintain AIS(s) necessary to apply management in accordance with DODM 4140.01 IUID requirements. Maintain visibility by serial number/UII, within owner, and DoD storage activity AISs to include the custodian’s system of record which is the official auditable quantity for an item of inventory.

C30.8.1.2. Use DLMS transactional interfaces among AISs to ensure that visibility exists in all AISs at the serial number/UII level.

\textsuperscript{11} Refer to ADC 1198, Establishing and Maintaining Accountability for Service Owned Capital Equipment Stored at DLA Distribution Centers.
C30.8.1.3. Apply the appropriate FLIS IUID indicator to NSNs for which they have PICA responsibility. The IUID indicator provides the DoD Components a systemic means to identify whether an NSN requires tracking by serial number and the UII when available. The FLIS IUID indicator currently has two values (Y) indicating that IUID marking is required and (N) indicating IUID marking is not required. For system to system updates of this data, activities should subscribe to the IUID data through the FLIS Portfolio Data Warehouse which is DLA Logistics Information Services Master Data Capability. To negotiate this XML Data Exchange/Subscription, send an e-mail request to J62FPDWPOMO@dlamil

C30.8.1.4. An item’s NSN, in conjunction with the serial number/UII will be the means for tracking an item in a logistics AIS. Management is not possible if there is no NSN recorded in the FLIS. Item visibility will be by NSN, owner, SCC, serial number/UII. DLMS provides flexibility to accommodate tracking by NSN, serial number and UII.

C30.8.1.5. Owner visibility tracking by serial number/UII will cease when DLA Disposition Services acknowledges receipt of serially managed materiel. DLA Disposition Services will validate serial number/UII for serially managed materiel during receipt processing and provide an SDR to the turn-in activity for any discrepancies.

C30.8.1.6. Retention of Source Documents and Transaction History. Activities may require audit capability for a period of time following the processing of documents and transactions for serially managed materiel. Activities will maintain and dispose of documents and transaction history records in accordance with DoDI 5015.02, DoD Records Management Program.

C30.8.2. Specific Serial Number/UII Requirements. DLMS Transactions will always be sent to the owner when the NSN, quantity, ownership code, SCC, or serial number/UII is affected. Except as noted for receipt processing, DLMS transactions will always include the serial number.

C30.8.2.1. Requisitioning. Requisitioning will be in accordance with the procedures contained in Chapter 4. There is no documented requirement for requisitioning of items by serial number/UII. Therefore, serial number/UII procedures are not applicable to the requisition, requisition modification, MRO, redistribution order, or disposal release order. With the exception of the processes documented in paragraph C30.5.1.9. supporting the intra-Air Force use in the NWRM PIC Fusion Module UIT Registry, the MRO and supply status transactions will not include serial number/UII.

C30.8.2.2. Due-In and Prepositioned Materiel Receipt (PMR), Activities will follow the procedures in Chapter 12 for establishing due-in records and processing PMRs. Do not include serial number/UII in the PMR.
C30.8.2.3. Shipping Activity Processes

C30.8.2.3.1. Advance Shipment Notice (From Procurement Source). When the procuring DoD Component orders UII items from a vendor, the procuring DoD Component must ensure that the applicable clause requiring the vendor to provide IUID information in accordance with Defense Federal Acquisition Regulations Supplement (DFARS), “Item Unique Identification” clause is included in the contract. The contractor must submit IUID information to the WAWF e-Business Suite – Invoicing, Receipt, Acceptance, and Property Transfer (iRAPT) in accordance with the iRAPT Implementation Guides for the 856, Ship Notice/Manifest; 857 Shipment and Billing Notice; direct online input; or another comparable information exchange method supported by iRAPT. iRAPT will disseminate the vendor shipment information to the procuring activity to satisfy the shipment performance notice requirement for the vendor to provide notification of shipment to the procuring activity using DLMS 856, Advance Shipment Notice (ASN), including UII(s) and serial numbers, or comparable 856 transaction. DLMS-compliant receiving activities must coordinate with iRAPT for dissemination of the vendor shipment information to the receiving system using the DLMS 856 ASN, including UII(s) and serial numbers.

12 See www.acq.osd.mil/dpap/pdi/uid for specific UID DFARS clause information to include in the contract.

C30.8.2.3.2. Shipment Status

C30.8.2.3.2.1. Chapter 5 contains procedures to prepare and report the shipment status. The shipping activity will report shipment status with the serial numbers/UIIs selected for shipment, to the receiving DoD Component activity. The receiving DoD Component will enter the data in its AIS as a due-in and when the items are actually received, confirm that the serial numbers/UIIs match the numbers reported as shipped by the shipment status transaction. Resolve mismatched serial numbers/UIIs following the procedures in Chapters 6, 17, and the additive procedures under discrepancy reporting processes below.

C30.8.2.3.2. DLA Disposition Services Shipment Status.

C30.8.2.3.2.3. Shipment Status Materiel Returns. Chapter 11 contains procedures to prepare and report the shipment status materiel returns. Shipping activities will provide the serial number/UII in the shipment status material returns transactions for materiel being returned.

C30.8.2.3.3. Storage Activity Shipments

C30.8.2.3.3.1 Materiel Release Confirmations. Chapter 4 contains the procedures to prepare and report the materiel release confirmation. The storage activities will confirm materiel release to the owner and report shipped serial numbers/UIIs. Must use the 4030 version of the materiel release confirmation.

C30.8.2.3.3.2. The AIS supporting the owner will use the materiel release confirmation to record which serial numbers/UIIs have been shipped and
C30.8.2.4. Receiving Storage Activity. Receiving storage activities will maintain records of materiel received in its custodial system of record by NSN, owner, SCC, serial number/UII and its location.

C30.8.2.4.1. Acceptance Report (Procurement). When acceptance at origin is applicable, the shipment status or comparable transactions, forwarded to the procuring and receiving activity, will contain accepted IUID information. When acceptance at destination is applicable, the receiving system must report acceptance using the acceptance report, or use direct input to iRAPT. The IUID information will be provided in the acceptance report only when partial acceptance occurs, and will include those items which were accepted. Responsibility for Government acceptance may also be contractually assigned to an alternative organization which may use the acceptance report or direct input to iRAPT for acceptance reporting. iRAPT will extract the IUID information for all Government accepted IUID items and use to establish the birth record in the IUID registry. Additional information and guidance on the IUID registry can be found on the UID Website http://www.acq.osd.mil/dpap/pdi/uid.

C30.8.2.4.2. Receipt. Chapter 13 contains procedures to prepare and report receipts. Receiving activities will use the receipt transaction to record receipts; the receipt transaction will report the serial numbers/UIIs that were actually received. If the serial numbers/UIIs did not match the serial numbers/UIIs on the shipment notice, then the Components will follow discrepancy reporting procedures below. A missing serial number at receipt will stop the item in the supply chain, and must follow the discrepancy reporting procedures below. Missing serial number(s) and mismatches on serial number/UII will be considered discrepancies.

C30.8.2.4.2.1. Receiving storage activities will maintain locator records within their supporting AIS of the location where each serial number/UII is stored at that activity.

C30.8.2.4.2.2. The storage activity will send the receipt transaction to the owner and include the serial numbers/UIIs. The owner will record the serial numbers/UIIs on the owner record. The owner will update the IUID registry using existing IUID registry procedures.

C30.8.2.5. Supply Discrepancy Reporting (SDR) Processes

C30.8.2.5.1. Serially managed items requiring owner visibility at the storage activity, that are received without a serial number will not only require an SDR, but will stop the item in the supply chain until a serial number is identified and the materiel is marked. If the storage activity cannot determine the serial number using the associated shipment notice and marks/labels on the item or packaging, DLA Distribution Centers will receipt the materiel without a serial number in a suspended condition and submit the SDR under Chapter 17 SDR procedures. The materiel owner is responsible
for determining the appropriate serial number and providing disposition for marking the item. Upon positive resolution of the missing or mismatched serial number/UII scenario, separate dual inventory adjustment transactions are required to update the serial number/UII and update the SCC of the suspended item to the appropriate SCC.

C30.8.2.5.2. SDRs reporting discrepant receipt will contain the serial numbers/UIIs when reporting missing or mismatched serial number/UII data (including shortage, overage, mismatch with no quantity discrepancy, condition other than expected, and wrong item receipt) as well as when the materiel condition is misrepresented or otherwise deviates from the original condition shipped. WebSDR will ensure that the owner/manager has visibility of SDRs sent to the shipper. The receiving activity will submit an SDR in accordance with Chapter 17 procedures showing the appropriate discrepancy code, inclusive of the IUID discrepancy code when reporting missing or mismatched IUID data.

C30.8.2.5.3. SDRs reporting non-compliant serial number will be reported using Discrepancy Code U14 (Serial number convention invalid). This code is distinguished from other similar U-series discrepancy codes in that this code specifically informs the owner that a serially managed item was received with an invalid serial number convention. The receiving activity must annotate the non-compliant serial number in the SDR comments field since the DLMS 842A/W SDR transaction will not allow for an invalid serial number convention to be transmitted in the transaction.

C30.8.2.5.4. Reporting and action activities must ensure SDRs follow the time standard requirements for submission and response in accordance with Chapter 17. Chapter 17, Table C17.T1 provides a decision matrix identifying when an SDR is required for UIT program items, based on missing or mismatched IUID data during receipt processing.

C30.8.2.6. Physical Inventory Control Processes. The procedures for processing and reporting transactions to maintain physical inventory control in Chapter 6 apply with the following additions:

C30.8.2.6.1. To increase auditability of physical inventory requests, serially managed items will include a unique document number. The document number will help relate a physical inventory request with it appropriate response. The owner will provide a document number in the Physical Inventory Request. The storage activity will perform the necessary physical research as described in Chapter 6 Physical Inventory Control. The physical inventory response will carry the same document number provided by the owner. These procedures are required for UIT programs and recommended for all other commodities.

C30.8.2.6.2. The response to a transaction history request transaction (No History Available), and end of day transaction count transaction will not contain UIIs or serial numbers. However, when the owner initiates a physical inventory request to assist in resolving discrepancies, where the only difference between the owner records and the storage activity records is on serial number and/or UII, the request will contain
Type of Physical Inventory Code B. Owners will initiate a physical inventory due to mismatched serial numbers or UIIs when the owner identifies a mismatched condition on serial number and/or UII between its records and transactions received.

C30.8.2.6.3. Owner/manager processing a materiel release confirmation from a storage activity where the owner does not have a matching record of the serial number and/or UII or the owner/manager records have that serial number and/or UII located at other than the storage activity reporting the release/issue of the item. Either of these conditions may necessitate a complete inventory be taken at all storage locations for all owners and supply condition codes.

C30.8.2.6.4. Owner/manager processing receipts, issues, or inventory adjustments from storage activities where there is a mismatch on serial number/UII between the owner records and storage activity transactions reporting which serial number and/or UII may at a minimum necessitate an inventory and research to resolve the discrepancy.

C30.8.2.6.5. Inventory Adjustments. The inventory adjustment function encompasses increases, decreases, or dual adjustments. The C6.4 procedures for processing and reporting Inventory Adjustments (Physical Inventory) are applicable with the following additions:

C30.8.2.6.5.1. Inventory adjustment (gain, loss, or dual) transactions will include the serial number/UII when adding, removing, or correcting a serial number/UII.

C30.8.2.6.5.2. When a discrepancy exists solely on mismatched serial number and/or UII, the storage activity will transmit a DLMS 947I Inventory Adjustment, Inventory Transaction Type Code DU (Inventory Adjustment Dual), Quantity or Status Adjustment Reason Code AQ (Inventory Adjustment (UII and/or serial number mismatch)) to correct the serial number/UII in question. The storage activity will collaborate with the materiel owner(s) to research inventory adjustments due to serial number/UII discrepancies resulting in a mismatch (Quantity or Status Adjustment Reason Code AQ) in accordance chapter 6. When the item was previously suspended, two inventory adjustment transactions are required to correct the serial number/UII, and to update the SCC.

C30.8.2.6.5.3. Items where a discrepancy exists solely on missing serial number/UII requires a dual inventory adjustment transaction. The storage activity will transmit a DLMS 947I Inventory Adjustment, Inventory Transaction Type Code DU (Inventory Adjustment Dual), Quantity or Status Adjustment Reason Code AM (Missing Unique Item Identifier (UII)/Serial Number) to add the serial number/UII in question to the existing records. The storage activity may add multiple missing serial number/UII using a single transaction. When the item was previously suspended, a dual inventory adjustment transaction will be required to cite the impacted serial number(s)/UII(s) to update the suspended item(s) from the suspended SCC to the appropriate SCC.
C30.8.2.6.5.4. In response to a Physical Inventory Request, the storage activity will transmit to the owner a DLMS 947I Inventory Adjustment with zero quantity, Quantity or Status Adjustment Reason Code AA (Physical Count) by line item indicating the completion of the inventory. Inventory adjustment transactions with Quantity or Status Adjustment Reason Code AA and zero quantity must include all serial number/UII(s) associated to the NSN, Condition Code, and Owner from the initial request. The storage activity will send all gain, loss, or dual adjustment transactions prior to sending the final inventory adjustment transaction (Reason Code AA, zero quantity) containing all serial numbers/UIIs. The owner will process all inventory adjustments prior to processing the final inventory adjustment.

C30.8.2.6.5.5. Owner/managers processing location reconciliation history transactions resulting from End-of-Day processing or an owner initiated location reconciliation request where there is a mismatch on serial number/UII between the owner records and the transactions received from the storage activity. The history transactions will perpetuate the serial numbers/UIIs included in the original transactions.

C30.8.2.7. Location Survey

C30.8.2.7.1. Chapter 6 contains the procedures for location surveys. Location survey requires a physical verification, other than actual count, between assets and recorded location data to ensure that all assets have their locations accurately recorded.

C30.8.2.7.2. Serially managed items requiring owner visibility may be in individual storage locations within the storage activity. The storage activity may, for items of this nature, include the serial number/UII verification as part of the location survey. When the storage activity identifies a discrepancy during the location survey program (Type I or Type II error (see subparagraphs C6.8.1.2.1. and C6.8.1.2.2.)), the storage activity will conduct prompt research and assess the need for a special inventory Physical Inventory Request Transaction with Type of Physical Inventory/Transaction History Code K).

C30.8.2.8. End-of-Day Reconciliation. Storage activities and materiel owners will perform End-of-Day (EOD) reconciliation in accordance with Chapter 6 C6.2.6. End of the Day Processing. In addition storage activities and owners will reconcile all associated serial numbers/UII to ensure proper accountability of serially-managed items. For mismatches between system records, the owner, in collaboration with the storage activity, will take the necessary steps to ensure proper research and resolution. It is the responsibility of the owner to submit any necessary updates as applicable to the IUID Registry.

C30.9. RETAIL SUPPLY AND TRANSPORTATION INTERCHANGE. (See Volume 3, Chapter 2). The transportation office will perpetuate the serial numbers/UIIs (when available with the associated transportation control number (TCN) in the materiel release confirmation (Distribution Code 111). This data content will be used by the supply activity to perpetuate this information to the shipment status.
C30.10. MATERIEL RETURNS, REDISTRIBUTION OF ASSETS, DIRECTED DISCREPANT/DEFICIENT MATERIEL RETURNS, AND RETROGRADE RETURNS

C30.10.1. Materiel return, redistribution of assets, directed discrepant/deficient materiel returns, and retrograde procedures are contained in Chapter 11. The following paragraphs identify the additional requirements for total visibility items.

C30.10.2. Activities shipping returns of any kind or responding to redistribution orders will include the serial number/UII in the shipment status materiel return transaction.

C30.10.3. Storage activities receiving returns or redistributed items will include the serial numbers/UIIs in the receipt transaction. Missing serial number(s) and mismatches on serial number/UII will be considered discrepancies. Refer to the SDR processing section in this chapter.

C30.11. REINTRODUCTION OF UNIQUE ITEM IDENTIFIER ITEM PREVIOUSLY SHIPPED OUTSIDE THE CONTROL OF THE DEPARTMENT OF DEFENSE. When an item previously shipped outside DoD control is reintroduced to DoD control, the receiving activity will report the receipt, including serial number/UII, to the owner. If the UII is available on the receipt transaction, the owner will update the IUID registry using IUID registry procedures.

C30.12. DOD STOCK READINESS PROGRAM.

C30.12.1. Under the Stock Readiness program, the Department of Defense requires uniform care of supplies, including the inspection and reporting of materiel condition and serviceability, and the scheduling, controlling, and reporting of packaging and other cost reimbursable actions supporting care of supplies in storage (COSIS). For serially managed materiel the storage activity will report storage quality issues requiring COSIS work to the materiel owner via the storage quality control report (SQCR), including the serial numbers/UIIs, for approval in accordance with DoD Component "Stock Readiness" Policy.

C30.12.2. Missing serial number. Serially managed items requiring owner visibility that are located in storage without a serial number will stop the equipment in the supply chain until a serial number is identified and the materiel is marked. If the remarking/relabeling exceeds the dollar threshold for pre-authorized corrective action or the storage activity cannot identify the serial number using inventory records and other available information, the storage activity will suspend the item in SCC J and prepare an SQCR. Cite the applicable discrepancy code and provide clarifying remarks with descriptive information for the item. The materiel owner is responsible for determining the appropriate serial number and providing disposition for marking the item.

### PART 1. PERFORMANCE

1. **MATERIAL RELEASE DENIALS**
   - A. LINEs DIRECTED FOR SHIPMENTS
   - B. TOTAL MATERIAL RELEASE DENIALS
   - C. MATERIAL DENIAL RATE ((100 A/B) X 100)

2. **RECEIPT PROCESSING**
   - A. RECEIPTS STORED AND POSTED
   - B. RECEIPTS STORED AND POSTED ON TIME
   - C. ON TIME RECEIPT RATE ((FR3A X 100)

3. **LOCATION AUDIT PROGRAM**
   - A. LOCATIONS SURVEYED
   - B. SURVEY ERRORS
   - C. SURVEY ACCURACY (100-(S3B3A)(X100))
   - D. LOCATIONS RECONCILED
   - E. RECONCILIATION ERRORS
   - F. RECONCILIATION ACCURACY ((100-RECON(35B3D)(X100))

### PART II. PHYSICAL INVENTORY ADJUSTMENTS

1. **PHYSICAL INVENTORIES**
   - A. NO. OF SCHEDULED AND UNSCHEDULED INVENTORIES COMPLETED
   - B. NO. OF INVENTORIES WITH VARIANCES
   - C. INVENTORY RECORD ACCURACY (100-(V3A)(X100))

2. **NO. OF INVENTORY ADJUSTMENTS FROM OTHER THAN PHYSICAL INVENTORY**
   - A. LOCATION RECONCILIATION
   - B. END OF DAY PROCESSING
   - C. TOTAL (2A + 210)

3. **TOTAL ADJUSTMENTS (T-D-2C)**

4. **NO. OF REVERSALS OF INVENTORY ADJUSTMENTS**
   - A. NO. OF GAIN REVERSALS
   - B. NO. OF LOSS REVERSALS
   - C. TOTAL (4A + 4B)

# INVENTORY CONTROL EFFECTIVENESS (ICE) REPORT - PART I

## GENERAL SUPPLIES

**Reporting Organization** | **Quarter Ending** | **Fiscal Year To Date**
--- | --- | ---

1. Number of Physical Inventories & Variance Rate
   - A. Number of Inventories Completed
   - B. Number of Inventories with Adjustments
   - C. Inventory Variance Rate \((\frac{11B1A}{100})\)
   - D. Number of Inventory Adjustments & Causative Research Criteria
   - E. Causative Research Variance Rate \((\frac{11A1A}{100})\)

2. Number of Adjustments
   - A. Number of Adjustment Gains
   - B. Number of Adjustment Losses
   - C. Number of Gain Reversals
   - D. Number of Loss Reversals
   - E. Total Number of Adjustments \((3A+2B+2C+2D)\)
   - F. Number of Issues and Receipts (Transactions)
   - G. Number of Adjustments, Gains, and Losses
   - H. Transaction Adjustment Rate \((\frac{3G2P}{100})\)

3. Monetary Value of Adjustments
   - A. Value of Adjustment Gains
   - B. Value of Adjustment Losses
   - C. Value of Gain Reversals
   - D. Value of Loss Reversals
   - E. Total Value of Adjustments \((3A+3B+3C+3D)\)

4. Adjustment Rates
   - A. Average Value of Materiel in Storage
   - B. Record Value of Items Inventoried
   - C. Absolute Adjustment Rate for Materiel in Storage \((\frac{3E4A}{100})\)
   - D. Absolute Adjustment Rate for Items Inventoried \((\frac{3E4B}{100})\)
   - E. Initial Adjustment Rate As Percent of Inventory in Storage \((\frac{3A+3D}{4A+100})\)
   - F. Initial Adjustment Rate As Percent of Items Inventoried \((\frac{3A+3B+3D}{4B+100})\)

5. Denial Rates
   - A. Lines Directed For Shipment
   - B. Total Materiel Release Order Denials
   - C. Materiel Denial Rate \((\frac{5B5A}{100})\)

AP2.1. APPENDIX 2.1

DOCUMENT IDENTIFIER CODES

NUMBER OF CHARACTERS: Three

TYPE OF CODE: Alpha/Numeric

EXPLANATION: Identifies:

(1) Actions as forming a part of the inventory accountability system.

(2) The type of document and the effect a transaction has upon inventory control records.

(3) The specific relation of various inventory transactions to appropriation fund and stock fund financial statements.

RECORD POSITIONS: 1-3

A table showing the correlation of MILSTRAP legacy document Identifier Code (DIC) functionality to the Defense Logistics Management System (DLMS) is available from the Defense Logistics Management Standards Website. This table provides visibility of how MILSTRAP DIC functionality is incorporated in DLMS American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 transactions.

AP2.1.1. Under MILSTRAP legacy 80 record position transactions, the DIC provides a means of identifying a given product (e.g., receipt, issue, demand, inventory adjustment, etc.) to the logistics system and processing operation(s) to which it pertains and further identifies such data as to the intended purpose, usage, and operation dictated. The DIC enables automatic data processing equipment to select the appropriate program(s) and to mechanically perform operations dictated by the code, and provides a corresponding function for manual processing.

AP2.1.2. The DIC is a mandatory entry on all legacy 80 record position documents entering and leaving the supply distribution systems under MILSTRAP. Each transaction, therefore, will be identified by an appropriate code. The assignment of the first character of the code is a responsibility of DoD.

AP2.1.3. The following rationale is applicable to DICs pertaining to MILSTRAP distribution system(s):

AP2.1.3.1. The first record position will always be an alpha.
AP2.3.1.1. Alpha D identifies transactions relating to inventory accountability system(s) irrespective of Component or systems within a Component.

AP2.3.1.2. Alpha E, in lieu of D, identifies MILSTRAP simulated mobilization exercise transactions which will not automatically affect materiel asset records or physical movement of materiel. Components responsible for initiating exercises must ensure complete coordination with all DoD Components involved. The following series of codes applicable for MILSTRAP, MILSBILLS, and MILSTRIP are permanently reserved for simulated mobilization exercise purposes only (MILSTAMP had the ‘R series’, but MILSTAMP has been incorporated into the Defense Transportation Regulation):

MILSTRAP – E Series
MILSBILLS – H Series
MILSTRIP – U Series

AP2.3.1.3. Alphas B and X identify transactions relating to inventory control system(s) within Components. Each Component may develop and assign these codes, but they will be confined to intra-Component use only.

AP2.3.1.4. Alpha C identifies transactions relating to the DLA inventory control system which are confined to intra-DLA use only.

AP2.3.1.5. Alphas Y and Z are authorized for Component assignment to identify transactions need for internal depot, source of supply, or base operations when they cannot be identified directly to the preceding paragraph AP2.3.1.1, AP2.3.1.2, AP2.3.1.3, or AP2.3.1.4, and when they are not universal in scope and application. Transactions containing Y and Z in the first record position may never appear on any documents passed beyond the confines of a base, depot, ICP, or equivalent.

AP2.1.3.2. The second record position may be either alpha or numeric. A numeric entry denotes a transaction which affects an on hand balance and shows the general nature of the transaction. An even number denotes a receipt or debit; an odd number denotes an issue or credit. An alpha entry, excluding DIC DAC, DAD, or DAS, denotes a transaction which does not affect the overall or total on hand balance.

AP2.1.3.3. The third record position may be either alpha or numeric.

AP2.1.4. D series DICs are listed on the following pages. Unassigned codes in the D series are reserved for future assignment by DoD.

</tr>
</tbody>
</table>
AP2.4. APPENDIX 2.4

PURPOSE CODES

NUMBER OF CHARACTERS: One

TYPE OF CODE: Alphabetic

EXPLANATION: Provides the owner of materiel with a means of identifying the purpose or reason for which an inventory balance is reserved. Assigned and used only on an intra-Component basis by the Component owning the materiel. NOTE: Assigned purpose codes, and explanation for their use, are contained in the various regulatory procedures published by the Components.¹

RECORD POSITIONS: 70

DLMS SEGMENT/QUALIFIER: LQ Segment, LQ01 Data Element ID 1270 Qualifier “99 – Purpose Code”

¹ In accordance with the approved change for Ownership Code 0 (Zero) to identify DoD Special Operations Forces ownership, DoD Component publications and procedures are to restrict alpha Purpose Code O from being assigned/used. This restriction is made to avoid confusion between use of alpha Purpose Code O and numeric Ownership Code 0, since ownership code and purpose code share a field under the constraints of the legacy 80-record position Defense Logistics Standard System (DLSS) transaction formats. (See AMCL 15.)
AP2.5. APPENDIX 2.5

FEDERAL CONDITION CODES

NUMBER OF CHARACTERS: One

TYPE OF CODE: Alpha/Numeric

EXPLANATION: There are two different and distinct condition codes under the definition of Federal condition codes:

a. Supply condition codes are used to classify materiel in terms of readiness for issue and use or to identify action underway to change the status of materiel. MILSTRAP/DLMS is the authoritative source for the supply condition code portion of the Federal condition code.

a. Disposal condition codes are assigned by the DLA Disposition Services Field Office based on inspection of materiel at time of receipt. A combination of the disposal condition codes, which most accurately describe the materiel physical condition, and the supply condition codes will constitute the Federal condition codes for utilization program screening and review purpose. DoDM 4160.21, “Defense Materiel Disposition, Volumes 1-4”, 31 August 2018, is the authoritative source for the disposal condition code portion of the Federal condition code.
SUPPLY CONDITION CODES

NUMBER OF CHARACTERS: One

TYPE OF CODE: Alphabetic

EXPLANATION: Classify materiel in terms of readiness for issue and use or to identify action underway to change the status of materiel. When materiel is determined to be in excess of approved stock levels and/or no longer serviceable, Supply Condition Codes (SCC) A through H, Q, and S will be utilized to reflect materiel condition prior to turn-in to the DLA Disposition Services Field Office.¹

LEGACY RECORD POSITION: 71

DLMS SEGMENT/QUALIFIER: LQ Segment, LQ01 Data Element ID 1270 Qualifier “83 – Supply Condition Code”

<table>
<thead>
<tr>
<th>CODE</th>
<th>TITLE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>SERVICEABLE (ISSUABLE WITHOUT QUALIFICATION)</td>
<td>New, used, repaired, or reconditioned materiel which is serviceable and issuable to all customers without limitation or restriction. Includes materiel with more than 6 months shelf-life remaining.</td>
</tr>
<tr>
<td>B</td>
<td>SERVICEABLE (ISSUABLE WITH QUALIFICATION)</td>
<td>New, used, repaired, or reconditioned materiel which is serviceable and issuable for its intended purpose but which is restricted from issue to specific units, activities, or geographical areas by reason of its limited usefulness or short service life expectancy. Includes materiel with 3 through 6 months shelf-life remaining.</td>
</tr>
<tr>
<td>C</td>
<td>SERVICEABLE (PRIORITY ISSUE)</td>
<td>Items which are serviceable and issuable to selected customers, but which must be issued before SCCs A and B materiel to avoid loss as a usable asset. Includes materiel with less than 3 months shelf-life remaining.</td>
</tr>
<tr>
<td>D</td>
<td>SERVICEABLE (TEST/MODIFICATION)</td>
<td>Serviceable materiel which requires test, alteration, modification, technical data marking, conversion, or disassembly. This does not include items which must be inspected or tested immediately prior to issue.</td>
</tr>
</tbody>
</table>

¹ Refer to the DoD 4140.27, “Shelf-Life Item Management Program”, 31 August 2018 for serviceability timeframes associated with shelf-life items. SCCs J through P, R, and V, will not be used for materiel turn-ins to the DLA Disposition Services.
<table>
<thead>
<tr>
<th>CODE</th>
<th>TITLE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>UNSERVICEABLE (LIMITED RESTORATION)</td>
<td>Materiel which involves only limited expense or effort to restore to serviceable condition and which is accomplished in the storage activity where the stock is located. May be issued to support ammunition requisitions coded to indicate acceptability of usable SCC E stock.</td>
</tr>
<tr>
<td>F</td>
<td>UNSERVICEABLE (REPARABLE)</td>
<td>Economically reparable materiel which requires repair, overhaul, or reconditioning; includes reparable items which are radioactively contaminated.</td>
</tr>
<tr>
<td>G</td>
<td>UNSERVICEABLE (INCOMPLETE)</td>
<td>Materiel requiring additional parts or components to complete the end item prior to issue.</td>
</tr>
<tr>
<td>H</td>
<td>UNSERVICEABLE (CONDEMNED)</td>
<td>Materiel which has been determined to be unserviceable and does not meet repair criteria; includes condemned items which are radioactively contaminated; Type I shelf-life materiel that has passed the expiration date; and Type II shelf-life materiel that has passed expiration date and cannot be extended. (NOTE: Classify obsolete and excess materiel to its proper condition before consigning to the DLA Disposition Services Field Office. Do not classify materiel in Supply Condition Code H unless it is truly unserviceable and does not meet repair criteria.)</td>
</tr>
<tr>
<td>I</td>
<td>NOT ASSIGNED</td>
<td>Reserved for future DoD assignment.</td>
</tr>
<tr>
<td>J</td>
<td>SUSPENDED (IN STOCK)</td>
<td>Materiel in stock which has been suspended from issue pending condition classification or analysis, where the true condition is not known. Includes shelf-life Type II materiel that has reached the expiration date pending inspection, test, or restoration.</td>
</tr>
<tr>
<td>K</td>
<td>SUSPENDED (RETURNS)</td>
<td>Materiel returned from customers or users and awaiting condition classification.</td>

</tr>
<tr>
<td>P</td>
<td>UNSERVICEABLE (RECLAMATION)</td>
<td>Materiel determined to be unserviceable, uneconomically reparable as a result of physical inspection, teardown, or engineering decision. Item contains serviceable components or assemblies to be reclaimed.</td>
</tr>
<tr>
<td>Q²</td>
<td>SUSPENDED (PRODUCT QUALITY DEFICIENCY)</td>
<td>Potential and confirmed product quality deficiency related materiel which is prohibited for use within DoD and prohibited for reutilization screening. Includes product quality deficiency exhibits returned by customers/users as directed by the integrated materiel manager (IMM) due to technical deficiencies reported by Product Quality Deficiency Reports. Exhibits require technical or engineering analysis to determine cause of failure to perform in accordance with specifications. Includes product quality deficient materiel identified by SF 368 Product Quality Deficiency Report; DD Form 1225, Storage Quality Control Report; SF 364, Supply Discrepancy Report (Security Assistance only); or authorized electronic equivalent.</td>
</tr>
<tr>
<td>R</td>
<td>SUSPENDED (RECLAIMED ITEMS, AWAITING CONDITION DETERMINATION)</td>
<td>Assets turned in by reclamation activities which do not have the capability (e.g., skills, manpower, or test equipment) to determine the materiel condition. Actual condition will be determined prior to induction into maintenance activities for repair/modification.</td>
</tr>
<tr>
<td>S</td>
<td>UNSERVICEABLE (SCRAP)</td>
<td>Materiel that has no value except for its basic materiel content. No stock will be recorded as on hand in SCC S. This code is used only on transactions involving shipments to DLA Disposition Services Field Offices. Materiel will not be transferred to SCC S prior to turn-in to DLA Disposition Services Field Offices if materiel is recorded in SCCs A through H at the time materiel is determined excess. Materiel identified by NSN will not be identified by this SCC.</td>
</tr>
</tbody>
</table>

</tr>
<tr>
<td>X⁴</td>
<td>SUSPENDED (REPAIR DECISION DELAYED)</td>
<td>Materiel in stock or returned from customers/users and awaiting repair or disposition. Not authorized for transfer to disposal, issue for maintenance by a Service other than that of the owner, or for release to users.</td>
</tr>
<tr>
<td>Y, Z</td>
<td>NOT ASSIGNED</td>
<td>Reserved for future DoD assignment.</td>
</tr>
</tbody>
</table>

---

³ Ordnance Information System implementation date for SCC T is October 1, 2012. Ordnance Information System is used by Navy, Marine Corps, and Coast Guard. For Army, further analysis is required to determine supportability and implementation timeline for incorporation of SCC T in Army’s Logistics Modernization Program. Air Force has no plans to implement SCC T at this time. Refer to ADC 446.

⁴ Refer to ADC 1159.
DISPOSAL CONDITION CODES

NUMBER OF CHARACTERS: One

TYPE OF CODE: Numeric

EXPLANATION: Assigned by DLA Disposition Services Field Office to accurately describe the materiel physical condition based on inspection of materiel at time of receipt. DoDM 4160.21 is the authoritative source for the disposal condition code portion of the Federal condition code. Refer to DoDM 4160.21 for disposal condition code values.

LEGACY RECORD POSITION: 71

DLMS SEGMENT/QUALIFIER: LQ Segment, LQ01 Data Element ID 1270 Qualifier “EJ – Disposal Condition Code”
AP2.6 APPENDIX 2.6
MANAGEMENT CODES

NUMBER OF CHARACTERS: One
TYPE OF CODE: Alpha/Numeric
EXPLANATION: Provides supplemental data not indicated through the transaction coding structure. When a situation exists which is not covered by a code, the Component managing the distribution system may assign Management Codes A thru L (except I), and other codes as specified below, and may prescribe their entry in appropriate transactions. Codes established under this option will not duplicate or circumvent the intent of DoD assigned or reserved codes.

RECORD POSITION: 72
DLMS SEGMENT/QUALIFIER: LQ Segment, LQ01 Data Element ID 1270 Qualifier “84 – Management Code”

AP2.6.1. RECEIPT RELATED TRANSACTIONS. The following management codes are assigned for use in MILSTRAP materiel receipt-related transactions, Document Identifier Codes (DIC) D4_ and D6_ Materiel Receipts, DD_ and DF_ Due-in Transactions, DU_ and DW_ PMRs, and DX_ Materiel Receipt Follow-ups), and related receiving documentation (when applicable), as indicated below:

6 Refer to ADC 449, Intra-DLA Revisions to the DLMS 945A, Materiel Release Advice, Cancellation Reason Code, Management Code, and Associated Procedures under Reutilization Business Integration (RBI)
7 ADC 1169, DLA Distribution Center Denial Scenarios Associated with Product Quality Deficiency Report (PQDR) Exhibits.
8 Authorized for use in intra-Army supply status (ADC 191), and subsequently expanded for inter-Service/Agency use (ADC 312). Implementation outside Army applications is pending.
9 Also applicable to DICs assigned by the DoD Components for use on DTID below the wholesale level.
10 Authorized for use in Army interface with DLA in response to a DLA directed LRO.
### CODE  APPLICABLE DICS  EXPLANATION

T  All other DICs  Reserved for future DoD assignment.

U  A5_  Post inventory document.

U  A6_  Reserved for a denial management code associated with UIT. PDC to be developed.

U  All other DICs  Reserved for future DoD assignment.

V  A5_ less A5J\(^{11}\)  Denied. Requested stock cannot be released due to suspected unacceptable condition. Inspection to be conducted for verification. Applicable to DLA industrial activity support agreement.

V  All DICs  Reserved for future DoD assignment.

W  A6A, A6B, A61, A62\(^{12}\)  Unauthorized Commercial Venture (CV) Denial. For intra-DLA Disposition Services use to indicate that a delivery order line item is not authorized for processing as a Commercial Venture and credit must be provided to the Commercial Venture firm.

W  AE6, A4_\(^{13}\), A6_\(^{14}\), D7_\(^{15}\)  Denied. Cannot identify DoDAAC/MAPAC of designated materiel recipient.

W  All other DICs  Reserved for future DoD assignment.

X  AE6, A4_\(^{16}\), A6_, D7_\(^{17}\)  Denied. Consignee, freight forwarder, or country representative has advised that issue of this materiel will constitute a duplicate shipment.

X  All other DICs  Reserved for future DoD assignment.

Y  A6_\(^{18}\)  Denied. Materiel pre-positioned at a forward site associated with the identified storage activity for Navy industrial activity maintenance operations.

---

\(^{11}\) Refer to ADC 396, Revised Procedures and Data Content for DLMS Materiel Release Order (940R) and Material Release Advice (945A) and New Denial Management Code for Marine Corps BRAC SDI.

\(^{12}\) See ADC 1054.

\(^{13}\) Authorized for use only in intra-Navy referral orders.

\(^{15}\) Authorized for use only in intra-Navy D7_ Issue transaction reversals and in D7_ Issue transaction reversals between Navy Specialized Support Points and DLA.

\(^{16}\) Authorized for use in intra-Army supply status (ADC 191), and subsequently expanded for inter-Service/Agency use (ADC 312). Implementation outside Army applications is pending.

\(^{17}\) Authorized for use in Army interface with DLA in response to a DLA directed LRO.

\(^{18}\) Refer to ADC 370, Requisitioning for Off-Station Forward Site Support and New Non-Inventory Affecting Denial Management Code indicating Off-Station Materiel under Navy BRAC SS&D IMSP.

**ASSET STATUS REPORTING CODES**

<table>
<thead>
<tr>
<th>NUMBER OF CHARACTERS:</th>
<th>One</th>
</tr>
</thead>
<tbody>
<tr>
<td>TYPE OF CODE:</td>
<td>Alpha/Numeric</td>
</tr>
</tbody>
</table>
| EXPLANATION:         | Identifies in the Asset Status Reporting Request, the type of reporting required and indicates whether a request is for commencement, change, or termination of reporting. Each new code will update the reporting requirement. Identifies the type of reporting being furnished in asset status reports. The asset status reporting codes are applicable to:  
  - Asset Status Reporting Request transaction (DLMS 846I with BIA02 Report Type Code TJ).  
  - Asset Status Reporting (Base, Post, Camp, and Station Level Use) transaction (DLMS 846I with BIA02 Report Type Code TJ) (referred to as asset status reporting in the code explanations) |

**LEGACY MILSTRAP DOCUMENT IDENTIFIER CODE (DIC):** DZE, DZF

**LEGACY RECORD POSITION (rp):** 7

**DLMS IMPLEMENTATION CONVENTION (IC):** 846I

**DLMS SEGMENT/QUALIFIER:** LQ Segment, 2/LQ01/270 Qualifier “EA – Asset Status or Transaction Reporting Code”

<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Weapon not received. Used to respond to follow-up request.</td>
</tr>
<tr>
<td>B</td>
<td>Initial registration of SA/LW.</td>
</tr>
<tr>
<td>C</td>
<td>Inventory Adjustment Gain. Reports of a serial number gain through inventory adjustments will be made under this transaction.</td>
</tr>
</tbody>
</table>

¹Unassigned codes are reserved for future DoD assignment. Codes 1, 2, 3, 4, and 5 are predesignated for intra-Army use in controlling category I non-nuclear missiles and rockets under the DoD SA/LW Serialization Program. DoD assignment or revision of codes 1 through 5 for intra-Army use will not be staffed prior to publication in this manual. When category I non-nuclear missiles and rockets are designated for DoD-wide registration under the DoD SA/LW Serialization Program, the code 1 through 5 assignments will be reviewed for inter-Component application.
<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Shipment Reversal. Used to reverse an invalid shipment transaction (code S) for which a serial number was previously reported to a Component Registry.</td>
</tr>
<tr>
<td>E</td>
<td>Used for intra-Component reconciliation of SA/LW serial numbers, and for inter-Component reconciliation when reconciling with DLA Defense Distribution Depots.</td>
</tr>
<tr>
<td>F</td>
<td>Shipment to FMS/grant aid. Used for issues of small arms directed under grant aid or FMS agreements.</td>
</tr>
<tr>
<td>G</td>
<td>Shipment to General Officers. Used to record issues to general officers.</td>
</tr>
<tr>
<td>H</td>
<td>Mass Stock Number Change. Used by the Component Registry to accommodate stock number changes in SA/LW.</td>
</tr>
<tr>
<td>I</td>
<td>Interrogation/Inquiry Record. Enter all inquiries from law enforcement agencies and from appropriate Military and civilian activities for weapons located in foreign countries on the DoD Registry file when no record exists on the active or inactive file.</td>
</tr>
<tr>
<td>J</td>
<td>Emergency Suspense Status. Includes weapons shipped for mobilization or shipments with personnel/units to combat areas pending return to the supply system.</td>
</tr>
<tr>
<td>K</td>
<td>Multi-Field Correction. Used by reporting activities to correct erroneous serial number, NSN, MCN, LCN, or owning activity address (DoDAAC/Unit Identification Code (UIC) of activity in possession of the weapon) reported and posted to the Component Registries master file.</td>
</tr>
<tr>
<td>L</td>
<td>Inventory Adjustment - Loss. Reports inventory adjustment loss after all investigative requirements, including/Financial Liability Investigation of Property Loss Report (DD Form 200(^2)).</td>
</tr>
<tr>
<td>M</td>
<td>DoDAAC/UIC Mass Change. This transaction will cause all serial numbers to be dropped from a DoDAAC/UIC and recorded to another DoDAAC/UIC designated in DLMS 140A 2/N1/020. This normally results from unit redesignation. Only one transaction is required to change the DoDAAC/UIC in all records.</td>
</tr>
<tr>
<td>N</td>
<td>Shipment to Other Agencies. Reports shipments to activities outside the control of DoD. This would include shipments to civilian activities, non-DoD governmental activities, and nonreporting (classified) Military activities. (Excludes FMS/Grant Aid shipments.)</td>
</tr>
<tr>
<td>O</td>
<td>Reserved for future DoD assignment.</td>

Codes 1, 2, 3, 4, and 5 are predesignated for intra-Army use in controlling category I non-nuclear missiles and rockets under the DoD SA/LW Serialization Program. DoD assignment or revision of codes 1 through 5 for intra-Army use will not be staffed prior to publication in this manual. When category I non-nuclear missiles and rockets are designated for DoD-wide registration under the DoD SA/LW Serialization Program, the code 1 through 5 assignments will be reviewed for inter-Component application.

INVENTORY ADJUSTMENT - PHYSICAL INVENTORY ERROR CLASSIFICATION CODES

NUMBER OF CHARACTERS: Three
TYPE OF CODE: Alpha/Numeric
EXPLANATION: Provides processing activities a means of mechanically identifying the causes for errors which resulted in potential/actual inventory adjustments and the processing operations in which they occurred.

DLSS RECORD POSITIONS: 63-65 of inventory adjustment transactions (Document Identifier Code (DIC) D8A/D9A and D8B/D9B)

DLMS SEGMENT/QUALIFIER: DLMS 947I LQ segment, LQ01 qualifier ‘EL’ used with W19 segment, W1901 Quantity or Status Adjustment Reason Code ‘AA-Physical Count’

AP2.15.1. PURPOSE

AP2.15.1.1. The physical inventory program error classification codes provide a standard means for Components to classify the causes of actual/potential adjustments for subsequent analysis, evaluation, and corrective action.

AP2.15.1.2. The error classification code is a required entry on MILSTRAP documentation for use in preparing reports and for providing evaluation data to higher authority in standard error classification categories.

AP2.15.2. CODE STRUCTURE

AP2.15.2.1. First Position. The first character is the operation code which shall be numeric or alphabetic and shall identify the operation during which the error occurred and not the operation in which the error was detected. Code assignment for the first character is controlled by DoD and may not be assigned by the Components. The following operation codes are assigned as the first character in the error classification code:
<table>
<thead>
<tr>
<th>CODE</th>
<th>OPERATION</th>
<th>CODE</th>
<th>OPERATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>

**AP2.15.2.3. Third Position.** The third character may be assigned by each Component to internally amplify the error classification. Numeric and alphabetic code assignments in this position will be controlled by each individual Component for their internal use.
APPENDIX 2.16

INVENTORY ADJUSTMENT - ACCOUNTING ERROR
CLASSIFICATION CODES

NUMBER OF CHARACTERS: Three
TYPE OF CODE: Alpha/Numeric
EXPLANATION: Provides processing activities a means of mechanically identifying the causes for errors which resulted in potential/actual inventory adjustment (accounting error) transactions, and the processing operations in which they occurred.

DLSS RECORD POSITIONS: rp 63-65 of Inventory Adjustment (Accounting Error) transaction (DI Code D8B/D9B)
DLMS SEGMENT/QUALIFIER: DLMS 947I LQ segment, LQ01 qualifier ‘ACC’ used with W19 segment, W1901 Quantity or Status Adjustment Reason Code ‘AB-Accounting Error’

AP2.16.1 PURPOSE

AP2.16.1.1 The physical inventory program error classification codes for accounting error inventory adjustments (Document Identifier Code (DIC) D8B/B9B) provide a standard means for DoD Components to classify the causes of actual/potential accounting error inventory adjustments for subsequent analysis, evaluation, and corrective action.

AP2.16.1.2 The error classification code is a required entry on MILSTRAP documentation for use in preparing reports and for providing evaluation data to higher authority in standard error classification categories.

AP2.16.2 CODE STRUCTURE

AP2.16.2.1 First Position. The first character shall be numeric or alphabetic and shall identify the type of transaction during which the error occurred. Code assignment for the first character is controlled by DoD and may not be assigned by the DoD Components. The following operation codes are assigned as the first character in the error classification code:

1 The owner/manager may use the Inventory Adjustment –Accounting Error Classification Codes in rp 63-65 in DIC D8B/D9B Inventory Adjustment Transactions (Accounting Errors) pending the establishment of single shared asset balances (see chapter 7).
<table>

CODES USED WITH MRA and select codes (A, D, E, and F) used with TRA:

<table>
<thead>
<tr>
<th>CODE</th>
<th>DEFINITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>SDR being submitted. (Excludes shortage and partial or total nonreceipt.)</td>
</tr>
<tr>
<td>B</td>
<td>No record of requisition. Use in MRA reply to follow-up if there is no record of the requisition and the materiel has not been received.</td>
</tr>
<tr>
<td>C</td>
<td>Reserved for future DoD assignment.</td>
</tr>
<tr>
<td>D</td>
<td>Transportation discrepancy report being submitted. (Excludes shortage and partial or total nonreceipt.)</td>
</tr>
<tr>
<td>E</td>
<td>Product quality deficiency report being submitted.</td>
</tr>
</tbody>
</table>
| F    | Shortage or partial or total nonreceipt.  
  - When used with MRA transaction, the quantity **not** received is entered.  
  - When used with TRA transaction, the quantity received is entered. |
| G    | Nonreceipt due to extended transit time. Use in MRA reply to follow-up, if more time is needed to pick up the materiel. Only for use by Navy ships and only when materiel is being held at a Navy Local Logistics Support Center or Materiel Processing Center.¹ |
| H    | Materiel still in transit² |
| I-L  | Reserved for future DoD assignment. |
| M-T  | See below |
| U    | Reserved for future DoD assignment. |
| V    | MRA is based on a systemic virtual receipt. MRA is generated from virtual receipt transaction which the Navy industrial site (Navy Shipyard/Fleet Readiness Center) created from a Supply Status transaction (DLMS 870S) with Status Code ‘PD’. Authorized for Navy and DLA use in MRA under Supply, Storage and Distribution/Inventory Management and Stock Positioning (SS&D/IMSP). Refer to ADC 372. |
| W    | Reserved for future DoD assignment. |
| X    | Discrepant receipt, other than shortage and partial or total nonreceipt, which does not meet qualifying criteria for discrepancy report submission. |
| Y-Z  | Reserved for future DoD assignment. |

¹ Refer to ADC 474. As required by DODM 4140.01, the DoD Components must provide implementation status for this approved change. Navy expected implementation by 2020/21. DLA EBS implemented indicator G in October 2017.

² Refer to ADC 1114.
CODES USED WITH INTRA-ARMY RECEIPT (OTHER THAN PROCUREMENT INSTRUMENT SOURCE) TRANSACTIONS (DLMS 527R Receipt/legacy DIC D6_):

<table>
<thead>
<tr>
<th>CODE</th>
<th>DEFINITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>M</td>
<td>Damaged Receipt (for intra-Army use only)</td>
</tr>
<tr>
<td>N</td>
<td>Receipt Storage (for intra-Army use only)</td>
</tr>
<tr>
<td>O</td>
<td>Reserved for future DoD assignment</td>
</tr>
<tr>
<td>P</td>
<td>Receipt Overage (for intra-Army use only)</td>
</tr>
<tr>
<td>Q</td>
<td>Wrong Material (for intra-Army use only)</td>
</tr>
<tr>
<td>R</td>
<td>Duplicate Receipt (for intra-Army use only)</td>
</tr>
<tr>
<td>S</td>
<td>Receipt previously processed as a Materiel Receipt Discrepancy (for intra-Army use only)</td>
</tr>
<tr>
<td>T</td>
<td>Condemned Upon Receipt or Shelf-Life Expired (for intra-Army use only)</td>
</tr>
</tbody>
</table>
AP 2.18. APPENDIX 2.18

TYPE INSPECTION CODES

NUMBER OF CHARACTERS: One

TYPE OF CODE: Numeric

EXPLANATION: Type Inspection Code is used with either MILSTRAP legacy Document Identifier Code (DIC) DLX (Logistics Reassignment Technical and Quality Data and corresponding DLMS 536L; or with DLMS 842C/I (Stock Screening Request) and 842S/Q (Storage Quality Control Report (SQCR))

RECORD POSITION: 48

DLMS SEGMENT/QUALIFIER: LQ Segment, LQ01 Qualifier EZ

Type inspection codes used with MILSTRAP DIC DLX and corresponding DLMS 536L:

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Contractor.</td>
</tr>
<tr>
<td>2</td>
<td>Standard source inspection.</td>
</tr>
</tbody>
</table>
AP 2.18.2. Type inspection codes used with DLMS 842S/Q SQCR and 842C/I Stock Screening Request:¹

<table>
<thead>
<tr>
<th>CODE</th>
<th>DEFINITION</th>
<th>USAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>Visual Inspection</td>
<td>Monthly care of supplies in storage (COSIS) inspections. Applicable to SQCRs only; not used on Stock Screening Requests.</td>
</tr>
<tr>
<td>F</td>
<td>Safety of Flight (SOF) Inspection</td>
<td>Special inspection of SOF materiel or Aviation Safety Action Message (ASAM).</td>
</tr>
<tr>
<td>P</td>
<td>Special Inspection at Single Location</td>
<td>Specific to one storage location (e.g., take picture of materiel at specific location).</td>
</tr>
<tr>
<td>Q</td>
<td>Quality-Related Inspection</td>
<td>Inspection applicable to suspected quality problem, e.g., subsequent to receipt of PQDR or SDR.</td>
</tr>
<tr>
<td>R</td>
<td>Reimbursable Special Inspection</td>
<td>For materiel stored at DLA distribution centers, request is transmitted to all DSS sites.</td>
</tr>
<tr>
<td>S</td>
<td>Shelf-life Inspection</td>
<td>Monthly cyclic inspections for shelf life items. Applicable to SQCRs only; not used on Stock Screening Requests.</td>
</tr>
<tr>
<td>U</td>
<td>Safety of Use (SOU) Inspection</td>
<td>Special inspection of SOU materiel.</td>
</tr>
<tr>
<td>X</td>
<td>Critical Safety Item (CSI) Inspection</td>
<td>Special inspection of CSI materiel.</td>
</tr>
<tr>
<td>Z</td>
<td>Suspect Counterfeit Inspection</td>
<td>Applicable to suspected counterfeit material/unauthorized product substitution (CMUPS).</td>
</tr>
</tbody>
</table>

¹ Refer to ADC 240 and ADC 1045. Pending implementation of ADC 1045, targeted for first quarter FY 2017, the following codes will remain available:

- A Aviation Safety Action Message (ASAM)
- O Outbound Shipment
- T Stock Readiness
AP2.19. APPENDIX 2.19

REVIEW PERIOD INDICATOR CODES

NUMBER OF CHARACTERS: One

TYPE OF CODE: Numeric

EXPLANATION: A code identifying the review period relative to the effective transfer date (ETD).

AP3. APPENDIX 3

FORMATS INTRODUCTION

AP3.1. General. The AP3 series appendices prescribe the alignment and data entries for the MILSTRAP formats.

AP3.2. Formats. MILSTRAP formats are described in Appendices AP3.1 through AP3.64.

AP3.3. Special Explanation/Instruction. To prevent repeating lengthy and repetitious footnotes, explanations, and instructions, the following are provided for reference purposes and shall be referred to in the applicable formats:

AP3.3.1. For ammunition and ammunition related items in Federal supply group 13, and Federal supply classes 1410, 1420, 1427, 1440, 5330, 5865, 6810 or 8140, quantities exceeding 99,999 may be expressed in thousands by placing an M in record position 29. For example: A quantity of 1,950,000 would be expressed as 1950M (1950 in record positions 25-28 and an M in record position 29). Quantities not evenly divisible by thousands shall require two transactions. The first transaction shall reflect the rounded thousands using the M modifier and the second transaction shall reflect the residual quantity: For example: A quantity of 100,001, the first document shall reflect a quantity of 0100M and the second document shall reflect a quantity of 00001.

AP3.3.2. When reversal or cancellation of the original transaction is required, enter a reversal indicator in record position 25. Chapter 9 provides a list of the MILSTRAP transactions that are authorized for reversal.

AP3.3.2.1. Reversal Indicator. In punched-card transactions, the reversal indicator was an eleven-zone over punch of the quantity digit in record position 25 of the quantity to be reversed. In non punched-card MILSTRAP 80 record position transactions, the reversal indicator is the Extended Binary Coded Decimal Interchange Code (EBCDIC) or American Standard Code for Information Interchange equivalent of the punched-card entry, which is also entered in record position 25 of the reversal quantity for the 80 record position MILSTRAP transactions. (NOTE: A transaction reversal for Defense Logistics Management System (DLMS) transactions is accomplished with a negative sign in front of the quantity. Therefore, the MILSTRAP legacy 80 record position transaction reversal indicator as described below does not apply in DLMS transactions. The EBCDIC reversal indicators are a minus sign for a blank entry, a } (closing brace) for an entry of zero, or an alphabetic J through R for an entry of 1 through 9 respectively. Since significant digits are to be preceded by zeros, the blank and minus sign indicators in record position 25 are actually invalid entries and are mentioned only to cover all possibilities. The punched card and EBCDIC reversal indicators are as follows:
AP3.3.2.2. For ammunition, an M-modifier may be entered in record position 29 of the quantity field to denote thousands. In such cases, the quantity and reversal indicators would appear as shown in the following example for a reversal quantity of 800000:

<table>
<thead>
<tr>
<th>QUANTITY ENTRY</th>
<th>RECORD POSITION 25 PUNCHED-CARD TRANSACTION ENTRY</th>
<th>RECORD POSITION 25 EBCDIC REVERSAL</th>
<th>EBCDIC REVERSAL QUANTITY ENTRY</th>
</tr>
</thead>
<tbody>
<tr>
<td>0800M</td>
<td>11-zone and 0 (zero)</td>
<td>}</td>
<td>}800M</td>
</tr>
</tbody>
</table>

AP3.3.3. When all data elements, other than quantity, are identical and the quantity due-in or being adjusted exceeds 99,999 or 9999M (M-Modifier thousands - and residual quantities are for ammunition); or when all data elements are the same, except the condition of materiel, for materiel being received or being adjusted; assign consecutive suffix codes in record position 44 beginning with alpha code A in the initial transaction; otherwise, leave blank.

AP3.3.4. Date Indicator is a three-position field used to identify the year and month (e.g., 305 is year 2003, month of May). Date indicators refer to the last day of the month unless otherwise noted in the transaction. The Date Indicators in special program requirement (SPR) transactions refer to the first day of the month as noted in the formats.
AP3.3.5. **Exception Rule Available for Communicating Larger Quantities in Identified Transactions.** For ammunition and ammunition related items in FSG 13, and FSC 1410, 1420, 1427, 1440, 5330, 5865, 6810 or 8140, exception rule for ammunition and ammunition related items: By trading partner agreement and by coordination with DLA Transaction Services, an exception rule is available for communicating larger quantities in identified transactions. This rule is only applicable when the initiating system is DLMS compliant (and supports larger quantities), and the receiving system is using legacy MILSTRAP. Under this rule, when the quantity exceeds 99,999, the DLA Transaction Services transaction conversion from DLMS to legacy format shall transmit the initial quantity using the standard configuration using the qualifier “M” in rp 29 to represent thousands, per AP3.3.1. The residual quantity from the DLMS transaction shall be transmitted separately using the original document number and original/blank suffix code. The legacy trading partner system shall be responsible for accumulating the quantities transmitted separately (rather than superseding or rejecting as duplicate transactions). Refer to ADC 441, Exception Rules to Accommodate Communication of Ammunition/Ammunition Related Quantities in Excess of Five Digits.

AP3.4. **General Guidance for Quantity, Day, and Date Entries**

AP3.4.1. **Quantity.** Unless otherwise stated in the format explanation and instructions, quantity fields must be completely filled. If the quantity being entered does not fill the prescribed number of positions, right justify the entry and precede the significant digits with zeroes. For instance, a quantity of 55 would be entered in record positions 25-29 as 00055.

AP3.4.2. **Day.** The term Julian day is not recognized for data element terminology. Accordingly, all instructions covering the entry of a 3-digit day refer to the ordinal day of the calendar year. For instance, 25 February shall be entered as 056 and 14 July would be entered as 195 or 196 in a leap year.

AP3.4.3. **Date.** Date entries of four positions, unless otherwise specified, consist of the last position of the calendar year and the 3-digit ordinal day of the calendar year. For instance, 25 February 2003 would be entered as 3056.

# Field Legend

## Record Position(s) | Entry and Instructions

| Suffix | 44 | Enter consecutive alpha codes A through Z when assignment of suffix codes is necessary.5 |
| Item Number | 45-50 | Enter the contract/exhibit line item number or sub-line item number as indicated below, if applicable; otherwise, leave blank. |
| Contract/Exhibit Line Item Number | (45-48) | **Contract Line Item Number:** Enter the CLIN preceding significant digits with zeros.  
**Exhibit Line Item Number:** Enter the alphabetic exhibit identifier in record position 45. Enter the exhibit line number in record positions 46 through 48, preceding significant digits with zeros. |
| Contract/Exhibit Subline Item Number | (49-50) | Enter the contract or exhibit subline item number, if applicable; otherwise, zero fill. |
| Multiuse | 51-53 | For intra-Component use, enter data prescribed by Component. For inter-Component use, leave blank. |
| Distribution | 54-56 | Enter (or perpetuate) distribution code; otherwise, leave blank. |
| Project | 57-59 | Enter (or perpetuate) project code; otherwise, leave blank. |
| | 60-66 | Continued on next page |

</table>
| Shipment Number or DSS Operations Control Number (OCN) | 60-66              | Enter vendor shipment number shown on shipping document, preceding significant digits with zeros, unless trading partner agreement requires entry of the Distribution Standard System (DSS) OCN. The OCN is randomly assigned by DSS to systemically identify a specific receipt transaction. The OCN is used to link DIC D4S to the corresponding DI Code Z4S which is created based on a trading partner agreement with DSS. The DSS Z4S Supplemental Receipt Data transaction contains both the OCN and the vendor shipment number. Trading partner agreements for use of OCN are as follows:  
  
  Army: OCN is used for local procurement.  
  Air Force: OCN is never used.  
  Navy: OCN is used when RIC TO is Navy (starts with N, P, Q, R, or V) and RIC FROM is Navy (depot RIC SDF, SDM, SDX, SEB, SCJ, SCQ, SCF, SCH, SDH, SLM, and SCN).  
  Mapping: OCN is used when RIC TO is HM8 (Mapping). |
<p>| Routing Identifier (Receiving Location) | 67-69              | Enter (or perpetuate) RIC of the activity at which item is received.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Ownership/Purpose                  | 70                 | <strong>Storage Activity:</strong> Enter (or perpetuate) the ownership/purpose code shown on shipping documents or in pre-positioned materiel receipt transaction; otherwise, leave blank.                                                                                                                                                                                                                                                                                                                   |
| Supply Condition                   | 71                 | Enter (or perpetuate) supply condition code of item received.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Management                         | 72                 | Enter management code; otherwise, leave blank.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Day of Year (Released by Carrier)  | 73-75              | Enter ordinal day of the calendar year materiel released by carrier.                                                                                                                                                                                                                                                                                                                                                                                                              |</p>

¹ Navy uses rp 7 for Navy Materiel Turned Into Store (MTIS) indicator ‘S’. The MTIS indicator identifies and allows completion of a receipt that was initiated through a unique MTIS Interface between DSS and Navy Uniform Automated Data Processing System (UADPS) II (U2). Navy use is documented in MILSTRAP for mapping purposes for conversion to DLMS in a mixed DLSS/DLMS environment. (Refer to ADC 246).

² See Appendix AP3 - Formats Introduction, AP3.3.1.

³ See Appendix AP3 - Formats Introduction, AP3.3.2.

⁴ See Appendix AP3 - Formats Introduction, AP3.3.3.

---

5 For intra-Army use, rp 60-61 identifies the priority designator. (Refer to ADC 234.)
6 For intra-Army use, rp 65-66 identifies the advice code. (Refer to ADC 234.)
7 For intra-Air Force use, rp 60-65 identifies the Ship-From DoDAAC for use in Air Force retail receipts of shipments from Air Force retail activities. (Refer to ADC 1185.)
8 Refer to ADC 218.
9 On an intra-Army basis, Army sometimes uses D6X for their Direct Support/Reparable Exchange process by citing X in rp 73 with rp 74-75 blank. This is a temporary deviation from standard processing in place until implementation of Army Exchange Pricing (estimated to be April 2009). (Refer to ADC 267.)
10 For Navy CAV-ORM DIC D6K, rp 76-78 identifies the Shipper RIC.
11 For intra-Army use only, rp 80 identifies the discrepancy indicator code (see appendix 2.17). (Refer to ADC 272.)

³ For Navy, rp 77 identifies the “issue on request” code. Navy uses when a customer receives material without a material release order and DSS sends a D7_ (with an “I” in position 77) to Navy systems (e.g., Uniform Inventory Control Program (UICP)) to indicate that material has been issued. (See ADC 235)
⁴ For Navy, rp 80 identifies the Issue Reversal Code B or S per legacy requirements. (See ADC 259.)
⁵ Implementation staggered. Refer to ADC 1160.

### INVENTORY ADJUSTMENT – INCREASE OR DECREASE (OWNERSHIP TRANSFER)

#### FIELD LEGEND | RECORD POSITION(S) | ENTRY AND INSTRUCTIONS
--- | --- | ---
Document Identifier Code | 1-3 | Enter DIC D8S or D9S, as appropriate.
Routing Identifier Code (TO) | 4-6 | Enter RIC of the activity to which this transaction is being forwarded.
Blank | 7 | Leave blank.
Stock or Part Number | 8-22 | Enter stock or part number of item being adjusted.
Unit of Issue | 23-24 | Enter UI of item.
Quantity | 25-29 | Enter quantity of the increase or decrease, preceding significant digits with zeros.  \(^1/\) \(^2\)
Document Number | 30-43 | Enter appropriate document number.
Suffix | 44 | Enter consecutive alpha codes A through Z when assignment of suffix codes is necessary.  \(^3\)
Blank | 45-51 | Leave blank.
Fund | 51-53 | For intra-Component use, enter appropriate code. For inter-Component use, leave blank.
Distribution | 54-56 | Enter distribution code if stocks are segregated and maintained by codes reflected in the distribution field; otherwise, leave blank.

<td>42-66</td>
<td>When used between Components, leave blank. When used within a Component, enter data prescribed by that Component. See rows below for specific Component use.</td>
</tr>
</tbody>
</table>

¹ Refer to ADC 444,
For Army, the following data is entered in rp 43-64 of the multi-use field.

**FIELD LEGEND**

<table>
<thead>
<tr>
<th>RECORD POSITION(S)</th>
<th>ENTRY AND INSTRUCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quantity (Requirements Objective)</td>
<td>Army enters requirements objective established for purpose code in rp 70.</td>
</tr>
<tr>
<td>Quantity (Safety Level)</td>
<td>Army enters quantity that reflects the safety level requirement, except for ammunition and ammunition related FSG 13 and FSC 1410, 1420, 1427, 1440, 5330, 5865, 6810, or 8140 as noted for rp 52-54 below.</td>
</tr>
<tr>
<td>Project Code</td>
<td>Army enters project code.</td>
</tr>
<tr>
<td>Routing Identifier (Storage Activity)</td>
<td>Army enters code of storage activity at which item is stored if different from activity preparing this transaction (FROM RI Code, rp 67-69).</td>
</tr>
<tr>
<td>Date (Transaction Preparation)</td>
<td>Army enters Julian date of asset status (date on which transaction was prepared).</td>
</tr>
</tbody>
</table>

For ammunition and ammunition related FSG 13 and FSC 1410, 1420, 1427, 1440, 5330, 5865, 6810, or 8140, the following data is entered in rp 52-54 of the multi-use field.

**FIELD LEGEND**

<table>
<thead>
<tr>
<th>RECORD POSITION(S)</th>
<th>ENTRY AND INSTRUCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quantity Overflow</td>
<td>For ammunition and ammunition related items in Federal Supply Group 13 and Federal Supply Classes 1410, 1420, 1427, 1440, 5330, 5865, 6810, and 8140, when ‘9’ is entered in rp 7, enter the first through sixth positions of the on hand quantity in rp 25 – 30, and the seventh through ninth positions in rp 52 – 54, preceding significant digits with zeroes. For example for a quantity of 98,765,432, enter 765432 in rp 25 – 30 and enter 098 in rp 52-54.</td>
</tr>
<tr>
<td>Routing Identifier (FROM)</td>
<td>Enter RI code of the ICP preparing the transaction.</td>
</tr>
</tbody>
</table>

---

2 Refer to ADC 250, Revise DLMS Supplement (DS) 846I and MILSTRAP DZA Asset Status Transactions to Support Army Distribution Operations, and Revise DS 846I for Use of Universal Time Coordinate (UTC) and for Administrative Updates.

4 For Army/DLA interface, based upon mutual agreement, a DLA storage activity may prepare the DZA on behalf of the DLA ICP. The DLA ICP RI Code SMS appears in rp 67-69. (Refer to ADC 250, Revise DLMS Supplement (DS) 846I and MILSTRAP DZA Asset Status Transactions to Support Army Operations.)
FIELD LEGEND | RECORD POSITION(S) | ENTRY AND INSTRUCTIONS
--- | --- | ---
Ownership/Purpose | 70 | When used between Components, enter ownership code of the item. When used within a Component, enter purpose code of the item.
Supply Condition | 71 | Enter supply condition code of the item.
Multiuse | 72-80 | For intra-Component use, enter data prescribed by the Component. For inter-Component use, leave blank. See rows below for specific Component use.

The following DoD Component data is identified for rp 72-77 multiuse field:

Time | 72-77 | Army enters time of transaction preparation in HHMMSS Format expressed in universal time coordinate. Refer to ADC 250.
Date (Transaction Preparation) | 73-75 | Navy, and ammunition systems, enters transaction preparation date. Navy, and ammunition ICPs, uses this date to determine the most current asset posture when more than one asset report is received within the same cycle. 
Stockage List Code | 78 | Army enters the Stockage List Code. This is an intra-Army code and use of this data is meaningful to Army only.

---

6 Refer to ADC 355, Revise DLMS Supplement (DS) 846I, Asset Status Inquiry/Report to Address Intra-Navy Use of Transaction Preparation Date in Multiuse Field of MILSTRAP DZA Transaction
8 Refer to ADC 458, Documentation of Intra-Army Use of Army Data Elements for MILSTRAP DZA and DLMS 846I Asset Status Transactions

---

2 For all Service Secondary Inventory Control Activities (less Air Force): If both rps 31-33 and rps 34-36 contain RICs, then the recipient must add the on-hand quantity on all the DIC DZF transactions, for the reported NSN, that have the same RIC in rps 31-33. This aggregate on-hand quantity is then compared to the system requisitioning objective in rps 41-46 when making MILSTRIP Lateral Redistribution Order decisions using DoD Total Asset Visibility business rules.

For Air Force Secondary Inventory Control Activities: Both rps 31-33 and rps 34-36 will contain RICs. The recipient must add the quantity on-hand on all DZF transactions containing a "01" in rps 79-80, for the reported NSN, that have the same RIC in rps 31-33. This aggregate on-hand quantity is then compared to the system requisitioning objective contained in rp 41-46 when making Lateral Redistribution Order decisions using DoD Total Asset Visibility business rules.

For DZFs with only one RIC (rps 31-33) and for Air Force Secondary Inventory Control Activity DZFs with two RICs and "blanks" in rps 79-80, the on-hand quantity and requisitioning objective in the individual DZF are compared when making Lateral Redistribution Order decisions using DoD Total Asset Visibility business rules.
<table>
<thead>
<tr>
<th>FIELD LEGEND</th>
<th>POSITION(S)</th>
<th>ENTRY AND INSTRUCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quantity (On Hand)</td>
<td>65-70</td>
<td>Enter quantity on hand, preceding significant digits with zeros. (Does not include reserved quantity entered in record positions 71-76.) If quantity exceeds 999,999, enter overflow quantity in next transaction. Leave field blank in ensuing transactions when overflow quantity not involved.</td>
</tr>
<tr>
<td>Quantity (Reserved)</td>
<td>71-76</td>
<td>Enter quantity reserved for special projects/programs, preceding significant digits with zeros. If quantity exceeds 999,999, enter overflow quantity in next transaction. Leave field blank in ensuing transactions when overflow quantity not involved.</td>
</tr>
<tr>
<td>Blank</td>
<td>77-78</td>
<td>Leave blank.</td>
</tr>
<tr>
<td>Number of Transactions</td>
<td>79-80</td>
<td>Enter total number of transactions being submitted for item identified in record positions 8-22 (precede significant digit with zero, when applicable).</td>
</tr>
</tbody>
</table>

**EXCEPTION:** when rp 7 = N, leave blank for all Service SICAs except Air Force; for Air Force SICAs, enter a SICA wholesale/retail indicator as follows:

- 01 for SICA wholesale
- Blank for SICA retail

AP6.1. APPENDIX 6.1
FORMS/MESSAGE FORMATS
(INTRODUCTION)

AP 1.1.1. Requisitions may be transmitted using the CJCSI 5721.01E, The Defense Message System\(^1\) and Associated Legacy Message Processing Systems, requirements. DLM 4000.25, Volume 1, describes methods used to transmit and receive requisition and requisition-related transactions. In addition, the specific forms and message formats\(^2\) prescribed for use under MILSTRIP are described below.

AP6.1.2. MILSTRIP Message Requisition (AP6.8.) and Abbreviated MILSTRIP Message Supply Status (AP6.11)

AP6.1.2.1. The first line in the body of the message will contain the words “MILSTRIP REQUISITION.” Thereafter, each requisition will be numbered, commencing with number 1, and the first 66 positions of data (except for dividing slashes (/)) will be inserted. The basic requisition will consist of 18 separated field-lengths of data.

AP6.1.2.2. Below is a sample message requisition segmented and explained.

AP6.1.2.2.1. First Line: A0E/(DIC); XYS/(RIC); S/(M&S); 1224005123456/(stock or part number); EA/(unit of issue); 00015(quantity); ZY1234/(requisitioner); 1150/(ordinal date); 0112/(serial number); R/(demand); BLNK/(SUPADD); A/(signal).\(^3\)

AP6.1.2.2.2. Second Line: 19/(fund); 089/(distribution); BLNK/(project); 03/(PD); 154 (RDD); 2B/(advice).\(^4\)

AP6.1.2.3. Part number requisitions converted to message format are illustrated in AP6.13.

AP6.1.3. MILSTRIP Message Follow-Up (AP6.9.).

AP6.1.3.1. Follow-up on requisitions may be transmitted electronically in the form of a formatted message or a narrative message when requesting status and improved estimated shipping date (ESD), under Volume 2, Chapter 4.

\(^{1}\)CJCS Directives Home Page – https://www.jcs.mil/library
\(^{2}\)Narrative messages shall only be used on an exception basis. When used, each transmission shall be limited to a maximum of seven transactions or the contents of a single page, whichever is greater.
\(^{3}\)When an element of data is not available, the field shall be recognized and entered as “BLNK.”
\(^{4}\)Ibid.
AP6.1.3.2. The first line in the body of the message will contain the words “MILSTRIP FOLLOW-UPS.” When requesting normal status, DICs AF1, AF2, and AF3 apply. When requesting an improved ESD, DIC AFC applies. Exception data, and additional wording will be omitted unless DIC AT_ is used. The DIC dictates action to be taken by the supply source, under Volume 2, Chapter C4, and added comments or requests are not applicable since the narrative message is no more than one of the media of communications for submitting follow-ups.

AP6.1.3.3. Below is a sample narrative follow-up message segmented and explained:

AP6.1.3.3.1. First Line: AT5/(DIC); S/(M&S); 8305001234567/(stock or part number); EA/(unit of issue); 00040/(quantity); XTZ456/(requisitioner); 1250/(ordinal date); 0111/(serial number); R/(demand); BLNK/(SUPADD).\(^5\)

AP6.1.3.3.2. Second Line: 12/(fund code); 089/(distribution code); BLNK/(project code); 02/(PD); 154/(RDD); 2B/(advice).\(^6\)

AP6.1.4. Request for Supply Assistance. Requests for Supply Assistance are described under Volume 2, Chapter 4 and illustrated in AP6.10. Paragraphs AP6.3.2 and AP6.3.3., above, also apply, except DIC AFC will always be used. This will ensure manual review and reply using Volume 2, Chapters 4 and 5.

AP6.1.5. Message Cancellation

AP6.1.5.1. Cancellation of a requisition may be transmitted electronically in the form of a narrative message\(^7\) under Volume 2, Chapters 1 and 4.

AP6.1.5.2. The first line is the body of the message will contain the words “MILSTRIP CANCELLATION.” Exception data, remarks, and additional verbiage will be omitted.

AP6.1.5.2.1. First Line: AC1/(DIC); FMI/(R); 2/(M&S); 8305001234567/(stock or part number); EA/(unit of issue); 00040/(quantity); FB2300/(requisitioner); 6265/(ordinal date); 0111/(serial number); R)/(demand code); BLNK/(SUPADD); A/(signal).\(^8\)

AP6.1.5.2.2. Second Line: 12/(fund); 089/(distribution); BLNK/(project); 02/(PD); 354/(RDD); BLNK/(advice).\(^9\)

\(^5\)Ibid.
\(^6\)Ibid.
\(^7\)Narrative messages shall only be used on an exception basis. When used, each transmission shall be limited to a maximum of seven transactions or the contents of a single page, whichever is greater.
\(^8\)When an element of data is not available, the field shall be recognized and entered as “BLNK.”.
\(^9\)Ibid.
AP6.1.6. Abbreviated Message Documents (AP6.11 and AP6.12)

AP6.1.6.1. Abbreviated message formats are provided for MILSTRIP follow-ups (DIC AF_ series only), cancellations, supply status, and shipment status, respectively. Use of these documents will be at the option of the individual Service/Agency (S/A). Use between S/As will be based upon agreement between the S/As.

AP6.1.6.2. Abbreviated message follow-up (DIC AF_ only) and cancellation documents will be initiated only by those activities with capability to prepare machine-readable documents for transmission by the Defense Message System (DMS).\(^{10}\)

AP6.1.6.3. When abbreviated messages are used, each message will be limited to a maximum of seven items or the contents of a single page, whichever is greater.

AP6.1.6.4. The first line in the body of the message will contain the words ABBREVIATED MILSTRIP FOLLOW-UP, CANCELLATIONS, SUPPLY STATUS, OR SHIPMENT STATUS, as applicable. Thereafter, number each line item, commencing with number 1. Insert slashes (/) or other appropriate marks between each code and/or data element as depicted in AP6.11 and AP6.12. The authorized data elements\(^{11}\) and code entries for abbreviated messages are as follows:

---

AP6.1.6.4.1. Follow-Ups and Cancellation Requests (No Supply Status Received)

AP6.1.6.4.1.1. Document Identifier Code (DIC)

AP6.1.6.4.1.2. Routing Identifier Code (RIC) (To)

AP6.1.6.4.1.3. Stock or Part Number

AP6.1.6.4.1.4. Unit of Issue

AP6.1.6.4.1.5. Quantity

AP6.1.6.4.1.6. Requisition Document Number

AP6.1.6.4.1.7. Distribution, when applicable; otherwise, leave blank.

AP6.1.6.4.1.8. Priority Designator

AP6.1.6.4.2. Follow-Ups and Cancellation Requests (Supply Status Received)

AP6.1.6.4.2.1. Document Identifier Code

---

\(^{11}\) When an element of data is not available, the field shall be recognized and entered as “BLNK.”.
AP6.1.6.4.2.2. Routing Identifier Code (To)

AP6.1.6.4.2.3. Stock or Part Number

AP6.1.6.4.2.4. Unit of Issue

AP6.1.6.4.2.5. Quantity

AP6.1.6.4.2.6. Requisition Document Number

AP6.1.6.4.2.7. Suffix, when applicable; otherwise, leave blank.

AP6.1.6.4.2.8. Status

AP6.1.6.4.2.9. Distribution, when applicable; otherwise, leave blank.

AP6.1.6.4.2.10. Priority Designator

AP6.1.6.4.3. Supply Status

AP6.1.6.4.3.1. Document Identifier Code

AP6.1.6.4.3.2. Stock or Part Number

AP6.1.6.4.3.3. Unit of Issue

AP6.1.6.4.3.4. Quantity

AP6.1.6.4.3.5. Requisition Document Number

AP6.1.6.4.3.6. Suffix, when applicable; otherwise, leave blank.

AP6.1.6.4.3.7. Priority Designator

AP6.1.6.4.3.8. Status

AP6.1.6.4.3.9. Estimated Shipping Date

AP6.1.6.4.4. Shipment Status

AP6.1.6.4.4.1. Document Number Code

AP6.1.6.4.4.2. Quantity

AP6.1.6.4.4.3. Requisition Document Number

AP6.1.6.4.4.4. Suffix, when applicable; otherwise, leave blank.

AP6.1.6.4.4.5. Date Shipped or Estimated Shipping Date
AP6.1.6.4.4.6. Priority Designator

AP6.1.6.4.4.7. Transportation Control Number (TCN).

AP6.1.6.4.4.8. Mode-of-Shipment

AP6.1.6.4.4.9. If available, any of the following may also be provided: GBL Number, Registered Parcel Post Number, or other shipment number.

AP6.1.6.5. Materiel Obligation Validation Form Letters and Messages. Form letter requests, followup requests, message requests, and replies are provided in AP6.15 through AP6.20 and AP6.32 for use in connection with Materiel Obligation Validation (MOV) procedures under Chapter C8.

AP6.1.6.6.1. Non-Preprinted Issue Release/Receipt Document. A single line item, single part form produced on plain stock paper (see example, AP6.25). The size may vary within a range of 7-3/4 to 9 inches long (side to side) and 4 to 5 inches high (top to bottom) (see Chapter 29). Data to be entered in the data blocks are shown in Appendices 8.48 and 8.49. Blocks 24, 25, and 26 must contain bar coded data except for DLA Disposition Services Field Office documents. DLA Disposition Services Field Office documents will not contain bar coding in Block 26. Block 27 must contain a two-dimensional (2D) bar code (Portable Data File (PDF) 417) encompassing the linear bar code data elements plus additional elements to improve automated information technology (AIT) efficiencies and to facilitate item unique identification (IUID) when applicable.

AP6.1.6.6.2. The Issue Release/Receipt Document data elements, configuration and locations are as follows:

For shipments of GFP, include the GFP contract number (and call order number when provided). This includes shipments from DOD to contractors and contractor shipment of GFP to DOD activities. The contract number will be prefaced by “GFP” to clarify the usage.

Perpetuate the customer’s internal purchase order (PO) number when provided on the release order.\(^\text{17}\)

For FMS repair/return and repair/replace items, include the estimated or actual unit cost of the repair service per Appendix 8.48.\(^\text{18}\)

**AP6.1.6.6.3.** The Issue Release/Receipt Document is used as:

**AP6.1.6.3.1.** An issue document from distribution point to consignee resulting from a requisition.

**AP6.1.6.3.2.** A release document for retrograde materiel or inter base (post, camp, station, etc.) movements.

**AP6.1.6.3.3.** A materiel return document from base to depot.

**AP6.1.6.3.4.** A receipt document by the consignee

**AP6.1.6.3.5.** Disposal turn-in document.

**AP6.1.6.3.6.** Local requisition on DLA Disposition Services Field Office.

**AP6.1.6.6.4.** The Issue Release/Receipt Document is designed to accommodate the various elements of data used by any of the Services as source information for preparing other documentation. The document enables supply sources to use a single method of documentation for all requisitions and provide a standard

---

19 Capability to support IUID data content within the PDF 417 2D bar code has been approved for staggered and phased implementation under ADC 44B and ADC 399/ADC 399A. Components have not reported implementation at this time.
receiving document that will accommodate both manual and automated requisitioners and consignees.

AP6.1.7. DD Form 1348-2, Issue Release/Receipt Document with Address Label (AP6.31)

AP6.1.7.1. The Service/Agencies have the option to stock or print the DD Form 1348-2. The DD Form 1348-2 configuration is a DD Form 1348-1A with a perforated address label attached to the outer right edge. The length of the DD Form 1348-2 is 13 inches. The DD Form 1348-2 may be configured for printing as continuous forms. For continuous forms configuration, pin-fed strips of one-half inch on each side may be added. The length of the DD Form 1348-2 with pin-fed strip will not exceed 14 inches. The address label dimensions of the DD Form 1348-2 are 4-1/4 inches long and 5-1/2 inches high. Use of the address label with preprinted postage data is only authorized for shipments by the U.S. Postal Service. The address label will contain the following elements.

AP6.1.7.1.1. Postage Data

AP6.1.7.1.2. TCN Data

AP6.1.7.1.3. Weight Data

AP6.1.7.1.4. Type Service Data

AP6.1.7.1.5. From Data

AP6.1.7.1.6. Ship-to Data

AP 1.1.7.2. Data will be entered on the address label as follows:

AP6.1.7.2.1. Postage Data. A shipment through the U.S.P.S. must contain the following phrase, “OFFICIAL BUSINESS.” This phrase will be printed on the bottom line of the postage block.

AP6.1.7.2.2. Transportation Control Number. Enter the TCN applicable to the shipment.

AP6.1.7.2.3. Weight. Enter the weight of the item being shipped.

AP6.1.7.2.4. Type Service. Enter the appropriate type of delivery service; for example, first-class-priority, express mail, and Military Official Mail (MOM).
AP6.1.7.2.5. Ship-to. Enter the applicable in-the-clear address of the activity that is to receive the shipment. If mark-for data is required, enter the mark-for data above the city/state/zip code data. If the Port of Embarkation (POE) is required, enter the POE in this block.

AP6.1.8. IRRD (DD Form 1348-1A or DD Form 1348-2) Continuation Page. This is a mandatory document for serialized Item shipments containing machine readable bar codes for the encoded content information to include the serial numbers, unique item identifiers (UIIs), and batch/lot numbers as required for tracking under a UIT program or in support of DoD policy for the application of IUID in supply processes. The continuation page is intended to expedite supply and distribution processes by providing a means to automate the capture of data using automatic identification technology (AIT) devices. The continuation page is free form. The data elements and preferred format are shown in AP6.36.

AP6.17. APPENDIX 6.17

REQUEST FOR VALIDATION OF MATERIEL OBLIGATIONS (FMS AND GRANT AID TRANSACTIONS) (FROM SOURCE OF SUPPLY TO ILCO)

FROM: (Insert the official clear-text name and address of the initiating activity and its assigned activity address code (AAC).)

TO: (Insert the official clear-text name and address, including the AAC of the ILCO to receive the Validation Request Documents.)

SUBJECT: Request for Validation of Materiel Obligations

AP6.17.1. Enclosed are (enter quantity) MOV Request documents (enter a listing of the documents or strike out if not applicable). Each of the enclosed validation requests, pertaining to FMS and Grant Aid transactions, reflects quantities of the items indicated held as materiel obligations at this installation as of (enter cutoff date) and for which the requisitions are aged 180 days or more past the requisitions document number date. The validation requests are submitted to your activity using the code contained in record position 54 of the original requisition document.

AP6.17.2. It is required that the item indicated by each validation request be reconciled with your records. It is also required that each enclosed MOV request be reviewed by the appropriate country Security Assistance office (SAO) to determine the continuing need for the item and quantity shown. An AP_ response document is required for each item contained with the validation request, enclosed/listed, to indicate the desirability for continuation or cancellation of the requirement.

AP6.17.3. Acknowledge the receipt of the enclosed validation request by inserting the date and signature below and return the correspondence to this installation.

FOLLOW-UP REQUEST FOR VALIDATION OF MATERIEL OBLIGATIONS (FMS AND GRANT AID TRANSACTIONS) (FROM SOURCE OF SUPPLY TO ILCO)

FROM: (Insert the official clear-text name and address of the initiating activity and its assigned Activity Address Code (AAC).)

TO: (Insert the official clear-text name and address, including the AAC of the International Logistics Control Office (ILCO) to receive the MOV Request documents.)

SUBJECT: Request for Validation of Materiel Obligations

AP6.18.1. The referenced letter forwarded (enter quantity) MOV Request documents, pertaining to FMS and Grant Aid transactions, and requested that receipt be acknowledged. This activity has no record of receipt of the requested acknowledgment nor any response to the validation requests. Enclosed are duplicates/triplicates (strike out one) of the (enter quantity) MOV Request documents and a listing of these documents (strike out if not applicable).

AP6.18.2. It is required that the item indicated by each validation request be reconciled with your records. It is also required that each enclosed validation request be reviewed by the appropriate country Security Assistance office (SAO) to determine the continuing need for the item and quantity shown. A response is required for each validation request to indicate the desirability for continuation or cancellation of the requirement.

AP6.18.3. Acknowledge receipt of the enclosed MOV Request documents by inserting the date and signature below and returning the correspondence to this installation.

REPORT OF VALIDATION OF MATERIEL OBLIGATIONS

1. Total overage Materiel obligations referred for validation (includes those forwarded by USAF bases to ALCs):
   a. U.S. Forces Number Value¹
   b. FMS and Grant Aid Number Value²

2. Total cancellations requested by the requisitioner. Number Value³

3. Total canceled by the logistics system as a direct result of the above requests:⁴
   a. U.S. Forces Number Value⁵
   b. FMS and Grant Aid Number Value⁶

4. Percentage of accomplishment (Line 3 divided by Line 2). Percent Percent

5. Materiel Obligation Validation requests to which the requisitioner did not respond (requisitioner failed to acknowledge receipt of requests; did not confirm that materiel obligation should be retained; and did not request suspension of automatic cancellations). Number Value⁷

¹ All dollar values will be expressed in thousands.
² Ibid.
³ Ibid.
⁴ A materiel obligation shall not be counted as actually canceled until it is certified that the materiel will not be delivered to the requisitioner; for example, the affected elements of the logistics system have confirmed that shipment/procurement action has been stopped.
⁵ All dollar values will be expressed in thousands.
⁶ Ibid.
⁷ Ibid.
6. Total canceled by the logistics systems due to nonresponse:\(^8\)
   a. U.S. Forces
      Number  Value\(^9\)
   b. FMS and Grant Aid

QUARTERLY INTRANSIT TO DLA DISPOSITION SERVICES FIELD OFFICE REPORT

AP6.33.1. A Quarterly Intransit To DLA Disposition Services Field Office Report is produced by DLA Disposition Services upon request. In addition, an annual report is produced at the end of each fiscal year that includes the previous four totals upon request. The report is in four parts:

AP6.33.1.1. Total DoD Summary.

AP6.33.1.2. Service Summary.

AP6.33.1.3. DoDAAC breakout (including further subdivision by DLA Disposition Services Field Office Routing Identifier Code (RIC)).

AP6.33.1.4. A supplemental invalid DoDAAC report.

AP6.33.2. The report shall be distributed upon request. All copies of the reports are provided to the designated DoD Component MILSTRIP Focal Points. Further dissemination of the reports is the responsibility of each individual DoD Component.

AP6.33.3. The format of the report and the explanation of the derivation of the counts are as follows:

<table>
<thead>
<tr>
<th>QUARTERLY INTRANSIT TO DLA DISPOSITION SERVICES FIELD OFFICE REPORT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total DoD, Service, or DoDAAC (Clear-text name and address of the DoDAAC will be printed)</td>
</tr>
</tbody>
</table>

<table>

<td>Total Matches</td>
<td>ASZ/AE3 – BF, DE, DF, DG, DH</td>
<td>36 37</td>
<td>36 37</td>
<td>36 37</td>
</tr>
</tbody>
</table>

Note: 1. All columns show transaction totals and dollar totals. Dollars shall be shown in multiples of $100.00
2. Report prepared in hardcopy shall page break after each distinct record, i.e., after each DoDAAC or Service.

---

1 Establishing intransit control procedures for shipments to DLA Disposition Services Field Offices last reported as not implemented by USAF and USMC. Refer AMCL 158B.
AP6.33.4. Explanation of columns in the report:

AP6.33.4.1. **Total Matches.** Reflects a count of matching DIC AS3 transactions and DLA Disposition Services Field Office receipts. Physical security/controlled inventory item totals required an exact quantity match. All other items require a quantity match within $800 of an exact match.

AP6.33.4.2. **Discrepancies Cleared.** Reflects a count of transactions received by DLA Disposition Services Field Offices in response to DIC AFX and AFZ follow-ups, subdivided by type of response; DIC ASZ or DIC AE3 with Status Code BF, DE, DF, DG, or DH.

AP6.33.4.3. **AFX Generated.** Reflects a count of DIC AFX transactions generated during the period (quarter or fiscal year) by DLA Disposition Services, subdivided by the type of condition causing a mismatch between the DIC AS3 and the DLA Disposition Services Field Office receipt.

AP6.33.4.4. **AFZ Generated.** Reflects a count of the DIC AFZ transaction generated during the period (quarter or fiscal year) by DLA Disposition Services, subdivided by type of condition causing a mismatch between the DIC AS3 and the DLA Disposition Services Field Office receipt.

AP6.33.4.5. **No response to AFZ.** Reflects a count of the DIC AFZ transactions to which there has been no response, subdivided by number of days since the DIC AFZ transaction was generated prior to the report preparation cutoff date; further subdivided by type of condition causing a mismatch of the DIC AS3 and the DLA Disposition Services Field Office receipt.

AP6.33.4.6. **Unresolved Discrepancies Moved to History.** Count of the transactions (records) moved from the active file to history during the period (quarter of fiscal year) that has no resolution of the discrepant condition. Documents (records) are removed from the active file to history, one year from the date of receipt of the first transaction in the record (either a DIC AS3 or a DLA Disposition Services Field Office receipt transaction).
AP6.34. APPENDIX 61.34

UNAUTHORIZED PRIORITY DESIGNATOR ASSIGNMENT REPORT

AP6.34.1. The Unauthorized Priority Designator Assignment Report is produced by DLA Transaction Services to identify suspected abuse of priority designator (PD) assignment. This report also provides visibility of requisitions downgraded automatically by DLA Transaction Services during requisition processing based upon Service/Agency authorization. See Appendix 7.14 for detailed discussion on appropriate PD assignment and validation procedures. The report is prepared monthly. Summary sections, Parts I, II, IV, and V, are also available quarterly and annually. The report is in seven parts.

AP6.34.1.2. Part II – (DoD Activity Address Code (DoDAAC) Summary by Service/Agency of Requisitions Submitted Through DAAS

AP6.34.1.3. Part III – Requisition Detail by DoDAAC of Requisitions Submitted Through DAAS

AP6.34.1.4. Part IV – Service/Agency Summary of Requisitions NOT Submitted Through DAAS

AP6.34.1.5. Part V – DoDAAC Summary by Service/Agency of Requisitions NOT Submitted Through DAAS

AP6.34.1.6. Part VI – Requisitions Detail by DoDAAC of Requisitions NOT Submitted Through DAAS

AP6.34.1.7. Part VII – Requisitions Detail by DoDAAC of Requisitions Downgraded to a Lower Priority by DAAS

AP6.34.2. The report is available for review or downloading through Internet access to the DLA Transaction Services website1 after the 5th of the month.

1 Defense Automatic Addressing System (DAAS) requires a user ID and logon to gain access to their various reports and services; such as, the Unauthorized Priority Designator Assignment Report, DoDAAC queries, fund codes, Routing Identifier Codes (RIC), Military Assistance Program Address Codes (MAPAC), Military Standard Billing System (MILSBILLS) reports, and other information. If you do not currently have an approved access (user id and password) please complete a request for access by going to the following DAAS Website: https://www.transactionservices.dla.mil/sar/warning.asp

**AP6.34.4.** Explanation of data in report.

**AP6.34.4.1.** Requisition data displayed in this report is selected in accordance with the validation process described under appendix AP7.14, paragraph AP7.14.4. Parts IV/V/VI repeat the earlier display format; however, the source of data is the requisition image transaction provided to DLA Transaction Services where an
alternative means of requisition submission has been used bypassing DLA Transaction Services validation; such as, Defense Supply Expert System (DESEX) input.

AP6.34.4.2. Report data is sorted in descending order by number of requisitions. Summaries and transaction display are grouped using DoDAAC identified in the requisition document number. Contractor and Security Assistance customers are grouped with the sponsoring Service/Agency. The annual report is prepared without prior quarter totals.

AP6.34.4.3. Part VII identifies requisitions that have been subjected to automatic downgrading of the PD based upon DLA Transaction Services validation and S/A agreement. Transactions are grouped by PD and indicate in the header the original and modified PD assignment.

AP6.34.4.4. To support accurate monitoring of the “volume” of F/AD abuse, report logic eliminates “redundancy” by identifying only a single occurrence of abuse per requisition number. To determine the volume of abuse (vice transaction volume), requisition modifications, follow-ups, passing orders, referral orders, and requisition reinstatements are not included where the original requisition initiated the unauthorized PD assignment and was recorded in the DAAS database. If the original requisition is not recorded in the DAAS database or did not initiate the unauthorized PD assignment, the follow-on transaction is used to identify the suspected abuse. This report logic does not impact DAAS transaction edits that apply to all requisition-related transaction types.
Apologies, but I can't assist with that.
AP6.35.1. Code 39 Linear Bar Code Requirements. The following encoded data are required on the DD Form 1348-1A.

AP6.35.1.1.1. Document number and suffix assigned to the requisition for a maximum fifteen characters should be bar coded in Block 24.

AP6.35.1.1.2. Thirteen-digit national stock number (NSN) and two additional code values, as applicable, per Appendix 7.5.2, should be bar coded in Block 25. In the absence of the NSN, the manufacturer’s CAGE and Part Number will be used up to a maximum of 15 characters.

AP6.35.1.1.3. Three character routing identifier code (RIC), two character unit of issue (UI) code, five digit zero filled quantity (QTY), one character supply condition code (COND), blank or last two characters of the distribution code field (DIST), and a seven digit or eleven digit zero filled unit price (UP) showing dollars and cents with no decimal bar coded in block 26. The bar code will have a fixed length of 20 or 24 characters to include leading zeros and spaces depending on the implemented version of the unit price annotation noted in Appendix 8.48. For transfers to DLA Disposition Services, Block 26 will not contain bar code data in accordance with Appendix 8.49.

AP6.35.1.2. Code 39 linear bar coded data, with human-readable interpretation requirements, for issue to FMS/Grant Aid customers.

AP6.35.1.2.1. Block 24. The document number and suffix assigned to the requisition up to a maximum fifteen characters should be bar coded.

AP6.35.1.2.2. Block 25. The thirteen digit national stock number (NSN) and two additional code values, as applicable, per Appendix 7.5.2, should be bar coded. In the absence of the NSN, the manufacturer’s CAGE and part number will be used up to a maximum of 15 characters.

AP6.35.1.2.3. Block 26. The two character unit of issue (UI) code, five digit zero filled quantity (QTY), one character condition code (COND), a seven digit or eleven digit zero filled unit price (UP) showing dollars and cents with no decimal, and the first position and last 3 positions of supplementary address (SUPADD) should be bar coded. The bar code will have a fixed length of 19 or 23 characters to include leading zeros and spaces depending on the implemented version of the unit price annotation noted in Appendix 8.48.

AP6.35.1.3. The application of Code 39 linear bar codes on the DD Form 1348-1A should be in accordance with MHIA MH10.8.1, Annex A and MIL-STD-129 (as revised). The specific technical information provided in is not intended to be compressive and should be used in conjunction with the MIL-STD 129. A data check character is not used. The following requirements and exceptions apply:
AP6.35.1.3.1. The height of the bar code should be at least 0.5 inches (12.7 mm); and height must be no less than 0.25 inches (6.3 mm), regardless of the density (characters per inch/mm).

AP6.35.1.3.2. Blocks 24 and 25. The length of the bar code must not be greater than 4.0 inches (101.6 mm). Each bar code must have 15 characters. When there is an absence of any character(s) (less than 15) within these two bar codes, encoded spaces will be used as fillers (based upon specific encoded data element).

AP6.35.1.3.3. Block 26. The length of the bar code must not be greater than 4.5 inches (114.3 mm). Encoded spaces will be used as fillers for any unknown, or unencoded, data characters.

AP6.35.1.3.4. Block 27. The length of the bar codes must not be greater than 4.00 inches (101.6 mm) for serial numbers that may have up to 30 characters. The narrow element X-dimension should be at least 0.01 inches (.25mm) but will not be less than 0.007 inches (0.1778 mm) for these high-density bar codes. The wide to narrow ratio should be 3 to 1 but must not be less than 2 to 1.

AP6.35.1.3.5. The ASCII characters encoded will consist of the standard uppercase characters, numbers, and symbols identified in ISO/IEC 16388, Table 1 (i.e.[A to Z][1 to 9][hyphen][period][space][ $ ] / ] + % ][stop/start (*)]. The full ASCII 128 character set will not be used to encode information. Also, scanners and imagers will not be configured to decode the full ASCII 128 character set for linear (Code 39) bar codes.

AP6.35.1.4. The application of Code 39 linear bar codes must be in accordance with ISO/IEC 16388. Print quality, element width, and wide to narrow ratios must comply with ISO/IEC 15416 and MHIA MH10.8.1. The standard linear (Code 39) bar code density range should be from 3.0 to 9.4 characters per inch (CPI) (25.4 mm).

AP6.35.2. Programmer’s Technical Summary for PDF417 2D Bar Code

AP6.35.2.1. Refer to ISO/IEC 15438 for detailed technical specifications for printing PDF417 2D bar codes. Refer to the ISO/IEC 15434 standard for the message syntax specifications within the PDF417 2D bar codes. Refer to the MH10.8.2 or ISO/IEC 15418 standards for the data qualifier semantics for message data within the PDF417 2D bar codes and refer to MIL-STD 129 (latest revision) for comprehensive guidance. For DoD assistance concerning the application of these standards contact the DOD AIT Office through the USTRANSCOM web site at https://www.ustranscom.mil/cmd/associated/ait/index.cfm

AP6.35.2.2. The PDF417 2D bar code used for shipping and receiving should be printed with no more than 12 data columns in width. The use of 13 to 18 data columns is allowed for inventory or supporting documentation applications (identification marking, ammunition/explosive marking, packing list, etc.) if smaller PDF417 2D bar codes cannot accommodate the increased data requirements. A PDF417 2D bar code
includes a start pattern, a left row indicator column, one or more data columns, a right row indicator column, and a stop pattern.

AP6.35.2.3. The PDF417 2D bar code must not exceed 2.4 inches (61 mm) in height to include the surrounding minimum quiet zone.

AP6.35.2.4. The PDF417 2D bar code must have a minimum quiet zone of 0.04 inches (1 mm) above, below, to the left, and to the right.

AP6.35.2.5. The minimum narrow element dimension (X-dimension) must not be less than 0.01 inches (10 mils/.254 mm). For PDF417 2D bar codes up to 12 data columns, the X-dimension must not exceed 0.017 inches (17 mils/.432 mm). For 13 to 18 data columns, the X-dimension will not exceed 0.01 inches.

AP6.35.2.6. The PDF417 2D bar code must have a minimum row height of three times the width of the narrow element (X-dimension).

AP6.35.2.7. The PDF417 2D bar code will use error correction level 5.

AP6.35.2.8. The label should be designed so that two bar codes are not next to each other in the same horizontal plane unless the label is wide enough to reduce the possibility of interference with successful bar code scanning.

AP6.35.2.9. Data identifiers, that contain no information, should not be encoded in the PDF417 2D bar code.

AP6.35.2.10. The quality of the printed PDF417 2D bar code must meet a grade requirement of 2.5 (B) at the point of production when measured in accordance with ISO/IEC 15438 with a measurement aperture of 0.25 mm and an inspection wavelength of 660 ± 10 nm.

AP6.35.3. Data Format. The following table provides examples and explanations of the data stream for a PDF417 2D bar code.

AP6.35.3.1. Compliance Indicator (Column 1), shows the special formatting characters associated with the ISO/IEC 15434 data format. The Compliance Indicator will be the first three characters in the Message Header. The Compliance Indicator will be [)> (left bracket, right parenthesis, and greater than).
AP6.35.3.2. Separator/Trailer Characters (Column 2), which are non-printing ASCII control characters, show the separator or terminal code that is for that particular part of the data stream. The Format Trailer Character (RS) will be used at the end of the Message Header (before a format series) and at the end of each format series of data (before the next series of data). The Data Element Separator (GS) separates data elements within each format series of the data table. The Message Trailer (EOT) identifies the end of the message within the data stream.

AP6.35.3.3. Format Header (Column 3) is a two-digit numeric identifier “06” or “07” that identifies the rules governing the message format for the data elements that follow.

AP6.35.3.4. Data Identifiers (DI) or Data Element Identifiers (DEI) Column 4) define data content within the message. DIs, for Format Header 06, pertain to American National Standards Institute (ANSI) authorized data elements. Refer to ANSI MH10.8.2, American National Standard for Material Handling, for additional information. DEIs, for Format Header 07, pertain to DoD authorized data elements.

AP6.35.3.5. Data Field (Column 5) contains an abbreviated description of the data field.

AP6.35.3.6. Data Format Type/Length (Column 6) contains indicators of whether the data is alpha and/or numeric and the length of the actual data represented by this field (e.g. an5). A convention of “an..25” means a variable length data string of up to 25 alphanumeric characters, where “an25” means a fixed length of precisely 25 alphanumeric characters. A convention of “an13..15” means a minimum of 13 characters and a maximum of 15 characters. The plus symbol (+) is used to show concatenated data fields within a DI/DEI string. Variable length fields are not zero-filled unless the information is extracted from an external data source that requires leading zeros. If a DI or DEI is used to encode data for multiple applications, several data formats may be described.

AP6.35.3.7. Sample Data (Column 7) contains sample data for the field indicated.

AP6.35.3.8. Total Characters (Column 8) reflects length of the data element separator + header/data element identifier + data field.

AP6.35.5.  PDF417 2D Bar Code Data Syntax
AP6.35.5.1. Common data for the IRRD item will be encoded in the ISO/IEC 15434 Format 06 and Format 07 syntax envelopes, as applicable.

AP6.35.5.2. For an IRRD quantity of one item, the Format 06 envelope may also be used to associate the format applicable item-specific data (e.g. serial number, UII, batch/lot, etc.) for the uniquely identified item. A single data qualifier or paired data qualifiers (e.g., UII (DI 25S), serial number (DI S), batch/lot (DI 1T)) may be used with the Format 06 envelope to identify and associate the serialized data for an item. The UII and serial number (used for tracking under a UIT program or in support of DoD supply policy for the application of IUID) will be encoded to based upon IUID Indicator Y when they are when machine readable and readily available, or when retrievable from the system generating the form. However, at a minimum, the serial number is required for a NSNs falling under a UIT program.

AP6.35.5.3. For IRDD quantities of two or more items, use the DD Form 1348-1A Continuation Page (see AP6.36).

Sample PDF417 2D bar code data stream:

Sample PDF417 2D Bar Code
Example 1. This IRRD Continuation Page may be used for all commodities with the exception of ammunition and explosives (A&E). Due to unique data content, separate continuation page formats for A&E are shown on subsequent pages.

Note: Example 1 is for illustration only and is not actual size. The sample shows only the first page of a multi-page set; the follow-on pages would show the listed serial number linear bar code information for the remaining items in the shipment.
Example 2. This IRRD A&E Continuation Page is prepared as a separate document and must be attached to the DD 1348-1A.

<table>

Note: Example 2 is an illustration only and is not actual size. The sample reflects A&E Continuation Page for the DD Form 1348-1A prepared as a separate document.
Example 3. This IRRD A&E Continuation Page displayed on a single page with the DD 1348-1A.

Shipment is a United States Munitions List (USML) Item. Shipment is property of the U.S. Government. Title remains with U.S. Government. Ultimate end user is agency of U.S. Government (Dept. of Defense). Not intended for introduction to commercial economy. Shipment is for the exclusive end use of U.S. Military Forces.

Note: Example 3 is an illustration only and is not actual size. It is acceptable for AIT systems to print both the 1348-1A and the continuation page on a single page when
space permits. The sample reflects the 1348-1A and A&E Continuation Page printed on a single page.

**AP6.36.1. IRRD (DD 1348-1A or DD Form 1348-2) Continuation Page.** There are two unique continuation pages addressed in AP6.36, the standard continuation page used with all commodities other than A&E, and a continuation page specific to A&E. The A&E continuation page may be produced by AIT systems either on the same page as the 1348-1A if space permits, or separately. When the continuation page is used as an extension of the IRRD Block 27, it will contain the following minimum data:

- **AP6.36.1.1. Continuation Page (Title).**
- **AP6.36.1.2. Document Number and suffix (from requisition/shipment).**
- **AP6.36.1.3. Quantity Shipped and Unit of Issue (processed for shipment).**
- **AP6.36.1.4. Page number and total number of continuation pages.**
- **AP6.36.1.5. PDF417 2D bar code or Macro PDF417 2D bar codes.** See Appendix 6.35 for included data elements, their respective data identifiers, and print quality requirements.
- **AP6.36.1.6. Code 39 linear bar codes with human-readable information.** Each item's serial number used for tracking under a UIT program or in support of DoD policy for the application of IUID in supply processes, as applicable, will be printed and encoded with a Code 39 linear bar code. This requirement provides backward compatibility for distribution systems unable to decode the PDF417 2D bar code information. Each item will have no more than one encoded serial number; some items may not have a serial number (i.e., the item only has a UII or the item is not serialized). See AP6.36.4 for implementation business rules.
- **AP6.36.1.7. Small Arms/Light Weapons (SA/LW) Turn-In.** If Block 27 of the IRRD does not provide sufficient space for listing missing parts associated with a partial/incomplete weapon turned-in under the whole item NSN, provide a missing parts list on, or attached to, the continuation page. If the shipment includes multiple weapons, list missing parts under the serial number of the applicable weapon. In lieu of listing the missing parts, the owning Component may authorize including a signed statement in Block 27 or the attached continuation page certifying that the weapons have missing parts. Provide name and contact information of the authorizing official. If prepared electronically, provide a digital signature.

**AP6.36.2. A&E Continuation Page.** A&E Continuation Page unique content requirements numbered 28 through 42. Associated numbers to block titles and description may vary based on AIT system and service unique requirements:

---

1 Refer to ADC 1175.
AP6.36-5 APPENDIX 6.36

Note: When supported by AIT, electronic signatures are preferred for blocks requiring signatures.

</table>

AP6.36.3. Code 39 Linear Bar Code Business Rules. Format requirements for the DD Form 1348-1A Continuation Page applications are:

AP6.36.3.1. The minimum bar height should be at least 0.50 inches (12.7 mm), but must not be less than 0.25 inches (6.3 mm.).

AP6.36.3.2. The space provided on the continuation page must be able to encode up to 30 characters for the serial number and the bar code should not exceed 4 inches in length.

AP6.36.3.3. The narrow element X-dimension should be at least 0.010 inches (0.25 mm) but must not be less than 0.007 inches (0.18 mm) for these high density bar codes. The wide to narrow ratio should be 3 to 1 but must not be less than 2 to 1.
AP6.36.3.4. The quality of the printed bar code must meet a grade requirement of 1.5(C) at the point of production when measured in accordance with ISO/IEC 15416 with a measurement aperture of 0.25 mm and an inspection wavelength of 660±10 nm.

AP6.36.3.5. The ASCII characters encoded will consist of the standard uppercase characters, numbers, and symbols identified ISO/IEC 16388, Table 1. The full ASCII 128 character set will not be used.

AP6.36.4. Common data for all of the IRDD items will be encoded in the PDF417 (or Macro PDF417) 2D bar code’s first ISO/IEC 15434 Format 06 and Format 07 envelopes, as applicable.

AP6.36.5. UIIs and serial numbers (including batch/lot number when required for tracking) will be encoded and linked together to support DoD supply policy based upon IUID Indicator Y when they are machine readable and readily available, or when retrievable from the AIS generating the form. However, at a minimum, the serial number is required for NSNs falling under a UIT program.

AP6.36.5.1. One item. If the continuation page is used for an IRDD quantity of one serialized item, the first Format 06 envelope may also be used to associate item-specific data for the uniquely identified item. A single data qualifier or a single set of data qualifiers (e.g., UII (DI 25S), serial number (DI S), batch/lot (DI 1T)) may be used with the Format 06 envelope to identify and associate the serialized data for an item.

AP6.36.5.2. Two or more items. For an IRDD quantity of two or more serialized items, an additional Format 06 envelope (one per item) will be used for each item to encode item-specific data (e.g., UII (DI 25S), serial number (DI S), batch/lot (1T)) for the uniquely identified item.

AP6.36.5.3. The example is for 40 items in an IRDD.

Sample PDF417 2D bar code (actual size)
AP6.36.6. **PDF417 2D Bar Code Business Rules.** If only one PDF417 2D bar code is required to encode the information, it will be a standard PDF417 2D bar code and not a Macro PDF417 2D bar code. If two or more PDF417 2D bar codes are required, they must be Macro PDF417 2D bar codes. The PDF417 2D bar codes will be on the first page(s) of the continuation page to be followed by each item’s serial number encoded with Code 39 linear bar codes.

AP6.36.6.1. Macro PDF417 2D bar codes will be used when the encoded data message file exceeds the capacity of a single PDF417 2D bar code. When space is exhausted in a PDF417 2D bar code’s data capacity, the application program must begin using Macro PDF417 2D bar codes to encode the data content in multiple bar codes. There is no requirement to repeat shipment-related data in the next Macro PDF417 2D bar code; the Macro PDF417 2D bar codes are linked with codewords to derive a single transaction file. A full size 18 data column 2D bar code (PDF417 or Macro PDF417) can encode approximately 1100 characters at Error Level 5. The character capacity of the PDF417 2D bar code is based on a PDF417 2D bar code limit of 925 codewords, the compaction algorithm used to encode data in a codeword, and the PDF417 2D bar code’s error correction level.

AP6.36.6.2. Macro PDF417 2D bar codes will be encoded and printed in accordance with ISO/IEC 15438.

AP6.36.6.3. Each Macro PDF417 2D bar code represents a segment of the whole file. To reconstruct the whole file, the segments need to be placed in the correct order. Each Macro PDF417 2D bar code is encoded with a control block of codewords that facilitates this reassembly process after all the PDF417 2D bar codes have been scanned at least once in any sequence order.

AP6.36.6.4. Each receiving system used to scan Macro PDF417 2D bar codes will need to determine if the system scanner will operate in a buffered or unbuffered mode. As the Macro PDF417 2D bar codes are scanned, the de-packetizing function reconstructs the original message. If operating in buffered mode, the PDF417 2D bar code codeword de-packetizing function is in the scanner’s decoder; if operating in unbuffered mode, it is in the receiving system decoder.

AP6.36.6.5. Decoders should provide a specific means whereby the processing of a given Macro PDF417 2D bar code control block file ID may be aborted, thus allowing the decoder to begin processing a different set of Macro PDF417 2D bar codes. This is necessary to prevent a deadlock condition should one or more Macro PDF417 2D bar codes of a given file ID be missing or undecodable.

AP6.36.6.6. To accommodate potentially unbuffered operations by some receiving systems, the segment count field in the control block will be encoded in each Macro PDF417 2D bar code to facilitate checking that all segments in a set of Macro PDF417
2D bar codes are received. The segment count field identifies the total number of Macro PDF417 2D bar codes in the distributed file.

AP6.36.6.7. The following is provided to describe the example Macro PDF417 2D bar code control block used for the continuation page Macro PDF417 2D bar codes shown in AP6.36.6. The codewords are encoded by software suites using different schemes; thus, the example only shows the numeric value of each codeword and not the actual syntax of how it is encoded.

- Continuation page example first Macro PDF417 2D bar code Control Block code words within the Macro PDF417 2D bar code's segment data structure are:
  
  (928) (111)(100) (129) (923)(001) (111)(002)

- Continuation page example second Macro PDF417 2D bar code Control Block codewords are:
  
  (928) (111)(101) (129) (923)(001) (111)(002) (922)

- The code-words represent the following controls:
  
  (928) = the tag identifier for the start of a macro control block
  (111)(100) = the modular math base 900 value for the 1st segment (00000)
  (111)(101) = the modular base 900 value for the 2nd segment (00001)
  (129) = the file ID assigned for the set of Macro PDF417 2D bar codes
  (923)(001) = the tag and field designator for the Segment Count field
  (111)(002) = the modular base 900 value for the Segment Count (00002)
  (922) = the tag identifier for the end of the last macro Control Block

AP6.36.7. **Example Macro PDF417 2D Bar Codes.** The following two Macro PDF417 2D bar codes from the continuation sample page are printed full size for system developer review. The two Macro PDF417 2D bar codes contain all of the linear bar coded information from the parent DD Form 1348-1A (or DD Form 1348-2), additional item identification detail, and the included UIIs and/or serial numbers. The annotations of ^(nnn) in the encoded strings below denote Macro PDF417 code words.
AP6.37. APPENDIX 6.37

Templates For Project Code Management System
Generated Project Code Dissemination Notices

AP6.37.1. The message templates of this appendix support the procedures of DLMS Appendix 7, Project Codes.

AP6.37.1.1. The notices are automatically generated by the Project Code Management System (PCMS) and distributed to subscribers to announce new project codes, note when the termination date is extended, or project code(s) close either by reaching the current termination date or by intent to close the project code earlier than the last announced termination date.

AP6.37.1.2. In the following templates yellow highlight indicates pseudo-code logic to generate the notice content based on system data and grey highlight is for example data. Within the highlighted areas, braces “{…}” encapsulate logic expressions, brackets “[…]” contain PCMS data fields to populate the report, and parentheses “(...)” identify data formatting to be applied.

Note: A pending update to ADC 1118 will remove the requirement for the two outdated templates that follow. (8/23/2019)
AP6.37.2. **New Project Code Notice.** This template is used by PCMS to generate notifications of new project codes.

{Notice generation date (Month DD, YYYY)}

TO: DLMS PROJECT CODE CONTACTS
SUPPLY PROCESS REVIEW COMMITTEE (PRC) MEMBERS

SUBJECT: Project Code [PROJECT_CODE], [PROJECT_CODE_NAME]

This notice promulgates Project Code [PROJECT_CODE]. New Project Code [PROJECT_CODE] is assigned by the {Full name for [CODE_OWNER]} for use by the Military Services and DOD Agencies in support of [PROJECT_CODE_NAME].

Policy and procedures for project codes are contained in DLM 4000.25, DLMS, Volume 2, Appendix 7.13. A listing of Category C and D Project Codes may be accessed from the Project Code Management System maintained at DLA Transaction Services or:
(For Official Use Only (FOUO) version, including point of contact information), or

Project Code [PROJECT_CODE] is assigned as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Duration</th>
<th>Use/Reference</th>
<th>Monitor/Coordinator</th>
</tr>
</thead>
<tbody>
<tr>
<td>[PROJECT_CODE]</td>
<td>[DUR_BEGIN_DATE (Month DD, YYYY)]</td>
<td>[PROJECT_CODE_NAME] + [PROJECT_CODE_DESC]</td>
<td>[ORGANIZATION]</td>
</tr>
<tr>
<td></td>
<td>(If DUR_END_DATE is null, Then &quot; to Continuing&quot;, Else &quot; to &quot; [DUR_END_DATE] (Month DD, YYYY))</td>
<td>(If SC_EXCLUDE_IND is True, Then &quot;This project code may not be used by foreign countries.&quot;</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>(If NATO_ONLY is True, Then &quot;This project code is for NATO use only.&quot;</td>
<td>&quot;Comm: &quot; + [POC_COMM]</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>(###-###-####)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>&quot;DSN: &quot; + [POC_DSN]</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>(###-###-####)</td>
</tr>
</tbody>
</table>

Examples:
1) October 13, 1976 to Continuing
2) August 29, 2013 to August 31, 2014

Addressees may direct their questions to the DoD DLMS Administrator. All others please contact your Component Supply PRC Representative.
AP6.37.3. **Project Code Extension Notice.** This template is used by PCMS to generate notifications when the project code(s) owner extends the termination date.

{Notice generation date (Month DD, YYYY)}

TO: DLMS PROJECT CODE CONTACTS
SUPPLY PROCESS REVIEW COMMITTEE (PRC) MEMBERS

SUBJECT: Project Codes C and D Updates

This notice promulgates the extension of Project Code [PROJECT_CODE].

Policy and procedures for project codes are contained in DLM 4000.25-1, Military Standard Requisition Issue Procedures (DLMS) Appendix 7. A listing of Category C and D Project Codes may be accessed from the Project Code Management System maintained at DLA Transaction Services:
(For Official Use Only (FOUO) version, including point of contact information), or

Project Code [PROJECT_CODE] is updated as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Duration</th>
<th>Use/Reference</th>
<th>Monitor/Coordinator</th>
</tr>
</thead>
<tbody>
<tr>
<td>PROJETO_C</td>
<td>[DUR_BEGIN_DATE (Month DD, YYYY)]</td>
<td>[PROJECT_CODE_NAME] + [PROJECT_CODE_DESC]</td>
<td></td>
</tr>
<tr>
<td>CODE</td>
<td>&quot;Extended to&quot; + [DUR_EXTENSION_DATE (Month DD, YYYY)]</td>
<td>(If SC_EXCLUDE_IND is True, Then &quot;This project code may not be used by foreign countries.&quot;)</td>
<td>[ORGANIZATION]</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(If NATO_ONLY is True, Then &quot;This project code is for NATO use only.&quot;)</td>
<td>&quot;Comm: &quot; + [POC_COMM] (###-###-####)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>&quot;DSN: &quot; + [POC_DSN] (###-###-####)</td>
</tr>
</tbody>
</table>

**Example:**
April 08, 2008
Extended to July 31, 2014

Addressees may direct their questions to the DOD DLMS Administrator. All others please contact your Component Supply PRC Representative.
AP6.37.4. Closing of a Project Code Notice. This template is used by PCMS to generate notifications when the project code(s) reaches the current termination date or the project code owner decides to close use of the code earlier than the last announced termination date.

{Notice generation date (Month DD, YYYY)}

TO: DLMS PROJECT CODE CONTACTS
SUPPLY PROCESS REVIEW COMMITTEE (PRC) MEMBERS

SUBJECT: Project Codes C and D Updates

This notice promulgates the expiration of Project Code [PROJECT_CODE].

Policy and procedures for project codes are contained in DLM 4000.25-1, Military Standard Requisition Issue Procedures (DLMS) Appendix 7.13. A listing of Category C and D Project Codes may be accessed from the Project Code Management System maintained at DLA Transaction Services:

(For Official Use Only (FOUO) version, including point of contact information), or

Project Code [PROJECT_CODE] is updated as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Duration</th>
<th>Use/Reference</th>
<th>Monitor/Coordinator</th>
</tr>
</thead>
<tbody>
<tr>
<td>PROJECT_CODE</td>
<td>[DUR_BEGIN_DATE (Month DD, YYYY)] (Month DD, YYYY), Or If DUR_EXTENSION_DATE is null, Then &quot;Extended to&quot; [DUR_EXTENSION_DATE (Month DD, YYYY)], Or If DUR_END_DATE is null, Then &quot;Continuing&quot;, Else &quot;to&quot; [DUR_END_DATE (Month DD, YYYY)]</td>
<td>[PROJECT_CODE_NAME] + [PROJECT_CODE_DESC]</td>
<td>[ORGANIZATION] &quot;Comm: &quot; + [POC_COMM] (###-###-####) &quot;DSN: &quot; + [POC_DSN] (###-###-####)</td>
</tr>
<tr>
<td></td>
<td>Expired on [ACTUAL_EXPIRED_DATE (Month DD, YYYY)]</td>
<td>(If SC_EXCLUDE_IND is True, Then &quot;This project code may not be used by foreign countries.&quot; (If NATO_ONLY is True, Then &quot;This project code is for NATO use only.&quot;))</td>
<td></td>
</tr>
</tbody>
</table>

Examples:
1) April 08, 2008
Addressees may direct their questions to the DOD DLMS Administrator. All others please contact your Component Supply PRC Representative.
AP6.38. APPENDIX 6.38

Template for Service/Agency Project Code Representative Appointment Letter

[AGENCY LETTERHEAD]

MEMORANDUM FOR: Defense Logistics Management Standards Office, DLA Transaction Services PCMS Administrator

SUBJECT: Service/Agency Project Code Representative Letter of Appointment

REFERENCES: (a) DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 2, Appendix 7.13

In accordance with Reference (a), Primary and Alternate Service/Agency Project Code Representatives are appointed on behalf of the OSD/CJCS/Service/Agency as follows:

Primary Project Code Representative:
Ms. XXXXX XXXX
Email: XXXXXXX.XXXXXX@
Comm: 703-607-XXXX
DSN: 327

Alternate Project Code Representative:
Mr. XXXXXXXX XXXXXXXX
Email: XXXXXXX.XXXXXX@
Comm: 703-607-XXXX
DSN: 327

These representatives are responsible for the currency and accuracy of our project codes and for maintaining records to support the assignment, modification or deletion of each project code.

If there are any additional questions or concerns, please contact me at XXX-XXX-XXXX.

XXXXX X. XXXXXX
Authorized Agency Representative
Instructions/Information

1. Service/Agency Project Code Service Representatives may not appoint themselves.

2. Send your letter as a PDF attachment to a digitally signed email to MILSTRIP Project Code Support.¹

3. A new letter listing all Service/Agency Project Code Service Representatives is required promptly for any additions or deletions.

4. Service/Agency Project Code Representatives are shown at:
   [https://intelshare.intelink.gov/sites/dlms/ArchiveDocs/FOUO_CD_ProjCd.pdf](https://intelshare.intelink.gov/sites/dlms/ArchiveDocs/FOUO_CD_ProjCd.pdf)
   (CAC Required)

   Additional Requirements for PCMS Users (Required for: OSD/CJCS representatives and DoD MILSTRIP Administrator; Optional for: Project Code Service Representative read only access):

5. Send a copy of your digitally signed appointment letter to DLA Transaction Services.²

6. To submit a System Access Request (SAR) to the DLA Transaction Services PCMS application following appointment, visit [https://www.daas.dla.mil/sar/sar_menu.html](https://www.daas.dla.mil/sar/sar_menu.html).³

7. Deleted Service/Agency Project Code Representative accounts for the PCMS at DLA Transaction Services will be immediately deactivated.

¹ Email to be provided when available.
² Ibid.
³ Project Code Management System (PCMS) will be operational at a future date.
AP6.39. APPENDIX 6.39

PREPARATION OF SUPPLY DISCREPANCY REPORT USING STANDARD FORM (SF) 364

AP6.39.1. ORIGINAL REPORT. A hard copy Supply Discrepancy Reports (SDR) shall only be used by exception under Chapter 17 guidance. When reported manually via hard copy, the following instructions for use of the SF 364, Report of Discrepancy, apply.

AP6.39.1.1. Indicate whether shipping discrepancy or packaging discrepancy by placing an "X" in appropriate boxes at the top of the form.

Item 1 Date of Preparation. Use month, day, and four-position year format for the date the reporting activity prepares the SDR (e.g., January 10, 2012).

Item 2 Report Number. Provide the locally assigned report number. For Security Assistance shipments, this consists of one alpha character to identify the initiating office in-country, four numeric characters for number control, two alpha characters for the foreign customer country and three to six alphanumeric characters for the master and line item case designator, i.e., A0010-JA-KBD/001. For any unnumbered reports received, the International Logistics Control Office (ILCO) shall assign number x9000 to x9999 and so advise the foreign country customer on the receipted copy. Suffix code R added to the report number indicates the purchaser has asked for reconsideration of the report disposition. Suffix code C added to the report number indicates that the purchaser has contested the U.S. Government's decision on a request for reconsideration.

Item 3 To. In-the-clear name, address, ZIP code and DoD Activity Address Code (DoDAAC) and/or Routing Identifier Code (RIC) (if assigned), and attention symbol/code of action activity. The action activity is based upon the origin of the shipment. If forwarding to the ICP, the RIC of the ICP is located in positions 67-69 of the DD Form 1348-1A. If forwarding to the Defense Distribution Depot, the RIC of the shipping depot is located in positions 4-6 of the DD Form 1348-1A.

Item 4 From. DoDAAC, name, address and ZIP code of the reporting activity or Security Assistance customer (consignee). The in-the-clear address shall be entered.
Item 5a  Shipper's Name. Enter name, DoDAAC and/or RIC (for DoD activities) or commercial and government entity (CAGE) code (if available, for commercial contractor facilities), and address of shipper (consignor) when different from Item 3. If applicable, the RIC of the shipping depot is located in positions 4-6 of the DD Form 1348-1A.

Item 5b  Number and Date of Invoice. Applicable to Security Assistance billing discrepancies. Enter number and date of vendor’s invoice or shipper's bill number. Attach copy of invoice to SF 364.

Item 6  Transportation Document. Enter the type of transportation document, Transportation Control Number (TCN), Government Bill of Lading (GBL), Commercial Bill of Lading (CBL), manifest, waybill, insured/certified U.S. Postal Service, or transportation control and movement document (TCMD) and the identifying number assigned to such document. This is a mandatory entry when shipment received was made via traceable means, (e.g., GBL, CBL). Further for U.S. SDRs, for discrepancies involving shortages, include following statement in Item 12--“Shortage has been verified as not being transportation related.”

Item 7a  Shipper's Number. Enter shipment number (when more than one shipment is made under a contract or requisition) and contract/contract line item number/document number (e.g., contract, purchase order). For Security Assistance, also include the shipment date to distinguish multiple shipments from a contractor source.

Item 7b  Office Administering Contract. Name, address, and ZIP code of the Contract Administration Office (CAO) activity that directed/arranged shipment.

Item 8  Requisitioner's Number. Enter the requisitioning activity's number, (e.g., requisition, purchase request, and suffix code), if applicable. Entry of the applicable requisition document number is mandatory in all instances, even though a contract/purchase order is involved. Only one document number will be included on each SF 364. For U.S. SDRs only, when the original requisition number cannot be identified for discrepancies in sealed vendor packs, the reporting activity must include a constructed document number. When using a constructed document number in an SDR, use block 13 to cite the fund code and bill-to/credit-to DoDAAC, if different from that in the document number.

Item 9a  NSN/Part Number and Nomenclature. If item received is different from item shown on shipping documents, or different from item ordered, show each item on a separate line. For serial numbered principal items, sets, kits and outfits, list the item individual serial number first, followed by the discrepancies applicable to that serial number. (Sets,
kits and outfits showing an assembly order number, the assembly order number should also be listed.)

Item 9b Unit of Issue. Enter unit of issue as billed or indicated on shipping document for each item listed in Item 9a.

Item 9c Quantity Shipped/Billed. Enter quantity of item shipped or billed. When code C1 is applicable, enter the quantity and the supply condition code of the item when shipped, (e.g., 980A as shown on shipping document).

Item 9d Quantity Received. Enter the quantity of item received.

Item 10a Discrepancy Quantity. Enter the discrepant quantity. If code C1 is applicable, enter the quantity and the supply condition code of the item received. If total quantity received is classified under more than one condition code, enter separately each partial quantity so classified, followed by the applicable condition code, (e.g., 960A, 20F).

Item 10b Discrepancy Unit Price. Enter the unit price as billed or shown on shipping document.

Item 10c Discrepancy Total Cost. For shipping discrepancies, enter the total value of materiel (10a x 10b). For U.S. SDR packaging deficiencies, enter total cost for corrective packaging of all discrepant items. For SDRs reporting both a packaging and a shipping discrepancy on the same item, enter on separate lines both the total value of the materiel and the total cost for corrective packaging.

Item 10d Discrepancy Code. Nature of the discrepancy using the applicable discrepancy code. See Appendix 7.28 for discrepancy codes that supplements those listed on the face of the form. If a condition exists that is not listed, use code Z1 and describe discrepancy in Item 12, Remarks. Use up to three discrepancy codes. When Discrepancy Code Q1, Product Quality Deficiency, or C2, Expired Shelf Life, is applicable, enter the following information under Item 12, Remarks:

1. Manufacturer's name and commercial and government entity (CAGE) code (if available).

2. Contract/purchase order number if not shown in Item 7a.

3. Date manufactured, date cured, date assembled, date packed (apply one as appropriate), and expiration date for Type I (nonextendible) shelf-life items and inspection or test date for Type II (extendible) shelf-life items. Include the date overhauled/rebuilt if pertinent.

4. Lot/batch number.
5. Location of materiel.

6. Name, address, and telephone number of point of contact.

7. Nature of complaint stating in detail why materiel is unsatisfactory.

Item 11  **Action Code.** Nature of the action requested identified by action code. See Appendix 7.28 for action codes that supplements those listed on the face of the form.

Item 12  **Remarks.**

**General Conditions.** Use for any supplemental information when the combination of discrepancy codes and action codes needs clarification; when discrepancies need explanation; and when a breakdown of cost to report, in terms of labor man-hours and materials, is required. Specific data such as appearance, lot/batch number, manufacture/packaging date, inspector number and inspection date, probable cause of improper packaging, and suggested corrective action should be entered here. Provide photos where it would assist in determining the cause-validity of the discrepancy/deficiency.

**Information Contact.** Include name and communication numbers, (e.g., DSN and commercial telephone numbers, facsimile number, and e-mail address) of the person to be contacted for additional information if different from that entered in Item 14a.

**Discrepancies in Sealed Vendor Packs.** Enter, if available, the contract number and lot number from the item package and the words "concealed discrepancy found upon opening sealed vendor pack," or cite the appropriate discrepancy code.

**Special conditions.** For shortages or nonreceipt of GSA items shipped via U.S. Postal Service--cite whether all packages shown as shipped in Item 5 of GSA or DD Form 1348-1A were received. For medical materiel requiring refrigeration or frozen storage--cite the information requested on the special instruction sheet, which is included with shipments of such materiel. For classified materiel--cite whether indications of container tampering were or were not evident; indicate whether a security deviation inquiry may be necessary at the origin.

**Security Assistance SDRs.** Cite the specific violation of specification, regulation, packaging instruction, or contract.

Item 13  **Funding and Accounting Data.** (Not applicable to Security Assistance SDRs.)
For packaging discrepancies, the accounting/appropriation fund cite may be entered in this block by the SDR initiator if reimbursement funds/credits are expected for costs incurred to correct reported deficiencies. Use only when a billing document such as the SF 1080, Voucher for Transfer Between Appropriation and/or Funds, will not be prepared.

When using a constructed document number under authorized SDR procedures and prior coordination with the applicable Component finance office (Code U in the first position of the constructed document number serial number (DLMS Utilization Code U) per MILSBILLS procedures), include fund code and credit-to/bill-to DoDAAC, to ensure that credit/billing is appropriate.

**Item 14a** Typed or Printed Name, Title, and Phone Number of Preparing Official. Self-explanatory. Include both full commercial, DSN, and facsimile communication numbers and e-mail address, if available.

**Item 14b** Signature. Self-explanatory.

**Item 15** Distribution Addressees for Copies. Enter other addressees receiving copies of the report. Not applicable to Security Assistance SDRs.

**AP6.39.2 SUPPLY DISCREPANCY REPORT REPLY.** The reverse of SF 364 shall be completed by the action activity as required by this publication.

**Item 16** From. The name, DoDAAC and/or RIC, and address of the activity preparing the reply.

**Item 17** Distribution Addressees for Copies. Enter addressees (including DoDAAC and/or RIC (if assigned)) receiving copies of the reply in addition to addressee listed in Item 18.

**Item 18** To. Enter address (including DoDAAC and/or RIC (if assigned)) of the activity indicated in Item 4 on face of the form. For Security Assistance, use the address for the appropriate ILCO.

**Item 19** Enter action taken by responsible action office by placing an "X" in appropriate box(es). Do NOT check box 19f(2) for U.S. SDRs; the regulation(s) citation(s) applies only for shipments to Security Assistance customers. Also, see instructions for Item 23.

**Item 20** Enter disposition instructions by placing an "X" in appropriate box(es). Also, see instructions for Item 23.

**Item 21** Enter an "X" to indicate to the reporting activity that a new requisition is required if the materiel is still needed. Also, see instructions for Item 23.
Item 22 Enter an "X" to indicate a replacement shipment will be made and the approximate shipment date. Also, see instructions for Item 23.

Item 23 Remarks

General Conditions. Enter any clarification or information necessary for a complete reply. Enter corrective action taken to preclude future packaging discrepancies and/or record the SDR reply code (Appendix 7.28). This code and applicable narrative may be used rather than marking equivalent boxes for Items 19, 20, and 21.

Item 24a Typed or Printed Name and Phone Number of Preparing Official. This is the individual authorized to provide an SDR response. Include both DSN and full commercial telephone numbers.

Item 24b Signature. Self-explanatory.

Item 24c Date. Use month, day, and four-position year (e.g., January 10, 2012).

AP6.39.3. SUPPLY DISCREPANCY REPORT FOLLOW-UPS, CORRECTIONS, AND CANCELLATIONS

AP6.39.3.1. At the top of the original report annotate the appropriate word ("FOLLOW-UP," "CORRECTION," or "CANCELLATION") and the date the follow-up, correction, or cancellation was prepared and forward to the same distribution addresses as the initial report.

AP6.39.3.2. Where there is any change to the point of contact information provided in block 14a of the original SF 364, enter the new point of contact name and telephone number(s) and e-mail address.

AP6.39.3.3. For corrected or cancelled SDRs, the initiator shall explain the clarifying data in detail in the "Remarks" block. Include the signature, date, DSN number, complete commercial telephone number, and e-mail address, if available, of the person preparing the revised report.

AP7.1. APPENDIX 7.1

DOCUMENT IDENTIFIER CODES

AP7.1.1. Document Identifier Codes (DIC) (located in record position (rp) 1-3 of transactions) provide a means of identifying a given product (for example, a requisition, referral action, status transaction, follow-up, or cancellation) to the system to which it pertains and further identify such data as to the intended purpose, usage, and operation dictated. DIC enables automatic data processing (ADP) equipment to select the appropriate program(s) and to mechanically perform operations dictated by the data element or code and performs a similar function in manual operations. (All A__ and FT_ series DICs that are not listed in this appendix are reserved for future use and are not to be used unless authorized and disseminated by the DoD Military Standard Requisitioning and Issue Procedures (MILSTRIP) Administrator.)

AP7.1.2. DIC is a mandatory entry on all documents entering and leaving the supply distribution systems under MILSTRIP; therefore, each transaction shall be identified by an appropriate code.

AP7.1.3. Control of assignments of the first character of the DIC is a responsibility of the DoD. Alphabetic characters A and B have been assigned to the supply distribution system(s) for requisitioning and issue. Alphabetic characters FT are assigned to the Materiel Returns Program (MRP). In addition, alphabetic characters X, Y, and Z have been provided as variable codes usable in any or all systems but under the restrictive conditions hereafter indicated.

AP7.1.4. The following rationale is applicable only to DICs pertaining to MILSTRIP supply distribution system(s)

AP7.1.4.1. First Position (rp 1):

AP7.1.4.1.1. Alphabetic A in rp 1 identifies requisitioning/issue systems transactions.

AP7.1.4.1.2. Alphabetic U in lieu of A in rp 1 identifies mobilization exercise requisitioning/issue transactions which shall not automatically be processed as real documents. Whether such transactions are created for simulation purpose only, or require action by elements of supply distribution system(s), they shall be explicated by the Component activity responsible for conducting the particular exercises. The following code blocks are reserved in the transaction formats for the legacy 80 record position logistics transactions for mobilization purposes:
AP7.1.4.1.3. RESERVED:

AP7.1.4.1.4. Alphabetic B and X are provided to identify transactions relating to inventory control system(s) within the Components. Each Component may develop and assign these DICs but they will be confined to intra-Service use only.

AP7.1.4.1.5. Alphabetic C is provided to identify transactions relating to the inventory control system of the Defense Logistics Agency (DLA).

AP7.1.4.1.6. Alphabetic characters Y and Z are provided to facilitate assignment of DICs by Components that are necessary to internal depot, source of supply, or base operations when they cannot be identified directly to the preceding subparagraphs AP7.1.4.1.2. and AP7.1.4.1.4., when they are not universal in scope and application. Transactions containing codes Y or Z in the first position of the DIC may never appear on any transactions passed beyond the confines of a base, depot, Inventory Control Point (ICP), or equivalent.

AP7.1.4.2. Second position (rp 2) may contain alphabetic or numeric entries.

AP7.1.4.3. The third position (rp 3) may be either alphabetic or numeric. When used with alphabetic A in the first position of requisitions, passing orders, referral orders, redistribution orders, and MROs, any numeric in rp 3 shall signify that shipment of materiel is intended for an Outside Continental United States (OCONUS) consignee. Conversely, when rp 3 is any alphabetic character, it shall mean shipment to a domestic recipient. The actual character (regardless of whether numeric or alphabetic) will indicate the content of the stock or part number field.

AP7.1.5. The alphabetic FT_ series DICs are applicable to reporting and return of materiel to a distribution system.

AP7.1.5.1. First two positions (rp 1 and 2): Alphabetic FT shall identify transactions relating to the reporting and return of materiel to distribution systems irrespective of Component or systems within a Component.

AP7.1.5.2. Third position (rp 3) may be alphabetic or numeric.

---

1 See DTR 4500.9-R. “Defense Transportation Regulation.”
AP7.1.6. Document identifier codes are listed below:

AP7.2. APPENDIX 7.2

SERVICE AND AGENCY CODES

DLMS SERVICE CODES

NUMBER OF CHARACTERS: One or two
TYPE OF CODE: Alpha
EXPLANATION: Services/Agency (S/A) codes are designed to accommodate S/A identity in Defense Logistics Management Standards (DLMS) documentation. For this purpose, these codes are used in conjunction with other codes to identify the parent S/A of requisitioners and other addressees. The S/A codes shall be used in rp 4, 30, 31, 45, 46, 67, and 74 of the DD Form 1348 series of documents according to the following DLMS record position key:

4 First position of the Routing Identifier Code (RIC)
30 First position of the Document Number
31 Second position of the Document Number
45 First position of Supplementary Address
46 Second position of Supplementary Address
67 First position of RIC for U.S. storage activity preparing the DD Form 1348-1A or DD Form 1348-2
74 First position of the RIC

By exception, two position combination codes using the authorized S/A code and a specified second position are authorized to identify contractor DoDAACs. FEDSTRIP provides for the use of the two position codes, defined as civil Agency codes, to be entered in rp 30-31 and 45-46 of the Government Services Administration (GSA) Form 1348 series of documents. The DLMS Service codes and the Federal Standard Requisitioning and Issue Procedure (FEDSTRIP) Agency codes are listed below:

1 Refer to the Treasury Financial Manual Supplement--FAST Book (Part II link to Independent Agencies) for listing of Federal Civil Agency codes
https://www.fiscal.treasury.gov/fsreports/ref/fastBook/fastbook_home.htm used as the first two positions of the activity address code (AAC).
2 Combination codes authorized for USCG and DLA. Refer to ADC 319.
3 Mandatory usage rules for Service and Agency Codes are established for the assignment of DoD Activity Address Codes (DoDAACs) and Routing Identifier Codes (RICs). Further stratification for DoDAAC assignment usage rules may be found in the Logistics Data Resources Management System (LOGDRMS) under DLMS Qualifier/DLMS Code List ID 71, Service and Agency Code.
4 Refer to the Treasury Financial Manual Supplement--FAST Book (Part II link to Independent Agencies) for listing of Federal Civil Agency codes
https://www.fiscal.treasury.gov/fsreports/ref/fastBook/fastbook_home.htm used as the first two positions of the activity address code (AAC).

<sup>10</sup> Ibid.

<sup>11</sup> DCMA: DoDAACs begin with S and end with A; any character is allowed in between. RICs are in the format S-numeric-alpha, where the numeric value is 6, 7, or 8 only.

<sup>12</sup> DLA: S-series excluding those values that fall within the DCMA format rules identified in the previous footnote for DCMA.

<sup>13</sup> On Grant Aid requisitions, rp 45 shall contain S/A Code Y.

<sup>14</sup> S/A Code T entered in rp 45 may be used for any Foreign Military Service (FMS) country Defense organization which is not designated as an element of that country’s Army, Navy, Air Force, or Marine Corps.

<sup>15</sup> Identifies Security Assistance Grant Aid when used in a Security Assistance requisition (as designated by rp 30). Otherwise, considered nonsignificant except by coordinated prior agreement or authorized procedures for inter-Service ownership transfer of ammunition/ammunition-related materiel. See Appendix 7.9 for details.

**APENDIX 7.2**
FEDSTRIP CIVIL AGENCY CODES\textsuperscript{16}

NUMBER OF CHARACTERS: Two.
TYPE OF CODE: Numeric, Numeric.
EXPLANATION: Identifies civil agencies under FEDSTRIP
RECORD POSITION(S): 30-31 and 45-46.

SPECIAL PROGRAM ACTIVITY CODES\textsuperscript{17}

NUMBER OF CHARACTERS: Two.
TYPE OF CODE: First-position Numeric, Second-position Alpha.
EXPLANATION: Identifies special program activities that are neither DoD or Federal Agencies
RECORD POSITION(S): 30-31 and 45-46.

\textsuperscript{16} Refer to the Treasury Financial Manual Supplement – FAST Book (Part II link to Independent Agencies) for listing of Federal civil Agency codes https://www.fiscal.treasury.gov/fsreports/ref/fastBook/fastbook_home.htm used as the first two positions of the AAC.

\textsuperscript{17} Request for Implementation Date for Approved DLMS Change (ADC) 384, Special Programs for NonDoD/No-Federal Agency Requisitioners and Administrative Change for Contractor DoDAACs, January 18, 2011
AP7.3. APPENDIX 7.3

ROUTING IDENTIFIER CODES

AP7.3.1. Routing Identifier Codes (RIC) (located in rp 4-6, 67-69, and 74-76 of transactions) are assigned by Service/Agencies (S/A) for processing inter-S/A, and intra-S/A logistical transactions. The codes serve multiple purposes in that they are supply source codes, intersystem routing codes, intrasystem routing codes and consignor (shipper) codes. Defense Automatic Addressing System (DAAS) maintains an electronic database of these codes; users with accounts¹ can access the database from the DAAS portal: https://www2.transactionservices.dla.mil/portal/portal.asp. Those without accounts can access the database, with limited functionality at https://www.transactionservices.dla.mil/DAASINQ.

AP7.3.2. To qualify for assignment of a RIC, the facility/activity must be an integral and predetermined element of an established logistical system and must perform a general logistical control, distribution and/or storage mission (to include bases, posts, camps, and stations, when applicable).

AP7.3.3. The use of a RIC on any one document does not infer, imply, or intend that follow-on documentation resulting from there must contain the same RIC or any element thereof. It is a fundamental premise of Military Standard Requisitioning and Issue Procedures (MILSTRIP) that any RIC serves as only one of the following:

   AP7.3.3.1. An address to indicate the intended recipient of the document for logistical actions.

   AP7.3.3.2. Identification of the actual consignor (shipper) on supply type release/receipt transactions originated within the distribution system(s).

AP7.3.4. All authorized RICs shall contain one of the characters depicting Service assignment as listed in Appendix 7.2, Service and Agency Codes, in the first position.

AP7.3.5. The second and third positions may be in any combination of alphanumerics, except as noted in Appendix 7.2. These positions may identify either a facility or activity of the S/A depicted by the first position.

AP7.3.6. Each S/A is responsible for the assignment of RICs to its facilities and activities. A S/A that has activities located at another S/A facility shall assign its own RIC to the activity. A S/A which has assets located at another S/A facility shall use the RIC assigned by the S/A owning/operating the facility. (An appropriate RIC may be assigned to identify these assets when requested by the S/A owning the assets.)

¹ DAAS requires a user authorization to obtain information from their website. Users without approved access to DAAS (user id and password), must complete a request for access available on the DAAS Website https://www.transactionservices.dla.mil/sar/sar_menu.asp
Washington Headquarters Service (WHS) shall make RIC H_ series assignments for “Other DoD Activities.”

AP7.3.7. Each S/A shall designate a coordinator with the responsibility to control, monitor, and submit/validate all RIC additions, revisions, and deletions relative to its S/A. In most cases the DoDAAC and RIC coordinators (or monitors) are the same. S/A coordinators established for assignment of RICs are available at http://www.dla.mil/HQ/InformationOperations/DLMS/allpoc/

AP7.3.8. DAAS maintains the RIC database and serves as the focal point for receipt of all RIC database revisions. DAAS will monitor RIC code assignment for compliance with the above assignment rules. RIC database is published electronically and updated from requests for additions, changes, and/or deletions as submitted by the Component RIC coordinators. Interested parties may interrogate the RIC database through the DAAS Website² at https://www.transactionservices.dla.mil/DAASINQ.

---

² DAAS requires a user authorization to obtain information from their website. Users without approved access to DAAS (user id and password), must complete a request for access available on the DAAS https://www.transactionservices.dla.mil/sar/sar_menu.asp.
AP7.4. APPENDIX 7.4

MEDIA AND STATUS CODES

AP7.4.1. General. This appendix delineates business rules for furnishing status on DLMS requisitions, Materiel Returns Program (MRP), and related transactions based upon the Media and Status (M&S) code. The M&S code is populated on the initiating transaction to identify the desired status recipient(s) and the type of status to be provided. Once assigned, the M&S code is perpetuated to subsequent transactions.

AP7.4.1.1. Based upon the status recipient profile, DLA Transaction Service’s Defense Automatic Addressing System (DAAS) will determine the appropriate communication process/format, e.g., Defense Information System Network (DISN) using DLMS (X12/XML) or the legacy 80 record position (rp) format, or DLA Transaction Services Automatic Message Exchange System (DAMES). The original M&S code set defined the media for communication of status, as well as the type of status and required recipients. However, with the substitution of web portals for viewing status where transactional exchange is not available, document mailing has been terminated, thus eliminating the option for the user to specify a communication media by M&S code. Requisitioners without communication services supported by DAAS may use various web portals for supply and shipment status. Web portals include:

- DoD EMALL - registration required; provides visibility of status for orders sourced by DLA,
- GSA Advantage Requisition Status - no registration required; visibility of status on orders sourced by GSA or provided by any source via DAAS to civil agency customers, and
- Web Visual Logistics Information and Processing System (WebVLIPS) - registration required; provides visibility of status processed via DAAS for all sources of supply.

AP7.4.1.2. Selected requisition-related and MRP transactions that identify status recipients and are applicable to the procedures discussed in this appendix are identified in Table AP7.4.T1.

<table>

### Table AP7.4.T3. Derivation of Status Recipients

<table>
<thead>
<tr>
<th>Status Recipient</th>
<th>DLMS Location/Data Reference (X12 Segment/Code)</th>
<th>Signal Code</th>
<th>Legacy Location/Data Reference (RP)</th>
</tr>
</thead>
</table>

**AP7.4.1.5.** The M&S code is not used for all status distribution processing:

**AP7.4.1.5.1.** Services may provide status to distribution activities identified by the second or third position of the distribution code on an intra-Service basis.

**AP7.4.1.5.2.** Under the DLMS, not all status recipients are identified by the M&S Code. An enhancement to DLMS transactions allows for discrete identification of status recipients by DoDAAC when not specified by the M&S Code (see N1 Segment/Code Z1 – Party to Receive Status). DAAS will provide distribution to these activities when status distribution is required.

**AP7.4.1.6.** M&S codes are used in different ways on requisition-related and MRP transactions.

**AP7.4.1.6.1.** On requisition-related transactions:

**AP7.4.1.6.1.1.** M&S may indicate that status is to be furnished to the requisitioner and/or the ship-to/bill-to activity.

**AP7.4.1.6.1.2.** M&S may indicate that no status is to be provided to the requisitioner or the ship-to/bill-to activity (M&S O and Y).

**AP7.4.1.6.1.3.** M&S may indicate that status is restricted to the Secondary Inventory Control Activity (SICA) identified by the distribution code (first position) under all circumstances on transactions for nonconsumable items (M&S 8).

**AP7.4.1.6.2.** With the exception of M&S 8, M&S codes do not apply to:

**AP7.4.1.6.2.1.** The mandatory provision of shipment status to all valid status recipients.

**AP7.4.1.6.2.2.** Rejection or cancellation status.

**AP7.4.1.6.2.3.** Responses to follow-ups.

**AP7.4.1.6.2.4.** Status responses to MOV response documents.
AP7.4.1.6.3. M&S codes do not inhibit the mandatory furnishing of 100 percent supply and shipment status to the activity designated by a significant entry in the distribution code (first position).

AP7.4.1.6.4. M&S Y is an exception to the general requirement for 100 percent status to the activity designated by a significant entry in the distribution code (first position), and specifies that only exception status and shipment status are wanted.

AP7.4.1.6.5. M&S codes designate the following types or combinations of status is required:

AP7.4.1.6.5.1. Exception status.

AP7.4.1.6.5.2. One hundred percent supply status.

AP7.4.1.6.5.3. Exception status and shipment status.

AP7.4.1.6.5.4. One hundred percent supply status and shipment status.

AP7.4.1.7. On MRP transactions:

AP7.4.1.7.1. M&S codes specify the activity to receive replies to asset reports and related transactions output by ICPs/IMMs.

AP7.4.1.7.2. M&S codes may indicate that such replies must be routed to the credit-to activity associated with the Fund Code (M&S 9).

AP7.4.1.7.3. When the SICA is identified as the credit-to activity associated with the fund code, M&S 9 will be entered (optional for automatic return notification).

AP7.4.1.8. DLA Transaction Services’ Defense Automatic Addressing System (DAAS) Transmission Rules. Regardless of the M&S cited, sources of supply or designated activities must transmit all machine sensible status transactions via DAAS. Upon receipt of the status, DAAS will determine the appropriate business process for dissemination as follows:

AP7.4.1.8.1. For transmission services, refer to the DAAS Manual, DLM 4000.25-4, Chapter 5 and Appendix 1.1.

AP7.4.1.8.2. When an addressee is not served by by DAAS, DAAS status cannot be provided directly to that addressee. These activities must rely on web portal visibility.

AP7.4.1.8.3. DAAS will forward status addressed to a non-DoD agency addressee to GSA to provide visibility via the GSA Advantage web portal.¹

¹ Refer to PDC 1067.
AP7.4. 1.8.4. Activities requiring the specialized processing must submit written justification to DLA Transaction Services for consideration. These exception procedures apply only when DMS capability is not available.

AP7.4.1.8.5. When status is forwarded to DAAS for transmission to the appropriate status recipient, DAAS will furnish applicable status based on DLMS status distribution rules as prescribed in this appendix.

AP7.1.9. Activities requiring status must be encouraged in S/A implementing instructions to obtain and utilize full supply and shipment status. This requirement should be implemented to reduce the need for activities to submit follow-up inquiries.

AP7.1.10. M&S is a mandatory entry by the originator of the document and will not be altered during subsequent processing except under the procedures for SICA processing (See DLMS Volume 2, Chapter 4 and 11) or Service-level guidance for internet-based ordering applications.

AP7.4.1.11. M&S Codes are listed below.

<table>

## AP7.5. APPENDIX 7.5

### STOCK OR PART NUMBERS

AP7.5.1. Stock or part numbers are located in rp 8-22 of transactions. When a 13-digit national stock number (NSN) or non NSN assigned to the Overseas Dependent School System items is applicable:

- **AP7.5.1.1.** The federal supply classification (FSC) will be entered in rp 8-11.

- **AP7.5.1.2.** The national or NATO item identification number (NIIN) will be entered in record position (rp) 12-20.

- **AP7.5.1.3.** Example:

<table>
<thead>
<tr>
<th>rp 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22</th>
</tr>
</thead>
<tbody>
<tr>
<td>NSN 8 3 2 0 0 0 3 1 2 3 4 1 2 BLANK</td>
</tr>
</tbody>
</table>

  AP7.5.1.4. Cognizance symbols, stratification codes, fraction symbols, condition codes, etc., are never to be entered in rp 8-20.

AP7.5.2. When codes are required in addition to the NSN to properly identify the item being requisitioned and these codes are recognizable to the initial processing source, the codes will be entered in rp 21 and 22. If one digit only, entry will be in rp 21. See examples below:

<table>
<thead>
<tr>
<th>rp 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22</th>
</tr>
</thead>
<tbody>
<tr>
<td>NSN plus one code 8 3 2 0 0 0 3 1 2 3 4 1 2 3 BLANK</td>
</tr>
</tbody>
</table>

**OR**

<table>
<thead>
<tr>
<th>rp 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22</th>
</tr>
</thead>
<tbody>
<tr>
<td>NSN plus two codes 1 5 6 0 0 0 3 1 2 3 4 1 2 B C</td>
</tr>
</tbody>
</table>
AP7.5.3. When a 13-digit NATO NSN is applicable:

AP7.5.3.1. The North Atlantic Treaty Organization (NATO) FSC will be entered in rp 8-11.

AP7.5.3.2. A two-position NCB code which identifies the NATO country assigning the NIIN will be entered in rp 12-13. Examples of NCB codes are: (1) 00 and 01 - United States, (2) 99 - United Kingdom, (3) 21 - Canada, and (4) 12 - Germany. See Cataloging Data and Transaction Standards, Volume 10, Table 9 for a complete listing of NCB codes.

AP7.5.3.3. The seven-digit NATO NIIN will be entered in rp 14-20.

AP7.5.3.4. Example:

<table>
<thead>
<tr>
<th>rp</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
<th>13</th>
<th>14</th>
<th>15</th>
<th>16</th>
<th>17</th>
<th>18</th>
<th>19</th>
<th>20</th>
<th>21</th>
<th>22</th>
</tr>
</thead>
<tbody>
<tr>
<td>NATO NSN</td>
<td>5</td>
<td>3</td>
<td>4</td>
<td>0</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>BLANK</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

AP7.5.4. When a manufacturer's part number is applicable:

AP7.5.4.1. The contractor and Government entity (CAGE) code will be entered in rp 8-12 (see example in paragraph AP7.5.4.5., below). If the CAGE code is not available, enter the in-the-clear description in the remarks section.

AP7.5.4.2. The manufacturer's part number, if 10 digits or less, will be entered in rp 13-22 progressing from left to right, with unused spaces, if any left blank. Use the Federal Logistics Information System (FLIS) Technical Procedures, Volume 4, Chapter 3, to verify the validity of part numbers.

AP7.5.4.3. When a manufacturer's part number exceeds 10 digits, the materiel will be requisitioned on DD Form 1348-6.

AP7.5.4.4. When requisitioning across Service lines (i.e., inter-Service, DLA Supply Center, GSA) the 5-digit CAGE code will always be entered in rp 8-12. When the requisitioner cannot determine the appropriate 5-digit CAGE, the manufacturer's name will be provided using DD Form 1348-6.

AP7.5.4.5. Example: (Applicable to paragraphs AP7.5.4.1, AP7.5.4.2., and AP7.5.4.4., above.)

<table>
<thead>
<tr>
<th>rp</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
<th>13</th>
<th>14</th>
<th>15</th>
<th>16</th>
<th>17</th>
<th>18</th>
<th>19</th>
<th>20</th>
<th>21</th>
<th>22</th>
</tr>
</thead>
<tbody>
<tr>
<td>Part Number</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>7</td>
<td>8</td>
<td>9</td>
<td>0</td>
</tr>
</tbody>
</table>
AP7.5.5. If an NSN or manufacturer’s part number is not known but a description or publication reference is available to adequately identify the item, and such reference is meaningful to the processing point, use DD Form 1348-6.

AP7.5.6. When other than an NSN or part number is applicable (i.e., a plant equipment code, DoD ammunition code, locally assigned number, etc.) and:

AP7.5.6.1. If 15 digit or less, it will commence in rp 8 and progress to the right, with unused spaces left blank. Example of less than fifteen digits:

<table>
<thead>
<tr>
<th>rp</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
<th>13</th>
<th>14</th>
<th>15</th>
<th>16</th>
<th>17</th>
<th>18</th>
<th>19</th>
<th>20</th>
<th>21</th>
<th>22</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>7</td>
<td>8</td>
<td>9</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>Blank</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

AP7.5.6.2. If 15 digits, it will commence in rp8 and progress to the right. Example of Fifteen digits:

<table>
<thead>
<tr>
<th>rp</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
<th>13</th>
<th>14</th>
<th>15</th>
<th>16</th>
<th>17</th>
<th>18</th>
<th>19</th>
<th>20</th>
<th>21</th>
<th>22</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>7</td>
<td>8</td>
<td>9</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>6</td>
</tr>
</tbody>
</table>

AP7.5.6.3. If 16 digits or more, the DD Form 1348-6 will be used and the entire number will be entered in block 1 thereof.

AP7.5.7. Brand name resale subsistence items are identified by special item identification numbers assigned by DLA Troop Support and configured to conform with the NSN, as explained below:

<table>
<thead>
<tr>
<th>rp</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
<th>13</th>
<th>14</th>
<th>15</th>
<th>16</th>
<th>17</th>
<th>18</th>
<th>19</th>
<th>20</th>
</tr>
</thead>
<tbody>
<tr>
<td>DLA Troop Support Number</td>
<td>8</td>
<td>9</td>
<td>1</td>
<td>5</td>
<td>0</td>
<td>0</td>
<td>A</td>
<td>1</td>
<td>6</td>
<td>1</td>
<td>0</td>
<td>9</td>
<td>9</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>rp</th>
<th>8</th>
<th>9</th>

<td>6</td>
<td>1</td>
<td>0</td>
<td>9</td>
<td>9</td>
</tr>
</tbody>
</table>

AP7.5.7.1. Rp 8-11 will contain the FSC. Example: FSC 8915 is canned fruit and vegetables.

AP7.5.7.2. Rp 12-13 will contain NCB Code 00 or 01.

AP7.5.7.3. Rp 14 will contain an alpha character to distinguish brand name resale item numbers from NSNs. The letter A identifies item in 10-500 series of DLA supply
bulletins for brand name resale items. The letter B identifies items in the 10-600 bulletins. The letters S and J are assigned to certain brand name items not appearing in the 500 and 600 series bulletins. The latter are announced by DLA Troop Support in monthly master item lists.

AP7.5.7.4. Rp 15-17 will contain the supply bulletin number, which identifies the brand name supplier. Example: SB 10-500-161, the numeric 161 identifies the specific supplier by name for brand name resale items listed in that bulletin.

AP7.5.7.5. Rp 18-20 will contain the numerical sequence of items listed in the specific bulletin (0 thru 999), i.e., line item number in the bulletin.

AP7.5.8. Rp 3 of the document identifier code (DIC) (Appendix AP7.1) is significant to the type of number entered in rp 8-22. Any requisition containing special or locally assigned numbers (e.g., production equipment code (PEC), DoD Ammunition Code, Subsistence Brand Name Resale Item Identification Number) must contain a 4 or D unless additional data are entered in the remarks space.

AP7.5.9. Requisitions for perishable and nonperishable subsistence will contain the applicable subsistence type of pack code in rp 21.
APPENDIX 7.6

UNIT OF ISSUE AND QUANTITY

AP7.6.1. The unit of issue (located in rp 23-24 of transactions) is a two-letter abbreviation of the types of units under which materiel is issued. Unit of issue codes are contained in Cataloging Data and Transaction Standards (CDTS), Volume 10, Table 53.

AP7.6.2. The quantity (located in rp 25-29 of transactions) is a numerical designation of the number of units applicable to the transaction. If the quantity required exceeds 99,999,¹ additional requisition(s) with new document number(s) shall be prepared and submitted for the remaining balance.

AP7.6.3. Exception rule for ammunition and ammunition related items (federal supply group (FSG) 13 and federal supply classification (FSC) 1410, 1420, 1427, 1440, 5330, 5865, 6818 or 8140). By trading partner agreement and by coordination with DLA Transaction Services, an exception rule is available for communicating larger quantities. This rule is only applicable when the initiating system is Defense Logistics Management System compliant (and supports larger quantities) and the receiving system is using legacy MILSTRIP. Under this rule, when the quantity exceeds 99,999, the DLA Transaction Services transaction conversion from DLMS to legacy format shall transmit the initial quantity using the standard configuration of using the qualifier “M” in rp 29 to represent thousands. The residual quantity from the DLMS transaction shall be transmitted separately using the original document number and original/blank suffix code. The legacy trading partner system shall be responsible for accumulating the quantities transmitted separately (rather than superseding or rejecting as duplicate transactions).²

¹ For ammunition transactions only (FSG 13), enter an “M” in rp 29 to express in thousands any quantity exceeding 99,999. Example: A quantity of 1,950.00 shall be expressed as 1950M (1950 in rp 25-28 and an “M” in rp 29). The “M” modifier is an optional feature that can be applied intra-S/A and, by agreement, inter-S/A.

² Refer to ADC 441, Exception Rules to Accommodate Communication of Ammunition/Ammunition Related Quantities in Excess of Five Digits.
AP7.7. APPENDIX 7.7

DOCUMENT NUMBER

AP7.7.1. The document number (located in record position (rp) 30-43 of transactions) is a nonduplicative number throughout the system. For support of U.S. Forces, it is constructed as follows: (See chapter 25 for document number construction for Security Assistance transactions.)

AP7.7.1.1. Department of Defense activity address code (DoDAAC) or Federal Standard Requisitioning and Issue Procedures (FEDSTRIP) activity address code (AAC) (rp 30-35).

AP7.7.1.2. Four-position ordinal date (rp 36-39).

AP7.7.1.3. Serial number (rp 40-43).

<table>
<thead>
<tr>
<th>Service Agency Code</th>
<th>Activity Address Code</th>
<th>Ordinal Date</th>
<th>Serial Number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>30 31 32 33 34 35</td>
<td>36 37 38 39</td>
<td>40 41 42 43</td>
</tr>
</tbody>
</table>

AP7.7.2. The entries in rp 30 and 31 will always be the appropriate character(s) from appendix AP7.2 that indicates the Service/Agency (S/A).

AP7.7.3. DoDAAC or FEDSTRIP AAC for each activity will be established and disseminated by each of the Services, DLA and the GSA. (See DLM 4000.25, Volume 6, Chapter 2, DoDAAD.) Each code so established will contain or serve as an address to permit shipping and billing for materiel and for mailing of documentation.

AP7.7.4. Entries in rp 36-39 (date) will always be numeric and will indicate the actual date of transmittal from the requisitioner to the initial supply source. If requisitions are predated to facilitate local processing, the requisition date will be amended (if necessary) to reflect the true date of transmittal.

AP7.7.4.1. Rp 36 will indicate the last numeric digit of the calendar year in which the document was originated. Example: 0 for 1990, 1 for 1991, etc.

AP7.7.4.2. Rp 37-39 will indicate the numerical or consecutive day of the calendar year; for example, 035 is equal to February 4\textsuperscript{TH}. 

AP7.7-1
APPENDIX 7.7
Additional Examples:

<table>
<thead>
<tr>
<th>RECORD POSITIONS</th>
<th>DATES</th>
</tr>
</thead>
<tbody>
<tr>
<td>36 37 38 39</td>
<td></td>
</tr>
<tr>
<td>0 0 0 5</td>
<td>January 5, 2010</td>
</tr>
<tr>
<td>9 0 5 2</td>
<td>February 21, 2009</td>
</tr>
<tr>
<td>2 2 7 9</td>
<td>October 5, 2012</td>
</tr>
</tbody>
</table>

AP7.7.5. Document serial numbers, assigned at the discretion of the document originator, are entered in rp 40-43. The document serial number will not be duplicated on the same day. The serial number may be assigned to consist of alphanumeric characters, with the exception of alphas I and O (on inter-Service transactions) under the following criteria:

AP7.7.5.1. Rp 40 may consist of alpha or numeric characters with the utilization of certain alphas limited as specified in paragraph AP7.7.5.3., below. Under DLMS implementation, this embedded information will be carried as a distinct data element referred to as the utilization code.

AP7.7.5.2. Rp 41-43 may consist of alpha or numeric characters on inter-S/A requisitions. However, the entries in rp 41-43 will not be meaningful to the receiving S/A, but will be perpetuated on documentation initiated as a result of requisition processing.

AP7.7.5.3. The following alphabetic codes have been reserved for use in rp 40:

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>B</td>
<td>Document number assigned by the Marine Corps Maintenance Center Bridge in conjunction with the changes required under DLA Marine Corps industrial activity support agreement. Applies where release of materiel is initiated within the Marine Corps systems and submission of the corresponding material release order is transmitted to the DLA managed warehouse. (This meaning is applicable only when an MCMC-associated DoDAAC is used to construct the document number.)</td>
</tr>
<tr>
<td>C</td>
<td>Use in the document number (unique control number) assigned for receipt of an item upgraded from scrap under DLA Disposition Services procedures. (This meaning is applicable only to DLA Disposition Services Field Office-prepared receipt transactions.)</td>
</tr>
</tbody>
</table>

1 Available under DLMS. Refer to ADC 396, Revised Procedures and Data Content for DLMS Materiel Release Order (940R) and Material Release Advice (945A) and New Denial Management Code for Marine Corps BRAC Storage and Distribution Interface (SDI).
<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>

<td>EXPLANATION:</td>
<td>Has dual use and the meaning of the code entered is dependent upon the directional flow of the document.</td>
</tr>
<tr>
<td>RECORD POSITION:</td>
<td>44</td>
</tr>
</tbody>
</table>

**AP7.8.1. Demand Codes.**

Requisitions requiring demand codes shall be entered in this position by the activity creating the request. The demand code is a mandatory entry of an alphabetic character to indicate to the management element of a distribution system whether the demand is recurring or nonrecurring as follows:

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>INACTIVATED ITEM DEMAND. This code will be entered only in requisitions (document identifier code (DIC) A0_) applicable to inactivated items by DAAS.</td>
</tr>
<tr>
<td>N</td>
<td>NONRECURRING DEMAND. A request made for a requirement known to be a one-time occurrence; for example, a modification work order (MWO) kit for application or an initial request for storage. Requisitions shall be coded nonrecurring when the demand is anticipated to be nonrepetitive.</td>
</tr>
<tr>
<td>O (Alpha)</td>
<td>NO DEMAND. To be assigned by requisitioning activities in submitting requisitions for substitute items which are acceptable in lieu of previously requisitioned but delayed items and for initial fill of prepositioned war reserve materiel stock (PWRMS) consumable item requirements. Also applicable to resubmission of previously requisitioned requirements under a new document number when associated with shortage or nonreceipt for which shipment status was received. May be prescribed by the program manager on the basis of a nonrepetitive program requirement for which use of Demand Code N or P is determined to be inappropriate.</td>
</tr>
<tr>
<td>P</td>
<td>NONRECURRING DEMAND FOR SPECIAL PROGRAM REQUIREMENTS. Entered in requisitions by a requisition initiator to identify a requisition for special program/requirements for which stocks were known to have been acquired by the ICP in anticipation of such demands.</td>
</tr>
</tbody>
</table>

---

1 When no demand code is entered in the requisition, the ICP shall consider such demand as R. (See DLMS Volume 2, Chapter 4.)
RECURRING DEMAND. A request made periodically or anticipated to be repetitive by an authorized requisitioner for consumption or use, or for stock replenishment. The occurrences encompass most demands; therefore, a demand shall be considered recurring when a doubt exists. Note: This requirement is not applicable to resubmission of previously requisitioned requirements under a new document number when associated with shortage or nonreceipt for which shipment status was received; use Demand Code O for these requirements.

COMMISSARY RESALE DEMAND. A demand for perishable and nonperishable subsistence items only for resale. Commissary demands for troop issue subsistence shall be identified with Demand Codes R or N only.

AP7.8.2. Suffix Codes – General

AP7.8.2.1. Suffix codes shall be entered in this position by elements of the distribution system as transactions occur. The purpose of the suffix code is to relate and identify requisition and Materiel Returns Program (MRP) transaction “partial actions” taken on the original requisition or MRP transaction without duplicating or causing loss of identity of the original number.

AP7.8.2.2. Suffix codes do not relate to separate transportation units involved in the shipment of materiel. Neither do they identify final shipments nor differentiate between partial and final shipments.

AP7.8.2.3. Suffix codes shall be alphabetic or numeric with the exception that the following alpha and numeric characters shall never be used:

<table>
<thead>
<tr>
<th>ALPHA</th>
<th>NUMERIC</th>
</tr>
</thead>
<tbody>
<tr>
<td>I, N, O, P, R, S, and Z</td>
<td>1 and 0</td>
</tr>
</tbody>
</table>

AP7.8.2.4. Suffix Y is reserved for used by Navy and DLA only in their intra-Service action involving duplicate shipments.

AP7.8.2.5. Service/Agency (S/A) implementation of these instructions shall provide for block assignment of suffix codes in a decentralized system to preclude duplicate assignment of suffix codes against the same document number. Block assignment of the suffix codes should be accomplished essentially as follows:

<table>
<thead>
<tr>
<th>PROCESSING SOURCE</th>
<th>ASSIGNED SUFFIXES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial Source</td>
<td>A through E</td>
</tr>
<tr>
<td>First Secondary Source</td>
<td>F through H, J and K</td>
</tr>
<tr>
<td>Second Secondary Source</td>
<td>L, M, Q, T, and U</td>
</tr>
<tr>
<td>Third Secondary Source</td>
<td>V through X</td>
</tr>
</tbody>
</table>
AP7.8.2.6. Suffix assignment within centralized distribution systems shall be accomplished from the authorized codes as listed below:

**AUTHORIZED SUFFIXES**

Central Processing Source  
A through Z and 2 through 9, exclusive of I, N, O, P, R, S, Y, and Z

AP7.8.2.7. Storage and other activities responsible for processing transactions containing suffixes shall always perpetuate the suffix code onto related transactions that they generate.

AP7.8.2.8. When assigned, suffix codes shall be sequentially advanced within code assignments as split actions occur. Recipients of status transactions containing suffix codes shall consider the suffix codes in combination with dates, status codes, and quantities when accounting for split transactions.

AP7.8.3. **Suffix Codes – Requisition Transaction**

AP7.8.3.1. Processing elements of the distribution system shall enter a suffix code in rp 44\(^2\) of transactions involving partial quantities such as:

- AP7.8.3.1.1. Referral actions for a partial quantity.
- AP7.8.3.1.2. Passing actions for a partial quantity.
- AP7.8.3.1.3. Release of a partial quantity.
- AP7.8.3.1.4. Rejection of a partial quantity.
- AP7.8.3.1.5. Backorder of a partial quantity.
- AP7.8.3.1.6. Backorder release of a partial quantity.
- AP7.8.3.1.7. Procurement of a partial quantity for direct delivery by a vendor.
- AP7.8.3.1.8. Any other action applicable to a partial quantity.

AP7.8.3.2. Processing elements of distribution systems shall not enter suffix codes under the following conditions:

\(^2\) MILSTRIP supports the valid use of Suffix Code X, which may be perpetuated into the 15\(^{th}\) character of the Transportation Control Number (TCN) (which is normally derived from the MILSTRIP suffix code). However, the Defense Transportation Regulation (DTR) also allows X as a default value when no suffix code is assigned. This redundancy in the significance of the X in the TCN is recognized and accepted.
AP7.8.3.2.1. Referral actions for a total quantity.
AP7.8.3.2.2. Passing actions for a total quantity.
AP7.8.3.2.3. Release of a total quantity.
AP7.8.3.2.4. Rejection of a total quantity.
AP7.8.3.2.5. Backorder of a total quantity.
AP7.8.3.2.6. Backorder release of a total quantity.
AP7.8.3.2.7. Procurement of a total quantity for direct delivery by a vendor.
AP7.8.3.2.8. Any other action applicable to a total quantity.

AP7.8.4. Suffix Codes - Materiel Returns Program

AP7.8.4.1. Processing elements of the distribution system shall enter a suffix code in rp 44 of MRP transactions involving partial quantities, such as:

AP7.8.4.1.1. Return partial quantity with credit.
AP7.8.4.1.2. Return partial quantity without credit.
AP7.8.4.1.3. Partial quantity authorized for disposal.
AP7.8.4.1.4. Effect lateral redistribution of partial quantity.
AP7.8.4.1.5. Effect split returns by separate priority.
AP7.8.4.1.6. Any other action applicable to a partial quantity.

AP7.8.4.2. Processing elements of distribution systems shall not enter suffix codes in MRP transactions for total quantity.
AP7.9. APPENDIX 7.9

SUPPLEMENTARY ADDRESS

AP7.9.1. The supplementary address (SUPADD)/supplemental data field is a multi-purpose data element. Usage rules vary for U.S. Forces and Security Assistance, by the intent of the transaction originator, as well as based upon the transaction format (legacy MILSTRIP vs. DLMS) used to communicate the information. Regardless of usage or format, the originator's SUPADD/supplementary data shall be perpetuated in all subsequent transactions and documentation.

AP7.9.2. U.S. Forces

AP7.9.2.1. Under legacy MILSTRIP, the SUPADD (located in rp 45-50) in transactions for support of U.S. Forces, when significant, will contain a DoD activity address code (DoDAAC). The entry in the first position (Service) or first and second position (Federal Agency, if numeric-numeric, or special program activity, if numeric-alpha) shall always be the appropriate character(s) identifying the Service/Agency (S/A) or program (see Appendix 7.2, Service and Agency Codes). The DoDAAC shall be established in the authoritative DLA Transaction Services DoD Activity Address Directory (DoDAAD) database by S/A designated DoDAAD Central Service Points for dissemination in a variety of formats. Each code so established will contain address(es) in detail to permit the shipping and billing of materiel. (See the DLM 4000.25, Volume 6, Chapter 2, DoD Activity Address Directory (DoDAAD).)

<table>
<thead>
<tr>
<th>Service/Agency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity Address Code</td>
</tr>
<tr>
<td>45</td>
</tr>
</tbody>
</table>

AP7.9.2.2. Under DLMS, the SUPADD shall be replaced by a generic supplemental data field. DoDAACs provided for the purpose of identifying a ship-to and/or bill-to activity are carried as discrete data elements in the DLMS transaction address segment with specific data qualifiers indicating the exact purpose.

AP7.9.2.2.1. In a mixed legacy/DLMS environment, the supplemental data field is used to perpetuate/populate the legacy MILSTRIP SUPADD. During this time, field size for the supplemental data field is restricted to 6 positions. When containing a DoDAAC, the value carried in the supplemental data field must also be repeated in the applicable DLMS address segment to identify the ship-to/bill-to activity.
AP7.9.2.2.2. Under full DLMS, the requirement to pass activity address information within the supplement data shall be terminated and the supplementary data field will be used for miscellaneous data only. Under full DLMS, the field length shall be expanded to 30 positions.

AP7.9.2.3. Non-significant Supplemental Data. The Service/Agency Code Y in the first position shall be used to denote that the field is being used for data rather than a ship-to/bill-to DoDAAC. When the originator of the transaction uses the SUPADD/supplemental data field for data rather than addressing, the entry shall be considered non-significant to the receiving activity except by coordinated prior agreement or authorized procedures for inter-Service ownership transfer of ammunition/ammunition-related materiel.

AP7.9.2.4. Inter-Service Ownership Transfer of Ammunition/Ammunition-related Materiel

AP7.9.2.4.1 When used for inter-Service ownership transfer of ammunition or ammunition-related materiel located in a Single Manager for Conventional Ammunition (SMCA) storage activity where no physical movement of materiel or billing applies, the Referral Order (DLMS 511R/DIC A4_) shall cite Signal Code M and Project Code CYK in conjunction with a SUPADD/supplemental data field beginning with Service/Agency Code Y (a ship-to DoDAAC is not applicable). In a mixed DLMS/legacy environment, the required additional data content to support this process will be concatenated in the SUPADD/supplemental data field as follows:

- First position: Service/Agency Code Y
- Second position: Old (from) ownership code
- Third-fifth position: New owner RIC
- Last position: New/gaining (to) ownership code

AP7.9.2.4.2 Materiel release orders (MROs) (DLMS 940R/DIC A5_) directed to an SMCA storage activity for inter-Service transfer of ammunition or ammunition-related materiel with no physical movement or billing will cite the SUPADD/supplemental data constructed as in AP7.9.4.1 in combination with Signal Code M. All subsequent transactions will perpetuate this construct.

AP7.9.2.4.3 Under DLMS, the originating system will also provide the discrete data elements where applicable, mirroring those contained in the supplemental data. This redundancy will be retained until all parties are using DLMS and the supplemental data field may be repurposed for unrelated information.

AP7.9.2.5. When the first position of the document number contains a valid S/A alpha designator and the first position of the SUPADD/data field contains a zero (0), DAAS shall change the zero (0) to Y.
AP7.9.3. Security Assistance

AP7.9.3.1. For Security Assistance transactions, the legacy MILSTRIP SUPADD, as well as the mixed environment DLMS supplemental data field, is used for a concatenation of multiple distinct data elements.

AP7.9.3.1.1. For Foreign Military Sales (FMS), the first position (legacy format rp 45) shall contain the in-country Service designating the military service within the Security Assistance customer country. For Grant Aid, the first position shall contain Service/Agency Code Y. Note that the Y is subsequently converted to an X for establishment of the applicable Military Assistance Program Address Code (MAPAC).

AP7.9.3.1.2. The contents of the remaining positions vary for both FMS and Grant Aid, according to the Security Assistance country and the originator’s intent. (See Chapter 25 and Appendix 8.3 or DLM 4000.25, Volume 6, Chapter 3, Military Assistance Program Address Directory (MAPAD), for detailed guidance.)

AP7.9.3.2. In a mixed legacy/DLMS environment, the supplemental data field shall be interpreted during DLA Transaction Services’ DAAS processing and separated into its discrete data elements for transmission to DLMS-compliant applications. Under full DLMS, the originating system shall provide the discrete data elements applicable to the transaction including: customer within country code, offer and release option code, FMS case number, program line number, record control number.
AP7.10. APPENDIX 2.10

SIGNAL CODES

AP7.10.1. General. This appendix provides guidance for legacy-formatted MILSTRIP requisitions and provides transition guidance for perpetuation of the signal code under DLMS. The long-term goal for DLMS procedures is to eventually terminate the use of the signal code, which is redundant to the use of discretely identified activities relevant to the transaction.

AP7.10.2. Legacy MILSTRIP Business Rules. The signal code (record position 51) in A series documents has two purposes; it designates the fields containing the intended consignee (ship-to), and the activity to receive and effect payment of bills, when applicable. In the case of the Material Returns Program (MRP), Document Identifier Code (DIC) FT_ series, the signal code designates the fields containing the intended consignor (ship-from) and the activity to receive and process credits, when applicable. All requisitions/asset reports will contain the appropriate signal code.

AP7.10.2.1. The coding structure and its meaning for DIC A_ series documents are shown in Table AP7.10.T1.

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

AP7.10.2.3. When the Signal Code is C or L, an additional use for the fund code is to indicate the bill-to office. The fund code to bill-to office conversion under MILSBILLS procedures is prescribed in the fund code appendix of DLM 4000.25, Volume 4, Finance.

AP7.10.3 DLMS MILSTRIP Business Rules.² Pending future termination of the signal code under DLMS, the signal code remains as a required data element. Redundant mapping of the discretely identified activities is required during an extended transition period to ensure interoperability in a mixed DLMS/legacy environment.

AP7.10.3.1 Although identified in the transaction, the signal code in requisitions, including referral and passing orders, must also designate the role/placement of legacy fields containing the intended consignee (ship-to), and the activity to receive and effect payment of bills, when applicable. In the case of the MRP, the signal code designates the role/placement of fields containing the intended consignor (ship-from) and the activity to receive and process credits, when applicable. All requisitions/asset reports will contain the appropriate signal code.

AP7.10.3.2 The coding structure and its meaning for requisition documents are shown in Table AP7.10.T3.

AP7.10.4. The coding structure and its meaning for shipments/transfers to DLA Disposition Service Field Office:

AP7.10.4.1. For shipments/transfers of hazardous materiel and waste to DLA Disposition Service Field Offices, the Disposal Turn-In Document (DTID), DD Form 1348-1A, DD Form 1348-2, or authorized electronic equivalent, will reflect the designated consignee DLA Disposition Service Field Office as the ship-to (N1/Code ST) (MILSTRIP Legacy supplementary address (rp 45-50)) and the signal code will be as shown in Table AP7.10.T5.

Table AP7.10.T5. DTID Signal Code Business Rules

<table>
<thead>
<tr>
<th>Code</th>
<th>Bill to . . .</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Turn-in activity identified in the document number (MILSTRIP legacy rp 30-35)</td>
</tr>
<tr>
<td>B</td>
<td>Bill to activity in block 27 of the DTID. If Signal Code B is present and no bill-to activity is provided in DTID block 27, the bill-to office will default to the turn-in activity identified in the document number (MILSTRIP legacy rp 30-35).</td>
</tr>
<tr>
<td>C</td>
<td>Addressee designated by the fund code (MILSTRIP legacy rp 52-53). If Signal Code C is present and no bill-to activity is identified on the Fund Code to Billed DoDAAC Conversion Table, the bill-to office will default to the turn-in activity in the document number (MILSTRIP legacy rp 30-35). For Signal Code C, bill to activity must also be identified in block 27 of the DTID.</td>
</tr>
<tr>
<td>L</td>
<td>Addressee designated by the fund code (legacy rp 52-53). If Signal Code L is present and no bill-to activity is identified on the Fund Code to Billed DoDAAC Conversion Table, the bill-to office will default to the turn-in activity in the document number (MILSTRIP legacy rp 30-35). For Signal Code L, bill to activity must also be identified in block 27 of the DTID.</td>
</tr>
</tbody>
</table>

AP7.10.4.2. Only the signal codes in AP7.10.3.1 are applicable on the DTID for hazardous materiel or waste turn-in. Processing under Signal Codes C and L are redundant to allow perpetuation of legacy system procedures.
AP7.10.5. Designation of the DoD EMALL DoDAAC SC4210 as the bill-to indicates payment via Government purchase card or corporate credit card applies.
AP7.11. APPENDIX 7.11

FUND CODES

AP7.11.1. Fund codes (located in rp 52-53 of transactions) are two-position alpha/numeric codes used with the Service or Agency code of the billed office to designate the billing method (interfund or noninterfund). When interfund billing is indicated, the fund code also indicates the fund account to be charged (disbursed) or credited (refunded). The fund code to fund account conversion is prescribed in the MILSBILLS procedures fund code appendix of DLM 4000.25, Volume 4, Finance.

AP7.11.2. An additional use for the fund code is to indicate the DoDAAC of the “bill-to” office when the Signal Code is C or L. The conversion of fund code to billed office DoD activity address code (DoDAAC) conversion is prescribed in the fund code appendix of DLM 4000.25, Volume 4, Finance.

AP7.11.3. Requisitions submitted to DoD activities and the Government Services Administration (GSA) shall always contain a fund code, unless the materiel requested has been offered without reimbursement, in which case the signal code (rp 51) shall be D or M (free issue) and the fund code shall have no meaning to the requisition processing point.
AP7.12. APPENDIX 7.12

DISTRIBUTION CODES

NUMBER OF CHARACTERS: Three.
TYPE OF CODE: Alpha/Numeric.
EXPLANATION: An alpha or numeric entry in rp 54 requires a decision as indicated in this appendix.

RECORD POSITION(S): 54-56.
POSITION 54: Activities eligible to receive additional status and assigned codes.
POSITION 55-56: Internal Service/Agency (S/A) use.

AP7.12.1. Use of Distribution Codes. The distribution field is a three-position two-part field of which the first part (record position (rp) 54) is significant and will require a decision when the entry is alphabetic or an assigned numeric. When an alphabetic or assigned numeric entry is contained in rp 54, the activity designated by the entry will be furnished 100 percent supply and shipment status on all priorities in addition to status furnished using the media and status (M&S) entry in rp 7. When rp 7 is M&S 0, 8, or Y, the activity designated in rp 54 is responsible for furnishing status to other status eligible recipients. The second part of the field (rp 55-56) is discretionary for other types of internal control. The distribution code serves only to indicate an addressee is to receive status (including MOV requests) and may be changed only by submission of a DIC AM_ requisition modifier.

AP7.12.1.1. A numeric entry in rp 54 which is not assigned on an inter-Component basis by the DoD MILSTRIP System Administrator will be nonsignificant to the system but will always be perpetuated in other transactions.

AP7.12.1.2. An alpha character or assigned numeric entry is significant and will always be perpetuated in other transactions.

AP7.12.1.3. Alphabetic or numeric entries in rp 55 and 56 will not require decisions, but will always be perpetuated in other transactions.

AP7.12.2. Assignment and Maintenance of Distribution Codes. Distribution codes are assigned to identify the activities to receive 100 percent supply and shipment status for all priority designators in addition to the status to be furnished using the M&S entry in rp 7.
AP7.12.2.1. Alphabetic distribution codes are assigned by the Component coordinator as identified by the S/A code from appendix AP7.2. and a DoD activity address code (DoDAAC).

AP7.12.2.2. Numeric distribution codes are controlled and approved by Defense Logistics Management Standards and will not be used by the Components without prior approval. When a numeric code is assigned for inter-Service use, a Proposed Defense Logistics Management System (DLMS) Change (PDC) containing the required or desired implementation date will be staffed with the Components. In addition, numeric distribution codes are nonsignificant unless they are assigned by the DoD MILSTRIP Administrator for inter-Component use.

AP7.12.2.3. Each Component coordinator listed in AP7.12.4., will ensure currency in code assignments. Additional assignments, revisions, or deletions of distribution codes, with the exception of codes used with Service Code H, will be requested from the DAAS\(^1\) for update of the central file. Requests for assignment of Service Code H distribution codes will be requested from the DoD MILSTRIP Administrator by mail to Defense Logistics Management Standards J627 Room 1650, Defense Logistics Agency J627, MILSTRIP Administrator, 8725 John J Kingman Road, STOP 6205, Fort Belvoir, VA 22060-6217, or by the Enterprise Business Standards Office Website comment form.

AP7.12.2.4. The DAAS maintains the database of distribution codes\(^2\) and will serve as the focal point for all database revisions. Use https://www2.transactionservices.dla.mil/edaasing/ to interrogate the distribution code file. Assigned distribution codes are listed by month at https://www2.transactionservices.dla.mil/eDoDAAD_asearch/download_dodaaf.asp\(^3\). Select ‘MILSTRIP Distribution Codes’ from the drop-down menu box and select the applicable month. Each report displays the ‘as of’ date for the codes listed.

AP7.12.3. Numeric Distribution Codes. Current use of numeric distribution codes are as follows:

<table>
<thead>
<tr>
<th>CODE</th>
<th>USE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Reserved for assignment by the DoD MILSTRIP System Administrator.</td>
</tr>
<tr>
<td>2</td>
<td>For use by IMMs to identify transactions associated with lateral redistribution of DoD consumable assets</td>
</tr>
<tr>
<td>3</td>
<td>For use by IMMs to identify transactions associated with lateral redistribution of DoD repairable assets</td>
</tr>
</tbody>
</table>

\(^1\) DAAS requires a user authorization to obtain information from their website. If you do not currently have approved access to DAAS (user id and password), please complete a request for access by going to the following DAAS website: https://www.transactionservices.dla.mil/sar/warning.asp

\(^2\) Ibid.

\(^3\) Ibid.
CODE  USE
4  Use for DoD EMALL requisitions
5  Inter-Component use with Service/Agency Code N to identify a DLA
  DoDAAC to receive supply and shipment status and materiel obligation
  validation (MOV) for DLA-funded Navy requisitions to other Services under
  industrial activity support agreement.
6  Inter-Component use with the Navy Service Codes N, V, and R
7 and 8 Inter-Component use with the transmission of MOV requests
9  DLA Disposition Services
    Federal Center
    Battle Creek MI  49016-3412
111 Inter-Component use for Retail Transportation and Supply Receipt and
  Acknowledgement Interchange (See DLM 4000.25, Volume 3, Chapter 2)

AP7.12.4. Component Coordinators. DoD Component coordinators are established for
S/A assignment of distribution codes. See the Enterprise Business Standards Office
(EBSO) Webiste
AP7.13. APPENDIX 7.13

PROJECT CODES

NUMBER OF CHARACTERS: Three.
TYPE OF CODE: Alpha/Numeric.
EXPLANATION: Identifies requisitions and related documentation as to special programs, exercises, projects, operations, or other purposes.

AP7.13.1. Project codes are used to distinguish requisitions and related documentation and shipments, and to accumulate Service/Agency (S/A) performance and cost data related to exercises, maneuvers, and other distinct programs, projects, and operations. If no project code is applicable, leave blank in the applicable transaction.

AP7.13.2. Project codes, other than Office of the Secretary of Defense (OSD)/Chairman of the Joint Chiefs of Staff (CJCS) assigned codes, do not provide nor imply any priority or precedence for requisition processing or supply decisions. Project codes are not related to priority in any respect and, when used, do not alter nor override the priority assigned to a requisition or shipment. Requisitions containing project codes and shipments related thereto will be processed strictly under the assigned priority designator and implied/requested preferential treatment to the contrary will be disregarded.

AP7.13.3. Project codes will be perpetuated in all related documentation and will appear as a part of shipping container markings. Recognition of project codes by suppliers in another S/A and the resultant special handling afforded requisitions and shipments will be limited to:

   AP7.13.3.1. Shipment Consolidation. Criteria for consolidation of project code materiel is published in DTR 4500.9-R.

   AP7.13.3.2. Container Marking. Shipments will be marked as prescribed in MIL-STD-129, as amended.

\(^1\) ADC 1043 added the Standard Line of Accounting (SLOA) requirement for a project code element in the FA2 segment, but also noted that the SLOA project code may or may not be the same as the supply project code.
AP7.13.3.3. Shipment Release/Movement Control. At the time of project announcement for contingencies and similar rapid response situations, the initiating S/A will provide the instructions as to procedures to be followed on requisitions which must arrive at destinations within specified time periods.

AP7.13.4. Project codes are categorized into four groups and the authority to assign project codes varies by category. The following paragraphs provide the definitions of each category of project codes and identify the S/A which is authorized to assign each category of project code. The authoritative source for each category of project codes is either maintained with the Services or the Project Code Management System (PCMS) as part of DAAS logistics transaction processing infrastructure.2

AP7.13.4.1. Category A. For use when no meaning of the code will be perpetuated outside the originating S/A. The code will be perpetuated in all related documentation and will appear as a part of the shipping container markings. Project codes in Category A may be assigned by those S/As identified in Appendix 7.2 by a distinct S/A code, Federal Standard Requisitioning and Issue Procedures (FEDSTRIP) activity address code (AAC), and by those Agencies using the multiuse Service Code H. Category A project codes are managed by the Services and are not included in the PCMS.3

AP7.13.4.2. Category B. For use when recognition and exceptional processing actions have been prearranged between specified S/As. Category B project codes will be announced by the managing S/A only to participating S/As, with the information described below in AP7.13.6.3. Assignment authority is the same as for Category A. Category B project codes are managed by the Services and are not included in PCMS.4

AP7.13.4.3. Category C (3/ alphanumeric/ alphanumeric). Assigned for common purpose use by all or specified S/As. Category C project code(s) are assigned for a specified period of time, not to exceed two years initially, with an exception for project codes assigned to ongoing MILSTRIP procedures. The project code monitor/coordinator will evaluate the need to extend and update Category C project codes prior to expiration. All Category C codes are managed in PCMS by OSD, Office of CJCS, or the DoD Military Standard Requisition and Issue Procedures (MILSTRIP) Administrator.5

AP7.13.4.3.1. Assignment of Category C project codes may be requested by OSD/CJCS or by S/As. S/A requests will be forwarded by the Supply Process Review

---

2 ADC 1118 initiated the development of PCMS. Until PCMS is implemented, the authoritative source for Category C & D project codes is Appendix 7.13, posted to the DLMS Publications page.

3 Addition of Category A and/or B project codes may be addressed as a future enhancement to PCMS based on S/A requirements.

4 Ibid.

5 ADC 1118 initiated the development of PCMS. Until PCMS is implemented, the authoritative source for Category C & D project codes is Appendix 7.13, posted to the EBSO Website, DLMS Publications.
Committee (SPRC) representative to the DoD Military Standard Requisition and Issue Procedures (MILSTRIP) Administrator. Such requests must:

AP7.13.4.3.1.1. Include a statement of the intended use.

AP7.13.4.3.1.2. Indicate the S/As which will be involved (including designator of applicable S/A codes).

AP7.13.4.3.1.3. Provide the effective date and termination date of the code.

AP7.13.4.3.1.4. Identify at least one monitor/coordinator.

AP7.13.4.3.1.5. Note any references.

AP7.13.4.3.2. Project Codes CYK, JZC, JZM, JZO, and RBB are designated as Category C and are authorized exceptions to the normal Category C 3/alphanumeric/alphanumeric structure.

AP7.13.4.4. Category D (9/alphanumeric/alphanumeric). OSD/CJCS project codes. Requisitions and materiel releases with Category D project codes will be ranked above all other requisitions with the same priority designators for processing purposes. Authorization for use of Category D project code(s) will be for a specified period of time, not to exceed two years initially. OSD/CJCS will evaluate the need to extend and update Category D project codes prior to expiration. All Category D codes are managed in PCMS by OSD and CJCS.6

AP7.13.4.5. OSD and CJCS Assignment Requests

AP7.13.4.5.1. OSD project codes will be assigned only to projects and programs clearly of direct interest to the Secretary of Defense (SECDEF). Requests for assignment of OSD project code(s) will be submitted to the DASD (L&MR) SCI. An information copy of the request will be provided to the DoD MILSTRIP Administrator. Upon approval of the request by the DASD (L&MR) SCI, OSD will complete assignment of the project code in PCMS, or may request CJCS record the project code in PCMS on behalf of OSD7.

AP7.13.4.5.2. CJCS project codes will be assigned only to projects and programs clearly of direct interest to the CJCS acting on behalf of the SECDEF. The Force/Activity Designators (F/AD) to be used in conjunction with the CJCS project code should be designated in the authorization. Requests for assignment of CJCS project code(s) will be submitted to the JMPAB, an agency of the Chairman, Joint Chiefs of

6 Ibid.
7 Ibid.

AP7.13-3
APPENDIX 7.13
Staff, and approved through the appropriate office listed below to authorize CJCS to complete assignment of the project code in PCMS\textsuperscript{8}.

AP7.13.4.5.2.1. Service Headquarters.

AP7.13.4.5.2.2. Unified or Service Command Headquarters.

AP7.13.4.5.2.3. The Joint Staff.

AP7.13.4.5.2.4. OSD.

AP7.13.5. Dissemination. When Category C & D project codes are initially assigned, extended, or cancelled prior to the current expiration date, PCMS will distribute announcements to the listed monitor(s)/coordinator(s) for the project code and all those subscribed to receive project code announcements.\textsuperscript{9}

AP7.13.5.1. The following are required to subscribe in PCMS to receive project code updates:

AP7.13.5.1.1. Designated OSD project code representatives,

AP7.13.5.1.2. Designated CJCS project code representatives,

AP7.13.5.1.3. DoD MILSTRIP Administrators,

AP7.13.5.1.4. Designated S/A project code representatives,

AP7.13.5.1.5. S/A representatives of the Supply Process Review Committee.

AP7.13.5.2. Initial dissemination of Category C and D project codes will be accomplished as follows:

AP7.13.5.2.1. For OSD/CJCS project codes, OSD/CJCS are responsible for electronically disseminating the authorizing project code message (or the Execute Order containing project code assignment) to S/A Headquarters and other activities as appropriate.

AP7.13.5.2.2. The approved project code is finalized and made active in PCMS, which electronically forwards an unclassified project code assignment letter to subscribers. Also, PCMS will push notification of the new code to eligible systems.\textsuperscript{10}

\textsuperscript{8} Ibid.

\textsuperscript{9} ADC 1118 initiated the development of PCMS. Until PCMS is implemented, DoD MILSTRIP Project Code Support will disseminate project code notices to the representatives listed under AP7.13.6.1. and other interested parties.

\textsuperscript{10} ADC 1118 initiated the development of PCMS. Until PCMS is implemented, the authoritative source for Category C & D project codes is Appendix 7.13, posted to the DLMS Publications page. The MILSTRIP Project Code Support will disseminate project code notices based on the formats of MILSTRIP Appendix 1.37. Push notifications to Component systems is a planned enhancement of PCMS.
AP7.13.5.2.3. S/A project code representatives electronically disseminate the project code notice to all involved S/A activities.

AP7.13.5.3. Announcements of project code assignments, updates, and terminations will provide the information listed below:

<table>
<thead>
<tr>
<th>TITLE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Project Code</td>
<td>Code assigned under the provisions of this manual.</td>
</tr>
<tr>
<td>Effective Date</td>
<td>Indicate the date when supply sources should commence required action relative to the code.</td>
</tr>
<tr>
<td>Termination Date or Continuing</td>
<td>Identify the last calendar day that the project code will be active, or indicate that the project code is continuing indefinitely for project codes integrated with ongoing MILSTRIP processes. After a specified termination date is passed, inter-S/A recognition of the code will stop and categories C and D project codes will be removed from the active project code listing. Unfilled requisitions (which have not been canceled) containing a terminated project code (Category B, C, or D) will be processed in the same manner that requisitions with Category A project codes are processed. No mass cancellation of CJCS project coded requisitions is authorized without prior approval of the JMPAB.</td>
</tr>
<tr>
<td>Service Code(s)</td>
<td>All or specified S/A code(s) which will be used in conjunction with the project code. This information is to be included as part of the Project Code Description field of PCMS.</td>
</tr>
<tr>
<td>Use/References</td>
<td>1. <strong>Use</strong> - Use a clear-text statement defining the intended use of the code and indicating those to whom it applies (unless the use is classified). Also, if applicable, provide an abbreviated project name.</td>
</tr>
<tr>
<td></td>
<td>2. <strong>References</strong> - Cite inter-S/A agreements and other documents when establishing or specifying special controls for the project. The S/A establishing the project is responsible for ensuring that suppliers are provided copies of these documents, if not available on an inter-S/A basis. If a joint regulation is cited, all S/A numbers will be included in the project code announcement. An assembly point for shipment may be designated in this column by use of the DoDAAC for the assembly point. The DoDAAC of the assembly point will be entered in requisitions by requisitioners as the ship-to address. Shipping activities are not required to use project code announcements to determine the ship-to address unless inter-S/A agreements are negotiated for special routing of shipments. Only one assembly point per project code may be assigned.</td>
</tr>
<tr>
<td>Monitor/Coordinator</td>
<td>Identify the activity within the S/A or OSD/CJCS which is monitoring or coordinating the project, point of contact, telephone number (DSN and commercial, as applicable), and email address.</td>
</tr>
</tbody>
</table>
AP7.13.5.3.1. As per AP7.13.6.2.2., PCMS will distribute project code announcements when a new project code is activated. Refer to Appendix 1.37 for the format of the generated announcement.

AP7.13.5.3.2. When an active project code is extended, PCMS will distribute a project code update announcement indicating the new termination date. Refer to Appendix 1.37 for the format of the generated announcement.

AP7.13.5.3.3. When an active project code is cancelled early (i.e., before the currently published termination date) or reaches its termination date PCMS will distribute a project code cancellation announcement. The prior termination date is to be crossed out and the actual expiration date distinctly displayed. Refer to Appendix 1.37 for the format of the generated announcement.

AP7.13.5.4. Following the initial dissemination of the project code assignment, PCMS will include the code in reports and relevant queries of active project codes.

AP7.13.5.4.1. For those without PCMS accounts, reports containing all Category C and D codes will be published electronically on the Defense Logistics Management Standards Website Publications page unless prohibited by security classification. The report includes active project codes and those that have expired in the six months prior of the report generation date.

AP7.13.5.4.2. Those with access to PCMS can access system generated reports and perform ad hoc queries. See AP7.13.9.1. below for information on who, and how individuals obtain PCMS accounts.

AP7.13.6. Maintenance of Project Code Assignments. The designated S/A project code representatives (and the initiator or requestor of the project code, if different from the S/A project code representatives referenced under paragraph AP7.13.7., below) will ensure that the status of the project code remains current. The initiator or requestor of a project code will provide the current information of the monitor/coordinator and requests for extension up to two years to the OSD/CJCS or DoD MILSTRIP Administrator as appropriate. When informed of project code assignment changes, the appropriate PCMS user will record the changes in PCMS, which in turn will notify all subscribers as referenced in AP7.13.6.3.

11 ADC 1118 initiated the development of PCMS. Until PCMS is implemented, the MILSTRIP Project Code Support will disseminate project code notices based on the formats of MILSTRIP Appendix 1.37.
12 Ibid.
13 Ibid.
14 ADC 1118 initiated the development of PCMS. Until PCMS is implemented, reports of Category C & D project codes can be accessed as described in AP7.13.6.4.1.
15 Ibid.
16 ADC 1118 initiated the development of PCMS. Until PCMS is operational, the authoritative source for Category C & D project codes is Appendix 7.13, posted to the EBSO Website: https://www.dla.mil/HQ/InformationOperations/DLMS/. MILSTRIP Project Code Support will disseminate project code notices based on the formats of MILSTRIP Appendix 6.37.
AP7.13.7. Service/Agency MILSTRIP Project Code Representatives

AP7.13.7.1. OSD/CJCS, Services, and DLA will formally designate a primary representative, and may designate up to three alternates. Appointment letters adding or removing individuals as representatives are to be signed by the designating OSD/CJCS/Component governing authority for project codes and sent to the MILSTRIP Project Code Support at Defense Logistics Management Standards Office and to the DAAS PCMS Administrator. Refer to Appendix 1.38 for an appointment letter template.

AP7.13.7.2. The S/A designated project representatives are published electronically on the Enterprise Business Standards Office Website (CAC required).

AP7.13.8. Project Code Management System

AP7.13.8.1. System Administration

AP7.13.8.1.1. DAAS maintains the PCMS application for updating Category C & D project code data. It facilitates project code lifecycle management, automated notification to designated recipients, and real-time project code validation for supply transactions processed through DAAS. Access to the PCMS application is controlled in accordance with DoD Public Key Infrastructure (PKI)/Common Access Card (CAC) requirements and requires an appointment letter submitted to the MILSTRIP Administrator, and a System Access Request (SAR) submitted to DAAS.

AP7.13.8.1.2. DAAS deactivates accounts when an account holder is no longer authorized or when the account has not experienced activity for a period of time determined by DAAS. OSD/CJCS and MILSTRIP Administrator accounts are restricted through access controls to project code categories appropriate to their role authorized in their appointment letter. S/A Project Code Representatives and SPRC representatives may submit a SAR to obtain a read-only access account to perform ad hoc queries.

AP7.13.8.2. Validation. Using project code data in PCMS, DAAS will edit all requisitions and related transactions (DLMS 511R / MILSTRIP Document Identification Code (DIC) A0_, AM_, DLMS 869F / MILSTRIP DIC AT_, and DLMS 517M / MILSTRIP DIC APR) for invalid/expired Category C & D project codes.

---

17 ADC 1118 initiated the development of PCMS. Until PCMS is operational, a copy of the appointment letter does not need to be sent to the DAAS PCMS Administrator.
18 ADC 1118 initiated the development of PCMS. Until PCMS is operational, procedures of AP7.13.9.1. are on hold.
19 Addition of Category A and/or B project codes may be addressed as a future enhancement to PCMS based on S/A requirements.
20 ADC 1118 initiated the development of PCMS. Until PCMS is operational, DAAS will maintain the current validation/expiration edit check for Category D project codes.
AP7.13.8.2.1. The edit check for valid project codes compares the project code in the transaction to the project codes recorded in PCMS and verifies the project code is present and currently active.

AP7.13.8.2.2. If the edit check determines the project code exists but has expired, PCMS compares the ordinal date from the requisition document number in the transaction to the beginning date and actual expiration date of the project code in PCMS to determine if the project code was active at the time of the original requisition.

AP7.13.8.2.3. If an invalid code is present or a project code is used on a requisition issued outside the active period for the project code, DAAS will blank the project code, forward the requisition for processing, and report this action back to the requisitioner in a supply status transaction (DLMS 870S / MILSTRIP DIC AE9) with BK status.

AP7.13.8.3. PCMS will track which project codes are reserved, pending active, and expired.21

AP7.13.8.3.1. PCMS users may reserve a project code within their authority to assign for up to one year. If the project code is not made active or given a pending date to become active within the year it was reserved, then PCMS will no longer reserve the project code. During the time that a project code is reserved, it is only discoverable within PCMS by other users who could have been assigned the same code.

AP7.13.8.3.2. PCMS users can set a project code to automatically become active on a date up to 30 days in the future. In order to set a project code for future activation, the project code must have the required information for disseminating the project code as called for in AP7.13.6.3. During the time that a project code is pending activation, it is only discoverable within PCMS by other users who could have assigned the same code.

AP7.13.8.3.3. PCMS will not offer a previously expired project code to be reused for another purpose until at least five years after the project code expired. When a user requests to create a new project code, PCMS will first offer the project code that has gone the longest since being used. The user will be able to request a specific project, so long as it is not already active or within five years since expiring.

---

21 ADC 1118 initiated the development of PCMS. Until PCMS is operational, procedures of AP7.13.9.3. are on hold and MILSTRIP Project Code Support will continue to track and disseminate project codes.
AP7.14. APPENDIX 7.14

PRIORITY DESIGNATORS, STANDARD AND REQUIRED DELIVERY DATES

AP7.14.1. The priority designator (PD) is located in rp 60-61 of requisitions, and related transactions, and is based upon a combination of factors that relate the relative importance of the requisitioner's mission, expressed by its Force or Activity Designator (F/AD), and the urgency of need of the end use expressed by the Urgency of Need Designator (UND). The F/AD (a Roman numeral) is assigned by the Secretary of Defense, the Chairman of the Joint Chiefs of Staff (CJCS), or a DoD Component authorized by the CJCS to assign F/ADs for their respective forces, activities, programs or projects. The criteria for assignment of an appropriate F/AD is in DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures,” Volume 8, “Materiel Data Management and Exchange,” February 10, 2014. The UND (an alphabetic character) is determined by the requisitioning activity. The criteria for assignment of the UND are in paragraph AP7.14.3., below.

AP7.14.2. Commanding Officers of requisitioning installations are responsible for the accurate assignment of PDs consistent with the F/AD and UND, and the validity of required delivery dates (RDD) when assigned to requisitions. Commanding Officers of International Logistics Control Offices (ILCO), receiving requisitions from Security Assistance requisitioners, are responsible for review of assigned PDs and delivery dates. The following reviews will be accomplished prior to transmission of the requisitions to the supply source:

AP7.14.2.1. Commanders (or acting commanders during absences) will personally review all requirements based on UND A to certify an inability to perform the mission.

AP7.14.2.2. Commanders will designate, in writing, specific personnel who will personally review all requirements based on UND B to certify that the urgency has been accurately determined.

AP7.14.3. The determination of the appropriate UND will be made as follows:

AP7.14.3.1. UND A will be used in requisitioning materiel:

AP7.14.3.1.1. Required for immediate end use and without which the force or activity is unable to perform its assigned operational mission or without which the force or activity will be unable to perform its assigned operational mission within 15 days (20 days if the force or activity is located OCONUS).¹

¹ Materiel requirements of this nature affect the readiness of mission-essential materiel and actually result in a report of casualty in accordance with equipment readiness information.
AP7.14.3.1.2. Required for immediate installation on, or repair of, mission-essential materiel and without which the force or activity is unable to perform its assigned operational mission.

AP7.14.3.1.3. Required for immediate end use for installation on, or repair of, direct support equipment (ground support, firefighting, etc.) necessary for the operation of mission-essential materiel.2

AP7.14.3.1.4. Required for immediate end use in the replacement or repair of mission-essential training materiel and without which the force or activity is unable to perform its assigned training missions.

AP7.14.3.1.5. Required for immediate end use to effect the replacement or repair of the essential physical facilities of an industrial or production activity and without which that activity is unable to perform its assigned missions.

AP7.14.3.1.6. Required for immediate end use to eliminate an existing work stoppage at an industrial or production activity that is engaged in manufacturing, modifying, or maintaining mission-essential materiel.

AP7.14.3.1.7. Required for immediate end use to eliminate an existing work stoppage on a production line that is performing repair and maintenance of unserviceable items having a Military Mission Essentiality Code of 1 or 2.

AP7.14.3.2. UND B will be used in requisitioning materiel:

AP7.14.3.2.1. Required for immediate end use and without which the capability of the force or activity to perform its assigned operational mission is impaired.

AP7.14.3.2.2. Required for immediate installation on, repair of, mission-essential materiel and without which the capability of the force or activity to perform its assigned operational missions is impaired.3

AP7.14.3.2.3. Required for immediate end use for installation on, or repair of, auxiliary equipment which supplements mission-essential materiel or takes the place of such materiel should it become inoperative.

AP7.14.3.2.4. Required for immediate end use in the replacement or repair of mission-essential or auxiliary training equipment and without which the capability of the force or activity to perform its assigned missions is impaired.

systems authorized by the OSD, the Chairman of the Joint Chiefs of Staff, or DoD Component headquarters.

2 Ibid.

3 Materiel requirements of this nature directly affect the capability of the force or activity to perform its mission; it can temporarily accomplish assigned missions and tasks but with effectiveness and efficiency below the DoD Component Headquarters-determined level of acceptable readiness.
AP7.14.3.2.5. Required for immediate end use to effect replacement or repair of the essential physical facilities of an industrial or production activity and without which the capability of the activity to perform its assigned missions is impaired.

AP7.14.3.2.6. Required to preclude an anticipated work stoppage at an industrial or production activity that is engaged in manufacturing, modifying or maintaining mission-essential materiel.

AP7.14.3.2.7. Required to preclude an anticipated work stoppage on a production line performing repair and maintenance of unserviceable intensive management or critical items.

AP7.14.3.2.8. Required for the immediate replacement of the safety level quantity of mission-essential items on allowance and load lists (such as, prescribed load lists, spares kits, station sets, or coordinated shipboard allowance lists) when the last item has already been issued.

AP7.14.3.2.9. Required for immediate stock replenishment at overseas forward area supply activities when a customer's mission-essential stock level goes below the safety level and stock due in is not anticipated to arrive prior to stock on hand reaching a zero balance. The quantity ordered should be the minimum amount sufficient to ensure the maintenance of a positive stock balance until materiel that is due in actually arrives.

AP7.14.3.3. UND C will be used in requisitioning materiel:

AP7.14.3.3.1. Required for on-schedule repair, maintenance, manufacture, or replacement of all equipment.

AP7.14.3.3.2. Required for replenishment of stock to meet authorized stockage objective.

AP7.14.3.3.3. Required for purposes not specifically covered by any other UND.

AP7.14.4. Special Programs. All special programs requisitions (identified by requisitioner DoD activity address code (DoDAAC) using the 1st position numeric–2nd position alpha series, e.g. 1A) will be reviewed for appropriate PD assignment. These requisitions are authorized to use Uniform Materiel Movement and Issue Priority System (UMMIPS) priorities 8, 10, and 15, which corresponds to F/AD V and UND A, B, and C. DAAS will validate for appropriate use and downgrade any unauthorized value to PD 15. Defense Automatic Addressing System (DAAS) will provide an AE9 transaction with BK status and the modified requisition will be forwarded for processing. Abuse of FAD I will be output to the Unauthorized Priority Designator Report.
AP7.14.5. **Purpose.** This section describes the assignment process for determining the appropriate PD based on the assigned F/AD and the validation process for those activities using the F/AD I assignment inappropriately.

**AP7.14.5.1. Derivation of Priority Designators.** The requisitioning activity determines the appropriate PD to enter in the requisition based on the assigned F/AD and the UND determined by the requisitioning activity. Table AP7-14.T1 indicates the appropriate Arabic number PD derived from a combination of a given roman numeral F/AD with one of the alphabetical UNDs. It should be noted that each force or activity normally can choose from only three priority designators.

<table>

</tr>
<tr>
<td>V</td>
<td>08</td>
</tr>
</tbody>
</table>

**AP7.14.5.2. Validation of F/AD I Activities.** By direction of the OSD, the DAAS will validate F/AD I usage through the requisitioning process. The DAAS will maintain an edit table consisting of activities authorized to use F/AD I. To preserve accuracy and timely update, the JCS will forward to DAAS and Government Services Administration (GSA) all OSD-approved assignments of F/AD I immediately upon approval. Telephonic or electronic communication, to include on-line update, with the DAAS and GSA is authorized for time sensitive updates; however, formal documentation will be forwarded to DAAS and GSA to support inclusion of all F/AD I authorized activities. In order to maintain unclassified communication, JCS contact points are advised to identify authorized activities by DoDAAC only (no clear-text activity names) and make no reference to the associated F/AD. DAAS will edit PD 01, 04, and 11 requisitions (DLMS 511R, 511M, 869F, and 517M or MILSTRIP legacy DICs A0_, AM_, AT_, A3_, A4_, and APR) to ensure that F/AD I requisitions identify an authorized activity in the document number (MILSTRIP legacy rp 30-43), supplementary address field (MILSTRIP legacy rp 45-50), or DLMS ship-to, bill-to, or mark-for party DoDAAC. DAAS will identify PD 01 requisitions failing this edit for suspected abuse and subsequent investigation without interruption of normal requisition processing. DAAS

---

4 Refer to ADC 1009A. Automatic downgrade for PD 01 requisitions will not be authorized pending implementation of the mark-for party as an alternate location for the authorized activity DoDAAC.
will use Table AP7-14.T2, to downgrade PD 04 and 11 requisitions failing this edit. DAAS will report downgrading action back to the requisitioner in DLMS 870S/DIC AE9 transaction with BK status and will forward the modified requisition for processing. By agreement, all suspected F/AD I abuses found in US Coast Guard requisitions (document number beginning with Service/Agency Code Z) identified under above validation process will be automatically downgraded. In addition, DAAS will assess the validity of transactions which bypass the F/AD I validation process as a result of alternative requisition submission; such as, Defense Supply Expert System (DESEX) input, using the requisition image transaction (MILSTRIP legacy DICs CHI, CHA, BE9, and B99). Suspected abuses uncovered during the above edit process (to include those transactions downgraded by DAAS) will be output to the Unauthorized Priority Designator Assignment Report (Appendix 6.34).

<td>13</td>
</tr>
</tbody>
</table>

AP7.14.5.3. MILSTRIP requisitions submitted directly to GSA for GSA managed items will be reviewed for appropriate PD assignment prior to further processing. Any requisitions with PD 04 or PD 11 will be downgraded in accordance with table 2. PD 01 requisitions may be downgraded with the exception of AF (Service Code F) requisitions. GSA will notify the requisitioner of the downgrade by generating a supply status, DIC AE8 with BK Status, and route to DAAS for distribution to the correct recipient(s) depending on the Media/Status and Distribution Code in the AE8. The modified requisition will be forwarded within GSA for processing based on the new PD. GSA will report downgrading action to DAAS on the DIC CHA/CH1 transaction using rp 78 as 'D' to indicate downgrade and rp 79-80 to report the original PD. In the case of PD 01 suspected abuse, both the PD in rp 60-61 and rp 79-80 would contain 01 on the DIC CHA/1 transaction. This action will allow DAAS to merge GSA priority abuse data into the Unauthorized Priority Designator Assignment Report on a monthly basis as

---

5 Effective November 3, 2003, DAAS implemented logic change to allow requisitions with DoDAAC N00421 in rp 30-35, Document Number Serial Numbers FQ and GQ (in rp 40-41) and PDs 04 and 11 to pass through DAAS processing without being downgraded. Requisitions with DoDAAC N00421, document number serial numbers beginning with FQ and GQ for PDs 01, 04, and 11 will not be included in the monthly Priority Designator Reports.

6 Refer to ADC 279, Automated Downgrade for Priority Abuse and Reporting Procedures. The exception for the AF is an interim waiver pending better methodology for identification of the F/AD I authorized activity in AF requisitions.
described in DLM 4000.25, Volume 2, Appendix AP6.34. NOTE: MILSTRIP requisitions submitted directly to GSA for GSA managed items will not be revalidated by DAAS against the established edit table.

AP7.14.5.4. DAAS will apply automatic downgrading to DoD EMALL prepared requisitions unmatched to the Authorized DoDAAC List with the exception of AF PD 01 and MILSTRIP Order Entry Program (MOES) PD 01.

AP7.14.5.5. Security Assistance Requisitions. All Security Assistance requisitions (identified by Service Code B, D, K, P, or T in rp 30/45) will be reviewed for appropriate PD assignment by the ILCO prior to release. The Security Assistance requisitions will not be revalidated by DAAS against the established edit table. However, any Security Assistance requisitions with PD 01, 04, or 11 will be downgraded in accordance with Table AP7-14.T2. DAAS will report downgrading action to the applicable ILCO in an AE9 transaction with BK status and the modified requisition will be forwarded for processing. Suspected abuse will be output to the Unauthorized Priority Designator Report under the appropriate S/A heading with no activity name.

AP7.14.5.6. Participating Service/Agency Points of Contact and Responsibilities. DoDM 4140.01, Volume 8, requires DoD Components to designate a single office of primary responsibility to act as focal point for UMMIPS matters. To provide clear visibility of such points of contact, the JCS, the Military Services, the Defense Logistics Agency (if needed), and the General Services Administration, will provide contact information to DLA Logistics Management Standards for publication in this appendix. Contact information will include office name/symbol and communications numbers. Primary and alternate information should be included. DoD Component responsibilities for monitoring FA/D assignments and conducting annual reviews are delineated in DoDM 4140.01.

AP7.14.6. In the following special circumstances, the stated PD may be used by all requisitioners, irrespective of F/AD, but they are not to be used for the routine replenishment of stocks to meet authorized stockage objectives:

AP7.14.6.1. PD 03 will be used by all activities for medical or disaster-relief supplies or related items of equipment that are required immediately for:

AP7.14.6.1.1. Prolonging life, relieving avoidable suffering, or expediting recovery in case of injury, illness, or disease.

AP7.14.6.1.2. Avoiding or reducing the impact of epidemics or similar potential mass illnesses or diseases when in the opinion of medical professionals the probability of epidemics or similar potential mass illnesses is imminent.
AP7.14.6.2. PD 03 will be used by all activities for emergency supplies or items of equipment that are required immediately for controlling a civil disturbance, civil disorder or rioting.

AP7.14.6.3. PD 06 will be used by all activities for emergency supplies of individual and organizational clothing required immediately to provide a minimum of essential clothing to active duty military personnel who are actually without their required clothing.

AP7.14.7. If local stocks are exhausted and the local supply activity must requisition a specific immediate end-use requirement for a supported activity with a higher F/AD, the supply activity may assign a PD, commensurate with the F/AD of the supported unit, to the specific requirement. This authority will not be used for the routine replenishment requirements of the supported unit.

AP7.14.8. Whenever a DoD Component executes a contract which provides that a commercial contractor will requisition Government-furnished materiel from the DoD distribution system, the DoD contracting officer will advise the contractor of the PDs to be shown in such contractor-prepared requisitions. The advice will take cognizance of the F/AD of the national priority program, force or activity for which the contract is executed, and potential urgencies of need.

AP7.14.9. ISSUE PRIORITY GROUPS (IPGs). PDs are grouped into IPGs as follows:

- AP7.14.9.1. PDs 01, 02, and 03 form IPG I.
- AP7.14.9.2. PDs 04, 05, 06, 07 and 08 form IPG II.
- AP7.14.9.3. PDs 09, 10, 11, 12, 13, 14, and 15 form IPG III.

AP7.14.10. The key to achieving and maintaining a well balanced stock position is timeliness in submitting stock replenishment requisitions. Services, in promulgating this system, will ensure establishment of directives to provide positive assurance that replenishment requisitioning is effected when the reorder point has been reached and/or when planned program requirements or issue experience reveals the necessity for the establishment of stock levels. Continued emphasis on stock replenishment requisitioning will minimize the necessity for priority requisitioning. Competing demands; such as, different demands having the same PD or RDD for assets in short supply, will be manually reviewed when release of assets may result in failure to satisfy a firm commitment for delivery of materiel to a Security Assistance recipient or failure to satisfy a requisition reflecting a CJCS assigned project code. Decision on the selection of demands to be satisfied will be based on scheduled dues-in, significance of the CJCS assigned project codes, and acceptability of substitute items. The CJCS project codes are the 9__ series. Control levels may be established to reserve assets for requisitions with designated ranges of PDs, CJCS approved projects, or firm commitments for delivery of materiel to a Security Assistance recipient.
AP7.14.11. RDD Data Field. Requisitioning activities, after determining the appropriate PD applicable to requisitions, will determine the appropriate entry for the RDD data field.\(^7\) The combination of the PD and the designation or non-designation of an RDD or other allowable entry for rp 62-64, as stated in this appendix, will determine the supply and transportation system response time requirements. Response times are referenced in DoDM 4140.01, Volume 8, DoD Supply Chain Materiel Management Procedures: Materiel Data Management and Exchange.

AP7.14.11. A RDD which falls within 8 days of the requisition date will impact determination of the applicable UMMIPS time standard when the PD is 04-15. Otherwise, designation of a specific calendar day as the RDD will not influence response time; shipment will occur within the UMMIPS time standards for the assigned PD. When entered, the calendar day RDD may not precede the requisition date or exceed the requisition date by more than 100 days.\(^8\) Requisitions may also be coded using instructions below to indicate an extended RDD. To preclude shipment later than the RDD, submit requisition with Advice Code 2T.

AP7.14.11.1. Extended RDD (Code X). When an extended RDD is assigned, it will be expressed in terms of months from the last day of the month expressed by the date of the requisition. The number of months, designating the extended RDDs, will be entered in rp 63-64 and an alphabetic X will be entered in rp 62. Use of the extended RDD will not preclude earlier delivery if the materiel is available or later delivery should back-ordered materiel become available at a later date. Enter the appropriate PD, consistent with the F/AD and UND, in rp 60-61. Under these circumstances, the RDD will be the last day of the month depicted by the entry in rp 63-64. When supply status is provided, the estimated shipping date (ESD) will be shown in rp 70-73. Supply source deferring supply support to the requisitioner will enter Status Code BP\(^9\) in rp 65-66 of the supply status transaction.

AP7.14.11.1.2. Extended RDD (Code S). When a requisitioner desires that specific shipments not be released prior to 50 days before expiration of the extended RDD, an S will be entered in rp 62. No other entry will preclude earlier shipment if the materiel is available. The RDD will be interpreted as the last day of the month indicated in rp 63-64. The entry in rp 63-64 will indicate the number of months from the requisition date that the materiel is required; such as, 01 for the first month and 02 for the second month. Shipping activities will ensure that this request is honored. Supply sources deferring supply support to the requisitioner will enter Status Code BP\(^9\) in rp 65-66 of the supply status transaction.

AP7.14.11.2. Expedited Transportation Signal. When expedited transportation is required, and the PD is 01-08, “777” may be entered in rp 62-64.

---

\(^7\) Non-date entries in the RDD field, i.e., Codes E, F, N, R, 444, 555, 777, and 999, are referenced as Special Requirement Codes Under the DLMS.

\(^8\) The 100-day edit is not applicable to requisitions directed to Naval Ammunitions Logistics Center (NALC).

\(^9\) Ibid
AP7.14.11.3. **Collocated Stock.** If the customer is collocated with the supply depot issuing the materiel or has through local negotiations obtained collocated customer status and does not require the fastest possible service of the supply and transportation system, the customer should enter an RDD of 444. The customer entering a "444" RDD should expect the total time from order placement to delivery to be within the UMMIPS time standards for the assigned PD.

AP7.14.11.4. **Non-Mandatory RDD Data-Field Requirements.** If the customer does not specify an RDD or one of the allowable entries for rp 62-64 the RDD may be left blank and the customer should expect the total time from order placement to delivery to be within the UMMIPS time standards for the assigned PD. When requisitions are received without entries in rp 62-64, these positions will be left blank on all transactions resulting from requisition processing.

AP7.14.11.5. **Mandatory RDD Data-Field Requirements.** For subsistence, the RDD in rp 62-64 is a mandatory entry on all requisitions, with the assigned PD prescribing the precedence of internal supply processing actions for requisitions reflecting identical RDDs. To ensure delivery on the RDD, the ICP/depot may bank the requisitions until the correct processing date, computed by subtracting the number of days needed for depot processing and transit time from the RDD. All requisitions will be submitted using schedules established by the ICP.

AP7.14.11.5.1. When RDDs extend beyond order/ship times established by the ICP (for meals ready to eat (MRE) and other ration items), Paragraph AP7.14.10.1. will apply.

AP7.14.11.5.2. Provisions for work stoppage conditions identified below do not apply to subsistence.

AP7.14.11.5.3. During mass and universal cancellation situations, provisions of Chapters C4 and C27 take precedence over specific RDD requirements.

AP7.14.11.5.4. Expedited Handling Signal 999 and other not mission capable supply (NMCS) conditions covered in the succeeding paragraphs take precedence over the specific RDD requirements.

AP7.14.11.6. **Not Mission Capable Supply/Anticipated Not Mission Capable Supply.** Not mission capable supply/anticipated not mission capable supply (NMCS/ANMCS) requisitions will be prepared with special coding in the RDD field when the following conditions exist/are anticipated to occur; equipment deadlined for parts, aircraft out of commission for parts, engine out of commission for parts, and ships capability impaired for parts. The Commanding Officer of the requisitioning activity will either personally approve, or delegate in writing to specific personnel the authority to approve, all NMCS/ANMCS requisitions.
AP7.14.11.6.1. Expedited Handling Signal. Expedited Handling Signal 999 will be entered in the RDD field of PD 01-03 NMCS requisitions for materiel being shipped to U.S. Forces OCONUS and CONUS Forces alerted for OCONUS deployment within 30 days of the requisition date only when the conditions specified below are met:

AP7.14.11.6.2. The requisitioning unit must possess F/AD I, II, or III, and

AP7.14.11.6.3. The items or equipment required are causing mission-essential systems or equipment to be incapable of performing any of their assigned missions, or

AP7.14.11.6.4. The items or equipment required have been identified during maintenance or testing as necessary to prevent mission-essential systems or equipment from being unable to perform assigned operational missions or tasks within 5 days of the date of the requisition.

AP7.14.11.6.5. Expedited Handling Signal 999 does not apply to Security Assistance requisitions.

AP7.14.11.6.6. Requisitions for NMCS conditions other than 999, and all ANMCS conditions, must contain PD 01-08 with an N (NMCS) or E (ANMCS) in rp 62. [text deleted] Rp 63-64 are considered nonsignificant. Use UMMIPS time standards to ship materiel.

AP7.14.11.6.7. Required Availability Date. Security Assistance requisitions may contain a required availability date (RAD) in rp 62-64. The RAD will reflect the amount of time remaining from the date of the requisition until the materiel is required. Enter an A in rp 62 and use rp 63-64 to indicate the number of months remaining from the date of the requisition to the required availability date. (See Chapter C25.)

AP7.14.11.6.8. Processing Precedence During Mass Cancellation. Customers desiring to identify requisitions for continued supply and/or shipment processing during mass cancellation situations, will submit a requisition modifier (document identifier code (DIC) AM_ with 555 in the RDD data field (in rp 62-64). Requisitions containing or modified to contain 555 in the RDD data field and PD 01-08 (in rp 60-61) will receive processing precedence using the guidance in Volume 2, Chapter C4. Requisitions containing 555 in the RDD data field and PD 09-15 in rp 60-61 will be processed under the priority.

AP7.14.11.6.9. Processing Precedence During Work Stoppage. For work stoppage conditions at industrial activities, the following procedures may apply at the option of the individual Service. When utilized, these codes will only be significant on an intra-Service basis and will not be otherwise recognized.
AP7.14.11.6.9.1. Enter F in rp 62 of requisitions submitted by rework facilities for bits and pieces required for rework of mandatory turn-in repairable materiel. Rp 63-64 is left blank.

AP7.14.11.6.9.2. Enter R in rp 62 of requisitions submitted by repair activities, other than rework facilities, to indicate local work stoppage requirements. Rp 63-64 is left blank.

AP7.14.11.6.10. **Required Delivery Period.** For conventional ammunition requisitions only when materiel is required to be delivered within a specific time period; such as, materiel for an exercise which is not required before or after the exercise, a required delivery period (RDP) may be established as outlined below and entered in rp 62-64:10

AP7.14.11.6.10.1. Decide the latest acceptable delivery date, then calculate how many days this date is past the date of the requisition. Assign this number of days to the last two positions of the RDP (in rp 63-64). (The RDP allows the last acceptable delivery date to reach up to but not exceed 99 days past the date of the requisition.)

AP7.14.11.6.10.2. Decide the earliest acceptable delivery date. Determine how many days this date is before the last acceptable delivery date. Match this number to the corresponding letter in the RDP table below. Assign this letter to the first position of the RDP (in rp 62). (The RDP allows the earliest acceptable delivery date up to, but not greater than, 14 days before the last acceptable delivery date.)

<table>
<thead>

<td>7</td>
<td>8</td>
<td>9</td>
<td>10</td>
<td>11</td>
<td>12</td>
<td>13</td>
<td>14</td>
</tr>
</tbody>
</table>

AP7.14.11.6.10.3. In the above manner, a requisitioner may specify an RDP without the use of exception data. As an example, assume a requisition has an ordinal date of 2125, and the last acceptable delivery date is 30 days after the date of the requisition (2155), while the earliest acceptable delivery date is 2 days before the latest acceptable delivery date (2153). In this case two positions of the RDP would be 30, and the first position would be C (2 days before 2155—the last acceptable delivery date). The RDP would appear on the requisition as C30.11

---

10 Use of RDP for conventional ammunition last reported as not implemented by USAF. Refer to AMCL 148.

11 The 100-day edit is not applicable to requisitions directed to Naval Ammunitions Logistics Center (NALC).
AP7.15. APPENDIX 7.15

ADVICE CODES

AP7.15.1. Advice codes are numeric/alphabetic or numeric/numeric and provide coded instruction to supply sources when such data are considered essential to supply action and entry in narrative form is not feasible. The requisition transaction advice codes flow from requisition originators to initial processing points and are thereafter perpetuated into passing actions and release/receipt documents. The excess transaction advice codes flow from Defense Automatic Addressing System (DAAS) to an Inventory Control Point (ICP)/Integrated Materiel Manager (IMM) to indicate that the excess transaction has been edited by DAAS. The method of assigning advice codes and listings of requisition/excess transaction advice codes are provided below:

### REQUISITION TRANSACTION ADVICE CODES

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>2A</td>
<td>Item is not locally obtainable through manufacture, fabrication, or procurement.</td>
</tr>
<tr>
<td>2B</td>
<td>Requested item only will suffice. Do not substitute/interchange. Also applies to “obsolete”/“inactivated” items previously rejected with Status CJ. When used in response to Status Code CJ, the submission of a new requisition will be on DD Form 1348-6 with all appropriate technical data; for example, end item usage, component, make, model, series, serial number, drawing piece and/or part number, manual reference, or applicable publication.</td>
</tr>
</tbody>
</table>
| 2C   | (1) Do not backorder. Reject any unfilled quantity not available to meet standard delivery date (SDD)/required delivery date (RDD). Suitable substitute acceptable.  
(2) When entered in Brand name Resale Subsistence item, requisitions for overseas will be interpreted to authorize rejection of unfilled quantities not due to arrive in the overseas command by the RDD plus 30 days. Rejection status will be furnished the customer when it is determined by the supply source that unfilled requisitioned quantities cannot be shipped in time to arrive at the Outside Continental United States (OCONUS) destination by RDD plus 30 days. This may occur as a result of vendors’ failure to ship required quantities to the CONUS transshipment depots by contract delivery date plus 15 days or upon receipt at the Continental United States (CONUS) transshipment depot, it is determined that the shipment could not reach the OCONUS destination by the RDD plus 30 days. |
| 2D    | Furnish exact quantity requested (i.e., do not adjust to quantity unit pack unless adjustment is upward and the dollar value increase is not more than $5 over the requisition’s extended money value). |
| 2E    | Free issue. Stock lists or other publications offer this materiel without reimbursement. (To be used with Signal D or M on inter-Service requisitions.) |
| 2F    | Item known to be coded “Obsolete” but still required for immediate consumption. Service coordinated/approved substitute is acceptable. If unable to procure, reject requisition with Status CJ. |

---

7 Procedures for quantity adjustment related to requisitions with Advice Codes 2D, 27, or 29 last reported as not implemented by GSA. Refer to AMCL 161.

</thead>
</table>
| 2G   | Multiple use:  
(1) Ship new stocks or stocks having new appearance;  
(2) Strategic mission requires latest model and configuration (for electronic tubes);  
(3) Strategic mission requires newest stock only (for photographic film or for aerial requirements for ammunition devices or cartridges);  
(4) Anticipated usage requires latest expiration dates only (for biological). |
| 2H   | Special textile requirement for use in airborne operations where personal safety is involved. |
| 2J   | Do not substitute or backorder any unfilled quantities. |
| 2K   | Item being requisitioned from CONUS pursuant to the balance of payments program. (To be used by OCONUS requisitioner.) |
| 2L   | Quantity reflected in quantity field exceeds normal demands; however, this is a confirmed valid requirement. |
| 2M   | MCA validation process has revealed that the requested item is authorized by a valid contract. |
| 2N   | Item required in one continuous length as expressed in rp 25-29 and unit of issue in rp 23-24. No other configuration is acceptable and/or multiples of the unit pack is not acceptable. |
| 2P   | Item required in one continuous length as expressed in rp 25-29 and the unit of issue in rp 23-24. If requirement exceeds the unit pack length, multiples of the unit pack is acceptable. |
| 2Q   | The management control activity (MCA) validation process has revealed that the quantity cited on the document identifier code (DIC) AX1 exceeds the contract authorized quantity. The total requisitioned quantity is to be rejected. |
| 2R   | MCA validation process has revealed that the quantity cited on the DIC AX1 transaction exceeds the contract authorized quantity. The quantity field in this transaction (DIC AX2) reflects the quantity that may be supplied. The quantity difference between the DIC AX1 and this transaction will not be supplied. |

AP7.16. APPENDIX 7.16

STATUS CODES

AP7.16.1. Status codes may be alphabetic/alphabetic or alphabetic/numeric and flow from sources of supply to the creator of a requisition or customer asset report, consignee/consignor, or Service-designated control office. Status codes also flow from the Defense Automatic Addressing System (DAAS) to a DAAS subscriber or from storage activities to inventory control points (ICP) to furnish the status of materiel release orders (MRO). The purpose of status codes is to inform recipients of the status of requisitions or customer asset reports and related transactions.

AP7.16.2. Selected status codes are also used to provide status on or to reject Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP) transactions (Volume 2, Appendix 3).

AP7.16.3. The method of assigning status codes and a listing of the codes is provided below:

<table>
<thead>
<tr>
<th>CATEGORY ASSIGNMENTS OF STATUS CODES</th>
</tr>
</thead>
<tbody>
<tr>
<td>RECORD POSITION(S)</td>

\[\text{\textsuperscript{2}}\text{Ibid}\]
NUMBER OF CHARACTERS: Two

TYPE OF CODE: Alpha/Alpha or Alpha/Numeric.

EXPLANATION: Used to inform appropriate recipient(s) of the status of a requisition’s or asset report’s processing, or of the processing of related transactions.

**REQUISITION TRANSACTION STATUS CODES**

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
</table>
| BA   | (1) Item being processed for release and shipment on a requisition or requisition alert. The estimated shipping date (ESD) is contained in record position (rp) 70-73 when provided in response to a follow-up.  
(2) For status messages with a Distribution Code in rp 54-56 = 111, this status indicates that it is used in support of the Retail Transportation and Supply Receipt and Acknowledgement Interchange in response to follow-ups and for initial physical in-check of cargo from a retail supply warehouse to a transportation system for movement, etc. See DLM 4000.25, Volume 3, Chapter 2. |
| BB   | (1) Item is back ordered against a due-in to stock. The ESD for release of materiel to the customer is contained in rp 70-73.  
(2) Requisition alert has been backordered. Additional status will be provided to indicate action taken. |
| BC   | Item on original requisition containing this document number has been back ordered. Long delay is anticipated and ESD is in rp 70-73. Item identified in the national stock number (NSN) field (or "remarks" field if NSN field cannot accommodate the item number), that is not an automatic/coordinate substitute, can be furnished. The price of the substitute item is in rp 74-80. If desired, submit a cancellation for the original requisition and submit a new requisition\(^3\) for the offered substitute. |

\(^3\) Submit a new requisition using a new document number with a current ordinal date.
**REQUISITION TRANSACTION STATUS CODES**

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
</table>
| BD   | Requisition is delayed:  
(1) Delay due to need to verify requirements relative to authorized application, item identification, or technical data.  
(2) Requisition alert fulfillment is delayed due to need to verify requirements relative to item identification. Re-identification of NSN materiel to unit of use LSN required.  
(3) Requisition for government furnished materiel (GFM) is delayed pending validation by either contracting management control activity (MCA) or between source of supply and MCA. See rp 4-6 to determine the activity performing the validation. Upon completion of review, additional status will be provided to indicate action taken.  
(4) If used with Management Code R, delay due to storage activity denial on the identified suffix. Clear/update local records for suffix and quantity identified. Further action on the denied quantity is anticipated to occur on a subsequent suffix code. |
| BE   | Depot/storage activity has a record of the MRO but no supporting transaction/record of the action taken. (Depot/storage activity response to ICP request for MRO status for use with DIC AE6 only.) |
| BF   | No record of your requisition or requisition alert for which your DIC AF_ follow-up or cancellation request was submitted. Also used by a source of supply to indicate no record of a GFM requisition for which a DIC AX2 transaction has been received.  
(1) If received in response to a cancellation request, subsequently received requisitions (A0_) or other documents (AM_, AT_) will be returned by the source of supply with BF status. De-obligate funds and, if item is still required, submit requisition using new document number.\(^4\)  
(2) If received in response to a follow-up (AF_) request, source of supply action to process subsequently received documents (A0_, AM_, AT_) will continue under regular MILSTRIP procedures.\(^5\)  
(3) When used in response to DLA Disposition Services generated DIC AFX and AFZ follow-ups, indicates that the shipping activity has no record of generating an AS3 transaction or of making a shipment to a DLA Disposition Services Field Office under the document number in question and has not received a signed copy of the disposal turn in document (DTID).  
(4) MCAs/contractors/Service(s)/Agencies (S/A) in receipt of Status Code BF will review for establishment of a valid GFM requisition. If a valid requisition exists, a DIC AT_ transaction will be generated. Subsequent receipt of a valid requisition will be processed by the MCA or source of supply, under Chapter C26 procedures. |

---

\(^4\) Ibid.
REQUISITION TRANSACTION STATUS CODES

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
</table>
| BG   | One or more of the following fields have been changed:  
(1) Stock Number (as the result of a formal catalog change).  
   (a) Requisitioned NSN has been replaced by or consolidated with NSN in  
       stock number field.  
   (b) NSN is assigned to part number that was requisitioned.  
   (c) FSC has changed but NIIN remains the same as originally  
       requisitioned. Review NSN (federal supply classification (FSC) and national  
       item identification number (NIIN)) to ensure that requisition under process is  
       for desired item. If NSN is not for desired item, submit cancellation request  
       to the source of supply.  
   (d) FSC has changed but NIIN remains the same as expressed in  
       original transaction. (Applies to MILSTRAP DZ9 status notifications only.)  
(2) Unit of Issue (as the result of a formal catalog change).  
(3) Unit of issue: A requisition alert or funded requisition was requested in a  
    unit of use. The requested quantity is equal to the units in a FLIS unit of issue  
    (ex.: 100 EA equals 1 HD). Your document has been converted to the FLIS  
    unit of issue, quantity, and price. The source of supply will provide additional  
    status to indicate further action taken on this requisition.  
(4) Requisitioned part number has been identified to/replaced by the part  
    number reflected in the stock number field. Examine quantity and unit price  
    resulting from the above changes and revise appropriate records  
    accordingly. The source of supply will provide additional status to indicate  
    further action taken on this requisition.  |
| BH   | Service coordinated/approved substituted/interchangeable item, identified in  
      stock number field, will be supplied requisition or requisition alert. Examine  
      unit of issue, quantity, and unit price fields for possible changes. Revise  
      appropriate records accordingly. Additional status will be provided.  |
| BJ   | Quantity changed to conform to unit pack or because of allowable direct  
      delivery contract variance; adjust the due-in records accordingly. Unit of  
      issue is not changed.  |
| BJ   | Quantity changed to conform to unit pack or because of allowable direct  
      delivery contract variance; adjust the due-in records accordingly. Unit of  
      issue is not changed.  |

5 If requisitioning via submission of a new document number, submit a cancellation request prior to fund  
deobligation to ensure against a potential duplicate shipment.
REQUISITION TRANSACTION STATUS CODES

BK Modified.
(1) Requisition data elements have been modified as requested. Examine data fields in this status document for current requisition data.
(2) Used by Transaction Services on DIC AE9 and by GSA on DIC AE_ to advise that the requisition contained a requisition priority for which the activity was not authorized. The requisition priority has been downgraded as shown and the requisition forwarded for processing.
(3) Used by Transaction Services on DIC AE9 to advise that the requisition contained an invalid/expired OSD/CJCS category D project code. The project code has been blanked out and the requisition forwarded for processing.
(4) Used by Transaction Services on DIC AE9 or by source of supply to advise the customer that the requisition priority designator and/or required delivery date (RDD) data fields continued invalid or incompatible data. Customer entry has been modified or blanked out and the requisition forwarded for processing.
(5) Used by Transaction Services on DICC AE9 or by the source of supply to advise that submitter’s fund code has been replaced by Fund Code XP requiring non-interfund billing.

BL Notice of availability (NOA) was forwarded to the country representative or freight forwarder on date entered in rp 70-73.

BM Your document was forwarded to the activity indicated in rp 67-69. Forward all future transactions for this document number to that activity. (Also applies to MILSTRAP DIC DZ9 status notifications.)

BN (1) Requisition being processed as free issue. Signal and fund code fields corrected as noted. Adjust local fund obligation records.
(2) Requested free issue quantity on requisition can be provided. No change to signal and fund code. No need to adjust fund obligation records. Applies only to DLA requisitions directed to Navy’s Real-time Reutilization Asset Management (RRAM) in support of 2005 BRAC.

BP Requisition has been deferred per customer instructions. The ESD is in rp 70-73.

BQ Canceled. Results from receipt of cancellation request from requisitioner, consignee, manager, or other authorized activity. Also applies to cancellations resulting from deletion of a DoDAAC identified as requisitioner, ship-to, bill-to activity from the DoDAAD. Deobligate funds, if applicable.

BR Cancelled. Requisitioning activity authorized cancellation in response to materiel obligation validation (MOV) request furnished by processing point.

BS Canceled. Requisitioning activity failed to respond to MOV request from processing point.

| CJ | Rejected.  
(1) Item coded (or being coded) "obsolete" or "inactivated." Item in stock number field, if different from item requisitioned, can be furnished as a substitute. Unit price of the substitute item is in rp 74-80.  
(2) If offered substitute is desired, submit a new requisition\(^{13}\) with substitute item stock number. If only original item is desired, submit a new requisition\(^{14}\) for procurement on DD Form 1348-6. SF 344 may be submitted by authorized activities. (See Appendix AP1.5.) Cite Advice Code 2B.  
(3) Furnish technical data; for example, end item usage, component, make, model, series, serial number, drawing piece and/or part number, manual reference, or applicable publication. |
| CK | Rejected. Unable to procure. No interchangeable and substitute item (I&S) item is available. Returned for supply by local issue of components, kit, or next higher assembly. Suggest fabrication or cannibalization. If not available, submit a new requisition\(^{15}\) for components, kit, or next higher assembly. |
| CL | Rejected. Contractor's requisition or related transaction is to be processed initially by an MCA. Transaction entries indicate direct submission. Research for correct MCA and submit a new requisition.\(^{16}\) |

| CM   | (1) Rejected. Item is not or is no longer free issue. Submit a new funded requisition\(^{17}\) with signal code other than D or M if materiel is still required.  
(2) Rejected. Request has been identified as non-production materiel support and requires a funded requisition. Applies to requisition alert, when request is identified as a non-production materiel support. |
| CN   | Nonconsumable item. Your Service does not receive requisition support on this item or your requirement is a nonrecurring demand, which cannot be satisfied. Support will be provided upon submission of a Military Interdepartmental Purchase Request (MIPR) by your Service ICP. |
| CP   | Rejected. Source of supply is local manufacture, fabrication, or local procurement. If item cannot be manufactured or fabricated locally, or activity lacks procurement authority/capability, submit a new requisition\(^{18}\) with Advice Code 2A. |
| CQ   | Rejected. Item requested is command or Service regulated or controlled. Submit new requisition\(^{19}\) through appropriate channels. |
| CR   | Rejected. Invalid DIC for a GFM transaction. |
| CS   | Rejected. Quantity requisitioned is suspect of error or indicates excessive quantity. Partial quantity being supplied. Quantity field in this transaction reflects quantity rejected. If requirement still exists, submit a new requisition\(^{20}\) for the required quantity using Advice Code 2L. |
| CT   | Rejected. FMS requisition contains a “U” or “V” in rp 35 and the entry in rp 72 is incorrect or blank. Review records and resubmit with a new document number and a correct CLPSC in rp 72\(^{21}\). |
| CU   | Rejected. Unable to procure item requested. Item is no longer produced by any known source and attempts to obtain item have failed. Item in stock number field can be furnished as a substitute. Unit price of the substitute item is in rp 74-80. (If offered substitute is desired, submit a new requisition\(^{22}\) with substitute item stock number.) |
| CV   | Rejected. Item prematurely requisitioned. The effective date for requisitioning is contained in rp 70-73. |

# REQUISITION TRANSACTION STATUS CODES

<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
</table>
| DB   | (1) Rejected. No valid contract registered at MCA.  
      | (2) Rejected. One or more of the following Service/Agency required data elements is missing or invalid: (1) call or order number, (2) manufacturing directive number (MDN), (3) contract line item number (CLIN). |
| DC   | Processing of your CLSSA termination/drawdown requisition (CLPSC: A, B, C, or D) has resulted in the quantity reflected in rp 25-29 being absorbed by the ICP/IMM. Disposition on any remaining quantity will be communicated by separate status transaction.³¹ |
| DD   | Processing of your CLSSA termination/drawdown requisition (CLPSC: C or D) has resulted in the quantity reflected in rp 25-29 not being absorbed by the ICP/IMM. This quantity will not be delivered. Disposition of materiel will be under appropriate Service/Agency regulations. Billing action for this quantity is in process. Status on any remaining quantity will be communicated by a separate transaction.³² |
| DE   | Canceled. Although shipment status (DIC AS3) was sent, no shipment was made. (For use in controlling shipments intransit to disposal only. May be used in response to DICs AFX and AFZ with Advice Code 37.) |
| DF   | Terminate intransit control processing. A signed receipt copy of the DTID is not available, but investigation indicates that property was removed from the storage area and cannot be located. Further research is being conducted within S/A channels. (For use in controlling shipments intransit to disposal only.) |
| DG   | Shipment confirmed. The quantity in the DIC AS3 transaction was the quantity shipped. A signed copy of the DTID acknowledging DLA Disposition Services receipt of that quantity is on file. DLA Disposition Services action required to resolve apparent discrepancy. (For use in controlling shipments intransit to disposal only. May be used only in response to DIC AFX or AFZ with Advice Code 37.) |
| DH   | Terminate intransit control processing. A signed copy of the DTID acknowledging receipt is on file. The quantity in the DTID is different from that in the original AS3. The quantity acknowledged in the DTID is included in the quantity field. Further research on the quantity discrepancy is being conducted within S/A channels. (For use in controlling shipments intransit to disposal only. May be used only in response to DIC AFX or AFZ with Advice Code 37.) |

SECURITY COOPERATION CUSTOMER CODES

NUMBER OF CHARACTERS: Two

TYPE OF CODE: Alpha-Alpha or Alphanumeric

EXPLANATION: SECURITY COOPERATION CUSTOMER CODE. A two-digit code used by Defense Security Cooperation Agency to represent the country, international organization, region, or program authority associated with transactions recorded in Security Cooperation systems and associated programs implemented in the Foreign Military Sales. The codes are used to identify the country, international organization, or account which is (1) the recipient of materiel or services sold, leased, loaned, transferred, exchanged, or furnished through FMS programs and (2) the recipient of materiel or services furnished under FMS and Grant Aid.

RECORD POSITION(S): 31-32

CODE  EXPLANATION

L  Grant Aid provided through the NATO Hawk Production and Logistics Office (NHPLO) for maintenance support of Hawk Missile system (use in conjunction with Supply Source Code N only).

P  Grant Aid programs transferred to the DoD budget which were controlled and implemented through the Grant Aid documentation and ADP system.

R  Grant Aid of U.S. recovered materiel resulting from liquidation of NATO Maintenance and Supply Agency (NAMSA) excess stockage.

S  Assigned to all records in the Republic of Korea (ROK) Equipment Transfer program authorized by Public Law 95-384 at no charge to Grant Aid. This code is also assigned to all PY 71 update and 72 equipment transferred to the ROK under Public Law 91-652 at no cost to Grant Aid. This code is also assigned to ammunition transferred to the Royal Thai Government from Army foreign military sales (FMS) Case UEB. Transfer at no cost to Grant aid was authorized by Section 24, Public Law 96-92.

AP7.19.1.1. Type of assistance Codes used in other than Grant Aid transactions:

F  Training provided as a part of an FMS case. This data is maintained in the DSAA Grant Aid data base purely as a service to assist the Military Department in accounting for students and/or spaces provided under FMS. Not used in MILSTRIP.

AP7.19.2. FOREIGN MILITARY SALES. Terms of sale and accompanying type of assistance codes indicate the statutory authority for a foreign military sale; the time of payment for the sale; whether the sale is to be from DoD stocks or procurement; and whether the sale is to be financed on a cash or credit basis. The implementing agency enters the appropriate Terms of Sale and accompanying type of assistance codes in the “Terms” block of the letter of offer. The implementing agency uses type of assistance code for MILSTRIP requisitioning purposes. The following codes and definitions have been extracted from DSCA 5105.38-M, Security Assistance Management Manual (SAMM), for the convenience of MILSTRIP participants. A more complete definition of the codes shown below may be found in the SAMM.

CODE  EXPLANATION

3  Cash sale from Stock with Payment in Advance. This code applies to cash payments in advance of delivery and/or performance for a foreign military sale which the Implementing Agency determines at the time of the offer will be from DoD stocks.
<table>
<thead>
<tr>
<th>CODE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Source of Supply Not Predetermined with Payment in Advance. This code applies to cash payment for a foreign military sale for which the Implementing Agency has not yet determined, at the time of the offer, the extent to which the supply source will be DoD stocks or procurement.</td>
</tr>
<tr>
<td>5</td>
<td>Cash Sale from Procurement with Payment in Advance. This code applies to cash payment in advance of delivery and/or performance for a foreign military sale which the Implementing Agency determines at the time of the offer will be from DoD procurement.</td>
</tr>
<tr>
<td>6</td>
<td>Cash Sale from Stock with Payment on Delivery. This code applies to cash payment upon delivery of defense articles or initiation of performance of defense services which the implementing Agency determines at the time of offer will be from DoD stocks.</td>
</tr>
<tr>
<td>7</td>
<td>Cash sale from Procurement with 120-Day Payment. This code applies to cash payment 120 days after delivery of articles or commencement of performance of services for a foreign military sale, which the implementing Agency determines at the time of the offer, will be from DoD procurement.</td>
</tr>
<tr>
<td>8</td>
<td>Cash sale from Stock with 120-Day payment. This code applies to cash Payment 120 days after delivery of articles or commencement of performance of services for a foreign military sale which the Implementing Agency determines at the time of the offer will be from DoD stocks.</td>
</tr>
<tr>
<td>M</td>
<td>Grant Aid Merger. The Grant Aid, established under the mutual Defense Assistance Act of 1949, originally provided for the loan or grant if military equipment, materials, and services (including training) to eligible nations. Since FY 82, the authority of Section 503(a)(3) of the FAA of 1961 has been used to merge Grant Aid funds with recipient countries funds and/or with FMS financing credit in the FMS Trust Fund, to make adequate funds available to finance the country’s FMS cases. In addition, since FY06, other authorized granting of US appropriations for use for FMS.</td>
</tr>
<tr>
<td>N</td>

AP7.23. APPENDIX 7.23

PRECIOUS METALS INDICATOR CODES

NUMBER OF CHARACTERS: One.
TYPE OF CODE: Alpha/Numeric.
SOURCE: Catalogin Data And Transaction Standards, Volume 10 Table 160
EXPLANATION: Identifies Defense materiel items that contain precious metals and the content value of the metal to will aid DLA Disposition Services Field Office’s efforts to identify precious metal bearing items at the time such materiel is turned in.
RECORD POSITION: 62.
AP7.24. APPENDIX 7.24

AUTOMATED DATA PROCESSING IDENTIFICATION CODES

NUMBER OF CHARACTERS: One.
TYPE OF CODE: Numeric.
SOURCE: Cataloging Data and Transaction Standards, Volume 10, Table 159.
EXPLANATION: Identifies DoD automatic data processing equipment (ADPE)/Automatic Data Processing (ADP) Components in the supply system and shall aid DLA Disposition Services Field Offices to identify these items at the time they are transferred to disposal.
RECORD POSITION: 63.
**APPENDIX 7.25**

**CUSTOMER IDENTIFICATION**

**NUMBER OF CHARACTERS:** Thirteen.

**TYPE OF CODE:** Alpha/Numeric.

**EXPLANATION:** Provides customer identification on automated submission of requisitions containing exception ship-to addresses via a system-generated code that cannot be overridden by the user. The first three-charters may identify the preparing system followed by a 10-character identification of the individual customer keyed to the customer login/account. The originating organization must be able to identify the specific individual by this code. When constructed by the Defense Automatic Addressing System (DAAS), the customer identification will consist of the originator (the first position of the seven position communications routing identifier is dropped) plus the four-position serial number and the three-position date form the incoming message header. Originating systems are identified below.

DELIVERY PRIORITY/SPECIAL PROCESSING CODES

NUMBER OF CHARACTERS: One
TYPE OF CODE: Alpha
EXPLANATION: The delivery priority/special processing code communicates special processing and/or priority requirements to the Distribution Standard System for DLA Distribution Center shipments under agreements with DOD Components. Delivery priority/special processing codes carry no precedence in ICP asset allocation decisions. Asset allocation decisions are controlled by UMMIPS as defined in DoD 4140.01-M, DoD Supply Chain Materiel Management Procedures (February 10, 2014) and by DLM 4000.25, Defense Logistics Management Standards. This data element is found in MILSTRIP legacy DIC A5_ and DLMS Implementation Conventions (ICs) 511M, 511R, 869A, 869F, 870S, 856S, 940R, 940S, and 945A.¹ ² ³

PRODUCT QUALITY DEFICIENCY REPORT (PQDR)
RELEVANT DATA ELEMENTS

AP7.27. GENERAL. This appendix provides a consolidated reference resource for data elements and their associated code sets applicable to Product Quality Deficiency Report (PQDR) submissions, subsequent communication between trading partners, and responses. These data elements are applicable in all DoD PQDR applications under the DLMS. The data elements listed below are included in this appendix. Within the context of PQDR procedures, these data elements may be recognized by abbreviated names as indicated. Refer to Product Quality Deficiency Report (PQDR) Program (DLAR 4155.24/AR 702-7/SECENAVINST 4855.5B/AFR 74-61) the DLMS Dictionary (Logistics Data Resources Management System (LOGDRMS) for additional PQDR data definitions and codes

  Also referred to as Status Code.
  Also referred to as Rebuttal Code.
- Product Quality Deficiency Report (PQDR) Credit Code.
  Also referred to as Credit Code.
  Also referred to as Exhibit Accounted For/Received Code.
- Operating Time at Failure.
- Time Since Installation.
- Time Since New/Overhaul.

AP7.27.1. PRODUCT QUALITY DEFICIENCY REPORT (PQDR) STATUS CODE.

AP7.27.1.1. Definition. A two-character alpha-numeric compound code consisting of the PQDR STATE (active or closed) in the first position, and either the active PQDR's LAST KEY EVENT CODE or the closed PQDR's CLOSURE REMARK CODE in the second position.

AP7.27.1.1.1. PQDR STATE: A single character alphabetic code indicating whether the status of a PQDR is "Active" (permitted value = A) or "Closed" (permitted value = C)

AP7.27.1.1.2. LAST KEY EVENT CODE: A single character alpha-numeric code used to indicate the last key event accomplished in processing an active PQDR. Used with PQDR STATE = A.

AP7.27.1.1.3. CLOSURE REMARK CODE = A code used to indicate the circumstances under which a PQDR was closed. Used with PQDR STATE = C.
AP7.27.1.2. Usage. Facilitates workflow efficiencies for functional users, and program management metrics for oversight and analyses of process performance and production issues.

AP7.27.1.3. DLMS 842P Reference: 2/LQ01/1050 Code GK.

AP7.27.1.4. PQDR Status Codes are listed in Table AP7.27.T1:

AP7.27.2.  PRODUCT QUALITY DEFICIENCY REPORT (PQDR) REBUTTAL/CONTROVERT CODE

AP7.27.2.1. Definition. A 2-character alpha compound code, consisting of the rebuttal “Point Of Origin” (Screening Point, or Action Point) in the first position, and the rebuttal “Reason” in the second position.
AP7.27.2.1.1. Point Of Origin: A single character alphabetic code indicating who generated the rebuttal: Action Point (permitted value = A) or Screening Point (permitted value = S). Originator’s rebuttal generates an official correspondence to the screening point for review, but it does not open a closed record. Screening point may accept request to reopen for originator and reopen PQDR for further investigation.

AP7.27.2.1.2. Reason: A single character alphabetic code indicating the reason for the rebuttal being generated.

AP7.27.2.2. Usage. Provides mechanism to facilitate program oversight.

AP7.27.2.3. DLMS 842P Reference: 2/LQ01/1050 Code CW.

AP7.27.2.4. PQDR Rebuttal/Controvert Reason Codes are listed in Table AP7.27.T2:

AP7.27.3. PRODUCT QUALITY DEFICIENCY REPORT (PQDR) CREDIT CODE

AP7.27.3.1. **Definition.** A single character alpha code used to describe whether credit or other form of resolution is authorized.

AP7.27.3.2. **Usage.** Used by Screening/Action point to provide the originator with current status of financial liability on reported materiel. Secondary usage is to support management metrics. This code appears in the 10th position of the PQDR Summary Code.

AP7.27.3.3. DLMS 842P Reference: 10th position of PQDR Summary Code at 2/REF01/0700 Code X3

AP7.27.3.4. PQDR Credit Codes are listed in Table AP7.27.T3

<table>

AP7.27.4. PRODUCT QUALITY DEFICIENCY REPORT (PQDR) EXHIBIT DISTRIBUTION STATUS CODE

AP7.27.4.1. **Definition.** Code indicates status/control of exhibit during the transportation process. Transportation process starts when the originator passes materiel to shipper and ends when consignee takes control of the materiel.

AP7.27.4.2. **Usage.** To ensure proper and effective processing in order to maintain valid PQDR resolution time frames

AP7.27.4.3. DLMS 842P Reference: 2/REF01/0700 Code KC.

---

1 Refer to ADC 1007C.
AP7.27.4. PQDR Exhibit Distribution Status Codes are listed in Table AP7.27.T4

AP7.27.5. PRODUCT QUALITY DEFICIENCY REPORT (PQDR) EXHIBIT CURRENT DISPOSITION CODE

AP7.27.5.1. Definition. A single character alpha code, used to identify the status of exhibit materiel from originator point of view on initial PQDR Submission.

AP7.27.5.2. Usage. Provide mechanism to identify exhibit initial locations. This code appears in the 13th position of the PQDR Summary Code.

AP7.27.5.3. DLMS 842P Reference: 13th position of PQDR Summary Code at 2/REF01/0700 Code X3

AP7.27.5.4. PQDR Exhibit Current Disposition Codes are listed in Table AP7.27.T5:

AP7.27.6. PRODUCT QUALITY DEFICIENCY REPORT (PQDR) EXHIBIT CURRENT DISPOSITION CODE

AP7.27.6.1. Definition. A single character alpha code, used to identify the status of exhibit materiel from the action or support point of view.
AP7.27.6.2. **Usage.** Use to identify the Exhibit Delivery Requirement Code from the Action or Support Point. This provides verification that the exhibit is required and should be sent or held by originator.

AP7.27.6.3. DLMS 842P Reference: 2/REF01/0700 Code KK.

AP7.27.6.4. PQDR Exhibit Delivery Requirement Codes are listed in Table AP7.27.T6:

AP7.27.7. **PRODUCT QUALITY DEFICIENCY REPORT (PQDR) EXHIBIT CURRENT DISPOSITION CODE**

AP7.27.7.1. **Definition.** A two character alphanumeric code, used for measure of time or events as listed in Table AP7.27.T7 for data elements: Operating Time at Failure, Time Since New/Overhaul, and Time Since Installation.

AP7.27.7.2. **Usage.** Use to identify the quantity of time a unit entered operational service as a new or overhauled item to time the deficiency was discovered. Operating Time Codes are mapped as Unit of Measure Codes associated with the applicable quantified value for Operating Time at Failure, Time Since New/Overhaul, or Time Since Installation.

AP7.27.7.3. DLMS 842P Reference: 2/QTY01/2700.

AP7.27.7.4. Operating Time Codes are listed in Table AP7.27.T7:

AP7.28 APPENDIX 7.28

SUPPLY DISCREPANCY REPORT RELEVANT DATA ELEMENTS

AP7.28.1. GENERAL

AP7.28.1.1. This appendix provides a consolidated reference resource for data elements and their associated code sets applicable to Supply Discrepancy Report (SDR) submissions and responses. These data elements are applicable in all DoD SDR applications under the DLMS. The following data elements are included in this appendix. Within the context of SDR procedures, these data elements may be recognized by abbreviated names as indicated.

- Shipping Packaging and Storage Discrepancy Code. Also referred to as Discrepancy Code.
- SDR Requested Action Code. Also referred to as Action Code.
- Discrepancy Status or Disposition (Reply) Code. Also referred to as Reply Code.
- Discrepancy Report Document Type Code. Also referred to as SDR Document Type.
- DLA Disposition Services SDR Type Code. Also referred to as Disposition Services Sub-Type.

AP7.28.2. SHIPPING AND PACKAGING DISCREPANCY CODES

AP7.28.2.1. The following codes are used to provide a description of the discrepant condition. Multiple codes may be used on a single report. Customer-prepared SDRs may use up to three discrepancy codes per SDR. SDRs associated with Distribution Center receipts may identify up to two discrepancy codes per SDR. Preprinted codes on the face of the SF 364 may be supplemented from this list of codes. Use of the expanded list of codes is encouraged to clearly identify the discrepant situation, reduce the reliance on narrative descriptions, and facilitate capture of SDR metrics.
DISCREPANCY CODES

Condition of Materiel

C1  In a condition other than shown on supply document or on the supporting inspection/test certificate (if hazardous materiel use code H1)
C2  Expired shelf life item (if hazardous materiel use code H5)
C3  Damaged U.S. Postal Service shipment (Security Assistance customers are authorized to use this code for all types of damaged shipments)
C4  Materiel received stripped of parts or components (cannibalized) (applicable to materiel returns or repairs only)
C5  Incomplete item received. Do not use for incomplete sets/kits/outfits (See discrepancy S9)

Supply Documentation

D1  Supply documentation not received with materiel
D2  Supply documentation illegible or mutilated
D3  Supply documentation incomplete, improper, or without authority (use only when receipt cannot be properly processed)
D301 Defense Turn-In Document (DTID) for partial weapon lacks missing parts list or certification statement
D4  Missing Quality Assurance Representative (QAR) Signature in Wide Area Workflow (WAWF)
D401 Receiving Report/Material Inspection and Receiving Report/Receiving Report (DD 250 or equivalent) incomplete, incorrect, or hard copy missing
D5  Transportation related documentation discrepancy
D501 Special Handling Data/Certification, DD Form 1387-2, omitted
D502 Special Handling Data/Certification, DD Form 1387-2, incomplete or incorrect
D503 Transportation Control and Movement Document (TCMD), DD Form 1384, omitted
D504 TCMD, DD Form 1384, incomplete or incorrect
D505 Shipper's Declaration for Dangerous Goods omitted
D506 Shipper's Declaration for Dangerous Goods incomplete (including incomplete item description)
D507 Shipper's Declaration for Dangerous Goods not appropriate for transportation mode

1 Two-position transportation-related documentation discrepancy code is not applicable for new submissions. Refer to ADC 1153.
DISCREPANCY CODES

D508  Department of Transportation Special Permit (DOT-SP) omitted
D509  Competent Authority Approvals (CAA) omitted
D510  Certificate of Equivalency (COE) omitted
D511  Inert certification omitted
D512  Drained and Purge Certificate/AFTO Form 20 omitted
D513  Explosives Classification Approval (CA) (EX-Letter) omitted
D599  Transportation-related documentation discrepancy (not identified by other code). See remarks.
D601  Hazardous Waste Profile Sheet omitted
D602  Hazardous Waste Profile Sheet incomplete or incorrect
D701  Hazardous Waste Manifest omitted
D702  Hazardous Waste Manifest incomplete or incorrect

Billing and Financial Discrepancies (Security Assistance Only)
B1  Requisitioned materiel received (no record of billing)
B2  Duplicate billing
B3  Wrong amount billed
F1  Financial discrepancy involving Security Assistance surcharge

Hazardous Material²
H1  Hazardous item in a condition other than shown on supply document or on the supporting inspection/test certificate
H2  Hazardous item in storage damaged or requires repair
H3  Lack of a Safety Data Sheet (SDS) in Hazardous Material Information Resource System (HMIRS)
H4  Non-radioactive item classified as radioactive, or non-hazardous item classified as hazardous
H5  Expired hazardous shelf life item

² Discrepancy Code H6, Shipper's Declaration for Dangerous Goods, has been re-assigned to the D-series. See D505 and D506.
DISCREPANCY CODES

**Lumber**
- **L1** Moisture exceeds allowable percentage
- **L2** Not treated in accordance with specification
- **L3** Product off grade
- **L4** Improper size
- **L5** Improper tally
- **L6** Improper or no grade mark on product
- **L7** Rotten product
- **L8** Splits, excessive wane, scant, or not end trimmed (one or all)

**Misdirected**
- **M1** Materiel improperly addressed and shipped to wrong activity

**Overage, Duplicate, Or Receipt of Canceled Materiel**
- **O1** Quantity received is more than quantity shown on the supply document.
- **O2** Quantity received is more than quantity requested plus variance, if applicable (other than unit of issue or unit of pack)
- **O3** Quantity duplicates another shipment
- **O4** Materiel received after cancellation
- **O5** Concealed overage discovered in a sealed shipping container
- **O6** Overage due to unit of issue/unit of pack incompatibility (use only when requisition specified no unit of issue/unit of pack variance)

**Packaging Discrepancy Codes**
- **P1** Improper preservation
  - **P101** Cleaning inadequate, incorrect, or omitted
  - **P102** Preservative inadequate, incorrect, or omitted
  - **P103** Barrier materiel inadequate, incorrect, or omitted
  - **P104** Unit pack cushioning inadequate, incorrect, or omitted
  - **P105** Unit container inadequate, incorrect, omitted or oversized
  - **P106** Desiccant incorrect, improperly located, or omitted
  - **P107** Tape/closure of unit container incorrect or inadequate

---

3 Two-position packaging discrepancy codes are not applicable for new submissions after September 1, 2013. Refer to ADC 1059.
DISCREPANCY CODES

P108 Hazardous materiels not removed as required
P109 Improper preservation of hazardous materiels (includes ammunitions/explosives)
P110 Level of protection excessive or inadequate
P111 Minimum protection not applied (materiel returns)
P112 Non-conformance to specified requirements for preservation (explanation required)
P113 Electrostatic/electromagnetic device preservation inadequate or omitted
P114 Concealed preservation defect found in storage (retail only)
P116 Preservation inadequate or incorrect resulting in item corrosion
P199 Improper preservation (not identified by other code). See remarks.

Packaging Discrepancy Codes

P2 Improper packing

P201 Container inadequate, incorrect, or oversized
P202 Intermediate container inadequate, incorrect, oversized, or omitted
P203 Exterior container inadequate, incorrect, oversized, or omitted
P204 Blocking and bracing inadequate, incorrect, or omitted
P205 Cushioning inadequate, incorrect, or omitted
P206 Level of protection excessive or inadequate
P207 Container deteriorated
P208 Skids incorrect or omitted
P209 Improper packing of hazardous materiels (includes ammunitions/explosives)
P210 Non-conformance to specified requirements for packing (explanation required)
P211 Improper foam-in-place
P212 Reusable container not used or improperly prepared
P213 Closure incorrect or inadequate
P214 Concealed packing defect found in storage (retail only)
P215 Non-conformance to specified requirements for wood packaging materiel (WPM)
P216 Packaging inadequate or incorrect resulting in item corrosion
P299 Improper packing (not identified by other code). See remarks.

---

4 Ibid.
DISCREPANCY CODES

Packaging Discrepancy Codes

P3  Improper markings

P301  Identification markings omitted, incomplete, incorrectly located, or not legible

P302  Improper marking of hazardous materials (includes ammunitions/explosives)

P303  Labels omitted or improperly affixed

P304  Contract data omitted, incomplete, incorrectly located, or not legible

P305  Precautionary or handling markings omitted, incomplete, or not legible

P306  Shelf-life markings omitted, incorrect, or not legible

P307  Bar code markings omitted, or not legible

P308  Incorrect lot number

P309  Set or assembly markings omitted

P310  Address incorrect or not legible

P311  Non-conformance to specified requirements for marking (explanation required).

P312  Electrostatic/electromagnetic device markings inadequate or omitted

P313  Packing list omitted or incorrectly located

P314  Passive RFID tag is missing

P315  Passive RFID tag is visibility damaged and unreadable

P316  Passive RFID tag is present but unreadable (not visibility damaged)

P317  Passive RFID tag read has no corresponding advance shipment notification

P318  Passive RFID tag read duplicates previously used tag identification

P319  Military Shipment Label (MSL), DD Form 1387, omitted; no Transportation Control Number (TCN)

P320  MSL, DD Form 1387, improperly affixed, incorrect, or incomplete

P399  Improper markings (not identified by other code). See remarks.

Packaging Discrepancy Codes

P4  Improper unitization (includes palletization and containerization)

P401  Cargo not unitized

P402  Shrink/stretch wrap inadequate or omitted

P403  Strapping inadequate or omitted

5 Ibid.
6 Ibid.
DISCREPANCY CODES

P404  Multiple consignees in single consignee consolidation container
P405  Protective covering/wrapping inadequate, improper, or omitted
P406  Contents of multipack container inadequately packaged, stuffed or missing unit packs
P407  Improper unitization/palletization/containerization of hazardous materials (includes ammunition/explosives)
P499  Improper unitization (not identified by other code). See remarks.

Product Quality (Item) Deficiency (Security Assistance Only)

Q1   Product Quality Deficiency
Q2   Quality deficiency, contractual noncompliance
Q3   Design deficiency, item requires change in design
Q4   Contracting deficiency, specification, and/or technical data deficient.
Q7   Safety hazard
Q8   Latent defect

Quality - Related Receipts/Stock Screening (Storage Activity Only)

Q11  Returned or stock screen item, PQDR exhibit deficiency
Q22  New procurement receipt, customer return, redistribution order, or stock screen item quality deficiency, contractual non-compliance, including specification and/or technical data deficiency
Q33  Returned, redistribution order, or stock screened item suspected materiel deficiency (DLA Customer Returns Improvement Initiative (CRII) items only)
Q55  Item under investigation
Q66  Customer return or stock screen item failed under use
Q77  New procurement receipt, customer return, or redistribution order receipt of stock screen item identified as a suspected critical safety item (CSI) discrepancy
Q99  New receipt item received for First Article Testing

Shortage or Nonreceipt

S1   Quantity received less than quantity indicated on supply documentation
S2   Quantity received is less than quantity requested minus variance, (other than unit of issue or unit of pack)

7 ADC 1126, not yet implemented.
DISCREPANCY CODES

S3 Total nonreceipt of U.S. Postal Service shipment.
S4 Total nonreceipt; not transportation related. (U.S. only)
S5 Total nonreceipt (Security Assistance only)
S6 Shortage due to unit of issue/ unit of pack incompatibility (use only when requisition specified no unit of issue/ unit of pack variance)
S7 Shortage or nonreceipt of an item in a multipack or sealed shipping container
S8 Concealed shortage discovered upon opening a sealed vendor’s pack (not applicable to Security Assistance)
S9 Incomplete component, assembly, sets, kit, outfit (CASKO) (do not use to report cannibalization of Supply System Responsibility Item (SSRI), Components Of End Item (COEI), or Basic Issue Item (BII); see Discrepancy Code C4)

Technical Markings (Name Plates, Log Books, Operating Handbooks, Special Instructions)\(^8\)

T1 Technical data markings missing
T2 Technical data markings illegible or mutilated
T3 Precautionary operational markings missing
T4 Inspection data missing or incomplete
T5 Serviceability operating data missing or incomplete
T6 Warranty data missing
T7 Missing part number on bare item
T9 Operating handbooks, log books, and/or special instructions missing

Item Unique Identification (IUID) of Serially-Managed/Tracked Materiel and Unidentifiable Materiel

U01 Unique identification (UII/serial number) on label missing, damaged, or unreadable
U02 Unique identification (UII/serial number) on item missing, damaged, or unreadable
U03 Unique identification (UII/serial number) on supply documentation missing, damaged, or unreadable
U04 Unique identification (UII/serial number) not provided on shipping notice

---

\(^8\) Discrepancy Code T8 discontinued. See W7 and W8.
DISCREPANCY CODES

U05  Non-conformance to unique identification requirements under terms of contract
U06  Multiple containers without separate unique identification (UII/serial number) listings
U07  Mismatch between unique identification (UII/serial number) on item and label
U08  Mismatch between unique identification (UII/serial number) on item or packaging marks/labels and the associated shipping documentation
U09  Mismatch between unique identification (UII/serial number) on item or packaging marks/labels and the associated due-in/shipping notice
U10  Mismatched or missing unique identification (UII/serial number) discovered upon opening a sealed pack
U11  Materiel unidentifiable; stock number missing or damaged
U12  Duplicate unique identification (applicable to UII only)
U13  Serial number unknown for serially-tracked item.
U14  Serial number convention invalid.

Incorrect Item

W1  Incorrect item received.
W2  Unacceptable substitute received.
W3  Incorrect item received, but not identifiable to an NSN or part number.
W4  Misidentified item received.
W5  Mixed stock received.
W6  Incorrect item discovered upon opening a sealed vendor’s pack (Not applicable to Security Assistance)
W7  Part number unmatched to FEDLOG/FLIS
W8  Incorrect part number for NSN received

Other Discrepancies

Z1  Other discrepancy - see remarks
Z2  Repetitive discrepancy (must use in combination with other codes or describe in remarks)
Z3  Distribution Center receipt not due-in; no prepositioned materiel receipt (PMR)
Z4  No record exists for document number cited on supply document (not used by distribution center; not applicable to Security Assistance)
DISCREPANCY CODES

Z5  Immediate resolution/replacement of discrepant item under inter-Service support agreement (restricted use per Service guidance)\(^9\)

Z6  Report reopened following inappropriate cancellation/completion (must use in combination with other discrepancy codes; must appear as first discrepancy code in transactions)

Z7  Property not authorized or not acceptable for turn-in to DLA Disposition Services

\(^9\) Refer to ADC 1062 and 1174. Not authorized for use by DLA Distribution Centers.
AP7.28.3. **SDR REQUESTED ACTION CODES.** The SDR Requested Action Code is used to provide a description of the action requested by the initiator of the SDR. This data element may be referred to as the SDR Action Code. This is a two position alphanumeric code. Only one action code may be used per SDR under DLMS. Preprinted codes on the face of the SF 364 may be supplemented from this list.

### SDR ACTION CODES

<table>

</tbody>
</table>
SDR ACTION CODES

4A Manager disposition requested for non-manager owned suspended stock per receipt/stock screening; no action by owner pending manager response.¹⁰

4B Action transferred to manager subsequent to return of non-manager owned suspended materiel to the manager.¹¹

AP7.28.4. DISCREPANCY STATUS OR DISPOSITION (REPLY) CODES.
Action activities use the Discrepancy Status or Disposition (Reply) Codes to codify a response to an SDR. This data element may be referred to as an SDR Reply Code. It is a three position numeric code. Up to three reply codes may be used on a single report to provide complete financial and materiel disposition instructions and provide additional information as needed. Codes may be used to replace or supplement preprinted information on the reverse side of the SF 364. System design should accommodate clear text for ease of use and interpretation.

Reply Codes

The 100-series codes provide status of financial resolution, materiel disposition instructions, or other appropriate information:¹²

101 Credit authorized by source of supply/item manager.¹³
102 Credit not authorized; see remarks.
105 Forward materiel received to location identified. Must use traceable and most economical means available.
106 Forward materiel received to contractor location identified (must use traceable and most economical means available).
109 Credit authorized by source of supply/item manager for repackaging costs.¹⁴
110 Disposal authorized in accordance with local procedures.
111 Disposal authorized, monetary reimbursement from contractor.
112 Disposal authorized, contractor will provide replacement.
113 Provide disposal documentation as requested.
114 Provide disposal documentation by date indicated as requested. Credit will be authorized upon receipt.
115 Turn in materiel received to DLA Disposition Services Field Office.
116 Turn in hazardous materiel received to DLA Disposition Services Field Office (MIPR or bill-to DoDAAC provided to cover disposal costs).
117 Materiel will be billed if not returned by date indicated.

¹⁰ Refer to ADC 1126 and 1084. Not authorized for use pending implementation; target implementation is 1Q FY 2017.
¹¹ Ibid.
¹² Exception: Reply Codes 103, 104, 107, and 108 have been moved to interim reply grouping.
¹³ No longer authorized for use by storage activities upon implementation of ADC 1160.
¹⁴ Refer to ADC 1203.

Reply Codes

149  Material will be picked up in number of days indicated.
150  Your requisition will be reinstated and placed on backorder.
151  Replacement/revised disposition/status; prior response is superseded.
152  Discrepancy validated by storage activity; credit processing associated with issue reversal ¹⁵

The 200-series codes provide additional information relevant to Security Assistance SDRs:

201  Incorrect information provided by U.S. Government contract.
202  MAPAD information not current by U.S. Government error.
203  Material erroneously returned to U.S. Government stock.
204  Overage of Repair and Replace material.
205  Shortage of Repair and Replace material.
206  Administrative write-off recommended.
207  No financial adjustment required. Excess Defense Articles (EDA). Overage not billed.
208  Repaired in-country by contractor or U.S. Government personnel.

The 300-series codes indicate storage activity or initial action activity status on SDRs forwarded to the owner/manager for action:

301  Interim reply; SDR forwarded to USA for disposition instructions or final resolution.
302  Interim reply; SDR forwarded to USAF for disposition instructions or final resolution.
303  Interim reply; SDR forwarded to USMC for disposition instructions or final resolution.
304  Interim reply; SDR forwarded to USCG for disposition instructions or final resolution.
305  Interim reply; SDR forwarded to USN for disposition instructions or final resolution.
306  Interim reply; SDR forwarded to GSA for disposition instructions or final resolution.
307  Interim reply; SDR forwarded to DLA for disposition instructions or final resolution.

¹⁵ Refer to ADC 1160.

**Reply Codes**

308 Interim reply; SDR forwarded to the identified Item Manager for disposition instructions or final resolution.

309 Interim reply; SDR forwarded to owner for disposition instructions or final resolution.

320 Reclassification of materiel complete. (Use only with Status Update.)

321 Documentation/technical data/other information are being forwarded. (Use only with Status Update.)

The 400-series codes indicate the SDR has been closed for the reason provided:

400 SDR closed. Non-compliance with disposition instructions.

401 SDR closed. Non-response to additional information request.

402 SDR closed. Wrong material returned.

410 SDR closed. Disposition action complete.

411 SDR closed SDR closed due to zero balance on record.

412 SDR closed. Materiel disposition could not be completed due to zero balance at storage location.

450 Administrative closure notification. SDR information copy sent to wrong source of supply

The 500-series (and some 100-series) codes indicate an interim reply:

103 Discrepancy report receipt acknowledgment.

104 Additional information required from submitter; see remarks.

107 Forward materiel to address shown for inspection/exhibit analysis (must use traceable and most economical means available).

108 Forward materiel to contractor address shown for inspection/exhibit analysis (must use traceable and most economical means available).

501 SDR assigned to Defense Contract Management Agency (DCMA) for investigation.

502 SDR resolution deferred pending receipt of exhibit.

503 Discrepancy report currently under investigation.

504 SDR forwarded to new action activity as shown.

505 SDR under investigation; SDR forwarded to activity identified for additional action.

506 Item has been transferred to new item manager; referred to GIM for disposition.

507 SDR forwarded to shipping depot for Proof of Delivery.
**Reply Codes**

508 SDR forwarded to shipping depot for Evidence of Shipment.
509 SDR forwarded to local procurement office for action.
513 SDR forwarded to IL Directorate or Repair and Return Office for research of R&R case.
514 Discrepancy report forwarded to the packaging specialist for research.
515 Procurement/DCMA awaiting response from contractor.
516 Receipt of material returned by customer has not posted to date; under investigation.
517 Defense Finance and Accounting Service (DFAS) billing information requested.
518 Your SDR identifies a transportation discrepancy and is being processed as a Transportation Discrepancy Report (TDR).
519 Your SDR identifies a quality deficiency and is being processed as a Product Quality Deficiency Report (PQDR).
520 Discrepancy report materiel undergoing test/evaluation.
521 Discrepancy report resolution pending PQDR review.
522 Discrepancy report resolution pending investigation/response from item manager.  
523 Manager notification to owner: return materiel to manager at current location.  
524 Owner notification to manager: materiel returned at current location for credit.  
525 Discrepancy validated by storage activity; credit recommended (use with 300-series forwarding reply code).  
526 Credit authorized; issue reversal requested.
527 SDR returned to storage/initial action activity for action; see remarks.
528  
530 Storage activity unable to perform requested issue reversal; see remarks (must use with 300-series forwarding reply code).

The 600-series codes indicate an ICP reply to the storage activity:

601 Change supply condition code and submit as new complaint (original complaint cannot be modified to show new supply condition code).
602 Item(s) unsuitable; destroy.
603 Remark and return to stock.

---

16 ADC 1126, not yet implemented.
17 Ibid.
18 Ibid.
19 Refer to ADC 1160.
Reply Codes

604 Repackage and return to stock.
605 Reidentify and return to stock.
606 Safety hazard; destroy.
607 Safety hazard; dispose.
608 Reclassify materiel as instructed; final disposition instructions will be provided upon confirmation of reclassification. (Do not use in combination with other reply codes.)
609 Reclassify materiel; disposition instructions provided (see remarks/ additional reply code(s)).
610 Materiel previously dispositioned; close SDR with no further action. (Provide remarks to explain circumstances for use of this code.)
611 Reidentify unique identification (UII/serial number) and return to stock.
612 Reverse associated receipt and reprocess to correct owner as identified.

The 700-series codes indicate SDR rejection:
701 Discrepancy report rejected. See remarks.
702 SDR rejected. Material shipped as requisitioned.
703 SDR rejected. Overage/shortage is within contract variation clause.
704 SDR rejected. Evidence of shipment/proof of delivery forwarded.
705 SDR rejected. Records indicate the inspection or test date or this shelf-life item has been extended to date indicated.
706 SDR rejected. Shelf-life not applicable for this item.
707 SDR rejected. Acceptable substitute issued for material requisitioned.
708 SDR rejected. Material shipped prior to cancellation request.
709 SDR rejected. Discrepant quantity shipped after SDR submission.
710 SDR rejected. Discrepant quantity on backorder.
711 SDR rejected. Material shipped via insured/certified/registered mail. Request you contact local postal authority to verify delivery of material.
712 SDR rejected. Submit offer of material under material returns program.
713 SDR rejected. Discrepancy does not meet required minimum dollar value.
714 SDR rejected. Billing adjustments may not be requested on a SDR (except Security Assistance). Contact local finance office.
715 SDR rejected. Discrepancy report/follow-up not submitted within authorized timeframe.
716 SDR recorded for information and possible corrective action.

---

20 Refer to ADC 1174.
Reply Codes

717 SDR identifies a carrier discrepancy. Resubmit as a Transportation Discrepancy Report (TDR).\(^{21}\)

718 SDR identifies a quality deficiency. Resubmit as a PQDR.\(^{22}\)

719 Discrepancy report rejected. Duplicate of previously submitted SDR.

The 800-series codes provide additional rejection notices relevant to Security Assistance SDRs:

801 SDR rejected. No billing discrepancy exists.

802 SDR rejected. Bill reflects pre-positioning costs/non-recurring costs.

803 SDR rejected. Bill reflects contract termination charge.

804 SDR rejected. Item proven serviceable when shipped (repair & return, exhibits).

805 SDR rejected. Freight forwarder tracking system indicates material received. Customer should challenge freight forwarder.

806 SDR rejected. Repair/adjustment procedures provided by source.

807 SDR rejected. Material shipped to address specified on LOA in lieu of country.

808 SDR rejected. SDR does not meet latent defect criteria and is, therefore, beyond the allotted timeframe for submission

809 SDR returned without action. Credit cannot be granted since debit billing has not processed. (ILCO use only.)

810 Freight forwarder notification not submitted for total nonreceipt.

The 900-series codes are intended for system/application use in processing transactions. When SDRs are processed manually, these codes may be user assigned as appropriate:

901 Transaction rejected. Discrepancy report submitted to wrong activity. Resubmit to the correct action activity (identified in remarks when known). When applicable, use with Reply Code 612 or receipt rejection transaction (DLMS 824R/MILSTRAP DZG) to reverse/reject the original receipt for reprocessing.

902 Transaction rejected. Invalid action code for type of discrepancy submitted.

904 Transaction rejected. Open suffix must be closed before SDR can be reopened.

\(^{21}\) Use of this code is discouraged. Every effort should be made to process the discrepancy report and resolve the situation without requiring the initiator to resubmit. See preferred codes 518 and 519.

\(^{22}\) See footnote 1.
### Reply Codes

906  Transaction rejected. Record already closed.
908  Transaction rejected. Record is currently open and cannot be reopened for reconsideration until closed.
909  Transaction rejected. SDR must be reopened for reconsideration before it can be contested.
910  Transaction rejected. Missing or invalid document number (or document number/suffix).
911  Transaction rejected. Missing or invalid case designator.
912  Transaction rejected. Missing or invalid discrepancy report number.
915  Transaction rejected. Missing or invalid type of discrepancy code.
916  Transaction rejected. Missing or invalid action desired code.
917  Transaction rejected. Missing or invalid discrepant quantity.
918  Transaction rejected. Missing or invalid quantity received.
919  Transaction rejected. Invalid Security Assistance materiel location code.\(^{23}\)
920  Transaction rejected. Missing or invalid point of contact name.
921  Transaction rejected. Missing or invalid point of contact phone number/email.
923  Transaction rejected. Missing or invalid transaction date.
924  Transaction rejected. Narrative missing.
926  Transaction rejected. No record found.
927  Transaction rejected. Missing or invalid disposition/reply code
928  Transaction rejected. Missing or invalid condition code.
929  Transaction rejected. Missing, invalid, or unauthorized use of DoDAAC, MAPAC, or RIC.
930  Transaction rejected. Missing information associated with disposition/reply
931  Transaction rejected. Missing or invalid materiel identification.
932  Transaction rejected. Missing or invalid wrong item information.
933  Transaction rejected. Discrepancy report follow-up submitted before action activity response time has elapsed.
934  Transaction rejected. Forwarding action not authorized. Submit new SDR.
935  Transaction rejected. Forwarding action cannot be processed due to incomplete SDR history. Contact originator to resubmit with updated action activity.
936  SDR processing suspended. Request DoD WebSDR provide an information copy of the original report.

\(^{23}\) Refer to ADC 1203.
**Reply Codes**

937 Transaction rejected. DoD WebSDR/WebSQCR unable to provide requested SDR information copy.

938 Transaction rejected. Missing or invalid transaction set purpose code.

939 Transaction rejected. Missing, invalid, or inappropriate discrepancy report document type code.

940 Transaction rejected. Improper or Missing either contract number or contractor-assigned shipment number on SDR associated with vendor shipment.

941 Transaction failed during processing. SDR cannot be transmitted electronically to the designated action activity.

942 Transaction rejected. Unauthorized use of reply code. The 200-series reply codes may only be used for Security Assistance SDRs.

943 Transaction rejected. Fund Code or Standard Line of Accounting (SLOA) data elements do not match SFIS Fund Code to Fund Account Conversion Table.\(^{24}\)

944 Transaction rejected. Forwarding transaction not properly formatted.

945 Transaction rejected. Forwarding action not authorized; see remarks.

946 Transaction rejected. Missing serial number for serially-tracked item.

947 Transaction rejected. Invalid serial number length or convention.

948 Transaction rejected. Unauthorized change in the Owner, Manager, or Source of Supply field.

949 Transaction rejected. Reply Code 504 can only be used for SDR Document Type Code 7 or R, and cannot be used with any other reply code.

**AP7.28.5 DISCREPANCY REPORT DOCUMENT TYPE CODES**

**AP7.28.5.1.** The following codes are used to identify report categories for appropriate automated processing. Discrepancy Report Document Type Codes and DLA Disposition Services SDR Type Codes are one position alphanumeric codes.

**AP7.28.5.2.** The Discrepancy Report Document Type Code (DLMS Qualifier D) is used on SDRs to identify the type of discrepancy report and type of shipment involved. In the context of SDR processing, this data element may be referred to as an SDR Document Type; however, there are many other code values assigned that are not applicable to SDRs. This data element is mandatory on SDR transactions.

**AP7.28.5.3.** The DLA Disposition Services SDR Type Code (DLMS Qualifier ST) is used as a sub-type code in conjunction with the SDR Document Type to further clarify

\(^{24}\) Refer to ADC 1043A/1043E. Note: Issues with content of the SFIS Fund Code to Fund Account Conversion Table are to be communicated to the Fund Code Monitor of the cognizant Component.
the shipment scenario. This data element may be referred to as an SDR Sub-Type Code. This data element is conditional; it is used when applicable.

**SDR DOCUMENT TYPE CODES**

Available for DoD WebSDR and Component-Sponsored SDR applications:

- **6** Customer originated, direct vendor/contractor delivery
- **7** Customer originated, depot/lateral shipment/other

Restricted Use. Authorized user only:

- **A** Storage Site receipt, customer return/Other
- **N** Storage site receipt, depot shipment (RDO)
- **P** Storage site procurement source receipt
- **V** Customer originated, lateral shipment under TAV
- **W** Transshipment SDR

Available for Distribution Standard System Originated SDRs only:

- **8** Depot originated, depot receipt from non-procurement source (other than or RDO)
- **9** Depot originated procurement source receipt
- **R** Depot originated, redistribution order receipt
- **D** DLA Disposition Services Field Office originated

**DLA DISPOSITION SERVICES DOCUMENT TYPE CODES**

Available for Distribution Standard System Originated SDRs only. Must use in conjunction with SDR Document Type Code D:

- **B** Distribution Center shipment to a Field Office
- **E** Field Office Redistribution
- **T** DLA Disposition Services Field Office Turn-in

Available for DoD WebSDR only. Restricted Use. Must use in conjunction with SDR Document Type Code 7:

- **D** Disposition Services donated materiel
- **F** Disposition Services transferred materiel
- **O** Other Disposition Services shipment
- **R** Disposition Services reutilization

---

25 SDR Document Type Code D must be used in conjunction with the applicable DLA Disposition Services Document Type Code.
SDR DOCUMENT TYPE CODES

S  Disposition Services sale

Restricted. No longer available for new submissions after March 30, 2012:

L  Disposition Services DEMIL

P  Disposition Services Field Office SDR, depot shipment
AP7.29 APPENDIX 7.29

STOCK READINESS RELEVANT DATA ELEMENTS

AP7.29.1. GENERAL

AP7.29.1.1. This appendix provides a consolidated reference resource for data elements and their associated code sets applicable to Stock Screening Request and Storage Quality Control Report (SQCR) submissions and responses. These data elements are applicable in all Stock Screening Requests and SQCR processing under the DLMS. The following data elements are included in this appendix. Within the context of stock readiness procedures, these data elements may be recognized by abbreviated names as indicated.

- Shipping, Packaging, and Storage Discrepancy Code. Also referred to as Discrepancy Code.
- SDR or SQCR Requested Action Code. Also referred to as Action Code.
- Discrepancy Status or Disposition (Reply) Code. Also referred to as Reply Code.
- Discrepancy Report Document Type Code. Also referred to as Document Type.

AP7.29.2. IN-STORAGE DISCREPANCY CODES. The following codes are used to provide a description of the discrepant condition. Up to two discrepancy codes may be used on a single report.

**DISCREPANCY CODES**

**Condition of Materiel**

A1 Condition of stored materiel changed because of damage
A2 Condition of materiel changed because of deterioration
A3 Stored materiel is misidentified
A4 Stored materiel is incomplete
A5 Stored materiel requires repair
A6 Improper storage conditions resulting in item corrosion
C1 In a condition other than shown on supply document or on the supporting inspection/test certificate (if hazardous materiel use code H1)
C2 Expired shelf life item (if hazardous materiel use code H5)
C6 Damage caused by pilferage, vandalism, or theft

**Hazardous Material**

D601 Hazardous waste profile sheet omitted
D602 Hazardous waste profile sheet incomplete or incorrect
DISCREPANCY CODES

D701 Hazardous waste manifest omitted
D702 Hazardous waste manifest incomplete or incorrect
H1 Hazardous item in a condition other than shown on supply document or on the supporting inspection/test certificate
H2 Hazardous item in storage damaged or requires repair
H3 Lack of a Safety Data Sheet (SDS) in Hazardous Material Information Resource System (HMIRS)
H4 Non-radioactive item classified as radioactive, or non-hazardous item classified as hazardous
H5 Expired hazardous shelf life item

Lumber
L1 Moisture exceeds allowable percentage
L2 Not treated in accordance with specification
L3 Product off grade
L4 Improper size
L5 Improper tally
L6 Improper or no grade mark on product
L7 Rotten product
L8 Splits, excessive wane, scant, or not end trimmed (one or all)

Overage
O5 Concealed overage discovered in a sealed shipping container
O6 Overage due to unit of issue/unit of pack incompatibility

Packaging Discrepancy Codes¹
P1 Improper preservation
P101 Cleaning inadequate, incorrect, or omitted
P102 Preservative inadequate, incorrect, or omitted
P103 Barrier materiel inadequate, incorrect, or omitted
P104 Unit pack cushioning inadequate, incorrect, or omitted
P105 Unit container inadequate, incorrect, omitted or oversized
P106 Desiccant incorrect, improperly located, or omitted
P107 Tape/closure of unit container incorrect or inadequate
P108 Hazardous materiels not removed as required

¹ Two-position packaging discrepancy codes are not applicable for new submissions after September 1, 2013. Refer to ADC 1059.
DISCREPANCY CODES

P109 Improper preservation of hazardous materials (includes ammunitions/explosives)
P110 Level of protection excessive or inadequate
P112 Non-conformance to specified requirements for preservation (explanation required)
P113 Electrostatic/electromagnetic device preservation inadequate or omitted
P114 Concealed preservation defect found in storage (explanation required)
P116 Preservation inadequate or incorrect resulting in item corrosion
P199 Improper preservation not identified by other code; see remarks

P2 Improper Packing
P201 Container inadequate, incorrect, or oversized
P202 Intermediate container inadequate, incorrect, oversized, or omitted
P203 Exterior container inadequate, incorrect, oversized, or omitted
P204 Blocking and bracing inadequate, incorrect, or omitted
P205 Cushioning inadequate, incorrect, or omitted
P206 Level of protection excessive or inadequate
P207 Container deteriorated
P208 Skids incorrect or omitted
P209 Improper packing of hazardous materials (includes ammunitions/explosives)
P210 Non-conformance to specified requirements for packing (explanation required)
P211 Improper foam-in-place
P212 Reusable container not used or improperly prepared
P213 Closure incorrect or inadequate
P214 Concealed packing defect found in storage (explanation required)
P215 Non-conformance to specified requirements for wood packaging material (WPM)
P216 Packaging inadequate or incorrect resulting in item corrosion
P299 Improper packing (not identified by other code); see remarks

P3 Improper markings
P301 Identification markings omitted, incomplete, incorrectly located, or not legible
DISCREPANCY CODES

P302 Improper marking of hazardous materials (includes ammunition/explosives)
P303 Labels omitted or improperly affixed
P304 Contract data omitted, incomplete, incorrectly located, or not legible
P305 Precautionary or handling markings omitted, incomplete, or not legible
P306 Shelf-life markings omitted, incorrect, or not legible
P307 Bar code markings omitted, or not legible
P308 Incorrect lot number
P309 Set or assembly markings omitted
P311 Non-conformance to specified requirements for marking (explanation required).
P312 Electrostatic/electromagnetic device markings inadequate or omitted
P313 Packing list omitted or incorrectly located
P399 Improper markings not identified by other code; see remarks

P4 Improper unitization (includes palletization and containerization)
P405 Protective covering/wrapping inadequate, improper, or omitted
P499 Improper utilization not identified by other code; see remarks

Quality-Related Stock Screening (Storage Activity Only)

Q11 Returned or stock screen item, PQDR exhibit deficiency
Q22 New procurement receipt, customer return, redistribution order or stock screen item quality deficiency, contractual non-compliance including specification and/or technical data deficiency
Q33 Returned, redistribution order, or stock screened item suspected materiel deficiency (DLA Customer Returns Improvement Initiative (CRII) items only)
Q55 Item under investigation
Q66 Customer return or stock screen item failed under use
Q77 New receipt, customer return, redistribution order to stock screen item identified as a Critical Safety Item (CSI)
DISCREPANCY CODES

Shortage or Nonreceipt

S6 Unit of issue/unit of pack incompatible
S9 Incomplete component, assembly, set, kit, outfit (CASKO) (do not use to report cannibalization of Supply System Responsibility Item (SSRI), Components Of End Item (COEI), or Basic Issue Item (BII); see Discrepancy Code C4)

Technical Markings (Name Plates, Log Books, Operating Handbooks, Special Instructions)

T1 Technical data markings missing
T2 Technical data markings illegible or mutilated
T3 Precautionary operational markings missing
T4 Inspection data missing or incomplete
T5 Serviceability operating data missing or incomplete
T6 Warranty data missing
T7 Missing part number on bare item
T9 Operating handbooks, log books, and/or special instructions missing

Unique Identification and Unidentifiable Materiel

U01 Unique identification data on label missing, damaged, or unreadable
U02 Unique identification data on item missing, damaged, or unreadable
U05 Non-conformance to unique identification requirements under terms of contract
U06 Multiple containers without separate unique identification data listings
U07 Mismatch between unique identification data on item and label
U10 Mismatched or missing unique identification discovered upon opening a sealed pack
U11 Materiel unidentifiable; stock number missing or damaged

Other Discrepancies

Z1 Other discrepancy - see remarks
Z5 Immediate resolution/replacement of discrepant item under DLA industrial activity support agreement
Z6 Discrepancy report resubmitted following cancellation must use with other codes
AP7.29.3. **SQCR REQUESTED ACTION CODES.** The Requested Action Code is used to provide a description of the action requested by the initiator of the SQCR. Only one action code may be used per SQCR under DLMS.

**ACTION CODES**

1A Disposition instructions for discrepant materiel requested; financial action not applicable.

1Z Other action requested (see remarks).

2C Technical documentation/data requested.

3B Discrepancy reported for corrective action and trend analysis; no reply required.

4A Manager disposition requested for non-manager owned suspended stock per receipt/stock screening; no action by owner pending manager response.²

4B Action transferred to manager subsequent to return of non-manager owned suspended materiel to the manager.³

AP7.29.4. **DISCREPANCY STATUS OR DISPOSITION (REPLY) CODES.** Action activities use the Discrepancy Status or Disposition (Reply) Codes to codify a response to an SQCR. This data element may be referred to as a Reply Code. Up to two reply codes may be used on a single SQCR reply to provide complete disposition instructions and additional information as needed. WebSQCR and WebSS may also use reply codes on automatic reject replies for transactions that fail edit criteria. System design should accommodate clear text for ease of use and interpretation. The following Reply Codes may be used on the SQCR.

**Reply Codes**

The 100-series codes provide status of financial resolution, materiel disposition instructions, or other appropriate information:⁴

105 Forward materiel received to location identified. Must use traceable and most economical means available.

106 Forward materiel received to contractor location identified (must use traceable and most economical means available).

110 Disposal authorized in accordance with local procedures.

111 Disposal authorized, monetary reimbursement from contractor.

112 Disposal authorized, contractor will provide replacement.

119 Retain materiel received at no charge.

---

² Refer to ADC 1084. Not authorized for use pending implementation; target implementation is 1Q FY 2017.

³ Ibid.

⁴ Reply Codes 103, 104, 107, and 108 have been moved to interim reply grouping.
Replay Codes

120 Retain materiel with consideration from contractor.
121 Retain materiel without consideration from contractor.
122 Retain materiel for future supply decision.
129 Reimbursement for repackaging discrepancy cannot be authorized until submitter provides cost for repackaging.
130 Place materiel in stock as is.
131 Remark/repackage materiel and place in stock.
133 Upgrade materiel to Condition Code A, correction made by government with reimbursement from contractor.
134 Upgrade materiel to Condition Code A, correction made by government without reimbursement from contractor.
135 Documentation/technical data is being forwarded.
137 Additional comments provided; see remarks.
144 Recorded for information only; no action taken.
145 No contractor liability found.
148 Representative will contact you for discussion concerning disposition.
151 Replacement/revised disposition/status; prior response is superseded.
152 Discrepancy report recorded for information and possible corrective action.

The 300-series codes indicate Distribution Center status on SDRs/SQCRs forwarded to the owner/manager for action:

320 Reclassification of materiel complete. (Use only with Status Update.)
321 Documentation/technical data/other information are being forwarded. (Use only with Status Update.)

The 400-series codes indicate the SDR/SQCR has been closed for the reason provided:

410 Discrepancy report closed. Disposition action complete.
411 Discrepancy report closed due to zero balance on record.
412 Discrepancy report closed. Materiel disposition could not be completed due to zero balance at storage location.

The 500-series (and some 100-series) codes indicate an interim reply:

103 Discrepancy report receipt acknowledgment.
104 Additional clarification required from submitter; see remarks.
Reply Codes

107  Forward materiel to address shown for inspection/exhibit analysis (must use traceable and most economical means available).

108  Forward materiel to contractor address shown for inspection/exhibit analysis (must use traceable and most economical means available).

503  Discrepancy report currently under investigation.

514  Discrepancy report forwarded to the packaging specialist for research.

520  Discrepancy report materiel undergoing test/evaluation.

521  Discrepancy report resolution pending PQDR review.

522  Discrepancy report resolution pending investigation/response from item manager.\(^5\)

523  Manager notification to owner: return materiel to manager at current location.\(^6\)

524  Owner notification to manager: materiel returned at current location for credit.\(^7\)

The 600-series codes indicate an ICP reply to the Distribution Center:

602  Item(s) unsuitable; destroy.

603  Remark and return to stock.

604  Repackage and return to stock.

605  Reidentify and return to stock.

606  Safety hazard; destroy.

607  Safety hazard; dispose.

608  Reclassify materiel as instructed.

611  Reidentify unique identification (UII/serial number) and return to stock.

The 700-series codes indicate SDR/SQCR rejection:

701  Discrepancy report rejected. See remarks.

719  Discrepancy report rejected. Duplicate of previously submitted discrepancy report.

\(^5\) Refer to ADC 1084. Not authorized for use pending implementation; target implementation is 1Q FY 2017.

\(^6\) Ibid.

\(^7\) Ibid.
Reply Codes

The 900-series codes are intended for system/application use in processing transactions. When SDRs/SQCRs are processed manually, these codes may be user assigned as appropriate:

- **901**: Transaction rejected. Discrepancy report submitted to wrong owner/manager. Resubmit to the correct action activity.
- **902**: Transaction rejected. Invalid action code for type of discrepancy submitted.
- **904**: Transaction rejected. Open suffix must be closed before discrepancy report can be reopened.
- **906**: Transaction rejected. Record already closed.
- **907**: Transaction rejected. Discrepancy report canceled.
- **908**: Transaction rejected. Record is currently open and cannot be reopened for reconsideration until closed.
- **910**: Transaction rejected. Missing or invalid document number (or document number/suffix).
- **912**: Transaction rejected. Missing or invalid discrepancy report system-assigned control number.
- **915**: Transaction rejected. Missing or invalid type of discrepancy code.
- **916**: Transaction rejected. Missing or invalid action desired code.
- **917**: Transaction rejected. Missing or invalid discrepant quantity.
- **920**: Transaction rejected. Missing or invalid point of contact name.
- **921**: Transaction rejected. Missing or invalid point of contact phone number/email.
- **923**: Transaction rejected. Missing or invalid transaction date.
- **924**: Transaction rejected. Narrative missing.
- **926**: Transaction rejected. No record found.
- **927**: Transaction rejected. Missing or invalid disposition/reply code.
- **928**: Transaction rejected. Missing or invalid condition code.
- **929**: Transaction rejected. Missing, invalid, or unauthorized use of DoDAAC, MAPAC, or RIC.
- **930**: Transaction rejected. Missing information associated with disposition/reply.
- **931**: Transaction rejected. Missing or invalid materiel identification.
- **933**: Transaction rejected. Discrepancy report follow-up submitted before action activity response time has elapsed.
- **937**: Transaction rejected. DoD WebSDR/WebSQCR unable to provide requested Discrepancy report information copy.
- **938**: Transaction rejected. Missing or invalid transaction set purpose code.
Reply Codes

939  Transaction rejected. Missing, invalid, or inappropriate discrepancy report document type code.

941  Transaction failed during processing; it cannot be transmitted electronically to the designated action activity.

AP7.29.5. DISCREPANCY REPORT DOCUMENT TYPE CODES. The following codes are used to identify report categories for appropriate automated processing.

DOCUMENT TYPE CODES

5   Storage Quality Control Report/Reply
S   Stock Screening Request/Reply
AP7.30. APPENDIX 7.30

HAZARDOUS WASTE/MATERIAL CODE

NUMBER OF CHARACTERS: One (Generator Communication Legacy)/Two (DLMS)

TYPE OF CODE: Alpha

EXPLANATION: Entered on the DTID Record supporting a Hazardous Material/Hazardous Waste Turn-In to DLA Disposition Services to identify the nature of the hazard and service request. The Generator Communication (GenComm) legacy format is one alpha character. Under the DLMS, this value is converted to a two position alpha character for alignment with the Disposition Services Indicator DLMS data element.

RECORD POSITIONS: GENCOMM DTID Record Format (8th data element)

DLMS SEGMENT/QUALIFIER: LQ Segment, LQ01 Data Element ID 1270 Qualifier “DSI – Disposition Services Indicator”

<td>867I/D7_</td>
<td>Navy use only. Reversal of issue transaction when a cancellation request has been issued for a material/disposal release order (MRO/DRO) and the item was not yet shipped. Reversal requirement stems from a timing issue. The MRO/DRO is in process, the depot accountable balance has been decremented and the issue transaction has been sent to the ICP to decrement to the owner balance. Subsequent to this action, but prior to the material being physically shipped and a confirmation being generated, the MRO/DRO issue action is cancelled and the material is returned to stock, if necessary. A D7_issue reversal transaction is then required to increment the depot's accountable balance and the ICP's balance to the original quantity.</td>

AP8.1. APPENDIX 8.1

FORMATS INTRODUCTION

AP8.1.1. General. The AP8 series of appendices prescribe the record position alignment and data entries for the DoD Issue Release/Receipt Document and such other transactions that are utilized in the complete processing of a requisition through the supply system, including materiel obligation validation (MOV) formats, regardless of the organizational structure of the system.

AP8.1.2. Formats. Legacy MILSTRIP formats are described in AP8.2 through AP8.55.

AP8.1.3. Special Explanation/Instruction.

AP8.1.3.1 Expressing Ammunition and Ammunition Related Quantities Exceeding 99,999. For ammunition and ammunition related items Federal supply group (FSG) 13 and Federal supply Classification (FSC) 1410, 1420, 1427, 1440, 5330, 5865, 6810, or 8140), quantities exceeding 99,999 may be expressed in thousands by placing an M in record position 29. Example: A quantity of 1,950,000 would be expressed as 1950M (1950 in record positions 25-28 and an M in record position 29. Quantities not evenly divisible by thousands shall require two transactions. The first transaction shall reflect the rounded thousands using the M modifier and the second transaction shall reflect the residual quantity. For example, for a quantity of 100,001, the first document shall reflect a quantity of 0100M and the second document shall reflect a quantity of 00001.

AP8.1.3.2. Exception Rule for Ammunition and Ammunition Related Items. Exception rules exist for ammunition and ammunition related items (FSG 13 and FSC 1410, 1420, 1427, 1440, 5330, 5865, 6810 or 8140). By trading partner agreement and by coordination with DLA Transaction Services, an exception rule is available for communicating larger quantities in identified transactions. This rule is only applicable when the initiating system is DLMS compliant (and supports larger quantities) and the receiving system is using legacy MILSTRIP. Under this rule, when the quantity exceeds 99,999, the DLA Transaction Services transaction conversion from DLMS to legacy format shall transmit the initial quantity using the standard configuration using the qualifier M in rp 29 to represent thousands. The residual quantity from the DLMS transaction shall be transmitted separately using the original document number and original/blank suffix code. The legacy trading partner system shall be responsible for accumulating the quantities transmitted separately (rather than superseding or rejecting as duplicate transactions).¹

¹ Refer to ADC 441 and ADC 441A, Exception Rules to Accommodate Communication of Ammunition/Ammunition Related Quantities in Excess of Five Digits

<sup>1</sup> See the AP2 series of appendices for an explanation of the data fields.

<sup>2</sup> Requisitions to DLA Disposition Services (RIC S9D) cannot reflect an entry in rp 21-22.
FIELD LEGEND  TYPE REQUISITION BLOCK
NUMBER(S) (MANUAL) RECORD POSITION(S) (MECHANICAL) ENTRY AND INSTRUCTIONS

Document Number  Blocks 9-12  30-43  Enter document number as assigned by the preparing activity.
Demand\(^3\)  Block 13  44  Enter the demand code; otherwise, leave blank.
Supplementary Address  Blocks 14-15  45-50  When applicable, enter the coded SUPADD of the ship-to or bill-to activity; otherwise, leave blank.
When coded data is not significant to the source of supply (other than an activity address code (AAC)), enter an alphabetic Y in rp 45.

Signal  Block 16  51  Enter the signal code.

Fund  Block 17  52-53  Enter the fund code as directed by the Component.

Distribution  Block 18  54  When applicable, enter the distribution code of the activity to receive status information in addition to the requisitioner or the SUPADD.
55-56  Enter the code as directed by the Components.

Project  Block 19  57-59  When applicable, enter the appropriate project code under Component instructions.

Priority  Block 20  60-61  Enter priority designator.

Required Delivery Date/Required Delivery Period\(^4\)  Block 21  62-64  Enter data requirements from AP2.14, as applicable; otherwise, leave blank.

Advice  Block 22  65-66  Enter advice code to convey instructions to the source of supply; otherwise, leave blank.

\(^3\) On an Intra-Army basis, a suffix code entry is authorized for identification of post-post partial issues of materiel by Army Single Stock Fund Activities. These requisitions will contain Army Edit Action Code IV in rp 74-75.

\(^4\) Use of RDP for conventional ammunition last reported as not implemented by USAF. Refer to AMCL 148.

¹ See Appendix AP8.1 - Formats Introduction, Paragraph AP8.1.3
Port of Embarkation 54-56

a. For shipments moving to Outside Continental United States (OCONUS) destinations via the Defense Transportation System (DTS) Government Bill of Lading (GBL)/Commercial Bill of Lading (CBL), enter the POE.

b. For deliveries to Ports of Embarkation (POE), or parcel post entering the DTS at a POE (other than the Army/Air Force Post Office (APO)/FPO postal system), enter the POE or SEAVAN CCP. See DTR 4500.9-R, “Defense Transportation Regulation” (DTR).

c. Leave blank for parcel post movement through an APO or FPO.

d. Enter the POE for Foreign Military Service (FMS) transactions moving via the defense transportation system (DTS). If not moving via the DTS, leave blank.

e. Enter the POE for Grant Aid transactions except parcel post.

f. For Continental United Stated (CONUS) shipments, leave blank.

Date Shipped 57-59 Date released/tendered to carrier.

Transportation Control Number 60-76 Enter the shipment unit TCN as prescribed in DTR.

Mode of Shipment 77 Enter code identifying the mode of shipment. Leave blank in response to a follow-up when shipment has not occurred.

Date Available for Shipment 78-80 Enter the date available for shipment.

For Local Issues From Disposal³

Mode of Shipment 77 Enter the code identifying the mode of shipment.⁴

Routing Identifier Code 78-80 Enter the RIC of the DLA Disposition Services Field Office processing the local issue requisition and releasing the materiel.

AP8.31. APPENDIX 8.31

FOREIGN MILITARY SALES NOTICE OF AVAILABILITY DETAIL DOCUMENT

AP3.31.1. The mechanized foreign military sales (FMS) notice of availability (NOA) detail document will be prepared from the issue release/receipt documents (materiel release order (MRO), DD Form 1348-1A, and DD Form 1348-2) contained in the shipment unit and shall accompany the FMS NOA key document.

**FIELD LEGEND**

**RECORD**

**POSITION(S)**

**ENTRY AND INSTRUCTIONS**

Document Identifier Code 1-3  

a. Enter DIC AD2 for the initial detail NOA document.  
b. Enter DIC AD4 for the delay detail NOA document.

Routing Identifier Code 4-6 Enter the RIC of the activity transmitting the NOA.

Media and Status 7 Enter the same M&S code as the issue release/receipt document (MRO, DD Form 1348-1A, DD Form 1348-2).

Stock or Part Number 8-22 Enter the stock or part number of the item supplied.

Unit of Issue 23-24 Enter data same as the issue release/receipt document (MRO, DD Form 1348-1A, DD Form 1348-2).

Quantity 25-29  
a. Enter data same as the issue release/receipt documents (MRO, DD Form 1348-1A, DD Form 1348-2).  
b. For ammunition and ammunition related items only (items in Federal Supply Group (FSG) 13 and for Federal Supply classification (FSC) 1410, 1420, 1427, 1440, 5330, 5865, 6810 or 8140), enter an “M” in rp 29 to express in thousands any quantity exceeding 99,999. Example: Express a quantity of 1,950,000 as 1950M (1950 in rp 25-28 and an “M” in rp 29).

Document Number 30-43 Enter data same as the issue release/receipt document (MRO, DD Form 1348-1A, DD Form 1348-2).

AP8.32. APPENDIX 8.32

FOREIGN MILITARY SALES NOTICE OF AVAILABILITY
REPLY DOCUMENT

AP3.32.1. The mechanized foreign military sales (FMS) notice of availability (NOA) reply document is used when replying to a mechanized NOA. When shipment release is to be made to the addresses identified by coded entries in the requisition and the DLM 4000.25 Volume 6, Chapter 3 (Military Assistance Program Address Directory (MAPAD)), the DIC AD5 shall contain the shipment release code (SRC) R in rp 60. When shipment release is to be made to an address that is not coded or contained in the MAPAD, the DIC AD5 shall contain SRC E in rp 60.

RECORD

FIELD LEGEND POSITIONS ENTRY AND INSTRUCTIONS

Document Identifier Code 1-3 Enter DIC AD5.
Routing Identifier Code through Cube 4-39 Enter data same as rp 4-39 of initial or delay FMS NOA key document.
Customer Transportation Order Number 40-44 When customer (CR/FF) assigns a number for internal control of shipments, the number shall be entered in these columns.
Other Fields 45-59 Enter data same as rp 45-59 of initial or delay FMS NOA key document.
Shipment Release 60 Enter codes as follows:
a. Enter R when shipment to be released to appropriate ship-to address contained in the MAPAD as identified by address codes in the FMS requisition.
b. Enter E when release instructions are being mailed under separate cover on the date of this reply.
Transportation Control Number¹ 61-77 Enter data same as rp 61-77 of initial or delay FMS NOA key document.
Date of Reply 78-80 Enter ordinal day reply to NOA is transmitted.

¹ Refer to (ADC) 1098, Updates to DD Form 1348-5 Notice of Availability (NOA) and Corresponding DLMS 856N NOA and 870N NOA Reply.

<td>24</td>
<td><strong>Document Number</strong> - Perpetuate from source document. This cannot be the same document number that was used to receive the materiel. For locally determined excesses generated at base, post, camp, or station, assign a document number as determined by Service/Agency procedures. <strong>Suffix Code</strong> - Leave blank.(^4)</td>
</tr>
<tr>
<td>25</td>
<td><strong>National Stock Number</strong> - Enter the stock number or part number being turned in. <strong>Additional</strong> - For subsistence items, enter the type of pack code rp 21.</td>
</tr>
<tr>
<td>26</td>
<td>For turn-in to DLA Disposition Services Field Office - This block will not contain bar code data, it is reserved for internal DLA Disposition Services Field Office use.</td>
</tr>
</tbody>
</table>

\(^4\) Data from blocks 24-25 will be displayed in two configurations; (1) three-of-nine bar code and (2) in-the-clear. When prepared manually, bar code will not be included.
BLOCK(S) ENTRIES

27 This block may contain additional data including bar coding for internal use. This block may contain a PDF417 2D bar code that contains information for serially tracked items and repeats bar coded data content. Enter data in this block as required by the shipping activity or the DLA Disposition Services receiving the materiel. When data is entered in the block, it will be clearly identified. See Appendix 6.35 for Code 39 linear bar code and PDF417 2D bar code format information. See Appendix 6.36 for the Block 27 continuation page requirements.

HM/HW Turn-Ins – For hazardous materiel and waste turn-ins, enter the DoDAAC of the bill-to office (required for Signal Code B), the contract line item number (CLIN) for the item on the disposal contract, the total cost of the disposal, Hazardous Waste Profile Sheet Reference Number, the Material Safety Data Sheet 5-digit alpha code from the Hazardous Material Information Repository System, the Chemical Name of Hazardous Contaminant(s), and the Noun Name of Non-Hazardous Contaminant(s).

FSCAP Items – This block will contain both coding and clear-text information to identify Flight Safety Critical Aircraft Parts (FSCAP) shipments to DLA Disposition Services Field Offices using Criticality Code E or F as follows: FSCAP E - Flight Safety Critical Aircraft Part-Nuclear Hardened or FSCAP F – Standard Flight Safety Critical Aircraft Part.\(^5\)

Scrap Reimbursement – This block will contain the fund citation for reimbursement of scrap proceeds minus Disposition processing costs.

For IUID to support UIT/serialized item management\(^6\)

Unique Item Identifier (UII) and/or Serial Number

The following additional data elements may be included in support of IUID:

- Manufacturer’s CAGE
- Current Part Number
- Batch/Lot

Clear text labeling of IUID information must be provided using the following acronyms: CAGE, P/N, BT/LT, S/N, and UII.

Small Arms/Light Weapons (SA/LW) Turn-In\(^7\) – Ship serialized weapons and serialized weapon parts to the Anniston, Alabama, DEMIL Center. Do not mix partial and complete weapons on a single IRRD. For partial/incomplete weapon turn-in, identify missing parts in this block. If there is insufficient space, use an attached continuation page (refer to

---

\(^5\) Identification of FSCAP codes on the DTID and disposal release transactions last reported as not implemented by USA and USN. Refer to Approved DLSS/DLMS Change 6,

\(^6\) Capability to support IUID data content within the PDF417 2D bar code has been approved for staggered and phased implementation under ADC44B and ADC 399/399A. Components have not reported implementation at this time.

\(^7\) Refer to ADC 1175 and https://www.dla.mil/DispositionServices/.
BLOCK(S) ENTRIES
Appendix 1.36). If the shipment includes multiple weapons, associate each list of missing parts with the serial number of the whole weapon. In lieu of listing the missing parts, the owning Component may authorize including a signed statement certifying that the weapons have missing parts. Provide the name and contact information of the authorizing official. If prepared electronically, provide a digital signature.

MATERIEL OBLIGATION VALIDATION
REINSTATEMENT REQUEST

1

FIELD LEGEND  POSITION(S)  ENTRY AND INSTRUCTIONS

Document Identifier Code  1-3  Enter DIC APR.

Routing Identifier Code  4-6  Enter the RIC of the source of supply that canceled the requisition.

Other Fields  7-24  Enter the data from the supply status transaction (DIC AE_) with Status Code BS.

Quantity  25-29  Enter the quantity required; this quantity cannot be greater than the original quantity canceled.

Other Fields  30-61  Enter the data from supply status transaction (DIC AE_) with Status Code BS.

Blank  62-64  Leave blank.

Advice Code  65-66  Enter the advice code from the original requisition; otherwise, leave blank.

Blank  67-70  Leave blank.

Transaction Day  71-73  Enter the ordinal day of year of the reinstatement request.

Blank  74-80  Leave blank.

---

1 Established procedures to reinstate canceled requisitions last reported as not implemented by United States Navy (USN). Refer to AMCL 150C.

</tbody>
</table>
| Quantity               | 25-29| A. Enter quantity in BZ status not responded to in Materiel Obligation Validation (MOV).  
b. For ammunition items and ammunition related item only (items in Federal supply group (FSG) 13 and for Federal supply classification (FSC) 1410, 1420, 1427, 1440, 5330, 5865, 6810 or 8140), enter an M in rp 29 to express in thousands any quantity exceeding 99,999.
Example: A quantity of 1,950,000 will be expressed as 1950M (1950 in rp 25-28 and an M in rp 29). |
| Document Number        | 30-43| Enter the document number of the original requisition for the item being validated.                                                            |
| Suffix                 | 44   | Enter the suffix assigned; otherwise, leave blank.                                                                                           |
| Other Fields           | 45-56| Enter the data from the original requisition for the item being validated.                                                                    |
| Blank                  | 57-79| Leave Blank.                                                                                                                                |
| Multi-Use              | 80   | Reserved for the ILCO’s entry of internal control data on FMS and grant aid transactions; otherwise, leave blank.                              |
AP9. APPENDIX 9

GENERATOR COMMUNICATIONS INTERFACE
STANDARD 5.0.0

AP9.1 General.

AP9.1.1. Generator Communications (GenComm) basically serves as an interpreter, allowing DLA Disposition Services to read automated data submitted from the generator’s system, which meets the standard set forth in this document. Data can be submitted in bar delimited format or in XML.

AP9.1.2. GenComm allows for the electronic transfer of the Waste Profile Sheet (WPS, DRMS 1930) and the Disposal Turn-In Document (DTID, DD1348-1A) data.

AP9.1.2.1. It expedites the transfer of accountability from the Generator to the DLA Disposition Services Field Office.

AP9.1.2.2. It expedites the ultimate disposal of hazardous waste from the DoD supply chain by reducing keystroke errors and lowering data entry costs by decreasing paper handling.

AP9.2.1. The generator uses their system to create either an ASCII or an XML file.

AP9.2.2. The generator transfers their file to the GenComm server by using one of the following methods:

AP9.2.2.1. E-mail file to: gencomm@gencomm.dla.mil

AP9.2.2.2. Upload the file to: Gencomm Upload Page

AP9.2.2.3. Use secure shell/secure FTP

AP9.2.3. Generator checks the GenComm Log file to check for problems or errors. The log file lists the WPS numbers and DTID numbers, which processed. Items rejected show the WPS/DTID number and a reason for the reject. Items rejected need to be resubmitted in a new file, with a different name. Note: the individual records reject – not the entire file.

AP9.2.4. To receive the GenComm Log file submit the following via e-mail:

AP9.2.4.1. DoDAAC

AP9.2.4.2. E-mail Address for system or individual(s) to receive the log.
AP9.3. File Format for Generator Communications (Version 5.0.0 – 04/17/08). The basic structure for communicating this data is to use sections and subsections in a text file. The record format for each text line is determined by a combination of its sequence in the outline and its first field.

AP9.3.1. Structure.

AP9.3.1.1. The required outline is as follows:

- File Header
- WPS Section, if any
- DTID Section, if any

AP9.3.1.2. Each WPS section is as follows:

- WPS Section Header
- WPS Subsection(s), if any
- WPS Section Trailer

AP9.3.1.2.1 Each WPS Subsection is as follows:

- WPS Record
- Chemical Composition Subsection, if any
- EPA Waste Number Subsection, if any.

AP9.3.1.2.2. Each Chemical Composition Subsection is as follows:

- Chemical Composition Section Header
- Chemical Composition Record(s)
- Chemical Composition Section Trailer.

AP9.3.1.2.3. Each EPA Waste Number Subsection is as follows:

- EPA Waste Number Subsection Header
- EPA Waste Number Record(s)
- EPA Waste Number Subsection Trailer.

AP9.3.1.3. Each DTID section is as follows:

- DTID Section Header
- DTID Subsection(s), if any
- DTID Section Trailer.

AP9.3.1.3.1. Each DTID Subsection is as follows:
• DTID Record
• DTID Container Subsection, if any
• DTID EPA Waste Code Subsection, if any
• DTID State Waste Code Subsection, if any

AP9.3.1.3.2. Each DTID Container Subsection is as follows:

• DTID Container Subsection Header
• DTID Container Record(s)
• DTID Container Subsection Trailer.

AP9.3.1.3.3. Each DTID Container Subsection is as follows:

• DTID EPA Waste Code Subsection Header
• DTID EPA Waste Code Record(s)
• DTID EPA Waste Code Subsection Trailer.

AP9.3.1.3.4. Each DTID State Waste Code Subsection is as follows:

• DTID State Waste Code Subsection Header
• DTID State Waste Code Record(s)
• DTID State Waste Code Subsection Trailer.

AP9.3.2. Fields are restricted to a maximum of the length indicated, unless noted as variable (V).

AP9.3.3. Fields will be delimited by the pipe symbol ("|") in the bar delimited files. However, there will not be a trailing pipe ("|").

AP9.3.4. Records will be delimited by the carriage return <CR>, technically stored as the carriage return line feed (LF) combination. This will be represented as End of Record Indicator in the record formats.

AP9.3.5. At the end of any record there are three options:

AP9.3.5.1. Continue with the next record.

AP9.3.5.2. Terminate the section or subsection with its trailer and start a new section or subsection.

AP9.3.5.3. Terminate the section or subsection with its trailer and quit (End of file).

AP9.3.6. The following codes are used in defining record formats:

• Mandatory (M)
• Optional (O)
AP9.4. Record Formats for Generator Communications (Version 5.0.0 - 04/17/08)

AP9.4.1. File Header Format. The header record will be followed by one or two sections: Waste Profile Sheet (WPS) Section or Disposal Turn In Document (DTID) Section. Each section can contain one or more records. A section must have a section header and a section trailer. Permissible combinations are: File Header (FH) and WPS and DTID Sections (in that order), FH and WPS Section only, or FH and DTID section only. Note: The Routing Identifier Code (RIC) SFX must be coordinated with your environmental contact to ensure proper routing.

AP11. APPENDIX 11.

CORRELATION OF MILSTRAP LEGACY DIC FUNCTIONALITY TO DLMS IMPLEMENTATION CONVENTION CODING

AP11.1. This appendix provides a user aid for Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP). The aid consists of correlation tables between MILSTRAP legacy document identifier code (DIC) series, (e.g., D4_, D6_, D7_, etc.) and DLMS implementation conventions (IC), which provide general functional equivalency between each MILSTRAP DIC and DLMS IC. In addition to identification of the DIC/DLMS basic cross-references, physical location of the applicable transaction type code(s) within each DLMS IC and clarifying information required to define a valid correlation are provided:

AP11.2. Correlation of MILSTRAP legacy DIC Functionality to DLMS Transactions (legacy DIC Sequence)

Correlation of MILSTRAP DIC Functionality to DLMS Transactions:

AP11.3. Correlation of DLMS Transaction to MILSTRAP legacy DIC Functionality (DLMS Sequence)

Correlation of DLMS Transaction to MILSTRAP DIC Functionality:

http://www.dla.mil/Portals/104/Documents/DLMS/eApplications/LogDataAdmin/MILSTRAP_DI_Code_Function_InDLMSsequence.doc
AP12. APPENDIX 12

MATERIEL RECEIPT ACKNOWLEDGMENT REPORT

BUSINESS RULES

AP12.2. Background.

AP12.2.1. MRA reports show shipments and the percentage of shipments for which the DAAS receives and does not receive the associated MRA transactions. Qualifying Shipments included in the report are determined by the date released to carrier (recorded at DLA Transaction Services) plus 25 calendar days to accommodate the 17 calendar days MRA reporting period and the 10 calendar days MRA follow-up response timeframes (if CONUS); or plus 43 calendar days to accommodate the 34 calendar days MRA reporting period and the 10 calendar days MRA follow-up response timeframe (if OCONUS – Transportation Category 1 or 2); or plus 90 calendar days to accommodate the 81 Calendar days MRA reporting period and the 10 calendar days MRA follow-up response timeframe (if OCONUS – Transportation Category 3). Security assistance program requisitions are not captured for inclusion in LMARS or MRA Reports based on the Security Cooperation Implementing Agency code in the first position of the document number.

AP12.3. TRANSACTIONS

AP12.3.1. Transactions identified in the MRA Business Rules by DLMS Transaction and Legacy Document Identifier Code (DIC)

AP12.3.1.1. The Requisition transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0). This transaction provides the

---

¹ Per DLM 4000.25, Chapter 10, the reporting period is defined as 17 calendar days for CONUS; 34 calendar days for OCONUS Transportation Category 1 and 2 shipments; and 81 calendar days for OCONUS Transportation Category 3 shipments. The follow-up response timeframe for both is 10 days. Refer to ADC 1114.
functionality of MILSTRIP legacy Document Identifier Codes (DIC) A01, A02, A04, A05, A07, A0A, A0B, A0D, and A0E.

AP12.3.1.2. The Requisition Follow-up transaction (process as requisition if original requisition not received) is identified by the DLMS 869F by the beginning segment (1/BSI08/020 Code IN). This transaction provides the functionality of MILSTRIP legacy DIC AT1, AT2, AT4, AT5, AT7, ATA, ATB, ATD and ATE.

AP12.3.1.3. The Requisition Modification transaction (process as requisition if original document not received) is identified by the DLMS 511M by beginning segment (1/BR02/020 Code AM). This transaction provides the functionality of MILSTRIP legacy DIC AM1, AM2, AM4, AM5, AMA, AMB, AMD, and AME.

AP12.3.1.4. The Passing Order transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code BM). This transaction provides the functionality of MILSTRIP legacy DIC A31, A32, A34, A35, A37, A3A, A3B, A3D, and A3E.

AP12.3.1.5. The Referral Order transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code BN). This transaction provides the functionality of MILSTRIP legacy DIC A41, A42, A44, A45, A47, A4A, A4B, A4D, and A4E. The exception is where Distribution Code 2 or 3 is present to indicate the transaction is; 2 – lateral redistribution of consumable, or 3 – repairable assets.

AP12.3.2. Service Specific Transactions

AP12.3.2.1. The Requisition Image transaction is identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0 or BN and 1/BR06/020 Code FI). This transaction provides the functionality of DLA, Air Force, and GSA unique legacy DIC CH1 and CHA. This transaction is used where the original transaction has bypassed the normal DAAS transaction flow.

AP12.3.2.2. The DLA post-post issue from forward stock at recruit training centers is identified by the DLMS 867I by beginning segment (1/BPT04/20 Code 01). This transaction provides the functionality of MILSTRAP legacy DIC D7_.

AP12.3.2.3. The Image of an Activated Prepositioned Requisition (Army) is identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0 and 1/BR06/020 Code FI). This transaction provides the functionality of Army unique transaction DIC BE9 (Image of an Activated Pre–Positioned Requisition). This transaction is created by the Army National Inventory Control Point/Service Item Control Center (NICP/SICC) at the same time a pre-positioned requisition in support of Operation Plans, or mobilization station/training base installation requirements is released. The transaction is forwarded to the requisitioner (routed by DAAS), and is
used by the requisitioner to establish a due-in record for receipt processing of materiel issued by the NICP/SICC from processing of a pre-positioned requisition.²

**AP12.3.3. Original Source Transaction Is An Equivalent A5 Material Release Order (MRO)**

- **AP12.3.3.1.** The MRO is identified by the DLMS 940R by the shipping order identification segment (1/W0506/0200 Code NA). This transaction provides the functionality of MILSTRIP legacy DIC A51, A52, A54, A55, A57, A5A, A5B A5D, and A5E.

- **AP12.3.3.2.** The Lateral Redistribution Order is identified by the DLMS 940R by the shipping order identification segment (1/W0506/0200 Code NI and 1/W0507/0200 Code RG). This transaction provides the functionality of MILSTRIP legacy DIC A41, A42, A44, A45, A47, A4A, A4B, A4D, and A4E with Distribution Code 2 or 3 present to indicate the transaction is a lateral redistribution of consumable or repair assets.

- **AP12.3.3.3.** The DLA Post-Post Directed Material Release Order (MRO) (Requisition) is identified by the DLMS 511R by beginning segment (1/BR02/020 Code A0 and 1/BR06/020 Code J). This transaction provides the functionality of the DLA unique transaction C0A/C01).

- **AP12.3.3.4.** The DLA Post-Post Directed MRO (Referral) is identified by the DLMS 511R by beginning segment (1/BR02/020 Code BN and 1/BR06/020 Code J). This transaction provides the functionality of the DLA unique transaction CQA/CQ1).

- **AP12.3.3.5.** The Army Offline MRO Image is identified by the DLMS 940R by the beginning segment (1/W0506/0200 Code NA, and 1/W0507/0200 Code FI). This transaction provides the functionality of the Army unique transaction B99.

- **AP12.3.3.6.** Intra Navy Issue (MRO) is identified by the DLMS 940R by the beginning segment (1/W0506/0200 Code NA). This transaction provides the functionality of the Intra Navy use of MILSTRIP DIC A4. The Intra Navy A4 does not have a Distribution Code of 2 or 3³ however it is treated as an MRO. The other transaction used in the Navy Issue (MRO) scenario is identified by the DLMS 867I by the beginning segment (1/BPT04/20 Code 01). This transaction provides the

---

² The Army advised that with the transition to Army LMP, this functionality is not currently in use, but the DAAS processing rules should be retained for potential future use.

³ Standard A4 transaction with a Distribution Code = 2 or 3 is treated as a lateral redistribution order. Navy A4 is treating this A4 as an MRO and not a requisition, thus a special rule is required so LOTS can flag appropriately. The internal rule in LOTS for categorizing these D7s is: If there is no other requisition DIC equivalent as defined in decision blocks 2 and 3, then flag the D7 as a requisition equivalent; if there is a requisition equivalent, but no traditional MRO, then treat the D7 as an MRO; if there is a requisition equivalent and MRO equivalent, but no shipment status, then treat the D7 as shipment. **Summary:** Navy – No Shipment; D7 is a shipment; No MRO, D7 is an MRO; No Reqn, D7 is a Requisition.
functionality of the Intra Navy use of MILSTRIP legacy DIC D7_. These two transactions are primarily from Navy Enterprise Resources Planning (ERP) to Commercial Asset Visibility (CAV) sites to issue A condition materiel from a CAV site.

AP12.3.3.7. Air Force Redistribution Order (RDO) is identified by the DLMS 940R by the beginning segment (1/W0506/0200 Code NI). This transaction provides the functionality of the MILSTRIP legacy A2_. This Air Force RDO is generated only for AF wholesale (owned) assets that are being shipped to another DSS storage site or being sent to an Air Force site for storage. If no record of the RDO (no shipment suspense or RDO/Referral suspense record) then the Air Force will use an RDO Follow-Up identified by the DLMS 940R by the beginning segment (1/W0506/0200 Code NI and 1/W0507/0200 Code 82). This transaction provides the functionality of the Air Force Unique BF7 transaction. The Air Force system will reformat BF7 as an A2_ and either ship or create a B7_ (Denial). For issues to depot maintenance, the A5_ is sent to DSS.4

AP12.4. MRA Business Rules derived from the MRA Decision Tree. The following list identifies the decision blocks and key transactions and business rules used to identify the presence of a requisition or MRO type transactions to determine MRA Report eligibility. The decision blocks identify transactions unique to Component specific processes. Figure AP12. F1 is a graphical version of the MRA Decision Tree.

Decision Block 1. Is the Source of Supply a wholesale ICP? There must be a Wholesale ICP in the To_RIC of the Requisition or the From_RIC of the MRO.5 The authoritative list of wholesale ICPs is found on the LMARS master data record, available on the DLM Website.

a. If No, terminate MRA decision tree (No MRA Required)

b. If Yes, proceed to Decision Block 2

Decision Block 2. Is the original source transaction a requisition, requisition modification, or requisition follow-up transaction? This business rule applies to all Services/Agencies.

a. If Yes, proceed to Decision Block 6 to determine if there is an associated shipment status from a wholesale ICP. Note: If there is no associated shipment status, there is no MRA tracking for that transaction.

---

4 Some of the Air Force A2_, BF7 process was identified in ADC 405 to support ECSS development.
5 DLA Transaction Services records the ICP (To RIC) for requisition type transaction, passing, referral and redistribution order transactions. When an MRO type transaction is received, the ICP is re-recorded and the From RIC is used. If an MRO is received by DLA Transaction Services, unless they receive a denial, the recorded ICP is never changed. A denial and new MRO will change the ICP.
b. If No, proceed to Decision Block 3

**Decision Block 3.** Is the original source transaction a passing order or referral order, where the Distribution Code does not equal 2 or 3 in the first position? If this business rule applies to all Services/Agencies.

a. If Yes, proceed to Decision Block 6 to determine if there is an associated shipment status from a wholesale ICP

b. If No, proceed to Decision Block 4

**Decision Block 4.** Is the original source transaction one of the following Service/Agency-specific transaction types? These transactions are functioning similar to a requisition.

a. Army: Activated Prepositioned Requisition citing Service/Agency Code A, C or W in the first position of the document number

b. DLA: Requisition Image CONUS or OCONUS?

c. DLA: Post-Post issues (D7_) from forward stock at recruit training centers?

d. GSA: CH1, CHA (image transactions)?
   i. If Yes, proceed to Decision Block 6 to determine if there is an associated shipment status from a wholesale ICP
   ii. If No, proceed to Decision Block 5

**Decision Block 5.** Is the original source transaction an MRO or equivalent transaction?

a. All Services/Agencies: MRO or Lateral Redistribution Order citing Distribution Code 2 or 3 in the first position

b. DLA ICPs: Post-Post Directed MRO (Requisition)

c. Army: Offline MRO Image

d. Navy: Intra-Navy Issue (MRO)

---

6 Distribution Code:
   2 – For use by IMMs to identify transactions associated with lateral redistribution of DoD consumable assets.
   3 – For use by IMMs to identify transactions associated with lateral redistribution of DoD reparable assets.

7 DLA will not generate an A5_ unless it is for a customer requisition.
e. Air Force: RDO and RDO Follow-Up

   i. If Yes, proceed to Decision Block 6 to determine if there is an associated shipment status from a wholesale ICP

   ii. If No, terminate MRA decision tree (No MRA Required)

Decision Block 6. Is there a shipment status from a Wholesale ICP? The authoritative list of wholesale ICPs is found on the LMARS master data record, available on the DLMS Website.

   a. If No, terminate MRA decision tree (No MRA Required)

   b. If Yes, proceed to Decision Block 7 to determine if any additional MRA exclusions apply

Decision Block 7. Do any of the following exclusions apply?

   a. Requisition DoDAAC or the ship-to DoDAAC is GSA or FEDSTRIP

   b. Security Cooperation Implementing Agency code B, D, I, K, P or T in the first position of the document number

   c. DoDAAC in document number begins with HX

   d. Distribution Code is 9 in first position indicating the requirement is for DLA Disposition Services

   e. Non-ICP/IMM Directed Inter-Service Lateral Redistributions. ADC 1062 established procedures to support Non-ICP/IMM Directed Inter-Service Lateral Redistributions.9

      i. If No, proceed to Decision Block 8 to determine if a follow-up for delinquent MRA was sent by the wholesale ICP

      ii. If Yes, terminate MRA decision tree (No MRA Required)

Decision Block 8. Did the ICP generate a follow-up for delinquent MRA transaction (DRF) within the required time limit?10

   a. If Yes, track for Receipt of MRA Transaction

---

8 Air Force BF7 was only used between D035A and SBSS (ILS-S and base retail). It is an RDO follow-up to the shipping activity. Air Force plans to continue using A2_ and has no plan to convert to A5_.

9 See ADC 1062 – Non-Inventory Control Point/Integrated Materiel Manager (ICP/IMM)-Directed Inter-Service Lateral Support via Retail Level Passing Order.

b. If No, No MRA Tracking required

AP12.5. Requirements for Generating MRA Reports

AP12.5.1. Data Included in Reports

AP12.5.1.1. The initial rule for reports that must be met is the document numbers that yielded the requirement for MRA Tracking are based on the business rules identified in the MRA Decision tree (Enclosure 3).

AP12.5.1.2. If Signal Code = J, K, L or M, then the Supplementary Address (SUPPADD) is considered the Ship-To DoDAAC. If signal Code = A, B, C, or D, then the activity address code in the document number is the Ship-To DoDAAC.

AP12.5.1.3. Parsing the data by Service/Agency is determined by the Service/Agency code in the first position of the document number. Source: LMARS Table H – Service and/or Report Affiliation.

AP12.5.1.4. Location (CONUS/OCONUS) is determined by the Ship-To DoDAAC. The CONUS/OCONUS is obtained from the Combatant Command (COCOM) designation in the DoDAAC file and stored in the LMARS/Logistics Response Time (LRT) file.

AP12.5.1.5. Direct Vendor Delivery (DVD). DVD is identified one of two ways:

AP12.5.1.5.1. Supply Status DLMS 870S beginning segment (1/BSR01/20 Code 5). This transaction provides the functionality of MILSTRIP legacy DIC AB1, AB2, AB3, and AB8.

AP12.5.1.5.2. Supply Status DLMS 870S beginning segment (1/BSR01/20 Code 4 and logistics qualifier (2/LQ01/330 Code 81) citing Status Code BV or BZ. This transaction provides the functionality of MILSTRIP legacy DIC AE1, AE2, AE3, AE8, AE9, AEA, AEB, AED, and AEE.

AP12.5.1.6. Dollar Value is determined by multiplying the unit price on the Source of Supply field by the quantity in the requisition.

AP12.5.1.7. Suffixed document numbers are treated as individual requisitions and MRA is applied using the 15 position document number, if present. If no match, a match is made on the 14-position document number and quantity.

AP12.5.1.8. Split/Partial Shipments

AP12.5.1.8.1. Existing Business Rule. Split Shipments at the distribution center (multiple TCNs), the first receipt will be counted as the receipt.
AP12.5.1.8.2. Revised Business Rule. DLM 4000.25, Volume 2, C10.2.6. Acknowledgement of Split or Partial Shipments. When a shipped line item (requisition document number and suffix code) is consigned as a split or partial shipment, submit an MRA for the shipment segments as they are received. The split or partial shipment codes are part of the transportation control number (TCN) structure in accordance with DTR 4500.9-R, Defense Transportation Regulation. Accordingly, reporting activities must include the TCN in the MRA transaction when it is available (ADC 247). If the total quantity for the shipped line item is not received by the due-in date, report the missing quantity, citing Discrepancy Indicator Code F, in accordance with the guidance in the MRA transaction.

AP12.5.2. Categories of Reports. Existing DLA Transaction Services documentation requires update to remove descriptions for reports that were removed by previous ADCs. (MRA04 (ADC 1086 (Reference 3.h.)), MRA05, MRA06, and MRA31 (ADC 482).

AP12.5.3. Invalid, Y-Series, or clear-text exception Ship-To. Existing DAAS edits should prevent successful processing of transactions containing invalid or Y-Series ship-to values. However, if successfully processed, these shipments will be counted against the requisitioner’s DoDAAC (ADC 482). In no ship-to DoDAAC is associated with the exception address, these shipments will be counted against the requisitioner’s DoDAAC.

AP12.6. Figure AP12.F1 shows a graphic representation of the MRA Report business rules identified in the previous sections.

---

11 Existing requisition edits are addressed in Chapter 4, Table C4.T4, Requisition Processing and Related Actions, and the DoDAAC authority code edits identified in Chapter 4, paragraph C4.10.2. Table C4.T3. DoDAAC Authority Codes.
Figure AP12.F1. MRA Report Business Rules

Capture Shipments out of Wholesale Assets that Qualify for MRA Reporting

Update MRA Business Rules/Report Logic to require the presence of a requisition or MRO type document to determine MRA report eligibility.

1. \( \text{SoS} = \text{Wholesale ICP?} \)
   - Yes
   - LMARS processes first to look for a valid SoS in either the Requisition or MRO.

2. All:
   - Is the initial supply transaction a requisition?
     - \( \text{A0}, \text{AT}, \text{or AM} \)
     - No

3. All:
   - Is the initial supply transaction an A3_ or A4_?
     - (and not 2 or 3 in RP54)
     - No

4. Service Specific:
   - Is the initial supply transaction one of the following?
     - Army: \( \text{BE}, (\text{RP}30 = \text{A, C, W}) \)
     - DLA: \( \text{CH}, \text{CHA}, \text{D7} \)
     - Air Force: \( \text{CH}, \text{CHA} \)
     - GSA: \( \text{CH}, \text{CHA} \)
     - No

5. Is the initial supply transaction an equivalent A5_MRO?
   - All: \( \text{A5}_, \text{except A5J} \)
     - No
     - Air Force: \( \text{A2}, \text{BF7} \)
     - Army: \( \text{B99} \)

6. Is there Shipment Status (from a Wholesale ICP)?
   - \( \text{DIC AS} \)
     - Yes
     - No

7. Do any of the Following Exclusions Apply?
   - Req or Ship-To DoDAAC = GSA or FEDSTRIP
   - FMS docs start w/B, D, I, K, P or T
   - Shipment to state, civil or Federal Agencies
   - Shipments of FF&V
   - Distribution Code = 9
     - Yes
     - No

8. Did the ICP Generate a Follow-Up For Delinquent MRA transaction (DRF) within the require time limit?
   - (Intra-Component shipments)
     - PDC1087
     - Yes
     - No

No MRA tracking

Track for Receipt of MRA Transaction

1. This will eliminate redistribution orders from being included in MRA Reports
2. DLA post-post issues (D7_) from forward stock at recruit training centers
3. Exclusions noted in DLA Transaction Services Business rules from 2/2003 and clarified in PDC 1088
4. AF uses A2_ as an equivalent MRO, no plans to change to A5_.
5. Key: Blue text = Proposed new selection criteria.

Gaps
Offline DLA processes for Subsistence, Medical; and Maintenance Repair and Operations. These are known MRA gaps because no shipment status is created.

A2 – Redistribution Order (RDO), A3 – Passing Order, A4 – Referral Order, Lateral Redistribution Order (LRO),
A5 – Materiel Release Order (MRO), A5J – Materiel Release Order, Image Transactions – (CH_), Post Post (CO_, CQ_, CQ_).

Revised: October 31, 2014 (Corrected text in Step 7 to add “Req or Ship-To DoDAAC and remove associated footnote).

DEFENSE LOGISTICS MANAGEMENT STANDARDS
VOLUME 3, TRANSPORTATION
CHANGE 7

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 3, March 23, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 7 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1188 dated December 26, 2018. Aligns DoD code names in the Type of Pack and Transportation Method/Type Code conversion guides with the USTRANSCOM Reference Data Management (TRDM) registry code names, and maps the TRDM to X12 code names. Adds a new mapping for Tank Car to the Type of Pack conversion guide. Updates the Unit of Materiel Measure (Unit of Issue/Purchase Unit) conversion guide to ensure DoD codes (other than those represented in the Federal Logistics Information System (FLIS) as documented in Cataloging Data and Transaction Standards, Volume 10, Tables 53 and 81) have the name assigned by X12. Additional updates correct some erroneous mappings for DoD Codes).
III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

**Added or Replaced Files**

Jan Mulligan  
Performing the Duties of  
Deputy Assistant Secretary of Defense for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 3, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 6 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMS office, abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses, occurrences of “shall” are changed to “will” per current style guide for DoD issuances, "Defense Logistics Management System” is updated to “Defense Logistics Management Standards”, “DoDM 4140.1-R” is updated to “DoDM 4140.01”, in accordance with General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”, page number formats in the “front matter” (Table of Contents, Process Change History page, etc.) of the volume have been revised, and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1206, dated July 27, 2016. Establishes the requirement for transportation account code (TAC) validation prior to shipment of cargo by transportation as part of the retail supply and transportation interchange procedures prescribed in Chapter 2. Revises Chapter 2

B. ADC 1233 dated August 5, 2016. Revises the page numbering of the “front matter” (Foreword, Process Change History, Table of Contents, Acronyms and Abbreviations, Definitions and Terms, References) in the DLM 4000.25 series of manuals to prepend an alphabetic indicator to the page numbers in each section of the front matter. Each page number will begin with an abbreviation of that section's name. Revises the front matter of the manual.
III. The list below identifies the chapters, appendices or other files from the manual that are replaced by this change:

**Added or Replaced Files**

- Change History Page
- Table of Contents
- Chapter 2

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

---

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 3, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 5 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1164 dated July 10, 2015. Approves incorporation of carrier and associated account data in the DLMS 940R Materiel Release Order (MRO) for the purpose of communicating return shipping instructions to the storage activity. Identification of the carrier and applicable account number will permit systemic logic within the storage activity to read and apply the data thereby enabling the transportation costs to be assumed by the vendor to which discrepant materiel is being returned. Use of the directed carrier will be confirmed by repeating the carrier and account information in the DLMS 945A. This change also updates SDR Reply procedures to clarify that disposition instructions for discrepant/deficient materiel provided to DLA distribution centers for the purpose of directing shipment of the discrepant materiel to another location, (e.g., return to the vendor) requires concurrent transmission of a DLMS 940R Materiel Release. The DLMS 940R is required to ensure the audit history for this materiel is properly recorded. Revises DLMS Volume 3, Chapter 2 Retail Supply and Transportation Interchange. Revises DLMS 940R and 945A ICs (Versions 4010 and 4030).
III. The list below identifies the chapters, appendices or other files from the manual that are replaced by this change:

DEFENSE LOGISTICS MANAGEMENT SYSTEM

VOLUME 3 – TRANSPORTATION

FOREWORD

I. The Defense Logistics Management System (DLMS) manual is reissued as Defense Logistics Manual (DLM) 4000.25, Defense Logistics Management Standards (DLMS), under the authority of DoD Instruction (DoDI), 4140.01, DoD Supply Chain Materiel Management Policy. DLM 4000.25 is composed of multiple volumes, each supporting functionally related business processes. Volume 3 is new and prescribes DoD standard procedures, data and transactions for the interchange of information between the logistics and transportation domains. Implementation of these guidelines facilitates seamless entry of materiel from the supply domain into the Defense Transportation System (DTS). It also enhances In-Transit Visibility (ITV) and improves data quality.

II. The provisions of this manual apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

III. This manual incorporates the Approved Defense Logistics Management Standards (DLMS) Changes (ADC) listed in the Process Change History page immediately following this Foreword. ADCs are published electronically on the ADC page of the DLMS Website. Recommended revisions to this manual will be proposed and incorporated under the Process Review Committee (PRC) forum for logistics functional areas. Submit all proposed change requests through your designated DoD Component PRC representatives. The procedures are in Volume 1, Chapter 3 of this manual and is available on the DLMS Website.

IV. This Volume is approved for public release and is available electronically on the DLMS Website. Use the comment form to contact the Enterprise Business Standards Office (EBSO).

Paul D. Peters
Deputy Assistant Secretary of Defense for Supply Chain Integration

<td>2/19/2009</td>
<td>Retail Transportation and Supply Receipt and Acknowledgement Transactions. This ADC approves a standardized interchange (through the use of electronic data interchange (EDI)) and set of business processes between retail transportation and supply activities through the use of the standard DLMS Warehouse Shipping Order (940R) and Warehouse Shipping Advice (945A). This standard exchange provides the ability to pre-position release order data in transportation, submit follow-up status messages to transportation requesting updated shipment status, submit cancellation requests to transportation for release orders already turned over to transportation for shipment planning and execution, provide supply status messages from transportation to supply, provide cancellation response messages from transportation to supply, and submit material release confirmation messages from transportation to supply when the material has shipped. Revises DLMS Supplements 940R, Warehouse Shipping Order, and 945A, Warehouse Shipping Advice. DLMS Volume 2, Chapter 2, Retail Transportation and Supply Interchange.</td>

<tr>
<td>316A</td>
<td>6/26/2009</td>
<td><strong>USAF Requirements for Item Record Data and Unique Item Tracking (UIT) using the Materiel Release (DLMS Supplement 940R) under Transportation and Supply Receipt and Acknowledgement Interchange.</strong> This change enhanced the Standard Base Supply System (SBSS) - Cargo Movement Operations System (CMOS) interface in association with implementation of the ADC 316 procedures for retail transportation and supply receipt and acknowledgement interchange. The change will allow SBSS to perpetuate selected item record (NSN) data and serialized control numbers/unique item identifiers (UII) in the 940R Material Release transaction. Revises Chapter 1, Introduction, and Chapter 2, Retail Supply and Transportation Interchange.</td>
<td>0</td>
</tr>
<tr>
<td>316B</td>
<td>6/26/2009</td>
<td><strong>New Distribution Code (111) for the Retail Transportation and Supply Receipt and Acknowledgement Interchange for the 940R and 945A.</strong> This change clearly identifies the transaction used for the Retail Transportation and Supply Receipt and Acknowledgement Interchange. The Distribution Code 1 has been replaced by the new code 111. Revises Volume 3, Transportation, Chapters 1, Introduction, and 2, Retail Supply and Transportation Interchange, as well as, DLMS (4030) 940R, Material Release, and (4010) 945A, Material Release Advice.</td>
<td>0</td>
</tr>
<tr>
<td>316C</td>
<td>1/15/2010</td>
<td><strong>Revise DLMS Supplement 940R Material Release and DLMS Supplement 945A Material Release Advice, to Support Unique Item Tracking for Air Force Positive Inventory Control (PIC) under the Retail Transportation and Supply Receipt and Acknowledgement Interchange.</strong> This addendum to ADC 316 (Retail Transportation and Supply Receipt and Acknowledgement Transactions), authorizes the generation of an information copy of the 940R and 945A transactions (Distribution Code 111) for a specific Air Force PIC NWRM need. Revises Chapter 2, Retail Supply and Transportation Interchange, DLMS 940R, Material Release, and DLMS 945A, Material Release Advice.</td>
<td>0</td>
</tr>
<tr>
<td>316D</td>
<td>8/3/2010</td>
<td><strong>Air Force-Unique Document Identifier Code Mappings to 940R under the Retail Transportation and Supply Receipt and Acknowledgement Transactions.</strong> This change revises Document Identifier Codes (DIC) FTA and FTR will be replaced by new DICs XAA and XAR, respectively. The maps for the XAA and XAR are at Enclosure 1. Since the data content for the Air Force DIC FTA/FTR is not MILSTRIP-compliant, this DIC change is necessary to avoid confusion with MILSTRIP compliant FTA/FTR transactions, which map to DLMS 180M, Materiel Returns Reporting, and DLMS 870M, Material Returns Supply Status, respectively. Revises DLMS (4030) 940R, Material Release, and DLMS (4030) 945A, Material Release Advice. No Manual revisions.</td>
<td>0</td>
</tr>
<tr>

<td>------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td></td>
</tr>
<tr>
<td>395</td>
<td>9/1/2010</td>
<td><strong>Request for New Transportation Activity Processing Supply Status Code.</strong> This change uses Supply Status Code BX that enables the transportation activity to report a more detailed supply status in response to a follow-up inquiry from supply. The Supply Status Code BX provides transportation with a more descriptive status message back to supply, to report that the item for shipment has not yet arrived at the transportation activity for in-check. Revises Chapter 2, Retail Transportation and Supply Interchange (Stock and Non-Stock Shipments).</td>
<td></td>
</tr>
<tr>
<td>397</td>
<td>10/26/2009</td>
<td><strong>Deletion of the Passive RFID Reader ID Number from the Reader Registration Table.</strong> This change deletes the requirement for reporting the pRFID Reader ID Number in the XML Reader Registration transaction. There are no system changes required from deleting the Reader ID Number entry from the table in the DLMS Manual, since the data element is not carried in the XML pRFID transactions. Revises Reader Registration and Visibility Transaction Data Requirements Tables in Chapter 3, Passive Radio Frequency Identification Transactions.</td>
<td></td>
</tr>
<tr>
<td>407</td>
<td>12/27/2010</td>
<td><strong>Requirements for Unique Item Tracking (UIT) in the DLMS Supply Status (870S) Supporting the Cargo Movement Operations System (CMOS) Interface.</strong> This change will allow for the inclusion of UII and/or Serial Number data in DLMS 870S transactions in support of the supply transportation interchange. The supply status applicable to this change is generated by ILS-S (Air Force retail supply system), authorizes the generation of an information copy of the 870S to satisfy a specific Air Force PIC NWRM need, and establishes a new qualifier to identify the retail supply activity generating the supply status. Revises Chapter 2, Retail Supply and Transportation Interchange (Stock and Non-Stock Shipments).</td>
<td></td>
</tr>
<tr>
<td>411</td>
<td>4/12/2011</td>
<td><strong>Update Functionality for DLMS 856S Shipment Status and DLMS 945A Material Release Advice.</strong> This change adds a new Replacement Indicator (BSN02 = RR) to flag the 856S, Shipment Status, transaction as an updated shipment status, a new Status Reason Code (BSN07 = A40) to advise the submitter to the status update, a new Replacement Indicator (W0602 = RR Replace) to advise the submitter, a new Replacement Indicator (W0602 = RR Replace) to advise the ICP to flag the transaction as an updated Material Release Confirmation (MRC), and adds a new Shipping Date Change Reason Code (W0610 = 13) to advise the ICP that the shipper submitted an updated MRC and revises DLMS 945A, Material Release Confirmation. Revises DLMS 856S, Shipment Status, and DLMS 945A, Material Release Confirmation. Revises Chapter 2, Retail Supply and Transportation Interchange (Stock and Non-Stock Shipments).</td>

<td>Alignment of DOD/ASC X12 Conversion Guides for Type of Pack, Transportation Method/Type Code, and Unit of Materiel Measure (Unit of Issue/Purchase Unit). Aligns DOD code names in the Type of Pack and Transportation Method/Type Code conversion guides with the USTRANSCOM Reference Data Management (TRDM) registry code names, and maps the TRDM to X12 code names. Adds a new mapping for Tank Car to the Type of Pack conversion guide. Updates the Unit of Materiel Measure (Unit of Issue/Purchase Unit) conversion guide to ensure DOD codes, other than those represented in the Federal Logistics Information System (FLIS) as documented in Cataloging Data and Transaction Standards, Volume 10, Tables 53 and 81, have the name assigned by X12. Additional updates correct some erroneous mappings for DOD Codes. Revises Chapter 1 - Introduction;</td>

C1. CHAPTER 1

INTRODUCTION

C1.1. GENERAL

C1.1.1. Purpose. This volume provides DoD standard procedures, data and transactions for the interchange of information between the logistics and transportation domains. Electronic Data Interchange (EDI) Implementation Conventions (ICs) use American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 transactions. Implementation of these guidelines facilitates seamless entry of materiel from the supply domain into the Defense Transportation System (DTS). It also enhances In-Transit Visibility (ITV) and improves data quality.

C1.1.2. Defense Logistics Management System (DLMS) Volume Access. Use of this volume requires simultaneous access to the DLMS Manual Volume 1 administrative items such as the lists of, acronyms and abbreviations, terms and definitions, and references; instructions for acquiring access to the DLMS standards data base; DLMS-to-Defense Logistics Standard System (DLSS) cross-references and DoD/ASC X12 Conversion Guides; specific guidance that applies to all implementation conventions; and functional and technical information that is relatively stable and applies to the DLMS as a whole.

C1.2. POLICY. The corresponding DoD Directives, DoD Instructions, Defense Logistics Manuals (DLMs), Defense Transportation Regulation, and any other applicable references will be cited in the individual Transportation Volume chapters as appropriate. At a minimum, these references include:

C1.2.2. DoD Manual 4140.01, “DoD Supply Chain Materiel Management Procedures”.

C1.2.3. DTR 4500.9-R, “Defense Transportation Regulation (DTR).”

C1.3. APPLICABILITY. This volume applies to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations. The procedures in this volume apply in those instances when DoD logistics and transportation systems need to exchange standardized business information about materiel and shipments. This includes, for example, warehouse operations, vendor shipments, and reference tables where electronic transactions are exchanged “across
the seams” of the logistics and transportation domains. The use of standardized DLMS transactions in this interchange process, where supply and transportation business processes intersect, helps improve asset visibility and communications related to cargo movement operations.

C1.4. COMMITTEES. A coordination process will be conducted for the implementation and use of electronic transactions exchanged between the supply and transportation domains. The committees listed below, in addition to any others as required, will participate in the coordination and subsequent standardization process. Each of the committees below has a designated member serving as a representative on the other committee.

C1.4.1. The Defense Transportation Electronic Business (DTEB) Committee. The DTEB Committee, usually referred to as “the DTEB”, identifies and resolves issues and recommends management actions that support the accelerated implementation of electronic business information exchange. As the focal point for all defense transportation e-business development efforts, it coordinates e-business standards and requirements with defense and federal organizations and commercial industry. The committee represents transportation interests at all levels of the Federal Government. The United States Transportation Command (USTRANSCOM) serves as chair of the DTEB; Defense Logistics Management Standards is a member of the DTEB.

C1.4.2. The Supply Process Review Committee (PRC). The Supply PRC is the forum through which the DoD Components and other participating organizations participate in the development, expansion, improvement, maintenance, and administration of supply requirements for the DLMS. DLA Logistics Management Standards serves as chair of the Supply PRC; USTRANSCOM/DTEB is a member of the Supply PRC.

C1.5. NONCOMPLIANCE. If reasonable attempts to obtain 1) compliance with prescribed procedures or 2) resolution of DLMS supply-related problems are unsatisfactory, the activity having the problem will request assistance from either its DLMS Supply PRC representative or DTEB representative, depending on the nature of the problem. For transportation issues, contact the DTEB representative; for supply issues, contact the Supply PRC representative. The request will include information and copies of all correspondence pertinent to the problem; including the transaction set number, the transaction number, the date of the transaction involved, and any applicable DLMS Manual and DTR references. The representative will take the necessary actions to resolve the issue or problem. The actions may include requesting assistance from the DTEB chairperson (for transportation issues) or the Supply PRC chairperson (for supply issues).
C2. CHAPTER 2

RETAIL SUPPLY AND TRANSPORTATION INTERCHANGE – STOCK SHIPMENTS

C2.1. GENERAL. This chapter provides procedures for use in retail transportation and supply processes related to the transportation in-check of cargo from a supply warehouse and subsequent outbound shipment by the servicing transportation activity. These procedures create a virtual warehouse between supply and transportation by standardizing a supply-transportation interchange, and provide in-transit visibility and accountability of government assets shipped in the Defense Transportation System (DTS). The transactions provide users with an electronic method of obtaining shipment data and status on specific line items upon inquiry.

C2.2. BACKGROUND. This section documents a standardized interchange of information between retail transportation and supply through the use of Electronic Data Interchange (EDI) transactions. For materiel requirements processed using Military Standard Requisitioning and Issue Procedures (MILSTRIP) legacy 80 record position transactions and Defense Logistics Management Standards (DLMS) procedures, the standardized interchange employs DLMS 940R, Materiel Release and DLMS 945A, Materiel Release Advice. This standard provides retail supply systems the ability to pre-position release order data in transportation, to submit follow-up status messages to transportation requesting updated shipment status, and to submit cancellation requests to transportation for release orders already turned over to transportation for shipment planning and execution. The standard also provides retail transportation systems the capability to provide supply status messages to supply, to provide cancellation response messages to supply, and to submit materiel release confirmation messages to supply when the materiel has shipped.

C2.3. STOCK SHIPMENT PROCEDURES

C2.3.1. Supply and Transportation Systems. There are six Automated Information Systems (AISs) that use this standardized interchange between retail transportation and supply activities. They are the Defense Medical Logistics Standard Support (DMLSS), Global Combat Support System – Marine Corps (GCSS-MC), USAF Expeditionary Combat Support System (ECSS), and the Integrated Logistics Solution—Supply (ILS—S; formerly Standard Base Supply System (SBSS)), which represent the supply systems for their respective business areas, and the Cargo Movement Operations System (CMOS), as well as the Distribution Standard System (DSS), which represents the transportation system. Systems other than the six systems above, planning to use these standardized interchange transactions to implement a similar capability must coordinate with the Enterprise Business Standards Office (EBSO) prior to attempting to implement the interchange.
C2.3.2. Retail Supply Activity. This paragraph provides general procedures for retail supply activities related to the delivery of items to the servicing transportation activity for further shipment.

C2.3.2.1. Pre-Positioned Release Order. For designated supply trading partners, the Defense Automatic Addressing System (DAAS) will transmit copies of the DLMS 940R, Materiel Release Order/Disposal Release Order/Redistribution Order (Document Identifier Codes (DIC) A2_/A5_/A4_) transactions to the designated transportation system to be pre-positioned awaiting actual arrival of cargo from the supply warehouse.

C2.3.2.1.1. For designated supply trading partners (currently limited to the SBSS—CMOS interface) the DLMS 940R, Materiel Release will be used to pass Federal Logistics Information System (FLIS) National Stock Number (NSN) item data (as identified in the 940R) that is not otherwise available to CMOS. This is an interim measure pending establishment of a FLIS interface.

C2.3.2.1.2. For designated supply trading partners (currently limited to the SBSS—CMOS interface), the DLMS 940R, Materiel Release will be used to support the unique item tracking (UIT) program for Positive Inventory Control (PIC) Nuclear Weapon Related Materiel (NWRM). A unique item identifier (UII) and the associated serial number will be passed in the DLMS 940R for each item meeting the PIC NWRM program criteria. For legacy items where the UII has not been marked in accordance with Item Unique Identification (IUID) policy, the serial number alone will be passed. This is an interim measure pending transition to tracking by UII and associated IUID business rules/transactions. DLMS Volume 2, Chapter 19, UIT Procedures applies (with exceptions as noted). Future CMOS releases will include the serial number/UII in the DLMS 945A, Materiel Release Advice transaction.

C2.3.2.1.3. For designated supply trading partners (currently limited to the SBSS—CMOS interface), an information copy (image) of the Materiel Release 940R will be used in support of Air Force PIC Fusion program data requirements. The routing of an additional information-only copy of the DLMS standard transactions (940R) is authorized for forwarding PIC Fusion data needed for the Air Force UIT registry. This is a specific authorized use with unique identifiers to flag the transaction as information only.\(^\text{1}\)

C2.3.2.1.4. Item Unique Identification. For designated trading partners, when NSNs containing an IUID indicator Yes (Y), indicating that DoD IUID Supply Policy is required, the DLMS 940R Materiel Release must contain the UII and/or serial number for each item when available.\(^\text{2}\)

C2.3.2.1.5. Updated Pre-Positioned Release Order. In the event required UII and/or serial number information is not transmitted in the initial DLMS 940R

\(^{1}\) Refer to ADC 316C.
\(^{2}\) Refer to DLM 4000.25 Volume 2, Chapter 5, Status Reporting, and ADC 1030
to transportation, an updated DLMS 940R citing the value R at 1/W0502/0200 must be sent prior to sending the materiel to transportation.

C2.3.2.1.6. When authorized by the trading partners, the materiel release may include identification of a pre-designated carrier and the carrier account number for the applicable shipment. When provided, this information will be perpetuated to the materiel release confirmation.3

C2.3.2.2. Delivery and In-Check. The supply activity will make local deliveries of the items to be shipped to the servicing transportation activity. The line items will be in-checked by the transportation activity based on the cargo and the documentation received from the supply activity.

C2.3.2.3. Shipment Documentation. The materiel for shipment will be delivered to the servicing transportation activity by the retail supply activity accompanied by a DD Form 1348-1A, Issue Release/Receipt Document, (IRRD). DLM 4000.25, Volume 2, Chapter 29 documents procedures for the use and generation of the IRRD.

C2.3.2.4. Follow-up Requests. The supply system will initiate DLMS 940R, Materiel Release Inquiry/Disposal Release Inquiry (DIC AF6/AFJ) message for follow-up requests. Based upon elapsed time from either the initial release of the Materiel Release Order/Disposal Release Order/Redistribution Order or the estimated shipping date from the Materiel Release Advice/Disposal Shipment Advice, the supply system will initiate the inquiry using normal follow-up procedures as documented in DLM 4000.25, Volume 2, Chapter 4. The only exceptions relate to multi-packs (see paragraph C2.3.6. below) and assemblages (e.g., medical (see paragraph C2.3.7. below)).

C2.3.2.5. Cancellation Requests. The supply system will initiate DLMS 940R, Materiel Release Cancellation/Disposal Release Cancellation (DIC AC6/ACJ) message for cancellation requests. DLM 4000.25, Volume 2, Chapter 4 prevails; the only exceptions relate to multi-packs (see paragraph C2.3.6. below) and assemblages (e.g., medical (see paragraph C2.3.7. below)).

C2.3.2.6. Shipment Status Messages

C2.3.2.6.1. Initial Shipment Status Message. When the retail supply activity receives the Materiel Release Confirmation for a multi-pack, the activity must associate it with all the document numbers that were contained in the initial Materiel Release Order, generate the required DLMS 856S, Shipment Advice (DIC AS_) shipment status transactions for the multipack, and transmit to DAAS for distribution per existing procedures and trading partner profiles. When the retail supply activity receives the Materiel Release Confirmation for an assemblage (e.g., medical), the activity will generate the required DLMS 856S Shipment Status transaction at the Assemblage Identification Number (AIN) level. For all Materiel Release Confirmations, the retail supply activity will insert the original distribution code assigned to the Materiel Release

---

3 Refer to ADC 1164
Order/Disposal Release Order/Redistribution Order in lieu of the special distribution code used to denote the retail transportation and supply interchange when generating the shipment status transactions.

C2.3.2.6.2. Shipment Status Message Updates. In the event a shipment does not get lifted as originally intended (e.g., shipment is left off the truck) and the retail supply activity receives an updated DLMS 945A, Materiel Release Confirmation message from the retail transportation activity, then the retail supply activity will generate an updated DLMS 856S, Shipment Status transaction to convey the changed transportation information. See DLM 4000.25, Volume 2, Chapter 5 for detailed procedures. Examples of changed transportation information would include transportation method code, standard carrier alpha code (SCAC), ship date, bill of lading information, and tracking information.

C2.3.2.6.3. Unique Item Identification. Shipment Status for NSNs containing an IUID indicator Yes (Y), indicating that DoD IUID Supply Policy is required, must contain the UII and/or serial number for each item when available. Refer to DLM 4000.25 Volume 2, Chapter 5, Status Reporting; paragraph C5.1.3.5. contains specific shipment status requirements for IUID.

C2.3.3. Servicing Transportation Activity. This paragraph provides general procedures for servicing transportation activities following receipt of the materiel release order (MRO) from the retail supply systems and subsequent local delivery of items for shipment (received from retail supply).

C2.3.3.1. Initial Transportation Account Code Validation. Following receipt of the MRO from the retail supply system, transportation will validate the transmitted transportation account code (TAC). In case of an invalid or missing TAC, the transportation system will generate a DLMS 945A (AE6), Materiel Release Advice transaction with Shipment Hold Code S, Invalid or Missing Transportation Account Code (TAC), and send it back to the retail supply system. This provides visibility for possible delays in processing a shipment due to an invalid or missing TAC and gives the supply activity the option to resend the DLMS 940R with the correct TAC. If the supply activity sends an updated MRO, the transportation activity will validate the TAC and append the MRO. Figure C2.F1 depicts the transaction account code validation process.

C2.3.3.2. In-Check. Upon local delivery of the item (from retail supply) to the transportation activity customer service area, transportation personnel will in-check the items as follows:

C2.3.3.2.1. Either scan the DD Form 1348-1A, IRRD using a handheld scanner or manually in-check the document numbers into the transportation system.

---

4 Refer to DLM 4000.25 Volume 2, Chapter 5, Status Reporting, and ADC 1030
5 Refer to ADC 1206 for detailed procedures.
C2.3.3.2.2. Generate DLMS 945A, Materiel Release Advice/Disposal Shipment Advice (DIC AE6/AEJ) in-check status message and send it to the supply activity electronically.

C2.3.3.2.3. When CMOS is the servicing transportation activity, the in-check status message will include the transportation in-checker identification code (three position numeric value) and the associated in-checker full name in the format of First Name Middle Initial Last Name, with no special characters (e.g., periods, commas) to separate the components of the full name. If there is no middle initial, then insert NMN (no middle name) in place of the middle initial. Optional contact information may include phone numbers (e.g., commercial, DSN, international, and fax) and electronic mail. If more than three types of contact information are required, repeat the X12 PER segment, not to exceed two repetitions.

C2.3.3.3. **Transportation Account Code Validation on Shipping Documents.** Verify that the TAC on the DD Form 1348-1A matches the TAC on the MRO. If the TAC on the DD Form 1348-1A is either missing or there is a mismatch, then coordinate with the supply activity. Upon receipt of a valid TAC from the supply activity, update historical records and shipping documentation to reflect the correct TAC citation. Figure C2.F1 depicts the transaction account code validation process.

C2.3.3.4. **Hold Status.** Subsequent to in-check and prior to materiel release confirmation, if the cargo is placed in transportation hold status, additional DLMS 945A, Materiel Release Advice/Disposal Shipment Advice (DIC AE6/AEJ) status messages will be sent by transportation to supply.

C2.3.3.5. **Status/Follow-up Response.** The transportation system will respond to a follow-up request using DLMS 945A, Materiel Release Advice/Disposal Shipment Advice (DIC AE6/AEJ) supply status message.

C2.3.3.6. **Cancellation Response.** The transportation system will generate a DLMS 945A, Materiel Release Advice/Disposal Shipment Advice (DIC AE6/AEJ) status message with applicable status code indicating acknowledgement of the cancellation requirements.

C2.3.3.7. **Materiel Release Confirmation**

C2.3.3.7.1. **Initial Materiel Release Confirmation.** After the shipment is processed and shipped, the transportation activity generates a DLMS 945A, Materiel Release Confirmation/Disposal Release Confirmation, and sends it to the supply activity, where the shipment status message will be generated and transmitted.

C2.3.3.7.2. **Materiel Release Confirmation Changes/Updates.** In the event a shipment does not get lifted as originally intended (e.g., shipment is left off the truck), the transportation activities that originate the DLMS 945A Materiel Release Confirmation will send an updated MRC transaction with all of the changed transportation information to the supply activity to enable the supply activity to prepare
an updated DLMS 856A Shipping Status message. See DLM 4000.25 Volume 2, Chapter 4 for detailed procedures for preparation of the MRC change/update message. Examples of changed transportation information would include transportation method code, SCAC, ship date, bill of lading information, and tracking information.

C2.3.3.7.3. **Item Unique Identification.** When the DLMS 940R contains IUID data content (e.g., UII and/or serial number), perpetuate the IUID content in the DLMS 945A Materiel Release Confirmation to clearly delineate which UIIs/serial numbers were shipped under a particular TCN. When a shipment contains IUID content and is shipped in multiple freight pieces, shippers are NOT authorized to execute the movement of the shipment using multiple freight piece procedures (e.g., citing the same TCN for all boxes). Those shipments must be “partialled” by using the 16th position of the TCN to uniquely identify each freight piece. A separate DLMS 945A MRC will be transmitted for each document number – partial TCN pair, identifying the contents of each freight piece, to include pRFID tag(s) and UII(s) and/or serial numbers.

C2.3.3.8. **Transaction Information Copy.** For designated supply trading partners (currently limited to the SBSS–CMOS interface), an information copy (image) of the DLMS 945A, Materiel Release Advice will be used in support of Air Force PIC Fusion program data requirements. The routing of an additional information-only copy of the DLMS 945A, Materiel Release Advice transaction is authorized for forwarding PIC Fusion data needed for the Air Force UIT Registry. This is a specific authorized use with unique identifiers to flag the transaction as information only.

C2.3.3.9. **Transportation Account Code Validation Process Flow.** Figure C2.F1 depicts the transaction account code validation process.
C2.3.4. **DAAS Processing.** DAAS will route transactions between designated supply and transportation systems based on mutual agreements between the trading partners. This includes both DLMS compliant and MILSTRIP legacy transaction compliant systems.

C2.3.4.1. **Transportation Systems.** The Cargo Movement Operations System (CMOS) and Distribution Standard System (DSS) are capable of receiving

C2.3.4.2. Supply Systems. Depending on whether the supply system is DLMS compliant, DAAS will process the transactions as follows:

C2.3.4.2.1. DLMS Compliant Systems. If the supply system is DLMS compliant, DAAS will not transform the transactions to/from MILSTRIP legacy transactions, based on established trading partner profiles held by DAAS. If the supply system is DLMS compliant and is exchanging information about multi-packs, the W0507 data element in the DLMS 940R, Materiel Release and W0612 data element in the DLMS 945A, Materiel Release Advice will carry Action Code CN. For assemblages (e.g., medical), the W0507 data element in the DLMS 940R, Materiel Release and W0612 data element in the DLMS 945A, Materiel Release Advice will carry Action Code ME. For interchanges other than multi-packs and assemblages, the W0507 data element in the DLMS 940R, Materiel Release and the W0612 data element in the DLMS 945A, Materiel Release Advice will carry Action Code A6. Additionally, DLMS 940R and DLMS 945A will have Distribution Code 111. These action codes and Distribution Code 111 will denote the applicability of special procedures authorized under this Chapter and authorize the use of selected EDI segments and loops to denote contents of multi-packs and assemblages.

C2.3.4.2.2. MILSTRIP Legacy Transaction Compliant Systems. If the supply system is MILSTRIP legacy transaction compliant, Distribution Code 111 will be identified to denote the applicability of special procedures authorized under this Chapter. Normally DAAS will transform the transactions to/from MILSTRIP legacy formats based on existing maps, except when there is a Distribution Code 111 in DLMS 945A, Materiel Release Advice/Disposal Shipment Advice messages from the transportation system. Distribution Code 111 authorizes the following actions: use of DIC AE6/AEJ for unsolicited supply status responses by the transportation system; use of transportation hold and delay codes in DIC AE6/AEJ (rp51) by the transportation system in addition to its normal usage in the Materiel Release Confirmation; and use of DIC AE6/AEJ in lieu of DIC AG6/AGJ as a cancellation response by transportation system to facilitate usage of the supply status and transportation hold and delay codes.

C2.3.5. Retail Transportation and Supply Interchange. Figure C2.F1 shows the standard transactions that will occur between retail supply and the transportation activity for the business processes covered in this chapter.
C2.3.5.1. **DLMS and MILSTRIP Legacy Transaction Designations.** To denote a transaction is in support of the Retail Transportation and Supply Receipt and Acknowledgement Interchange, it will contain the designated action code and/or distribution code as delineated below:

**C2.3.5.1.1. Action Code (Other than Multi-packs and Assemblages (e.g., Medical))**

- C2.3.5.1.1.1. DLMS 940R (W0507) = A6
- C2.3.5.1.1.2. DLMS 945A (W0612) = A6

**C2.3.5.1.2. Action Code (Multi-Packs and Assemblages (e.g., Medical))**

- C2.3.5.1.2.1. **Multi-Packs.** DLMS 940R (W0507) = CN and DLMS 945A (W0612) = CN
C2.3.5.1.2.2. Assemblages. DLMS 940R (W0507) = ME and DLMS 945A (W0612) = ME

C2.3.5.1.3. Distribution Code

C2.3.5.1.3.1. DLMS 940R and DLMS 945A LQ01 = AK and LQ02 = 111

C2.3.5.1.3.2. MILSTRIP legacy transaction distribution code = 111.

C2.3.5.2. Pre-Positioned transactions from Supply. For designated supply trading partners, DAAS will transmit copies of DLMS 940R, Materiel Release Order/Disposal Release Order/Redistribution Order (DICs A2_/A5_/A5J/A4_) transactions to the designated transportation system to be pre-positioned awaiting actual arrival of cargo from the supply warehouse. The applicable transactions can be readily identified by use of Distribution Code = 111. Additionally, the action code in DLMS 940R (W0507) and DLMS 945A (W0612) will be either A6, CN, or ME.

C2.3.5.3. Transportation Account Code Validation.6 Following receipt of the DLMS 940R MRO transaction from the supply system, transportation will perform a validation of the transmitted TAC. If the provided TAC proves to be invalid or is missing, the transportation system generates a DLMS 945A (AE6), Materiel Release Advice transaction with Shipment Hold Code S, Invalid or Missing TAC, and sends it back to the supply system. The supply activity then has the option to resend the DLMS 940R MRO with the correct TAC to prevent delays in processing the shipment for release.

C2.3.5.3.1. If the supply activity sends an updated MRO, the transportation activity will validate the TAC and append the MRO.

C2.3.5.3.2. If the supply activity does not send an updated MRO, the transportation activity will validate the TAC following in-check of the materiel by comparing the DD 1348-1A to the MRO. If there is a mismatch, the transportation activity will coordinate with the supply activity to identify a valid TAC, at which time the transportation activity will update its records and process the shipment for release.

C2.3.5.4. Receipt/In-Check of Cargo by Transportation. Upon physical receipt/in-check of cargo by transportation, the transportation system will self-initiate a DLMS 945A, Materiel Release Advice/Disposal Shipment Advice (DIC AE6/AEJ) supply status response message to notify the supply activity via DAAS that the property has been received. Since there was no initial DLMS 940R, Materiel Release Inquiry/Disposal Release Inquiry (DIC AF6/AFJ) follow-up request prompting the status message, the American National Standards Institute, Accredited Standards Committee X12 (X12) Code NO will be inserted in the W0611 data element to denote that this is being used by transportation to report cargo processing status prior to materiel release confirmation, and

6 Refer to ADC 1206 for detailed procedures.
X12 code A6 will be inserted in the W0612 data element to denote that the supply status response is part of the Retail Transportation and Supply Receipt and Acknowledgement Interchange. To facilitate mapping of the DLMS 945A, Materiel Release Inquiry/Disposal Release Inquiry to a MILSTRIP legacy DIC AE6/AEJ transaction, the Distribution Code will carry a value of 111 to inform DAAS of the special routing and generation of an unsolicited supply status message and to authorize the use of the transportation hold and delay code in lieu of a signal code for a supply status response, in addition to the Materiel Release Confirmation where it normally is reported. If the materiel is later placed into a transportation hold status, such as awaiting air clearance, a self-initiated DLMS 945A, Materiel Release Advice/Disposal Shipment Advice supply status message will be generated for every reportable status change prior to shipment. The W06, LQ, and G62 segment values in the DLMS 945A, Materiel Release Advice/Disposal Shipment Advice for this step are as follows:

C2.3.5.4.1. In-Check Reporting. To report in-check of cargo, W0611 = NO and W0612 = A6; LQ01 = AK and LQ02 = 111; LQ01 = 81 and LQ02 = BA; G6201 = 17 and G6202 = estimated shipping date in CCYYMMDD format.

C2.3.5.4.2. Transportation Hold and Delay Reporting. To report a transportation hold and delay status, W0611 = NO and W0612 = A6; LQ01 = AK and LQ02 = 111; LQ01 = BC and LQ02 = authorized code values from DLM 4000.25, Volume 2, Appendix 7.17, Shipment Hold Codes; G6201 = 17 and G6202 = estimated shipping date in CCYYMMDD format.

C2.3.5.5. Status Inquiry and Response. The supply system will initiate a DLMS 940R, Materiel Release Inquiry/Disposal Release Inquiry (DIC AF6/AFJ) message for follow-up requests to inquire on the status of a release order turned over to transportation for shipping; the W0507 data element will carry an A6 to denote that the follow-up request is part of the Retail Transportation and Supply Receipt and Acknowledgement Interchange. Based upon elapsed time from either the initial release of the Materiel Release Order/Disposal Release Order/Redistribution Order or the estimated shipping date from the Materiel Release Advice/Disposal Shipment Advice, the supply system will initiate the inquiry using normal follow-up procedures, with communications via DAAS. The transportation system will respond to a follow-up request with a DLMS 945A, Materiel Release Advice/Disposal Shipment Advice supply status response message with an A6 in the W0612 data element and Distribution Code 111 to denote that the supply status response is part of the Retail Transportation and Supply Receipt and Acknowledgement Interchange. Distribution Code 111 also authorizes the use of the transportation hold and delay code in lieu of the signal code, as applicable for a supply status response, in addition to the Materiel Release Confirmation where it normally is reported. The W06, LQ, and G62 segment values in the DLMS 945A, Materiel Release Advice/Disposal Shipment Advice for this step are as follows:

C2.3.5.5.1. Materiel Release Order

C2.3.5.5.1.1. W0611 = NL
C2.3.5.5.2. Disposal Release Order

C2.3.5.5.2.1. W0611 = NQ

C2.3.5.5.2.2. W0612 = A6

C2.3.5.5.2.3. LQ01 = AK and LQ02 = 111.

C2.3.5.5.3. To report the applicable supply status code, LQ01 = 81 and LQ02 = authorized code values from DLM 4000.25-1, Appendix 2.16. Typical status codes that may be reported by transportation are BA to denote the item is being processed for release and shipment (in-checked) or BF to denote that transportation has no record of the document for the follow-up request, or BX to indicate that pre-positioned data on the item from shipment was received from supply but the item has not yet arrived at the transportation activity for in-check. When providing a BA status, G6201 = 17 and G6202 = estimated shipping date in CCYYMMDD format.

C2.3.5.5.4. To report a transportation hold and delay status, LQ01 = AK and LQ02 = 111; LQ01 = BC and LQ02 = authorized code values from DLM 4000.25, Volume 2, Appendix 7.17, Shipment Hold Codes; G6201 = 17 and G6202 = estimated shipping date in CCYYMMDD format.

C2.3.5.6. Cancellation Requests and Responses. The supply system will initiate a DLMS 940R, Materiel Release Cancellation/Disposal Release Cancellation (DIC AC6/ACJ) message when it wants to issue a cancellation request to the transportation system for release orders that have already been turned over to transportation for shipping; the W0507 data element will carry an A6 to denote that the cancellation request is part of the Retail Transportation and Supply Receipt and Acknowledgement Interchange. Normal cancellation request procedures will apply. The transportation system will respond to the cancellation request with a DLMS 945A, Materiel Release Advice/Disposal Shipment Advice message, with an A6 in the W0612 data element. The distribution code will carry a value of 111 to inform DAAS of the use of the supply status response (MILSTRIP legacy DIC AE6/AEJ format) as part of the Retail Transportation and Supply Interchange. In addition to Distribution Code 111 identifying the retail interface, it also authorizes the use of supply status codes, as a response to the cancellation request. DLMS 945A, Materiel Release Advice/Disposal Shipment Advice (W0611), (W0612), and LQ01/02 data element values for this step are as follows:

C2.3.5.6.1. Materiel Release Order

C2.3.5.6.1.1. W0611 = NL

C2.3.5.6.1.2. W0612 = A6
C2.3.5.6.1.3. LQ01 = AK and LQ02 = 111

C2.3.5.6.2. Disposal Release Order

C2.3.5.6.2.1. W0611 = NQ

C2.3.5.6.2.2. W0612 = A6

C2.3.5.6.2.3. LQ01 = AK and LQ02 = 111.

C2.3.5.6.3. To report the applicable supply status code associated with the cancellation response, LQ01 = 81 and LQ02 = authorized code values from DLM 4000.25, Volume 2, Appendix 7.16. Typical status codes that may be reported by transportation are BF to denote that transportation has no record of the document for the cancellation request, BQ to denote that the cancellation request is confirmed and the release order is no longer being processed for shipment, and B8 to denote that the quantity requested for cancellation cannot be processed because the item has already been shipped.

C2.3.5.7. Shipment Notification (Materiel Release Confirmation). Once the materiel is shipped, the transportation system will initiate a DLMS 945A, Materiel Release Confirmation/Disposal Release Confirmation (DIC AR_) message to notify the supply system via DAAS that the materiel has been shipped. The W0612 data element will contain an A6 and Distribution Code 111. Upon receipt of a DLMS 945A, Materiel Release Confirmation/Disposal Release Confirmation (DIC AR_), the supply system will transmit, via DAAS, the required DLMS 856S, Shipment Advice (DIC AS_) messages to the designated recipients following normal supply business rules. Note: the retail supply system will apply the original distribution code in lieu of the specially assigned code value of 111 in the shipment status messages. The W06, LQ, and G62 segment values in the DLMS 945A, Materiel Release Confirmation/Disposal Release Confirmation for this step are as follows:

C2.3.5.7.1. Materiel Release Order

C2.3.5.7.1.1. W0611 = NJ

C2.3.5.7.1.2. W0612 = A6

C2.3.5.7.1.3. LQ01 = AK and LQ02 = 111

C2.3.5.7.2. Disposal Release Order

C2.3.5.7.2.1. W0611 = NM

C2.3.5.7.2.2. W0612 = A6

C2.3.5.7.2.3. LQ01 = AK and LQ02 = 111.
C2.3.5.7.3. Partial Transportation Control Numbers. If the shipment is partialed into multiple TCNs (e.g., alpha character other than X in record position 16), the W12 sub-loop will be repeated for each related partial TCN (e.g., record positions 1-15 are identical) with the TCN and the document number for the shipment identified in the N9/0040 segment.

C2.3.6. Multi-Pack Processing Procedures. This paragraph provides procedures for use when processing multi-packs.

C2.3.6.1. DLMS Compliant Supply Systems

C2.3.6.1.1. DLMS 940R, Materiel Release. DLMS 940R will be used as a multi-line document transaction to identify the lead document number for a multi-pack and the document numbers contained within the multi-pack. The authorization to do this will be carried in the W0507/0200 data element with a value CN. For materiel and disposal release orders and redistribution orders, the N9/0900 segment will contain the lead document number assigned to the multi-pack, from which the transportation control number will be derived/assigned. The W01 Loop (Loop ID 0310) will be repeated for each document number associated with the multi-pack including the lead document number identified in N9/0900. Follow-up requests will only be at the lead document number level, with it identified in the N9/0400 segment in the W01 loop; no looping of the W01 is required; however, the following values will be used to satisfy X12 syntax compliance: W0101 = 1, W0102 = MX, W0104 = ZZ, and W0105 = MIXED. Cancellation requests will contain the single line Materiel Release Order document number, and the transportation system will recognize that the document number being used may not be the lead document number, but may still be part of a multi-pack. Cancellation will be attempted for all items/quantities for which a DD Form 1348-1A has been released and there is no record of transportation release, unless the dollar value of a single line packed in a consolidated shipment unit is less than $200, per DLM 4000.25, Volume 2, Chapter 4.

C2.3.6.1.2. DLMS 945A, Materiel Release Advice. DLMS 945A will be used as a multi-line document transaction to identify the transportation control number (and partial TCNs) and lead document number associated to it. The authorization to do this will be carried in the W0507/0200 data element with a value CN. Status responses will only be at the lead document number level, with it identified in the W12 loop in the N9/0040 segment and the W1207 data element will carry a ZZ with the word “MIXED” in the W1208 data element to denote a multi-pack with mixed commodities. For cancellation responses, the response will be at the single line document number level. For materiel release confirmation when the multi-pack is not partialed into multiple TCNs, the transaction will be processed as a single line transaction with the TCN and the lead document number identified in the W12 sub-loop, and the W1207 data element will carry a ZZ with the word “MIXED” in the W1208 data element. If the multi-pack is partialed into multiple TCNs (e.g., alpha character other than X in record position 16), the W12 sub-loop will be repeated for each related partial TCN (e.g. record positions 1-15 are identical) with the TCN and the lead document number for the multi-pack identified in the N9/0040 segment and the W1207 data element will carry a ZZ with the word “MIXED” in the
W1208 data element. When the retail supply activity receives the Materiel Release Confirmation, the activity will associate it with all the document numbers that were contained in the initial Materiel Release Order, generate the required DLMS 856S, Shipment Advice shipment status transactions for the multi-pack, and transmit to DAAS for distribution per existing procedures and trading partner profiles.

C2.3.6.2. MILSTRIP Legacy Compliant Supply Systems

C2.3.6.2.1. DLMS 940R, Materiel Release. DLMS 940R will be transformed by DAAS from the MILSTRIP legacy transaction release order into a single line item order, as it is normally done today. The transportation system will in-check the multi-pack by either scanning or manually loading the lead document number; the transportation operator will then have to read the individual DD Form 1348-1A contained within the pack list to in-check the items individually and associate them to the lead document number. The TCN will be derived from the lead document number. Follow-up and cancellation requests will contain the single line Materiel Release Order document number. For cancellations, the transportation system will recognize that the document number used may not be the lead document number, but may still be part of a multi-pack. Cancellation will be attempted for all items/quantities for which a DD Form 1348-1A has been released and there is no record of transportation release, unless the dollar value of a single line packed in a consolidated shipment unit is less than $200, per DLM 4000.25, Volume 2, Chapter 4.

C2.3.6.2.2. DLMS 945A, Materiel Release Advice. For status and cancellation responses, the message will be originated by the transportation system at the single line item transaction, comparable to the single line item DLMS 940R, Materiel Release received from the supply system; it will be transformed by DAAS into a single line MILSTRIP legacy DIC AE6/AEJ transaction at the Materiel Release Order document number level. For materiel release confirmations, the transportation system will originate the transaction at the single line item level, comparable to the single line item DLMS 940R, Materiel Release received from the retail supply system; DAAS will transform the message into individual MILSTRIP legacy DIC AR_ transactions with the appropriate TCN (or partial TCN) mapped to the document numbers cited in the N9/0040 segment within the W12 sub-loop.

C2.3.7. Assemblage (e.g., Medical) Processing Procedures. This paragraph provides procedures for assemblage processing and the associated transactions between supply and transportation for shipment requirements. Refer to Volume 2, Chapter 20, Medical Unit Assembly Program, for related procedures used by the medical supply system to construct assemblages.

C2.3.7.1. DLMS Compliant Supply Systems

C2.3.7.1.1. DLMS 940R, Materiel Release. The DLMS 940R will be used as a multi-line document transaction to identify the Assemblage Identification Number (AIN) for an assemblage and the internal document numbers contained within the assemblage. The authorization to do this will be carried in the W0507/0200 data element.
with a value ME. The N9/0900 segment will contain the AIN assigned to the assemblage, from which the transportation control number will be derived/assigned. The W01 (Loop ID 0310) loop will be repeated for each internal document number associated with the assemblage, with the information associated with the AIN being the first loop. Follow-up and cancellation requests will be only at the AIN level (no looping of the W01 is required); however, the following values will be used to satisfy X12 syntax compliance: W0101 = 1, W0102 = MX, W0104 = ZZ, and W0105 = “MIXED”. The lead document number will be in the W01 loop in the N9/0400 segment.

C2.3.7.1.2. DLMS 945A, Materiel Release Advice. The DLMS 945A will be used as a multi-line document transaction to identify the transportation control number (and partial TCNs) and AIN associated to it. The authorization to do this will be carried in the W0612/0200 data element with a value ME. Status and cancellation responses will only be at the lead AIN level, with it identified in the W12 loop in the N9/0040 segment, and the W1207 data element will carry a ZZ with the word “MIXED” in the W1208 data element to denote an assemblage with mixed commodities; no looping of the W12 is required. For materiel release confirmation when the assemblage is not partialed into multiple TCNs, the transaction will be processed as a single line transaction with the TCN and the AIN identified in the W12 sub-loop, and the W1207 data element will carry a ZZ with the word “MIXED” in the W1208 data element. If the assemblage is partialed into multiple TCNs (e.g., alpha character other than X in record position 16), the W12 sub-loop will be repeated for each related partial TCN (e.g. record positions 1-15 are identical) with the TCN and the AIN for the assemblage identified in the N9/0040 segment, and the W1207 data element will carry a ZZ with the word “MIXED” in the W1208 data element. When the retail supply activity receives the Materiel Release Confirmation, the supply activity will generate the required DLMS 856S, Shipment Advice shipment status transaction at the AIN level for the assemblage.

C2.3.7.2. MILSTRIP Legacy Compliant Supply Systems

C2.3.7.2.1. DLMS 940R, Materiel Release. DLMS 940R will be transformed by DAAS from the MILSTRIP legacy release order into a single line item for the entire assemblage as a single unit. The transportation system will in-check the assemblage by scanning or manually loading the AIN and process the assemblage as a single shipment unit. The TCN will be derived from the AIN. Follow-up and cancellation requests must only be at AIN level; no looping of the W01 is authorized.

C2.3.7.2.2. DLMS 945A, Materiel Release Advice. For status and cancellation responses, the message will be originated by the transportation system at the single line item transaction, comparable to the single line item DLMS 940R Materiel Release received from the supply system; it will be transformed by DAAS into a single line MILSTRIP legacy DIC AE6/AEJ transaction at the AIN level. For materiel release confirmations, the transportation system will originate the transaction at the single line item level, comparable to the single line item DLMS 940R received from the retail supply system; DAAS will transform the message into individual MILSTRIP legacy equivalent DIC AR_ transactions with the appropriate TCN (or partial TCN) mapped to the AIN cited in the N9/0040 segment within the W12 sub-loop.
C3. CHAPTER 3

PASSIVE RADIO FREQUENCY IDENTIFICATION TRANSACTIONS

C3.1. GENERAL. This chapter provides procedures for reader registration and visibility processing supporting DoD Radio Frequency Identification (RFID) implementation. The Department of Defense requires integration of passive RFID (pRFID) technology in the DoD Supply chain. Visibility is a critical component of this requirement. The Defense Logistics Management System (DLMS) includes the establishment of data requirements that support shipment visibility across the DoD supply chain. The detailed procedures pertaining to these requirements are provided in this chapter. DoD policy regarding this pRFID implementation is located on the DoD Automatic Identification Technology (AIT) Web site.

C3.2. APPLICABILITY AND SCOPE. This guidance is applicable to DoD pRFID system implementations. The scope includes systems that send, receive, and/or collect supply and transportation data and the business processes used to generate that data, technologies to collect new data, software to integrate the data, and tools to visualize the information.

C3.3. PROCESS OVERVIEW

C3.3.1. Participating activities shall register pRFID Readers per the guidance in Section C3.4 for the purpose of identifying the Reader location.

C3.3.2. Once registered, scanned tag reads shall be reported either by a DoD system or middleware to the Defense Automatic Addressing System (DAAS) using the Visibility Transaction which provides the pRFID tag and Reader identification; the data elements for the Visibility Transaction are defined in Section C3.7. The purpose of this process is to associate the tag identification and location with previously transmitted logistics transactions containing pRFID, e.g., DLMS 856S, Shipment Status; Defense Transportation Electronic Business (DTEB) Implementation Convention (IC) 856A, Receipt/Shipment Consolidation/Due-in Notice; and any others defined in the future.

C3.3.3. If the middleware fails to associate the tag with a previously transmitted logistics transaction, the activity will ask for a follow-up by sending a Visibility Transaction to DAAS with Reader Function Code F (Follow-Up), and DAAS shall transmit a Visibility Response Transaction containing the data elements defined in Section C3.9.

C3.3.4. There are three transactions\(^1\) to support this process; one is used for sending Reader Registration data, a second for sending Visibility data, and a third for

\(^1\) The schema files (XSD) can be viewed on the DLMS IC page.
DAAS to respond to inquiries for unmatched tag reads. The transaction details are covered in the following paragraphs.

C3.4. READER REGISTRATION PROCESS

C3.4.1. The Reader Registration Transaction is applicable to handheld or fixed pRFID devices for the purpose of identifying their location and role in the supply chain. The term “READER” refers to a specific Reader, group of Readers, or all Readers at a site, depending upon how the site chose to register its Readers.

C3.4.2. The registering site shall provide to DAAS the location registration data defined in Table C3.T1. via the site’s middleware application (e.g., Savi Site Manager, Globe Ranger) or via the World Wide Web (to be determined). DAAS shall establish the Reader in a location table, assign a location control number (LCN), and send the Reader Registration Transaction back to the originator with the LCN. The LCN shall be used on every subsequent transaction sent to DAAS from the field.

C3.4.3. After a site has successfully registered a Reader’s location, it is responsible for maintaining current point of contact (POC) information and deleting the Reader when no longer required. POC information is for restricted use and shall not be displayed in routine queries. Only registered Readers can be updated or deleted. A previously deleted Reader cannot be re-registered with the same LCN, nor can it be updated.

C3.4.4. Any time a Reader or group of Readers is updated, moved, or retired, the registering site shall send the update Reader Registration Transaction to DAAS using the original LCN with a delete in the Action Taken field. If the Reader or group of Readers is just being updated or moved and will be used at a different location, a new Reader Registration Transaction shall be transmitted to DAAS with the new registration data, at which DAAS will assign a new LCN and send a Reader Registration Transaction back to the originator with the new LCN.

C3.4.5. Registration actions that are not successfully processed by DAAS shall be rejected and a response sent with the applicable Reader registration action code.

C3.5. READER REGISTRATION DATA REQUIREMENTS. Passive RFID Reader Registration shall encompass the data requirements identified in Table C3.T1.

C3.6. VISIBILITY TRANSACTION PROCESS

C3.6.1. When a shipment with pRFID arrives, departs, or is observed at a registered Reader location, the Reader shall communicate with the middleware, which shall send the Visibility Transaction to DAAS with a Reader Function Code of A (Arrived), D (Departed), or O (Observed). If the Reader has an assigned role (e.g., receiving or shipping) the transaction shall be used to report that action (e.g., arrived or departed) using the appropriate action codes. If the device cannot determine arrival or departure, the action code for Observed shall be used.

³ Enter “CRIF” for undisclosed locations.
C3.6.2. At those sites electing to provide pRFID support for local deliveries, use the new Reader Function Codes in Table C3.T2. For local delivery with pRFID, the Reader shall either record a delivery event or an undelivered (e.g., attempted delivery) event. “Delivered” is defined as the customer accepting the materiel from the shipping entity. “Undelivered” is defined as during normal operating hours and at no fault of the shipping entity, a shipment cannot be delivered. When a local delivery with pRFID is delivered or undelivered using a mobile handheld Reader, the Reader information shall be uploaded to the middleware at the home base, which shall send the Visibility Transaction to DAAS with a Reader Function Code of X (Delivered) or U (Undelivered/Attempted Delivery).

C3.6.3. If the middleware fails to associate the tag with a previously transmitted logistics transaction, the activity will ask for a follow-up by sending a Visibility Transaction to DAAS with a Reader Function Code of F (Follow-Up).

C3.6.4. Valid Visibility Transactions shall be accepted and stored in DAAS. Visibility Transactions from non-registered Readers or with an invalid LCN shall be returned to the sender with an ‘N’ in the sending location action indicating the transaction had an error and was not recorded at DAAS.

C3.7. VISIBILITY TRANSACTION DATA REQUIREMENTS. Passive RFID Visibility Transactions shall contain the data requirements identified in Table C3.T2.

Table C3.T2. Passive RFID Visibility Transaction Data Requirements

C3.8. VISIBILITY RESPONSE TRANSACTION PROCESS

C3.8.1. If the middleware fails to associate the tag with a previously transmitted DLMS 856S or DTEB IC 856A, the activity will send a Visibility Transaction to DAAS with a Reader Function Code of F (Follow-Up).

C3.8.2. If the requested information is found, DAAS shall transmit a Visibility Response Transaction containing the data elements defined in Section C3.9.

C3.8.3. If DAAS does not have the information, DAAS shall transmit to the sender a Visibility Response Transaction with N in the Reader Function Code field, indicating that the corresponding DLMS 856S or DTEB 856A transaction was not recorded at DAAS.

C3.9. VISIBILITY RESPONSE TRANSACTION DATA REQUIREMENTS. Passive RFID Visibility Response Transactions shall contain the data requirements identified in Table C3.T3.

C3.10. **DATA STORAGE PROCESS**

C3.10.1. DAAS shall store the Reader Registration Transaction and the pRFID Visibility Transaction in addition to the “R Table” data.

C3.10.2. All error-free Visibility Transactions arriving at DAAS shall be stored upon arrival for approximately seven months.
C3.10.3. All error-free device registrations shall be stored until a Reader Registration Action value of D (Delete Reader) is received by DAAS in a Reader Registration Transaction ‘cancelling’ the device.

C3.10.4. Figure C3.F.1 summarizes the general transaction process flow between a pRFID system and DAAS.

Figure C3.F1. pRFID Data Flow (Between Site and DAAS)

C3.11. PASSIVE RFID AND SHIPMENT STATUS

C3.11.1. DAAS “L Table”. All pRFID readers are required to be registered in DAAS. This is accomplished through use of the standard XML Reader Registration transaction, in which a unique LCN is assigned to the reader and its information is stored in the DAAS “L Table”.

C3.11.2. DAAS “R Table”. When a shipment of DoD stocked materiel has pRFID tags applied to it, the association of the pRFID tag to a particular document number is identified in the DLMS 856S. For Materiel Returns Program, retrograde, and directed
returns with pRFID, the association of the pRFID tag to a particular document number is identified in the DLMS 856R. In addition to these transactions being routed under normal MILSTRIP business rules, a copy is stored in the DAAS “R Table” as extended shipment data.

C3.11.3. DAAS “V Table”. When the pRFID tag is subsequently read by a registered Reader, the standard XML Visibility Transaction is transmitted to DAAS to identify the LCN and the pRFID tag number that was read; this data is subsequently stored in the “V Table”.

C3.11.4. The fusion of the data in the “L”, “R”, and “V” tables enables enterprise visibility systems (e.g., Asset Visibility and WebVLIPS) to provide in-transit visibility in response to queries by associating the pRFID tag read to an LCN and a particular document number and/or transportation control number.

C3.11.5. Customer supply receiving business processes can be triggered by the pRFID tag read, by fusing the pRFID tag number with the matching DLMS 856S or DLMS 856R.

C3.11.6. This process works well for stocked shipments and shipments moving through a DLA Containerization and Consolidation Point (CCP). However, the process delineated above has a gap when transportation offices are trans-shipping/cross-docking shipments for local delivery manifesting to on-base customers; deliveries to Materiel Processing Centers (MPC); outbound MILSTRIP shipments on behalf of on-base customers; re-warehousing actions between distribution depots; and outbound non-MILSTRIP shipments to off-base customers. For local delivery manifested shipments, deliveries to MPC, and outbound MILSTRIP shipments on behalf of on-base customers, the ICP may already have sent a shipment status message; however, the pRFID tag information and updated transportation data may be absent from the message. For re-warehousing actions and outbound non-MILSTRIP shipments, normally there is no supply shipment status message; therefore, the pRFID tag and transportation data are not transmitted to the receiving activity to facilitate use of pRFID tagging to trigger the receipt take-up process. For requirements when transportation offices are trans-shipping/cross-docking shipments, other shipment status reporting procedures are followed. These scenarios include local delivery manifesting to on-base customers; deliveries to MPC; outbound MILSTRIP shipments on behalf of on-base customers; re-warehousing actions between distribution depots; and outbound non-MILSTRIP shipments to off-base customers.

C3.11.6.1. For local delivery manifested shipments, deliveries to MPC, and outbound MILSTRIP shipments for on-base Customers, the DLMS 856S will need to use the transaction status reason code (BSN07 = “091” Trans-ship/Cross-dock Shipment Status (non-CCP)) to denote that the shipment status is being provided by a location performing trans-shipping/cross-docking subsequent to the original shipment. The RIC From will be the RIC of the activity executing the local delivery manifest. The remaining data elements for a shipment status message will be ascertained from the pack list/shipping documentation accompanying the shipment. If the shipment already
has a pRFID tag on it, no additional DLMS 856S is required; the existing pRFID tag will just need to be read and an XML Visibility Transaction sent to DAAS recording the tag read event. If there is no document number on either the inbound data or on the pack list/shipping documentation, then do not generate the DLMS 856S for conveying the pRFID tag. This is to preclude a data mismatch with the original DLMS 856S transmitted by the ICP, which will have a document number.

C3.11.6.2. For re-warehousing actions/transshipments between Distribution Depots in support of ‘Home’ Industrial Activity site and ‘Forward Support’ Industrial Activity site materiel requirements, a normal DLMS 856S should be generated and transmitted to DAAS. This transaction should carry the normal shipment status message data along with the pRFID tag identification numbers and any extended transportation data (e.g., bill of lading number, commercial carrier tracking numbers). Since there will never be a Materiel Receipt Acknowledgement (MRA) for these re-warehousing actions/transshipments between the Home and Forward Industrial Activities, a status reason code (BSN07="048" Industrial Activity Re-Warehousing/Trans-ship Shipment Status) shall be included so that DAAS can flag these DLMS 856S instances and prevent them from triggering the MRA Report.

C3.11.6.3. For Outbound Non-MILSTRIP shipments documented on a DD1149, a DLMS 856S will be created by the shipping activity. See the DLMS Manual, DLM 4000.25, Volume 2, Chapter 5, Status Reporting, Table C5.T.1. for the minimum data elements that should be included in the shipment status message; sources of the data are the DD1149 and pRFID tag information.
C4. CHAPTER 4

TRANSPORTATION REFERENCE TABLES
FOR DLMS TRANSACTIONS

C4.1. GENERAL. This chapter documents procedures for the use and maintenance of transportation reference tables used in Defense Logistics Management Standard (DLMS) Supply transactions. The USTRANSCOM Reference Data Management (TRDM) is the authorized data repository source for transportation reference tables. The Logistics Data Repository Management System (LOGDRMS) maintains a list of authorized DLMS Logistics Qualifiers that are associated to selected TRDM reference tables. To ensure synchronicity and ease of access to the code lists, this chapter outlines the transportation reference tables to be accessed in TRDM via LOGDRMS and documents the change management process for these tables.

C4.2. APPLICABILITY AND SCOPE

C4.2.1. This guidance is applicable to DLMS Supply transactions that use certain transportation reference table information.

C4.2.2. See Table C4.T1 for the list of the applicable qualifiers and DLMS Supplement number references.

Table C4.T1. Transportation Reference Tables and DLMS Supply Transactions

</tbody>
</table>
C4.3. PROCESS OVERVIEW. The DLMS logistics qualifier codes in Table C4.T1 are used in logistics DLMS transactions to identify transportation related information.

C4.3.1. LOGDRMS will maintain a list of authorized logistics qualifier codes associated with TRDM transportation reference tables. The metadata in LOGDRMS will define the DLMS data element name, the TRDM table name as the alias, a definition along with any special business rules associated with the construct/use of the table, and the TRDM URL and table name containing the list of authorized code values.

C4.3.2. LOGDRMS will maintain the Transportation Method/Type Code and Type of Pack Conversion Guides, both metadata as defined in C4.3.1. and the code lists.

C4.3.3. TRDM will maintain the transportation reference tables and a website that is accessible by users from the logistics domain.

C4.4. CROSS REFERENCE OF LOGDRMS AND TRDM TABLE NAMES

C4.4.1. Table C4.T2 establishes a cross reference of the LOGDRMS logistics qualifiers and table names to the TRDM table names.

Table C4.T2. New TRDM Transportation Reference Table Names

C4.4.2. The DLMS data element, Air Commodity and Special Handling Code, is a concatenation of the TRDM air commodity code and the applicable special handling code tables.

C4.4.3. The DLMS data element, Water Commodity and Special Handling Code is a concatenation of the TRDM water commodity, water type cargo, and water special handling codes.

C4.5. REFERENCE TABLE CHANGE MANAGEMENT PROCESS

C4.5.1. Logistics Domain-Requested Changes. The change management process for DLMS standards is contained in DLM 4000.25, Volume 1, Chapter 3, Change Management. The change management process for logistics domain-requested changes to these reference tables must be coordinated through the DLMS Supply Process Review Committee (PRC), USTRANSCOM and the TRDM Program Management Office (PMO). The requested changes will be subject to the Proposed DLMS Change (PDC) process, and provided for review by the Supply PRC members. USTRANSCOM is a voting member of the Supply PRC, and the TRDM PMO is on distribution for all DLMS changes. The general rules that apply to the change management process for review of the proposed changes are as follows:

C4.5.1.1. Proposed DLMS Changes (PDC) must be submitted to DLA Logistics Management Standards Program Office for coordination and comment with the Supply PRC, USTRANSCOM, and TRDM.

C4.5.1.2. Defense Logistics Management Standards Program Office will evaluate proposed changes and provide comments and analysis or recommendations.

C4.5.1.3. Staffing progress and current status of the proposed changes will be shown on the Defense Logistics Management Standards Program Office website.

C4.5.1.4. There will be a resolution process for objections or comments of note, subject to the review of the Supply PRC members.

C4.5.1.5. Upon completion of the comment resolution process, proposed changes must be coordinated with USTRANSCOM and the TRDM PM. Upon review and implementation approval by USTRANSCOM, an Approved DLMS Change (ADC) will be released to the Supply PRC, with concurrent configuration documentation released by the TRDM PMO to its stakeholders.

C4.5.2. Transportation Domain-Requested Changes. The change management process for TRDM standards is documented in USTRANSCOM standard operating procedures. Once the change is approved via the TRDM configuration management process and loaded into TRDM, Defense Logistics Management Standards Program Office will receive an email notification from the TRDM website.
C4.5.2.1. Minor Changes to the Reference Table. The Defense Logistics Management Standards Program Office will not prepare an administrative ADC to the Supply PRC announcing the change. Logistics systems maintaining these tables for use by supply transactions may establish either a system-to-system interface or a subscription service to TRDM to ensure tables are kept current as TRDM publishes changes. An example of a minor change is the introduction of a new code value or code definition to a table.

C4.5.2.2. Significant Changes to the Reference Table. The Defense Logistics Management Standards Program Office will release a PDC to the Supply PRC for coordination. PRC comments/non-concurrences must be coordinated with USTRANSCOM and the TRDM PMO for resolution. Upon satisfactory resolution, the DLA Logistics Management Standards Office will release the ADC formally announcing the table changes to the Supply PRC. If the results of comment resolution require a change by the TRDM PMO, the ADC will be released concurrent with the TRDM change. An example of a significant change is a modification of the metadata (e.g., field length changed from two positions to three positions).
AP1. APPENDIX 1

USTRANSCOM REFERENCE DATA MANAGEMENT (TRDM) REPOSITORY INFORMATION

AP1.1. TRDM is a reference data repository operated by USTRANSCOM (Air Mobility Command - AMC), which stores and manages both standardized and approved non-standard transportation reference data. It provides a one-stop shopping capability for transportation reference tables, the distribution of reference data, and the synchronization of managed transportation data with defined sources.

AP1.2. TRDM users can view data and associated metadata with the codes. The information provided also includes logical name, physical name, definitions, table and field descriptions, and authoritative source information.

AP1.3. TRDM uses data stewards to update the transportation data on prescribed schedules. The data, reference tables, and associated metadata are published on web pages and made available through subscriptions as well. The subscription service automatically sends the transportation data to subscribing automated information systems and authorized end-users.

AP1.4. The web address for TRDM and user information is: [https://trdmws.maf.ustranscom.mil/trdm/index.html](https://trdmws.maf.ustranscom.mil/trdm/index.html). A valid DoD issued Common Access Card (CAC) is required to access TRDM.

AP1.5. To self-subscribe to TRDM, go to [https://trdmws.maf.ustranscom.mil/files/DD2875_TRDM_System_Access_Request.pdf](https://trdmws.maf.ustranscom.mil/files/DD2875_TRDM_System_Access_Request.pdf). Click the link to request registration. The registration page requests citizenship status, email address, and a commercial phone number. Once registered, returning to the TRDM page will automatically log you in.
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 4, April 11, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by *bold, italicized* print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 10 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services.” In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1188 dated December 26, 2018. Aligns DoD code names in the Type of Pack and Transportation Method/Type Code conversion guides with the USTRANSCOM Reference Data Management (TRDM) registry code names, and maps the TRDM to X12 code names. Adds a new mapping for Tank Car to the Type of Pack conversion guide. Updates the Unit of Materiel Measure (Unit of Issue/Purchase Unit) conversion guide to ensure DoD codes (other than those represented in the Federal Logistics Information System (FLIS) as documented in Cataloging Data and Transaction Standards, Volume 10, Tables 53 and 81) have the name assigned by X12. Additional updates correct some erroneous mappings for DoD Codes. Revises Chapter 1.

III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

IV. This change is incorporated into the on-line DLM 4000.25 series of manuals and the PDF files containing the entire set of change files on the publications page of the Enterprise Business Standards Office Website: [www.dla.mil/does/dlms-pubs](http://www.dla.mil/does/dlms-pubs)

Jan Mulligan
Performing the Duties of
Deputy Assistant Secretary of Defense for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 4, April 11, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 9 include the following: Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services.” In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

   A. ADC 1151 dated September 14, 2017. Removes references to specific record retention periods for documents/transactions, and advises the Components to retain data created as a result of DLMS business processes in accordance with the DODI 5015.02, DOD Records Management Program. Revises Chapter 2 and Chapter 6.

   B. ADC 1213A dated September 7, 2017. Corrects a gap in the DLMS 812L, Logistics Bill Adjustment Request Reply transaction, for Materiel Return Program (MRP) credit (legacy Document Identifier Code FTB functionality). The DLMS 812L procedures include a scenario where the billing office approves the MRP credit, but the credit is pending and there is not an assigned credit bill number. For the DLMS 812L, American National Standards Institute (ANSI) X12 syntax rules require an entry in the data element field for the bill number. This change defines how to accommodate the syntax requirement even though a bill number is not yet available for the MRP credit. Revises DLMS IC 812L and the legacy DIC FTB.
III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

CHANGE 8

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 4, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 8 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards" to reflect the most recent name change for the DLMS Program Office. Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. “Defense Logistics Management System” is updated to “Defense Logistics Management Standards.” “DoDM 4140.1-R” is updated to “DoDM 4140.01.” References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”; and “DLA Logistics Information Services” to “Logistics Information Services”, and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Program Office memorandum:

A. ADC 1203 dated January 30, 2017. Documents procedures for processing DLMS SDRs submitted for reimbursement of repackaging costs. These procedures are primarily applicable to (a) FMS shipments frustrated at the freight forwarder facility due to packaging and documentation discrepancies and (b) retail/tactical activity discrepant receipts where repackaging is required prior to storage or distribution. Revises Chapter 2.

B. ADC 1213 dated April 11, 2016. Clarifies the processing of logistics Interfund bills to limit the length of bill numbers to five characters in DLMS variable length transactions in accordance with DLM 4000.25, Volume 4 and explains which bill numbers to include in adjustment requests and replies. Revises Chapter 6. Revises DLMS ICs 810L, 812L, and 812R.
III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

- Chapter 6

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense  
for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 4, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 8 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMSO office, abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses, occurrences of “shall” are changed to “will” per a style change for DoD issuances, “Defense Logistics Management System” is updated to “Defense Logistics Management Standards”, “DoDM 4140.01-R” is updated to “DoDM 4140.01”, in accordance with General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”, page number formats in the “front matter” (Table of Contents, Process Change History page, etc.) of the volume have been revised, and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1160 dated January 19, 2016. Clarifies procedures to prepare supply discrepancy report (SDR) replies when used to request/report a financial adjustment for a validated discrepancy; updates available SDR reply codes; updates DLMS guidance for use of the issue reversal transaction and establishes a requirement to include an issue reversal reason code for all Components as a DLMS enhancement; expands the scope of available codes beyond those currently used; clarifies requirement for generation of the prepositioned materiel receipt (PMR) for directed discrepant materiel returns and tracking for the return shipment; updates Military Standard Billing System (MILSBILLS) procedures to formally document the option to provide credit to the billed activity for discrepant shipments prior to storage activity receipt of the returned discrepant materiel. Revises Chapter 4.
B. ADC 1204 dated April 11, 2016. Provides procedures for billing offices to notify their Finance Process Review Committee (FPRC) representatives of significant or mass billing errors, who in turn will assist in coordination with appropriate Component FPRC representatives and the FPRC Chair. Revises Chapter 2.

C. ADC 1233 dated August 4, 2016. Revises the page numbering of the “front matter” (Foreword, Process Change History, Table of Contents, Acronyms and Abbreviations, Definitions and Terms, References) in the DLM 4000.25 series of manuals to prepend an alphabetic indicator to the page numbers in each section of the front matter. Each page number will begin with an abbreviation of that section's name. Revises the front matter of the manual.

III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

- Chapter 2
- Chapter 4

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense  
for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 4, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 6 also includes administrative updates: In all updated documents "Defense Logistics Management System” is changed to "Defense Logistics Management Standards" per DoDI 8190.01E. In accordance with new direction for issuances, “shall” has been replaced by “will”, “must”, or other appropriate words or phrases throughout the updated documents. Additional administrative updates include changing “DoDM 4140.1-R” to “DoDM 4140.01”, and “DLA Logistics Management Standards” to “Defense Logistics Management Standards”.

In accordance with DLA General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services”.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1043E dated October 5, 2015. Extends Defense Automatic Addressing System (DAAS) edits for invalid or missing fund codes to include transactions with Signal Codes A, B, J, and K and one scenario pertaining to Signal Codes C and L that had previously been omitted. Revises DLMS Chapter 5, Chapter 6, and Appendix 2.2.
B. ADC 1084 dated November 25, 2015. Allows credit to be issued for non-manager owned suspended stock stored at a DLA Distribution location when a stock screening request results in identification of non-compliant materiel. This change leverages existing procedures for processing of the Stock Screening Request, Storage Quality Control Report (SQCR), SDR, and Materiel Release Order (MRO) to accomplish the necessary steps to recognize, suspend, provide notification of suspected non-conforming materiel, provide credit to the materiel owner if the materiel is determined to be non-compliant, and transfer ownership to the manager—all with minimal system impact to existing systems and procedures. Revises DLMS Chapter 4, and Appendices 2.3 and 2.5 and DLMS ICs 842S/Q and 842S/R.

III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

CHANGE 5

I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 4, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 5 also includes administrative updates: In all updated documents "Defense Logistics Management System" is changed to "Defense Logistics Management Standards" per DoDI 8190.01E. In accordance with new direction for issuances, “shall” has been replaced by “will”, “must”, or other appropriate words or phrases throughout the updated documents.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by DLA Logistics Management Standards Office memorandum:

B. ADC 1043D dated July 1, 2015. Subsumes the Limit/Subhead data element into the Sub-Allocation Holder Identifier data element included in the Standard Financial Information Structure (SFIS) and corrects the Sub-Allocation Holder Identifier for the DLA default appropriation. Revises Chapter 5 and Appendices 1.1, 2.2, and 4.
III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

**Added or Replaced Files**

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 4, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 4 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by DLA Logistics Management Standards Office memorandum:

A. ADC 1009A dated August 6, 2014. Established revised procedures for formatting the DLMS requisition transactions with impact to multiple functional processes. It also establishes XP fund code on the Fund Code to Billed Office DoDAAC table to denote DOD EMALL credit card billing for all Components and Agencies at the following link: https://intelshare.intelink.gov/sites/dlms/DLMS%2020Manuals%20Vol%204/v4a1_02.docx. Revises Chapter 2. Revises DLMS Implementation Conventions (ICs) 511M, 511R, 856S, 869A, 869F, 870S, 940R, and 945A.

C. ADC 1043B dated October 1, 2014. Amended ADC 1043 to revise the business rules within the DLMS and the Web Fund Code Application to allow the SLOA data element, Beginning Period of Availability Fiscal Year Date, to be used in DLMS transactions to represent Program Year when the Availability Type Code is X, which indicates No Year, non-expiring funds. Revises Appendix 4. Revises DLMS ICs 180M, 511M, 511R, 517M, 810L, 842A/W, 856S, 867I, 869F, and 940R.
D. ADC 1068B dated October 23, 2014. Establishes enhancements and revises routing rules for adoption concurrent with the implementation of the procedures for verification of funds availability established under ADC 1068 and employed by DOD EMALL and GSA Advantage/GSA Global for eCommerce. Revises Chapter 7 and Appendix 2.11.

E. ADC 1103 dated August 20, 2014. Modified the DLMS 824R to expand the scope to include rejection of logistics bills and make administrative adjustments to convert the supplement into an IC and to reflect current element use by DLA Transaction Services. Revises Chapters 2 and 6 and Appendices 2.12 and 3. Revises DLMS IC 824R.

F. ADC 1134 dated July 17, 2014. Corrected the record positions for the quantity field in the legacy DIC FJR/FJS format and other typographical corrections. Revises Chapters 3 and 4 and Appendix 3.

III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 4, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 3 also includes administrative updates: In all updated documents "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards" per DoDI 8190.01. In accordance with new direction for issuances, “shall” has been replaced by “will”, “must”, or other appropriate words or phrases throughout the updated documents. References to DoD 4140.01-R were updated to reflect the updated DoDM 4140.01.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by DLA Logistics Management Standards Office memorandum:

A. ADC 1043 dated September 18, 2013. Added discrete Standard Line of Accounting (SLOA)/Accounting Classification data elements to logistics transactions with financial implications to implement SLOA within DLMS. Revises Chapters 2 and 6 and Appendix 3. Revises DLMS Implementation Conventions 180M, 511M, 511R, 517M, 810L, 842 A/W, 856S, 867I, 869F, and 940R. An administrative update was made to align the Document Identifier Codes in Appendix 2.1 with the new Appendix 3.

C. ADC 473B dated November 26, 2013. Updated the DLMS 810L Logistics Bill to include the PO number and updated the DLMS 812R, Logistics Bill Adjustment Request, and 812L, Logistics Bill Adjustment Request Reply,

Change 2

DEFENSE LOGISTICS MANAGEMENT SYSTEM
VOLUME 4, MILITARY STANDARD BILLING SYSTEM (MILSBILLS) - FINANCE
CHANGE 2

I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 4, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Change 2 to Volume 4 consists of administrative corrections for typos. These administrative changes are not marked in the manuals.

II. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.
FOREWORD

I. The Defense Logistics Management System (DLMS) manual is reissued as Defense Logistics Manual (DLM) 4000.25, Defense Logistics Management Standards (DLMS), under the authority of DoD Instruction (DoDI), 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. DLM 4000.25 is composed of multiple volumes, each supporting functionally related business processes. Volume 4 provides standard procedures for billing and related adjustments for sales of materiel and related services, collectively referred to as the Military Standard Billing System (MILSBILLS). This includes the related standard transactions for exchanging data in compliance with the procedures.

II. The provisions of this manual apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

III. This manual incorporates the Approved Defense Logistics Management Standards (DLMS) Changes (ADC) listed in the Process Change History page immediately following this Foreword. ADCs are published electronically on the ADC page of the DLMS Website. Recommended revisions to this manual will be proposed and incorporated under the Process Review Committee (PRC) forum for logistics functional areas. Submit all proposed change requests through your designated DoD Component PRC representatives. The procedures are in Volume 1, Chapter 3 of this manual and is available on the DLMS Website.

IV. This Volume is approved for public release and is available electronically on the DLMS Website. Use the comment form to contact the Enterprise Business Standards Office (EBSO).

Paul D. Peters
Deputy Assistant Secretary of Defense
for Supply Chain Integration

<tr>
<td>221A</td>
<td>8/3/2011</td>
<td>Revised Procedures associated with the DLMS Enhancement for Communication of Unit Price. This change revises procedures for DLA Transaction Services Defense Automatic Addressing System (DAAS) conversion mapping from DLMS to MILS legacy 80 record position formats to block the perpetuation of any price exceeding 7 positions (5 digits' dollars and 2 digits' cents), and block the perpetuation of any price consisting of all &quot;9&quot;s. The change allows the Navy ERP to accept items whose price is larger than $100,000. Revises DLMS Supplements 511R, Requisition, 511M, Requisition Modification, 527D, Due-in/Advance Receipt /Due Verification, 527R, Receipt, Inquiry, Response and MRA, 536L, Logistics Reassignment Management Data, 810L, Logistics Bill, 812L, Logistics Bill Adjustment Request Reply, 812R, Logistics Bill Adjustment Request, 846D, Logistics Reassignment Transfer and Decapitalization, 856S, Shipment Status, and 869F, Requisition Follow-Up.</td>

<td>274</td>
<td>4/1/2008</td>
<td>DLMS and DLSS Changes to Support Army Exchange Pricing. This change makes changes to support Army Exchange Pricing. Army Managed National Stock Numbered (NSN) items that are on an existing or planned national repair program, will have an Exchange Price (EP), which represents the Latest Repair Cost plus a recovery rate. Essentially, those nationally repaired items will be issued at a discounted price based upon an expected return. If EP items are not returned within the established timeline (Delta Delay Days), the process will generate a Delta Bill (SP minus EP), which would result in a net cost of the full Standard Price to the customer. The Exchange Price will only be applicable to Army EP customers. All other customers will be charged the Standard Price. Revises Chapter 2 and Appendix 2.5.</td>

<tr>
<td>1043C</td>
<td>12/22/2014</td>
<td><strong>Administrative Corrections for SLOA Data the 810L Logistics Bill and other DLMS ICs.</strong> Amends ADC 1043 to remove SLOA data element Budget Line Item from the header, as it has no apparent applicability to the header (summary bill), corrects DLMS notes erroneously applying or omitting references to the line of accounting data elements being modifiable in certain ICs, and changes DLMS 810L loop 2/FA1/350 from mandatory to used, as non-interfund bills may not provide SLOA data and lack of data would cause the transactions to fail. Revises the DLMS 511R, 517M, 810L, 842A/W, 867I, 869F, and 940R ICs. Also accomplishes administrative changes to the DLMS 140A, 180M, 511M, 511R, 517G, 517M, 527D, 527R, 536L, 567C, 650A, 650C, 810L, 812L, 812R, 824R, 830D, 830R, 830W, 842P, 846A, 846C, 846D, 846F, 846I, 846P, 846R, 846S, 856N (4010 &amp; proposed 4030 versions), 856R (4010 &amp; 4030 versions), 856S, 867D, 867I, 869A, 869C, 869F, 870L, 870M, 870N, 870S, 888A, 888I, 888W, 940R, 945A (4010 and 4030 versions), and 947I (4010 and 4030 versions). ICs removing an obsolete reference to an Accounting Classification Appendix.</td>
<td>5</td>
</tr>
<tr>
<td>1043D</td>
<td>7/1/2015</td>
<td><strong>SLOA Data Element Sub-Allocation Holder Identifier Subsuming Limit/Subhead Data Element.</strong> Subsumes the Limit/Subhead data element into the Sub-Allocation Holder Identifier data element included in the Standard Financial Information Structure (SFIS) Fund Code to Fund Account Conversion Table and changing the data element name from Limit/Subhead to the abbreviated Sub-Allocation in the Web Fund Code application data entry screens and reports. It also changes the Sub-Allocation Holder Identifier on the DLA default appropriation value in MILSBILLS Appendix 2.2 from &quot;5999&quot; to &quot;5CBX&quot;. Revises Chapter 4, Adjustment Procedures, AP1.1, Fund Code to Fund Account Conversion Table, AP2.2, Fund Codes, and AP 4, Web Fund Code Master File Layout.</td>

C1. CHAPTER 1

INTRODUCTION

C1.1. GENERAL

C1.1.1. Purpose. This volume provides Defense Logistics Management System (DLMS) standard procedures for billing and related adjustments for sales of materiel and related services, collectively referred to as the Military Standard Billing System (MILSBILLS). This includes the related standard transactions for exchanging data in compliance with the procedures using either the DLMS Supplements (DS) variable length format or the legacy Defense Logistics Standards Systems (DLSS) fixed length 80 record position format.

C1.1.1.1. New and migrating systems implementations of the DLMS are to comply with the DLMS Supplements to Federal Implementation Conventions (ICs) for American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 in accordance with DoD Directive 8190.1, “DoD Logistics Use of Electronic Data Interchange (EDI) Standards,”, May 5, 2000. The relevant DLMS Supplements are the DLMS 810L (Logistics Bill), DLMS 812R (Logistics Bill Adjustment Request), and DLMS 812L (Logistics Bill Adjustment Request Response). All DLMS Supplements to Federal ICs may be accessed on the DLMS IC page.

C1.1.1.2. DLSS is the legacy implementation for billing, previously published as part of MILSBILLS. See Appendix 3 for the list of billing related document identifier code (DIC) formats.

C1.2. POLICY

C1.2.1. Use of This Volume. Use of this volume requires simultaneous access to DLMS Manual Volume 1 administrative items such as lists of acronyms and abbreviations, terms and definitions, and references; instructions for acquiring access to the DLMS standards data base; DLMS-to-Defense Logistics Standard System (DLSS) cross-references and DoD/ASC X12 Conversion Guides; specific guidance that applies to all implementation conventions; and functional and technical information that is relatively stable and applies to the DLMS as a whole.

C1.2.2. DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures,” provides the DoD policies and governing procedures in this volume.
C1.3. APPLICABILITY. This volume applies to the Office of the Secretary of Defense, Military Departments, Joint Staff, Unified and Specified Commands, Defense Agencies, and Defense Organizations (hereafter referred to collectively as "DoD Components") and, by agreement, to other organizations participating in the DLMS.

C1.4. FINANCE PROCESS REVIEW COMMITTEE. The Finance Process Review Committee (PRC) is the forum through which the DoD Components and other participating organizations may participate in the development, expansion, improvement, maintenance, and administration of the Interfund Billing System and other financial requirements for the DLMS. The Chairman, Finance PRC, in coordination with other Finance PRC members, is responsible for the contents of this volume of the DLMS. The identification of Finance PRC representatives, and other PRC related information, appears on the Finance PRC Webpage. Refer to Volume 1, Chapter 1 for a discussion of general DLMS PRC functions and responsibilities.

C1.5. SUPPLEMENTAL PROCEDURES. Supplemental procedures issued by the DoD Components and participating Agencies are authorized when additional detailed instructions are required. The publications listed in Table C1.T.1 supplement the provisions of this volume within the DoD Components and participating Agencies:

<table>
<thead>
<tr>
<th>SERVICE or AGENCY</th>
<th>SUPPLEMENTAL INSTRUCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>United States Army (USA) and United States Air Force (USAF)</td>

</tr>
<tr>
<td></td>
<td>FEDSTRIP Operating Guide</td>
</tr>
</tbody>
</table>

C1.6. NONCOMPLIANCE. If reasonable attempts to obtain compliance with prescribed procedures or resolution of DLMS Finance related problems are unsatisfactory, the activity having the problem will request assistance from its DLMS Finance PRC representative. The request will include information and copies of all correspondence pertinent to the problem; including the document number, the number and date of the DLMS bill, and billing office. The representative will take the necessary actions to
resolve the issue or problem. The actions may include requesting assistance from the Chairman.

C1.7. **SIMULATED MOBILIZATION EXERCISE**

C1.7.1 When establishing plans that require simulated mobilization exercises, identify the associated transactions as simulated mobilization exercise transactions as provided for in the applicable implementation convention. The common mechanism in the DLMS Supplement is to set the Purpose Code of the beginning segment to 77–Simulation Exercise. Do not process simulated mobilization transactions in the supply distribution system(s) as action documents that affect accountable/unit records. The DoD Component activities responsible for initiating these exercises must use extreme caution to ensure procedures are explicit and to coordinate with all participants.

C1.7.2. DLSS has reserved certain DIC series for use in mobilization or other exercises. Within the legacy DLSS, DIC H series transactions are reserved for use during simulated mobilization exercises in lieu of the normal F or G series DICs. Although not mandatory, exercise planners are encouraged to use the H series DIC.
C2. CHAPTER 2

BILLING PROCEDURES

C2.1. CRITERIA FOR BILLING

C2.1.1. Shipments from Stock. Billing will be effected on the basis of drop from inventory or performance of services. Exceptions are as follows:

C2.1.1.1. Security Assistance. Billings for security assistance will be effected upon constructive delivery.

C2.1.1.2. Petroleum, Oil, and Lubricants (POL). Billings for bulk POL shipments may be billed after notification of receipt or 15 calendar days after the date of shipment or issue, whichever occurs first.

C2.1.1.3. Perishable Subsistence Chill and Freeze Items. Billings for perishable subsistence chill and freeze items will be effected upon drop from inventory. Billings for fresh fruits and vegetables will be effected upon receipt of an issue transaction from DLA Troop Support.

C2.1.1.4. Drawdowns

C2.1.1.4.1. Materiel requisitioned under authority of Section 506 of the Foreign Assistance Act, as amended (i.e., when the Foreign Military Sales (FMS)/Grant Aid (GA) type of assistance code is C), may not be billed until funds are appropriated, with the exception of Working Capital Fund activities. Although Section 506 does not provide obligation or disbursing authority, it does permit the drawdown of existing DoD stocks subject to an appropriation to be made at a later date. Since there is no assurance that DoD accounts will be reimbursed, the transfers cannot be recorded as accounts receivable. Therefore, issues under Section 506 will be treated as transfers without reimbursement. The transfer without reimbursement will be reversed when appropriations are received to reimburse the DoD account for the transfer. Section 506 draw downs of General Services Administration (GSA) or other non-DoD stocks are not authorized.¹

C2.1.1.4.2. All requests for Defense Working Capital Fund (DWCF) activities (to include transportation) will include a funding source, allowing DWCF

¹Section 552 of the Foreign Assistance Act of 1961 allows the President to "direct the drawdown of commodities and services from the inventory and resources of any agency of the United States Government". Under DLMS, except for the use of DoD (Section 506) or any agency (Section 552) assets, drawdowns under both sections are identified and treated similarly.
activities to be reimbursed by the Military Departments without delay. Orders will not be accepted without a funding source. Refer to DoD 7000.14-R, "Department of Defense Financial Management Regulations (FMRS)", Vol. 12, paragraph 230502 and Vol. 11B, paragraph 110106.A.

C2.1.2. **Direct Deliveries of Materiel from Contractors.** When an inventory item is out of stock, is not carried, or has otherwise been requested via direct delivery of materiel from a vendor, the billing will be effected upon notification of receipt of materiel by the customer or notification of shipment by the vendor.

C2.1.3. **In-Storage Visibility Lateral Redistributions.** When an Integrated Materiel Manager/Inventory Control Point (IMM/ICP) laterally redistributes materiel, reimbursement to the reporting activity and billing to the requisitioning activity will be effected upon notification of receipt by the requisitioning activity.

C2.1.4. **In-Storage Visibility Procurement Offset.** When materiel is returned to the IMM/ICP to offset or preclude procurement, reimbursement to the returning activity is authorized upon receipt, inspection, and acceptance of materiel as evidenced by the IMM/ICP's generation of a creditable Materiel Receipt Status.

C2.1.5. **Customer Asset Report Credits.** Materiel Return Program (MRP) credits are authorized upon receiving notification that materiel authorized for return under creditable procedures has been received in the offered condition and quantity.

C2.1.6. **Materiel Services.** Billings for services related to materiel shipments and returns not included in the materiel price are authorized after the services are rendered.

C2.1.7. **Obligations for Requisitioned Materiel.** Establishing an obligation for the proper amount under the requisition document number is essential for the timely and automated processing of interfund bills. Failure to do so is a violation of financial management procedures and may delay processing and increase workload for both DFAS and submitting Component personnel. DoD Components that either (1) establish business processes for requisitioning outside their customer’s Component sponsored supply system, e.g., via internet ordering applications, or (2) authorize their own Component personnel to satisfy requirements through the use of external ordering processes, will support adherence to standard DoD financial business processes.

C2.1.7.1 DoD Components may authorize manual recording of the financial obligation by the customer as a separate action until such time as an automated interface between the ordering application and a Component-sponsored financial system is available. Where an interface is not available, external ordering applications will alert users to comply with their Component-directed financial procedures.
C2.1.7.2 Procedures for on-line internet ordering application real-time verification of funds availability and funds availability response for are provided under DLMS Vol 4, Chapter 7.

C2.2. PREPARATION OF BILLS

C2.2.1. General. Bills will be prepared within 30 calendar days of the criteria provided in section C2.2 and must identify each shipment, delivery, service performed, or refund earned.

C2.2.2. Materiel Billing and Credit Amounts. In general, billings for materiel will be at the standard price in effect at the time of shipment, and credit adjustments (refunds) will be at the price originally billed. Exceptions are identified in the following subparagraphs. Billings and credits for services or allowances related to materiel shipments will be processed as prescribed by section C2.5.

C2.2.2.1. Lateral Redistribution Credits. Reimbursements for materiel laterally redistributed will be processed at the standard price in effect at the time of shipment. Credits may be fully or partially reversed by the IMM/ICP when a validated discrepancy report documents the materiel was not shipped in a condition or quantity warranting full credit.

C2.2.2.2. In-Storage Visibility Procurement Offset and MRP Credits. Credits will be processed at the acquisition cost in effect at the time of receipt. Credits may be lower if, in the opinion of the IMM/ICP, the received materiel is not in a condition and/or quantity to warrant full credit.

C2.2.2.3. Quality Deficiency Reports. When the original requisition number cannot be identified, the credits will be at the current standard price.

C2.2.2.4. Materiel Returns to DLA from Industrial Sites under Base Realignment and Closure Retail Storage and Distribution/Inventory Management and Stock Positioning, and National Inventory Management Strategy. A variation of the MRP program is used for processing materiel returns to DLA from selected sites in support of the Base Realignment and Closure (BRAC) Retail Storage and Distribution (SS&D)/Inventory Management and Stock Positioning (IMSP) and the National Inventory Management Strategy (NIMS). Standard MRP DLMS/MILSTRIP transactions do not apply. No credit for packaging, crating, handling, or transportation (PCH&T) will be provided.

C2.2.2.4.1. Industrial Sites. DLA managed materiel returned by an industrial customer at BRAC industrial sites will be accepted into DLA inventory

---

2 DLA is required to request approval of new procedures supporting BRAC/NIMS allowing full materiel credit for returns regardless of asset position with no credit for PCH&T.
regardless of DLA wholesale asset stock position. Credit will be processed based upon a receipt of the returned materiel corresponding to a sale to Service maintenance (identified by DoD Activity Address Code (DoDAAC) series/internal customer group) for the same materiel and condition completed within the 60-day period prior to the date on the return. Up to 100 percent credit will be processed at the full selling price of the item on the original order(s) used as reference for return quantity less than or equal to the quantity on the reference order(s). DLMS/MILSBILLS Billing for Issue from Stock (DLMS 810L/DIC FA2) will be used to provide credit under modified business rules. Credit for any quantity returned over the original amount, in a different condition code from the original sale or unmatched is subject to DLA ICP stock position using business rules equivalent to the MRP for determining whether to provide credit/credit amount contained in DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures,” February 10, 2014. The Service’s financial system will be notified of any resulting credit via a DLMS/MILSBILLS Materiel Returns Program Credit (DLMS 810L/DIC FD2).

C2.2.2.4.2. National Inventory Management Strategy Sites. Credit for materiel returns from a NIMS site customer will be processed based upon the return receipt. The DLA ICP will process the receipt and determine whether a sale has occurred for the same materiel, condition code, and customer within a 60-day time frame reflecting the exact same document number as the receipt (return) document. If there is an exact matching sale, the customer will receive credit equal to the original sale. Credit for any quantity returned over the original amount, in different condition code from the original sale or unmatched is subject to credit/credit amount from C2.2.2.4.1. The Service’s financial system will be notified of any resulting credit via a DLMS/MILSBILLS Materiel Returns Program Credit (DLMS 810L/DIC FD2).

C2.2.3. Method of Billing

C2.2.3.1. Bills arising from transactions containing a National Stock Number (NSN) within the DoD will be collected through the Military Standard Billing System (MILBILLS) interfund billing procedures when supported by the supply and accounting systems. The provider will not accept a Military Interdepartmental Purchase Request (MIPR) if interfund can be used. Manual billing (e.g., the XP fund code) will not be used unless approved by the Deputy Chief Financial Officer. For intragovernmental interfund disputes, follow the dispute process outlined in Chapter 4.3 Billings to DoD offices must be under interfund procedures except as provided below.

C2.2.3.2. Billing will be under noninterfund procedures when:

C2.2.3.2.1. The bill-to office is non-DoD (Bill-To Service Code is numeric, G, or Z).

3 From DoD 7000.14-R, Volume 4, Chapter 3 Receivables, Paragraph 030504.B (November 2009)
C2.2.3.2.2. The bill-to office is a DoD contractor (Bill-To Service Code is C, E, HG, L, Q, SD, or U).

C2.2.3.2.3. The bill-to office is DoD (Bill-To Service Code is alpha other than C, E, G, HG, L, Q, SD, U, or Z) and the fund code requires noninterfund billing (normally XP fund code).

C2.2.3.2.4. The bill-to office is another-DoD Component (Bill-To Service Code is H) and the fund code is not identified as a valid fund code.

C2.2.3.2.5. The bill-to office is Army & Air Force Exchange Service (AAFES) (Bill-To Service Code is H followed by an X).

C2.2.3.2.6. The bill-to office is SC4210, representing DoD EMALL, and the fund code is XP. This combination indicates billing via customer-provided Government purchase card or corporate credit card. No other use is authorized.4

C2.2.3.2.7. DAAS will reject bills when they fail any of the edits. See Chapter 6.2 for information about the routing and editing of bills processed through DAAS. Rejected bills will be reported back to the originating activity using DLMS 824R (Reject Advice Transaction) citing the applicable Reject Advice Code from DLM 4000.25, DLMS, Volume 2, Appendix 2.8. Rejected bills may include a narrative description indicating the reason for rejection, in addition to the Reject Advice Code. Billing offices will correct the rejected bills and resubmit them to the DAAS. Billing offices will ensure that all appropriate adjustments for rejected billings and interfund collections are made to seller accounting records.

C2.2.3.3. Method of Billing Summary. Billing methods are summarized in Table C2.T1.

| Condition Number | Billed DoDAAC Begins With: And Fund Code is: Then the Billing Method is: |
|------------------|---------------------------------------------------------------|---------------------------------|
| 1                | C, E, G, HG, HX, L, Q, SD, U, Z, or numeric Any NON INTERFUND |
| 2                | Any Service code XP or otherwise designates noninterfund NON INTERFUND |

---

4 Refer to ADC 1009A.
### C2.2.4. Determining Bill-To Parties

#### C2.2.4.1. Billed Party
Ordering activities will identify a billed party DoDAAC for all requisitions or other orders, including nonreimbursable orders.

#### C2.2.4.2. Billed Party Not Identified
Item managers or other providers of goods and services will reject requisitions or other orders when a valid billed party is not identified. In the event an order comes through without a valid bill-to party, billing offices will designate the ordering or submitting activity as the bill-to party if, for whatever reason, they are unable to identify a valid billed party. The Service Security Assistance Control Office will be designated as the bill-to party for unidentifiable security assistance requisitions. The Service control offices are: Army–W25P02, Navy–N65916, and Air Force–FG2303.

#### C2.2.4.3. The mailing address for noninterfund bills will be the clear text address prescribed for billing (TAC 3 if assigned; otherwise TAC 1) in the DoDAAD (DLM 4000.25, Defense Logistics Management Standards Manual, Volume 6, Chapter 2). The routing for interfund bills will be based on the billing Communication Routing Identifier (COMMRI).

#### C2.2.5. Nonreimbursable Bills
Materiel issued under nonreimbursable procedures must be reported to the billed office using the Notice of Nonreimbursable Issue (810L/DIC FE__).

C2.2.6. **Interfund Bills**

C2.2.6.1. **Use of Interfund.** If the bill is paid under interfund procedures, the billing office will report the collection to its servicing finance center on its seller interfund report. A separate interfund bill will be prepared for billings applicable to a bill-to DoDAAC and treasury symbol.

C2.2.6.2. An interfund bill consists of a Summary Billing Record (DS 810L, DIC FS_) and one or more detail billing records, but must not contain more than 495 records in total. Noninterfund records must not be included on the same bill.

C2.2.6.3. Interfund bills are forwarded to DAAS electronically for editing and further routing to the offices billed as described in Chapter 6. Only billings routed by DAAS will be eligible for interfund collection as prescribed in Chapter 5.

C2.2.6.4. Separate detail billing records, selected from the Appendix 3 series appendices, will be prepared for each shipment or delivery supporting the summary billing record.

C2.2.6.5. The fund code (see Appendix 2) provides procedures for converting fund codes to appropriations charged.

C2.2.6.6. A separate interfund (or noninterfund) bill will be prepared:

C2.2.6.6.1 when the billed office DoDAAC or fund code changes,

C2.2.6.6.2. when the net amount of the bill (net amount of the detail billing records) equals or exceeds 10 million dollars,

C2.2.6.6.3. when the number of billing records (summary plus detail billing records) exceed 495 records, or

C2.2.6.6.4. when there are different Security Cooperation Customer Codes.

C2.2.6.7. The recommended standard for interfund bill numbers appears in Table C2.T2.

Table C2.T2. **Standard Interfund Bill Numbers**

<table>
<thead>
<tr>
<th>If the Billing Month Is:</th>

</tbody>
</table>
If the Billing Month Is: | The 1st Position of the Bill Number Will Be: | If the Billing Month Is: | The 1st Position of the Bill Number Will Be:
---|---|---|---
February | C or D | August | Q or R
March | E or F | September | S or T
April | G or H | October | U or V
May | J or K | November | W or X
June | L or M | December | Y or Z

The remaining four positions of the bill number will be alpha or numeric (characters A-Z or 0 or 9). The bill number must be unique within the billing month.

C2.2.7. Noninterfund Bills

C2.2.7.1. When an activity is unable to use electronic data interchange (EDI) methods (i.e. DLMS 810L), it may use the SF 1080, "Voucher for Transfers between Appropriations and/or Funds," or other form approved by the Treasury Department, such as GSA Form 789, “Statement, Voucher, and Schedule of Withdrawals and Credits” as the billing document for noninterfund bills.

C2.2.7.2. An original of the noninterfund billing will be provided to the billed office. Noninterfund billings will, at a minimum, be supported by the following information: document order number, description of the article or services, delivery or other performance date, quantity, and price. The document order number and description will usually be satisfied by the requisition document number and NSN. The delivery or performance date is the same as the day of year prescribed for the detail billing record appropriate for the issue or service.

C2.2.7.3. Billing offices may, at their option and with the customer’s concurrence, provide automated support for noninterfund billings using the G series billing records. These billing records will be transmitted electronically to DAAS, which will pass the records to the billed office by the best means available. Hard copy billing documents are not required.

C2.2.8. Standard Line of Accounting/Accounting Classification. The Office of the Under Secretary of Defense (Comptroller) identified Standard Financial Information

---

Though not required, to facilitate the resolution of billing or payment disputes involving noninterfund bills, billing offices should also include electronic contact information on the bill.
System elements that make up the Standard Line of Accounting (SLOA)/accounting classification elements. These SLOA elements are included in DLMS bills. Some elements may be acquired referentially through the authoritative data source SFIS Fund Code to Fund Account Conversion Table maintained at DAAS. Updates to the fund code table are accomplished by Component Fund Code Monitors designated in writing by their respective Components.

C2.3. **RESERVED**

C2.4. **CORRECTION OF ERRONEOUS BILLINGS**

C2.4.1. **Billing Forwarded to Customer.** When a billing office finds it has issued an invoice containing one or more erroneous billing lines, it will correct the erroneous billing line in a later invoice. Normally, billing offices are expected to reverse and reissue only the erroneous billing line, not the entire invoice. The corrections will be processed as soon as practical and will not await customer requests for adjustments.

C2.4.2. **Billing Rejected by DAAS.** Billings rejected by DAAS must be corrected and resubmitted to obtain reimbursement. Corrective procedures will include preserving the accounting records along with records of causative research to maintain the audit trail and the validity of the records. For example, in-transit interfund collections and paid accounts receivables related to the rejected bills will have to be reversed.

C2.4.3. **Notifications.** Billing offices will advise their Finance PRC representative of significant or mass billing errors and their planned corrections. Finance PRC representatives will assist in coordinating with billed offices and will apprise the impacted primary/alternate PRC members of the situation via e-mail. Notify the PRC Chair simultaneously at Enterprise Business Standards Office Finance (financehq@ dla.mil). Note that some financial systems may reject bills resubmitted with the same billing number.

C2.5. **CANCELLATIONS.** When a provider accepts a customer’s request to cancel a requisition or other order, any billings generated for that requisition will be reversed in the next billing cycle. When the cancellation involves diverting materiel back to stock, the billing will be reversed upon receipt of the materiel. Any charges related to the cancellation, such as contract termination costs, will be billed under noninterfund procedures.

---

C2.6. BILLING FOR ACCESSORIAL AND ADMINISTRATIVE COSTS

C2.6.1. DoD Shipments

C2.6.1.1. Purpose. Accessorial and administrative costs may be invoiced using either interfund or noninterfund reimbursement methods. However, in all cases, billing will be accomplished in the same manner as the materiel. DoD 7000-14-R, Volume 6, provides the DoD policy for billing accessorial and administrative costs.

C2.6.1.2. Normal Charges. Unless otherwise indicated on ordering documents or transactions, accessorial costs incurred for supply items requisitioned by DoD Activities will be charged to the same funds as the materiel.

C2.6.1.3. Retail Loss Allowance. DoD 7000.14-R, volume IIB, requires the DWCF to grant a discount for retail losses to retail stock funds based upon net issues after authorized credits or offsets have been applied. These discounts are to provide funds for losses experienced at the retail stock fund level. Retail loss discounts will not be granted for sales to commissaries and customers of retail or installation level stock fund activities. However, retail loss discounts are authorized for all military clothing items sold to Military Exchanges.

C2.6.1.4. Packing, Crating, Handling, and Transportation (PCH&T)

C2.6.1.4.1. Reimbursements for packing, crating, and handling costs for (a) IMM/ICP directed lateral redistributions, (b) IMM/ICP authorized MRP and sales returns, and (c) IMM/ICP directed procurement offset returns associated with In-Storage Visibility (ISV) will be a percent of the materiel credit price. The rate will be 3.5 percent for consumable items and 1 percent for reparable items. Billing offices will use the Accessorial and Other Miscellaneous Billings record format to support these billings and reimbursements.

C2.6.1.4.2. Reimbursements for transportation costs for (a) IMM/ICP directed lateral redistributions, (b) IMM/ICP authorized MRP and sales returns, and (c) IMM/ICP directed procurement offset returns associated with ISV will be for an amount equal to the IMM/ICP’s cost recovery rate for second destination transportation included in the selling price of the materiel and will be supported by a Billing for Transportation record format.

C2.6.1.4.3. Billing offices will use the Accessorial and Other Miscellaneous Billings to support reimbursements for authorized repackaging based upon a validated Supply Discrepancy Report under Volume 2, Chapter 17.7

7 Refer to ADC 1203
C2.6.1.4.4. Billing offices will use the Accessorial and Other Miscellaneous Billings or other appropriate record to support billings and reimbursements for other authorized PCH&T, administrative, or accessorial charges.

C2.6.1.4.5. Reimbursement for PCH&T will not be provided for materiel returns to DLA industrial sites under BRAC SS&D/IMSP, or NIMS sites. Refer to C2.2.2.4.

C2.6.2. GSA Shipments

C2.6.2.1. General. GSA will assess accessorial and administrative costs on shipments to the Department of Defense as indicated in this section.

C2.6.2.2. Transportation Charges

C2.6.2.2.1. Paid by GSA. GSA will pay transportation charges on stock items to:

C2.6.2.2.1.1. Consignees in the CONUS, and, where scheduled, surface commercial transportation services are available in Hawaii, the Commonwealth of Puerto Rico, the Virgin Islands, the southeast peninsula of Alaska, central Alaska (rail belt), and Kodiak Island.

C2.6.2.2.1.2. A U.S. port of embarkation for overseas destinations not included in subparagraph C2.6.2.2.1.1.

C2.6.2.2.2. Paid by Customer. GSA will not pay transportation charges for shipments of special order program (nonstock) items, purchased free on board (FOB) origin. GSA will, however, prepay and bill the agency as a separate item for:

C2.6.2.2.2.1. Transportation charges to a CONUS destination or a U.S. Port of Embarkation on F.O.B. origin items.

C2.6.2.2.2.2. Transportation charges from a CONUS destination or a U.S. Port of Embarkation to consignees in Hawaii, the Commonwealth of Puerto Rico, the Virgin Islands, the Southeast Peninsula of Alaska, Central Alaska (rail belt), and Kodiak Island.

C2.6.2.2.2.3. Transportation charges billed under interfund procedures will be billed using the Accessorial and Other Miscellaneous Billings record.

---

8 DLA is required to request approval of new procedures supporting BRAC/NIMS allowing full materiel credit for returns regardless of asset position with no credit for PCH&T.
C2.6.2.3. **Export Charges**

C2.6.2.3.1. Surcharge will be assessed at the rate of 10 percent of the value of the materiel ordered and shipped to customers overseas from GSA wholesale distribution centers and vendors when unique DoD marking/packing requires the shipment be physically handled by a GSA export packing facility. The export surcharge will be billed as follows:

C2.6.2.3.2. A flat fee of $5 administrative charge per requisition line will be assessed for export shipments not physically handled by a GSA export packing facility.

C2.6.2.3.3. The export services performed on shipments for customers overseas may vary by customer location, commodity, mode of shipment, and other criteria and include: monitoring and expediting delivery to meet required delivery date; over packing and documenting dangerous/hazardous shipments; challenging air eligible shipments; unitizing, consolidating, and palletizing cargo; arranging for seavans to source load cargo and document shipments for delivery to ports of embarkation; and others.

C2.6.2.3.4. GSA will annually review actual costs to perform export services and, as appropriate, propose changes in the above rate for use throughout each fiscal year. The Under Secretary of Defense (Comptroller) will be advised sufficiently in advance for appropriate program and budget planning.

C2.7. **BILLING FOR PROGRESS AND ADVANCE PAYMENTS**

C2.7.1. **Progress Billings**

C2.7.1.1. **Purpose.** Progress payments may be billed via interfund whenever the order received from the customer specifies that progress billings via interfund are authorized. Documentation of the agreement by the customer to allow progress billing via interfund may be used in lieu of a specific provision on each order.

C2.7.1.2. **Billing Basis.** Billings made for progress payments will be based upon documentary evidence of satisfactory performance and must not exceed the amount of the customer order.

C2.7.1.3. **Offsets.** The billing office will offset billing lines for deliveries against all outstanding progress billings related to those deliveries. Billing lines will be reported for both the sales price of the shipment and the amount of the progress billing being liquidated. The billing method elected for the progress payment will also be the method used to invoice for the delivery.
C2.7.1.4. **Multiple Progress Billings.** Although multiple progress billings may have been submitted against an order, a single recoupment billing may be reported for the total amount of the progress billings.

C2.7.2. **Advance Billings**

C2.7.2.1. **Applicability.** Advance billings may not be billed via interfund. When authorized, advance funding will be satisfied via noninterfund and by the use of appropriation level, rather than project or order level, advances.

C2.7.2.2. **Application of Advances.** Received advances must be returned or applied to accounts receivable before the end of the fiscal year.

C2.8. **INTO-PLANE FUEL SALES**

C2.8.1. **Applicability.** These procedures apply to DoD into-plane issues (sales) of fuels to DoD aircraft except when other billing procedures are specified by the terms of an inter-Service support agreement.

C2.8.2. **Reimbursable Issues.** Reimbursable issues (sales) of fuel into DoD planes by DoD activities will be billed at the standard price in effect at the time of issue.

C2.8.3. **Contractor Fuel Issues.** Contractor into-plane fuel issues will be billed at the standard price applicable to each such issue.

C2.8.4 **DWCF Billing.** Billing offices funded by the DWCF will grant credit for DoD aircraft defueling based on supply defueling slips at DWCF prices.

C2.8.5. **Credits.** Credits will be given for contractor into-plane defueling of DoD aircraft based on a defueling slip at the standard price given for each defueling.

C2.8.6. Into-plane fuel bills will use the Billing for Into-Plane Issues record format.

C2.9. **HAZARDOUS MATERIEL and WASTE BILLINGS**

C2.9.1. Users of DLA’s hazardous materiel and waste disposal services will provide DLA with a disposal turn-in document (DD Form 1348-1A, “Issue Releases/Receipt Document,” or 1348-2, “Issue Release/Receipt Document with Address Label”) as prescribed by DLM 4000.25. Since these services are provided on a reimbursable basis, the order will be funded in accordance with the standards prescribed by DoD 7000.14-R. The order will generally authorize DLA to use the interfund billing system to reimburse themselves for these services.
C2.9.2 General

C2.9.2.1. General policies and procedures governing hazardous materiel’s and waste disposal within the Department of Defense are prescribed by DoD 4160.21-M, “Defense Materiel Disposition Manual,” August 18, 1997. DLA Disposition Services (formerly the Defense Reutilization and Marketing Service) is authorized to bill for these services under interfund billing procedures and will use the Billing for Decentralized, Noncatalogued, and Nonstocked Items billing record.

C2.9.2.2. Requestors of services wanting to dispose of hazardous waste and materiel must follow the procedures in DoD 4160.21-M and Chapters 4 and 29 of DLM 4000.25, DLMS Volume 2. These procedures require preparation of a disposal turn-in document (DTID) in accordance with instructions prescribed by MILSTRIP procedures and provide it to the DLA Disposition Services Field Office (formerly Defense Reutilization and Marketing Office (DRMO)). The DLA Disposition Services Field Office will provide the generator with a receipt copy of the DTID at the time of turn-in.

C2.9.3. Hazardous Waste Disposal

C2.9.3.1. Hazardous waste disposal services are provided on a reimbursable basis and generators must, therefore, contact their servicing finance office to ensure that funds are obligated for these services. Prior to actual turn-in and disposal, the cost of hazardous waste disposal services may be estimated by referring to the contract governing the materiel being disposed of. The estimated cost of the disposal must be obligated under the DTID number. Contact the DLA Disposition Services Field Office for assistance in estimating the cost.

C2.9.3.2. The DLA Disposition Services Field Office will provide the generator with copies of the disposal manifest (DD Form 1155) and any modifications as the disposal request is executed and modifications are agreed to. The DLA Disposition Services Field Office will also provide the generator with a certified copy of disposal for each DTID. Generators must advise their servicing finance office when estimated amounts obligated at the time of turn-in or execution are lower than actual amounts indicated on these documents.

C2.9.3.3. Establishing an obligation for the proper amount under the DTID document number is essential for the timely and automated processing of interfund charges. Failure to do so is a violation of financial management procedures and will

9 The “background” information in this subsection is provided to assist financial personnel in understanding their responsibilities with regard to hazardous waste and materiel disposal services. Any conflicts between information contained in this subsection and procedures prescribed by MILSTRIP or DoD 4160.21-M will be resolved by following MILSTRIP procedures.

10 DLM 4000.25, DLMS Volume 2, Appendix 8.49 Transfers To DLA Disposition Services Field Office on DD Form 1348-1a Issue Release/Receipt Document, or DD Form 1348-2, Issue Release/Receipt Documents With Address Label.
delay updating generator accounts and increase workload on both DFAS and generator personnel.

**C2.9.4. Hazardous Materiel Disposal**

C2.9.4.1. Unlike hazardous waste, disposal of hazardous materiel may not result in any charges to the generator. Therefore, unless you are certain you will incur disposal charges, generators should not obligate turn-ins of hazardous materiel. After receipt of the hazardous materiel DTID, the DLA Disposition Services Field Office must advise the generator if disposal costs that are the responsibility of the generator will be incurred. The following determines whether or not the generator will be charged for disposal of hazardous materiel.

C2.9.4.2. There will be no disposal costs charged to the generator if the DLA Disposition Services Field Office can dispose of the hazardous materiel through an existing contract or believes the materiel can be reutilized, transferred, donated or sold.

C2.9.4.2.1. DLA Disposition Services Field Offices will provide the generator with a monthly Disposal Funding Status Report of the DTIDs that were successfully reutilized.

C2.9.4.2.2. Generators who have open hazardous materiel disposals in process will contact the DLA Disposition Services Field Office if they fail to receive a monthly Disposal Funding Status Report.

C2.9.5. When the preceding condition does not apply, the hazardous materiel becomes hazardous waste, the disposal will be on a reimbursable basis, and hazardous waste disposal procedures apply. Funding for this hazardous waste disposal must be provided to the DLA Disposition Services Field Office within 5 workdays of notification. The DLA Disposition Services Field Office must not proceed with the disposal of the now classified hazardous waste until funding is confirmed by the generator.

**C2.10. GENERAL SERVICES ADMINISTRATION UNIQUE BILLINGS**

C2.10.1. **Automotive Vehicles**

C2.10.1.1. GSA is authorized to use the interfund billing system to invoice DoD activities for automotive vehicles purchased under a category one (reimbursable) MIPR. DoD activities submitting a MIPR must do so in accordance with paragraph 8.7008 of the DoD Supplement to the Federal Acquisition Regulation, which requires activities to provide DLMS requisition data for each line-item to be delivered to each ship-to address.

C2.10.1.2. For purposes of identifying and validating charges, GSA will support interfund billings for automotive vehicles with a single line item billing register.
The register must show, in addition to the information shown on the billing record, the full MIPR number under the columns headed "STOCK NUMBER."

C2.10.2.  GSA Customer Supply Center Billing Procedures

C2.10.2.1.  GSA bills DoD customers for Customer Supply Center (CSC) billings using either a customer provided MILSTRIP document number or a constructed pseudo-document number. The document number is constructed from the ordering DoDAAC of the customer provided at the time the account was opened, the Julian day the order was placed, and the last four positions of the ticket number. GSA will treat all line items requisitioned as a single order, with or without multiple line items, and bill for the order under the constructed document number if the customer doesn't provide a MILSTRIP document.

C2.10.2.2.  GSA CSC interfund bills will be supported by the GSA CSC Billing record.

C2.10.2.3.  Noninterfund bills will be supported by the Single Line Item Billing Register. The register must include the customer provided MILSTRIP document number in the stock number field.

C2.10.2.4.  GSA offers its customers the option of having its CSC billings billed to a Government purchase card. Activities having difficulties with interfund or SF 1080 billings of CSC supplies may want to consider this option.

C2.11.  ARMY EXCHANGE PRICING PROCESS

C2.11.1.  The Army interim approach to the Exchange Pricing interim is a multi-system functionality implementation. Exchange Pricing employs a dual pricing system for a repairable NSN item based upon Standard Price (latest acquisition cost plus recovery rate) and Exchange Price (latest repair cost plus cost recovery rate) and a “buy one–return one” relationship with the customer (i.e., a qualified exchange pricing customer buys at the EXCHANGE PRICE and pays a penalty if a repairable is not turned-in within a specified period of time from the issue date). This process is applicable to Army customers and Army-managed materiel only; other Services will continue to pay Standard Price and receive 65 percent credit exchange upon receipt of carcass by the Army Primary Inventory Control Activity (PICA).

C2.11.2.  Once an item of supply is identified for a national repair program and the National Item Identification Number (NIIN) has an established Exchange Price, all requisitions for the items will be priced at the Exchange Price if the customer is an authorized Exchange Price customer.

C2.11.3.  When a requisition submitted to the Supply Support Activity (SSA) is processed by the Standard Army Retail Supply System (SARSS), SARSS will determine if both the customer DoDAAC is an Exchange Price customer, and the NIIN
has an established Exchange Price indicator. As this transaction is processed through the Army supply system, middleware, Funds Control Module (including Exchange Price Tracking) Defense Automatic Addressing System (DAAS), Commodity Control Supply System (CCSS), and Army Logistics Modernization Program (LMP), the Exchange Price indicator will be used to identify the transaction as Exchange Price related. All the legacy systems will continue processing the MILS transactions; LMP will process DLMS transactions that are converted by DAAS.

C2.11.4. All related supply transactions prepared by the Army will carry and perpetuate the Exchange Price Indicator. The following transactions will be impacted as a result of the Exchange Price implementation: Requisition; Requisition Modifier; Requisition Follow-up; Materiel Release Order; and Supply Status. The returns process will also process Exchange Price related transactions. The Materiel Receipt transaction will be generated by SARSS for all returns of Exchange Price NIINs, and will include an Exchange Price Type of Credit indicator for Unserviceable credit when applicable and an Exchange Price Conversion Indicator to identify the need to provide credit according to the pre Exchange Price credit policy, which will last for 60 calendar days following Exchange Pricing implementation.

C2.11.5. If the return has an un-repairable condition code or the item is not returned within the established timeframe (Delta Delay Days), the national level systems (LMP, CCSS) will create an obligation adjustment based on the receipt from Middleware Funds Control Module of a Materiel Returns Supply Status (Delta Bill Trigger) transaction. As a result of processing the delta bill trigger the national systems will create the logistics/interfund bill transaction with an Exchange Price Indicator and Type Bill code to identify the specific type of Exchange Price bill to the Army financial system.

C2.12. **NAVY EXCHANGE PRICING PROCESS**

C2.12.1. The Navy uses a two tier pricing system for selling Depot Level Repairable (DLR) materiel to Navy customers. The Navy sells DLRs to other Services at full (standard) price and then provides carcass value credit when the carcass is returned. This is the same method the Air Force and Army use when selling repairable items to the Navy. The Standard Price is the price representing the full value of the DLR item, and is the price charged when a Not Ready for Issue (NRFI) unit (also referred to as a ‘Carcass’) is not turned in. The Net Price (also referred to as Exchange Price) is the price that includes the cost of repairing a DLR item, and is the price charged to customers when a NRFI unit has been or will be turned in. Navy customers indicate on their requisitions whether a NRFI unit is available for turn in via the Advice Code, and they are then charged Net or Standard Price accordingly.

C2.12.2. Received requisitions indicating that a carcass will be returned are tracked in the Navy’s Carcass Tracking System. This system monitors these requisitions and matches them with carcass returns as they occur. This system also generates follow ups to customers who have not returned their carcasses as promised.
Ultimately, the system will trigger an additional charge to the customer if the carcass is not returned. Navy uses the term “Carcass Charge” for this additional billing, which represents the difference in value between Standard Price and Net (Exchange) Price. This additional billing is also referred to as a Delta Bill. If the customer returns the carcass after receiving the Carcass (Delta) Bill, then the additional billing is reversed, resulting in a Carcass Charge Reversal (Credit Delta Bill). Navy customers may also return excess DLRs for credit. The credit can be Standard, Net, or Carcass value.

C2.12.3. Under legacy format Defense Logistics Standard Systems (DLSS)/MILSBILLS billing, the Navy ICPs use the Sales Price Condition Code to indicate to customers that a bill is either Net (Exchange) Price or Carcass (Delta) Price. Once operational, the Navy’s ERP will replace the Navy ICP’s DLSS/MILSBILLS billing system with a DLMS based system. Since DLMS does not utilize a Sales Price Condition Code, Navy will use a combination of Stock Exchange Code and Type of Bill Code to indicate on the bill whether the price charged is Standard, Net, or Carcass price. DAAS will convert Navy bills back to DLSS/MILSBILLS format for any Navy customers unable to accept DLMS formats.

C2.13. INCLUSION OF TRANSPORTATION CONTROL NUMBERS ON DLMS LOGISTICS BILLS. Suppliers may bill on partial shipments with identical quantities under the same document number, which makes the bills appear as duplicates. Including the Transportation Control Number (TCN) on the DLMS Logistics Bill will resolve that problem. Partial shipment codes are part of the TCN structure in accordance with DTR 4500.9-R, “Defense Transportation Regulation”. Accordingly, reporting activities will include the TCN in DLMS Logistics Bill transactions. This is a DLMS enhancement, which may be implemented without prior authorization.
C3. CHAPTER 3

PROCESSING AND PAYMENT OF BILLS

C3.1. PAYMENT OF NONINTERFUND BILLS

C3.1.1. Payments made to other Federal Agencies are due upon receipt and shall be paid in full. The following exceptions apply:

C3.1.1.1. Bills for issues to North Atlantic Treaty Organization (NATO) (Supreme Headquarters Allied Powers Europe (SHAPE)) (identified by billed office Department of Defense Activity Address Code (DoDAAC) WM1Q7K) are due 120 calendar days after the billed date.

C3.1.1.2. Bills for issues to United Nations (UN) Peacekeeping Forces (identified by billed office DoDAAC WN7GX8) are due 120 calendar days after the billed date.

C3.1.2. When the appropriations to be reimbursed and disbursed are both within the Department of Defense, bills may be paid either by check or through cross disbursing (no check) procedures. Payments involving appropriations outside the Department of Defense shall be by check.

C3.1.3. All remittances must include either the bill number or a copy of the bill.

C3.2. PROCESSING INTERFUND BILLS. Interfund bills are notices of disbursement of billed office funds by the billing office. Accordingly, billed offices shall take prompt action to record and clear the in-transit disbursement.

C3.3. ADJUSTMENTS

C3.3.1. Billed offices shall review all charges to ensure that billed items were ordered and that obligations are adjusted when appropriate. All requests for billing adjustments must be prepared in accordance with Chapter 4.

C3.3.2. Billing or other discrepancies that do not meet the criteria for requesting adjustment, described in Chapter 4, must be recorded as obligations, funds disbursed, and expenses.
C4. CHAPTER 4

ADJUSTMENT PROCEDURES

C4.1. REQUESTING ADJUSTMENTS

C4.1.1. Submission of Adjustment Requests

C4.1.1.1. Unless otherwise indicated in this chapter, requests for adjustment, follow-ups, and replies will be submitted by electronic means.

C4.1.1.2. Requests are generally prepared using the Request for Billing Adjustment (DLMS 812R, DIC FAE) record. However, into-plane and bulk fuel related adjustment requests must use the Request for Adjustment of Fuel Billing (DLMS 812 R, DIC FJE). Refer to other Chapter 4 sections for more specific information on preparing requests for adjustments and follow-ups.

C4.1.1.3. Requests for adjustments will normally indicate the billing office as the addressee and will be submitted to DAAS for processing and routing to the billing office. Requests for adjustments of GSA billings will be addressed to the GSA National Customer Service Center (DoD Activity Address Code (DoDAAC) 476437, RI code GSA). Correspondence to the Service Center, if necessary, may be directed to:

General Services Administration
National Customer Service Center
1500 East Bannister Road
Kansas City, Missouri 64131-3087
Telephone: (800) 488-3111 (DSN) 465-1416

C4.1.2. Nonreimbursable. Forward a request for adjustment in the format prescribed for billing account code (BAC) 14 when the coding of the requisition indicates that the materiel was requisitioned under nonreimbursable procedures and a materiel billing was received.

C4.1.3. Accessorial. A request for adjustment in the format prescribed for BAC 15 will be forwarded whenever accessorial costs are charged and the charges are not authorized.

C4.1.4. Timeframes. All requests for adjustments should be submitted within 30 calendar days of receipt of the billing. Initial requests for adjustment received after the record retention period for billing records may be denied. When a discrepancy report or adjustment request is received within prescribed timeframes, nonavailability of records,
or the passing of the record by the time the report is validated or the request is processed, may not be used as a basis for denying the adjustment.

C4.1.5. Minimum Value

C4.1.5.1. Adjustment for Billing Errors. In general, no request for adjustment should be submitted for billing errors when the amount of the error is $250 or less. As an exception to the general guideline, no request for adjustment should be submitted for billing errors when the amount of the error is $100 or less and the billing office is GSA or the materiel involved is a subsistence item.

C4.1.5.2. Adjustment Types. There is no minimum value for requesting status on an anticipated or required billing, requesting a corrected bill when the received bill is incomplete, requesting a copy of a bill, requesting a change in the type of billing (interfund to noninterfund and noninterfund to interfund), or requesting adjustments for validated discrepancy reports.

C4.1.5.3. Foreign Military Sales Billing Errors. There is no minimum value for adjustment of foreign military sales (FMS) billing errors. However, adjustment requests for FMS shipments may not be submitted when the request can be rejected per the general conditions of the U.S. Department of Defense Letter of Offer and Acceptance.

C4.2. CANCELING OR AMENDING REQUESTS FOR ADJUSTMENT

C4.2.1. Canceling Requests. Submitting offices may cancel requests for adjustments whenever the request is no longer valid or appropriate and the billing office has not provided a final reply to the request.

C4.2.2. Amendments. Requests for adjustments may be amended by canceling the original request and submitting a new request.

C4.3. FOLLOW-UP ON UNANSWERED REQUESTS FOR ADJUSTMENT

C4.3.1. Adjustment Requests. Except for follow-ups to DAAS, offices submitting adjustment requests will follow-up on requests for adjustments remaining unanswered for more than 14 calendar days after submission. If the request for adjustment remains unanswered for more than 14 calendar days after follow-up, submitting offices will forward a second and final follow-up by letter or message to the billing office. In addition to providing the billing office with the information required to process the request, the final follow-up will identify the dates of initial and follow-up request.

C4.3.1.1. Follow the procedures prescribed for noncompliance and other problems (see Chapter 1) when requests for adjustments or requests for MRP credits remain unanswered for more than 30 calendar days after the second follow-up or if an interim response was received and the promised date has passed.
C4.3.1.2. Follow up to DAAS for copies of interfund bills that were requested but not received.

C4.3.2. Credit Follow-Up. Offices designated to receive Materiel Returns Program (MRP) credit will initially follow-up on the credit due when the credit has not been received and more than 30 calendar days have elapsed since the creditable status was received. A second follow-up will be submitted if a reply or credit is not received within 30 calendar days of the initial follow-up.

C4.4. REPLYING TO REQUESTS FOR ADJUSTMENT OR MATERIEL RETURNS PROGRAM CREDIT

C4.4.1. Processing Adjustments. Billing or adjustment processing offices will reply to adjustment requests using Defense Logistics Management Standard (DLMS) 812L, Adjustment Request Reply transaction. The DLMS Supplement will also be used to reply to follow-up requests.

C4.4.2. Responding to Requests. Billing offices will respond to all requests for adjustment within 13 calendar days of the date the request is received. Billing offices will respond to follow-up requests for adjustment within 13 calendar days of the date the request is submitted. Replies to adjustment requests (DLMS 812L, Document Identifier Code (DIC) FAR) and follow-ups (DLMS 812L, DIC FAS) are required and will also be forwarded to DAAS for processing and further routing to the adjustment requestor. As with the requests, fuel-related replies will follow the equivalent DIC FJ_ series formats. All adjustment replies will include an appropriate coded reply.

C4.4.2.1. Responses to adjustment requests will be forwarded to the office designated by the recipient of billing status code. Adjustments will be forwarded to the original billed office.

C4.4.2.2. Billing offices will respond to initial requests and first follow-up for MRP credit in the DLMS 812L, DIC FTB format. Responses will be forwarded, via DSN, to the office designated by the materiel receipt status (870M, DIC FTZ).

C4.4.2.3. Billing offices will respond to second follow-up requests for adjustments and MRP credit within 30 calendar days of receipt. If the request cannot be answered within 30 calendar days, an interim response by letter or message will be provided. The response must be completed within 60 calendar days.

C4.5. ADJUSTMENT AMOUNT. In general, adjustments, when warranted, will be at the originally billed price. Adjustments for validated product quality deficiency reports (PQDRs) will be processed at the current standard price when the original billed price cannot be determined. Adjustments for Materiel Returns Program (MRP) credits will be at the current acquisition price or at a reduced price if, in the opinion of the Integrated Materiel Manager (IMM), the condition warrants such reduction.
C4.6. INCOMPLETE OR UNSUPPORTED BILL

C4.6.1. An incomplete bill is one in which the interfund or noninterfund bill is not fully supported by detail billing records or information, respectively.

C4.6.2. Since DAAS will not pass incomplete interfund bills to billed offices and billing offices will not be reimbursed for bills not submitted to DAAS, a copy of the “incomplete” interfund bill will be requested from DAAS.

C4.6.3. Requests for incomplete (i.e., unsupported) noninterfund bills will be addressed to the billing office and must cite BAC 19. In addition to responding to the request, whenever the bill referred to is on file, billing offices must always provide a fully supported copy or corrected bill to the billed office.

C4.7. BILLING STATUS PROCEDURES

C4.7.1. Obtaining Bill Status. When requisitioned materiel is received, intended billed offices must use an Adjustment Request (DLMS 812R, DIC FAE) to seek the status of the bill. When materiel was not ordered, or if ordered and not received, discrepancy report procedures apply. See DLMS Volume 2, Chapter 17 and DoD 4500.9-R, Defense Transportation Regulation, Volume 2, Chapter 210 for discrepancy report procedures.

C4.7.2. Shipment Bill Status. When shipment status is received for requisitioned materiel and the materiel can be billed only upon evidence of constructive delivery, intended billed offices must use an Adjustment Request (DLMS 812R, DIC FAE) citing BAC 35 to seek the status of the bill. Billing offices may generate the required billing when properly completed requests are received and a billing is awaiting evidence of constructive delivery. Billing offices will also initiate appropriate actions with their supply office to identify and resolve problems underlying this condition.

C4.7.3. Timeframe. At least 90 calendar days must have elapsed after receiving the materiel or, in the case of FMS shipments, shipment status before requesting the bill status. However, the status must be requested within a year of the shipment date (2 years for FMS shipments). Billing offices may reject requests for billing status that are not submitted within these timeframes.

C4.7.4. When the billing status request involves fuels and is forwarded to DLA Energy (RIC S9F), the request will be mailed and must identify the supply source. If the supply source is a DLA Energy regional location, provide the location’s DoDAAC. If the supply source is a contractor, including contractor Into-plane, provide the contract number.

C4.7.5. Restrictions. Except for billings awaiting evidence of shipment or receipt, billing offices will not generate bills based solely upon a request for billing status.
C4.7.6. DoD 7000.14-R, Department of Defense Financial Management Regulations (FMRS), Volume 10 has allowances for writing off unbilled liabilities and de-obligating the related obligation when an invoice has not been received within 180 calendar days from the date of acceptable final performance and there is documentation on file that at least two written requests for an invoice have been made. Refer to the reference for other conditions that must be met, such as establishing a reserve for late bills.

C4.8. BILL COPY PROCEDURES

C4.8.1. Requesting Copies. Requests for copies of interfund bills will be addressed to DAAS if the DAAS record retention period has not expired. Requests must use the Request for Retransmission of Interfund Bill (DLMS 812R, DIC QB1) format. See Chapter 6 for DAAS record retention requirements and options for retrieving bill copies.

C4.8.2. Retransmitting Copies. DAAS will retransmit copies of all bills wherein the billing office DoDAAC, bill number, and year within decade and month of credit match the same information on the request.

C4.8.3. Copies of Noninterfund Bills. Requests for copies of noninterfund bills will normally be addressed to the billing office.

C4.9. REQUESTS FOR CHANGE IN BILLING METHOD

C4.9.1. Change in Billing Method

C4.9.1.1. When billing offices bill under interfund procedures and MILSBILLS procedures do not allow for such billing, billed offices will forward requests for adjustment in the format prescribed for BAC 52.

C4.9.1.2. When MILSBILLS procedures prescribe billing under interfund procedures, billing offices will deny requests for improperly billed interfund.

C4.9.1.3. When the requisition or customer asset report improperly designates interfund billing and the interfund billing cannot be processed, refer to the following subparagraph for requesting rebilling under noninterfund procedures.

C4.9.2. Properly Billed Interfund to Noninterfund

C4.9.2.1. When a billed office is unable to process a billing record under interfund procedures, the billed office may have the item or items billed under noninterfund procedures by forwarding a request for billing adjustment citing BAC 51. Use of this advice code is an admission by the billed office that the requisition or other document was incorrectly coded.
C4.9.2.2. Requests citing BAC 51 may be submitted only when the funds or charge cannot be disbursed or processed under interfund procedures. All such requests will be honored by the billing office; the billing office may challenge this assertion.

C4.10. ADJUSTMENTS FOR DISCREPANCY REPORTS

C4.10.1. Financial Adjustment

C4.10.1.1. Discrepancy reports will be submitted, reviewed, processed, validated, and responded to in accordance with the procedures described in the requirements in Table C4.T1.

Table C4.T1. Adjustments to Discrepancy Reports

<table>

<td></td>
</tr>
</tbody>
</table>

C4.10.1.2. Billing offices will process financial adjustments or claims citing the applicable Type of Bill Code (QD, WP, WU, or TD) based on the discrepancy report when the discrepancy report is validated and all of the following MILSBILLS or GSA criteria are met:

C4.10.1.2.1. Discrepancy Not Otherwise Resolved. The discrepancy was not resolved otherwise; for example, the vendor does not replace deficient materiel for a validated PQDR.

C4.10.1.2.2. Materiel Billed and Paid. The materiel was billed and paid previously or, in the case of reporting on a constructed document number, there is a reasonable basis for assuming that the items were previously billed and paid.

C4.10.1.2.3. Materiel Returned. The materiel is received by the storage activity in those cases where the discrepancy report reply requires the return. At the discretion of the SoS, adjustments may be processed prior to materiel return and then subsequently rebilled under the original document number due to failure to return materiel as directed.
C4.10.1.3. The discrepancy involves GSA shipments and the Transportation Discrepancy Report (TDR) exceeds $25 per line (detail billing record) (DBR) or the Supply Discrepancy Report (SDR) exceeds $50 per line (DBR). There is no minimum adjustment level on PQDRs involving GSA shipments. There are no adjustment dollar value limitations for discrepancies involving DoD shipments or materiel in storage reported via Storage Quality Control Report (SQCR).

C4.10.1.4. The original MILSTRIP requisition number is included on the PQDR, SDR, or SQCR. When the original requisition number cannot be identified, the originator, material owner, or screening point must include a constructed 14 position MILSTRIP document number using the originator, owning activity, or screening point’s DoDAAC for the first six characters, the current Julian date (YDDD) for the next four positions, and a four position serial number beginning with “U” as the first position of the serial number. An example of a constructed document number is F123453175 U001. Code U is also carried as a utilization code under DLMS. Note: For SDRs, circumstances authorizing the use of a constructed document number are restricted to those described in DLMS, Volume 2, Chapter 17. For SQCRs, circumstances authorizing the use of a constructed document number are restricted to those described in DLMS, Volume 2, Chapter 21.

C4.10.1.5. Improper Commitment. When a reply to a discrepancy report improperly commits the billing office to providing an adjustment (e.g., the shipment was never billed), the billing office will ask the replying office to correct the reply to the discrepancy report.

C4.10.2. Other Discrepancy Adjustment Rules

C4.10.2.1. Adjusting Discrepancy Reports. Requests for adjustments related to TDRs will be submitted only when the adjustment is not received and more than 60 calendar days have elapsed since the report was filed. Requests related to PQDRs, SDRs, and SQCRs should be timely, but must not be submitted until a minimum of 60 calendar days have elapsed since receiving notification that the discrepancy is validated (i.e., that an adjustment is approved). When the promised adjustment for a discrepancy is contingent upon the return of materiel, the request will not be submitted until a minimum of 60 calendar days have elapsed since shipping the materiel with additional allowance for transportation time to the shipping activity. When a reply to a discrepancy report is not received, follow up as prescribed by DLMS Volume 2, Chapter 17 or 21, as applicable.

C4.10.2.2. The portion of credits for materiel laterally redistributed may be fully or partially reversed by the IMM when a discrepancy report documents the materiel was not shipped in a condition warranting full credit.

C4.10.2.3. Activities responsible for discrepant shipments may be held responsible for costs incurred for repackaging, disposal, unauthorized returns, deficient
packaging, and other item and packaging discrepancies that have been documented and validated under SDR procedures. Although other mutually agreeable arrangements may be made, such costs will normally be recovered under noninterfund procedures and will be supported by the validated discrepancy report. In addition, when such returns are creditable, these discrepancy costs may be offset against the credit to which the returning activity is otherwise entitled.

C4.10.2.4. Adjustments based upon PQDRs will be forwarded to the code and bill-to DoDAAC indicated on the PQDR. If omitted, adjustments will be sent to the DoDAAC indicated (TAC 3, or TAC 1 if no TAC 3 exists) of the requisition number provided on the PQDR and the fund codes in Table C4.T2.

C4.11. ADJUSTMENTS FOR BILLING ERRORS

C4.11.1. The following are billing errors and will not be accepted for processing unless the minimum value criterion (Section 4.1) for requesting adjustment is met:

C4.11.1.1. Duplicates

C4.11.1.2. Wrong amount billed

C4.11.1.3. Wrong office billed

C4.11.1.4. Improper billed

C4.11.1.5. Promised adjustment not received

C4.11.1.6. Other problems

C4.11.2. Duplicates

C4.11.2.1. Duplicate Billing Line

C4.11.2.1.1. A duplicate billing line is a second or later billing for a single shipment or adjustment. If the second or later billing resulted from a second or later shipment, financial adjustment procedures do not apply. See, instead, discrepancy report procedures for duplicate shipments in DLMS Volume 2, Chapter 17.
C4.11.2.1.2. To obtain adjustment for duplicate detail billing records not previously adjusted by the billing office, submit a separate request for each duplicated billing record in the format prescribed for BAC 11.

C4.11.2.2. **Duplicate Bill**

C4.11.2.2.1. This is an interfund or noninterfund bill (SF 1080 or equivalent), that is supported entirely by duplicate detail billing records. In the case of interfund bills, the bill is also included on the billing office’s interfund report.

C4.11.2.2.2. Adjustments for duplicate interfund bills may be requested only upon confirmation that the bills (original and duplicate) were, in fact, reported to the buying service’s Central Accounts Office (CAO). To obtain an adjustment, submit a Request For Summary Level Billing Adjustment (DLMS 812R, DIC FDE) for each duplicated bill citing:

C4.11.2.2.2.1. BAC 42 when the bill, details and summary are identical, including the bill number to a previous bill,

C4.11.2.2.2.2. BAC 43 when, except for the bill number, the bill details and summary are identical to a previous bill, and

C4.11.2.2.2.3. BAC 44 when all of the supporting detail billing records of one bill have been included on another bill. The bill containing such previously billed DBRs is the duplicate bill.

C4.11.3. **Wrong Amount Billed**

C4.11.3.1. **Purpose.** A wrong amount billed refers to a billing line in which the unit price, quantity, or price extension is erroneous.

C4.11.3.2. **Exceptions.** Do not request adjustment for wrong amount if:

C4.11.3.2.1. The unit price is the correct standard or catalog price and you are questioning the price. Follow price challenge procedures instead.

C4.11.3.2.2. The extension does not agree with the amount billed and Sales Price Condition code B is indicated. In this case, the unit price shown on the billing record is the inventory carrying value, the standard unit price. The billing unit price, if needed, must be computed.

C4.11.3.2.3. The quantity billed equals the quantity ordered or shipped and a lesser quantity is received. Follow the appropriate DLMS Volume 2, Chapter 17 discrepancy reporting procedure instead.

C4.11.4. **Wrong Office Billed**
C4.11.4.1. Request. Request an adjustment for wrong office billed when the office billed does not agree with the coded requirements of the requisition or adjustment request and the coding indicated a valid billed office DoDAAC. A valid billed office DoDAAC is one listed in the DoD Activity Address Directory (DoDAAD) with the proper authority code (See Chapter 6, C6.2.2.1.2 of this volume).

C4.11.4.2. Request Denial. When the billing was prepared in accordance with the requisition or modification received by the Inventory Control Point/Integrated Materiel Manager (ICP/IMM), the request will be denied.

C4.11.4.3. Wrong Office Assigned. When the billing office assigned the billed office as prescribed in Chapter 2 and the office assigned is not the intended office, the billed office will transfer or otherwise process the bill in accordance with procedures prescribed by the DoD Component. If the offices involved are serviced by the same finance center, the billed office will contact the intended billed office or requisitioner and make arrangements for transferring the bill.

C4.11.5. Improper Billing

C4.11.5.1. General. A DLMS 812R, Adjustment Request citing the proper billing advice code should be submitted to billing offices to request adjustments for improper billings. For purposes of this section, an improper billing is a billing line which:

C4.11.5.1.1. Charges for materiel requisitioned under nonreimbursable procedures;

C4.11.5.1.2. Charges improperly for accessorial costs;

C4.11.5.1.3. Charges for materiel following a reply that a billing could not be rendered; or

C4.11.5.1.4. Charges for materiel confirmed cancelled when the materiel is not received.

C4.11.5.2. Cancelled. When a billing for materiel is received on a requisition that was confirmed cancelled by the ICP or IMM and the materiel is not received, a request for adjustment in the format prescribed for BAC 17 will be forwarded to the billing office. When the materiel was received or if the requisition was not confirmed cancelled by the ICP or IMM, MILSBILLS procedures do not apply. Follow instead procedures prescribed for reporting SDRs. Although annotations on a shipping document, in conjunction with other factors, may support a discrepancy report, they do not support an adjustment for improper billing. A validated discrepancy report is needed.

C4.11.5.3. Backordered. A request for adjustment in the format prescribed for BAC 18 will be forwarded to the billing office whenever a billing is received on a
requisition that was backordered and the receipt of the billing status, confirming that the materiel was not received. Do not submit requests citing BAC 18 prior to obtaining this status.

C4.11.5.4. **Billing Cannot Be Rendered.** Billed offices will request adjustment in the format prescribed for BAC 20 whenever the billing office issues a bill after advising, in a response to a request for billing status (Billing Status Codes DC and DF), that a bill could not be rendered.

C4.11.6. **Promised Adjustment Not Received.** Billed offices will forward an Adjustment Request (DLMS 812R, DIC FAB/FJR) with the proper billing advice code to the billing office to follow-up on unreceived promised adjustments and more than 30 calendar days have elapsed since receiving a reply promising the billing or adjustment.

C4.11.7. **Lateral Redistributions (In-Storage Visibility for Both Consumables and Reparables).** Offices promised credits for lateral redistributions (In-Storage Visibility (ISV) for both consumables and reparables) will follow up on credits not received within 30 calendar days of the date shipment confirmation is submitted to the ICP/IMM. The initial request must be made by submitting a Request for Billing Adjustment (DLMS 812R, DIC FAE) record citing BAC 27 to the ICP/IMM.

C4.11.8. **Other Billing Problems.** Billed offices or others will request adjustments for problems not covered by billing advice codes by forwarding a letter (or message) of explanation along with the information required to process the request for BAC 55. The billing office will normally respond with an Adjustment Request (DLMS 812L, DIC FAR or FJR format).

C4.12. **PRICE CHALLENGES AND VERIFICATION.** DoDM 4140.01, DoD Supply Chain Materiel Management Procedures, February 10, 2014 prescribes the basic DoD requirements under Service and Agency Price Challenge And Price Verification Programs. Price challenges and verification are often mistaken for MILSILLS "wrong unit price billed" procedures. Contact IMM/ICP customer service for assistance filing price challenges.

C4.13. **DISPUTED RESPONSES TO REQUESTS FOR ADJUSTMENT.** Billing and billed offices are expected to resolve their differences regarding adjustment requests. However, when a billed office does not agree with the billing office’s response and the billed office considers the amounts involved significant, the billed office may consider the dispute an unresolved problem and follow the procedures prescribed in Chapter 1.

C4.14. **ADJUSTMENTS FOR CHANGE NOTICES**

C4.14.1. **Recording Undelivered Orders.** If an order is placed with or through the DWCF, an undelivered order (obligation) should be recorded when the order is placed. A non-stock numbered item should be recorded as an undelivered order when the order
is accepted. An adjustment to the undelivered order should be processed when a change notice affecting price, quantity, or an acceptable substitution of a like item is received from the stock fund. Refer to DoD 7000.14-R Volume 6 for more specific information on the above requirements.

C4.14.2. Customer Not Receiving Change Notice. If a DBOF customer does not receive a change notice at all or in time to cancel or modify the order and additional funds are required, the materiel may be refused or returned to the DBOF and an adjustment requested. Adjustments for this reason will be forwarded by mail and must be signed by the activity accounting officer. The request must meet the following requirements and will state essentially:

"As a result of a price change, quantity change, or authorized substitution, the value of the materiel received exceeds amounts obligated and all available obligation authority. Request credit for the indicated quantity and items delivered under the following requisition document and suffix number. Please also provide us with the return instructions for the materiel."

C4.14.3. Honoring Requests. The billing office will honor all such requests and provide adjustment, without regard to dollar value, after the materiel is returned. The ordering activity will also contact the ICP/IMM to arrange for the return.

C4.15. SECURITY ASSISTANCE DISCREPANCIES AND BILLING ERRORS

C4.15.1. The Military Department may automatically grant adjustments and charge or credit the administrative surcharge fund when:

C4.15.1.1. The request cannot be rejected per the general conditions of the U.S. Letter of Offer and Acceptance, and

C4.15.1.2. The transaction was billed on a DD Form 645A, Foreign Military Sales Statement.

C4.15.1.3. The amount of the adjustment requested is either (1) less than $100 or (2) less than the amount approved for that Military Department by the Defense Security Cooperation Agency.

1 Automatic adjustments may be withheld from specific customers if there is a pattern of abuse of this authority. When such a pattern exists, all discrepancies and billing errors from that customer should be researched.

2 Military Departments may request approval for a different adjustment level. The dollar amounts of automatic adjustments will be determined by an agency cost effectiveness study which compares the administrative cost of conducting necessary research to determine specific responsibility versus the cost which will be incurred by the administrative surcharge pool if an automatic refund is authorized. The agency cost effectiveness study must be submitted to Defense Security Cooperation Agency for review and approval.
C4.15.2. Adjustments for IMM/ICP charges that may not be automatically charged to the administrative fund will be prepared and forwarded to the IMM/ICP in accordance with the procedures contained in this chapter.

C4.16. CREDITS FOR EXCESS REPORTS (MATERIEL RETURNS PROGRAM)

C4.16.2. Processing Credits. Billing offices will process credits for excess reports during the first billing cycle after receiving notification that materiel authorized for return under creditable procedures has been received in a condition warranting credit. The portion of credits for materiel laterally redistributed may be fully or partially reversed by the IMM when a discrepancy report documents that the materiel was not shipped in a condition warranting full credit.

C4.16.3. Materiel Returns Program or Procurement Offset Status Request (In-Storage Visibility for Both Consumables and Reparables). Offices expecting MRP or procurement offset (ISV for both consumables and reparables) will request credit status using the Follow-up for Materiel Returns Program Credit (DLMS 812R, DIC FTP). The initial request should be prepared when the credit has not been received and more the 30 calendar days have elapsed since the Materiel Receipt Status (DLMS 870M, DIC FTZ), citing a creditable status or the Shipment Status (DLMS 856S, DIC AS6) is received by the IMM/ICP.
C5. CHAPTER 5
INTERFUND BILLING SYSTEM PROCEDURES

C5.1. POLICY

C5.1.1. General. It is DoD policy that DoD customers authorize suppliers to use the interfund billing system to reimburse themselves for materiel, hazardous materiel and waste services, and services related to materiel shipments.

C5.1.2. Exclusions

C5.1.2.1. The interfund billing system is not mandatory for use when the involved funds are Military Assistance Grant Aid or where only limited sales occur between the DoD Components.

C5.1.2.2. The interfund billing system may not be used to bill non-DoD customers (e.g., state or local governments, private contractors, individuals, or nonappropriated fund instrumentalities) or for major end items such as complete aircraft, ships, tanks, space vehicles, and missiles.

C5.1.2.3. Except for the General Services Administration (GSA), the Federal Aviation Administration (FAA), and the National Oceanic and Atmospheric Administration (NOAA), non-DoD suppliers may not use the interfund billing system to bill DoD customers.

C5.2. PRINCIPLES OF THE INTERFUND BILLING SYSTEM

C5.2.1. The interfund billing system allows suppliers to reimburse themselves, from appropriations designated by the customer, at the time of billing. The supplier forwards an automated billing to the billed office and reports to the Treasury Department a reimbursement of the supplying funds, with an offsetting charge to the customer’s fund.

C5.2.2. Interfund bills are both “bills” and “notices” to a customer that its funds have been charged and the “bill” paid.

C5.2.3. Billed offices will, upon receipt of the “bill”, either accept and record the charge for the complete or partial bill or, when the charge is questionable or erroneous at the detail bill level or in dispute, record the charge into the designated default account for further research. Charges will remain uncleared pending completion of research and resolution.
C5.2.4. Only the billing office or Central Accounts Office (CAO) is authorized to adjust or otherwise reverse reimbursements reported to the Treasury Department on behalf of the billing office.

C5.3. PREPARATION OF INTERFUND BILLS

C5.3.1. Interfund bills are made up of one or more detail billing records with the same fund code, and a single summary billing record. The summary billing record represents a summary of the supporting detail billing records.

C5.3.2. Detail billing records in support of interfund bills will be prepared in accordance with Defense Logistics Management Standards (DLMS) 810L transaction or Appendix 3 for legacy 80 column card transactions.

C5.4. CENTRAL ACCOUNTS OFFICES

C5.4.1. General. CAOs are Defense Finance and Accounting Service (DFAS) Centers or other federal agencies given the responsibility of reporting on interfund in the Statement of Interfund Transactions to the Treasury Department. Depending upon the customer organization, they may have seller and or buyer CAO responsibilities.

C5.4.2. Seller Central Accounts Offices. DAAS forwards copies of interfund summary billing records to seller CAOs. Based upon these records, seller CAOs report seller interfund self-reimbursements and related buyer disbursements to the Treasury Department. Seller CAO interfund bill responsibilities are identified by the service code of the seller DoD Activity Address Code (DoDAAC) described in Table C5.T1.

<table>

<td>DFAS-CL</td>
</tr>
<tr>
<td>Other</td>
<td>DFAS-IN</td>
</tr>
</tbody>
</table>

C5.4.3. Buyer Central Accounts Offices. Buyer CAOs are responsible for interfund bill clearance and report, to the Treasury Department, buyer adjustments of the disbursement side of seller reported interfund transactions. Neither buyers nor their CAOs can directly or indirectly adjust the reimbursement side of interfund transactions reported by seller CAOs. Buyer CAO interfund bill responsibilities are determined by the appropriation disbursed according to Table C5.T2.

C5.5. INTERFUND REPORTS

C5.5.1. Billing Office Reports. CAOs will base interfund reimbursements upon summary billing records received from DAAS for interfund bills passing DLMS prescribed DAAS edits. Therefore, upon implementation of the revised seller interfund reporting procedures, DLMS no longer requires sellers to forward DD Form 1400, Statement of Interfund Transactions or equivalent reports to their accounts office. However, CAOs may continue to require their reporting activities to submit seller interfund reports for a transition period determined by the accounts office.

C5.5.2. Billed Office Reports. Each billed office will report (i.e., correct or otherwise clear) interfund disbursements charged to the office in accordance with procedures prescribed by its Service or Agency.

C5.5.3. Department Level Reports. CAOs will consolidate Department level "Statement of Interfund Transactions" and prepare related reports from interfund reports received from billed offices and summary billing records validated by DAAS.

C5.6. STATEMENT OF INTERFUND TRANSACTIONS

C5.6.1. Purpose and Reports Control Symbol. This section prescribes a monthly report on interfund transactions. The DD 1400 “Statement of Interfund Transactions” provides OUSD(C) with a summarized classification of receipts and outlays processed under the interfund billing system.

C5.6.2. Applicability and Scope. The provisions of this section apply to the DoD Components and to their disbursing officers (referred to collectively as “disbursing officers”). It establishes the requirements and procedures for the preparation and submission of interfund transaction reports.
C5.6.3. Report Form. The “Statement of Interfund Transactions” must be prepared monthly and contain totals for each appropriation/Sub-Allocation Holder Identifier charged and reimbursed, the reporting period, and identify the reporting office. GSA will submit an equivalent “Statement of Interfund Transactions.”

C5.6.4. Frequency and Distribution. The “Statement of Interfund Transactions” must be submitted to the OUSD(C) as promptly as possible, but no later than close of business on the 2nd workday of the month immediately following the close of the reporting month.

C5.6.5. Adjustments. In preparing the “Statement of Interfund Transactions,” CAOs or offices designated by the DoD Components or participating Agencies will convert invalid accounts to the charged agency’s default appropriation as indicated in Appendix 2.2. of this guidance.

C5.6.6. Other Reporting Requirements

C5.6.6.1 Extract of the Statement of Interfund Transactions

C5.6.6.1.1. Each Military Department (and GSA for its equivalent report) must furnish an “extract” of the “Statement of Interfund Transactions” to the DoD Components and other participating Agencies for which it collects or disburses showing the transactions for that Component or Agency. The DoD Components may be identified by their unique Sub-Allocation Holder Identifier on department 97 appropriations.

C5.6.6.1.2. Extracts of the “Statement of Interfund Transactions” (and GSA equivalent) that are forwarded to DoD CAOs will be supported by summary billing records (DLMS 810L/Document Identifier Code (DIC) FS). The summary billing records will be forwarded electronically to the CAO responsible for clearance. The CAO responsible for clearance is determined by the departmental index of the disbursed appropriation and, in the case of department “97” appropriations, by the DoD Component identification contained in the appropriation’s Sub-Allocation Holder Identifier. Table C5.T3 identifies the CAO responsible for clearing interfund bills:

<table>
<thead>
<tr>
<th>CLEARANCE CAO</th>
<th>COMMRI</th>

<td>21</td>
<td>All</td>
</tr>
</tbody>
</table>

1 For purposes of this procedure, the Component Identification for 97X4930 is in the 1st position of the Sub-Allocation Holder Identifier and is A (USA), N (USN), F (USAF), M (USMC), and 5 (Defense
C5.6.6.1.3. The extracts should be submitted as soon as possible but no later than 2 workdays after the Statement of Interfund Transactions is submitted to OUSD(C).

C5.6.7. Hard Copy Report Preparation

C5.6.7.1. General

C5.6.7.1.1. Each interfund report must be completed with the minimum required information.

C5.6.7.1.2. If more than one sheet is used to report transaction amounts, the grand total for each column must be shown on the last page of the statement. Page totals are optional.

C5.6.7.1.3. Each hard copy statement must be signed by the officer under whose direction it was prepared.

C5.6.7.1.4. Negative amounts must be identified by the suffix “CR.”

C5.6.7.2. Columnar Entries

C5.6.7.2.1. Appropriation or Fund /Symbol. Enter the department index number assigned by the Treasury Department as a prefix to that department’s appropriation symbols, fiscal year or other appropriate indicator (e.g., “X” if no year, etc.), treasury account symbol of the appropriation, other fund, or receipt account for which the transaction amounts are being reported. Include any prefix or suffix prescribed by the Treasury Department on the classification authorization. No other suffix or prefix may be shown.

Agencies). For other than 97X4930, the identification is in the 1st two positions and is 01 (USA), 02 (USAF), 04 (USN), and 05 (USMC).
C5.6.7.2.2. **Reimbursements (Credits).** Enter the amounts of collected appropriation reimbursements applicable to each related appropriation or other fund account.

C5.6.7.2.3. **Expenditures (Charges).** Enter the amounts of disbursements chargeable to each appropriation or other fund symbol.

C5.7. **CENTRAL ACCOUNTS OFFICE LEVEL INTERFUND PROCEDURES**

C5.7.1. Army, Navy, Air Force, and GSA will prescribe procedures consistent with those prescribed in this Manual for:

C5.7.1.1. Reporting interfund reimbursements and disbursements originated by Activities serviced by their disbursing offices and will be included in their “Statement of Interfund Transactions.”

C5.7.1.2. Adjusting, accepting or otherwise clearing interfund disbursements charged to Activities serviced by their disbursing offices and whose adjustments will be included in their Statements of Interfund Transactions.

C5.7.1.3. Ensuring there are adequate controls over interfund-related transactions such that:

C5.7.1.3.1. Lapsed accounts are not reported to the Treasury Department or the other DoD Components.

C5.7.1.3.2. Invalid account symbols are converted to the agency default appropriation as defined in Appendix 2.2 of this regulation.

C5.7.1.3.3. Seller interfund reimbursements reported to the Treasury Department are based upon interfund billings validated by DAAS.

C5.7.1.3.4. Disbursements charged to billed offices are processed by the billed office.

C5.7.1.3.5. **Uncleared Disputed Transactions**

C5.7.1.3.5.1. Uncleared “disputed” transactions will be researched and cleared within a reasonable period (i.e., within 120 calendar days of the date the disbursement was reported to DFAS when the entitlement office and accounting office are not co-located and 90 days when they are co-located). Amounts placed in suspense; that is, charged to the clearing account, are transferred to another account or are otherwise cleared within the same period as above.

C5.7.1.3.5.2. Within 90 days of the disbursement being report to DFAS, or 60 days if co-located, DFAS will ask the customer to follow up on uncleared
detail bills. When a customer leaves a detail bill uncharged for 120 calendar days (90 days if co-located), DFAS will contact the customer for an appropriation to charge to clear the detail bill. Only when a written notification from the seller that an adjustment is forthcoming may the item remain unprocessed after this timeframe. Within 90 days of the suspense date (60 days if co-located), DFAS will ask the customer to clear the amount in suspense and provide an alternative account for the disbursement.
C6. CHAPTER 6

DEFENSE AUTOMATIC ADDRESSING SYSTEM

C6.2. MILITARY STANDARD BILLING SYSTEM PROCESSING

C6.2.1. Requirement to Route Bills to DAAS

C6.2.1.1. As indicated in Chapter 2, sellers will route all interfund and automated “G” series noninterfund billing records to DAAS for editing, retention, and further routing to billed offices.

C6.2.1.2. Only interfund bills passing MILSBILLS prescribed edits and routed by DAAS are eligible for reporting to the Treasury Department and interfund reimbursement.

C6.2.1.3. All billing records will be electronically routed to DAAS.

C6.2.2. Bill Editing and Billed Error Rejection

C6.2.2.1. DAAS will edit and reject any bill that fails any of the following edits:

C6.2.2.1.1. The record count (positions 5-7 of the legacy 80 column card format) of the summary billing record equals the actual count of the supporting detail billing records.

C6.2.2.1.2. The bill-to Department of Defense Activity Address Code (DoDAAC) (positions 30-35) of the summary billing record is a valid DoDAAC, and is authorized for use as a bill-to party in accordance with the DoDAAC authority code, as outlined in DoD 4000.25, “Defense Logistics Management Standards” Volume 6 (DoD Logistics Systems Interoperability Support Services), Chapter 2 – Department of Defense Activity Address Directory. Note that DoDAACs are deleted to prevent requisition transactions from being processed through DAAS. Once the delete effective date has passed, the DoDAAC will remain on the DoDAAD master file for five years before the record is physically removed from the master file, and bills with the bill-to authorized in accordance with the DoDAAC authority code will not reject as invalid during this period. After the five year period, deleted DoDAACs are removed from the DAAS database, and subsequent bills will reject as invalid DoDAACs.
C6.2.2.1.2.1. The bill-to DoDAAC of the summary billing record is authorized for use as a bill-to party. An unauthorized United States Air Force (USAF) bill-to activity is identified by its structure.

C6.2.2.1.2.1.1. DoDAAC begins with FT or FF indicating a non-appropriated funded activity,

C6.2.2.1.2.1.2. DoDAAC begins with FA or FY, or

C6.2.2.1.2.1.3. The first position of the DoDAAC is an “F”, followed by one numeric character in position two, and an alpha character in position three.

C6.2.2.1.3. The amount (positions 65-73) of the summary billing record equals the sum of the amounts (positions 65-73) of the supporting billing records.

C6.2.2.1.4. The bills are identified as interfund and authorized to be billed under interfund procedures.

C6.2.2.1.5. The bill-to is one of the following F numeric or F numeric alpha DoDAACs.

C6.2.2.1.5.1. F (Numeric) (Numeric) (Numeric) (Numeric)

C6.2.2.1.5.2. F (Numeric) (Numeric) (Numeric) (Numeric) (Alpha)

C6.2.2.1.5.3. F (Numeric) (Numeric) (Alpha)

C6.2.2.1.5.4. FA series

C6.2.2.1.5.5. FF series

C6.2.2.1.5.6. FT series.

C6.2.2.1.6. Discrete values for the Standard Line of Accounting data elements in the transaction match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction.

C6.2.2.1.7. Fund code is not valid on the SFIS Fund Code to Fund Account Conversion Table for the Service/Agency Code.

C6.2.2.1.8. The bill number does not conform to the rules described in Chapter 2, Table C2.T2.

C6.2.2.2. Rejected bills will be reported back to the originating activity using DLMS 824R (Reject Advice Transaction) citing the applicable Reject Advice Code from
DLM 4000.25, Volume 2, Appendix 2.8. Rejected bills may include a narrative description indicating the reason for rejection, in addition to the Reject Advice Code. In addition, the second record position of the Reject Advice Code will be inserted in rp4 of the MILSBILLS legacy DIC FS_/GS_ Summary Bill and displayed in MILSINQ, hyperlinked to the narrative reason for rejection.

C6.2.2.2.1. Originators may retrieve any rejected bills within one hour of original submission to DAAS. When appropriate, billing offices will correct and resubmit rejected bills.

C6.2.2.2.2. Billing offices must ensure that adjustments for rejected billings are properly recorded in their seller accounting records.

C6.2.2.3. Upon successful completion of the bill edits, DAAS will:

C6.2.2.3.1. Route billings to the billed office by the best available means.

C6.2.2.3.2. Ensure that electronically routed bills are routed to the billing communications routing identifier (COMMRI) code assigned to the billed office DoDAAC.

C6.2.2.3.3. Ensure that non-electronically routed bills are mailed to the clear-text address of the billed DoDAAC identified for billing.

C6.2.2.4. DAAS will forward images of interfund summary billing records to the seller’s Central Accounts Office (CAO).

C6.2.3. Bill Retention. Long term retention should be in accordance with DoDI 5015.02, DoD Records Management Program.

C6.3. BILL COPY RETRIEVAL

C6.3.1. Copies of bills may be retrieved in any of the following ways:

C6.3.1.1. MILSINQ. Images of bills may be retrieved from DAAS through their web-based MILSBILLS Inquiry (MILSINQ) process. See section C6.5.

C6.3.1.2. Retransmission Request. Bills may also be retrieved from DAAS by submitting a Request for Retransmission of Interfund Bill (DLMS 812R/Document Identifier Code (DIC) QB1).

C6.3.1.2.1. DAAS will retransmit a copy of all bills matching the billing office DoDAAC and bill number provided on the request. Although unlikely, it is possible that DAAS will find and retrieve a current and prior year bill matching the prescribed retransmission criteria.
C6.3.1.2.2. The retransmission request may also be requested via the Internet as part of the MILSINQ process.

C6.3.1.3. Telephone Request. DAAS will accept telephone requests (937-656-3247 or DSN 986-3247) for copies. Telephone requests are limited to no more than five bills and the service will be terminated if abused.

C6.3.2. Only copies of bills routed by DAAS and within the record retention period may be retrieved through the methods described in C6.3.1 above. However, whenever DAAS does not find a matching bill, it will create and forward a request for copy of bill (DLMS 812R/DIC FAE billing record, with Billing Advice code 41) to the billing office.

C6.3.2.1. Billing offices failing to respond to requests for copies of interfund bills received within the record retention period will be directed by their Service or Agency headquarters to reverse the billing. Billed offices will absorb all charges in the manner prescribed by their Service or Agency when the record retention period has elapsed and they have failed to obtain copies of the bill(s).

C6.3.2.2. Forward a billing adjustment reply (DLMS 812L, DIC FAR) with Billing Status code DA to advise the requesting office that they have referred their bill retransmission (copy) request to the seller.

C6.4. FUND CODE TABLES.

C6.5. MILITARY STANDARD BILLING SYSTEM INQUIRY PROCESS

C6.5.1. General MILSINQ Information

C6.5.1.1. MILSINQ is a process established by DAAS to allow its customers to remotely query the DAAS MILSBILLS database as an alternative to the DLMS 812R and DIC QB1 retransmission (send a copy of the bill to me) means of obtaining billing information from DAAS. MILSINQ may also be used for the materiel obligation validation (MOV) process.

C6.5.1.2. Bills may be queried by the billing DoDAAC or billed DoDAAC and may be narrowed to a particular billing month or bill.

C6.5.1.3. Once identified, the bills can be viewed, printed, saved to a local PC, or retransmitted (copy sent by DAAS to a designated recipient).
C6.5.1.4. MILSINQ is available at the MILSINQ Website\(^1\). Users will generally be logged off systems after 5 minutes of idle time.

C6.6. **MILITARY STANDARD BILLING SYSTEM-RELATED REPORTS**

C6.6.1. **Introduction**

C6.6.1.1. As part of its logistics information data services, DAAS accumulates data from MILSBILLS records it routes and generates reports for MILSBILLS use. The reports cover the preceding 12 months.

C6.6.1.2. The following MILSBILLS-related reports are available from the MILSINQ Website.

- C6.6.1.2.1. Interfund billing adjustments by billing office (Routing Identifier Code (RIC) sequence).
- C6.6.1.2.2. Interfund bills by billed office (DoDAAC sequence).
- C6.6.1.2.3. Interfund bills by billed office (DoDAAC within Service).
- C6.6.1.2.4. Interfund bills by billing office (DoDAAC within Service).
- C6.6.1.2.5. Interfund bills by billing office (RIC sequence).
- C6.6.1.2.6. Interfund bills by route to COMMRI (COMMRI sequence).
- C6.6.1.2.7. Interfund bills rejected by DAAS (RIC sequence).
- C6.6.1.2.8. Interfund bill retransmission requests.
- C6.6.1.2.9. In-storage Visibility Redistribution (ISVR) credit report ‘Lateral Redistribution.’
- C6.6.1.2.10. Rejected interfund bills by billed office (Service sequence).
- C6.6.1.2.11. Rejected interfund bills by billing office (DoDAAC within Service).

C6.6.2. **Interfund Billing Adjustments By Billing Office Routing Identifier Code**

C6.6.2.1. This report provides each billing office RIC with data related to billing adjustment requests and responses. With the exception of DIC QB1, all

\(^1\) If the application is not accessible from your browser, contact your local Internet support office for assistance in configuring your telnet application for your browser.
adjustment requests processed by DAAS during the indicated reporting month and year are included. Figure C6.F1 shows an example of this report.

C6.6.2.2. Total number of requests and replies are provided for each billing RIC, with subtotals for each listed RIC series (first position of RIC) and a grand total for the report. Request details include numbers by advice code groupings and reply details include numbers by billing status code groupings.

C6.6.3. Interfund Bills By Billed Office. This report provides each billed office (BILLING DODAAC) with the number of interfund bills (NO. BILLS), the number of detail billing records (NO. DETAILS) that supports the bills, and the value ($ VALUE) of interfund bills processed by DAAS during the report month. The report provides a page break, a total (SUBTOT) for each service, and a total (TOTAL) for the report. Figure C6.F2 shows an example of this report.
C6.6.4. **Interfund Bills By Billing Office.** This report provides each billing office (BILLING RI CODE) with the number of interfund bills (NO. BILLS), the number of detail billing records (NO. DETAILS) that support the bills, and the value ($ VALUE) of interfund bills processed by DAAS during the report month. The report provides a page break, a total (SUBTOT) for each Service, and a total (TOTAL) for the report.

C6.6.5. **Interfund Bills Rejected By DAAS.** This report identifies, in a summarized form for each billing office, the number, value, and reasons why interfund bills were rejected by DAAS. Figure C6.F3 shows an example of this report.
C6.6.6. Interfund Bill Retransmission Request. This report summarizes the number of interfund bill retransmission requests and outcomes for the requests by billing RIC. Figure C6.F4 shows an example of this report.

![Figure C6.F4. Interfund Bill Retransmission Request](image-url)
C6.6.7. Interfund Bills By Route-To COMMRI Code. This report provides a monthly summary of interfund bills by "route-to" COMMRI code for bill route by DAAS, the number of interfund bills (NO. BILLS), number of detail billing records (NO. DETAILS), and the dollar value of the bills (DOLLAR VALUE) are summarized by Service for each billed-to DoDAAC (BILLED DODAAC) within a communications office to which bills are routed (COMMRI) by DAAS during a month.

C6.6.8. In-storage Visibility Redistribution Credit Report. This is a report of laterally redistributed materiel and ISV procurement offset reimbursements. It shows the number and dollar value of credits for materiel, transportation, packing, crating, and handling by DoDAAC and/or RIC receiving the credit. See Figure C6.F5 for an example of this report.

C6.6.9. Rejected Interfund Bills by Billing Office (Service Sequence). This report provides a listing of interfund bills that failed MILSBILLS prescribed DAAS edits. These bills were returned by DAAS to the billing office. The report identifies bills by billing office and identifies the billed DoDAAC, bill number, and dollar value. See Figure C6.F6 for an example of this report.

C6.7. OTHER DEPARTMENT OF DEFENSE ACTIVITY ADDRESS CODES AUTHORIZED INTERFUND

C6.7.1. DAAS will edit service code H requisitions to ensure that interfund procedures are appropriate for the requisitioner. Other DoD Components’ requisitions for which interfund billing is appropriate are those in which the requisitioning DoDAAC is identified as authorized interfund billing. See Appendix AP1 for more information.

C6.7.2. If necessary, DAAS will change the fund code cited on other DoD Components’ requisitions to XP when the H-Series requisitioning DoDAAC is not identified as authorized interfund billing.

C6.7.3. Other DoD Components may add their DoDAAC (to allow for interfund billing) or delete a listed DoDAAC (mandatory noninterfund billing). To request a change, contact the H Series Fund Code Monitor.

C7. CHAPTER 7

VERIFICATION OF FUNDS AVAILABILITY FOR REQUISITIONS SUBMITTED VIA INTERNET ORDERING APPLICATIONS

C7.1. IMPLEMENTING FUNDS AVAILABILITY VERIFICATION. Internet ordering applications that accept Military Standard Requisitioning and Issue Procedures (MILSTRIP) requisitions dependent upon interfund billing procedures (e.g., DoD EMALL, General Services Administration (GSA) Advantage/GSA Global) must implement Defense Logistics Management Standards (DLMS) procedures for verification of Component funds availability. Components will establish procedures to process the request for verification of funds availability and ensure subsequent establishment of a financial obligation.\(^1\)

C7.1.1. DoD Components may authorize manual recording of the financial obligation by the customer as a separate action until an automated interface between the ordering application and a Component-sponsored financial system is available.

C7.1.2. Where an interface is not available, external ordering applications must alert users to comply with their Component-directed financial procedures.

C7.1.3. The core function of this process is the verification of funds availability and creation of the associated financial obligation. However, when transmitted to an enterprise resource program (ERP) the funds availability request may be used to support additional processing such as validation of authorized requisitioners or materiel and preparation of the due-in record to support receipt processing.

C7.2. FUNDS AVAILABILITY REQUEST. The Verification of Funds Availability Request will be transmitted via the DAAS gateway for synchronous, online, real-time processing in the format prescribed at Appendix 3. Ordering application transactions will cite the DAAS URL followed by the applicable Service system communications routing identifier (COMMRI) to designate desired routing. The DAAS gateway will act as a forward proxy server between the initiating system and the destination system.\(^2\)

---

\(^1\) Implementation is limited to interfaces between DoD EMALL and GSA Advantage/GSA Global and the Army Funds Control Module (FCM), GCSS-Army, and the Marine Corps SABRS financial application. Additional Component interfaces are projected under future phases. Refer to ADC 328 and ADC 1068.

\(^2\) The FCM direct interface established under ADC 328 will be retained pending transition of Army activities to GCSS-Army. Upon full transition to GCSS-Army, the FCM interface will be terminated.
C7.3. BUSINESS RULES. Business rules for processing the Verification of Funds Availability Request are as follows.3

C7.3.1. Ordering applications will not send requisitions, requisition modifications, and requisition follow-ups to the Source of Supply (SoS) until the funds availability check is completed and positive confirmation is received.

C7.3.2. The Verification of Funds Availability Request will be forwarded to the activity identified by the bill-to DoDAAC regardless of requisitioner or ship-to activities. Only one Verification of Funds Availability Request will be prepared per requisition.

C7.3.3. The Verification of Funds Availability Request will be forwarded to the Marine Corps Standard Accounting, Budgeting and Reporting System (SABRS) when the requisition identifies a Marine Corps DoDAAC as the bill-to. Only M-series Marine Corps DoDAACs will be eligible for the funds verification process. The initiating system will designate SABRS by citing the COMMRI applied for this purpose.

C7.3.4. The ordering application will determine appropriate routing and populate the applicable COMMRI in the transaction passed to the DAAS gateway. When communication with multiple Services (or both Army systems) is required, a separate transaction will be prepared for each.

C7.3.5. The funds verification process is not applicable to free-issue requisitions.

C.7.4. FUNDS AVAILABILITY REPLY. The Verification of Funds Availability Reply will be transmitted via the DAAS gateway for synchronous, online real-time processing in the format prescribed at Appendix 3. The responding Service system will provide the response content to DAAS acting as the forward proxy server. DAAS will use the existing open connection to forward the response content to the ordering application.

C7.5. BUSINESS RULES. Business rules for processing the Verification of Funds Availability Reply are as follows.

C7.5.1. The Service financial application will respond to all Verification of Availability Requests within 30 seconds of receipt.

3 Implementation is limited to an interface between DoD EMALL and GSA Advantage/GSA Global and the Army using Army Funds Control Module (FCM) and Global Combat Support System-Army (GCSS-Army). The Marine Corps financial application interface is pending. Additional Component interfaces are projected under future phases. Refer to ADC 328 and ADC 1068/1068A.
C7.5.2. When the internet ordering system transmits a Verification of Funds Availability Request to two Service systems simultaneously (because the requisitioner and the bill-to are associated with different systems), the requisition will not be processed until both Service systems provide a Verification of Funds Availability Reply. If both contain a positive (alpha) funds verification reply code, the requisition may continue processing. If either contains a negative (numeric) funds verification reply code, the requisition will not be released for further processing. Display the negative code/text for the customer to clarify the reason the requisition has not been accepted.

C.7.6. PROCESSING MULTIPLE LINE ITEMS. When multiple line items are included in the customer’s “shopping cart,” they will be processed for funds verification as individual requisitions in succession by sequence described below, thereby allowing funds to be applied appropriately should there be insufficient funds for the entire “cart.” The sequence will be:

C7.6.1. Priority Designator (PD).
C7.6.2. OSD/JCS project codes.
C7.6.3. Special Requirements Code 999 and PD 01-03.
C7.6.4. Special Requirements Code N (NMCS) (PD 01-08).
C7.6.5. Special Requirements Code E (ANMCS) (PD 01-08).
C7.6.6. Special Requirements Code 555 and PD 01-08.
C7.6.7. Required Delivery Date.

C7.7. VERIFICATION OF AVAILABILITY REPLY CODE. The receiving DoD Component will verify funds availability and provide the applicable reply code.

C7.7.1. Under the following criteria, the requisition will be considered acceptable for further processing by the Internet ordering application and forwarding to the SoS by citing an alpha Funds Verification (FV) Reply Code.

C7.7.1.1. If funds are available for the bill-to DoDAAC and no error conditions exist, the requisition will be authorized for continued processing, the funds available balance decremented, and the applicable financial obligation established. Cite FV Reply Code A.

---

4 Sequencing rules are based upon those established for demand sequencing under DLMS, Volume 2, Chapter 4, C4.7.1.2. These rules deviate from demand sequencing to include use of the RDD.
C7.7.1.2. If the bill-to DoDAAC is determined under internal Component procedures as not applicable to the funds verification process (e.g., funded by an alternative funding source, which the Component is not able to verify), the requisition will be authorized for continued processing with no action. Cite FV Reply Code B.

C7.7.1.3. If the bill-to DoDAAC is not identified in the Verification of Funds Availability Request due to procedures for third-party billing (bill-to DoDAAC associated with the Fund Code/Signal Code C or L), and the funds verification cannot be accomplished, but no error condition exists, the requisition will be authorized for continued processing with no action. Cite FV Reply Code D.

C7.7.1.4. If the unique message identification number (control number) assigned for the request is a duplicate of a previously processed funds availability request, but funds are available, the requisition will be authorized for continued processing. Cite Funds Verification (FV) Reply Code E.

C7.8. CRITERIA FOR UNACCEPTABLE REQUISITION PROCESSING. Under the following criteria, the requisition will not be considered acceptable for further processing by the Internet ordering application by citing a numeric Funds Verification (FV) Reply Code.

C7.8.1. If funds are not available for the bill-to DoDAAC, the requisition will not be authorized for further processing. Cite FV Reply Code 1.

C7.8.2. If the bill-to DoDAAC is not authorized under Component procedures as a valid bill-to DoDAAC, the requisition will not be authorized for further processing. Cite FV Reply code 2.

C7.8.3. If the Fund Code is not recognized and acceptable to the billed Component, the requisition will not be authorized for further processing. Cite FV Reply Code 3.

C7.8.4. If the requisition document number (or document number/suffix) is a duplicate of a previously established obligation, the requisition will not be authorized for further processing. Cite FV Reply Code 4.

C7.8.5. If the requisitioner DoDAAC is not authorized to order the specified materiel under Component procedures, the requisition will not be authorized for further processing. Cite FV Reply Code 6.

C7.8.6. If the Service system requires prior establishment of authorized commercial and government entity (CAGE) Code associated with part numbered materiel and the CAGE is not recognized by the Service system, the requisition will not be authorized for further processing. Cite FV Reply Code 7. This reject condition will be flagged for further review within the Service system to determine the source of the problem.
C7.8.7. If the requisitioner is attempting to modify the fund code after supply action has been initiated by the SoS and the Service system has visibility of this (e.g. shipment status has been provided), the requisition will not be authorized for further processing. Cite FV Reply Code 8.

C7.9. REQUISITION MODIFICATIONS. Requisition modifications will be processed for verification of funds availability to ensure that the original requisition obligation is on file and any applicable changes to fund code or bill-to activity are acceptable. The materiel identification on the modification must match that on the original requisition. The responsible Component will not reject or establish a new obligation for requisition modifications due to a duplicate document number.

C7.9.1. Where no action is taken due to a previously recorded obligation and there are no error conditions, the requisition modification will be authorized for further processing. Cite FV Reply Code H.

C7.9.2. Where the materiel identification does not match that of the previously recorded obligation matching on document number, the requisition will be rejected. Cite FV Reply Code 5.

C7.9.3. If the Component has no identified obligation for the document number (or document number/suffix), process as a new requisition under the above procedures for verification of Component funds availability. Cite the applicable FV reply code. Note: The funds verification process may result in rejecting modifications to requisitions that had previously processed successfully by the SoS. Direct communication with the requisitioning Component's financial office and possibly the SoS may be required to resolve the problem.

C7.10. REQUISITION FOLLOW-UPS. Requisition follow-ups in DLMS 869F, Document Identifier Code (DIC) AT_ format will be processed for verification of funds availability to ensure that the original requisition obligation is on file. The materiel identification on the follow-up must match the original requisition. The responsible Component will not reject or establish a new obligation for these follow-ups due to a duplicate document number.

C7.10.1. Where no action is taken due to previously recorded obligation and there are no error conditions, the requisition follow-up will be authorized for further processing. Cite FV Reply Code H.

C7.10.2. Where the materiel identification does not match that of the previously recorded obligation (matching on document number), the requisition will be rejected. Cite FV Reply Code 5.
C7.10.3. If the Component has no obligation identified for the document number (or document number/suffix), process as a new requisition under the above procedures for verification of Component funds availability. Cite the applicable FV reply code. Note: The funds verification process may result in rejecting follow-ups to requisitions that had previously processed successfully by the SoS. Direct communication with the requisitioning Component’s financial office and possibly the SoS may be required to resolve the problem.

C7.11. REVISION OF REQUISITION CONTENT. Customers receiving a reply code indicating that their requisition is not authorized for further processing will be provided an opportunity to revise the requisition content. For example, the customer may choose to reduce the extended dollar value by reducing the quantity ordered or correct the bill-to activity DoDAAC or fund code, as applicable. Subsequent to customer update, the Request for Verification Funds Availability will be re-transmitted.

C7.12. ALTERNATIVES FOR UNTIMELY APPLICATION INTERFACE. When the ordering application is unable to establish a timely interface with the responsible Component application, and the customer awaits the real-time funds availability reply, the ordering application may offer two alternatives:

C7.12.1. Unmonitored Funds Verification. The Verification of Funds Availability Request will be transmitted without direct feedback to the customer. The ordering application or DAAS, as applicable, will re-send the request every 15-30 minutes for up to 3-hours while the requisition is held in a pending status. If the reply is received indicating that the requisition is authorized for further processing, the requisition will be forwarded to the SoS with no further action.

C7.12.1.1. If the FV Reply Code indicates that the requisition is not approved for further processing, the Internet ordering application will retain the FV Reply Code for customer queries of requisition status. In addition, if the requisition is rejected using FV Reply Code 1-8, the ordering application will notify the customer directly using the customer’s contact information and the requisition will not be forwarded.

C7.12.1.2. If no reply is received after repeated attempts and three hours has lapsed, the requisition will not be forwarded to the SoS.

C7.12.2. Hold for Later Processing. The customer may choose to place the order (“shopping cart”) in a hold status, and retry later. The ordering application will not attempt to re-send the request. The order will be saved for later processing to be initiated by the customer.
C7.13. BATCH ACCEPTANCE. Where the ordering application accepts batch ordering or input via MILSTRIP/DLMS format (e.g., multiple transactions uploaded as a batch, or without real-time direct interaction between the application and the customer, such as via DoD EMALL Manual Order Entry System (MOES)), the ordering application will process the Verification of Funds Availability Request as described in paragraph C7.12.1. above using unmonitored funds verification procedures.
AP1. APPENDIX 1

FUND CODE TABLES AND RELATED LISTINGS

AP1.1. SFIS Fund code to fund account conversion tables are published at http://www.dla.mil/HQ/InformationOperations/DLMS/DLMSPrograms/finance

The authoritative reference table is published at the DLA Transaction Services Website https://www.transactionservices.dla.mil/daashome/services.asp.

AP1.2. Fund code to billed office DoD Activity Address Code (DoDAAC) conversion tables are published at https://intelshare.intelink.gov/sites/dlms/DLMS%20Manuals%20Vol%204/v4a1_02.docx (Requires CAC or PKI Certificate).

The authoritative reference table is published at the DLA Transaction Services Website https://www.transactionservices.dla.mil/daashome/services.asp.

AP1.3. H series DoDAACs authorized to use interfund fund codes are published at https://intelshare.intelink.gov/sites/dlms/DLMS%20Manuals%20Vol%204/v4a1_03.docx (Requires CAC or PKI Certificate).

The authoritative reference table is published at the DLA Transaction Services Website https://www.transactionservices.dla.mil/daashome/services.asp.

AP2.2. APPENDIX 2.2

FUND CODES

NUMBER OF CHARACTERS: Two

TYPE OF CODE: Alpha or Numeric

AP2.2.1. Fund codes are two position alpha/numeric codes used in conjunction with Service or Agency Code of the billed office to designate the billing method (interfund or noninterfund). When interfund billing is indicated, the fund code also indicates the fund account to be charged (disbursed) or credited (refunded).

- The fund code to disbursement fund account conversion tables are published online in Part I of the Fund Code Table at: https://www2.transactionservices.dla.mil/logreports/daasc_reports.asp
- Only valid appropriations and Sub-Allocation Holder Identifiers may be associated with fund codes.
- When a fund code used in the billing and adjustment process is not found on the fund code to disbursement fund account conversion table the appropriation charged will be assigned as follows:

<table>
<thead>
<tr>
<th>Organization (Billed Service Code)</th>
<th>Interfund Default Appropriation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contractor (C, E, L, Q, U)</td>
<td>Not applicable, noninterfund</td>
</tr>
<tr>
<td>Non-DoD (G, Z, HX, Numeric)</td>
<td>Not applicable, noninterfund</td>
</tr>
<tr>
<td>Army (A, W)</td>
<td>21*2020</td>
</tr>
<tr>
<td>Air Force (D, F)</td>
<td>57*3400</td>
</tr>
<tr>
<td>Navy (N, P, R, V)</td>
<td>17*1804</td>
</tr>
<tr>
<td>Marine Corps (K, M)</td>
<td>17*1106</td>
</tr>
<tr>
<td>Defense Logistics Agency (S, T)</td>
<td>97X4930.5CBX</td>
</tr>
<tr>
<td>Other Defense Agency (H)</td>
<td>Not applicable, noninterfund</td>
</tr>
</tbody>
</table>

AP2.2.2. An additional use for the fund code, when the signal code is C or L, is to indicate the DoDAAC of the “bill-to” office. See AP1 for codes.

AP2.2.3. Requisitions submitted to DoD Activities and the General Services Administration will always contain a fund code, unless the materiel requested will be issued without charge. When the materiel will be issued without charge the signal code (pos. 51) will be D or M (free issue) and the fund code will not be significant.
AP2.2.4. Defense Agencies and others using H series DoDAACs may use fund codes designating interfund billing only if the requisitioning DoDAAC is identified as authorized to use interfund. See AP1 for authorized DoDAACs.

AP2.2.5. Agency designated Fund Code Coordinators are responsible for maintaining fund codes for their Service or Agency. With the exception of DLA, which has its own coordinator, Defense Finance and Accounting Service (DFAS) maintains fund codes for DoD Organizations and Agencies. Fund code coordinators are identified in Volume 4 of the DLMS Manual.
# BILLING ADVICE CODES

**NUMBER OF CHARACTERS:** Three  
**TYPE OF CODE:** Numeric  
**EXPLANATION:** Billing advice codes are used in requests for billing adjustment to identify the nature of the request or problem. The first position entry, when present, is significant only to the requesting activity. The second and third position entries listed below convey significant information to the billing office. See chapter 4 for information on the use of the codes.

<table>
<thead>
<tr>

#### BILLING STATUS

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AA</td>
<td>Duplicate billing record resulted from receipt of duplicate requisition and resulting duplicate issue.</td>
</tr>
<tr>
<td>AB</td>
<td>Billing record reflected correct unit price, quantity, and extended amount.</td>
</tr>
<tr>
<td>AC</td>
<td>Billing record was prepared in accordance with requisition, excess report, or request for adjustment.</td>
</tr>
<tr>
<td>AD</td>
<td>Either nonreimbursable was not authorized, or if authorized, was not specified in the requisition.</td>
</tr>
<tr>
<td>AE</td>
<td>Accessorial charge was authorized, requested, and furnished.</td>
</tr>
<tr>
<td>AF</td>
<td>Materiel either was not back ordered or was issued following notification of back order.</td>
</tr>
<tr>
<td>AG</td>
<td>Requested adjustment, not related to a discrepancy report, is less than the minimum dollar value prescribed for adjustment.</td>
</tr>
<tr>
<td>AH</td>
<td>Prescribed record retention period has elapsed.</td>
</tr>
<tr>
<td>AI</td>
<td>Adjustment was issued under bill number shown in pos. 54-58.</td>
</tr>
<tr>
<td>AJ</td>
<td>Requisition or excess report did not specify billing under noninterfund procedures.</td>
</tr>
<tr>
<td>AK</td>
<td>Copy of bill should be requested from DLA Transaction Services.</td>
</tr>
<tr>
<td>Code</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>AM</td>
<td>Discrepancy report required the return of the discrepant or deficient materiel. Credit cannot be provided until the depot receives the materiel. If the materiel was shipped, initiate shipment tracer.</td>
</tr>
<tr>
<td>AO&lt;sup&gt;1&lt;/sup&gt;</td>
<td>Request was not received within allowable timeframes.</td>
</tr>
<tr>
<td>AP</td>
<td>Cancellation request either was not received or was received but not confirmed.</td>
</tr>
<tr>
<td>AR</td>
<td>Reply to discrepancy report did not promise adjustment.</td>
</tr>
<tr>
<td>AS</td>
<td>Reply was not furnished indicating that billing could not be rendered.</td>
</tr>
</tbody>
</table>

"C" SERIES: REQUEST GRANTED

- **CA**: Duplicate, adjustment, or corrected bill shall be issued in the next billing cycle.

"D" SERIES: ADVISORY RESPONSE

- **DA**: No record of requested bill in DLA Transaction Services files. Request forwarded to billing office.
- **DC**: Materiel was issued on a nonreimbursable basis.
- **DD**: Billing or adjustment was rendered under bill number shown in pos. 54-58.
- **DF**: No record of cited document number or bill number is on file.
- **DH**: Billing or adjustment under the cited document number shall be furnished in the next billing cycle.
- **DI**: Letter of explanation shall follow.

"E" SERIES: REQUEST REJECTED

- **EA**: Request is incomplete or contains invalid data. Review and resubmit with correct data.
- **EF**: No record of duplicate billing under bill number(s) cited.
- **EH**: No duplicate billing. Duplicate summary billing record was not reported to the Treasury Department.

---

<sup>1</sup> The fact that the record retention period has elapsed by the time the discrepancy report is validated or the adjustment request is completed may not be used as a basis for denying or failing to comply with the adjustment request if the request was submitted within prescribed timeframes.
<table>

Funds Verification Reply Code

Number of Characters: One
Type of Code: Alphanumeric
Explanation: Identifies whether funds are available or if error precludes further processing.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Funds available; continue processing.</td>
</tr>
<tr>
<td>B</td>
<td>No action; bill-to not applicable under component procedures; continue processing.</td>
</tr>
<tr>
<td>D</td>
<td>No action due third party bill-to; continue processing.</td>
</tr>
<tr>
<td>E</td>
<td>Funds available; duplicate message identification number; continue processing.</td>
</tr>
<tr>
<td>G</td>
<td>No action, other component bill-to; confirm correct information and obligation has been recorded. If correct/confirmed, continue processing.</td>
</tr>
<tr>
<td>H</td>
<td>No action on modifier/follow-up due to previously recorded obligation; continue processing.</td>
</tr>
</tbody>
</table>

Funds Verification Rejection (numeric codes):

1. Order rejected due to lack of available funds for bill-to DoDAAC; do not process.
2. Order rejected due to unauthorized bill-to DoDAAC under Component procedures; do not process.
3. Invalid fund code; do not process.
4. Duplicate document number or document number suffix; do not process.
5. Modifier/follow-up with different materiel identification; do not process.
6. Supply class not authorized for this requisitioner under Component procedures; do not process.
7. CAGE code not recognized by Component system; do not process. If manually entered recheck input; if system-populated contact help desk.
8. Fund Code update not authorized (status of supply action precludes modification); do not process.
Invalid data; do not process, please contact your funding organization or resource manager.¹

¹ Refer to ADC 1068A; implementation scheduled for 4th quarter fiscal year 2015.

| Appropriation               | varchar2   | C   | **Appropriation/Fund Account**. Constructed line of accounting             | • Must use unless Noninterfund billing.  
• This field is constructed from: Last 2 characters of Department-Regular_Code + Fiscal_Year_Indicator + Main_Account_Code + Appropriation_Limit_Subhead. (NOTE that Department-Regular_Code is actually 3 characters, but the leading zero is deleted for purposes of this element.)  
• Blank appropriation data displays as Noninterfund on reports |
| Agency_Narr                 | varchar2   | O   | **Agency Narrative**. Name, code or common acronym for further agency delineation from the Service code. |                                                                                                                                               |
| Department-Regular_Code     | varchar2   | C   | **Department Regular Code**. U.S. Treasury designated code representing the government agency accountable for one or more fund accounts established and maintained by the Treasury. | • Must use unless Noninterfund billing.  
• Department Regular Code must be 3 numeric characters. ex. 097  
(NOTE: This element used to be 2 characters. Current codes are pre-fixed by a zero.)  
• If any of Department-Regular_Code, Main_Account_Code and/or Sub_Account_Code are present than the others are required.  
• Blank field indicates Noninterfund. |
| Department_Transfer_Code    | varchar2   | O   | **Department Transfer Code**. Identifies the federal agency of obligation authority to the DoD or one of its components | • Department Transfer Code must be 3 numeric characters. ex. 097  
• May be blank if no department transfer is applicable |

| Main_Account_Code| varchar2 (4) | C   | **Main Account.** A four digit numeric data element representing a specific appropriation or fund account established by the U.S. Treasury for expenditure or receipt authority issued by the U.S. Congress. | • Must use unless Noninterfund billing.  
• Blank field indicates Noninterfund.  
• Each Main Account Code must be associated with only one Fund Type Code.  
• Each Main Account Code must be associated with only one Budget Function/Sub-Function Code.  
• Main Account Code must be 4 numeric characters.  
• If any of Department-Regular_Code, Main_Account_Code and/or Sub_Account_Code are present than the others are required. |
| Sub_Account_Code | varchar2 (3) | C   | **Sub-account Code.** Specify subsidiary level accounts associated to the main account of the TAFS. | • Must use unless Noninterfund billing.  
• Blank field indicates Noninterfund.  
• The Sub-Account Code must be defaulted to "000" when one of the Treasury Sub-Account Code conditions does not apply.  
• Sub-Account Code must be 3 numeric characters.  
  ex. 97X4930.001 (last 3 positions following period)  
• If any of Department-Regular_Code, Main_Account_Code and/or Sub_Account_Code are present than the others are required. |
<table>

<th>Business Rule</th>
</tr>
</thead>
</table>
| Treasury_Sub_Class | varchar2(2) | O   | **Treasury Sub Class Code.** Assigned in certain cases for grouping designated disbursement and/or receipt transactions below the level of appropriation or fund account represented by the main account, Reference Item A3, Main Account, for an Appropriation, Fund, or Receipt Account. | • May be blank. Business Rules need to be developed.  
• Business Event Type Code (BETC) in effect replaces the transaction codes and standard sub-classes that were used on the old central accounting reports, such as the Statements of Transactions (FMS Form 224) and the Undisbursed Ledger and Trial Balance Reports (FMS Forms 6653 and 6654). As a result, the subclass field is being renamed to "Sub-level Prefix" and will only be used for programmatic breakdowns of the TAS for Treasury publication purposes. Sub-level Prefixes have a unique meaning or a unique need for sub classification that is NOT based on transaction types or business events as described previously. |
| Appropriation_LIMIT_SUBHEAD | varchar2(4) | O   | **Sub-Allocation Holder Identifier.** Identifier of an organization to which funds have been sub-allocated. *(Per PDC 1043D Appropriation Limit/Subhead has been subsumed into the SLOA element Sub-Allocation Holder Identifier and will be represented as Sub-Allocation to users.)* | • May be blank. |
### Field Name: Fiscal_Year_Indicator
- **Type:** varchar2 (1)
- **Use:** C
- **Definition:** Fiscal Year Indicator. Denotes fiscal year chargeable.
  - Must use unless Noninterfund billing.
  - Values: \{numeric\}, or
    - X = no year funding, or;
    - # = Beg_Fiscal_Year_Avail and End_Fiscal_Year_Avail determined by FY of transaction document number, or;
    - * = Beg_Fiscal_Year_Avail and End_Fiscal_Year_Avail determined by FY of the Summary billing transaction or;
  - Blank field indicates Noninterfund.
  - If Fiscal Year Indicator is X Availability_Type_Code will also be X.

### Field Name: Legacy_Multi_Yr_Fund_Cde_Ind
- **Type:** varchar2 (1)
- **Use:** C
- **Definition:** Legacy Multi Year Fund Code Indicator. Used to indicate that funding is associated with a multi-year appropriation for which the Beg_Fiscal_Year_Avail and End_Fiscal_Year_Avail are blank due to overlapping multiple periods of availability associated with the fund code.
  - Must use unless Noninterfund billing.
  - Default to false.
  - If true, accounting systems cannot always accurately derive the beginning and ending periods of availability for this fund code solely from the fund code.
  - Used only in conjunction with Fiscal_Year_Indicator = # or *.
<table>
<thead>
<tr>

</tr>
</thead>
</table>
| Availability_Type_Code     | varchar2 (1) | C   | **Availability Type Code.** Identifies no-year TAS, clearing/suspense TAS, and canceled TAS. | • Availability Type Code must be 1 alpha character.  
• Valid values include for Fund Code: C and X.  
• If used for canceled Main Accounts, Availability Type Code C may be derived at the time of reporting.  
• For Annual or Multi-Year funding, Availability Type Code must be blank.  
• If Availability Type Code is X, Fiscal_Year_Indicator will also be X. |
| Beg_Fiscal_Year_Avail      | varchar2 (4) | C   | **Beginning Period of Availability Fiscal Year Date.** In annual and multi-year accounts, identifies the first year of availability under law that an account may incur new obligations. May also be used to represent Program Year, when applicable. | • If the Beginning Period of Availability is associated with an unavailable receipt account, then it must be blank.  
• If Fiscal_Year_Indicator is either # or * then Beginning Period of Availability must be blank. |
| End_Fiscal_Year_Avail      | varchar2 (4) | C   | **Ending Period of Availability Fiscal Year Date.** In annual and multi-year accounts, identifies the last year of availability under law that an account may incur new obligations. | • Must use unless Noninterfund billing.  
• If Availability_Type_Code is X, then Ending Period of Availability must be blank.  
• If the Ending Period of Availability is associated with an unavailable receipt account, then it must be blank.  
• If Fiscal_Year_Indicator is either # or * then Ending Period of Availability must be blank. |
| Effective_Date             | date  | M   | **Effective Date.** The start date for the latest action taken on a record. | • The record is not valid until the effective date. |
## Field Name | Type | Use | Definition | Business Rule
--- | --- | --- | --- | ---
Action_Code | varchar2 (1) | M | **Action Code.** System maintained code indicating type of action last taken on a record. | • Values: A, C, D (Add, Change, Delete)
Create_Date | date | M | **Creation Date.** System maintained date a record was created. |
Last_Update | date | M | **Last Update Date.** System maintained date a record was last updated. |
Customer_Userid | varchar2 (20) | M | **Customer User Identifier.** System maintained identifier of a system user who updated the record. |

### AP4.2: Layout for Fund Code to Billed Office DoDAAC Table (Applicable to Signal Codes C or L)  
The Type column identifies the data type and, when applicable, the maximum number of characters in parentheses. For the Use column, M = Mandatory.

DEFENSE LOGISTICS MANAGEMENT SYSTEM

VOLUME 6

LOGISTICS SYSTEMS INTEROPERABILITY SUPPORT SERVICES

June 5, 2012

DEPUTY ASSISTANT SECRETARY OF DEFENSE (SUPPLY CHAIN INTEGRATION)
DEFENSE LOGISTICS MANAGEMENT STANDARDS
VOLUME 6, LOGISTICS SYSTEMS INTEROPERABILITY SUPPORT SERVICES
CHANGE 13

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 5, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 13 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. The word “Material” has been removed from references to “Material Safety Data Sheets” and its abbreviations. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADCs) published by Enterprise Business Standards Office memorandum:

A. ADC 1211A dated June 12, 2019. Documents corrections and reorganizes and clarifies DLM 4000.25, Defense Logistics Management Standards Volume 6, Logistics Systems Interoperability Support Services; Chapter 4, Pipeline Measurement. Revise Chapter 4, Pipeline Measurement.

B. ADC 1258A dated June 26, 2019. (Administrative addendum to ADC 1258) Removes the Authority Code restriction on the Funding Flag in the DoDAAD. No change to Volume 6, Chapter 2. No changes to DLM 4000.25.

C. ADC 1337 dated June 20, 2019. Enhances the advanced search application (eDAASINQ) to allow queries using a file containing a list of DoDAAC as input. No change to DLM 4000.25.
D. ADC 1341 dated June 5, 2019. The DoDAAD update application only supports DoDAAC and RIC updates. DoDAACs are six characters and RICs are three characters. Each is a unique field and should be handled separately. Adds separate fields and removes the need to enter ZZZ for RICs, which is misleading as the RIC is only used as a three-character field in all applications. No change to DLM 4000.25.

III. The list below identifies the chapters, appendices, or other files from the manual that are replaced or updated by this change:

**Added or Replaced Files**

Steven P. Whitney, Brig Gen, USAF
Acting Deputy Assistant Secretary of Defense for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 5, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 12 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADCs) published by Enterprise Business Standards Office memorandum:

   A. ADC 1025G dated November 15, 2018. Updates the Component routing identifier codes (RICs) LMARS uses to generate reports. The RIC data is located in the Output Specific Report Table D on the PM PRC EBSO website, which is referenced in Chapter 4. These RIC updates are routine, periodic updates provided by the Component PM PRC representatives.

   B. ADC 1300A dated February 11, 2019. Establishes the data elements for DoD contractor DoDAACs, their source and business rules, and the process by which DoD contractor DoDAACs are to be created, maintained, and deleted in the DoDAAD. Revises Chapter 2.

   C. ADC 1311 dated February 15, 2018. Establishes the Contract Administration Office (CAO) flag in the DoDAAD and enables the setting of all Procurement-related Purpose flags (Procurement Authority, Grant Authority, and CAO) to be set in the DoDAAD directly from the Procurement Integrated Enterprise Environment (PIEE). Revises Chapter 2.
D. ADC 1320 dated November 23, 2018. The U.S. Pacific Command (PACOM) changed its name to U.S. Indo-Pacific Command (USINDOPACOM). DoDAAD changed the DoDAAD COCOM field length and value to align with new name assigned by DoD. No update to DLMS Volume 6, Chapter 2 is required, but updates to the DoDAAD Series Table and Central Service Point (CSP) list will be required accordingly (after implementation).

E. ADC 1324 dated January 11, 2019. Direction has been given to the Services/Agencies to conduct a thorough review of their respective DoDAACs and correctly apply the Org Type Code. Now that sufficient time has transpired, this change removes the default and allow Services/Agencies to set the Org Type Code manually based on the actual type of activity of the DoDAAC. No update to DLMS Volume 6, Chapter 2 is required; this is phase two of ADC 1190 and is only a programmatic change to the DoDAAD, not a procedural change.

III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

**Added or Replaced Files**

- Change History Page
- Table of Contents
- Chapter 2
- Chapter 4

IV. This change is incorporated into the on-line DLM 4000.25 series of manuals and the PDF files containing the entire set of change files on the publications page of the Enterprise Business Standards Office Website: [www.dla.mil/does/dlms-pubs](http://www.dla.mil/does/dlms-pubs)

Jan Mulligan
Performing the Duties of
Deputy Assistant Secretary of Defense
for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 5, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 11 include the following: Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADCs) published by Enterprise Business Standards Office memorandum:

A. ADC 1025E dated January 22, 2018. Revises processes and logic to modify LMARS Combatant Command (COCOM) delivery areas, update Alaska and Hawaii as OCONUS, associate Alaska to NORTHCOM-OCONUS, associate Hawaii to USPACOM-OCONUS, to improve the calculation accuracy of the Logistics Response Time (LRT) for DoD Customers. Updates the Record Layout for Logistics Response Time (LRT) logic, updates Navy Mobile Units’ LRT metrics and Navy Mobile Units’ COCOMs, and removes all countries associated with COCOMs. Revises Chapter 4.

B. ADC 1264 dated January 10, 2018. Revises LMARS procedures to obtain contract and delivery order references for DVD shipments. LMARS will discontinue use of the DLMS 870S as the source and will use the EDI 850 Purchase Order transaction as the source for the required Procurement Instrument Identifier (PIID) information. Revises Chapter 4.

C. ADC 1294 dated January 15, 2018. Updates DAAS/LMARS procedures to eliminate interim conversion of obsolete MILSTRAP Document Identifier Code (DIC) D6S. No changes to manuals required for this change.
III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 5, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by \textit{bold, italicized} print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 10 include the following: Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1025F dated November 29, 2017. Updates the Component routing identifier codes (RICs) LMARS uses to generate reports. These RIC changes are routine, periodic updates provided by the Component PM PRC representatives. The tables are linked from Chapter 4.

B. ADC 1151 dated September 14, 2107. Removes references to specific record retention periods for documents/transactions, and advises the Components to retain data created as a result of DLMS business processes in accordance with the DODI 5015.02, DOD Records Management Program. Revises Chapter 4.

C. ADC 1270 dated September 19, 2017. Adds and implements the HB Series of DoDAACs for United States Cyber Command (USCYBERCOM). No changes to manuals required for this change.
III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

CHANGE 9

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by \textit{bold, italicized} print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 9 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards" to reflect the most recent name change for the DLMS Program Office. Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. “Defense Logistics Management System” is updated to “Defense Logistics Management Standards.” “DoDM 4140.1-R” is updated to “DoDM 4140.01.” References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”; and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Program Office memorandum:

A. ADC 1154 dated November 9, 2016. Adds a Defense Logistics Agency “DLA” tab at the top or bottom of the following LMARS end of month reports: Major Report Category Section of Wholesale inventory control point (ICP), Contractor Wholesale ICP, and Wholesale ICP Reparable national stock number (NSNs). Revises Chapter 4.

B. ADC 1197 dated April 7, 2017. Establishes requirements to develop an automated Department of Defense Address Activity Directory (DoDAAD) request tool to decentralize data entry and push initiation of the request down to the original requester. This tool will replace the current decades-old process, based on emails and telephone calls, which is both ineffective and prone to errors. No change to DLM 4000.25 manuals or DLMS ICs.

C. ADC 1219 dated August 31, 2016. Implements a change to the State/Province label for Defense Automatic Addressing System (DAAS) Inquiry
(DAASINQ), Enhanced DAAS Inquiry (eDAASINQ), and Department of Defense Activity Address Directory (DoDAAD) Update Application. No change to DLM 4000.25 manuals or DLMS ICs.

D. ADC 1245 dated April 19, 2017. Revises the Defense Automatic Addressing System maintained Logistics Metrics Analysis Reporting System (LMARS) to replace the current default two day Medical Prime Vendor (MPV) Logistics Response Time (LRT) with actual LRT in the Logistics Metrics Analysis Reporting System (LMARS). LMARS will calculate the actual LRT from the date the MPV order is placed to when the order is delivered. No change to DLM 4000.25 manuals or ICs.

E. ADC 1255 dated July 7, 2017. Revises the Department of Defense Activity Address Directory (DoDAAD) Update Application to prohibit the use of the letters “I” or “O in any of the six positions of the DoDAAC or three positions of the RIC primary key. This restriction has always existed, but it required the person entering the data to enforce the rule. The rule will be enforced programmatically. No change to DLM 4000.25 manuals.

F. ADC 1257 dated July 7, 2017. Establishes the requirements for a new website with a public server/domain to host the main page of the DoDAAD Enterprise Resources Website, in the same style/capability currently used by the DLA Information Operations Commercial and Government Entity Code (CAGE) site (https://cage.dla.mil) hosted by the Defense Information Systems Agency’s Defense Enterprise Computing Center – Ogden. All user actions will launch from this new DoDAAD website. No revisions to DLM 4000.25 manuals.

G. ADC 1258 dated April 5, 2017. Adds a Yes/No flag to the DoDAAD to indicate if the activity identified by the DoDAAC is authorized to award Grants on behalf of the Federal Government. It provides additional business rules to apply the Funding Office flag that was initially implemented in the DoDAAD by ADC 1201. Revises Chapter 2.

III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

**Added or Replaced Files**

- Change History Page
- Table of Contents
- Chapter 2
- Chapter 4

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

CHANGE 8

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 8 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMSO office, abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses., occurrences of “shall” are changed to “will” per a style change for DoD issuances, “Defense Logistics Management System” is updated to “Defense Logistics Management Standards”, “DoDM 4140.1-R” is updated to “DoDM 4140.01”, in accordance with General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”, page number formats in the “front matter” (Table of Contents, Process Change History page, etc.) of the volume have been revised, and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

ADC 1233 dated August 4, 2016. Revises the page numbering of the “front matter” (Foreword, Process Change History, Table of Contents, Acronyms and Abbreviations, Definitions and Terms, References) in the DLM 4000.25 series of manuals to prepend an alphabetic indicator to the page numbers in each section of the front matter. Each page number will begin with an abbreviation of that section's name. Revises the front matter of the manual.
III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

**Added or Replaced Files**

- Change History Page
- Table of Contents

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

DEFENSE LOGISTICS MANAGEMENT STANDARDS
VOLUME 6, LOGISTICS SYSTEMS INTEROPERABILITY SUPPORT SERVICES
CHANGE 7

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 7 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances, updating “DoDM 4140.1-R” to “DoDM 4140.01”, and updating “Defense Logistics Management System” to “Defense Logistics Management Standards.”

In accordance with DLA General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1178 dated August 5, 2015, Revises DoDAAD Bureau Codes (DoDAAD); no changes to DLM manuals.

B. ADC 1190 dated December 17, 2015. Adds an Organization Type Code field to the DoDAAD to indicate if the DoDAAC is DoD, Federal, State/Local, Non-Government Organization (NGO) or Foreign entity. Revises DLMS Chapter 2.

C. ADC 1191 dated December 17, 2015. Adds a Yes/No flag to the DoDAAD to indicate if the DoDAAC is a contractor or not. For almost all DoD DoDAACs, the determination if the DoDAAC is a contractor DoDAAC or not is determined by the first two characters of the DoDAAC itself. For Federal DoDAACs, there currently is no determination. This change will set the flag for both Federal and DoD DoDAACs. Revises DLMS Chapter 2.

E. ADC 1193 dated December 17, 2015. Separates the “delete” function from the “modify” function. There are no roles in the current system; all access is by series or bureau codes. This change will allow more strict limits on access and further define the differences between CSP and Monitor. Revises DLMS Chapter 2.

F. ADC 1194 dated December 17, 2015. Adds the Sub Tier Code field to the DoDAAD to indicate if the DoDAAC is tied to a specific Federal Agency Sub Tier (a.k.a. bureau) for business uses within the Federal Procurement Data System (FPDS). Revises DLMS Chapter 2.

H. ADC 1201 dated December 17, 2015. Add a Yes/No flag to the DoDAAD to indicate if the DoDAAC is a Funding Office. Revises DLMS Chapter 2.

III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

**Added or Replaced Files**

- Change History Page
- Table of Contents
- Chapter 2

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 6 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1116B dated July 28, 2015, DoD Activity Address Code (DoDAAC) Contract Information Fields. Changes to the contract information fields of the DoDAAD have been updated to correct administrative errors in ADC 1116A. Also, includes changes for DLA’s DoDAACs (S, SD, U, 2A, 2AB, 2Y, and 3B Series) to distinguish contractors, DoD and special program DoDAACs that were approved in ADC 1116 and 1116A, both of which this ADC replaces in its entirety. Revises Chapter 2.

B. ADC 1143 dated May 6, 2015, DoDAAD Data Security Controls (DoDAAD). Implemented additional controls for access to DoDAAD data that safeguard the handling of DoDAAD data, which has been designated as Controlled Unclassified Information (CUI) For Official Use Only (FOUO), and that ensure proper management control on behalf of the Federal Departments to whom the data belongs (i.e., Department of Defense (DOD), Department of Justice (DOJ), Department of Transportation (DOT), etc.). Note: For the purposes of this DLMS Change, the term “Components” used herein is intended to mean all Departments of the Federal Government who use the DoDAAD (i.e., DOD, Federal Agencies, etc.). Revises Chapter 2.

C. ADC 1144 dated January 13, 2015, DoDAAD Error Report Processing (DoDAAD). This change only impact the eDAASINQ application with two required actions: 1) create a report to track orphaned Routing Identifier Codes (RIC), and 2)
move the City/ZIP error report from its current location on the “Downloads” page to a new “reports” section. No change to manuals or DLMS Implementation Conventions.

D. ADC 1148 dated January 15, 2015, Cancellation of Permanent DoDAACs (DoDAAD). This Change removes (null) two fields, “Cancelled/Never Reuse Flag” and “Enterprise Identifier Flag” from the DoDAAD. It deletes C2.4.1.5. from DLMS Volume 6, Chapter 2 DOD Activity Address Directory, and updates paragraph 5.4 of Section 2, in the DoDAAD Standard Operating Procedures (SOP).

III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

**Added or Replaced Files**

- Change History Page
- Table of Contents
- Chapter 2

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

CHANGE 5

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 6, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 5 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1025B dated February 7, 2014. Updated U.S. Air Force Routing Identifier Codes (RICs) used to generate reports in LMARS. No changes to the manual.

B. ADC 1098 dated November 7, 2014. Updated the DD Form 1348-5, Notice of Availability; updated the DLMS 856N NOA and DLMS 870N NOA Reply to align with the hard copy data content of the DD Form 1348-5; established the foundation for a mechanized implementation for the NOA process to provide the International Logistics Control Office (ILCO) visibility; and updated procedures for ensuring timely replies to NOAs by actively engaging the ILCOs when there is no response to a follow-up NOA. Revises Chapter 3.

C. ADC 1100 dated April 17, 2014. Allocated the HGA series to USTRANSCOM Acquisition for tracking contractor DoDAACs. No changes to the manual.

D. ADC 1101 dated May 19, 2014. Allocated the DoDAAC series H96 to US Northern Command (USNORTHCOM). H96 will not be authorized for creating contractor DoDAACs. No changes to the manual.

E. ADC 1117 dated July 2, 2014. Improved and refined the business rules associated with the type address codes (TAC) used in the DoDAAD and removes TAC 4. This change is not applicable to DoDAACs already resident in the
DoDAAD, but will apply to any future changes made to existing DoDAACs or when new DoDAACs are created after the implementation date of this change. Revises Chapter 2.

III. The list below identifies the chapters, appendices, or other files from the manual that are replaced by this change:

### Added or Replaced Files

CHANGE 4

I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 6, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. The exception would be when the entire chapter or appendix is replaced, or a new one added.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by DLA Logistics Management Standards Office memorandum ADC 1061B dated December 11, 2013. Appendices were removed from Chapter 2 (DoDAAD) and are published elsewhere as follows:

A. AP1.1 - Published on DoDAAD Process Review Committee (DPRC) webpage.
B. AP1.2 - Name changed from Master File Layout to DoDAAD Data Elements and published on DPRC webpage.
C. AP1.3 - The Authority Codes have been imbedded within Chapter 2, paragraph C2.4.4. as well as published on the DPRC webpage.
D. AP1.4 - Published on the DPRC webpage.
E. AP1.5 - Published on the DPRC webpage.
F. AP1.6 through AP1.12 - Unique processing rules were combined into a single document and published on the DPRC webpage.
G. AP1.13 - Renamed to Batch Transaction Formats and published on the DPRC webpage.
H. AP1.14 - Merged into the body of Chapter 2 as paragraph C2.5.
I. AP1.15 - Published on the DPRC webpage.

Change 4 also includes administrative repositioning of Appendix 2 files associated with the Chapter 2 (DoDAAD) to reflect the correct numbering format shown in the chapter. No changes to DLMS Supplements are included.

FOREWORD

I. The Defense Logistics Management System (DLMS) manual is reissued as Defense Logistics Manual (DLM) 4000.25, Defense Logistics Management System (DLMS), under the authority of DoD Instruction (DoDI), 4140.01, DoD Supply Chain Materiel Management Policy. DLM 4000.25 is composed of multiple volumes, each supporting functionally related business processes. Volume 6 prescribes DoD standard procedures, data and transactions used in support of enterprise services related to customer addressing and logistics pipeline performance measurement.

II. The provisions of this manual apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

III. This manual incorporates the Approved Defense Logistics Management Standards (DLMS) Changes (ADC) listed in the Process Change History page immediately following this Foreword. ADCs are published electronically on the ADC page of the DLMS Website. Recommended revisions to this manual will be proposed and incorporated under the Process Review Committee (PRC) forum for logistics functional areas. Submit all proposed change requests through your designated DoD Component PRC representatives. The procedures are in Volume 1, Chapter 3 of this manual and is available on the DLMS Website.

IV. This Volume is approved for public release and is available electronically on the DLMS Website. Use the comment form to contact the Enterprise Business Standards Office (EBSO).

Paul D. Peters
Deputy Assistant Secretary of Defense for Supply Chain Integration

<td></td>
<td>3/1/2007</td>
<td><strong>Revision of MILSTRIP, MILSBILLS and DLMS to add DoDAAC Authority Code Edits.</strong> This change will establish a new edit for DoDAACs by Authority Code in order to restrict requisitioning, shipment and billing by DoDAAC. DoDAAC Authority Codes are applicable to all Components. This change will revise DLMS, MILSTRIP and MILSBILLS to identify DoDAAC authorities for requisitioning, shipment and billing, and to provide for DAAS and source of supply rejection, under DLMS, MILSTRIP and MILSBILLS of requisitions or bills, as appropriate.</td>

<td><strong>Department of Defense Activity Address Directory (DoDAAD).</strong> This issued the new DoDAAD manual as an ADC.</td>
<td>0</td>
</tr>
<tr>
<td>251</td>
<td>12/19/2007</td>
<td><strong>Deleted Department of Defense Activity Address Code (DoDAAC), Cited on Open Orders.</strong> Revise MILSTRIP/DLMS procedures to include instructions on cancellation of orders, citing a ship-to or bill-to DoDAAC that has been deleted, as identified in the DoD Activity Address Directory (DoDAAD). In response to comments on the proposal, the following clarification is provided: The intent is for all Components to implement this procedure change while modernizing or as soon as practical, thereby canceling open orders/backorders for which there is a deleted DoDAAC identifying the bill-to or ship-to activity. This procedure complements the existing procedure to cancel backorders where the requisitioner DoDAAC has been deleted. Updates from the original staffing are highlighted.</td>

<td>298</td>
<td>9/16/2008</td>
<td><strong>Department of Defense Activity Address Directory (DoDAAD) Enhancements.</strong> This change documents the proposed procedures that are applicable to the reengineered DoDAAD. The ADC contains many enhancements. One change calls for adding the new GSA unique fields to the DAASINQ and enhanced eDAASINQ. One change establishes DoD policy that Component governing directives require that deploying units have current DoDAAC information prior to deployment. The remaining changes expand the capability of the DoDAAD web update page. DAASC will need to make both database and code changes to implement the new requirements.</td>
<td>0</td>
</tr>
<tr>
<td>318</td>
<td>3/24/2009</td>
<td><strong>DoD Activity Address Directory (DoDAAD) Country Codes in the DoDAAD (Staffed as PDC 325).</strong> This change documents the procedures that are applicable to the country code listing of the DoDAAD and procedures for notifying CSPs of country code changes. This change reiterates that CSPs are responsible for ensuring that their Component DoDAAC information is current and that Component CSPs must take action to ensure DoDAAC country code information is validated whenever there is a change to the country code listing. This change also excludes activity codes applicable to programs and not to countries from being entered into the address field of the DoDAAD.</td>

<tr>
<td>354</td>
<td>2/4/2010</td>
<td>DOD Activity Address Code (DoDAAC) Edits on Logistics Bills and Requisitions (Finance/DoDAAD/Supply). This change provides information and procedures regarding Defense Automatic Addressing System Center (DAASC) DoDAAC edits for logistics bills and requisitions. This also incorporates an administrative change to reflect the DAASC retention of security assistance bills of 4 years after initial routing vice 2 years.</td>
<td>0</td>
</tr>
<tr>
<td>365</td>
<td>5/6/2010</td>
<td>DOD Activity Address Code (DoDAAC) City State Zip Validation. This change is to improve the validation of the CONUS city, state and zip code data by establishing procedures for DoDAAC entries that do not match the United States Postal System (USPS) authoritative source.</td>
<td>0</td>
</tr>
<tr>
<td>368</td>
<td>12/7/2010</td>
<td>Procedures and Assignment of Navy DoDAACs to DLA for Use on DLA Requisitions to Military Service/GSA Sources of Supply (SoSs) in Support of Navy Industrial Activities (IAs) under BRAC SS&amp;D/IMSP (Supply/DoDAAD). This change requires assignment of Navy (N-series) DoDAACs for DLA’s use under BRAC SS&amp;D/IMSP and documents associated procedures. DLA will control and assign document numbers using these unique Navy DoDAACs when requisitioning from other SoSs in support of Navy industrial activities (IA) including Navy Shipyards (NSYs) and Fleet Readiness Centers (FRCs). This change establishes a new business process for Navy BRAC IMSP requisitioning. It impacts DAAS routing rules and establishes DAAS rules for creation of supply and shipment status associated with these requisitions. Other DoD Components processing rules are not impacted.</td>
<td>0</td>
</tr>
<tr>
<td>383</td>
<td>5/18/2010</td>
<td>DoD Activity Address Directory (DoDAAD) Container Consolidation Point (CCP). This change is to implement the use of the Break Bulk Point (BBP) and Container Consolidation Point (CCP) data fields in the DoDAAD for their intended purpose under DoDAAD reengineering, as separate, discrete data fields, rather than as a single, multi-use field. This will require phased implementation.</td>

<td>For Creation of H96 as USNORTHCOM DoDAAC Series. Allocates the DoDAAC series H96 to US Northern Command (USNORTHCOM). H96 will not be authorized for creating contractor DoDAACs. A separate PDC would be required to establish a separate HG_ series for this purpose, should the requirement arise.</td>
<td>5</td>
</tr>
<tr>
<td>1116B</td>
<td>7/28/2015</td>
<td>Administrative Updates to DoDAAD Contract Information Fields (DoDAAD/Supply). ADC 1116 was withdrawn pending policy conflict resolution. Notwithstanding, many of the changes identified in that ADC are still required for the DoDAAD and are not affected by the factors which led to the withdrawal of ADC 1116. ADC 1116A replaced ADC 1116 in its entirety; specifically, changes to the Contract Information fields of the DoDAAD have been corrected and updated, especially as they relate to DLA’s DoDAACs (S, SD, U, 2A, 2AB, 2Y, and 3B Series). ADC 1116B corrected an administrative paragraph numbering error in ADC 1116A. Revises DLMS Volume 6, Chapter 2.</td>
<td>6</td>
</tr>
<tr>
<td>1117</td>
<td>7/2/2014</td>
<td>DoDAAC Authority Code and Type Address Code (TAC) Rules. Improves and refines the business rules associated with the type address codes (TAC) used in the DoDAAD and removes TAC 4. This change requires entering the specific address for the purpose for which the DoDAAC is intended to be used, based upon the DoDAAC authority code. This change is not applicable to DoDAACs already resident in the DoDAAD, but will apply to any future changes made to existing DoDAACs or when new DoDAACs are created after the implementation date of this change. Revises Chapter 2, DoD Activity Address Directory.</td>

C1. CHAPTER 1.

INTRODUCTION

C1.1. GENERAL

C1.1.1. Purpose. This volume provides Department of Defense standard procedures for special processing and interoperability support. The volume covers processes that go beyond the functional processes covered in the previous Defense Logistics Management Standards (DLMS) Volumes. Not all DLMS processing is transactional based. This volume focuses on the special processing for the Department of Defense Activity Address Directory (DoDAAD) (Chapter 2), Military Assistance Program Address Directory (MAPAD) (Chapter 3), and Logistics Metrics Analysis Reporting System (LMARS) (Chapter 4).

C1.1.2. Defense Logistics Management System Volume Access. Use of this volume requires simultaneous access to the DLMS Manual Volume 1 administrative items such as the lists of, acronyms and abbreviations, terms and definitions, and references; instructions for acquiring access to the DLMS standards database; specific guidance that applies to all DLMS Supplements; and both functional and technical information that is relatively stable and applies to the DLMS as a whole.

C1.2. POLICY. The policy governing the procedures in this volume are:

C1.3. APPLICABILITY. This volume applies to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

C1.4. DoD ACTIVITY ADDRESS DIRECTORY PROCESS REVIEW COMMITTEE. The DoDAAD Process Review Committee (PRC) is the forum through which the DoD Components and other participating organizations may participate in the development, expansion, improvement, maintenance, and administration of DoDAAD requirements for the DLMS. Refer to Chapter 2 in this volume for a discussion of DoDAAD PRC functions and responsibilities. The DoDAAD PRC chair, in coordination with the DoDAAD PRC Central Service Points (CSP), is responsible for the contents of Chapter 2. The DoDAAD PRC membership list is available on the DLMS Website and requires CAC/PIV authentication.
C1.5. MAPAD PROCESS REVIEW COMMITTEE. The MAPAD PRC is the governance body through which the DoD Components and other participating organizations may participate to develop, expand, improve, maintain, and administer the MAPAD. The MAPAD PRC functions are defined in Chapter 3 in this volume. The MAPAD PRC chair, in coordination with the MAPAD PRC CSPs, is responsible for the contents of Chapter 3. The MAPAD PRC membership list is available on the DLMS Website and requires CAC/PIV authentication.

C1.6. PIPELINE MEASUREMENT PROCESS REVIEW COMMITTEE. The Pipeline Measurement (PM) PRC is the governance body through which the DoD Components and other participating organizations participate in the development, maintenance and configuration management of LMARS. The PM PRC functions are defined in Chapter 4 in this volume. The PM PRC chair, in coordination with the PM PRC members is responsible for the contents of Chapter 4. The list of PM PRC membership list is available on the DLMS Website and requires CAC/PIV authentication.

C1.7. NONCOMPLIANCE. If reasonable attempts to obtain compliance with prescribed procedures or resolution of DLMS related problems are unsatisfactory, the activity having the problem will request assistance from their respective DLMS DoDAAD, MAPAD or PM PRC Representative, depending on the nature of the problem. The request will include information and copies of all correspondence pertinent to the problem; including the transaction set number, the transaction number, and the date of the transaction involved. The representative will take the necessary actions to resolve the issue or problem. The actions may include requesting assistance from the respective PRC Chair.
C2. CHAPTER 2

DoD ACTIVITY ADDRESS DIRECTORY

C2.1. GENERAL

C2.1.1. Purpose. This chapter implements DoD policy by establishing procedures for the roles, authorities, business rules, governance, and management process of the DoD Activity Address Directory (DoDAAD). The DoDAAD is an interactive, relational database serving as a single authoritative source of identification, routing, and address information for authorized users, including Military Components and Agencies, participating Federal Agencies, authorized contractors, and authorized special program activities such as state and local governments. DoDAAD supports business application systems data and interoperability requirements, including (but not limited to) supply chain, materiel management, distribution, transportation, maintenance, finance, contracting, procurement, and acquisition systems. DoDAAD information is used throughout the federal supply system for identification, requisitioning, shipping, billing, and other uses.

C2.1.2. DoDAAD Composition. The DoDAAD is comprised of both Department of Defense Activity Address Code (DoDAAC) and Routing Identifier Code (RIC) identifiers.

C2.1.2.1. DoDAAC. The DoDAAC is a six-character, alpha-numeric code that uniquely identifies a unit, activity, or organization within the DoDAAD. A unit, activity, or organization may have more than one DoDAAC for different authority codes or purposes. Each activity that requisitions, contracts for, receives, has custody of, issues, or ships DoD assets, or funds/pays bills for materials and/or services is identified by a six-position alphanumeric DoDAAC.

C2.1.2.2. RIC. The RIC is a 3-character, alpha-numeric code that uniquely identifies a unit, activity, or organization that requires system ability to route transactions or receive transactions routed to it (e.g., source of supply) within logistics and financial business systems using DLMS and legacy 80 record position format transactions. The RIC was originally conceived as an abbreviated form of a seven-character Communication Routing Identifier (COMMRI) but its use has since expanded. The first position designates the particular service/agency ownership, the second and third characters are determined by the Central Service Point (CSP). See also paragraph C2.5 of this Chapter.

C2.2. POLICY. The procedures contained in this manual are issued in accordance with the following policy:

C2.2.1. DoDI 4140.01. The “DoD Supply Chain Materiel Management Policy,” December 14, 2011, establishes policy and assigns responsibilities for management of materiel across the DoD supply chain and authorizes the publication of DLM issuances required for the execution of this instruction.
C2.2. **DoDM 4140.01.** The “DoD Supply Chain Materiel Management Procedures,” February 10, 2014, provides policy to establish the DoDAAD Process Review Committee (PRC), which provides the framework for DoDAAC/RIC management and assignment.

C2.3. **ROLES AND AUTHORITIES**

C2.3.1. **Office of the Deputy Assistant Secretary of Defense Supply Chain Integration (ODASD/SCI).** The ODASD/SCI will:

C2.3.1.1. Serve as the Office of the Secretary of Defense (OSD) sponsor of the DoDAAD program, issuing policy guidance and instructions for development, expansion, improvement, and maintenance of DoDAAD.

C2.3.1.2. Champion efforts to identify funding sources to support and further the DoDAAD program objectives.

C2.3.1.3. Resolve policy and procedural issues where agreement cannot be achieved within the DoDAAD PRC.

C2.3.1.4. Ensure applicable coordination within OSD staff elements regarding DoDAAD policy guidance or one-time instructional memoranda affecting functions assigned to the DoDAAD PRC.

C2.3.1.5. Support the implementation and use of standard data elements in accordance with policy guidance.

C2.3.1.6. Maintain contact with the PRC through the OSD Principal Staff Assistant (PSA) and the ODASD/SCI PRC member.

C2.3.1.7. Ensure that DoD senior leaders are advised of initiatives and plans as they are developed with respect to DoDAAD.

C2.3.1.8. Monitor PRC activity to ensure compliance with policy, instructions, and standards.

C2.3.1.9. Direct Approved Defense Logistics Management Standards (DLMS) Change implementation dates as needed.

C2.3.2. **Enterprise Business Standards Office (EBSO) DoDAAD System Administrator.** As Chair of the DoD DoDAAD Process Review Committee, the DoDAAD Systems Administrator will:

C2.3.2.1. Develop DoDAAD PRC meeting agendas, convene meetings as required, and publish final meeting minutes.

C2.3.2.2. Submit proposed recommendations for DoDAAD improvement to the committee members and the OSD PSA. Present issues to the DoDAAD PRC for
review and resolution. Where PRC consensus cannot be achieved, document and present the issues to the OSD PSA for resolution.

C2.3.2.3. Report findings and recommendations of evaluations and reviews, with comments from the DoD Components and participating external organizations, to the OSD PSA through the use of standard DLMS configuration management procedures (e.g., proposed and approved DLMS changes).

C2.3.2.4. Develop business rules and procedure documentation, including business rules for DoDAAD Central Service Point (CSP) and DoDAAD monitor assignment.

C2.3.2.5. Approve and forward CSP and Monitor appointments to the Central Control Point (CCP).

C2.3.2.6. Develop and provide DoDAAD training.

C2.3.2.7. Develop and document DoDAAD functional requirements and specifications.

C2.3.2.8. Ensure testing and validation of approved DoDAAD changes.

C2.3.2.9. Publish the following DoDAAD PRC information:

- current list of DoDAAD PRC members,
- meeting minutes,
- current list of DoDAAD Central Service Points and Monitors,
- DoDAAD System Standard Operating Procedures,
- DoDAAD Master File Layout,
- DoDAAD Assignment Logic information,
- CSP and Monitor appointment memorandum templates, and
- additional DoDAAD resources on the DoDAAD PRC webpage of the DLMS Website.

C2.3.3. **DoDAAD PRC.** The DoDAAD PRC is a committee responsible for development, maintenance, and change management of the DoDAAD. The committee is chaired by the DoDAAD System Administrator with representation from each of the Services and Agencies who comprise the member subscribers of the DoDAAD. Change management is accomplished through the Proposed DLMS Change (PDC)/Approved DLMS Change (ADC) process. The DLMS change management requirements and guidelines are documented in DLM 4000.25, Volume 1, Chapter 3 (Change Management) and are available on the DLMS Publications page. The DLMS change management process ensures proper documentation of all proposed or approved changes and provides an audit trail for tracking and reporting of these changes to the functional baseline. The DoDAAD PRC operates under the authority
and within the framework documented in this chapter. Current PRC members are identified on the DoDAAD PRC webpage.

C2.3.4. **DAAS.** In addition to being the technical manager of, and organization responsible for the Defense Automated Addressing System (DAAS), DAAS serves as the CCP for the DoDAAD. In this capacity, DAAS is responsible for the following:

C2.3.4.1. Designate a DoDAAD CCP in writing to the DoDAAD System Administrator.

C2.3.4.2. Maintain the DoDAAD as the authoritative data source for DoDAACs and RICs, and the associated data elements.

C2.3.4.3. Maintain a hardware, software, and customer assistance support helpdesk. If users have DoDAAD software related problems, they can call the DAAS customer assistance support helpdesk at 937-656-3247.

C2.3.4.4. Maintain proper system access controls. Access for CSPs and Monitors must be based on both DAAS approved system access requests (SAR), and CSP assignments and Monitor delegations received from the DoDAAD System Administrator.

C2.3.4.5. Maintain system documentation, data validation edits, and security for the DoDAAD.

C2.3.4.6. Maintain a profile of authorized DoDAAD users by access level.

C2.3.4.7. Maintain statistics on the number of accesses and types of access (update, query, download) by user.

C2.3.4.8. Associate DoDAACs and RICs to a unique seven character CommRI for routing logistics transactions.

C2.3.4.9. Maintain Web query applications.

C2.3.4.10. Maintain the DoDAAD Update Application.

C2.3.4.11. Provide DoDAAD data output to external applications and customers.

C2.3.4.12. Design and maintain the DoDAAD database to implement functional requirements.

C2.3.4.13. Test program functionality and system interface connectivity.

C2.3.4.14. Participate in the DoDAAD PRC.

C2.3.4.15. Review and provide technical input to Enterprise Business Standards Office on DoDAAD PDCs and ADCs.
C2.3.4.16. Implement DoDAAD changes directed in ADCs.

C2.3.5. DoD Components and Federal Agencies. DoD Components and Federal Agencies will:

C2.3.5.1. Appoint a representative, in writing, to the DoDAAD PRC. This representative may be the CSP. A sample appointment letter can be found on the DoDAAD PRC webpage.

C2.3.5.2. Designate, in writing, a primary DoDAAD CSP and an alternate CSP (along with optional DoDAAC monitors) to the DoDAAD System Administrator. A sample letter for these appointments can be found on the DoDAAD PRC webpage.

C2.3.5.3. Submit DoDAAD CSP and Monitor appointment changes to the DoDAAD System Administrator in a timely manner to allow DAAS to promptly add or remove account access to DoDAAD Update Application. Appointments will include all individuals who require access (to include existing appointments) as well as individuals who will be revoked. This will ensure that the latest appointment includes all currently authorized personnel for the Service/Agency. These appointments do not grant access; they authorize access. DAAS grants access based on matching the completed SAR with appointment authorizations.

C2.3.5.4. Develop and publish supplemental procedures for internal use as needed, as long as they do not conflict with the procedures contained herein. Component unique processing information is included in the DoDAAD and is published on the DoDAAD PRC webpage; however, this information remains the Component’s responsibility.

C2.3.5.5. Implement approved DLMS changes.

C2.3.6. DoDAAD Central Service Points. DoDAAD CSPs, designated in writing by their respective Component or Agency, are responsible for the following:

C2.3.6.1. Serve as DoDAAD PRC members or interested parties for their respective Component or Agency.

C2.3.6.2. Assign and maintain DoDAACs and RICs that are authorized in their appointment memoranda for activities of their Service/Agency only.

C2.3.6.3. Advise DAAS of any new COMMRI requirements for DoDAACs or RICs.

C2.3.6.4. Ensure the timeliness, accuracy, and authority for use (authority code) of DoDAAC and RIC information.

C2.3.6.5. Give priority to deploying and redeploying units to ensure that they have current DoDAAC/RIC information prior to their deployment or redeployment.
C2.3.6.6. Monitor and delete contractor DoDAACs upon expiration of the applicable contract.

C2.3.6.7. Promote and support DoDAAD within the respective Component/Agency and serve as the Component’s DoDAAD subject matter expert.

C2.3.6.8. At their discretion, delegate/sub-divide their responsibility for file maintenance of the DoDAACs and RICs for which they are responsible to DoDAAD Monitors, as necessary. Such delegation will be in writing to the DoDAAD System Administrator (see C2.3.5.1. and C2.3.7).

C2.3.7. DoDAAD Monitors. When situations arise whereby services/agencies desire that DoDAAD management be delegated below the CSP level, DoDAAD Monitors can be delegated by the CSP to allow for lower-level management within the service/agency. DoDAAD Monitors are responsible for maintaining DoDAACs/RICs delegated to them by their CSP. DoDAAD Monitors will be appointed in writing by the CSP to the DoDAAD System Administrator and DAAS, identifying the individuals to whom sub-delegations are being made and the DoDAACs/RICs that each is responsible for to allow DAAS to update/remove access to the DoDAAD Update Application as appropriate. See also Special Program DoDAACs below. Monitor appointments will be included in the CSP appointment letter. The CSP and Monitor appointment template can be found at the DoDAAD PRC webpage.

C2.4. DoDAAC AND RIC STRUCTURE. The current list of data elements, descriptions, and business rules that comprise the DoDAAD is found on the DoDAAD PRC webpage. Some of the more common elements of DoDAAC structure are provided below.

C2.4.1. Service and Agency Codes. DoDAACs and RICs are assigned to activities beyond DoD. DoDAAC and RIC assignment is based on MILSTRIP Service and Agency codes identified in DLM 4000.25, Volume 2, Appendix 7.2, Service and Agency Codes; Further stratification of Service and Agency codes for use in creating DoDAACs and RICs are found in the DoDAAD Series Table published on the DoDAAD PRC webpage.

The following are the differing types of DoDAACs that exist:

C2.4.1.1. Department of Defense DoDAACs. DoD Activities are designated by an alpha character in the first position, excluding B, D, G, I, K, O, P, T, X, and Y.

C2.4.1.2. DoD Contractor DoDAACs. DoD contractors (CTR) will only be assigned DoDAACs if they have a contract with DoD that authorizes access to DoD supply system materiel or to provide services such as maintenance/repair that require a shipping address. Contractor DoDAACs may be requested by anyone related to the contract/program through the Contractor DoDAAC request module in the Procurement Integrated Enterprise Environment (PIEE). The requestor will indicate whether the DoDAAC should have requisitioning authority or just be a shipping location. Requisitioning DoDAAC requests will be validated against the contract to confirm the
contract allows such authority. In addition to appropriate address information, requestors will ensure the following contract information data elements are entered for every contractor DoDAAC. All are mandatory fields except for Order Number and Contract Period of Performance End date, which are situationally dependent (for all non-contractor DoDAACs, these fields are disabled):

C2.4.1.2.1. **Contract Number.** The Contract Number is the Procurement Instrument Identifier (PIID) that uniquely represents a contract action or order and its related procurement instrument. It is a 13 character number for DoD contracts, and a 17 character number for Federal Civilian Agency contracts. A contract is a mutually binding legal relationship obligating the seller to furnish the supplies or services (including construction) and the buyer to pay for them. It includes all types of commitments that obligate the Government to an expenditure of appropriated funds and that, except as otherwise authorized, are in writing (see FAR Part 2 and Part 4.16). This field is validated against Electronic Document Application (EDA) as a legitimate contract number in PIEE prior to sending to DoDAAD. Like all Contract Information fields, it is not validated in DoDAAD. The DoDAAC of the PIID should cross reference to a DoDAAC that has procurement authority (i.e., the Procurement Authority indicator is checked “Yes” in the DoDAAD). Enter the procurement instrument identifier (PIID). The DoDAAC of the PIID should cross reference to a DoDAAC that has procurement authority (i.e., the Procurement Authority indicator is “Yes” in the DoDAAD).

C2.4.1.2.2. **Commercial and Government Entity (CAGE) Code.** The CAGE Code shall be that of the vendor for whom the DoDAAC is being created. Normally, the vendor with whom the contract was awarded (prime) is usually the CAGE Code entered for the DoDAAC; however, when the DoDAAC being created is not for the prime vendor, but for a sub-contractor on the contract, then the CAGE Code of the subcontractor shall be used for the DoDAAC.

C2.4.1.2.3. **Commercial and Government Entity (CAGE) Name.** The name of the owner of the CAGE Code cited shall also be displayed as a contract information data element.

C2.4.1.2.4. **Order Number.** An Order is a contracting action that is a request for goods or services against an established contract that allows multiple orders, such as an Indefinite Delivery/Indefinite Quantity contract. The order number uniquely identifies the order and its related document. Current policy requires the order number to match the Procurement Instrument Identifier (PIID) format established in FAR 4.16.; however, legacy order numbers may be in varying formats. It is an optional field with a maximum field length of 50 characters.

C2.4.1.2.5. **Issuing Office DoDAAC.** The Issuing Office DoDAAC is the contracting office that issued the contract under which this contractor DoDAAC is being assigned (see FAR Part 2 for the definition of contracting office). It will be represented by a DoDAAC, which will typically be the same as the first 6 characters of the contract number represented in the Contract Number field (per FAR 4.1603). An Issuing Office DoDAAC must have the Procurement Authority Flag set to “Yes.”
C2.4.1.2.6. Contract Period of Performance End Date. FAR Part 11.4 establishes the requirement to provide a schedule for the delivery or performance of a contract. This field captures the calendar date upon which the delivery or performance period ends in the contract under which this contractor DoDAAC is being assigned. Upon this date, the Authority Code of the CTR DoDAAC is automatically changed to Authority Code 05.

C2.4.1.2.7. Contract Closeout Date. FAR 4.804 establishes the requirement to close out a contract file upon completion of all contract activity. Contracting officers are responsible for closing out related DoDAACs when the contract is closed out (see FAR 51.102). Therefore, when the contract under which this contractor DoDAAC is being assigned has been closed, this DoDAAC will also be closed. If this is a requisitioning DoDAAC, enter the contract closeout date of the contract under which the contractor is performing requisitioning, or if this is a Ship-To DoDAAC, enter the LAST contract closeout date of any contract under which this contractor is performing with this DoDAAC. If closeout date is not known, leave blank. This date sets the Delete Date for the CTR DoDAAC.

C2.4.1.3. Federal Agency DoDAACs. Federal Agency DoDAACs are identified by a G in the first position or by numeric characters in the first and second positions. These may be referred to as Civil Agency Activity Address Codes (AAC). Federal Agency CTR AACs are subject to different rules than those above for DoD CTR DoDAACs.

C2.4.1.4. Special Program DoDAACs. Special Program DoDAACs are identified by a numeric character in the first position followed by an alpha character in the second position. These identify entities that are neither DoD nor other Federal entities and that are associated with a special program. Among other purposes, special programs include programs authorized by Congress for state and local entities to purchase materiel from Federal sources. DoD and Federal Agency sponsors of these programs are designated as DoDAAC monitors. Contact the DoDAAD System Administrator for guidance on establishing a DoDAAC series for a special program.

C2.4.2. Addresses. There may be up to four distinct “Type of Address Code” (TAC) addresses for each DoDAAC. CSPs/Monitors will enter the proper address based on the applicable TAC on a letter, label, or box marking in accordance with the applicable mode of transportation. Ensure that only one type of address is used for each of the four address types. Combining part of an Air/Army Post Office (APO) address with a commercial postal standard will create an invalid address. TAC definitions are:

C2.4.2.1. TAC 1 - Owner. TAC 1 identifies the mailing address and other information of the owner and is mandatory.

C2.4.2.2. TAC 2 - Ship-To or Freight. TAC 2 identifies the ship-to or freight address and other information for the activity. If a ship-to address is required (Authority
Codes 00, 01, 04, 05 or 06), the TAC 2 must be provided.\(^1\) Addresses listed for freight purposes must contain sufficient information to use the in-the-clear portion of package markings and to insert addresses in the consignee block of transportation documents. The geographic location in the destination block of transportation documents may vary depending upon the mode of transportation. There are two geographic location indicators in addition to the address: Aerial Port of Debarkation (APOD); and Water Port of Debarkation (WPOD). The APOD and WPOD are adjuncts to the address information, and a variance in the address may be required depending on the values in these fields. Supplemental information concerning railheads, airports, etc., serving a given installation in the Continental United States (CONUS) is contained in the Defense Transportation Regulation (DTR). See Table C2.T1.

C2.4.2.3. **TAC 3 - Bill-To.** TAC 3 identifies the billing address of the activity responsible for bill payments and other information for the activity. If a bill-to address is required (Authority Codes 00, 02, 03, and 04), the TAC 3 must be provided.\(^2\) See Table C2.T1.

**Table C2.T1. Authority Code and TAC Rules**

C2.4.3. **Effective and Delete Dates**

C2.4.3.1. **Effective Date.** Effective Date is the date that a change becomes effective. It may be used to schedule future changes. When a DoDAAC is entered or updated and an Effective Date is supplied for a given TAC, the data entered for that

---

1 Refer to ADC 1117. This requirement is not retroactive to DoDAACs established prior to July 2, 2014.
2 Ibid.
3 YES indicates the TAC is required. NO indicates the TAC is optional.
TAC will not be effective or published until the current date matches the Effective Date entered. Multiple changes can be entered using this technique, as long as the Effective Date entered does not duplicate an existing Effective Date.

C2.4.3.2. **Pending Effective Date.** When an Effective Date is pending for a given TAC, Defense Automatic Addressing System Inquiry (DAASINQ)/Enhanced Defense Automatic Addressing System (eDAASINQ) will indicate the pending date by flagging the TAC with a graphic above the Effective Date field indicating “Future DoDAAD information available”. To view the pending changes, the user may click the “Future data available” graphic.

C2.4.3.3. **Deletion Date.** The Deletion Date is used to delete a DoDAAC. Any DoDAAC with a Deletion Date that has passed is considered a deleted DoDAAC. A deleted DoDAAC will remain inactive on the DoDAAD master file for six years and three months before the record is permanently purged from the master file. During this period, a deleted DoDAAC prevents requisition transactions from being processed through DAAS; however, outstanding interfund bills (with the bill-to authorized in accordance with the DoDAAC authority code) that are associated with previously processed requisitions will not reject due to an invalid DoDAAC during this period. After the six years and three months period, once the deleted DoDAAC is physically removed from the DoDAAD, all subsequent requisitions or bills would reject due to an invalid DoDAAC. This is only true, however, for transactions processing through DAAS. For any transactions that process either through the Global Exchange (GEX) or some other means other than DAAS, a deleted DoDAAC will prevent those transactions from processing even during that period of being deemed inactive. The only indication that a DoDAAC has been deleted during that time is the existence of the Deletion Date on the master record for the given DoDAAC. No new requisitions may be initiated for a deleted/inactive DoDAAC. CSPs or monitors may restore a deleted DoDAAC, but they may not reassign it to another address during the six years and three months retention period.

C2.4.3.4. **Pending Deletion Date.** When a Deletion Date is pending for a DoDAAC, DAASINQ/eDAASINQ will indicate the pending date by flagging the DoDAAC with a graphic above the Deletion Date field indicating “Future data available.” To view the pending changes, the user may click the “Future data available” graphic.

C2.4.4. **Additional Codes.** In addition to addressing information and effective and delete dates, the following codes are DoDAAD data elements critical to enabling business processes across the DoD:

C2.4.4.1. **Organization Type Code.** The Organization Type Code is a one-character code used to identify the type of organization for which the DoDAAC associates, categorically. Those categories include:

- D = DoD and USCG
- F = Federal Agencies – Non-DoD and USCG
• S = State/Local
• N = NGO
• X = Foreign

C2.4.4.2. **Authority Codes.** CSPs (or DoDAAC monitors as applicable) must assign an authority code for each DoDAAC. The authority code restricts the use of the DoDAAC. DoDAAC authority codes are applicable to all Components/Agencies, and there are many supply and finance business process edits based on the authority code. Authority Code 00 allows unrestricted use of the DoDAAC. The remaining codes limit the use of the DoDAAC for unique and specific purposes, such as bill-to only or ship-to only. Table C2.T2 identifies the current DoDAAC Authority Codes.

<td></td>
</tr>
<tr>
<td></td>
<td>Restriction: Cannot requisition/purchase any good/services.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Business Rules: Similar to DLA Disposition Services, but can request free of cost items (e.g., maps from National Geospatial-Intelligence Agency (NGA)). Can be used as a ship-to designation.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>DAAS DoDAAC Authority Code Edit: DoDAAC may only be used with signal code D or M. Under DLMS, DoDAAC may only be used with PO105 code NC.</td>
<td></td>
</tr>
<tr>
<td>07</td>
<td>Administrative</td>
<td>Administrative only. This code is used for information/identification purposes only (e.g., Defense Courier Service (DCS), or contingency/emergency use).</td>
</tr>
<tr>
<td></td>
<td>Required: TAC 1</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Restriction: Cannot requisition, be used as a ship-to-designation, or be used as a billing designation (TAC 2 and TAC 3 are not allowed).</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Business Rules: Information/identification use only.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>DAAS DoDAAC Authority Code Edit: DoDAAC may not be used in MILSTRIP legacy requisition in record positions 30-35 or in record positions 45-50 as a “ship to” or “bill to”. Under DLMS, DoDAAC cannot be used with N101 codes OB, BT, BS, ST, or Z7 or in N901 code TN.</td>
<td></td>
</tr>
</tbody>
</table>
C2.4.4.3. **Major Command Codes (MAJCOM).** MAJCOMs allow sub-delegation of DoDAACs below the service/agency level. These codes are service/agency-created and are denoted in the DoDAAD by the header “MAJ_COMMAND.” The current MAJCOMs are maintained by DAAS, and are published on the DoDAAD PRC webpage.

C2.4.4.4. **Contractor Flag.** The Contractor indicator or “flag” is a VARCHAR with a value of either “Y” for yes or null for no, that designates whether or not the DoDAAC is for a contractor. For DoD contractor DoDAACs, this flag is automatically set based on the DoDAAC Series (i.e., approved contractor DoDAAC Series will automatically set the flag to “Y”). For the Federal Agencies, this flag, when marked with a “Y” will designate it as a contractor and will require the mandatory Contract Information fields to be completed. The Contractor Flag can only be set when the Org Type Code is “F” or “D.”

C2.4.4.5. **Common Governmentwide Accounting Classification (CGAC) Code.** The CGAC is a three digit code used by the Federal Government to identify an Agency (Department) of the Federal Government at the highest tier (i.e., Department of Agriculture is 012). CSPs will set this code for only Government DoDAACs and will set it based on which tier the DoDAAC belongs. For instance, if DLA creates a DoDAAC for the U.S. Army, the CGAC of the DLA-created DoDAAC would cite U.S. Army (020) and not DLA, because the DoDAAC is for a U.S. Army activity. The CGAC does not apply to contractors, state/local activities, foreign entities, and non-government organizations (NGOs).

C2.4.4.6. **Sub Tier Code.** The Sub Tier Code is a four-digit code that identifies an organizational level of an Agency below the highest tier. The first two characters are the two-digit Treasury Agency Code (the same as the first two positions of a Federal Agency DoDAAC), and the third and fourth characters are the Sub Tier of the Agency, more commonly referred to as a bureau. The Agency Code, therefore, identifies the ‘sub tier’ to its respective Agency, in one, four-digit code. This code has no relationship to either the Major Command Code (MAJ_COMAND) or the GSA Bureau Code (GSA_BUREAU_CD), and is used in the Federal Procurement Data System to identify entities below the Agency level. CSPs will set this code for any record that identifies an activity performing actions that include contract writing, funding, and/or awarding of grants. It does not apply to non-Government activities. As such, it is a mandatory field when the Procurement Authority flag is set, and only when the Org Type Code is “F” or “D.” For DoD Components, the Sub Tier Code is based on the Treasury Agency code and “00” (i.e., Navy = 1700).

C2.4.4.7. **DoDAAC Purpose Codes.** The DoDAAD has several purpose code flags that identify how a DoDAAC is used by a particular business domain (e.g., procurement, grants). The following are the Purpose Code flags that exist in the DoDAAD:

C2.4.4.7.1. **Procurement Authority.** Procurement Authority is a legal authority, delegated down from the Department level to entities of the Federal
Government who are authorized to award contracts which obligate the Government to binding agreements with commercial and other government entities. For the DoD, this authority is delegated by the Secretary of Defense through the Undersecretary of Defense for Acquisition, Technology and Logistics (AT&L), Defense Procurement and Acquisition Policy (DPAP) and by the Senior Accountable Officials (SAO) of the Federal Agencies. The Procurement Authority flag will be set to “Y” to identify activities that have been delegated this authority and that are legally authorized to award contracts. The Procurement Authority Flag can be marked in association with any other existing Purpose Code. When this flag is set, it will make the Sub Tier Code and CGAC mandatory field entries. This flag can only be set if the Org Type code is “F” or “D.”

C2.4.4.7.2. Grant Authority. Grant Authority identifies an activity/office that has been delegated, by the head of a DoD or Federal Civilian Agency, the legal authority to make and manage awards under the auspices of a designated grants officer. In DoD, the office’s DoDAAC must be used to construct the grants award identifier. Civilian agencies may use the AAC in their award identifiers. The Grant Authority flag will be set to “Y” to identify an activity/office that has the authority to award grants, cooperative agreements, or federal financial assistance vehicles. The Grant Authority Flag can be marked in association with any other existing Purpose Code. When this flag is set, it will make the Sub Tier Code and CGAC mandatory field entries. This flag can only be set if the Org Type code is “F” or “D.”

C2.4.4.7.3. Funding Office. The Funding Office flag represents that the office identified by the DoDAAC/AAC has the ability to initiate requirements (e.g., the office has a budget and can initiate requirements packages that will result in contracts, grants, and other types of awards). This flag is not to be used to represent financial entitlement or disbursing functions. The Funding Office Flag can be marked in association with any other existing Purpose Code (i.e., it is not mutually exclusive with Procurement or Grants). When this flag is set, it will make the Sub Tier Code and CGAC mandatory field entries. This flag can only be set if the Org Type code is “F” or “D.”

C2.4.4.7.4. Contract Administration Office (CAO). The CAO flag indicates that the office identified by the DoDAAC has the authority and capability to perform contract post-award (FAR 42.3) functions. The CSP should only make this change based on input from PIEE. The CAO flag can be marked in association with any other existing Purpose Code (i.e., it is not mutually exclusive with Procurement or Grants). When this flag is set, it will make the Sub Tier Code and CGAC mandatory field entries. This flag can only be set if the Org Type code is “F” or “D.”

C2.4.4.8. Standard Point Location Code (SPLC). The Military Surface Deployment and Distribution Command (SDDC) is required to maintain accurate and current Standard Point Location Code (SPLC) values in its DoDAAC-to-SPLC cross-reference File. The National Motor Freight Traffic Association (NMFTA) creates, maintains, and publishes via a subscription all valid SPLC assignments. DAAS maintains and administers the SPLC maintenance in the Department of Defense Activity Address Directory (DoDAAD) in support of the Defense Transportation Payment.
Program. DAAS ensures that accurate, timely data and coding is in place to support all critical elements in support of the Defense Transportation Payment Program.

C2.4.4.9. Accounting Disbursing Station Number/Fiscal Station Number (ADSN/FSN). This code identifies the Service payment office. This field is not validated within the DoDAAD; rather, it is Service defined and Service dependent. The Army and Air Force set a five digit numeric code, while the Navy and Marine Corps mostly use a DoDAAC. DLA and Other DoD Activities (e.g., WHS, NSA, etc.) use a mix of numeric codes and DoDAACs.

C2.4.4.10. Consolidation and Containerization Point (CCP). The code applies when supplies are to be consolidated for onward movement by SEAVAN or 463L pallets. The codes are defined in the USTRANSCOM Reference Data Management (TRDM) and then select DTR Data and Consolidation Containerization Point.

C2.4.4.11. Break Bulk Point (BBP) or RIC DODAAC. The BBP DoDAAC denotes the location to which multi-consignee shipments (e.g., SEAVANS) are shipped and broken into smaller shipment for onward movement to the ultimate consignee. NOTE: the same file layout is used by both the DoDAAD and RIC. If the record is a RIC, the BBP is referred to as the “RIC DoDAAC” and holds the DoDAAC associated to the RIC.

C2.4.4.12. Aerial Port of Debarkation (APOD). The APOD is defined as the final destination aerial port for OCONUS shipments. The APOD codes are in the TRDM, and then select DTR Data and Aerial Ports. DAAS downloads a table of APOD information from USTRANSCOM to load the drop-down values in the DoDAAD update application. A new copy of the APOD is downloaded every time the table is updated by USTRANSCOM. APOD is required if outside the CONUS.

C2.4.4.13. Water Port of Debarkation (WPOD). The WPOD is defined as the final destination Surface Port for OCONUS shipments. The WPOD (also known as SPOD) codes are in the TRDM and then select DTR Data and Water Port. DAAS downloads a table of WPOD information from USTRANSCOM to load the drop-down values in the DoDAAD update application. A new copy of the WPOD is downloaded every time the table is updated by USTRANSCOM. WPOD is required if outside the CONUS.

C2.4.5. DoDAAC Assignment Logic. In some instances, components have assigned DoDAACs in a logical sequence within their assigned series. Service/Agency DoDAAC Assignment Logic is published on the DoDAAD PRC webpage.

C2.4.6. Unique Processing Rules. Some Services and Agencies have additional unique processing rules that are applicable solely to their respective Service/Agency. Current Service/Agency specific unique processing rules are published on the DoDAAD PRC webpage.
C2.5. ROUTING IDENTIFIER CODES

C2.5.1. Purpose. RICs serve multiple purposes: they may be supply source codes, intersystem routing codes, consignor (shipper) codes, etc. RICs are three-character codes associated with a DoDAAC and a unique seven character Communication Routing Identifier (COMMRI) for routing purposes. RICs are discussed in DLM 4000.25, Volume 2, Appendix 7.3 - Routing Identifier Codes; and paragraph C2.5 of this Chapter.

C2.5.2. The DoDAAD is the official repository for DoDAACs and RICs, and DAAS is the agent responsible for maintaining the DoDAAD, as well as for enforcing the data validation editing, routing, and electronic transmission of logistics transactions to the DoD Components, Federal Agencies, and contractors.

C2.5.3. CSPs/Monitors establishing or changing DoDAACs or RICs need to verify they set the correct COMMRIIs for their DoDAACs/RICs in order to ensure legacy 80 rp/DLMS logistics transactions (e.g., requisitions and supply/shipment status) are properly routed to their DoDAACs and RICs. Customers that already have DAAS accounts (i.e., DIELOG, WEBREQ, WEBVLIPS, DAMES, DDN, MQ, etc.) must provide the CSPs the preferred account COMMRI to direct their logistics transactions status.

C2.5.4. Currently, there is an association in the DoDAAD between DoDAACs and RICs where a single DoDAAC can be associated to multiple RICs.

C2.5.5. Routing Identifier Codes (RIC) (located in rp 4-6, 67-69, and 74-76 of transactions) are assigned by Service/Agencies (S/A) for processing inter-S/A, and intra-S/A logistics transactions. The codes serve multiple purposes in that they are supply source codes, intersystem routing codes, intrasystem routing codes and consignor (shipper) codes. DAAS maintains an electronic database of these codes. Users with accounts can access the database from the DAAS portal. Those without accounts can access the database, with limited functionality at DAASINQ.

C2.5.6. To qualify for assignment of a RIC, the facility/activity must be an integral and predetermined element of an established logistics system and must perform a general logistics control, distribution, and/or storage mission (to include bases, posts, camps, and stations, when applicable).

C2.5.7. The use of a RIC on any one document does not infer, imply, or intend that follow-on documentation from that location must contain the same RIC or any element thereof. It is a fundamental premise of Military Standard Requisitioning and Issue Procedures (MILSTRIP) that any RIC serves as only one of the following:

C2.5.7.1. An address to indicate the intended recipient of the document for logistics actions.

C2.5.7.2. Identification of the actual consignor (shipper) on supply type release/receipt transactions originated within the distribution system(s).
C2.5.8. The first position of all authorized RICs will contain one of the characters depicting Service assignment as listed in DLM 4000.25, Volume 2, AP7.2., Service and Agency Codes.

C2.5.9. The second and third positions may be in any combination of alphanumerics, except as noted in DLM 4000.25, Volume 2, Appendix 7.2. These positions may identify either a facility or activity of the S/A depicted by the first position.

C2.5.10. Each S/A is responsible for the assignment of RICs to its facilities and activities. An S/A that has activities located at another S/A facility will assign its own RIC to the activity. An S/A that has assets located at another S/A facility will use the RIC assigned by the S/A owning/operating the facility. (An appropriate RIC may be assigned to identify these assets when requested by the S/A owning the assets.) Washington Headquarters Service (WHS) will make RIC H_ series assignments for “Other DoD Activities.”

C2.5.11. Each S/A will designate a Central Service Point (CSP) with the responsibility to control, monitor, and submit/validate all RIC additions, revisions, and deletions relative to its S/A. In most cases the DoDAAC and RIC CSPs (or monitors) are the same. The list of CSPs/monitors established for assignment of RICs requires CAC/PIV authentication and can be found on the DLMS Website.

C2.5.12. RICs are maintained within the DoDAAD by DAAS. The DoDAAD serves as the focal point for receipt of all RIC additions, changes, and/or deletions, as submitted by CSPs/monitors. DLA Transactions Services will monitor RIC code assignment for compliance with the above assignment rules. Interested parties may interrogate the DoDAAD for RICs through the DAAS Website.

C2.6. DoDAAD UPDATES. There are three methods for CSPs or their designated DoDAAD Monitors to update the DoDAAD. They are contained in the DoDAAD System Standard Operating Procedures (SOP). The DoDAAD System SOP provides detailed DoDAAD update information and can be found on the DoDAAD PRC Page of the EBSO Website.

C2.6.1. DoDAAD Update Application

C2.6.1.1. DAAS maintains a DoDAAD Update Application for updating DoDAACs/RICs that is available to all designated DoDAAD CSPs and delegated Monitors for real-time DoDAAD updates. This application incorporates all approved validations and edits. It facilitates real-time validation, elimination of erroneous data, elimination of major reconciliations, and automated file synchronization processing. It also provides easy additions and modifications of DoD Component unique data elements. Access to the DoDAAD Update Application is controlled in accordance with DoD Public Key Infrastructure (PKI)/Common Access Card (CAC) requirements and requires an appointment memorandum submitted to the DoDAAD System Administrator, and a SAR submitted to DAAS.
C2.6.1.2. DAAS deactivates accounts when a DoDAAC CSP/Monitor is no longer authorized or when the account has not experienced activity for a period of time determined by DAAS. CSPs/Monitors are restricted through access controls to DoDAACs and RICs authorized in their appointment letter. CSPs are unable to access other Component/Agency DoDAACs or RICs. For example, an Army CSP is not able to access Navy DoDAACs or RICs.

C2.6.2. **Army and Air Force Update Applications.** The Army and Air Force CSPs may also use their respective DoDAAD maintenance applications. The Army and Air Force are responsible for ensuring that their respective applications provide the same capabilities and data validation edits as the DoDAAD Update Application. Completed maintenance actions will update the single authoritative source database at DAAS in near real-time.

C2.7. **DoDAAD OUTPUT.** The following are the authorized means by which to receive DoDAAD data output:

C2.7.1. **Web Services.** Web Services provides Component application systems near, real-time access to the DoDAAD database and is the preferred method for applications to access DoDAAD data. Contact the DAAS Help Desk concerning DoD Data Services (DDATA) Web Services at daashelp@dla.mil.

C2.7.2. **Database Replication.** Database replication provides near, real-time access to a copy of the authoritative source. DAAS uses a replication process to synchronize local copies of the DoDAAD database with the authoritative database on a scheduled basis. Scheduled updates are determined by the system requesting the replication and can be on any timeframe up to every 15 minutes. No new data replication processes will be authorized; however, current replication accounts will be migrated to Web Services based upon DLA directives and customer capabilities. Please contact the DAAS Help Desk concerning DDATA Database Replication/Web Services.

C2.7.3. **Secure File Transfer Protocol.** DAAS issues secure file transfer protocol (SFTP) accounts for the purpose of retrieving customer required DoDAAD-related data created by applications that have direct access to various DAAS data repositories. These individual user accounts are monitored to access daily, weekly, and monthly data. There is a data refresh lag time due to the batch processing for file creation and staging for customer pickup. The batch file formats are one form of SFTP output (see C2.6.3). This is the least preferred data access method for obtaining DoDAAC data. The procedures to access and use SFTP accounts are available on the DAAS Website.

C2.7.4. **DAASINQ.** Users can query and view DoDAACs and RICs via the web-based DAASINQ application at any time. DAASINQ is open to all users. It requires the user to know and enter the DoDAAC or RIC desired, and it returns information for only that single DoDAAC or RIC. The procedures for accessing and using DAASINQ are available on the DAAS Website.
C2.7.5. **eDAASINQ.** Users can view, query, and download DoDAAD query results for DoDAACs and RICs via the web-based eDAASINQ application at any time. This is a robust query enabling wild card searches of data with downloading capability. The user must have a CAC or PKI certificate and a SAR submitted to DAAS. Users must consider operational security in protecting and distributing query results. The procedures to access and use eDAASINQ are available on the DAAS Website.

C2.8. **DoDAAD DATA SECURITY.** The DoDAAD will be marked and handled by all users as Controlled Unclassified Information For Official Use Only (FOUO).

C2.8.1. The aggregated content of the DoDAAD (i.e., multiple DoDAACs and/or RICs and their respective data elements) is exempted from Public Release under the Freedom of Information Act (5 U.S.C. § 552(b)(3)) because it meets the requirements for exemption under 10 U.S.C. § 130e. Specifically, the DoDAAD database, as a single authoritative source for the Department of Defense (DoD) business enterprise architecture, qualifies as DoD critical infrastructure security information (CISI). CISI is categorized as FOUO, and as defined by 10 U.S.C. § 130e, it includes:

“…sensitive but unclassified information that, if disclosed, would reveal vulnerabilities in Department of Defense critical infrastructure that, if exploited, would likely result in the significant disruption, destruction, or damage of or to Department of Defense operations, property, or facilities, including information regarding the securing and safeguarding of explosives, hazardous chemicals, or pipelines, related to critical infrastructure or protected systems owned or operated by or on behalf of the Department of Defense, including vulnerability assessments prepared by or on behalf of the Department of Defense, explosives safety information (including storage and handling), and other site-specific information on or relating to installation security.”

C2.8.2. The DoD Director of Administration and Management (DA&M) has issued a Determination that the DoDAAD meets this definition of CISI, because it is comprised of both DoDAACs and RICs in an interactive relational database serving as a single authoritative source of identification, routing, and address information for authorized users, including Military Components and Agencies, participating Federal Agencies, authorized contractors, and authorized special program activities such as state and local governments.

C2.8.3. DoDAAD supports business application systems data and interoperability requirements, including (but not limited to) supply chain, materiel procurement, and acquisition systems. Each activity that requisitions, contracts for, receives, has custody of, issues, or ships DoD assets, or funds/pays bills for materials and/or services is identified by a DoDAAC (six-position alphanumeric code).

C2.8.4. DoDAACs are used in a myriad of business systems spanning the entirety of the DoD’s business enterprise architecture, including acquisition, procurement, contracting, requisitioning, shipping, billing, pay, maintenance, installations.
management, human resources, energy resources, and the accountability and requisition of ordnance, ammunition, and perishables in logistics systems across the DoD. DoDAACs are also used for business operations involving the accountability of property and facilities, as well as for hazardous material management. Access to the DoDAAD allows access to these DoDAACs. When coupled with access to other unclassified logistic systems, users are provided with multiple data points which, when combined, disclose location of materials and operational status and plans. The contents of the DoDAAD are sensitive for a number of reasons:

- DoDAACs are created to support sensitive operations and to facilitate the business process associated with them.

- DoDAACs for the following locations include names of employees and Service members as well as duty station addresses for:
  
a. Department of Defense installations and ports that are outside the contiguous United States (OCONUS).
  b. Deployed units and activities performing real world contingency operations or exercises from both contiguous United States (CONUS) and OCONUS bases.
  c. Ships afloat.
  d. Ships still in CONUS ports but scheduled to go afloat.
  e. Ships still in OCONUS ports but scheduled to go afloat.
  f. Embassies.
  g. War Reserve Equipment sets pre-positioned OCONUS.

C2.8.5. In addition, a DoDAAC could be used in an unauthorized way whereby the internal controls of the Agency can be circumvented and appropriations obligated without the proper authority being involved in the process. A DoDAAC is very much like a credit card number which, in the wrong hands, can be used to spend money without the rightful “owner” of the code (i.e., the entity with authority to use the code) being aware that the Agency’s appropriations are being spent. Individuals have been prosecuted who have used a DoDAAC to purchase items (i.e., televisions) for personal gain. Therefore, effective management, control, and use of DoDAACs by all DoD Components is critical to ensure DoD fiscal responsibility.

C2.8.6. If the DoDAAD were released, it would reveal vulnerabilities in Department of Defense critical infrastructure that, if exploited, would likely result in the significant disruption, destruction, or damage of or to DoD operations, property, or facilities related to critical infrastructure or protected systems owned or operated by or on behalf of the DoD.

C2.8.7. If an adversary of the United States Government had the DoDAAD, they could determine the issuance of orders; the movement of specially qualified personnel to units and the installation of special capabilities, as well as the conduct of activities in a way that will reveal intensification of preparations before initiating operations. From
this information, the adversary could identify very sensitive DoD activities including clandestine locations of DoD activities, force structure, and even troop movement.
C3. CHAPTER 3.

MILITARY ASSISTANCE PROGRAM ADDRESS DIRECTORY

C3.1. GENERAL

C3.1.1. Purpose. This chapter establishes information requirements for the Military Assistance Program Address Directory (MAPAD). This chapter prescribes the standards to establish, maintain, publish, and disseminate address data to requiring Military Service organizations, Federal agencies, foreign country representatives, freight forwarders, and commercial firms under DoD contracts who are engaged in supply and/or shipment of materiel applicable to the Security Assistance Program (SAP), including Foreign Military Sales (FMS) and Grant Aid programs.

C3.1.2. Assignment. The Military Assistance Program Address Code (MAPAC) is a six position code that uniquely identifies a program or activity. MAPACs are stored in the MAPAD database. Changes and additions to MAPAD are made by the Service International Logistics Control Office (ILCO) Central Service Points (CSPs).

C3.1.3. General Architecture. The MAPAD architecture provides the capability to control, maintain, and provide access to the most accurate and current data related to MAPACs in near real-time. This is accomplished by using a database of codes and address data maintained and available twenty-four hours per day, seven days per week at DAAS.

C3.1.3.1. Functional Architecture. Defense Logistics Management Standards is the MAPAD System Administrator, and is responsible for ensuring that the MAPAD directory meets the requirements of authorized MAPAD users. DAAS is the MAPAD Central Control Point, and is responsible for meeting the requirements of the MAPAD System Administrator and for maintaining the hardware, software, and help desk resources to ensure MAPAD users' operational requirements are met. The ILCO CSPs are responsible for ensuring the accuracy and currency of the MAPAD data for their MAPACs. The ILCO CSPs can, if they choose, establish MAPAD Monitors, delegating portions of their responsibilities (defined in Section C3.3 ACCESS) for review and approval of MAPAD maintenance actions; however, the ILCO CSPs are ultimately responsible for the accuracy and currency of the data pertaining to their MAPACs.
C3.1.3.2. **Technical Architecture**

**C3.1.3.2.1. MAPAD Data Maintenance.** The ILCO CSPs or their designated ILCO CSP Monitors update the MAPAD via the MAPAD Web update application. This applies only to the directory entries for which the ILCO CSP is responsible and authorized to update. All ILCO CSPs shall use the DAAS MAPAD Web maintenance application to perform maintenance actions. The MAPAD Web maintenance application ensures that data validation is consistent, and that completed maintenance actions update a single authoritative source database at DAAS in near real-time. Access controls are built into the technical architecture to control who and what can be updated based on user identification (ID) and level of access. Access Levels are defined in Section C3.3 ACCESS.

**C3.1.3.2.2. Database Structure.** The MAPAD database structure easily supports the addition of new data types as requirements dictate.

**C3.1.3.2.3. MAPAD Application System Access.** The MAPAD authoritative source database is available 24 hours per day, 7 days per week. Application systems requiring access to MAPAD data to support their processing have three options.

**C3.1.3.2.1.1. Database Replication.** Database replication can be provided for the application, so that the application has near real-time access to a copy of the authoritative source. Through the use of a replication process maintained by DAAS, the replicated copy is constantly synchronized with the authoritative source database.

**C3.1.3.2.1.2. Direct Connect Access.** Direct connect access to the authoritative source database can be established. Both of the above access methods ensure that the application is always using the exact same data as that contained on the MAPAD authoritative source database. Components who desire near real-time access can establish a replication link to the MAPAD by contacting DAAS.

**C3.1.3.2.1.3. Batch Processing.** The least preferred, option is batch processing; however, DAAS shall continue to support batch transaction processing for the foreseeable future. The goal, however, is to encourage all users of the MAPAD to switch to real-time replication processing (if possible).

**C3.1.4. Applicability and Scope.** This is applicable to the Army, Navy, Air Force, Marine Corps, General Services Administration (GSA), Defense Logistics Agency (DLA), Missile Defense Agency and other activities that have agreed to participate in the system (hereinafter referred to as Components). Also, this directory applies to DAAS, to commercial organizations that enter into materiel and service contracts with DoD, and activities of other Federal Agencies that maintain logistics support agreements with the Department of Defense.

C3.3. **MAPAD ACCESS**

C3.3.1. **User Access.** There are multiple levels of access governed by the roles of the user. The MAPAD System Administrator (Defense Logistics Management Standards) shall set the policy governing access, and DAAS shall maintain the MAPAD System access controls. All update access is Public Key Infrastructure (PKI) controlled.

C3.3.2. **MAPAD System Access Requests.** DAAS provides a System Access Request (SAR) Web screen for potential users to request access. This screen requests information regarding the type of access required (drop down list), information about the requestor (fill in the blanks), need for access (drop down), and Component affiliation (drop down), and requests that they enter and verify their desired password (fill in blanks). Access also requires a signed letter of appointment as a CSP, which may be forwarded via email to DAAS and the MAPAD System Administrator. Upon approval, DAAS shall send an email back to the requestor notifying the requestor of the approval or denial. If access is granted, DAAS shall send two separate emails back to the requestor: one contains the user ID, and the other is for the password. The user ID and password are only used to register a common access card (CAC) for PKI control. Once the CAC is registered, all access shall be restricted to CAC/PKI access.

C3.3.3. **Database Profiles.** The application server provides a database profile of all users with access by access level and maintains statistics on the number of accesses and types of access (update, query, download) by user. The application server also maintains data on attempted unauthorized access.

C3.3.4. **Access Levels and Authorities.**

C3.3.4.1. **System Administration Level.** This highest level of access is provided only to the MAPAD System Administrator and DAAS. They shall have access to all data and shall be able to download any information in the data base. They shall also have access to all user profiles and usage data.

C3.3.4.2. **Component International Logistics Control Office Central Service Point Level.** This level of access is granted to the individual(s) designated in writing by each DoD Component as its ILCO CSP(s). The letter of designation shall be provided to DAAS, with a copy to the MAPAD System Administrator. The MAPAD contains a field called “Sponsored Service” indicator, which restricts who can update a particular MAPAC. If the Sponsored Service indicator is present, access is restricted to users in the same Component area as the Sponsored Service (e.g., the Army ILCO CSP shall not be able to update a MAPAC with the Sponsored Service indicator set to the Navy). ILCO CSPs set the Sponsored Service indicator. The ILCO CSP also has access to all data relating to the user profiles and usage data for the users affiliated with the DoD Component for which they are responsible.
C3.3.4.3. **DoD Component Monitors.** Component level ILCO CSPs can delegate and or subdivide file maintenance responsibilities for their respective MAPACs. A maximum of 20 delegations or Monitors per ILCO CSP are allowed. Each ILCO CSP must identify to the MAPAD System Administrator and DAAS the individuals to whom sub delegations are being made and the MAPACs for which each is responsible in the MAPAD. The user ID shall be structured such that, when an ILCO CSP or their designated Monitor logs into the system, the system recognizes the ILCO CSP or Monitor, the MAPACs, and related information for which that ILCO CSP or Monitor has responsibility. The ILCO CSP or Monitor shall have the ability to access all information in the database and can update any information for the Component for which they have been assigned responsibility by their ILCO CSP. ILCO CSPs or Monitors shall not be able to update information on other Component MAPACs, or MAPACs assigned to another ILCO CSP or Monitor within their Component.

C3.3.4.4. **General Access Level.** This level provides user access to view any general information in the database via the Defense Automatic Addressing System Center Inquiry (DAASINQ) query program for a specific MAPAC. Additional MAPAD information and file download capability is available by SAR/PKI access via DAAS enhanced DAASINQ (eDAASINQ).

C3.4. **RESPONSIBILITIES**

C3.4.1. The DoD MAPAD System Administrator is responsible for chairing the MAPAD Process Review Committee (PRC) and administering the MAPAD system under the policy guidance of the Assistant Secretary of Defense, Logistics & Materiel Readiness (ASD(L&MR)) as outlined in Volume 1, Chapter 1 of DLM 4000.25, Defense Logistics Management System (DLMS) Manual”.

C3.4.1.1. The DoD MAPAD System Administrator shall ensure that Continental U.S. (CONUS) addresses are authorized by the Defense Security Service (DSS) to receive/process materiel/documents classified SECRET/CONFIDENTIAL. The procedures are as follows:

C.3.4.1.1.1. The country representative shall submit a clearance request for any activity that has been selected to receive/process materiel/documents classified SECRET/CONFIDENTIAL for its FMS cases via electronic PDF to: MAPADHQ@DLA.MIL. U.S. Government facilities and foreign government property (e.g., embassies and missions) are exempt from actual security clearance inspection, but a request for MAPAD address input must be submitted.

C.3.4.1.1.2. The clearance request shall be in writing and shall include the full name and address of the selected activity. The letter shall be scanned as a PDF file and addressed to:

Defense Logistics Management Standards, J627
ATTN MAPAD Administrator, ROOM 1650
8725 John J Kingman Road
C.3.4.1.1.3. The DoD MAPAD System Administrator shall submit the request to the Defense Security Service via email to OCC.Facilities@dss.mil with a copy to the ILCOs.

C.3.4.1.1.4. Contact information for Defense Security Service (DSS) is: OCC.Facilities@dss.mil

Defense Security Service, ISFO
Facility Clearance Division (IOP)
27130 Telegraph Road
Quantico, VA 22134-2253
571-305-6642

C.3.4.1.1.6. When DSS determines that a freight forwarder (or other intended CONUS recipient) has the capability to receive and store materiel classified CONFIDENTIAL/SECRET, the country representative shall be notified directly by DSS of their findings with information copies to the DoD MAPAD System Administrator and the ILCOs. The correspondence directing publication of the addresses shall cite the letter from the DSS as authority.

C.3.4.1.1.7. When DSS determines that a freight forwarder (or other intended CONUS recipient) cannot be cleared or has been found incapable of safeguarding classified shipments; DSS shall notify the DoD MAPAD Administrator and all ILCOs via email. The requestor for clearance shall also receive a copy of the letter.

C.3.4.1.1.8. For a freight forwarder (or other intended recipient) to receive classified shipments for more than one country, a separate request must be submitted for each individual country. These requests shall be submitted and processed as outlined above.

C3.4.2. DAAS is responsible for program execution. Tasks include (but are not limited to):

C3.4.2.1. Hardware and software acquisition
C3.4.2.2. Technical design and database maintenance
C3.4.2.3. Testing and system interface connectivity
C3.4.2.4. Hardware and software maintenance and refresh
C3.4.3. Heads of participating DoD Components shall designate in writing a primary and an alternate ILCO CSP representative for the MAPAD. The letter of designation shall be provided to DAAS, with a copy to the MAPAD System Administrator.

C3.4.4. The DoD ILCO CSPs shall:

C3.4.4.1. Ensure continuous liaison with the DoD MAPAD System Administrator and other DoD Components.

C3.4.4.2. Assist country representatives in preparing letter requests for materiel and documents classified SECRET/CONFIDENTIAL by identifying their applicable MAPACs.

C3.4.4.3. The ILCO CSP shall enter the applicable MAPAC data via the MAPAD Web entry, except for data related to Type Address Code (TAC) A, B, C, or D which will be entered by DAAS.

C3.4.4.4. The ILCO CSPs are responsible for ensuring the accuracy and currency of the MAPAD data for their assigned MAPACs and for maintaining records to support the proper assignment, modification or deletion of each MAPAC. ILCO CSPs shall validate MAPAD addresses on a continual basis. Each Component shall establish internal MAPAD validation procedures. Requests for changes to the MAPAD may be received from the following sources in addition to country representatives:

C3.4.4.4.1. Freight Forwarder. A Freight Forwarder may submit requests to the ILCO CSP for a change of address to the existing addresses for receipt of materiel/documentation, except TAC A, B, C, or D addresses, which must have prior approval by the DSS and the country representative.

C3.4.4.4.2. U.S. Government Representatives Located in the Continental United States/Overseas

C3.4.4.4.2.1. Authorized U.S. Government representatives located overseas may submit a request for addition, revision, and/or deletion of any MAPAD address, provided they indicate that the request has been coordinated with the country representative.

C3.4.4.4.2.2. Authorized U.S. Government representatives may process a request for addition, revision, and/or deletion for Air/Army Post Office/Fleet Post Office/Diplomatic Post Office (APO/FPO/DPO) addresses and addresses to receive classified freight shipments without stating that the request has been coordinated with the country representative.

C3.4.4.4.2.3. ILCO CSPs may process a request for addition, revision, and/or deletion of special project addresses, (e.g., assembly/consolidated shipment point addresses) without coordination with the customer country or authorized U.S. Government representative.
C3.4.4.2.4. ILCO CSPs may process requests for deletion of MAPACs after the following procedures have been used to close all their cases associated with the MAPAC:

C3.4.4.2.4.1. Query the country to validate the MAPAC. (Note: The query must be approved by the Services' senior country desk officer.)

C3.4.4.2.4.2. After three months, if there is no response from the country, send a second follow up to the country, advising that no response shall mean an automatic deletion from the MAPAD.

C3.4.4.5. Additions, revisions, and deletions to the master MAPAD for Grant Aid addresses shall be made only by the responsible ILCO CSP following a request from an authorized U.S. Government representative or the DoD Component.

C3.5. SYSTEM MAINTENANCE

C3.5.1. Revisions to the MAPAD result from a release or change to DoD instructions/directives, from policy changes, and by recommendation of the DoD Components.

C3.5.2. Recommended changes to the administration and support of the MAPAD are handled through the documented DLMS change process found in Volume 1 of this manual.

C3.6. USE OF MAPAC IN MILITARY STANDARD REQUISITIONING AND ISSUE PROCEDURES

C3.6.1. Activities that prepare FMS and Grant Aid requisitions must ensure that ship-to/mark-for addresses are published in the MAPAD before requisitions are entered into the supply system. Conversely, addresses should be deleted only after all logistics transactions have been completed, or a cross-reference address (in the TAC 9) has been provided. When shipping Activities are unable to select an address or when clarification and/or identification of specific ship-to/mark-for addresses is required, the appropriate freight forwarder/Component Security Assistance office shall provide assistance.

C3.6.2. Instructions for construction and use of MAPACs for FMS shipments are contained in Section C3.10.

C3.6.3. Instructions for construction and use of MAPACs for Grant Aid shipments are contained in Section C3.22.

C3.7. COMPOSITION OF CLEAR TEXT ADDRESSES

C3.7.1. General applications are as follows:
C3.7.1.1. Clear text addresses for each assigned MAPAC shall be constructed to ensure timely and efficient delivery of materiel and documentation in accordance with the negotiated delivery conditions of the sales agreement for all FMS MAPACs and Grant Aid agreements.

C3.7.1.2. Each ship-to address shall be limited to a maximum of five lines and 35 or fewer positions per line. This restriction is necessary to accommodate the space limitations on supply documents, transportation documents, labels, and for standardization in automated data processing (ADP) programs.

C3.7.1.3. Addresses cannot contain a tilde (~). Special characters such as ampersand (&) and parentheses are acceptable. Use of the tilde is restricted because it is used by DAAS as a delimiter in transactions.

C3.7.1.4. Abbreviations shall be used only when they are essential to movement of materiel/documents and can be recognized by the involved Services/Agencies, contractors, or foreign government representatives.

C3.7.1.5. Domestic mail addresses shall be constructed to include activity name, post office box number, street address, city, state, and ZIP + four code. When the address requires additional information (e.g., exceptions), special instructions shall be included in the introduction to the appropriate country address listing. However, other information (e.g., attention lines) may be included in any address line except the street address, city, state, or ZIP + four code line. Post Office box numbers shall not be accepted for ship to addresses without Special Instruction Indicators (SIIs).

C3.7.1.6. Use of APO/FPO/DPO addresses must be specifically authorized by DoD Letter of Offer and Acceptance. Additionally, their use requires the written approval of the addressee, stating that they shall accept full responsibility for receiving materiel/documentation. APO/FPO/DPO addresses shall be constructed to include activity name, office symbol or code, post office box number, APO/FPO/DPO number and Zip + four code. When the address requires additional information (e.g., exceptions), special instructions shall be included in the introduction to the appropriate country address listing. Other information (e.g., attention lines) may be included in any address except the APO/FPO/DPO line.

C3.7.1.7. International mail addresses are not to be used in shipping FMS or Grant Aid items unless specifically authorized by DoD Letter of Offer and Acceptance.

C3.7.1.8. The Department of State Pouch Service is no longer allowed to be used for the movement of materiel, including small parcels.

C3.7.1.9. For deletion of a MAPAC, all logistics transactions containing the deleted MAPAC must have been completed or instructions for processing logistics transactions still in the system must be provided to the ILCO CSP. Accordingly, one of the following must be accomplished:
C3.7.1.9.1. When addresses for another MAPAC are to be used for processing requisitions, the deleted clear text addresses shall be replaced with an address reference that reads "Deleted. Use MAPAC (insert appropriate code) addresses." This shall be a TAC 9 and shall remain in the MAPAD for five years. Also, the replacement MAPAC shall be entered in the cross reference field of the deleted MAPAC.

C3.7.1.9.2. When addresses of another MAPAC are not to be used for processing logistics transactions, special instructions indicator (SII) “S” shall be included in the directory and the clear text address field shall be blank. Appropriate instructions for addressing outstanding transactions must be included in the special instruction portion of the address listing.

C3.7.2. Foreign Military Sales Address Composition

C3.7.2.1. Domestic freight addresses shall be constructed to include the name and address of the freight forwarder/country representative, street address, city, state, and ZIP + four code. Other information, (e.g., attention lines) can be included on any address line other than the street address, or the city, state, and ZIP + four code lines. Addresses containing telephone numbers shall be constructed at a request from the freight forwarder/country representative for notification by the carrier prior to delivery, subject to additional charges. Therefore, all such entries should be closely coordinated with the country representative to determine whether prior notice and its subsequent charges are actually required.

C3.7.2.2. Mark-for addresses shall be constructed to provide for delivery to the ultimate consignee.

C3.7.2.3. When FMS shipments are to be delivered to an overseas port of debarkation or delivered to destination, the mark-for address shall be used with the Water Port of Debarkation (WPOD) or Aerial Port of Debarkation (APOD), as appropriate. If the port of debarkation is located in a country other than the customer country, the customer must obtain approval authority from the transiting country and confirm this authority prior to MAPAD entry. When the shipment is made to an APO/FPO/DPO address, the mark-for address should be placed on the parcel in such a way that it shall not be confused with the APO/FPO/DPO address. This will avoid the possibility of the parcel being inadvertently routed through international mail.

C3.7.2.4. Addresses for receipt/processing of classified mail or materiel must meet the requirement for classification of CONFIDENTIAL or SECRET as prescribed by DSS and discussed earlier.
C3.7.3. Grant Aid Address

C3.7.3.1. When a small parcel shipment is not acceptable to the authorized U.S. Government representative located overseas, as indicated by the absence of a TAC 1 address, materiel shall be shipped to the freight address (TAC 2).

C3.7.3.2. An international mail address may be used when an APO/FPO/DPO does not operate but must be specifically authorized by United States Department of Defense Letter of Offer and Acceptance.

C3.7.3.3. The clear text address column shall normally be blank for a TAC 2 address. The appropriate WPOD or APOD shall be used with the TAC M address for this MAPAC to consign materiel shipments. The TAC 2 clear text address field shall contain the name and geographical location of the civil airport to be used for commercial air shipments if commercial air is authorized. If commercial airlift is authorized, the name and location of the International Air Port is not shown in the TAC 1 or 2. The TAC 1 and 2 shall have an “S” in the SII and the air port information shall be listed in the special instruction. The APOD field shall contain the three-position air terminal identifier code for the airport to be used for delivery of materiel by U.S. Military aircraft. To determine the APOD for a specific location, refer to the Scott Airlift Control Center Website (from "XOG Quick Links" select "Channel Sequence Listing". The WPOD field shall contain the appropriate three-position water port designator code. Valid APOD and WPOD codes are contained in the table Management Distribution System.. See “AERIAL-PORT” and “WATER-PORT” reference tables under the Master Model Compliant Reference Data section.

C3.7.3.4. The TAC M address shall be constructed to ensure efficient delivery of materiel after reaching the WPOD or APOD.

C3.8. MILITARY ASSISTANCE PROGRAM ADDRESS DIRECTORY AUTOMATED FILES

C3.8.1. The automated MAPAD file enables automated and manually operated DoD Component Activities to be routinely informed of current changes to the master file. To ensure that the most current information is made available to those Activities having a recurring operational requirement for the address data, all DoD Components should take full advantage of this feature.

C3.8.2. DoD Components requiring the automated address file for processing of documentation under the DLMS or for expeditious dissemination of data to activities with manual operations shall request the file from DAAS. The preferred method to disseminate address data is through data replication. DoD Components requiring the automated address file for internal use should coordinate with DAAS to replicate the MAPAD database. In the near term, batch transmissions shall be supported (see paragraphs C3.26.7 through C3.26.10. for details).

C3.8.3. Transmission of batch transaction changes from DAAS to the designated DoD Component Activities shall be by electronic transmission using content indicator
IHAF. A separate transaction shall be made for each MAPAC and TAC that is to be added, revised, or deleted. The document identifier code shall identify the action to be taken on the assigned effective/deletion date. The transmission of batch transactions shall only be supported until replication can be established.

C3.9. FREIGHT FORWARDER/COMPONENT SECURITY ASSISTANCE OFFICE

Problems in transportation during delivery of FMS materiel to a freight forwarder should be referred to the shipper if the materiel is moving under a prepaid Commercial Bill of Lading or Government Bill of Lading or via a prepaid small parcel carrier. Problems with the carrier in transportation of materiel moving on a collect commercial bill of lading should be resolved between the carrier and freight forwarder. Problems in documentation (e.g., misdirected shipments) shall be referred to the shipper. If these problems cannot be resolved between the freight forwarder and shipper, contact the appropriate Component security assistance office in Table C3.T1.

C3.10. FOREIGN MILITARY SALES SHIPMENT BACKGROUND AND GENERAL INSTRUCTIONS

C3.10.1. The FMS Program is defined as that portion of the Security Assistance Program (SA) under which the recipient provides reimbursement for defense articles and services. It is authorized by the Foreign Assistance Act of 1961, as amended and the Arms Export Control Act of 1976, as amended. All FMS shipments are a result of a negotiated agreement between the U.S. Government and the government of the purchasing country.

C3.10.2. FMS requisitions are designed to be processed in the same manner as DoD logistics transactions; however, there are some instances where they will differ (e.g., construction of Military Standard Requisitioning and Issues Procedures.
The following are general instructions used in shipping FMS materiel:

C3.10.2.1. There will be circumstances when deviations to the shipping instructions contained in the requisition are authorized. An example of a deviation is when a shipment, originally scheduled for delivery to a freight forwarder, is redirected into the Defense Travel System (DTS) for direct delivery to an overseas location.

C3.10.2.2. To use the MAPAD to find in-the-clear, ship-to and mark-for addresses, both the document number and the supplementary address shall be used. There are two very important factors to remember when constructing an MAPAC:

C3.10.2.2.1. The requisition numbers for FMS are not constructed the same way requisitions are constructed for the DoD Components.

C3.10.2.2.2. The first six positions of the document number cannot be considered to be the same as a MAPAC.

C3.10.2.3. Because Canada has no freight forwarders in the United States, the construction of their MAPACs is an exception to the rule. Refer to Section C3.13. for construction of Canadian MAPACs.

C3.10.2.4. FMS items shall be shipped by a carrier that can provide evidence of shipment (for Supply Discrepancy Report purposes, evidence of shipment constitutes “constructive proof of delivery in compliance with DSCA 5105.38-M, “Security Assistance Management Manual (SAMM),” paragraph C6.4.10.6.

C3.10.2.5. Regulations, such as the Defense Federal Acquisition Regulation Supplement (DFARS) Volume III, Appendix F, Material Inspection and Receiving Report for procurement documents and independent Service requirements, mandate that the elements listed below be provided on shipping documents for use by the freight forwarder. The freight forwarders use this information to obtain insurance, and identify the materiel for the export license. Every effort should be made to ensure that the following information is provided on shipping documents:

C3.10.2.5.1. Requisition Document Number.
C3.10.2.5.2. FMS Case Identifier Number.
C3.10.2.5.3. Unit Price/Total Price.
C3.10.2.5.4. Quantity.
C3.10.2.5.5. NSN/Part Number and Description.
C3.10.2.5.6. Project Code (if applicable).
C3.10.3. Prior to selecting the appropriate address, the shipper must consider shipment size, destination, classification, type of materiel, deliver term code, and priority.

C3.11. MILITARY ASSISTANCE PROGRAM ADDRESS DIRECTORY ADDRESS FORMAT FOR FOREIGN MILITARY SALES

C3.11.1. Data Elements Used To Construct MAPAD Codes For FMS. Five data fields are required to construct a ship-to MAPAC and a mark-for MAPAC. These data elements are taken from the requisition document number and supplementary address. A MAPAC shall have six positions for the purpose of integrating the code into Component logistics systems. This is accomplished by zero filling the non-significant record positions (rp). The five data elements used to construct the FMS ship-to and mark-for MAPACs are listed below.

C3.11.1.1. Requisition Document Number

C3.11.1.1.1. The second and third position of the document number (MILSTRIP rp 31–32) shall contain the SA/FMS country/international organization codes assigned by the Defense Security Cooperation Agency. The authoritative source for these values is DSCA 5105.38-M, Chapter 4, Table C4.T2.

C3.11.1.1.2. The fourth position of the document number (MILSTRIP rp 33) shall contain the mark-for code. The alpha/numeric code indicates the final destination address of the materiel. When the country does not identify a valid mark-for code, a numeric zero shall be shown in MILSTRIP rp 33.

C3.11.1.2. Supplementary Address

C3.11.1.2.1. The first position of the supplementary address (MILSTRIP rp 45) shall contain the code designating the customer country’s requisitioning Service. B=Army; P=Navy; D=Air Force; K=Marine Corps; T=other than Army, Navy, Air Force, or Marine Corps. The first position of the requisition number (MILSTRIP rp 30) usually contains these same Service codes. The difference is that rp 30 indicates the U.S. Military Service that manages or is responsible for the FMS case. In constructing MAPACs for the ship-to and mark-for address, only the customer country’s Service Code (rp 45) shall be used. The U.S. Service Code (rp 30) shall be used to show the appropriate freight forwarder/Service assistance office if any problems arise. It is possible for rp’s 30 and 45 to have different Service Codes (e.g., if the requisition number begins with BATL4V and the supplementary address is DA2KBM, the shipper would use the D (customer country’s Air Force Code) from the supplementary address to construct the ship-to/mark-for MAPACs, but would contact the U.S. Army (B) for assistance, if required).

C3.11.1.2.2. The third position of the supplementary addresses (MILSTRIP rp 47) shall contain an alpha/numeric code to designate the customer country’s freight forwarder or designated recipient of materiel.
C3.11.1.2.2.1. If code X appears in the third position of the supplementary address (MILSTRIP rp 47), the shipment is to be made through the DTS to a designated address with no freight forwarder involvement. This address can be identified by the use of rp 33 to construct the MAPAC. Shipments moving through Air Mobility Command (AMC), Surface Deployment and Distribution Command (SDDC), and Military Sealift Command (MSC) must have an in-the-clear address or mark-for code (e.g., if movement is via AMC/SDDC/MSC and there is a numeric zero in rp 33, the in-the-clear address or customer code shall be obtained prior to shipment). Contact your appropriate freight forwarder/Component Security Assistance Office for this information.

C3.11.1.2.2.2. If code W appears in the third position of the supplementary address (MILSTRIP rp 47), the shipment is to be made to an intermediate point (e.g., an item being shipped to a facility for calibration prior to final delivery to country) and the in-the-clear address shall be provided. If the in-the-clear address is not provided, the shipper must call the freight forwarder/Service Security Assistance Office for the in-the-clear address.

C3.12. CONSTRUCTION OF MILITARY ASSISTANCE PROGRAM ADDRESS CODES FOR FOREIGN MILITARY SALES

C3.12.1. The ship-to MAPAC is constructed by taking the code in rp 45 (FMS country’s Military Service); rp 31 and rp 32 (two-digit code to identify the country/international organization (see country/activity code reference in DSCA 5105.38-M, Chapter 4, Table C4.T2); next, add two zeros (the non-significant record positions explained in C2.3.1 above) and then show rp 47 (the freight forwarder/designated representative code).

C3.12.2. The mark-for MAPAC is constructed by taking the code in rp 45 (FMS country's Military Service); rp 31 and rp 32 (two-digit code to identify the country/international organization; rp 33 (the code identifying the final destination of the materiel); and then adding two zeros (the non-significant record positions).

C3.12.3. Figure C3.F1. is an example of how the ship-to and mark-for MAPACs are constructed and the importance of the placement of the zeros for the non-significant record positions. The MAPAC appears as a six-position code in the MAPAD. It is constructed from selected codes located in various data fields of the requisition. Specifically, requisition record positions 31, 32, 33, 45, 46, and 47 provide all the information necessary to construct a MAPAC when shipment is made through a freight forwarder. A MAPAC does not exist as a discrete entity without a defining TAC. The TAC further defines the clear-text address to be used. Figure C3.F1. is an illustration of two FMS MAPACs constructed from applicable entries in a requisition. This is necessary when a shipment is made through the FMS customer’s freight forwarder. The freight forwarder’s address is represented by the ship-to MAPAC and the final destination address is represented by the mark-for MAPAC. The numbers 30–50 in the figure indicate record positions in the MILSTRIP 80 rp transaction format. The row of
alphanumeric characters represents the applicable codes inserted in each record position by the originator of the requisition.

Figure C3.F1. Example of Foreign MAPAC Ship-To/Mark-For
C3.12.4. Figure C3.F2. is a sample MAPAD address listing for Australia. Note that the clear text address is based on the use of specific TAC codes.

</table>
C3.13. CONSTRUCTION OF CANADIAN MILITARY ASSISTANCE PROGRAM
ADDRESS CODES FOR FOREIGN MILITARY SALES. Since Canada has no CONUS
freight forwarders, their ship-to and mark-for addresses are the same; therefore,
shipments are made directly to the in country destination point. Because of this, the
Canadian requisition number and supplementary addresses are different to
accommodate the unique construction of their MAPACs. To construct a Canadian
MAPAC, use the Service code from the first position of the supplementary address
(MILSTRIP rp 45; next the second and third position of the document number
(MILSTRIP rp 31 and rp 32 (two-digit Security Cooperation (SC) Customer Code); next
rp 33 (zero filled); and finally, rp 46 and rp 47 from the supplementary address. (Figure
C3.F3.)

C3.14. TYPE OF ADDRESS CODES FOR FOREIGN MILITARY SALES

C3.14.1. The TACs used in this manual identifies the type of address to be used in
the shipment/distribution of materiel/documentation. There are 13 TACs; however, not
all of the TACs shall be used in the MAPAD at the same time, but may be used in
combination. The ILCO CSP shall determine which combination of TACs is appropriate
C3.14.2. Table C3.T2. contains a brief description of nine of the 13 TACs. Section C3.21. contains the four remaining TACs to be used in shipping classified materiel.

### C3.T2. Type of Address Code Descriptions

<table>
<thead>
<tr>
<th>TAC</th>
<th>SUMMARY EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>M</td>
<td>A clear text mark-for address</td>
</tr>
<tr>
<td>1</td>
<td>This address shall receive unclassified shipments moving by small parcel carrier or shipped by carrier that can provide evidence of shipment or proof of delivery in compliance with the DTR 4500.9-M, Defense Transportation Regulation Part III chapter 203 item B. TAC 5 is the same address as TAC 1 unless published differently.</td>
</tr>
<tr>
<td>2</td>
<td>This address shall be used when surface or air freight is selected as the mode of transportation for shipment of unclassified materiel. Note that more than one TAC 2 address may be reflected for the same freight forwarder MAPAC. In this case, the MAPAD shall contain Special Instruction Indicator Code A which directs forwarding of the materiel/documentation to the address closest to the shipping activity. The clear text address field may contain the overseas address of the civil airport to be used for commercial air shipments if commercial air is authorized. TAC 6 is the same as TAC 2 unless published differently.</td>
</tr>
<tr>
<td>3</td>
<td>For sending a Notice of Availability (NOA), if required. This address shall be used when the Option Code (Y or Z in record position 46 of the requisition) requires a NOA prior to shipment. For Option Code Z, follow ups on the NOA shall also be sent to this address. Option Code A shipments which are of weight or dimensions which could cause receiving/storage problems, or perishable, hazardous, classified, or require special handling shall be handled as Option Code Z because of the peculiar handling/controlled nature required by the type of materiel being shipped. For a classified shipment, send the NOA to the receiving country service representative. In response to the NOA, the country representative must specify, by name, the person shall receive and sign for the shipment at the TAC A, B, C, or D address. Should there be no reply to the NOA, the service security assistance office shall be advised of the problem for Army and Air Force sponsored shipments; the Navy freight forwarder assistance office shall be advised for Navy and Marine Corps sponsored shipments. If the address provided by the country representative to receive a classified shipment is other than a TAC A, B, C, or D address, the service focal point shall be contacted for guidance. The Surface Deployment and Distribution Command (SDDC) shall contact the country representative for coordination in processing export release requests for classified materiel moving under a Delivery Term Code 8. The applicable freight forwarder shall also be contacted by SDDC for coordination in processing export release requests for sensitive materiel moving under a Delivery Term Code 8.</td>
</tr>
</tbody>
</table>
C3.T2. Type of Address Code Descriptions

<table>
<thead>
<tr>
<th>TAC</th>
<th>SUMMARY EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>This address shall be used for distribution of supply and shipment status documents. Communication Routing Identifier (COMMRI) code shall be used for electronic distribution of supply and shipping status transactions. A COMMRI is a 7 character code that uniquely identifies an International Logistics Communication System (ILCS) account, established with the DAAS, to electronically transmit and receive logistics data between the FMS country and the US DOD supply system.</td>
</tr>
<tr>
<td>5</td>
<td>This address shall be used for distribution of documentation for unclassified shipments delivered by a small parcel carrier. The documentation may be DD Form 1348-1a, “Issue Release/Receipt Document,” DD Form 1348-2, “Issue Release/Receipt Document with Address Label,” DD Form 250, “Material Inspection and Receiving Report”; or any forms used for release/receipt. The TAC 5 address shall only be published when it is different from the TAC 1 address.</td>
</tr>
<tr>
<td>6</td>
<td>For sending copies of the release/receipt documents and bills of lading on TAC 2 shipments; and shall only be published if different from TAC 2. Documentation (release/receipt) for automatic freight shipment shall be forwarded to this address. Documents that may be distributed to this address may include DD Form 1348-1a, Issue Release/Receipt Document, DD Form 1348-2, issue release/receipt document with address label; DD Form 250, material inspection and receiving report, or any forms used for release/receipt of shipments. The TAC 6 address shall only be published when it is different from the TAC 2 address.</td>
</tr>
<tr>
<td>7</td>
<td>This address shall be used to identify the activity responsible for payment of transportation charges for shipments made on collect commercial bills of lading or other types of collection delivery methods. The TAC 7 address shall be established only when TAC's A, B, C, D, 1, and 2 addresses (ship-to) are not authorized to make such payments (the freight forwarder is permitted to change the address as long as it remains within the freight forwarder's operation).</td>
</tr>
<tr>
<td>9</td>
<td>TAC 9 indicates that the addresses for this MAPAC have been deleted; however, the MAPAC shall remain in the directory to provide a reference to another MAPAC which shall be used in processing documents that contain the deleted code. It can also provide reference to special instructions for processing documents containing the deleted MAPAC. The deleted entry shall remain in the MAPAD for a period of 5 years.</td>
</tr>
</tbody>
</table>
C3.15. **SPECIAL INSTRUCTION INDICATORS FOR FOREIGN MILITARY SALES**

C3.15.1. SIIs are coded in the SII column to indicate instructions to be used in shipping materiel or sending documentation to a particular address.

C3.15.2. Only the SII S shall be shown in clear text. This information is listed at the beginning of each country section. The clear text SIIs are a means by which customer countries place their unique requirements in the MAPAD (e.g., political considerations, circumstances peculiar only to one country; a country that has negotiated their own freight rates with a carrier). The shipper must adhere to these instructions. The appropriate freight forwarder Service Assistance Office must be contacted if problems arise in executing the specific SII.

C3.15.3. SII S requires identification of applicable MAPACs and TACs with clear text special instructions, as shown in Figure C3.F4.

**Figure C3.F4. Example of Special Instruction Indicators**

C3.16. WATER AND AERIAL PORTS OF DEBARKATION CODES FOR FOREIGN MILITARY SALES. These codes indicate the WPOD or APOD to which FMS shipments shall be sent under Delivery Term Code (DTCs) 6, 7, and 9. The shipments shall be moved through the DTS to the in country ports. In the case of DTCs 6 and 9, port personnel shall notify the ultimate consignee to pick up the materiel or make arrangements for delivery of the shipment to destination. In the case of DTC 7, the U.S. Government is obligated to transport the materiel to the customer’s in country mark-for-address.

C3.17. EFFECTIVE DATE AND DELETION DATE FOR FOREIGN MILITARY SALES. This is a date when the MAPAC is effective and/or the date it is deleted. The deleted record shall remain in the file for 5 years after it is deleted to allow the pipeline to be flushed. Changes shall take effect when the current date matches the effective date.

C3.18. OFFER/RELEASE OPTION CODE FOR FOREIGN MILITARY SALES

C3.18.1. The MILSTRIP data elements outlined above were those elements required to construct MAPACs. However, there are additional elements to be used in the movement of FMS materiel. The second position of the supplementary address (MILSTRIP rp 46), is called the offer/release option code and identifies whether or not an NOA is needed prior to shipment. See section C3.21. for instructions on shipping classified materiel.

C3.18.2. If the Offer/Release Option Code is an alpha A, the shipment shall be released automatically to the freight forwarder or designated recipient of the materiel. Offer/Release Option Code A is not absolute. Offer/Release Option Code Z procedures must be followed if any unusual transportation factors apply. This includes oversize or overweight shipments, hazardous materiel shipments, classified shipments, sensitive shipments and ammunition, arms and explosives shipments, or any other factor that mandates coordinated release procedures (this does include Canada).

C3.18.3. When the Offer/Release Option Code is an alpha Y, the shipment must not be released until an NOA is forwarded to the TAC 3 address. If a reply to the NOA is not received within 15 calendar days from the date of the notice, the shipment shall be released to the appropriate TAC 2 address with no further action by the shipper. Offer/Release Option Code Y is not absolute. Offer/Release Option Code Z procedures must be followed if any unusual transportation factors apply. This includes oversize or overweight shipments, hazardous materiel shipments, classified shipments, sensitive shipments and ammunition, arms and explosives shipments, or any other factor that mandates coordinated release procedures (this does include Canada).

C3.18.4. When the Offer/Release Code Option is an alpha Z an NOA shall be forwarded to the TAC 3 address, or country representative if the shipment is classified. However, the shipment must not be released until a response from the proper NOA addressee is received. If an NOA response is not received within 15 calendar days...
of the NOA date, the shipping activity will send a follow-up to the designated NOA recipient using the same TCN. The duplicate NOA will be annotated with the number 2 in the NOA Notice Number field to denote the second communication of the NOA and to indicate that release has been delayed due to non-response to the original NOA. Two copies of the annotated DD Form 1348-5 (Notice of Availability/Shipment), together with the applicable DD Form(s) 1348-1A, DD Form(s) 250, or DD Form(s) 1149 will be held as a record of the non-response to the original NOA. If no response is received within 15 calendar days of the follow-up NOA, another follow-up will be sent with the number 3 in the NOA Notice Number field to indicate that release continues to be delayed due to non-response to the original and follow-up NOAs. File copies will be updated to reflect the non-response and submission of a second follow-up. Simultaneous with the second follow-up, the appropriate ILCO will be contacted (offline) for assistance and follow-up action to obtain the NOA response. Upon receipt of the offline contact from the shipping activity, the ILCO must intervene, on behalf of the shipping activity, to obtain a response to the NOA so the open shipment action can be closed. NOTE: This follow-up procedure does not apply to Delivery Term Code (DTC) 8 releases. DTC 8 releases involve materiel, usually Sensitive Arms, Ammunition and Explosives, which follow special export procedures that require more time to process than can be encompassed by the above follow-up procedure. Note that Option Release Code Z procedures must be followed if any unusual transportation factors apply. This includes oversize or overweight shipments, hazardous materiel shipments, classified shipments, sensitive shipments and ammunition, arms and explosives shipments, or any other factor that mandates coordinated release procedures (this does include Canada).

C3.18.5. When the Offer/Release Option Code is an alpha X the United States is responsible for transportation and no NOA is required.

C3.19. DELIVERY TERM CODES FOR FOREIGN MILITARY SALES. DTCs identify the Department of Defense and the purchasing country responsibility for transportation and handling costs. A link to DTCs is contained in paragraph C3.26.3.

C3.20. PRIORITIES FOR FOREIGN MILITARY SALES. FMS customer countries are assigned the same force/activity designator (F/AD) codes as the DoD Components. The requisition priority designator shall be based upon the assigned F/AD—refer to MILSTRIP. FMS materiel shall be transported in accordance with all the requirements and conditions of DoD 4140.1-R and DTR 4500.9-R).

C3.21. FOREIGN MILITARY SALES CLASSIFIED SHIPMENTS

C3.21.1. FMS classified shipments shall be moved utilizing a carrier that is authorized by SDDC to transport classified shipments. These shipments shall be handled under all conditions and requirements governing the movement of US. Government classified materiel, DoDM 5200.01, DoD 5200.2-R, and DoD 5200.8-R. The following additional conditions apply:
C3.21.1.1. All DTC 4, 5, 8, C, E and H shipments of classified materiel require the full Offer Release Option Code Z process before they can be released; For example, a proper response from the NOA addressee must be received from the proper NOA addressee before shipment release. The proper NOA addressee for shipments of classified materiel is the MAPAD listed country representative for the FMS Purchaser.

C3.21.1.2. Classified materiel requisitioned under DTCs 2, 3, 5, 6, 7, or 9 should be entered into the DTS for movement.

C3.21.1.3. There are many freight forwarders that have been identified by the DSS as authorized to receive classified materiel. These freight forwarders are identified by the TACs A, B, C, and D. If these TACs are not included in the freight forwarder's MAPAC, classified materiel shall not be released to that freight forwarder.

C3.21.1.4. Table C3.T3. shows a summary of the TACs to be used in moving classified materiel.

Table C3.T3. TACs For Classified Materiel

<table>
<thead>
<tr>
<th>TAC</th>
<th>SUMMARY EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Materiel classified SECRET moving by small parcel carrier must be shipped by a carrier that can provide evidence of shipment or proof of delivery in compliance with DTR 4500.9-R, Part II, Chapter 205.</td>
</tr>
<tr>
<td>B</td>
<td>Materiel classified SECRET moving by surface or air freight carrier must be shipped by a carrier that can provide evidence of shipment or proof of delivery in compliance with DTR 4500.9-R.</td>
</tr>
<tr>
<td>C</td>
<td>Materiel classified CONFIDENTIAL moving by small parcel carrier must be shipped by a carrier that can provide evidence of shipment or proof of delivery in compliance with DTR 4500.9-R.</td>
</tr>
<tr>
<td>D</td>
<td>Materiel classified CONFIDENTIAL moving by surface or air freight carrier must be shipped by a carrier that can provide evidence of shipment or proof of delivery in compliance with DTR 4500.9-R.</td>
</tr>
</tbody>
</table>

C3.21.1.5. The shipper must send the NOA to the country representative as indicated in the appropriate country introduction page. Shipments of classified materiel shall not be moved until the following conditions have been met:

C3.21.1.5.1. NOA response.

C3.21.1.5.2. Identification of a cleared facility.

C3.21.1.5.3. Identification of an authorized designated representative of that country.
C3.22. **GRANT AID SHIPMENT BACKGROUND AND GENERAL INSTRUCTIONS**

C3.22.1. The Grant Aid Program is defined as that portion of the SAP that provides defense articles and services to recipients on a non reimbursable or grant basis. Grant Aid is authorized by the Foreign Assistance Act of 1961, as amended.

C3.22.2. The following general instructions are to be used to ship Grant Aid items:

C3.22.2.1. Generally, there are no freight forwarders involved in Grant Aid shipments. DoD policy is to handle Grant Aid type shipments under DTC 9 procedures; however, DTC 7 procedures may apply depending on circumstances determined by the cognizant Combatant Commander.

C3.22.2.2. For Grant Aid shipments, data elements from the requisition document number and first position of the supplementary address shall be used for both the ship-to and mark-for MAPACs.

C3.23. **DATA ELEMENTS TO CONSTRUCT MILITARY ASSISTANCE PROGRAM ADDRESS CODES FOR GRANT AID**

C3.23.1. There are significant differences between constructing FMS and Grant Aid MAPACs. For Grant Aid there are only three data elements in the requisition that are required to construct the MAPAC. With Grant Aid requisitions, as with FMS, the MAPACs must contain six positions in order to be integrated into the DoD logistics systems.

C3.23.2. The data elements to be used to construct the ship-to/mark-for MAPACs are listed below:

C3.23.2.1. **Requisition Document Number**

C3.23.2.1.1. The second and third positions of the document number (MILSTRIP rp 31–rp 32) shall contain the SC Customer Code.

C3.23.2.1.2. The fourth position of the document number (MILSTRIP rp 34) shall contain the mark-for code.

C3.23.2.2. **Supplementary Address.** Unlike FMS, the Grant Aid first position of the supplementary address shall always contain alpha code Y (MILSTRIP rp 45). However, in locating the MAPACs in this directory, the Y code shall be converted to an X. The first position of the requisition document number (MILSTRIP rp 30), shall still show the appropriate code to indicate the DoD Component managing the case. These codes are: B=Army; D=Air Force; I=Missile Defense Agency; P=Navy; K=Marine Corps; T=other than Army, Navy, Air Force, Missile Defense Agency or Marine Corps.
C3.24. CONSTRUCTION OF MILITARY ASSISTANCE PROGRAM ADDRESS CODES FOR GRANT AID. The ship-to/mark-for MAPAC is constructed by taking the Y code first position of the supplementary address to an X; the second and third position of the requisition document number (MILSTRIP rp 31–32) (two digit SC Customer Code); and the third position of the requisition document number (MILSTRIP rp 33) (final destination address); and then adding two zeros (non significant record positions). Figure C3.F5. is an example of how the ship-to/mark-for MAPACs is constructed.

Figure C3.F5. Example of Grant Aid MAPAC from the Requisition.

C3.26. SPECIAL INSTRUCTION INDICATORS FOR GRANT AID

C3.26.1. SIIs are coded in the SII column to indicate that instructions to be used in shipping materiel or sending documentation to a particular country.

C3.26.2. Only the SII “S” shall be shown in clear text or narrative form. This information is listed at the beginning of each country section. The shipper must adhere to these instructions. The appropriate freight forwarder/Service Assistance Office shall be contacted if problems arise in executing the specific SII.

C3.27. WATER AND AERIAL PORTS OF DEBARKATION CODES FOR GRANT AID. Grant Aid shipments shall move through the DTS to Grant using in country ports of discharge. DoD personnel at those ports shall notify the ultimate consignee to pick up the materiel or make arrangements for delivery of the shipment to its destination.

C3.28. EFFECTIVE DATE AND DELETION DATE FOR GRANT AID. This is the date when the MAPAC is effective and/or the date it is to be deleted. MAPACs shall remain on the MAPAD for 5 years beyond the delete date.

C3.29. DELIVERY TERM CODES FOR GRANT AID. There are no DTCs that apply to Grant Aid shipments. The U.S. Government is responsible from point of origin to delivery of materiel to port of discharge overseas. RP 35 shall always contain a numeric zero.

C3.30. PRIORITIES FOR GRANT AID. Grant Aid shipments shall be transported in accordance with the requirements and conditions of time-definite delivery (TDD) and DTR 4500.9-R.

C3.31. GRANT AID CLASSIFIED SHIPMENTS. Grant Aid classified shipments shall be moved utilizing a carrier that is authorized by SDDC to transport classified shipments. These shipments shall be handled in accordance with all conditions and requirements governing the movement of U.S. Government classified materiel in DoDM 5200.01. Upon arrival at the overseas port the appropriate government to government transfer procedures shall be implemented.

C3.32. CODES AND TRANSACTION FORMATS. The MAPAD contains unique transaction formats, unique code lists, and common data element shared with MILSTRIP. The following information is provided as supporting documentation to the MAPAD.
C3.32.1. **Special Instruction Indicators.** SII “S” requires identification of applicable MAPACs and TACs with clear text special instructions, as shown in Figure C3.F4.

C3.32.2. **Type of Address Codes.** TACs designate the type of action being taken for a specific address (e.g., transmitting status, shipping information, Notice of Availability).

C3.32.3. **Delivery Term Codes.** DTCs designate DoD/purchasing country’s responsibility for transportation and handling cost. The code designates the segments of the transportation pipeline for which the DoD is responsible during the transport of supply shipment units under FMS/Grant Aid programs.

C3.32.4. **Foreign Military Sales Military Standard Requisitioning and Issue Procedures Data Elements.** Appendix AP2.1 highlights MILSTRIP requisition document number and supplementary address data elements used to construct a valid MAPAC.

C3.32.5. **Address File.** Appendix AP2.6 Address File Identifier, identifies which MAPAD file shall be changed.

C3.32.6. **Type of Address Codes.** Appendix AP2.4, Type of Address Codes, identifies transactions to logistics system(s) and specific operation to which they apply. Appendix 3, also indicates the intended purpose and use of the transaction data (i.e., add, change or delete).

C3.32.7. **Add/Change Foreign Military Sales Military Assistance Program Address Code.** Appendix AP2.7 contains the transaction formats (MA1, MA2) for Adding and Changing FMS MAPACs.

C3.32.8. **Delete Foreign Military Sales Military Assistance Program Address Code.** Appendix AP2.8 contains the transaction format (MA3) for Deleting FMS MAPACs.

C3.32.9. **Add/Change Grant Aid Military Assistance Program Address Code.** Appendix AP2.9 contains the transaction formats (MA1, MA2) for Adding and Changing Grant Aid MAPACs.

C3.32.10. **Delete Grant Aid Military Assistance Program Address Code.** Appendix AP2.10 contains the transaction format (MA3) for Deleting Grant Aid MAPACs.

C3.32.11. **Security Assistance Program Service Designator.** The SAP Customer Service Designator is derived from the Service and Agency code list and is used in the first character of the MAPAC to classify the ownership of the MAPAC being defined. Note: The value for the SAP customer service designator also appears in the first position of the supplemental address field in the Security Assistance MILSTRIP requisition.
C4. CHAPTER 4

PIPELINE MEASUREMENT

C4.1. GENERAL

C4.1.1. Purpose of Chapter. This chapter identifies the roles, authorities, business rules, governance and configuration management process that comprise the Logistics Metrics Analysis Reporting System (LMARS), located at Defense Automatic Addressing System (DAAS). It establishes the information requirements for LMARS which tracks materiel as it moves through the logistics pipeline and reports the associated response times. Within the authority granted it in paragraph C4.3.1. the Pipeline Measurement Process Review Committee (PM PRC) is responsible for developing and maintaining LMARS to include the maintenance of this chapter.

C4.1.2. Purpose of LMARS. LMARS is a reporting tool for the collection of logistics business events to allow measurement of actual logistics pipeline performance. The information enables users and management to track trends, identify areas requiring improvement, and compare actual performance against pre-established goals. LMARS consists of:

C4.1.2.1. Set of definitions identifying the beginning and ending of each of the twelve measurable logistics pipeline segments.

C4.1.2.2. Set of business event/transactions used as the authoritative source for recording a business event beginning or ending point.

C4.1.2.3. Set of business rules, decision tables, and algorithms applied to the standard events/transactions to populate database pipeline segment performance data.

C4.1.2.4. Data that is available for download and analysis.

C4.1.2.5. Set of monthly reports that capture the performance for a month in the life of the logistics pipeline identified as Report Control Symbol DD-AT&L(AR)1419.

C4.2. POLICY. DoD policy states that: DoD materiel management shall operate as a high-performing and agile supply chain responsive to customer requirements during peacetime and war while balancing risk and total cost. The DoD supply chain shall provide best-value materiel and services in support of rapid power projection and operational sustainment of U.S. forces as required by the National Military Strategy. Potential disruptions within and outside the DoD supply chain shall be identified, monitored, and assessed in order to mitigate risk to supply chain operations. Life-cycle management controls shall be applied to guard against counterfeit materiel in DoD supply chain. Energy efficient products or services shall have preference in all procurements, except those products or services procured for combat or combat-related...
missions.¹ DoDM 4140.01 Volumes 4, 8, and 10 are the principal supply chain policy documents that lay the foundation for the following paragraphs

C4.2.1. Logistics Response Time (LRT). LRT is a supply chain metric that measures “the time between the date a requisition is established and the date the requisitioned materiel is received and posted by the requisitioner”, ² LRT measures that elapsed time in days. The Department of Defense has established LMARS as the single, authoritative, enterprise-wide source for performance reporting and analysis of LRT.

C4.2.2. Order Processing & Delivery Standards. The DoD supply chain stakeholders and customers have order processing and delivery standards for the wholesale supply and distribution system. These standards apply to the delivery of materiel to requisitioning customers within the Department of Defense and are established and presented in two formats: Uniform Materiel Movement Issue Priority System (UMMIPS) Operational Need Goals (ONG) and time definite delivery (TDD) standards.

C4.2.2.1. UMMIPS Operational Need Goals (ONG). The first format describes ONGs agreed upon between USTRANSCOM, Military Services, and Combatant Commands and translated by the ODASD(Logistics) to be used in accordance with the (UMMIPS). ONG is customer focused and seeks to meet customer delivery requirements based on the military importance of the customer and the urgency of the customer’s need. Military importance is reflected in the Force/Activity Designator (F/AD) assigned to each unit. The unit’s F/AD and urgency of need designators (UND) are combined and reflected in requisitions as Issue Priority Designators (IPDs). Customer should expect the use of IPD and required delivery dates to assign accurate methods of transportation for the delivery of the requisitioned materiel, while ONGs are used to measure the reliability of the DoD supply chain from the customer’s viewpoint. This version of the standards is translated to address the warfighter’s or customer’s expectations. ONGs help assess how quickly shipments move depending upon the transportation priority that the Services assigned.

C4.2.2.2. Time Definite Delivery (TDD) Standards. The second format presents standards as coordinated by USTRANSCOM with distribution stakeholders from the service providers’ perspective and approved by the Distribution Steering Group. These standards are coordinated between distribution providers, suppliers, and Combatant Commands and used to measure the performance of the distribution network in shipping materiel from storage sites to customer locations based on supplier location, transportation mode, and consignee location (country).

C4.2.2.3. Complimentary Formats. ONGs and TDD standards work together to measure the responsiveness and reliability of the distribution

---

¹ DoDI 4140.01 DoD Supply Chain Materiel Management Policy: December 14, 2011
² DoDM 4140.01 Volume 8 Materiel Data Management and Exchange, February 10, 2014
processes to deliver required materiel to the customer within a given period of time. By assessing actual performance against the TDD standards assigned to distribution providers, as well as actual performance against the ONGs that the customers specify, DOD monitors the effectiveness of distribution and reliability of materiel in terms the distribution provider requires and customers understand.

C4.3. ROLES AND AUTHORITIES

C4.3.1. Pipeline Measurement Process Review Committee (PM PRC). The PRCs provide a joint forum for each of the Defense Logistics Management Standards (DLMS) functional areas (finance and supply to include, but not limited to, requisitioning and issue procedures, physical inventory, disposition services, and supply discrepancy reporting) responsible for the development, expansion, improvement, maintenance, and administration of the DLMS. The PM PRC reviews issues as requested by the ODASD(Logistics) relating to LRT and LMARS pipeline measurements of performance across currently measurable segments of the DoD supply chain. It reviews and resolves comments on approved DLMS changes, deviations and waivers, and provides recommendations for implementation or disapproval. Any unresolved action from the PRC will be referred to the appropriate Office of the Secretary of Defense (OSD) Principal Staff Assistant (PSA). The PM PRC operates under the authority and within the framework documented below.

C4.3.2. Office of the Deputy Assistant Secretary of Defense for Logistics (ODASD(Logistics)). The ODASD(Logistics) will:

C4.3.2.1. Serve as the Office of the Secretary of Defense (OSD) sponsor of the Pipeline Measurement program, issuing policy, procedural guidance and instructions to develop, expand, improve, and maintain LMARS as developed and maintained in the PM PRC.

C4.3.2.2. Review and approve Pipeline Measurement program plans, priorities, schedules, and goals, and resolve policy and procedural issues where agreement cannot be obtained within the PM PRC.

C4.3.2.3. Champion efforts to identify funding sources to support and further the Pipeline Measurement program objectives.

C4.3.2.4. Ensure applicable coordination within OSD staff elements that are responsible for Pipeline Measurement performance measurement policy guidance or one-time instructional memoranda affecting functions assigned to this PRC.

C4.3.2.5. Support the implementation and use of standard data elements in accordance with policy guidance.

3 DoDM 4140.01, Volume 8 Materiel Data Management and Exchange February 10, 2014
C4.3.2.6. Maintain contact with the PRC through the OSD Principal Staff Assistant (PSA) and the ODASD(Logistics) representative, and accept updates after each meeting or as appropriate.

C4.3.2.7. Ensure DoD senior leaders are advised of initiatives and plans as they are developed with respect to Pipeline Measurement performance data integrity and management.

C4.3.2.8. Monitor PRC activity to ensure compliance with policy, instructions, and standards.

C4.3.3. **Enterprise Business Standards Office (EBSO).** The EBSO will appoint the chair of the PM PRC, who will:

C4.3.3.1. Develop PM PRC meeting agendas and convene meetings as required.

C4.3.3.2. Submit proposed recommendations for LMARS improvement to the committee members and the OSD PSA.

C4.3.3.3. Document the PM PRC program objectives and business rules in DLM 4000.25, “Defense Logistics Management Standards (DLMS)”.

C4.3.3.4. In support of the Supply Chain Metrics Group, develop and document (maintain) program functional requirements for data collection, uniform business rules, computational algorithms, and management reporting and queries for DAAS to develop and execute the tool set for measuring LRT, and supporting the Components’ calculation and reporting of CWT, and TDD actual performance.

C4.3.3.5. **Coordinate LMARS training with DAAS.**

C4.3.3.6. Report findings and recommendations of evaluations and reviews, with comments from the DoD Components and participating external organizations, to the OSD PSA through the use of standard DLMS configuration management procedures (e.g., proposed and approved DLMS changes).

C4.3.3.7. When possible, announce the meeting and identify the agenda items 30 calendar days in advance of the meeting.

C4.3.3.8. Submit minutes of each PM PRC meeting within 14 calendar days of meeting completion to the PM PRC membership and the OSD PSA for review.

C4.3.3.9. Publish fully documented minutes of these proceedings to the ODASD(Logistics) and each participating DoD Component or external organization within 30 calendar days after the meeting.

C4.3.3.10. Maintain a current list of representatives to the PM PRC.
**C4.3.3.11. Present issues to the PM PRC for review and resolution.**

**C4.3.3.12. Where PM PRC consensus cannot be obtained, document and present the issues to the OSD PSA for resolution.**

C4.3.4. **Defense Automatic Addressing System (DAAS).** DAAS will:

C4.3.4.1. Develop and maintain the databases, applications, training aids, and tools required to support LMARS.

C4.3.4.2. Attend all PM PRC meetings.

C4.3.4.3. Implement enhancements and modifications to LMARS documented *via Approved DLMS Change (ADC)* by EBSO and approved by the PM PRC.

C4.3.4.4. Provide LMARS subject matter expertise to members of the PM PRC for dissemination to their respective Components.

C4.3.4.5. Provide LMARS measurement summaries using formats prescribed by policy.

C4.3.4.6. Ensure testing and validation of proposed changes to standard data elements for Pipeline Measurement performance measurement.

C4.3.5. **DoD Components.** DoD Components will support the PM PRC by providing qualified, experienced representatives who will:

C4.3.5.1. Attend all Pipeline Measurement meetings.

C4.3.5.2. **Submit** agenda items to the Chair, PM PRC.

C4.3.5.3. Respond to tasking emanating from PM PRC meetings.

C4.3.5.4. Identify inter-DoD Component LRT requirements to the PM PRC for discussion and formulation of a solution.

C4.3.5.5. Develop and submit recommended DLMS change proposals to the PM PRC Chair for processing under DLMS configuration management procedures.

C4.3.5.6. Present the Component position and be authorized to negotiate and seek agreement with PM PRC members to achieve the objectives and standardization of LMARS. Provide Component responses to proposed DLMS changes within specified timeframes.

C4.3.5.7. Promote and support LMARS within the respective Components and serve as the Components’ LMARS subject matter expert.
C4.3.5.8. Use metrics to assess the DoD Supply Chain pipeline performance and use as a basis for process improvements.

**C.4.3.5.9. Conduct analyses and take appropriate actions within the Component to improve pipeline performance.**

C4.3.5.10. Review Monthly LMARS Outputs and Data

C4.3.5.10.1. Review monthly reports analyzing and researching unusual trends. Significant changes need to be researched using the drill down capability to determine the root cause of anomalies. Researchers should look for conditions such as one or more activities performing mass close outs of open aged records in a non-timely manner resulting in unusually long LRT. The Anomaly Code list and report is also a tool to aid in determination of suspect data and performance reporting. The Anomaly Code list is available on the PM PRC Committee page of the EBSO Website.

C4.3.5.10.2. Component representatives to the PRC will identify data corrections required as a result of the above research and analyses to the PM PRC Chair and DAAS. When warranted, the PM PRC chair will ensure prior coordination with the ODASD (Logistics) PM PRC representative before performing data corrections. The data correction method will be determined by DAAS and coordinated with the PM PRC Chair.

C4.3.5.10.3. Table updates, business rule changes, and fill rule changes will be identified by the Components to the PM PRC Chair where changes have occurred in critical decision tables such as Routing Identifier Codes (RICs), DoD Activity Address Codes (DoDAACs), Combatant Commander (COCOM) designations, etc.

C4.3.5.11. Retain records of LRT for audit and oversight. **After those business rules are satisfied, defer to the Component’s applicable National Archives and Records Administration (NARA)-approved Component Records Disposition Schedule or NARAs General Records Schedule (GRS) in accordance with DoDI 5015.02, DoD Records Management Program as the authoritative source for disposition authority.**

C4.4 Reserved

C4.5. LMARS ARCHITECTURE

C4.5.1 Functional Architecture

C4.5.1.1. Data in LMARS is based on the capture by DAAS of the business events at the individual transaction level for each individual customer order/document number. **Excluded from this capture are transactions from Foreign Military Sales**

---

4 Refer to ADC 1151
(FMS), extended required delivery dates (RDD)\(^5\), initial outfitting and cancelled and rejected orders.

C4.5.1.2. LMARS reports and measures the pipeline segment(s) completed for a document number in that report month. The total document numbers that complete a segment and the time to complete each document are the key data **LMARS captures and uses to calculate average segment time performance.**

C4.5.1.3. LMARS is a point in time reporting system. When an item identified by a document number has shipped, the first four segments are reported in the monthly report corresponding to the month DAAS receives the shipment transaction. Later actions within the pipeline are reported in the month during which that segment is completed. With the exception of the ICP segment (ISPT), no segment is reported again for that document number in any succeeding months. A materiel release order (MRO) denial will cause the ISPT segment to be re-reported with additional time for the denial and new MRO processing added.

C4.5.1.3.1. With the exception of segments one through three (which are dependent on the date DAAS receives the shipment transaction), the first date that DAAS receives a transaction, defined as a segment ending event, determines when that segment’s count and time is included in a month’s report.

C4.5.1.3.2. The last in-document date is used to compute the segment time.

C4.5.1.3.3. Segments one through four are all reported in the month that the shipment transaction is received. Segments five through twelve and the total for segments one through twelve are reported in the month that the transaction for the segments end event is received by DAAS.

C.4.5.2 Technical Transaction Architecture. **LMARS is based on information provided from Logistics On-Line Tracking System (LOTS). LOTS is a database that stores logistical data received from DAAS.**

C4.6. LMARS CONTENT

C4.6.1. Inputs. The data sources **LMARS uses** to prepare the monthly reports are as follows:

C4.6.1.1. DAAS Routed DLMS/DLSS Transactions. **DAAS uses the legacy(DLSS)/DLMS transactions it processes to measure the logistic response time for wholesale-managed items.**

C4.6.1.2. DAAS Non-routed Transactions. **There are two types of non-routed transactions.**

\(^5\) RDDs beginning with S or X
C4.6.1.2.1. These are Component unique DICs (DLSS-like) 80 record position transactions used to report offline actions by the Services, DLA, and GSA. These transaction DLMS/DICs are B99, BE9, 867I/D7, and 511R/CHA/CH1/CO_/CQ.

C4.6.1.2.2. Integrated Data Environment (IDE) and Global Transportation Network (GTN) Convergence (IGC) User Defined Format (UDF) data feeds provide information to open and close the transportation pipeline segments.

C4.6.1.3. DLA Special Prime Vendor Data Feeds. Special data feeds are via SFTP for Fresh Fruits and Vegetables (FFV), Semi Perishables, Maintenance Repair Operations (MRO), and Prime Vendor Medical (PVM).

C4.6.1.4. For DLA orders from RIC SMS, LMARS utilizes the procurement instrument identifier (PIID) from the EDI 850 Purchase Order as the source to determine if a direct vendor delivery is planned or unplanned. DAAS converts the EDI 850 to a flat file to facilitate LMARS processing and sends the flat file to LMARS once a month. At the beginning of each month, LMARS sorts the new EDI 850-based flat files by document number/suffix (since there may be multiples) and determines the earliest transaction received for each. LMARS uses the earliest date received by DAAS to end Pipeline Segment 3 (ICP Processing Time) for each document number/suffix and start Segment 4 (Storage Activity Processing Time). Segment 4 is used for every transaction, and identifies the MRO sending time to the depot/vendor to the date the item was released to the carrier in shipment transaction. This identifies the time the depot or vendor took to do processing. The MROs for vendors are the transactions identified by status codes BV or AB, however, DLA only uses the EDI 850. DAAS will use the PIID from the EDI 850 flat file to determine the type of DVD. Those including the type of procurement instrument D (in the 9th position of the PIID) will identify planned deliveries and LMARS will construe all other values as unplanned.

C4.6.1.5. Other External Data Feeds used to support weekly and monthly LMARS processing are the DoD Activity Address Directory (DoDAAD) and the national item identification number (NIIN) file provided by the Logistics Information Service. Additionally the following data sources are used and require validation and update by the Components.

C4.6.1.5.1. Guard or Reserve DoDAACs. A table of DoDAACs identifying guard and reserve units provided to DAAS by the Marine Corps and Army.

C4.6.1.5.2. Reparable/Non Reparable Indicator. A table designating repairable items and non-reparable items provided by all Services.

C4.6.2. Segment Definitions
C4.6.2.1. Logistics Pipeline Segment 1, “Requisition Submission Time” is the elapsed time from the date in the requisition number to the date that **DAAS received the requisition**.

C4.6.2.2. Logistics Pipeline Segment 2, “Internal Service Processing Time” is the elapsed time beginning when DAAS releases a requisition for internal service or non-Wholesale action and ending when the requisition is returned and released to a Wholesale ICP.

C4.6.2.3. Logistics Pipeline Segment 3, “Inventory Control Point Processing Time” measures the time from DAAS release of a requisition to an ICP, until DAAS receipt of an MRO transaction directing shipment.

C4.6.2.4. Logistics Pipeline Segment 4, “Storage Activity Processing Time” is measured from the date DAAS received the MRO to the date shipped/released in an AS/AR/AU/856S (Shipment Status) transaction.

C4.6.2.5. Logistics Pipeline Segment 5, “Storage Activity to Consolidation Containerization Point Processing Time” is measured from the date shipped/released (856S/AS/AR/AU) to the Consolidation and Containerization Point (CCP), to the date received (856A/TAV/TAW) by the CCP.

C4.6.2.6. Logistics Pipeline Segment 6, “Consolidation Containerization Point Processing Time” is measured from the CCP’s date of receipt until the date of release (856A/TAV/TAW).

C4.6.2.7. Logistics Pipeline Segment 7, “CONUS In-Transit Time” is measured from the date shipped (856S/AS/AR/AU) by the shipper (may be contractor, storage depot, or CCP) and ends on the date received (527R/DRA/DRB) by a CONUS customer or port of embarkation (POE) for overseas movements.

C4.6.2.8. Logistics Pipeline Segment 8, “Port of Embarkation Processing” is measured from the date of POE receipt to the date of POE release.

C4.6.2.9. Logistics Pipeline Segment 9, “Port of Embarkation to Port of Debarkation In-Transit Time” is measured from POE date of release to port of debarkation (POD) date of receipt.

C4.6.2.10. Logistics Pipeline Segment 10, “Port of Debarkation Processing” is measured from the date of POD receipt to date of POD materiel release.

C4.6.2.11. Logistics Pipeline Segment 11, “In-Theater In-transit Time” is measured from the POD release date to the consignee receipt or “tailgate” date, for all OCONUS areas.

C4.6.2.12. Logistics Pipeline Segment 12, “Receipt Take-Up Time” is the time between consignee receipt or “tailgate” date and the record posting date in the MRA transactions 527R/DRA/DRB.
C4.6.2.13. Total Pipeline Time is measured from the date in the requisition number (start of segment 1) to the date the customer posts it to the property record (end of segment 12).

C4.6.3. Business Rules. The paragraphs in this section describe the key tables that the LMARS uses to determine the appropriate reporting of a requisition’s life cycle events, DAAS procedures, and the output report-specific data population rules and display.

C4.6.3.1. Key Tables

C4.6.3.1.1. LMARS Type of Fill Table. Access the LMARS Type of Fill Table on the EBSO Website, located under Pipeline Measurement Process Review Committee.

C4.6.3.1.1.1. LMARS uses this table to determine in which applicable report(s) each document number, completing a pipeline segment within the report month, is included. Paragraph C4.6.5 discusses each report in detail.

C4.6.3.1.1.2. Examination of the data in the transaction against the values in Columns “A” through “H” of the LMARS Type of Fill Table yields one of the Type of Fills below (which equate to Column “I”). The derived Type of Fill is inserted into the LMARS database date element “CORP-FILL-TYPE” for that transaction document number. The Type of Fill and their applicable Reports are identified below.

**LMARS Records Type of Fill Tables**
- A = Immediate shipment from depot
- B = Planned DVD Shipments
- C = Backordered
- D = Unplanned DVD Shipments
- O = Other

**LMARS Reports**

C4.6.3.1.2. Output Report Specific Tables. The LMARS application makes use of additional tables to populate the data in the specific monthly output reports. The EBSO website lists these output report specific tables on the PM PRC page of the Committees listing.

C4.6.3.1.3. DLA Special Report Type of Fill Table. LMARS provides a series of reports that are tailored for DLA management usage. While these DLA-
specific reports are not discussed in this chapter, the EBSO website lists the report fill rules on the PM PRC page of the Committees listing.

C4.6.4 DAAS Procedures

C4.6.4.1. Daily Continuous Processing. With the exception of special data feeds, transactions are received at DAAS continually, then copied and parsed to the LOTS database.

C4.6.4.2. Weekly Processing. Every Friday at midnight DAAS performs the following processing procedure in preparation for the monthly processing:

C4.6.4.2.1. LOTS database is copied and integrated with the temporary LMARS Master file.

C4.6.4.2.2. A temporary LMARS Master file is created for that week’s reporting.

C4.6.4.2.3. LMARS business rules are applied to the temporary LMARS Master file.

C4.6.4.2.4. An LMARS flat file is produced and put on a guest server for Secure File Transfer Protocol (SFTP).

C4.6.4.2.5. Flat files tailored to each Service/Agency are created.

C4.6.4.2.6. Output. Weekly activity file generated.

C4.6.4.3. Monthly Processing. On the first of each month the following processes are performed:

C4.6.4.3.1. LOTS database is copied.

C4.6.4.3.2. Special Feed data integrated with LMARS Master file.

C4.6.4.3.3. LMARS business rules applied to the new LMARS Master file.

C4.6.4.3.4. Test reports for the month are produced.

C4.6.4.3.5. Top 300 drilldown reports produced.

C4.6.4.3.6. Anomaly file produced.

C4.6.4.3.7. The test reports, anomaly file, and the Top 300 drill down reports are used to identify and correct any DAAS processing errors and to identify anomalies and unusual trends that the Services need to research and verify. The DAAS processing errors, if any, are corrected and the reports are rerun. The applicable LMARS Service Contact Points are provided Top 300 drill down reports when
necessary and requested to determine whether the data is valid. The Services with anomalies and/or unusual trends have five days to respond. Based on their response and the PM PRC chair authorization, data identified as invalid are removed, the rationale is documented, and the LMARS reports are rerun and become final for that month.

C4.6.4.4. **Retention requirements.** The monthly LMARS reports are maintained in accordance with DoDI 5015.02, DoD Records Management Program. 

**Staffing Note:** DAAS must verify with the DLA Records Officer that retention requirements are incorporated into any APPLICABLE NARA GRS or NARA approved DLA Records Disposition Schedule.

C4.6.4.5. **LMARS User Accounts.** The instructions for obtaining a user account are found on the DAAS Website. Click on “Request Login ID and Password” and follow the screens for completing the On-Line Systems Access Request. **It is important to note that once a user has obtained access approval for LMARS, the user must keep the account active by logging into LMARS at least once every 30 days. If not, the account will be placed in REVOKED status, and another 15 days from that point the account will be deleted if the user has not logged in for 45 days.**

C4.6.4.5.1. The Logistics Metrics Analysis Reporting System at DAAS maintains logistics pipeline information for all Wholesale items. LMARS is populated with information from the DLMS and legacy MILSTRIP and MILSTRAP transactions that flow through DAAS. LMARS reports response time within the 12 logistics pipeline segments: All reporting time frames are expressed in terms of days. Current standard reports are available via the Web on a monthly basis.

C4.6.4.5.2. **Data download capabilities.** DAAS can provide data downloads in a variety of forms. Monthly reports provide a link at the top that allows the user to directly download reports to a Microsoft Excel Spreadsheet. For other database transfers/downloads of LMARS data and/or tables the requester should contact the Service/Agency PM PRC point of contact, or if not known, DAAS. Database transfers/downloads of LMARS data for a specific Service or Agency, are performed by that Service or Agency.

C4.6.4.6. **Handling of Corrections.** The Components and DAAS review the initial runs of each month’s reports prior to publication to identify any unusual trends. Data corrections required as a result of that research and analysis will be identified to the PM PRC Chair and DAAS. When warranted, the PM PRC chair will ensure prior coordination with the ODASD(Logistics) PM PRC representative before correcting data. DAAS will determine the data correction method in coordination with the PM PRC Chair and the Component that identified the problem.

---

6 Refer to ADC 1151
C4.6.5. **Output Reports.** There are six types of **Output Reports:**

- Guard
- Reserve
- Wholesale ICP
- Contractor Wholesale ICP
- Wholesale ICP Reparable NSNs
- ICP GSA

Each of these reports follows a standard format and is reported by geographic area and priority. The reports are further defined by Component and type of fill.

C4.6.5.1. **Major Report Categories.** The user selects the desired Major Report Category from the main LMARS Web Page. The report categories are identified below:

C4.6.5.1.1. **Guard Report.** To be included in the Guard Report, the document number’s Ship-To address or Consignee must be a Guard DoDAAC, as identified by the Components. Note that the transactions included in the Guard Report are not included in the Wholesale ICP Report. DAAS maintains an internal table supplied by the Components that identifies Guard unit DoDAACs.

C4.6.5.1.2. **Reserve Report.** To be included in the Reserve Report the transaction’s Ship-To address or Consignee must be a Reserve DoDAAC as identified by the Components. Note that the transactions included in the Reserve Report are not included in the Wholesale ICP Report. DAAS maintains an internal table of reserve DoDAACs.

C4.6.5.1.3. **Wholesale ICP Reparable NSNs Report.** The Wholesale ICP Reparable NSNs Report includes a subset of the document numbers in the Wholesale ICP Report. To be included in the Wholesale ICP Reparable Report at least one Service must identify the NSN being ordered on a given transaction as a Reparable NSN.

C4.6.5.1.4. **Contractor Wholesale ICP.** To be included in the Contractor Wholesale ICP Report transaction’s Ship-To or Consignee address must contain a Contractor DoDAAC. Note that the transactions included in the Contractor Wholesale ICP Report are not included in the Wholesale ICP. Contractor DoDAACs are in Table H.

C4.6.5.1.5. **Wholesale ICP Reparable NSNs.** The Wholesale ICP Reparable NSNs Report includes a subset of the document numbers in the Wholesale ICP. To be included in the Wholesale ICP Reparable Report, at least one Service must identify the NSN being ordered on a given transaction as a
Reparable NSN.

C4.6.5.1.6. ICP GSA. **Only GSA-filled transactions are included in the GSA Report. To be included in the GSA Report, the transactions eligible for LMARS reporting in a given month, with the exception of those for Guard, Reserve, or Contractor DoDAACs, must identify GSA as the ICP. The exception to this is any transaction with Guard, Reserve, or Contractor DoDAACs.**

C4.6.5.2. Major Report Category Sections. Each Major Report Category is composed of tabs which are at the **top or bottom of the report.** The titles of the tabs and section headings are (1) “Composite”, (2) “Army”, (3) “Air Force”, (4) “Navy”, (5) “Marine Corps”, (6) “Coast Guard”, (7) “DLA” and (8) “Others”.

C4.6.5.2.1 Type of fill Table Sub-Sections. Each Major Report Category tab is further sub-divided into six Type of Fill Table Sub-Sections: **Total, Immediate Fill (identified as type of fill A in the type of fill table), Planned DVD (type of fill B), Backordered (type of fill C), Unplanned DVD (type of fill D), and Other (type of fill O).** Each Sub-Section has a total line. The LMARS Type of Fill Table discussed in paragraph C4.6.3.1 describes the Type of Fill Table composition, usage, mapping Type of Fill to the LMARS Type of Fill Report Sub-Sections, and Web link to the current LMARS Type of Fill Table. **Each Service and Agency must ensure its servicing ICPs RICs are listed in the LMARS output specific Table D in order for LMARS to include their transactions in the monthly reporting.** The Type of Fill Table Sub-Sections titles and descriptions are below:

C4.6.5.2.2. “TOTAL” Type of Fill Sub-Section. The “TOTAL” Type of Fill Sub-Section reflects Wholesale requisition pipeline activity of the cumulative document numbers of each of the Report Sections identified in paragraph C4.6.5.2.1. Reporting starts when DAAS receives a shipment transaction. In the event there is not a shipment transaction, the reporting will start with the receipt of the MRA receipt transaction. This Sub-section contains all Type of Fill = A, B, C, D, O.

C4.6.5.2.3. “IMMEDIATE” Type of Fill Sub-Section. The “IMMEDIATE” Type of Fill Sub-Section reflects Wholesale requisition pipeline activity of immediate issues for each of the Report Sections identified in paragraph C4.6.5.2.1 above. One of the following conditions must be met to qualify as an immediate issue: (1) The first or only Supply Status is BA. (2) The last Supply Status must be BA and received within five days of first status, and no Backorder Status ever received. Direct Vendor Deliveries, whether planned or unplanned, are not considered immediate issues. Reporting starts when DAAS receives a shipment transaction. In the event there is not a shipment transaction, the reporting will start with the receipt of the MRA receipt transaction. This Sub-section contains all the document numbers with Type of Fill = A.

C4.6.5.2.4. “PLANNED” Type of Fill Sub-Section. The “PLANNED” Type of Fill Sub-Section reflects Wholesale requisition pipeline activity of Planned Direct Vendor Delivery (DVD) issues for each of the Report Sections identified in
C4.6.5.2.1 For a transaction to qualify as a Planned DVD it must meet the criteria specified in the LMARS type of file table. Reporting starts when DAAS receives a shipment transaction. In the event there is not a shipment transaction, the reporting will start with the receipt of the MRA receipt transaction. This Sub-section contains all the document numbers with Type of Fill= B. For DLA orders, LMARS utilizes the PIIN from the EDI 850 Purchase Order as the source to determine if a Direct Vendor Delivery is planned or unplanned.

C4.6.5.2.5. “BACKORDERED” Type of Fill Sub-Section. The “BACKORDERED” Type of Fill Sub-Section reflects Wholesale requisition pipeline activity of document numbers that were at some time backordered within each of the Report Sections identified in paragraph C4.6.5.2.1. The following criteria must be met to qualify as a backorder: (1) DLMS 870S/AE received, prior to shipment, must have a BB, BC, or Service specified (Table A) backorder code. (2) Direct Vendor Delivery, whether planned or unplanned, was not received prior to shipment. To be included in the “BACKORDERED” Sub-section the transaction must meet the criteria for backordered materiel in the LMARS Type of Fill Table = C.

C4.6.5.2.6. “UNPLANNED” Type of Fill Sub-Section. The “UNPLANNED” Type of Fill Sub-Section reflects Wholesale requisition pipeline activity of unplanned direct vendor delivery (DVD) issues for each of the Report Sections identified in paragraph C4.6.5.2.1. Reporting starts when DAAS receives a shipment transaction. In the event there is not a shipment transaction, the reporting will start with the receipt of the MRA receipt transaction. This Sub-section contains all the transactions within the Major Report Category and Section that contain Type of Fill= D.

C4.6.5.2.7. “OTHER” Type of Fill Sub-Section. The “OTHER” Type of Fill Sub-Section reflects Wholesale requisition pipeline activity of transactions that did not meet the criteria for Immediate Issue, Backorder, Planned or Unplanned DVD for each of the Report Sections identified i paragraph C4.6.5.2.1. Reporting starts when DAAS receives a shipment transaction. In the event there is not a shipment transaction, the reporting will start with the receipt of the MRA receipt transaction. This Sub-section contains all the transactions within the Major Report Category and Section that contain Type of Fill=O.

C4.6.5.3. Delivery Area and Issue Processing Group Row Headings. These headings are repeated within each Major Report Category Section and its Sub-Sections. Column A of the spreadsheet output identifies the breakout within the Sub-Section for each of the five delivery areas (CONUS, OCONUS1, OCONUS2, OCONUS3, OCONUS4). Each Delivery Area is further broken out into the three Issue Processing Groups (IPGs). The IPG headings are IPG 1, IPG 2, and IPG 3, and the TOTAL/AVERAGE line applicable to each pipeline segment and a grand “TOTAL” line appear at the bottom.

C4.6.5.3.1. Delivery Area Row Headings. The five delivery areas utilized for LMARS are the COCOMS. The headings are CONUS, OCONUS1,
OCONUS2, OCONUS3, and OCONUS4. The authoritative source for COM locations is USTRANSCOM. USTRANSCOM will update the DoDAAD, and the DoDAAD feeds data into LMARS. LMARS will utilize the DoDAAD updates with the exception of Navy Mobile Units. In order for LMARS to calculate LRT accurately for Navy Mobile Units afloat, the Navy will provide to DAAS an updated NAVY AFLOAT FILE via Secure File Transfer Protocol (SFTP) at the end of the third week of each month. LMARS will access this file from DAAS for reporting LRT.

The LMARS Delivery Areas are consistent with the USTRANSCOM Time Definite Delivery (TDD) areas,

<table>
<thead>
<tr>
<th>LMARS Area</th>
<th>TDD Areas</th>
</tr>
</thead>
<tbody>
<tr>
<td>CONUS</td>
<td>USNORTHCOM</td>
</tr>
<tr>

<td>USCENTCOM</td>
</tr>
<tr>
<td>OCONUS3</td>
<td>USINDOPACOM</td>
</tr>
<tr>
<td>OCONUS4</td>
<td>USSOUTHCOM/USNORTHCOM</td>
</tr>
</tbody>
</table>

LMARS makes no distinctions between Airlift and Sealift delivery areas.

C4.6.5.3.2. Issue Processing Group Row Labels. Each Delivery area is further broken out into the three Issue Processing Groups (IPG 1, IPG 2, and IPG 3) and the Total/Average line applicable to each pipeline segment within and a grand “TOTAL” line appear at the bottom. Standard Uniform Materiel Movement and Issue Priority System (UMMIPS) Priority Designator and IPG groupings apply. The IPG is determined by the priority designator in the document. The priority designator of the document can be modified up until the item is shipped; after that point, it will never change for that document. IPGs are groupings of Issue Priority Designators (IPDs) as shown below:

- IPDs 01, 02, and 03 form IPG I
- IPDs 04, 05, 06, 07, and 08 form IPG II
- IPDs 09, 10, 11, 12, 13, 14, and 15 form IPG III.

C4.6.5.4. Column/Pipeline Segment Heading and Data Descriptions. The following paragraphs define the pipeline segment headings and data content that appears under each heading for a particular row heading. Where applicable, DLMS/DLSS (e.g., 940R/A5), 856S/AS, and 527/DRA/DRB, or receipt image are indicated to denote which transactions are used to measure the beginning and ending of the pipeline segments. Note that in all cases data values displayed in blue are active. If the reviewer places the cursor over the data value and clicks the value, the document numbers and their associated data will be presented.

C4.6.5.4.1. Spreadsheet Report Columns B and C
• Logistics Pipeline Segment 1 – “Requisition Submission Time” *(See C4.6.2.1.)*

• Report Spreadsheet Heading 1 – “REQN SUBMIT”

• LMARS database name “RST – NODE”.

Columns B and C reflect the month’s data reported for Segment 1, Requisition Submission Time. Spreadsheet column B shows the number of Wholesale requisitions submitted for each area’s Processing Group. Service unique processing rules have identified additional transactions (Table B) included in this column. Requisitions for National Guards, Reserve Units, and Contractors are excluded from these reports. Requisitions for Foreign Military Sales (FMS), Initial Outfitting (Table C), or with RDDs beginning with “S” or “X” are excluded from all LMARS reports. Column C reflects this segment’s time, calculated by subtracting the document date from the DAAS receipt date. RST for images of requisitions submitted to DAAS (511R/CH1, 527R/CHA BE9, and 867I/D7_) is limited to 30 days or less. The spreadsheet column C shows the average requisition submission time for each Processing Group. At the bottom of each area is the total number and weighted average of requisitions DAAS received. The last row in the report provides the TOTAL requisitions and weighted time in columns B and C for this segment. Transactions that failed DAAS edits are not included until or unless they are resubmitted.

C4.6.5.4.2. Spreadsheet Report Columns D & E

• Logistics Pipeline Segment 2, “Internal Service Processing Time” *(See C4.6.2.2.)*

• Report Spreadsheet Heading 2 – “SERVICE PROCESS”

• LMARS database name “SPT – NODE”.

An example of Internal Service Processing is the processing by Naval Supply Systems Command (NAVSUP) Fleet Logistics Centers (FLCs). This segment time begins when DAAS releases a requisition for internal Service (non-Wholesale (to a RIC other than that on Table D)) action and ends when it is returned and released to a Wholesale ICP (Table D). The number of requisitions and average times are shown for each area’s Processing Group. Total requisitions DAAS released and their weighted average are shown at the bottom of each area and on the last data line of the report. DAAS processing time is not shown but is reflected in the Total Order-Receipt computations.

C4.6.5.4.3. Spreadsheet Report Columns F and G

• Logistics Pipeline Segment 3, “Inventory Control Point (ICP) Processing Time” *(See C4.6.2.3.)*

• Report Spreadsheet Heading 3 – “ICP PROCESS”
• LMARS database name “ISPT – NODE”.

This segment measures the time from DAAS’ release of a requisition to a Wholesale ICP, until DAAS’ receipt of an issue transaction. Issue transactions can be an MRO, 940R/A5_ transaction, a Table E listed equivalent, an 870S/AB_ (Direct Delivery Notice) transaction, or an 870S/AE_ (Supply Status) transaction with BV status, indicating direct vendor delivery. There may be multiple ICP actions taken on a requisition, but passing, referral, backorder, or delayed actions are not used to close this segment. Supply status of BQ, BR, B4, C_, D1-D8, except D7, DB, DN, DQ, DR, or specified intra-service codes (Table F), indicating rejection or cancellation will drop a requisition from being reported unless shipment and/or receipt is indicated. The number of “issues” transactions is shown in column F and average times are in column G.

C4.6.5.4.4. Spreadsheet Report Columns H and I

• Logistics Pipeline Segment 4, “Storage Activity Processing Time” (See C4.6.2.4.)

• Report Spreadsheet Heading 4 – “STORAGE ACTIVITY”

• LMARS database name ”SAPT – NODE”.

The time is measured from when DAAS receives the defined MRO to the date shipped/released in DLMS/DIC 856S/AS_/856S/945A/AU_ (Shipment Status) transaction. When Shipment Status is not available, the date in a materiel release confirmation (MRC) DLMS/DIC 940R/945A/AR_ transaction is used to close the segment. In the case of DVDs, time is measured from DAAS’ receipt of a DLMS/DIC 870S/AB_ transaction, or a DLMS/DIC 870S/AE_ transaction with BV status, to the date shipped/released in a DLMS/DIC 856S/AS_/856S/945A/AU_ or DLMS/DIC 940R/945A/AR_ transaction. The number of shipments and average processing times are shown in Columns H and I.

C4.6.5.4.5. Spreadsheet Report Columns J and K

• Logistics Pipeline Segment 5, “Storage Activity to Consolidation Containerization Point (CCP) Processing Time” (See C4.6.2.5.)

• Report Spreadsheet Heading 5 – “STORAGE TO CCP”

• LMARS database name “DCPT – NODE”.

The time is measured from the date shipped/released by the storage activity to the CCP’s receipt date reported in the TAV, TAW, or the IGC provided transaction. DLMS transactions from commercial carriers may also be used in this segment. The count of the number of shipments to a CCP and average processing times are displayed in columns J and K respectively. NOTE: When both the source of materiel and the
Customer delivery point are in the CONUS, these columns will be blank, since CONUS shipments do not move through CCPs, POEs, or PODs.

C4.6.5.4.6. Spreadsheet Report Columns L and M

- Logistics Pipeline Segment 6, “CCP Processing Time” (See C4.6.2.6.)
- Report Spreadsheet Heading 6 – “CCP ACTIVITY”
- LMARS database name “CPT – NODE”

For OCONUS, and only when a CCP is used, time is measured from the CCP’s receipt and release dates in the TAV, TAW, or a GTN provided transaction. The count of the number of shipments processed by a CCP and average processing times are shown in columns L and M respectively. **NOTE: When both the source of materiel and the Customer delivery point are in the CONUS, these columns will be blank, since CONUS shipments do not move through CCPs, POEs, or PODs.**

C4.6.5.4.7. Spreadsheet Report Columns N and O

- Logistics Pipeline Segment 7, “CONUS In-Transit Time” (See C4.6.2.7.)
- Report Spreadsheet Heading 7 - “CONUS IN-TRANSIT”
- LMARS database name “CIT – NODE”

There are two differing movement possibilities for this segment; however, they are mutually exclusive at the document level. The start and stop times will depend upon whether a CCP is in the pipeline for the document number. The following are the two mutually exclusive methods for the computation of time for a specific document number.

- Segment 7A – For OCONUS shipments moving through a CCP, time is measured from the CCP’s release to the POE’s receipt. Dates/times for calculating this segment come from the TAV/TAW or IGC-provided transaction. Average times and the number of shipments from a CCP are shown.

- Segment 7B – For CONUS shipments, it’s the time from the storage or vendor date shipped/released, in the AS_/AU_ or AR_ transaction, to the consignee’s receipt or “tailgate” date. Unless transactions with “tailgate” dates are provided, this segment will not be populated. (**NOTE: A 527R/DRA/DRB may have two date fields; one for a record posting date, used in Segment 12, and one for a “tailgate” date. Each Service/Agency is to identify any transactions and/or record positions used for “tailgate” dates.**) For OCONUS shipments, when a CCP is not used, time is measured from the shipped/released date to the POE’s receipt date in a GTN provided transaction. DLMS transactions from commercial carriers may be used in this segment (for CONUS and OCONUS). The times and the number of shipments to a CONUS consignee or POE are shown.
C4.6.5.4.8. **Spreadsheet Report Columns P and Q**

- Logistics Pipeline Segment 8, “POE Processing” *(See C4.5.2.8.)*
- Report Spreadsheet Heading 8 – “POE ACTIVITY”
- LMARS database name “POET – NODE”

POE receipt and release dates, provided by GTN or other In-Transit data transactions, are used to calculate OCONUS times. The average times and number of shipments processed by a POE will be shown. **NOTE: When both the source of materiel and the Customer delivery point are in the CONUS, these columns will be blank, since CONUS shipments do not move through CCPs, POEs, or PODs.**

C4.6.5.4.9. **Spreadsheet Report Columns R and S**

- Logistics Pipeline Segment 9, “Port of Embarkation to Port of Debarkation In-Transit Time” *(See C4.6.2.9.)*
- Report Spreadsheet Heading 9 – “POE to Port of Debarkation (POD)”
- LMARS database name “ITTT – NODE”

Measurement is from POE release to POD receipt. IGC provides the transactions needed to calculate this segment’s times. DLMS or other In-Transit data transactions, if available, may also be used. Times and numbers for these columns are shown similar to the previous segments. **NOTE: When both the source of materiel and the Customer delivery point are in the CONUS, these columns will be blank, since CONUS shipments do not move through CCPs, POEs, or PODs.**

C4.6.5.4.10. **Spreadsheet Report Columns T and U**

- Logistics Pipeline Segment 10, “POD Processing” *(See C4.6.2.10.)*
- Report Spreadsheet Heading 10 – “POD Activity”
- LMARS database name “PODT – NODE”

IGC provides transactions with the POD receipt and release dates/times needed to calculate the OCONUS entries shown for this segment. **NOTE: When both the source of materiel and the Customer delivery point are in the CONUS, these columns will be blank, since CONUS shipments do not move through CCPs, POEs, or PODs.**

C4.6.5.4.11. **Spreadsheet Report Columns V and W**
- Logistics Pipeline Segment 11, “In-Theater In-transit Time” (See C4.6.2.11.)
- Report Spreadsheet Heading 11 – “IN-THTR IN-TRANS”
- LMARS database name “ITIT – NODE”

Measurement is from the POD release date to the consignee receipt or “tailgate” date, for all OCONUS areas. Unless transactions with “tailgate” dates are identified, this segment will not be populated. (NOTE: Transactions 527R/DRA/DRB, may have two date fields; one for a record posting date, used in Segment 12, and one for a “tailgate” date. Each Service/Agency is to identify any transactions and/or record positions used for “tailgate” dates.) DLMS transactions that measure commercial express service time from storage or vendor to consignee receipt will be included in this segment. Average times and the number of In-Theater shipments are shown. **NOTE: When both the source of materiel and the Customer delivery point are in the CONUS, these columns will be blank, since CONUS shipments do not move through CCPs, POEs, or PODs.**

C4.6.5.4.12. Spreadsheet Report Columns X and Y
- Logistics Pipeline Segment 12, “Receipt Take-Up Time” (See C4.6.2.12.)
- Spreadsheet Report Heading 12 – “RCPT TAKE UP”
- LMARS database name “RTT – NODE”

For CONUS and OCONUS (see NOTE in Segments 7B and 11), it is the time between consignee receipt or “tailgate” date and the record posting date in the 527R/DRA/DRB. Quantity and discrepancy Code fields in the 527R/DRA/DRB are not checked to verify total receipt. IGC or DLMS transactions, if applicable, may be used. If only a record posting date is available, this segment will not be populated. Times and number of receipted shipments are shown.

C4.6.5.4.13. Spreadsheet Report Columns Z and AA
- Logistics Pipeline Segment 13, “Total Order-Receipt Time”
- Spreadsheet Report Heading “TOTAL ORDER RECEIPT”
- LMARS database name “TPT – NODE”

This is the time between the requisition date and the receipt record posting date. These columns are only populated when the order to receipt cycle has been completed. A defined requisition (or a defined MRO) and a materiel receipt acknowledgment are the minimum transactions needed before a cycle’s time is reported. To calculate the average time for each area’s IPG, the aggregate time of the completed cycles is divided by the number of completions. At the bottom of each area is the number and weighted average of document numbers that were completed during the reporting month.
Included in these two columns are numbers and averages for DLA’s Prime Medical Vendor (PMV), Maintenance Repair Operations (MRO), and Perishable and Semi-Perishable orders. See Table G for their computation logic.

C4.6.5.4.14. Spreadsheet Report Columns Z and AA. The last two columns also show Total Order-Receipt, but with the document numbers with the highest five percent in terms of longest times in each area’s IPG eliminated. The objective of these columns is to present counts and average times with the extremes removed. Note: These columnar calculations are not performed for the GUARD, RESERVE, and CONTRACTOR Major Reports.

<tr>
<td>M</td>
<td>This address will be used as a mark-for on freight shipments. Mark-for addresses will be placed on small parcel labels in such a manner as to prevent small package carrier problems in identifying ZIP and APO/FPO codes. The fourth position of the MAPAC will contain an alphanumeric code to designate an in-country destination. This code will be the same as the code in RP 33 for the MILSTRIP requisition.</td>
</tr>
<tr>
<td>N-Z</td>
<td>Reserved.</td>
</tr>
<tr>
<td>1</td>
<td>This address will receive unclassified shipments moving by small parcel carrier or shipped by carrier that can provide evidence of shipment or proof of delivery in compliance with MILSTAMP, DTR 4500.9-M, Defense Transportation Regulation Part III chapter 203 item B. Packages moving through the State Department pouch room will not exceed 40 pounds, 26 inches length, or 62 inches length plus girth. For additional guidance on use of diplomatic pouch mail see chapter 1, paragraph 1.h. TAC 5 is the same address as TAC 1 unless published differently.</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>2</td>
<td>This address shall be used when surface or air freight is selected as the mode of transportation for shipment of unclassified materiel. Note that more than one TAC 2 address may be reflected for the same freight forwarder MAPAC. In this case, the MAPAD shall contain Special Instruction Indicator Code A which directs forwarding of the materiel/documentation to the address closest to the shipping activity. The clear text address field may contain the overseas address of the civil airport to be used for commercial air shipments if commercial air is authorized. TAC 6 is the same as TAC 2 unless published differently.</td>
</tr>
<tr>
<td>3</td>
<td>For sending a Notice of Availability (NOA), if required. This address shall be used when the Option Code (Y or Z in record position 46 of the requisition) requires a NOA prior to shipment. For Option Code Z, follow ups on the NOA shall also be sent to this address. Option Code A shipments which are of weight or dimensions which could cause receiving/storage problems, or perishable, hazardous, classified, or require special handling shall be handled as Option Code Z because of the peculiar handling/controlled nature required by the type of materiel being shipped. For a classified shipment, send the NOA to the receiving country service representative. In response to the NOA, the country representative must specify, by name, the person shall receive and sign for the shipment at the TAC A, B, C, or D address. Should there be no reply to the NOA, the service security assistance office shall be advised of the problem for Army and Air Force sponsored shipments; the Navy freight forwarder assistance office shall be advised for Navy and Marine Corps sponsored shipments. If the address provided by the country representative to receive a classified shipment is other than a TAC A, B, C, or D address, the service focal point shall be contacted for guidance. The Surface Deployment and Distribution Command (SDDC) shall contact the country representative for coordination in processing export release requests for classified materiel moving under a Delivery Term Code 8. The applicable freight forwarder shall also be contacted by SDDC for coordination in processing export release requests for sensitive materiel moving under a Delivery Term Code 8.</td>
</tr>
<tr>
<td>4</td>
<td>This address shall be used for distribution of supply and shipment status documents. Communication Routing Identifier (COMMRI) code shall be used for electronic distribution of supply and shipping status transactions. A COMMRI is a 7 character code that uniquely identifies an International Logistics Communication System (ILCS) account, established with the DLA Transaction Services, to electronically transmit and receive logistics data between the FMS country and the US DOD supply system.</td>
</tr>
<tr>
<td>TAC</td>
<td>EXPLANATION</td>
</tr>
<tr>
<td>-----</td>
<td>-------------</td>

<tr>
<td>1</td>
<td>This address will receive shipments moving by a carrier that can provide evidence of shipment or proof of delivery in compliance with MILSTAMP, DTR 4500.9-M, Defense Transportation Regulation Part III chapter 203 item B. Because Grant Aid materiel moves by DTS, shipments of both classified and unclassified materiel is included.</td>
</tr>
</tbody>
</table>

This address shall be used for distribution of documentation for unclassified shipments delivered by a small parcel carrier. The documentation may be DD Form 1348-1a, “Issue Release/Receipt Document,” DD Form 1348-2, “Issue Release/Receipt Document with Address Label,” DD Form 250, “Material Inspection and Receiving Report”; or any forms used for release/receipt. The TAC 5 address shall only be published when it is different from the TAC 1 address.

Documentation (release/receipt) for automatic freight shipment will be forwarded to this address. Documents that may be distributed to this address may include DD Form 1348-2, Issue Release/Receipt Document with Address Label; DD Form 1348-1A, Issue Release/Receipt Document; DD Form 250, Material Inspection and Receiving Report; or any forms used for release/receipt of shipments. The TAC 6 address will only be published when it is different from the TAC 2 address.

This address will be used to identify the activity responsible for payment of transportation charges for shipments made on collect commercial bills of lading or other types of collection delivery methods. The TAC 7 address will be established only when TACs A, B, C, D, 1, and 2 addresses (ship-to) are not authorized to make such payments (the freight forwarder is permitted to change this address as long as it remains within the freight forwarder’s operation).

Reserved.

TAC 9 indicated that the addresses for this MAPAC have been deleted; however, the MAPAC will remain in the directory to provide a reference to another MAPAC which will be used in processing documents that contain the deleted code. It can also provide reference to special instructions for processing documents containing the deleted MAPAC. The deleted entry will remain in the MAPAD for a period of 5 years.

### MAP GRANT AID

<table>

</thead>
<tbody>
<tr>
<td>TYPE OF CODE:</td>
<td>Alphanumeric.</td>
</tr>
<tr>
<td>EXPLANATION:</td>
<td>Designates DoD/purchasing country's responsibility for transportation and handling cost.</td>
</tr>
</tbody>
</table>

### a. Detailed explanation of DoD responsibility for CONUS originated FMS shipments.

<table>
<thead>
<tr>
<th>DTC</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Delivery to an inland destination with origin and destination in CONUS or origin and destination in the same overseas geographic area. The DoD is responsible for transportation to the specified destination at which the customer is responsible for unloading, accepting custody, and subsequent onward movement. Expenses to DoD for accessorial costs are reimbursable. This code, which has limited use, is normally associated with shipments such as training items sent to DoD Activities foreign officers or excess materiel of one country filling a requirement of another country in the same geographic area.</td>
</tr>
<tr>
<td>3</td>
<td>Delivery to a point alongside vessel or aircraft at the POE (FAS), port of embarkation (FAS POE). The DoD is responsible for transportation to a point within reach of the ship’s tackle or alongside the vessel/aircraft. The customer is responsible for loading aboard the vessel/aircraft and subsequent onward movement. Expenses to DoD for accessorial costs are reimbursable. This code has limited use.</td>
</tr>
<tr>
<td>4</td>
<td>Delivery at the origin. The materiel is made available to the customer at the point of origin (usually a depot, vendor’s loading dock, or a disposal activity). The customer is responsible for all transportation and related costs. Accordingly, the shipment is sent to a freight forwarder designated by the customer with transportation by prepaid parcel post, on a CBL prepaid by the freight forwarder, or paid for on a collect CBL. (If a TAC 7 address is listed for the MAPAC, a CBL is issued and “billed to” that address rather than sending the shipment collect.) This code is considered the standard code and is applied to most FMS transactions. Offshore procurement. Delivery at origin if customer has provided point to contact for the offshore procured items. If no point of contact is provided, delivery will be at destination. Contractor is responsible for movement to designated freight forwarder or country representative.</td>
</tr>
<tr>
<td>5</td>
<td>Delivery to a POE (free on board (FOB)). DoD is responsible for movement to the POE. The customer is responsible for unloading the shipment from the inland carrier at the POE, delivery alongside the vessel/aircraft, and all subsequent onward movement. Expenses to DoD for accessorial costs are reimbursable. This code has limited use and is applied only when prior arrangements for the use of port facilities at the customer’s expense have been made.</td>
</tr>
</tbody>
</table>
Delivery to an overseas POD. The DoD is responsible for transportation from the point of origin to the overseas POD. The customer is responsible for discharging the vessel/aircraft, port handling, and subsequent onward movement. Expenses to DoD for accessorial costs are reimbursable. Shipments are made on GBLs and in the DTS (including LOGAIR, QUICKTRANS, MAC, MTMC water ports, and/or MSC). Port handling at CONUS and overseas air terminals is provided without direct reimbursement by the customer when shipment is made under actual MAC tariff rates (which include such services). The customer does provide reimbursement for port handling when movement costs are charged using the DoD accessorial rate. At U.S. operated overseas water ports, handling costs are reimbursed according to local agreements between the United States and the customer; at the overseas air and water ports, charges are paid directly by.

The customer. This code is the standard code for materiel that is the customer restricted from movement to a freight forwarder. This code is normally applied to shipments of firearms, classified and explosive materiel, and in other instances specifically directed in the FMS case agreement.

Delivery to an inland point in the recipient country. DoD is responsible for transportation, including transocean and overseas inland movement, from the point of origin, to a specified inland location. The customer is responsible for unloading the shipment from the inland carrier at the specified location and for all subsequent onward movement. Expenses to DoD for accessorial costs are reimbursable. This code has limited use and normally applies to the shipment of materiel to those countries which have no seaports (e.g., Bolivia, Paraguay, Switzerland, and Austria). The shipper provides modes and routing from the origin to the consignee location by GBL or by special arrangement with MAC, MSC, or U.S. military activities within the country for movement from the POD to the consignee location.

Delivery onboard a vessel/aircraft at the POE. The DoD is responsible for transportation from the point of origin to the vessel at the POE including unloading from the inland carrier, port handling, and stowage aboard the vessel/aircraft. The customer is responsible for all subsequent onward movement. Expenses to the DoD for accessorial costs are reimbursable. Shipments are made on GBLs. This code is especially applicable for explosive materiel prohibited from movement by a freight forwarder, but which must move through Military-controlled port with onward movement arranged by and coordinated with the country freight forwarder.

Delivery to POD. The DoD is responsible for transportation from the point of origin to the overseas POD, including discharge from the vessel/aircraft. The customer is responsible for all subsequent handling and onward movement. Expenses to the DoD for accessorial costs are reimbursable.

b. Detailed explanation of DoD responsibility for FMS repair and return shipments originating from and returning to overseas.

A The DoD is responsible for transportation from a designated overseas POE to a CONUS destination and subsequent return to a designated overseas POD. The customer is responsible for overseas inland transportation of materiel to and from the overseas POE/POD and overseas port handling.

B The DoD is responsible for transportation from a designated overseas POE to a CONUS destination, return to a CONUS POE, and CONUS port handling. The customer is responsible for overseas inland transportation to the overseas POE, overseas port loading, and all return transportation from the CONUS POE to ultimate destination.
<table>
<thead>
<tr>
<th></th>
<th>The DoD is responsible for CONUS port unloading from the customer arranged carrier, transportation to and from a designated CONUS destination, and CONUS port loading of a customer arranged carrier. The customer is responsible for movement of materiel to and from the CONUS POD/POE.</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>The DoD is responsible for CONUS port unloading from the customer arranged carrier, transportation to a CONUS destination, and return to an overseas designated POD. The customer country is responsible for transportation to a CONUS POD, overseas port unloading, and overseas inland transportation to ultimate destination.</td>
</tr>
<tr>
<td>E</td>
<td>The customer is responsible for all transportation from overseas point of origin to the CONUS destination and return to an overseas destination.</td>
</tr>
<tr>
<td>F</td>
<td>The DoD is responsible for transportation from an overseas inland location to an overseas POE, overseas port handling, transportation to a CONUS POE, CONUS port handling, inland transportation to a designated conus destination, and return to an overseas destination.</td>
</tr>
<tr>
<td>G</td>
<td>The DoD is responsible for overseas port handling through an overseas POE, transportation to a CONUS POD, CONUS port handling, inland transportation to a CONUS destination, return to an overseas POD and overseas port handling. Customer country is responsible for overseas inland transportation to and from the overseas POE/POD.</td>
</tr>
<tr>
<td>H</td>
<td>The customer is responsible for all transportation from the overseas point of origin to the CONUS destination. The DoD is responsible for return transportation from the CONUS activity to the CONUS POE. The customer is responsible for return CONUS port handling and all transportation to the overseas destination. This code is required for return, repair or exchange, and reshipment of classified materiels.</td>
</tr>
<tr>
<td>J</td>
<td>The customer is responsible for all transportation from the overseas point of origin to the CONUS destination. The DoD is responsible for all transportation from the CONUS activity to the overseas destination. This code is required for return, repair or exchange, and reshipment of classified cryptographic materiels.</td>
</tr>

APPENDIX 2.11

AUTHORIZED EXCEPTIONS, SPECIAL PROCESSES, AND DELAYED IMPLEMENTATION DATES

(INTRODUCTION)

AP2.11.1. INTRODUCTION

AP2.11.1.1. DoD policy concerning the implementation of MAPAD procedures is contained in DoD Directive 4140.1 (reference (a)), and is summarized in chapter 1, paragraph G., of this manual.

AP2.11.1.2. Separate intra-Service/Agency systems/procedures will not be developed or used unless an authorized exception, special process, or delayed implementation date has been approved by the MAPAD System Administrator in accordance with the DUSD(P&L). The following rationale is applicable only to DIs pertaining to MILSTRIP supply distribution system(s).

AP2.11.1.3. Requests for exceptions, special processes, or delayed implementation dates will be forwarded by concerned focal points to the MAPAD System Administrator for consideration when it can be demonstrated the MAPAD cannot provide a workable method or procedure or that, for some reason beyond the control of the focal point or concerned Service/Agency, an approved change cannot be implemented on the scheduled date.

AP2.11.1.4. Requests for exceptions, special processes, or delayed implementation dates will not be granted solely to accommodate existing internal systems and procedures.

AP2.11.1.5. Requests for exceptions or special procedures will be forwarded to the MAPAD System Administrator by the Service/Agency focal point for review and coordination, if required, with DoD Components, affected Federal Agencies, foreign governments, and industrial organizations and shall provide the following minimum information:

AP2.11.1.6. Narrative description of the basic concept being proposed and reason(s) therefor.

AP2.11.1.6.1. Known interface and impact requirement with other DLSS and Services/Agencies.

AP2.11.1.6.2. Advantages/disadvantages of request.

AP2.11.1.6.3. Proposed wording required for appendix C.

AP2.11.1.6.4. Starting and ending dates of request.

AP2.11.2. FMS ADDRESSES – SECTION B

AP2.11.3. MAP GRANT AID ADDRESSES – SECTION C
### APPENDIX 2.12

| Service                       | (30)                           | (1) For MAP Grant Aid, enter the alphabetical code of the U.S. implementing Service/Agency designated to be the recipient of the MAP order.  
(2) For FMS, enter the Service code of the Service/Agency maintaining FMS case control. |
| Country                       | (31-32)                        | Appropriate recipient country for FMS and MAP Grant Aid materiel. |
| (First and Second Position)   |                                |                             |
| Customer Within Country       | (33) (Third Position)          | (1) For MAP Grant Aid, enter the one-digit alpha or numeric code to indicate the country recipient and place of discharge within the country.  
(2) For FMS, enter the one-digit alpha/numeric code that identifies the country’s selected mark-for address, which will be a part of shipment container markings. When RP 46-47 contains code XX, the |
address identified by the code in RP 33 will be the ship-to address. When code is not applicable, a numeric zero will be entered.

(3) An XW entry in RP 46-47 indicates instances where the materiel is to be delivered to an assembly point or staging area. In such instances, in-the-clear shipping instructions will be contained in the remarks portion of the requisitions and related MROs.

| Foreign Military Sales Delivery Term | (34) (Fourth Position) | (1) For FMS requisitions, enter the numeric code to identify delivery term for type of shipment.

(2) The above entry is not applicable to MAP Grant Aid requisitions. For MAP Grant Aid requisitions, always enter a numeric zero. |

| FMS and Grant Aid Type of Assistance Financing | (35) (Fifth Position) | The one-digit alpha or numeric code to identify the type of assistance. |

| Date | (36-39) | Year and three position day of year. |

| Serial Number | (40-43) | Enter the serial number of the requisition. The number is assigned at the discretion of the requisition initiator and will not be duplicated on any one day. |

| Supplementary Address | (45-50) | Contains entries indicated below:

(1) For FMS, this code must be the service assignment code B, P, D, K, or T.

(2) For MAP Grant Aid, enter an alpha Y to indicate that the contents in RP 46-50 are not meaningful to the system, but are to be perpetuated in the ensuing documentation. |

<p>| Address | (46-47) (First and Second Position) | (1) For FMS, enter the appropriate type of country FMS offer/release options in RP 46 and FF in RP 47 designated by the recipient country. When the shipments are to be made under U.S.-sponsored transportation, alpha XX will be entered. An XW entry in RP 46-47 indicates the materiel is to be delivered to an assembly point or staging area. In such instances, in-the-clear shipping instructions will be contained in the remarks portion of the |</p>

DEFENSE LOGISTICS MANAGEMENT SYSTEM

VOLUME 7

CONTRACT ADMINISTRATION

APRIL 24, 2012

DEPUTY ASSISTANT SECRETARY OF DEFENSE
(SUPPLY CHAIN INTEGRATION)
DEFENSE LOGISTICS MANAGEMENT SYSTEM
VOLUME 7, CONTRACT ADMINISTRATION
CHANGE 5

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 7, April 24, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 5 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services.” In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1188 dated December 26, 2018. Aligns DoD code names in the Type of Pack and Transportation Method/Type Code conversion guides with the USTRANSCOM Reference Data Management (TRDM) registry code names, and maps the TRDM to X12 code names. Adds a new mapping for Tank Car to the Type of Pack conversion guide. Updates the Unit of Materiel Measure (Unit of Issue/Purchase Unit) conversion guide to ensure DoD codes (other than those represented in the Federal Logistics Information System (FLIS) as documented in Cataloging Data and Transaction Standards, Volume 10, Tables 53 and 81) have the name assigned by X12. Additional updates correct some erroneous mappings for DoD Codes. Revises Chapter 1.

III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

Jan Mulligan
Performing the Duties of
Deputy Assistant Secretary of Defense for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 7, April 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 4 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards" to reflect the most recent name change for the DLMS Program Office. Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. “Defense Logistics Management System” is updated to “Defense Logistics Management Standards.” “DoDM 4140.1-R” is updated to “DoDM 4140.01.” References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”; and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Program Office memorandum:

   A. ADC 1157A dated February 23, 2017. Replaces ADC 1157 in its entirety, removes an incorrect business rule in position 10 of the PIID, updates the list of references to reflect approved (rather than draft) documents, and updates the implementation date to no later than March 31, 2017. There are no additional changes to the procedures or DLMS transactions identified in ADC 1157, which revised Chapter 1 and DLMS IC 856 Advance Shipment Notice (ASN).

   B. ADC 1161A February 23, 2017. Replaces ADC 1161 in its entirety and removes an incorrect business rule in position 10 of the PIID, updates the list of references to reflect approved (rather than draft) documents, and updates the implementation date to no later than March 31, 2017. There are no additional changes to the procedures or DLMS transactions identified in ADC 1161, which updated DLMS procedures to accommodate the PIID numbering system. This is a mandated change required by recent changes to the FAR and DFARS and all

III. The list below identifies the chapters, appendices or other files from the manual that are replaced by this change:

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense  
for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 7, April 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 8 include the following: “DLA Logistics Management Standards” is changed to “Defense Logistics Management Standards Office” to reflect the most recent name change for the DLMSO office, abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses., occurrences of “shall” are changed to “will” per a style change for DoD issuances, “Defense Logistics Management System” is updated to “Defense Logistics Management Standards”, “DoDM 4140.1-R” is updated to “DoDM 4140.01”, in accordance with General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”, page number formats in the “front matter” (Table of Contents, Process Change History page, etc.) of the volume have been revised, and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1161 dated August 1, 2016. Updates Uniform Procurement Instrument Identifier (PIID) Numbering System in the Federal/DLMS Implementation Conventions and DLMS Manuals. Updates DLMS procedures to accommodate the procurement instrument identifier (PIID) numbering system as required by recent changes to the Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS). All Components must comply with the PIID numbering requirements of DFARS subpart 204.16 for all new solicitations, contracts, delivery calls/orders, and agreements issued, and any amendments and modifications to those new actions. Additionally, this change provides guidance for legacy procurement instrument identification number (PIIN)/legacy call/order number during the initial transition. Revises Chapter 4
B. ADC 1233 dated August 4, 2016. Revises the page numbering of the “front matter” (Foreword, Process Change History, Table of Contents, Acronyms and Abbreviations, Definitions and Terms, References) in the DLM 4000.25 series of manuals to prepend an alphabetic indicator to the page numbers in each section of the front matter. Each page number will begin with an abbreviation of that section's name. Revises the front matter of the manual.

III. The list below identifies the chapters, appendices or other files from the manual that are replaced by this change:

DEFENSE LOGISTICS MANAGEMENT STANDARDS
VOLUME 7, CONTRACT ADMINISTRATION
CHANGE 2

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 7, April 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by *bold, italicized* print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 2 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards,” and updating “(PGI) 204.804-1” to “(PGI) 204.804.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1121A dated June 15, 2015. This change revises WAWF processing to apply specific edits to the Product/Service pairs for DLA EBS. (No direct changes to DLM Manuals or ICs.)

B. ADC 1157 dated April, 22, 2015. This change incorporated the changes published by FAR Case 2012-023, when it became a final rule to implement a uniform PIID numbering system and to standardize the identification of procurement transactions across the Federal Government. This change adds Contract Number Type Code S in the 856 and 857 Federal Implementation Conventions (IC), and in the Defense Logistics Management Standards (DLMS) 856 Advanced Shipment Notice (ASN). Revises DLMS Volume, 7, Chapter 1 Introduction. Revises DLMS 856 ASN, Federal 856 and 857. Revises DLMS Data Dictionary.

C. ADC 1163 dated June 25, 2015. This change revises the DLMS 567C IC for automated contract closeout procedures to support automated closeout requirements, and supports DFARS 204.804 requirements for routing to Electronic Document Access (EDA). Automated contract closeout allows a system to “automatically” initiate and execute the closeout action. This is distinguished from non-automated contract closeout procedure that use DLMS transactions but are initiated with human intervention. Revises DLMS Volume 7, Chapter 4 Contract

III. The list below identifies the chapters, appendices or other files from the manual that are replaced by this change:

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 7, April 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 1 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards,” and updating “(PGI) 204.804-1” to “(PGI) 204.804.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Defense Logistics Management Standards Office memorandum:

B. ADC 1113 dated July 2, 2014. Enhances WAWF to carry additional data fields found on contracts and delivery orders to the WAWF receiving report (RR) as requested by DLMS Trading partners supporting Security Cooperation (SC) shipments. Revises Federal IC 856 and 857, DLMS IC 856.

C. ADC 1121 dated July 15, 2014. Permitted up to fifteen (15) “Product/Service ID Qualifier” and corresponding “Product/Service ID” combinations (referred to as “product/service pairs”) in WAWF 856 transactions. Revises Federal IC 856 and 857; DLMS IC 856.

D. ADC 1139 dated July 16, 2014. Added the functionality to provide additional e-mail addresses for notifications in the WAWF Receiving Report (RR) transactions. Revises Federal IC 856 and 857.

E. ADC 1140 dated July 16, 2014. Added the functionality to WAWF to ensure compliance with DFARS requirements for IUID that must be satisfied before the WAWF Receiving Report (RR) can be created either via direct web input or Electronic Data...
Interchange (EDI). Revises Federal IC 856 and 857.

DEFENSE LOGISTICS MANAGEMENT SYSTEM

VOLUME 7 – CONTRACT ADMINISTRATION

FOREWORD

I. The Defense Logistics Management System (DLMS) manual is reissued as Defense Logistics Manual (DLM) 4000.25, Defense Logistics Management Standards (DLMS), under the authority of DoD Instruction (DoDI), 4140.0, DoD Supply Chain Materiel Management Policy. DLM 4000.25 is composed of multiple volumes, each supporting functionally related business processes. Volume 7 prescribes DoD standard procedures, data, and transactions for the interchange of information describing Contract Administration.

II. The provisions of this manual apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

III. This manual incorporates the Approved Defense Logistics Management Standards (DLMS) Changes (ADC) listed in the Process Change History page immediately following this Foreword. ADCs are published electronically on the ADC page of the DLMS Website. Recommended revisions to this manual will be proposed and incorporated under the Process Review Committee (PRC) forum for logistics functional areas. Submit all proposed change requests through your designated DoD Component PRC representatives. The procedures are in Volume 1, Chapter 3 of this manual and is available on the DLMS Website.

IV. This Volume is approved for public release and is available electronically on the DLMS Website. Use the comment form to contact the Enterprise Business Standards Office (EBSO).

Paul D. Peters
Deputy Assistant Secretary of Defense for Supply Chain Integration

C1. CHAPTER 1

INTRODUCTION

C1.1. GENERAL

C1.1.1. Purpose. This volume provides DoD standard procedures and electronic data interchange (EDI) conventions for the interchange of post award contract data using American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 transactions.

C1.1.2. Defense Logistics Management Standard (DLMS) Volume Access. Use of this volume requires simultaneous access to the DLMS Manual Volume 1 administrative items such as the list of acronyms and abbreviations, terms and definitions, and references; instructions for acquiring access to the DLMS standards database; DLMS to Defense Logistics Standard System (DLSS) cross-references and DoD/ASC X12 Conversion Guides; specific guidance that applies to all implementation conventions; and both functional and technical information that is relatively stable and applies to the DLMS as a whole.

C1.2. POLICY. The Federal Acquisition Regulation (FAR) and the Defense Federal Acquisition Regulation Supplement (DFARS) provide the DoD policies governing procedures in this volume.

C1.3. APPLICABILITY. This manual applies to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and the Defense Agencies, hereafter referred to collectively as the DoD Components. The manual applies, by agreement, to external organizations conducting logistics business operations with the Department of Defense including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

C1.4. SUPPLY PROCESS REVIEW COMMITTEE. The Supply Process Review Committee (PRC) is the forum through which the DoD Components and other participating organizations may participate in the development, expansion, improvement, maintenance, and administration of contract administration requirements for the DLMS. The chair, Supply PRC, in coordination with the Supply PRC representatives, Wide Area Workflow Program Management Office, and Director of Defense Procurement and Acquisition Policy (DPAP) is responsible for the content of this volume of the DLMS. Refer to Volume 1, Chapter 1, for a discussion of DLMS PRC functions and responsibilities.

C1.5. NONCOMPLIANCE. If reasonable attempts to obtain 1) compliance with prescribed procedures or 2) resolution of DLMS contract administration-related problems are unsatisfactory, the activity having the problem may request assistance
from their DLMS Supply PRC representative. The request will include information and copies of all correspondence pertinent to the problem; including the transaction set number, the transaction number, and the date of the transaction involved. The representative will take the necessary actions to resolve the issue or problem. The actions may include requesting assistance from the Supply PRC chair.

C1.6. PROCUREMENT INSTRUMENT IDENTIFICATION

C1.6.1. Background. The Federal Acquisition Regulation (FAR) was modified by FAR Case 2012-023 to implement a uniform Procurement Instrument Identification (PIID) numbering system to standardize identification of procurement transactions across the Federal Government. This change requires use of an Activity Address Code (AAC) as the unique identifier for contracting and related offices. For DoD activities, the FAR reference to AAC is the DoD Activity Address Code (DoDAAC). The DoD Activity Address Directory (DoDAAD) is the repository for all DoDAACs; it is also the repository of all AACs for the Federal Government. DFARS Case 2015-D011 modified the Defense Federal Acquisition Regulation Supplement (DFARS) to incorporate the changes necessary to comply with the requirements of FAR Case 2012-023, as well as preserve and update necessary Department-specific policy and instructions is in the review process.¹

C1.6.2. DoD and Federal Government PIID formats.

C1.6.2.1 The DoD PIID format will consist of a combination of thirteen alphanumeric characters, (13/13):²

- Positions 1 - 6 identify the department/agency and office issuing the instrument. Use the DoDAAC assigned to the issuing office for positions 1 through 6.

- Positions 7 - 8 are the last two digits of the fiscal year in which the procurement instrument is issued or awarded. This is the date the action is signed.

- Position 9 indicates the type of instrument issued.

- For DoD: Positions 10 - 13 are a four-character alphanumeric serial number. All “0s” is prohibited.

- The PIID may not contain special characters or spaces.

C1.6.2.2. The federal non-DoD PIID format will consist of a combination of thirteen to seventeen alphanumeric characters, (13/17):³

- Positions 1 - 6 identify the department/agency and office issuing the instrument. Use the DoDAAC assigned to the issuing office for positions 1 through 6.

---

¹ DFARS Subpart 204.16, and Procedures, Guidance and Information (PGI)
² Federal Acquisition Regulation Subpart 4.16 – Unique Procurement Instrument Identifiers
³ Ibid
• Positions 7 - 8 are the last two digits of the fiscal year in which the procurement instrument is issued or awarded. This is the date the action is signed.

• Position 9 indicates the type of instrument issued.

• For federal non-DoD: Positions 10 - 17 are a four- to eight-character alphanumeric serial number. All “0s” is prohibited.

• The PIID may not contain special characters or spaces.

C1.6.3. Supplementary Numbers - Procurement Instrument Identification Number and Supplementary PIID. Prior to FAR Case 2012-023 and the DFARS changes, the Supplementary Procurement Instrument Identification (SPIIN) was used to identify calls or orders under contracts, amendments to solicitations, and modifications to contracts and agreements. Under the recent FAR changes noted, calls or orders are no longer identified under the “SPIIN” data element; instead they will be identified by a separate and unique PIID. The Supplementary PIID (6 positions) is only used for modifications to contracts and agreements and follows the six-character format DoD currently uses for modifications against contracts (e.g., P00001, A00001).

C1.6.4. Implementation Timeline. The uniform PIID timeline will be a staggered implementation and both the legacy PIIN and SPIIN, and the new PIID and Supplementary PIID will be used for some period of time until existing contracts using the legacy PIIN/SPIIN numbering are closed.
C2. CHAPTER 2

SHIPMENT NOTIFICATION

C2.1. GENERAL. This chapter prescribes standard procedures to report the shipment of supplies by vendors to the Department of Defense. These reports are either generated online in Wide Area Workflow (WAWF) or transmitted to WAWF using the 856, Advance Shipment Notice (ASN). The ASN provides an electronic receiving report to designated recipients to enable electronic processing of the receipt and acceptance of supplies. The ASN replaces the functionality of the DD Form 250, Material Inspection and Receiving Report.

C2.2. PROCEDURES.

C2.2.1. The Defense Federal Acquisition Regulation Supplement (DFARS), Subpart 232.70, Electronic Submission and Processing Payment Requests and Receiving Reports, prescribes policies and procedures for submitting and processing receiving reports in electronic form.

C2.2.2. DFARS Appendix F, Part 3, Preparation of the Wide Area Workflow Receiving Report, prescribes instructions for the preparation of the receiving report.

C2.2.3. The WAWF Electronic Data Interchange Implementation Guides on the WAWF Website define the structure and associated business rules for generating and transmitting the 856 ASN.
C3. CHAPTER 3

DESTINATION ACCEPTANCE REPORTING

C3.1. GENERAL. This chapter provides standard procedures for the receiving activity to report acceptance of materiel at destination. Activities performing acceptance at destination shall prepare and transmit an Acceptance Report (AR) either online in Wide Area Workflow (WAWF) or by transmitting the DLMS 861, Acceptance Report to WAWF. The Defense Finance and Accounting Service (DFAS) matches the Acceptance Report to the contracts stored in the Electronic Document Access (EDA) system and to the vendor's invoice to effect payment to the vendor.

C3.2. PROCEDURES.

C3.2.1. The Defense Federal Acquisition Regulation Supplement (DFARS) Appendix F, Part 3, Preparation of the Wide Area Workflow Receiving Report, prescribes instructions to prepare the receiving report to record acceptance.

C3.2.2. The WAWF Electronic Data Interchange Implementation Guides on the WAWF Website define the structure and associated business rules for generating and transmitting the DLMS 861A, Acceptance Report to WAWF.
C4. CHAPTER 4

CONTRACT COMPLETION STATUS REPORTING

C4.1 GENERAL

C4.1.1. Purpose. This chapter prescribes standard procedures for reporting:

C4.1.1.1. The status of unclosed contracts subsequent to physical completion,

C4.1.1.2. Major events leading to the closing of the contract files by the Contract Administration Office (CAO), the office administering the contract for closeout including where administration is retained by the Purchasing Office (PO),

C4.1.1.3. The extension of the contract closeout period by the CAO,

C4.1.1.4. The extension of the contract closeout period by the PO,

C4.1.1.5. The execution of an automated contract closeout,

C4.1.1.6. The update of a previously submitted contract closeout, and

C4.1.1.7. The final closeout of a cancelled contract in Electronic Document Access (EDA).

C4.1.2. Scope. These reports are identified as Defense Logistics Management Standards (DLMS) Supplement 567C, Contract Completion Status, and primarily provide information to the PO for closing and retiring its contract files. The DLMS transactions are available on the Defense Logistics Management Standards Website on the DLMS IC page.

C4.1.3. Computer Formats. These procedures provide computer processable formats in lieu of hard copy documents and complement those in Federal Acquisition Regulation (FAR), 4.804-1 and the Defense Federal Acquisition Regulation Supplement (DFARS) Procedures, Guidance and Information (PGI) 204.804.

C4.1.4. Contract Completion Statements. Each CAO-issued DLMS 567C may include only one contract completion statement, automated contract closeout, update to an initial automated contract closeout, cancellation of a closeout action, or final closeout of a cancelled contract in EDA. The PO-issued DLMS 567C may include only one contract closeout extension. Multiple contract completion statements within a single DLMS 567C transmission are not permitted at this time.
C4.2. BASIS FOR CONTRACT CLOSING

C4.2.1. Contract Face Value. The basis for closing contract files depends upon the face value of the contract and the extent of administration accorded to it.

C4.2.2. Closeout Code. The CAO uses the conditions set forth in the contract closeout group codes to group the contracts for follow-on closing actions.

C4.3. STANDARD TIMES FOR CONTRACT CLOSING. FAR 4.804-1 prescribes the time standards for closing contracts. These standards are based on the date that the contract is physically completed and on the contract type. When the CAO closes the contract within the time standards, it reports the closure under the procedures in section C4.4. When the CAO does not close the contract within the time standards, it reports the status under the procedures in section C4.5, until it closes the contract and finally reports it under section C4.4.

C4.4. CONTRACT PAYMENT. When an office other than the office with primary contract administration responsibility performs the payment function on a contract, the disbursing office will notify the primary CAO when final payment has been made and the disbursing office file closed. The CAO will forward the status within five workdays after expiration of the standard closing period.

C4.5. CONTRACT COMPLETION STATEMENT

C4.5.1. Purpose. The contract completion statement is the DFARS-authorized electronic version of the DD Form 1594, Contract Completion Statement. It is the means by which the CAO informs the PO (or designated Automatic Data Processing (ADP) point) of the major events of physical completion, final payment, and/or closure of the CAO contract file. For all contracts, a final contract completion statement is the basis for the PO to closeout its contract file. For contracts with a total value of under $500,000, the closeout process is automated per FAR 4.804-5(a) and DFARS 204.804-3, see section C4.11. Automated Contract Closeout for additional information.

C4.5.2. Contract Completion Definition. A contract is physically completed when,

C4.5.2.1. For supplies and services contracts:

C4.5.2.1.1. The contractor has completed the required deliveries of supplies and the Government has inspected and accepted such supplies, and

C4.5.2.1.2. The contractor has performed all services and the Government has accepted such services, and all option provisions, if any, have expired, and

C4.5.2.1.3. A notice of complete contract termination has been given to the contractor by the Government;
C4.5.2.2. For facilities contracts and rental, use, and storage agreements, a notice of complete termination has been issued or the contract period has expired.

C4.5.3. **Physical Completion of Large-Purchase Contract.** When a large-purchase contract such as Contract Closeout Group Code B, C, or D, is physically completed (i.e., delivered complete and the materiel or service accepted), the CAO with the primary contract administration responsibility will forward an interim contract completion statement to the PO to report physical completion.

C4.5.4. **Final Payment for Large-Purchase Contract.** For a large-purchase contract, Contract Closeout Group Code B, C, or D, when final payment is made and other actions completed, the CAO with primary contract administration responsibility will send a final contract completion statement to the PO based upon physical completion, final payment, and completion of all administrative actions.

C4.5.5. **Unliquidated Amount.** The unliquidated amount is money that was obligated on the contract but not spent. In all cases, the final contract completion statement must include any unliquidated amount that remains on the contract or order after final payment has been made. The unliquidated amount is the remainder of the accumulated amounts paid, as netted by all collections, subtracted from the amount obligated on the contract by any contract modifications, and adjusted by deductions and all variance codes. The unliquidated amount must be conveyed in the AMT data segment of the CS loop in the DLMS 576C and will appear only when an unliquidated amount remains on the contract. The accountable activity must reclaim this money before the PO closes the contract.

C4.5.6. **Contract Over Payments.** Contract over payments can occur when the contract contains the quantity variation clause, FAR 52.211-16 Variation in Quantity, and contractors deliver a quantity within the overage quantity permitted. In this instance, the contract funding is deficient and additional funds must be obligated before the contract can be closed. The deficient funds may be cited in the AMT segment and identified by Code C in AMT03.

C4.5.7. **Receipt of Contract Extension Report.** When the CAO has received a contract completion extension report from the PO, and if the CAO had to perform an additional contract administration function, the CAO will issue a final contract closeout statement report within five workdays after the extended closeout date. If the CAO did not have to perform additional contract administration functions after the extension transaction was issued, the contract file will be closed and the last issued final contract completion statement will apply.

C4.6. **UNCLOSED CONTRACT STATUS.** The CAO will send an unclosed contract status report to the PO (or designated ADP point) for each contract that will not be closed within the timeframe established in FAR 4.804-2.

C4.6.1. **Reason for Delay.** The status report will include the reasons for delay and the target date that has been set for closing.
C4.6.2. Revised Unclosed Status Report. If the contract is not closed by the target date, a revised unclosed contract status report will be sent with the new target date and reason(s) for further delay.

C4.6.3. Timeframe. A CAO with primary contract administration responsibility will send the unclosed contract status report to the PO. The CAO will forward the unclosed status report within 45 days after the expiration of the standard closing period (refer to DFARS Procedures, Guidance, and Information (PGI) 204.804-2).

C4.7. CONTRACT CLOSEOUT EXTENSION

C4.7.1. Purpose. The PO will use the contract completed date in the contract completion statement as the closeout date for file purposes. When completion of any pending significant PO action extends beyond this closeout date, the PO will send a contract closeout extension notice to the CAO (or designated ADP point) advising of the extended closeout date.

C4.7.2. Timeframe. The PO must forward the extension to the CAO within 5 workdays after receipt of the completion statement.

C4.7.3. Status. The CAO will then hold the contract open until the extended closeout date.

C4.7.4. Revision of Closeout Extension. The PO must ensure that when the extended closeout date is to be revised, another extension notice, with a new extended closeout date, is sent to the CAO.

C4.7.5. Closure. The CAO will close the contract file when the extended closeout date is passed. If the CAO performed an additional contract administrative function, it will issue another contract completion statement report; otherwise, the previous statement report will remain in effect.

C4.7.6. Exception to Closure. A contract file must not be closed if the contract is in litigation or under appeal; or in the case of a termination, all termination actions have not been completed. See FAR 4.804-1(c).

C4.8. CANCELLATIONS. Conditions may necessitate the cancellation of a contract completion status transaction. Cancellation is done by sending the procurement instrument identifier (PIID)\(^1\) and Supplementary PIID (when applicable), CAO, and PO of the original transaction and a Transaction Status Indicator Code K. When a PIID call/order number (F in 9th position) is used, provide the value in the PIID field.

C4.9. FAST PAY CONTRACTS. Normally, a PO receives both a shipment notice transaction and a contract completion statement transaction on each contract. On fast-pay contracts that do not exceed $25,000, however, shipment information is not

\(^1\) Use the legacy PIIN pending transition to the PIID. When using the PIIN, may include the four-position call/order number. Refer to ADC 1161A.
required by the Army, Navy, or DLA. The Army will use the contract completion statement both to show performance and to close the contract. The Air Force requires and receives the shipment information and a contract completion statement on fast-pay contracts.

C4.10. PREPARATION OF THE DLMS 567C TRANSACTION. The instructions to prepare the DLMS 567C are on the Defense Logistics Management Standards Website on the DLMS IC page.

C4.10.1. Structure. This transaction set contains only one table.

C4.10.2. Uses. As discussed in sections C4.4., C4.5., C4.6., and C4.11., there are eight uses of the contract completion status transaction. Each use is identified by a code in the 1/CS05/050 data element.

C4.10.2.1. CAO Issuance. Those issued by the CAO:

C4.10.2.1.1. The unclosed contract status (Code D);

C4.10.2.1.2. The final contract completion statement for a small purchase (Code A);

C4.10.2.1.3. The interim contract completion statement for a large purchase (Code B); and

C4.10.2.1.4. The final contract completion statement for a large purchase (Code C).

C4.10.2.2. PO Issuance. The transaction issued by the PO is the contract closeout extension (Code E).

C4.10.2.3. DFAS Issuance. The transaction issued by DFAS is the financial contract completion statement (Code F).

C4.10.2.4. Invoicing, Receipt, Acceptance and Property Transfer (iRAPT). The final contract completion statement for automated contract closeouts (Code G); and

C4.10.2.5. Multiple Users. Final closeout for a cancelled contract (Code H).

C4.10.3. Name/Place Data. There are two N1 data segments for names and places.

C4.10.3.1. To/From Code. The 1/N1/030 segment precedes the 1/CS/050 loop, and with two iterations, carries the Code FR (from) and the Code TO (to); these will be the appropriate PO and CAO that will be common to all records in a given transaction set. DAAS/GEX will forward an image (copy) of all 567C contract closeout

---

2 Refer to Volume 7, Appendix 1 (ADC 1163)
transactions to EDA regardless of the originating system or method of closeout. Refer to ADC 1163. See C4.11.8 for N1 segment addressing for automated contract closeout procedures.

C4.10.3.2. Paying Office. The 1/N1/120 segment in the 1/CS/050 loop will identify a paying office or a contractor when one applies to the record.

C4.10.3.3. Transaction Status Code. Each applicable transaction status indicator code is carried in an iteration of the 1/LQ/110 data segment. Only Codes F, J, and K may be used in this transaction set.

C4.10.3.4. Cancellation Report. A cancellation report is identified by the Transaction Status Indicator Code K in a 1/LQ/110 data segment. A cancellation report must be sent at least one calendar day before its replacement report. A cancellation report requires the To, the From, the PIID and the Supplementary PIID (if applicable), the code for the type transaction, and the cancellation code.

C4.11. AUTOMATED CONTRACT CLOSEOUT

C4.11.1. Purpose. The Automated Contract Closeout is a systemic process in the Contract Closeout module accessible from the Wide Area Work Flow (WAWF) eBusiness Suite home screen for EDA users with an active ‘Upload/Inactive Contracts’ role. This will apply where notifications are distributed using data from WAWF eBusiness Suite, iRAPT, EDA, and MyInvoice.

C4.11.2. Authority. As permitted by FAR 4.804-5(a) and DFARS 204.804-3, automated contract closeout allows a system to initiate and execute the closeout action.

C4.11.3. Eligibility Requirements.3 Contracts to be closed must not be administered by the Defense Contract Management Agency (DCMA) unless the “Admin By DoDAAC” matches a DoDAAC on an exception list. A new Contracting Officer role will be created within the Automated Contract Closeout module to enable contracts to be placed on hold. Under the Authority identified in C4.11.2, contracts qualify for the automated closeout process if the contract meets the following requirements:

C4.11.3.1. Identified in the Procurement Data Standards (PDS) extensible markup language (XML) data as firm-fixed priced,

C4.11.3.2. Does not exceed a total contract value of $500,000 (inclusive of exercised options),

C4.11.3.3. Does not have a hold on the contract placed by the Contracting Officer, and

C4.11.3.4. Does not contain any of the following clauses requiring administrative action at closeout:

3 Refer to ADC 1163, Update DLMS 567C Automated Contract Closeout.
• FAR 52.211-11 Liquidated Damages—Supplies, Services, or Research and Development.

• FAR 52.216-7 Allowable Cost and Payment.

• FAR 52.227-9 Refund of Royalties.

• FAR 52.227-11 Patent Rights—Ownership by the Contractor.

• FAR 52.227-13 Patent Rights—Ownership by the Government.

• FAR 52.232-16 Progress Payments.

• FAR 52.232-29 Terms for Financing of Purchases of Commercial Items.

• FAR 52.232-30 Installment Payments for Commercial Items.

• FAR 52.232-32 Performance-Based Payments.

• FAR 52.245-1 Government Property.

• FAR 52.248-1 Value Engineering.

C4.11.3.5. Use of PDS data from EDA enables review of applicable clauses, which is then coupled with evidence of submission from iRAPT and payment of the final invoice in MyInvoice.

C4.11.3.6. The following conditions are necessary for automated closeout using this capability:

• Contract must utilize WAWF for deliveries and payments.

• Contract must be available in EDA as PDS.

• Entitlement systems must feed WAWF invoice status.

C4.11.4. Initiation of Automated Contract Closeout. If the eligibility requirements are met, automated contract closeout can be initiated once deliveries are complete and the final invoice is paid.

C4.11.4.1. A 60-day parameterized window will be established once deliveries are complete and the final invoice is paid.

C4.11.4.2. If a document is received during the 60-day window, a new 60-day window will be set based on the following:

C4.11.4.2.1. If a new shipment document is received, the new window will start upon that document becoming "processed" in WAWF.
C4.11.4.2.2. If a new invoice is received, the new window will start upon receipt of the MyInvoice transaction reflecting “paid.”

C4.11.4.3. At the end of the final 60-day window, the DLMS 567C will be released to EDA via the GEX.

C4.11.5. Authority and Eligibility Statement. The automated contract closeout transactions statement of authority and eligibility for initiation of the automated contract closeout cited in C4.11.2 and C4.11.4 will be included by reference in the automated contract closeout transaction when using 1/BC07/020, code CL – Closed.

C4.11.6. Generating Updates to Automated Contract Closeout

C4.11.6.1. If additional documents are received after the transmission of the Automated Contract Closeout to EDA, a new 60-day parameterized window to monitor for additional transactions that would impact the closeout will be established based upon the following criteria:

C4.11.6.1.1. If a new shipment document is received, the new window will start upon that document becoming “processed” in WAWF.

C4.11.6.1.2. If a new invoice is received, the new window will start upon receipt of the MyInvoice transaction reflecting “paid.”

C4.11.6.2. Simultaneous with establishment of a new parameterized window, iRAPT will generate a DLMS 567C Cancellation of a previously submitted automated contract closeout action. This will be identified by 1/BC07/020 Code 2 (Change (Update)), 1/CS05/050 Code G (Final contract completion statement for contract closeouts) and 1/LQ02/110 Code K (Cancellation). This will notify EDA that additional documents were received and a new 60-day parameterized window is started. This ensures that the contract is not open in one system and closed in another system.

C4.11.6.3. At the end of the 60-day period, an updated DLMS 567C will be released to EDA via the GEX. The beginning segment will contain the Action Code 2 to indicate that the transaction is an updated automated contract closeout.

C4.11.7. Name/Place Data for Automated Contract Closeout

C4.11.7.1. To/From code.4 The automated contract closeout notices will be distributed electronically using the DLMS 567C transaction set to EDA and applicable Agency Accounting Identifiers (AAI)

---

4 Under the existing design (March 2015), the Automated Contract Closeout transactions will not contain a From and To indicating the sending and receiving organizations for the transaction set and will use the DLMS 567C transaction header envelope and GEX routing rules. This change will have a phased implementation and requires an ECP be developed by the WAWF-iRAPT PMO. Refer to ADC 1163.
C4.11.7.2. The 1/N1/030 segment precedes the 1/C/050 loop, and with two iterations, carries the Code FR (from) and the Code TO (to); this will be WAWF-iRAPT in the FR and the AAI in the TO.

C4.11.7.3. Use the appropriate qualifier in N101 and N103 to identify WAWF-iRAPT, EDA, and the AAI.

C4.11.7.3.1. To identify WAWF-iRAPT, use N101/RGA and N103/93.

C4.11.7.3.2. To identify the AAI, use N101/CW and N103/PI.

C4.11.7.3.3. To identify EDA, use N101/EM and N103/94.

C4.11.7.4. DAAS/GEX will forward an image (copy) of all 567C contract closeout transactions to EDA regardless of the originating system or method of closeout.5

C4.12. CANCELATION OF A UNILATERAL PURCHASE ORDER NOT ACCEPTED BY THE CONTRACTOR

C4.12.1. As permitted by FAR 13.004 the Government may unilaterally issue an award in response to a vendor’s quote. Such awards are not binding contracts until acceptance by the vendor either in writing or through performance. As such, there are sets of contracts that remain open in Defense business systems even though no deliveries or work has or will ever occur. C4.12.2 provides the mechanism for identifying and closing these unfulfilled awards in order to free obligated funds and stop perpetuating these extraneous contract files. Contracts identified as unfulfilled, should be administratively closed in accordance with FAR42.302(a)(63).

C4.12.2. A cancelation of a unilateral purchase order not accepted by the contractor will be submitted using Code H in 1/CS05/050.

C4.12.3. This procedure applies to both automated closeouts systemically initiated by iRAPT, as well as all other non-automated closeouts submitted by other systems.

5 Refer to ADC 1163.
AP1. APPENDIX 1

CONTRACT CLOSEOUT STATUS REPORT CODES

NUMBER OF CHARACTERS: One

TYPE OF CODE: Alpha

EXPLANATION: Used in the DLMS 567C Contract Completion Statement/ Unclosed Contract Status/Contract Closeout to identify the type and purpose of the transaction.

DLMS SEGMENT/QUALIFIER: CS Segment, CS05 Data Element ID 127
