DEFENSE LOGISTICS MANAGEMENT SYSTEM

VOLUME 1

CONCEPTS AND PROCEDURES

May 19, 2014

DEPUTY ASSISTANT SECRETARY OF DEFENSE (LOGISTICS)
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 1, May 19, 2014, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 9 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

ADC 1344 dated June 19, 2019. (Administrative Update) Removes unused and outdated Federal EDI implementation conventions (IC) from the Enterprise Business Standards Office (EBSO) Website. Unless noted, EBSO does not maintain or update these Federal ICs. Revises Chapters 3 and 4.

III. The list below identifies the chapters, appendices, or other files from the manual that are added or replaced by this change:

**Added or Replaced Files**

- Change History Page
- Chapter 3
- Chapter 4
IV. This change is incorporated into the on-line DLM 4000.25 series of manuals and the PDF files containing the entire set of change files on the publications page of the Enterprise Business Standards Office Website: www.dla.mil/does/dlms-pubs

Steven P. Whitney, Brig Gen, USAF
Acting Deputy Assistant Secretary of Defense for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 1, May 19, 2014, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 8 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1188 dated December 26, 2018. Aligns DoD code names in the Type of Pack and Transportation Method/Type Code conversion guides with the USTRANSCOM Reference Data Management (TRDM) registry code names, and maps the TRDM to X12 code names. Adds a new mapping for Tank Car to the Type of Pack conversion guide. Updates the Unit of Materiel Measure (Unit of Issue/Purchase Unit) conversion guide to ensure DoD codes (other than those represented in the Federal Logistics Information System (FLIS) as documented in Cataloging Data and Transaction Standards, Volume 10, Tables 53 and 81), have the name assigned by X12. Additional updates correct some erroneous mappings for DoD Codes. Revises Chapter 2, Chapter 7, Appendix 4, and Table of Contents.

B. ADC 1280 dated December 26 2018. Adds content from DLM 4000.25-1, MILSTRIP and DLM 4000.25-2, MILSTRAP Chapter 1 “General Information” to appropriate areas in the DLMS Manual. Also adds content from MILSTRAP Chapter 2 “MILSTRAP Features” to the DLMS Manual. Revises Chapter 1 and Chapter 3.

C. ADC 1332 dated January 16, 2018. Documents administrative changes to align the terms, abbreviations, definitions, and acronyms in DLMS Volume. Revises Appendix 2 and Appendix 3.
III. The list below identifies the chapters, appendices, or other files from the manual that are added or replaced by this change:

CHANGE 7

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 1, May 19, 2014, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 7 include the following: Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1181B dated April 6, 2018. Documents functional enhancements and adds required functionality to the existing SDR vendor noncompliance system exchange and business rules between WebSDR and Supplier Performance Risk System (SPRS). Revises Appendix 3.

B. ADC 1244 dated June 7, 2018. Defines procedures and establishes a coordinated implementation to exchange item unique identification (IUID) and serialization data in accordance with DODM 4140.01. Adds DLMS procedures to include serialization data in all DLMS balance-affecting transactions and selected additional transactions for UIT programs. Adds a new chapter titled “Procedures for Serially Managed Materiel Requiring Owner Visibility”, and allows for expansion to other areas as ODASD Logistics and the DoD IUID Working group identify additional IUID requirements for serially managed materiel requiring owner visibility while physically located at DLA Distribution Centers. Revises Appendix 3.

C. Withdrawal of ADC 1259 dated October 20, 2017. Formal withdrawal of ADC 1259 in its entirety due to the disapproval by the X12 standards body to add the Code OY (drained net weight) to the standard for X12 Data Element 355. Revises Appendix 4.
D. ADC 1274 dated June 4, 2018. On April 18, 2017, the SCESC agreed to transfer chairmanship of the JSA/LWCG from the Enterprise Business Standards Office to the Army. Revises Chapter 1.

E. ADC 1275 dated March 8, 2018. Updates DLM 4000.25, Defense Logistics Management Standards (DLMS), to clarify which characters are and are not valid in DLMS EDI transactions. Revises Chapter 6.

III. The list below identifies the chapters, appendices or other files from the manual that are added or replaced by this change:

VOLUME 1, CONCEPTS AND PROCEDURES
CHANGE 6

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 1, May 19, 2014, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 6 include the following: Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per a style change for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1151 dated September 14, 2017. Removes references to specific record retention periods for documents/transactions, and advises the Components to retain data created as a result of DLMS business processes in accordance with the DODI 5015.02, DOD Records Management Program. Revises Chapter 2 and Appendix 3.

B. ADC 1198 dated October 6, 2016. One of a series of DLMS changes to define procedures and establish a coordinated implementation to exchange serial number and unique item identifier (UII), when available, to support Financial Improvement and Audit Readiness (FIAR) compliance and accountability over service owned capital equipment stored at DLA. This change is based upon the capital equipment candidate requirements in the DoD Integrated Requirements Set (IRS) for Item Unique Identification (UID) in Supply Business Processes. Revises Appendix 1, Appendix 2, and Appendix 3.
C. ADC 1240 dated June 19, 2017. Requires the Services/Agencies to issue an official letter to designate a primary and alternate Process Review Committee (PRC) and Work Group (WG) contact to represent their Service/Agency in all matters relevant to the PRC, and WG. Provides a sample for the official correspondence for the Component response to a Proposed DLMS Change. Revises, Chapter 1 and adds new Appendix 11.

CHANGE 5

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 1, May 2014, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 5 include the following: References listed in Appendix 1 are updated. "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards" to reflect the most recent name change for the Enterprise Business Standards Office. Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses, occurrences of “shall” are changed to “will” per a style change for DoD issuances. “Defense Logistics Management System” is updated to “Defense Logistics Management Standards”. “DoDM 4140.1-R” is updated to “DoDM 4140.01”. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”; and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1161A dated February 23, 2017. Replaces ADC 1161 in its entirety; it removes an incorrect business rule in position 10 of the PIID, updates the list of references to reflect approved (rather than draft) documents, and updates the implementation date to no later than March 31, 2017. There are no additional changes to the procedures or DLMS transactions identified in ADC 1161, which updated DLMS procedures to accommodate the PIID numbering system. This is a mandated change required by recent changes to the FAR and DFARs and all Components must comply with the PIID numbering requirements of DFARS subpart 204.16 for all new solicitations, contracts, delivery calls/orders, and agreements issued, and any amendments and modifications to those new actions. Additionally, this change provides guidance for legacy procurement instrument identification number (PIIN)/legacy call/order number during the initial transition. Revises Appendix 2 Terms and Definitions, Appendix 3 Acronyms and Abbreviations and Chapter 4 Functional Application Errors.
B. ADC 1213 dated November 21, 2016. Clarifies the processing of logistics Interfund bills to limit the length of bill numbers to five characters in DLMS variable length transactions in accordance with DLM 4000.25, Volume 4 and explains which bill numbers to include in adjustment requests and replies. Revises Appendix 2, Terms and Definitions and Appendix 3, Acronyms and Abbreviations.

C. ADC 1226 dated May 10, 2017. Implements intra-Air Force procedures for the rejection of DLMS transactions as a variation of the rejection procedures described in ADC 1103. It authorizes additional data content to identify the manufacturer part number, local stock number, and commercial and government entity (CAGE) code in the DLMS 824R Reject Advice transaction. In addition, the change adds several new reject advice codes. Revises Chapter 4, Functional Application Errors. Revises DLMS IC 824R.

VOLUME 1, CONCEPTS AND PROCEDURES
CHANGE 4

I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 1, May 2014, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 4 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards" to reflect the most recent name change for the Enterprise Business Standards Office, abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses., occurrences of “shall” are changed to “will” per a style change for DoD issuances, “Defense Logistics Management System” is updated to “Defense Logistics Management Standards”, “DoDM 4140.1-R” is updated to “DoDM 4140.01”, in accordance with General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”, page number formats in the “front matter” (Table of Contents, Process Change History page, etc.) of the volume have been revised, and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1161 dated August 1, 2016. Updates Uniform Procurement Instrument Identifier (PIID) Numbering System in the Federal/DLMS Implementation Conventions and DLMS Manuals. Updates DLMS procedures to accommodate the procurement instrument identifier (PIID) numbering system as required by recent changes to the Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS). All Components must comply with the PIID numbering requirements of DFARS subpart 204.16 for all new solicitations, contracts, delivery calls/orders, and agreements issued, and any amendments and modifications to those new actions. Additionally, this change provides guidance for legacy procurement instrument identification number (PIIN)/legacy call/order number during the initial transition. Revises Chapter 4, Appendix 2, and Appendix 3.
B. ADC1202 dated July 12, 2016. Establishes a requirement for the Defense Logistics Agency (DLA) Distribution Standard System (DSS) to capture Certificate of Conformance (CoC) and Alternate Release Procedures (ARP) indicators when present in the DLMS 856 Advance Shipment Notice (ASN) provided via Invoicing, Receipt, Acceptance, and Property Transfer (iRAPT), formerly Wide Area Work Flow (WAWF), interface. DSS will recognize inclusion of the ARP or CoC indicator in the DLMS 856 ASN and store the ARP and CoC indicators for use upon receipt of the shipment matching on procurement instrument identifier (PIID)/contract number and contract line item number. Additionally, a new edit in DSS is established to prevent creation of a supply discrepancy report (SDR) with Discrepancy Code D4 when ARP or CoC indicators are present. Revises Appendix 3.

C. ADC 1233 dated August 4, 2016. Revises the page numbering of the “front matter” (Foreword, Process Change History, Table of Contents, Acronyms and Abbreviations, Definitions and Terms, References) in the DLM 4000.25 series of manuals to prepend an alphabetic indicator to the page numbers in each section of the front matter. Each page number will begin with an abbreviation of that section’s name. Revises the front matter of the manual.

D. ADC 1239 dated July 29, 2016, Adds the DLMS Compliance Checklist to Appendix 10.

**Added or Replaced Files**

Ms. Dee Reardon
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards (DLMS), Volume 1, May 2014, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Administrative updates to the documents include: In all updated documents "Defense Logistics Management System" is changed to "Defense Logistics Management Standards" per DoDI 8190.01E. In accordance with new direction for issuances, “shall” has been replaced by “will”, “must”, or other appropriate words or phrases throughout the updated documents. An additional administrative update changes “DoDM 4140.1-R” to “DoDM 4140.01.”

In accordance with DLA General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services”.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1043E dated October 5, 2015. Extends Defense Automatic Addressing System (DAAS) edits for invalid or missing fund codes to include transactions with Signal Codes A, B, J, and K and one scenario pertaining to Signal Codes C and L that had previously been omitted. It excludes image and post-post transactions, such as bearer walk-through or “over the counter” issues, where the order did not originate in the Component’s ordering system and route through DAAS first. To fill the void for such processes, this ADC requires sources of supply perform similar fund code edits/validation prior to accepting the requisition. Delays phased implementation of the new fund code validation edit for the DLMS 810L Logistics Bill, along with elimination of default lines of accounting in MILSBILLS. Revises Appendix 2.

B. ADC 1123 dated December 2, 2015. Establishes a requirement for MCA validation for CFM regardless of the Component sponsoring the contractor. All MCA MILSTRIP procedures applicable to GFM will be extended to CFM. Transaction Services’ edits for pseudo MCA processing of DOD EMALL CFM requisitions paid
via credit card will be eliminated upon Component implementation of MCA validation to mirror existing GFM procedures. Revises DLMS IC 517G.

D. ADC 1194 dated December 17, 2015. Adds the Sub Tier Code field to the DoDAAD to indicate if the DoDAAC is tied to a specific Federal Agency Sub Tier (a.k.a. bureau) for business uses within FPDS (DoDAAD) and adds the abbreviation FPDS to Appendix 3.

III. The list below identifies the chapters, appendices or other files from the manual that are replaced by this change:

Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published Enterprise Business Standards Office memorandum:

   A. ADC 1147 dated October 1, 2014. Modifies the definition of Small Arms/Light Weapons (SA/LW) to include suppressors. Revises Appendix 2, Terms and Definitions.

   B. ADC 1147A dated November 6, 2014. Corrects ADC 1147 to replace the reference to Navy specific policy with the broader DOD policy to better reflect applicability of the change across the DOD. Confirms the revision to the definition of SA/LW to include suppressors that was made to Appendix 2, Terms and Definitions via ADC 1147.

III. The list below identifies the chapters, appendices or other files from the manual that are replaced by this change:

I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 1, May 2014, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 1 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by Enterprise Business Standards Office memorandum:

C. ADC 1090 dated December 12, 2013. Updated the DLMS Unit of Material Measure (Unit of Issue/Purchase Unit) Conversion Guide to add Standard Advertising Unit and the corresponding X12 Code S8 and DOD code SW. Revises Appendix 4.

D. ADC 1098 dated November 7, 2014. Updated the DD Form 1348-5, Notice of Availability; updated the DLMS 856N NOA and DLMS 870N NOA Reply to align with the hard copy data content of the DD Form 1348-5; established the
foundation for a mechanized implementation for the NOA process to provide the International Logistics Control Office (ILCO) visibility; and updated procedures for ensuring timely replies to NOAs by actively engaging the ILCOs when there is no response to a follow-up NOA. Revises Chapter Appendix 2 and DLMS ICs 856N and 870N.

E. ADC 1103 dated August 20, 2014. Modified the DLMS 824R to expand the scope to include rejection of logistics bills and make administrative adjustments to convert the supplement into an implementation convention (IC) and to reflect current element use by DLA Transaction Services. Revises Chapter 4 and DLMS IC 824R.

G. ADC 1108 dated April 1, 2014. Updated the DLMS Unit of Materiel Measure (Unit of Issue/Purchase Unit) Conversion Guide to add Liters at 15 Degrees Celsius with the corresponding X12 Code L5 and DOD code 51. This UoM is used in the DLA Energy Supply Chain in Electronic Business System. Revises Appendix 4.

H. ADC 1111 dated August 27, 2014. Updated procedures for intransit control of materiel turned in to DLA Disposition Services and established use of the DLMS 527R as a Disposition Services Turn-In Receipt Acknowledgement. Revises Appendix 3 and DLMS IC 527R.

I. ADC 1113 dated July 2, 2014. Enhanced Wide Area WorkFlow (WAWF) to carry additional data fields found on contracts and delivery orders to the WAWF receiving report (RR) as requested by DLMS Trading partners supporting Security Cooperation (SC) shipments. Revises Appendix 4 and DLMS Implementation Convention (IC) 856.

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. The Defense Logistics Manual (DLM) 4000.25, Defense Logistics Management Standards, is issued under the authority of DoD Instruction (DoDI) 4140.01, DoD Supply Chain Materiel Management Policy. DLM 4000.25 is composed of multiple volumes, each supporting functionally related business processes. Volume 1 is being reissued in its entirety and prescribes logistics management responsibilities, procedures, rules, and electronic data communications standards for use in the Department of Defense, to conduct logistics operations.

II. The provisions of this manual apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

III. This manual incorporates the Approved Defense Logistics Management Standards (DLMS) Changes (ADC) listed in the Process Change History page immediately following this Foreword. ADCs are published electronically on the ADC page of the EBSO Website. Recommended revisions to this manual will be proposed and incorporated under the Process Review Committee (PRC) forum for logistics functional areas. Submit all proposed change requests through your designated DoD Component PRC representatives. The procedures are in Volume 1, Chapter 3 of this manual and is available on the EBSO Website.

IV. This Volume is approved for public release and is available electronically on the EBSO Website. Use the comment form to contact the Enterprise Business Standards Office (EBSO).

Dee Reardon
Deputy Assistant Secretary of Defense for Supply Chain Integration

<td>1060</td>
<td>8/29/2013</td>
<td>DoD 4000.25-13-M, “DoD Logistics Data Element Standardization and Management Program”, 19 June 1996 provided guidance and procedures for standardization and management of data elements used in DoD-wide and joint Service/Agency logistics systems. While the department’s mission for electronic data exchange (EDI) remains unchanged, the data management procedures in DoD 4000.25-13-M were outdated. Defense Logistics Management Standards Office initiated an effort to replace DoD 4000.25-13-M with a new Defense Logistics Manual (DLM) 4000.25, Volume 5, Defense Logistics Management System, Data Management. While developing the new volume, it became apparent that merging the content with the existing DLM 4000.25, Volume 1 would eliminate overlaps between the two volumes. The reissuance of DLM 4000.25, Volume 1 incorporates the updated DLMS data standards and procedures, eliminates redundant information and improves the organization of the information.</td>

C1. CHAPTER 1

INTRODUCTION

C1.1. PURPOSE. This Defense Logistics Manual (DLM) prescribes logistics management responsibilities, procedures, rules, and electronic data communications standards for use in the Department of Defense, to conduct logistics operations. The Defense Logistics Management Standards or DLMS, identify processes governing logistics functional business management standards and practices rather than an automated information system. The DLMS provide an infrastructure for the participatory establishment and maintenance of procedural guidance to implement the Department's logistics policy by its user community.

C1.2. SCOPE. This manual applies to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies, hereafter referred to collectively as the DoD Components. The manual applies, by agreement, to external organizational entities conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

C1.3. POLICY

C1.3.1. DLMS procedures, as prescribed herein, must be implemented uniformly between DoD Components and other participating external organizations and at all levels within each DoD Component. DoD Components must give priority to development and implementation of DLMS requirements before the development and implementation of intra-DoD Component requirements.

C1.3.2. DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011, authorizes the publication of this DLM and stipulates that it carry the full weight and authority of a DoD manual. DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures: Operational Requirements,” February 10, 2014, establishes a configuration control process for the DLMS and prescribes use of the DLMS to implement approved DoD policy in logistics functional areas such as Military Standard Requisitioning and Issue Procedures (MILSTRIP), Military Standard Reporting and Accountability Procedures (MILSTRAP), Military Standard Billing System (MILSBILLS), Supply Discrepancy Reporting (SDR), and the DoD Physical Inventory Control Program (PICP).

C1.3.3. DoD Directive (DoDD) 8190.01E, “Defense Logistics Management Standards (DLMS),” January 9, 2015, assigns responsibilities to the Enterprise Business Standards Office (EBSO) for direction, management, coordination, and control of the process to replace DoD unique logistics data exchange standards with approved EDI standards and supporting implementation conventions (IC) for DoD logistics business transactional data exchange. Pending full implementation of
enterprise-wide modernized data exchange standards, this manual may reflect legacy processes, formats, data, and mediation.

C1.4. RESPONSIBILITIES

C1.4.1. **Under Secretary of Defense (Acquisition and Sustainment (A&S)).** Develop policy and provide guidance, oversight, and direct implementation and compliance with the DLMS, except that the Under Secretary of Defense (Comptroller) (USD(C)) is responsible for the MILSBILLS functional area addressed under Volume 4 of this manual. The Director of **Defense Pricing and Contracting (DPC) is** responsible for the Contract Administration functions of shipment notification, destination acceptance reporting, and contract completion status reporting areas addressed under Volume 7 of this manual. When carrying out their responsibility, the USD (A&S), DoD Comptroller, and Director DPC, as appropriate for their respective functional areas, will:

- C1.4.1.1. Direct or approve expansion of DLMS in assigned functional areas or application of DLMS in new functional areas.
- C1.4.1.2. Provide the **EBSO** with policy guidance for development, expansion, improvement, and maintenance of the DLMS.
- C1.4.1.3. Resolve policy and procedural issues that cannot be resolved within the DLMS infrastructure.
- C1.4.1.4. Ensure appropriate coordination with other Office of the Secretary of Defense (OSD) staff elements when DLMS policy guidance or directional memoranda affect assigned functions of these offices.
- C1.4.1.5. Ensure appropriate coordination with other OSD staff elements when DLMS policy guidance or directional memoranda affect assigned functions of these offices.

C1.4.2. **Director, Defense Logistics Agency**

- C1.4.2.1. Establish and resource the **EBSO**, which will report to the Director, Information Operations/Chief Information Officer (CIO) (J6), DLA HQ.
- C1.4.2.2. Provide the necessary military and civilian personnel resources.
- C1.4.2.3. Provide the necessary administrative support and services, including office space, facilities, equipment, automatic data processing support, and travel expenses for Enterprise Business Standards Office personnel.

C1.4.3. **Director, Enterprise Business Standards Office.** Operating under the authority of DoDM 4140.01 and DoDI 4140.01, serve as the primary proponent to establish procedures, data standards, and transaction formats to promote interoperability in the logistics community and associated functional areas. This
includes the development, maintenance and documentation of corporate level policies and procedures for exchanging logistics data between DoD Components, between DoD Components and other Federal departments and agencies, and between DoD Components and private industry. Participate in cooperative efforts with other government entities to develop data exchange standards. Maintain membership in external voluntary standards bodies and groups; (e.g., American National Standards Institute (ANSI) chartered Accredited Standards Committee (ASC) X12). Administer the DLMS for assigned functional areas and receive policy guidance from proponent offices of the ASD(S), DPC, and the DoD Comptroller, as appropriate. The Director, EBSO will:

C1.4.3.1. Establish a formal change management process for the DLMS.

C1.4.3.2. Establish Process Review Committees (PRC) composed of representatives from the DoD Components and participating external organizations for each of the DLMS functional areas of finance, pipeline measurement, supply discrepancy reporting and supply (to include but not limited to requisitioning and issuing procedures, physical inventory, and disposition services). Also, establish PRCs for DoD Activity Address Directory (DoDAAD) and Military Assistance Program Address Directory (MAPAD). Designate a chair for each PRC.

C1.4.3.3. Designate a program administrator to serve as the DoD focal point for the Physical Inventory Control Program. Chair the Joint Physical Inventory Working Group (JPIWG) to recommend guidance and develop program enhancements for physical inventory control of DoD supply system materiel.

C1.4.3.4. Ensure uniform implementation of the DLMS by doing the following:

C1.4.3.4.1. Review implementation dates and plans of the DoD Components and participating external organizations, and make recommendations for improvement.

C1.4.3.4.2. Perform analysis and design functions to implement new or revised policy guidance and instructions, provided by OSD proponent offices, and to ensure the involvement of Defense Automatic Addressing System (DAAS) with telecommunications planning in an integrated system design.

C1.4.3.4.3. Develop and recommend, to the appropriate OSD proponent office(s), new or revised policy with supporting analysis which identifies and explains process improvements and indicates methods to accomplish identified changes.

C1.4.3.4.4. Serve as the Department’s Executive Agent for logistics data interchange on behalf of the DLA Director, as delineated in DoD Directive 8190.01E.
C1.4.3.4.5. Develop, publish, and maintain the Defense Logistics Management Standards manual and related DLM publications consistent with the DLM requirements identified in DODI 4140.01 and DODM 4140.01.

C1.4.3.4.6. Develop or evaluate proposed DLMS changes (PDC) and coordinate them with the DoD Components and participating external organizations. Provide a copy of all PDCs to the applicable OSD proponent office.

C1.4.3.4.7. Review, evaluate, and recommend improvements to curricula of DoD Components and participating external organizations’ training schools offering DLMS-related courses.

C1.4.3.4.8. Assist DoD Components and participating external organizations in resolving problems, violations, and deviations that arise during operations and are reported to the PRC Chair. Refer unresolved matters to the applicable OSD proponent office with analysis and recommendations for resolution and corrective action.

C1.4.3.4.9. Make available to Office of the Deputy Assistant Secretary of Defense (ODASD)(Logistics) and to DoD Components, a status review of all DLMS revision proposals that have not been approved for publication or, that if approved, have not been implemented. The status review is updated weekly and is available from the EBSO Website on the Process Changes Page.

C1.4.3.4.10. Review and coordinate with the DoD Components and participating external organizations all requests for system deviations and exemptions and make applicable recommendations to the OSD proponent office based on fact-finding status or analysis of accompanying justification.

C1.4.4. Heads of DoD Components and Participating External Organizations. Designate an office of primary responsibility for each DLMS functional area identified in section C1.3. Use an official memorandum on Service/Agency letterhead (or a digitally signed email) to identify to EBSO, the name of a primary and alternate PRC representative for each functional area who will:

C1.4.4.1. Serve as members on, and fulfill the responsibilities of, the PRC or Working Group (WG) for that function, and

C1.4.4.2. Provide the DoD Component's or external organization's official position on DLMS matters and have the authority to make decisions regarding procedural aspects.

C1.4.4.3. Ensure continuous liaison with the DLMS PRC Chair and with other DoD Components and participating external organizations.

C1.4.4.4. Submit to the Director, EBSO, or appropriate PRC Chair, as DLMS PDCs, all proposed changes affecting logistics business processes irrespective of the electronic business technology employed following the procedures in Chapter 3 of this
Perform the initial evaluation of PDCs that originate within the DoD Component or participating external organization and return such proposals with the evaluation results.

C1.4.4.5. Perform the initial evaluation of all beneficial suggestions to the DLMS originating within the DoD Component or participating external organization. For suggestions considered worthy of adoption, submit a PDC to the DLMS PRC Chair in accordance with Chapter 3 of this Volume for processing in the normal manner. The originator's PRC representative will determine any awards using normal DoD Component or participating external organization procedures.

C1.4.4.6. Develop and submit to the PRC and WG Chair, a single, coordinated DoD Component or participating external organization position on all PDCs within the time limit specified. When a PDC affects multiple DLMS functional areas, the designated representative for the PRC identified in the proposal will submit a single coordinated response.

C1.4.4.7. Accomplish internal training to ensure timely and effective implementation and continued operation of the approved DLMS. Review, evaluate, and update, at least annually, curricula of internal training programs to ensure adequacy of training. Furnish a copy of initial and revised training curricula to the appropriate DLMS PRC Chair.

C1.4.4.8. Implement the approved DLMS and changes thereto. Provide the PRC Chair with status information concerning implementation of approved changes. Report Control Symbol (RCS) DD-A&S(AR)1419 applies for this requirement. Begin reporting the first period following publication of the approved DLMS change. Stop reporting after identifying the approved change when the change is fully implemented. Cite the DoD Component or participating external organization implementing publication(s) and change number(s), and identify the operating system or subsystem involved. Provide the DLMS PRC Chair a copy of the publication change. Send the reports to the DLMS PRC Chair.

C1.4.4.9. Ensure that operating activities supporting the DLMS comply with the requirements and procedures published in the DLMs.

C1.4.4.10. Continually review and revise internal procedures to correct misinterpretation and prevent duplication of records, reports, and administrative functions related to the DLMS.

C1.4.4.11. Develop supplemental procedures for internal use as needed as long as they do not conflict with the DLMS procedures. Review internal supplemental procedures and/or implementing procedures to ensure conformance with the approved DLMS.

C1.4.4.12. Provide, to the appropriate PRC Chair, copies of supplemental and internal procedures, and changes thereto, related to operation of the DLMS.
C1.4.4.13. Report to the PRC Chair, problems, violations, and deviations that arise during system operations.

C1.4.5. Process Review Committees. PRCs are joint forums for each of the DLMS functional areas responsible for development, expansion, improvement, maintenance and administration of the DLMS. PRCs include finance, pipeline measurement, supply discrepancy report and supply (to include requisitioning and issuing procedures, physical inventory accountability, and disposition services). PRCs are also established for DoDAAD, and MAPAD. The PRC representatives are listed on the EBSO Website, “Committees” page. The DLMS PRCs will:

C1.4.5.1. Be administered/controlled by the applicable DLMS PRC Chair.

C1.4.5.2. Consist of representatives from the DoD Components and participating external organizations.

C1.4.5.3. Meet at the request of the PRC Chair. The PRC Chair will, when possible, announce the meeting and identify the agenda items 30 calendar days in advance. The PRC Chair will issue fully documented minutes of these proceedings to each participating DoD Component or external organization, and the applicable OSD principal staff assistant (PSA), within 30 calendar days after the meeting.

C1.4.5.4. Review and resolve comments on PDCs, deviations, and waivers, or other problems and violations, and provide recommendations for implementation or disapproval. Refer any action that the PRC cannot resolve to the appropriate OSD PSA.

C1.4.5.5. Ensure uniform and effective implementation of DLMS requirements by:

C1.4.5.5.1. Conducting periodic evaluations to determine effectiveness of DoD/DLMS policies, procedures, and processes.

C1.4.5.5.2. Conducting reviews of selected DLMS operational areas to determine conformance with, and evaluate the effectiveness of, DLMS requirements and to interpret or provide clarification of DLMS procedures.

C1.4.5.5.3. Reporting findings and recommendations of evaluations and reviews, with comments of the DoD Components and participating external organizations, to the applicable OSD PSA.

C1.4.6. DAAS. DAAS serves as the logistics central hub through which all DLMS transactions pass for selective data edits, business rule application, translation, routing, archiving, and data warehousing. The services provided allow the DoD Component supply systems to speak the same language, by receiving data (sometimes non-standard), editing and validating the transactions; and forwarding the transactions, in the correct format, to the proper destination. DAAS developed and maintains the Defense Automatic Addressing System (DAAS) to provide these services. The DAAS
manual is available on the EBSO Website. To ensure that these services are effective, DoD Components must route all DLMS transactions to DAAS. Key responsibilities for DAAS are to:

C1.4.6.1. develop DLMS mapping and conversion processes,

C1.4.6.2. implement Approved DLMS Changes (ADC) and ensure that all modifications are incorporated into the, edits, translation rules, and records,

C1.4.6.3. implement DLMS logistics data transmission requirements and execute system modification tasks supporting the DLMS documented in ADCs,

C1.4.6.4. provide telecommunications support, archiving and storage, translation services, conversion processes, and other services to support DoD Component implementation of the DLMS,

C1.4.6.5. capture required data and produce the end-to-end pipeline metrics specified by the Pipeline Measurement PRC, and

C1.4.6.6. develop, host and maintain enterprise applications and databases such as the DoDAAD, MAPAD, Web Supply Discrepancy Reporting, and host and maintains numerous essential database tables such as the Fund Code Table.

C1.5. DISTRIBUTION OF THIS MANUAL

C1.5.1. Defense Logistics Management Standards Manual. This manual is published electronically. No hard-copy document is available. The Defense Logistics Manuals are available from the EBSO Website under the header "DLMS Publications." Any further distribution will be accomplished within each DoD Component or external organization based upon approved distribution data generated through their internal publication channels.

C1.5.2. Changes. DLMS changes are published electronically and are available on the EBSO Website under the header "DLMS Process Changes."

C1.6. HOW TO USE THIS MANUAL

C1.6.1. Structure of the Manual

C1.6.1.2. DLMS Volumes

C1.6.1.2.1. DLMS Content. Each volume of the Defense Logistics Management Standards manual contains its own Foreword, Change History Page, and Table of Contents showing procedural chapters with listings of figures, and tables and appendices. Each volume of the Defense Logistics Management Standards manual may also contain appendices for related data that apply to multiple chapters in the volume; however, use of any of the functional area volumes requires simultaneous access to the Defense Logistics Management Standards, Volume 1 reference material items (e.g., terms, acronyms, and the DLMS change process).

C1.6.1.2.2. DLMS Implementation Conventions. Appendix 7 introduces the DLMS ICs that explain the use of the DLMS. The DLMS ICs are available on the EBSO Website DLMS IC page. For each DLMS IC, a hyperlink is provided to machine readable formats (X12 and XML) DLMS Change History and corresponding DLSS legacy transaction format.

C1.6.1.3. DLMS Reference Material in Volume 1. Volume 1 contains appendices with reference items applicable to the entire manual. Reference items are:

Appendix 1 References
Appendix 2 Terms and Definitions
Appendix 3 Acronyms and Abbreviations
Appendix 4 DoD/ASC X12 Conversion Guides
Appendix 5 DLMS to DLSS
Appendix 6 DLMS Code List Qualifiers
Appendix 7 DLMS Transaction Formats
Appendix 8 Transaction Set 997 Implementation Convention, Functional Acknowledgement
Appendix 9 DLMS Change Process Flow Chart
Appendix 10 DLMS Compliance
C2. CHAPTER 2

BUSINESS CONCEPTS AND ENVIRONMENTS

C2.1.  OVERVIEW

C2.1.1.  Defense Logistics Management Standards.  The Defense Logistics Management Standards (DLMS) provide procedures and data formats to link the various component organizational elements of the Defense Logistics community including: inventory control points (ICPs), distribution depots, maintenance depots, transportation nodes, and end users in posts, camps, stations, ships, and deployed units.  The DLMS address the different functional processes of logistics and provides standards to exchange data across the Military Services, Defense Agencies, other Federal Agencies, foreign national governments, international government organizations, and nongovernment participants.  As other electronic business (EB) methods emerge, DLMS will incorporate these new capabilities into the DoD logistics business processes, as appropriate.

C2.1.2.  Purpose.  This chapter provides an overview of some of the technologies and procedures that all participants must implement to employ the DLMS across the range of participating organizations.  This chapter also provides a road map to other parts of the manual that may provide more details about specific topics.

C2.2.  DLMS IMPLEMENTATION PROCESS.  Enterprise Business Standards Office coordinates DLMS related requirements with the DoD Component focal points and interfaces with DAAS to ensure these requirements are fulfilled.  These requirements are transformed into new or revised DLMS procedures, transactions and data standards.

C2.2.1.  Transactions.  The DLMS provide descriptive procedures, transactions, and data formats for computer-to-computer communications.  The transactions initiate a logistics action (e.g., requisition an item, authorize a funds transfer, ship an item).  The transactions are structured and formatted to be transmitted by computer systems without human intervention.

C2.2.2.  Transaction Flow.  DAAS acts as a central hub for all DLMS transactions.  Transactions flow from the originator's computer to the Defense Automatic Addressing System (DAAS) operated by DAAS.  DAAS will edit the transactions for correct format, retain an image in an interactive data base for user access, and route the transactions to the correct recipient(s).  The receiving computer(s) will process the transactions and initiate the appropriate logistics action.  This action will frequently result in generation of additional DLMS transactions to other systems and/or responses back to the originator via DAAS.  Refer to Defense Logistics Manual (DLM) 4000.25-4, Defense Automatic Addressing System (DAAS) manual for procedures and operations of DAAS.
C2.3. **DLMS DATA MANAGEMENT**

C2.3.1. Data management for DLMS provides data standards, syntax, and procedures necessary to ensure the data at the heart of DLMS transactions is well understood and interoperable. It prevents overlapping or incompatible uses of data and enables trading partners to communicate data or carry forward important data through related processes. The foundation of DLMS data management is based on the guiding principles established in DoD Directive (DoDD) 8190.01E, "Defense Logistics Management Standards (DLMS)," January 9, 2015, and DoDD 8320.02, “Data Sharing in a Net-Centric Department of Defense.” April 23, 2007. DLMS Data Management is further described in Chapter 5 of this volume.

C2.3.2. **Continued Support For Legacy Data.** DAAS will continue to execute the DLSS error notification processes until DoD has totally implemented the DLMS.

C2.4. **REQUIREMENTS FOR NEW OR REVISED DLMS PROCEDURES**

C2.4.1. **Use of DLMS Procedures.** DoD Components must use standards and procedures prescribed by the DLMS when undertaking development of new or revising existing logistics systems. If a DoD Component or other participating external organization requires changes to, or expansion of, the existing DLMS to accommodate technological innovations planned for new system designs, they must submit PDCs with full justification and explanation of the intended use following the instructions in Chapter 3 in this volume.

C2.4.1.1. **DLMS Enhancements.** The DLMS procedures and the supporting DLMS Implementation Conventions (IC) identify DLMS enhancements that may not have been implemented by all DLMS trading partners or within legacy systems. Therefore, data associated with an enhancement transmitted within a DLMS transaction may not be received or understood by the recipient’s automated processing system. Additionally, DLMS procedures may not have been developed to support the data exchange. Components wishing to implement DLMS enhancements must coordinate with the Enterprise Business Standards Office and trading partners prior to use. DoD Components must submit a PDC reflecting required business rules/procedures prior to implementation of DLMS enhancements already documented in DLMS ICs.

C2.4.1.2. **Future Streamlined Data.** The DLMS procedures and the supporting DLMS ICs identify data that may be targeted for elimination under a full DLMS environment. This data is often referred to as “future streamlined data”. This data is retained within DLMS during a transition period when many trading partners employ legacy systems or cannot move to full DLMS capability. DoD Components wishing to streamline data must coordinate with the Enterprise Business Standards Office prior to doing so. Components need to submit a PDC reflecting any revised business rules associated with such termination.

C2.4.1.3. **DLMS Data Element Field Size.** The DLMS ICs identify ANSI X12 field sizes and some field size constraints existing under DLSS legacy transactions.
Many DLMS trading partners operating within a legacy system will not be able to support the DLMS expanded field size. Components desiring to implement an expanded field size under DLMS must be aware that the conversion process to the DLSS legacy transactions cannot accommodate the larger fields. Components must coordinate with the Enterprise Business Standards Office prior to use and may submit a PDC to adjust a field size to a recommended length.

C2.4.2. Submission of New Data Elements. Data elements employed in DoD-wide, inter-DoD Component, and participating external organization logistics systems’ authoritative issuances that have not been standardized under DoDD 8320.02, “Data Sharing in a Net-Centric Department of Defense,” April 3, 2007, will be submitted as proposed DoD logistics standards following procedures developed under the authority of ASD(S). DoD logistics standard data elements must be used in design and upgrading of:

C2.4.2.1. DoD-wide and inter-DoD Component automated logistics systems and authoritative issuances, and

C2.4.2.2. DoD Component systems and issuances.

C2.5. DATA REQUIREMENTS AND FORMATS

C2.5.1. General Information. The DLMS use ANSI ASC X12 transactions for EDI and X12 based extensible markup language (XML). EDI is widely used in the private sector to conduct business operations, and also between industry and the Government in acquisition, transportation, finance, and other functional areas. The DLMS extend this electronic connectivity to internal DoD logistics operations. The DLMS may also expand to include other emerging EB methods as they are standardized and approved for use by the DoD. The standards and conventions are described in Chapter 6 of this manual.

C2.5.2. DoD/ANSI ASC X12 Conversion Guides. DoD systems that store internal data in DoD format and exchange data in X12-based DLMS format must incorporate three conversion guides to convert DoD data values established in legacy systems to the corresponding ASC X12 code values. DoD applications must convert outbound transactions from DoD code values to ASC X12 code values based on the DoD/ASC X12 Conversion Guide definitions. DoD applications must convert inbound transactions from ASC X12 code values to DoD code values based on DoD/ASC X12 Conversion Guide definitions (Appendix 4).

The three conversion guides available from a link on the Enterprise Business Standards Office Website and Appendix 4 are:

C2.5.2.1. Transportation Mode of Shipment/Transportation Method/Type Code Conversion Guide.

C2.5.2.2. Type of Pack Conversion Guide.
C2.5.2.3. Unit of Material Measure (Unit of Issue/Purchase Unit) Conversion Guide.

C2.5.3. Legacy Format to DLMS Cross Reference Tables. A Defense Logistics Standard System (DLSS) legacy 80 record position format to DLMS transactions cross reference table provides the following information:

C2.5.3.1. Cross Reference to Legacy Formats. Cross Reference of each legacy format Document Identifier Code (DIC) (e.g., A01) to DLMS IC number (e.g., 511R) for legacy format processes in DIC sequence and DLMS IC sequence. Refer to Appendix 5.

C2.5.3.2. Correlation Tables. MILSTRAP correlation tables in legacy DIC sequence provide general functional equivalency between each MILSTRAP legacy DIC and DLMS IC. Details for the correlation tables are provided in Appendix 5, DLMS to DLSS Cross Reference Tables. The MILSTRAP correlation tables can be viewed at the Enterprise Business Standards Office Website.

C2.5.3.3. Cross Reference Tables. Cross reference tables for each legacy 80 record position DLSS DIC are available in DIC and DLMS sequence at the Enterprise Business Standards Office Website.

C2.5.4. DLMS Code Lists/Qualifiers. DLMS Code Lists/Qualifiers used to identify DoD functional data elements in the DLMS ICs are described in Appendix 6. They are accessible from a link in Appendix 6, DLMS Code List Qualifiers, or in LOGDRMS from the Enterprise Business Standards Office Website.

C2.5.5. Editing

C2.5.5.1. General. Data contained in DLMS transactions must be complete and accurate for the receiving computer systems to process. The following paragraphs define principles for maintaining accurate data within the DLMS for all participants.

C2.5.5.2. Edit at Origin. DLMS procedures require recipients to edit and, if necessary, reject transactions back to the sender. Originating activities should maximize editing and validation on their own transactions prior to transmission; this can minimize the expense and delay involved in processing erroneous transactions. Outbound transactions must meet all DLMS IC requirements. Components may apply more stringent or specific edit requirements on outbound transactions to meet their business requirements.

C2.5.5.3. Use Data Only as Defined. Data elements will carry ONLY the data specifically defined in the DLMS ICs. Capabilities exist within the DLMS to support DoD Component unique data. However, DoD Components must submit proposed DLMS changes following Volume 1, Chapter 3 requirements to address any planned usage of Component-unique data.
C2.5.6. Error Processing

C2.5.6.1. Transaction Set (TS) 997, Functional Acknowledgement. DLMS use TS 997 when the translator encounters an error that violates ANSI ASC X12 syntax rules. TS 997 may also be used to acknowledge receipt of a transaction set without error when agreed to between the DoD and a commercial trading partner. Use of TS 997 is discussed in more detail in Appendix 8 of this manual and in DLM 4000.25-4, DAAS manual.

C2.5.6.2. DLMS Implementation Convention 824R, Reject Advice. DLMS 824R is used by the transaction recipient to reject a DLMS transaction that could not be processed due to erroneous or missing data based on requirements identified in the DLMS IC for a particular transaction. DLMS 824R is generated as an exception by DAAS and DoD Component application programs to convey information to the sender’s application process. Originating sites will possess technical and procedural means to receive the application advice, correct errors, and retransmit appropriate data. Use of DLMS 824R is discussed in Volume 1, Chapter 4, Functional Application Errors.

C2.5.7. Change Control. DAAS is the designated activity to perform change management for the translator used to convert legacy DLSS to DLMS or DLMS to legacy DLSS. DAAS will upgrade the translator as logistics data requirements change and the DLMS are updated to reflect the changes. Volume 1 Chapter 3 discusses the guidelines for maintaining the DLMS and defines the procedures for processing and recording proposed DLMS changes.

C2.5.8. Enveloping. The DLMS support the bundling of multiple groups of data, referred to as enveloping. Specifically, multiple transactions can be bundled into a single DLMS interchange. Multiple transaction sets of a similar type can be placed into a single functional group, and multiple functional groups can be placed into a single interchange group. The DLMS use of envelopes is consistent with ANSI ASC X12.6 standards. Refer to Defense Logistics Manual (DLM) 4000.25-4, DAAS manual (Communications) for details of DLMS envelope usage.

C2.6. DLMS DEVIATIONS OR WAIVERS

C2.6.1. Submission. DoD Components and participating external organizations will not request DLMS deviations or waivers solely to accommodate existing internal systems and procedures or organizational environments. When requesting deviations or waivers, DoD Components and participating external organizations must submit them following the guidelines in Chapter 3 in this volume.

C2.6.2. Review. The PRC Chairs will consider requests for DLMS deviations or waivers when the requestor demonstrates that the system cannot provide a workable method or procedure, or cannot accommodate interim requirements. The Director, Enterprise Business Standards Office will forward unresolved matters to the applicable OSD proponent office for resolution.
C2.7. COMMUNICATION REQUIREMENTS

C2.7.1. Telecommunication Networks. The method for conveying DLMS transactions from one activity to another will be by DoD and Federal electronic telecommunications networks. DoD Components will route all DLMS transactions to DAAS. The Defense Information Systems Network (DISN) is the main network pathway for transmission of transactions to and from the DAAS. Refer to the DAAS procedures in DLM 4000.25-4 for DLMS-specific capabilities and requirements for transmitting data within the DISN.

C2.7.2. Common Communications Approach. All participating activities must use a common communications approach. DAAS procedures (DLM 4000.25-4) define specific communication requirements. The following paragraphs highlight some of the key communications requirements:

C2.7.2.1. Data transmission will be via the DISN or other approved alternatives.

C2.7.2.2. Compression algorithms as defined by DAAS will be used.

C2.7.2.3. Transaction set syntax and content will be in accordance with ANSI ASC X12.6 standards and the DLMS implementation conventions defined in this manual.

C2.7.2.4. Transactions through DAAS are encrypted.

C2.7.2.5. Component activities will maintain readily accessible copies of all transmissions for at least one week, and will be able to retransmit them at the request of the receiving party. DAAS will retain a copy of all receipts and transmissions in accordance with DoDI 5015.02, DoD Records Management Program. DAAS procedures define the retention period for each type of transaction set.

C2.7.2.6. DLMS transactions are variable length and in many cases have no practical maximum size. However, for transmission purposes, an overall maximum size will be imposed for transaction sets and transmission envelopes (see Chapter 4).1

C2.7.3. Technical Solutions. DoD Component activities will have the discretion to determine the technical means to create the data exchange formats defined above, for example, using a commercial translator or develop their own software.

C2.8. DAAS OPERATIONS

C2.8.1. Functions. DAAS is central to all DLMS operations.2 It performs numerous corporate functions for DLMS operations including:

---

1 Temporary restrictions at the data element level may be imposed on translation requirements to the previous fixed-length formats.
2 Complete procedures for DAAS are contained in the DLM 4000.25-4, DAAS manual.
C2.8.1.1. Performing basic edits and returning any transactions with errors back to the originator.

C2.8.1.2. Archiving all received and transmitted messages, to ensure retransmission capability in the event the original message was lost due to computer or telecommunications failure.

C2.8.1.3. Generating images, as required.

C2.8.1.4. Holding or forwarding transactions per DoD Component profile for the recipient.

C2.8.1.5. Executing "suppress" or other national command directives.

C2.8.1.7. Coordinating and providing DoD management information on supply system performance evaluation.

C2.8.1.8. Performing additional functions for requisitioning, including rerouting requisitions to the correct source of supply (SOS).

C2.8.1.9. Rerouting other documents using DoD Component rules and records as appropriate.

C2.8.1.10. Evaluating the "To" address capability for receiving transactions in DLMS versus DLSS format.

C2.8.1.11. Converting transactions from legacy format DLSS to DLMS and from DLMS to DLSS, as required.

C2.8.2. DLMS Global Services Provider. DAAS maintains activity profiles recording EDI capability, compression techniques, encryption techniques, communications media, and other address data of the DoD Components.

C2.8.2.1. Capabilities. In its role as the DLMS Global Services Provider and as a DoD distribution point for EDI communications with industry, DAAS maintains an extensive capability to translate between EDI formats and other file structures. As required, DAAS will provide translation between DLMS and Component user defined formats; between multiple versions of the ANSI ASC X12 standards; and between other EDI formats, such as XML. In addition, DAAS will support translation between DLSS legacy formats and DLMS formats referred to as “conversion”.

C2.8.2.2. Transition Conversion Requirements. During a transition period of indeterminate length, the DoD will operate in a mixed legacy 80 record position/DLMS environment. DAAS will provide conversion processing between the standard legacy formats and DLMS to support this transition. Legacy format to DLMS conversion tables
have been developed that facilitate the conversion of data from legacy format to DLMS, and vice-versa. The conversion tables enable logistics business to be conducted in both environments. To accomplish the conversion, DAAS uses a commercial “any to any” mapping software package that supports a robust conversion. The Components are able to use their current format, either legacy format or DLMS, to initiate a transaction. DAAS incorporates and maintains a profile of each organization and specifies whether the organization is operating in legacy format, DLMS, or both. The legacy format data elements are retained in DLMS to support the conversion. However, DLMS enhanced data may not be supported in legacy or transitioning systems, so coordination with the Enterprise Business Standards Office is required prior to implementation of DLMS enhancements.
C3. CHAPTER 3

CHANGE MANAGEMENT

C3.1. GENERAL INFORMATION

C3.1.1. Guidelines Description. This chapter describes the guidelines for maintaining the Defense Logistics Management Standards (DLMS), DLMS Implementation Conventions (IC), and procedures. The change management process ensures the proper documentation of all proposed or approved changes to the DLMS. These guidelines also apply to the legacy 80 record position based systems changes (hereafter referred to as “legacy systems or formats”) and changes employing Electronic Business (EB) methods other than Electronic Data Interchange (EDI) that are chosen by DoD Components for use within their logistics business processes and systems. The DLMS will support emerging EB technologies such as: data sharing, automatic identification technology, electronic malls, web-based technology, electronic funds transfer, etc.

C3.1.2. Structured Collaboration Model. The DLMS change management process uses a structured collaboration model as a managed transformation process. On the input side, the Proposed DLMS Change (PDC) process factors in relevant DoD level policy guidance, DoD Component business requirements, relevant subject matter experts and Services Defense Automatic Addressing System (DAAS) subject matter and technical expertise. The output side of the structured collaboration model, the Approved DLMS Change (ADC) provides new or revised business rules, business objects, metadata, and functional requirements to guide Component implementation of the ADC.

C3.2. MAINTAINING DLMS IMPLEMENTATION CONVENTIONS. Enterprise Business Standards Office (EBSO) coordinates the implementation of the DLMS and maintains control of related standards, DLMS ICs, procedures, and common support packages (e.g., versions of the American National Standards Institute, Accredited Standards Committee (ANSI ASC) X12 standards, extensible markup language (XML) based standards), participates in the standards-setting process, and ensures compliance with approved EDI standards. A DLMS IC is a composite guideline that documents a specific business interpretation of an ASC X12 transaction set standard. The DLMS IC defines the structure, content, and DLMS business rules for a specific business interpretation; it maps application data requirements into specific data fields within the X12 transaction set and establishes parameters for its business usage.

C3.2.1. Change Management

C3.2.1.1. Scope. DLMS change management is the approval/disapproval and prioritization of changes to DLMS, achieved through DoD Component coordination and consensus, thereby promoting an integrated approach to standardization and modernization of DoD logistics business processes. Control of changes includes
documentation, justification, systematic evaluation, coordination, release, implementation, and publication.

C3.2.1.2. **Purpose.** The change management process ensures that those involved in the change process define and evaluate the full impact of a change based on at least the following considerations before making a decision to approve and implement the change:

- C3.2.1.2.1. Functional requirements
- C3.2.1.2.2. Change justification
- C3.2.1.2.3. Quality assurance
- C3.2.1.2.4. Operational readiness
- C3.2.1.2.5. Systems interfaces
- C3.2.1.2.6. Technical reviews
- C3.2.1.2.7. Estimated impact on total life-cycle costs.

**C3.2.2. Reporting Requirements**

C3.2.2.1. **Status Reports.** DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures: Volume 1, Operational Requirements”, February 10, 2014 directs DoD Components to provide the DLMS PRC Chair with the implementation status of approved changes. Report Control Symbol (RCS) DD-A&S(AR)1419 applies for this requirement. Begin reporting the first period following publication of the approved DLMS change. Stop reporting after identifying the approved change when the change is fully implemented. Cite the DoD Component or participating external organization implementing publication(s) and change number(s), and identify the operating system or subsystem involved. Provide a copy of the publication change to the DLMS PRC Chair. Send reports to the DLMS PRC Chair.

C3.2.2.2. **Status Reviews.** EBSO will maintain status of DLMS changes. The report will show the title and change number, associated dates, and current status for each DoD Component. The status review is updated continuously and is available from the EBSO Process Changes web page.

**C3.3. DLMS VERSION CONTROL**

C3.3.1. **Version Numbering.** The official ANSI ASC X12 version of a standard transaction set (e.g., 511) is a key ingredient in the successful application of DLMS ICs. The version number is transmitted as a code in the functional group header within an interchange envelope. The version is transmitted as a three-position code. Each major ANSI ASC X12 standards revision involving the public review process that leads to a publication of a set of American National Standards causes the version number to
increase by one. The predominate DLMS version is 004. The next three positions designate the release level within each version, (e.g., 010). The release number of each version is identified in the second position of the release level. The initial ASC X12 release is release one (010). The predominant DLMS releases are 010 and 030. Both version and release numbers are commonly referred to as a version/release, e.g., ANSI ASC X12 version/release 004010 (“4010”).

C3.3.2. Multiple DLMS Versions. DLMS may support multiple ICs based on different versions/releases of the X12 standard dependent upon trading partner requirements. In addition, DLMS may support multiple standards of DLMS ICs within each ANSI ASC X12 version/release. Currently some transactions such as the DLMS 947I support multiple standards; the newer (004030) version/release is used for new implementations, while enabling existing implementations to remain at an older version/release (004010), until they can be modified to the newer version/release. Older version/release DLMS ICs may not have all the functionality of the newer one, so Component AIS should plan to modernize to the newer version release (4030). Once all Component AIS have modernized to the newer version release, EBSO will cancel the old DLMS IC via a formally staffed DLMS change.

C3.4. DLMS CHANGE PROCESS

C3.4.1. New and Revised Requirements. A new requirement, design modification, system deficiency, change in DoD logistics policy, information exchange, or an operational emergency can all trigger a PDC. Examples of significant changes include those that create substantial life cycle cost savings, correct deficiencies, or make significant effectiveness change(s) in operational or logistics support requirements. Proposal submission requires inclusion of detailed procedures, and the text of revisions for the Defense Logistics Manual (DLM) 4000.25 series of manuals. Other changes include, but are not limited to: revisions to formats, codes, procedures; or changes requiring interface with other systems, retail level systems, or Federal Agencies. For all DLMS changes, two key elements are defining the problem, process gap or process improvement desired, and socializing the proposed change within the Component subject matter experts and putting forward a recommendation from a set of alternative solutions. ¹ To aid in ensuring the successful and timely processing of a PDC, the submitter should accomplish the following actions prior to its formal submission:

C3.4.1.1. Issue Identification. Determine the problem, process gap, or process improvement that is desired. The clear and complete articulation of the problem, process gap, or process improvement (including available problem examples and/or illustrative data) aids in the understanding by all parties involved. It also aids in the formulation of solution alternatives, preliminary internal Component socialization, and will be essential in the preparation of the draft PDC.

¹ DLMS Training slides Module 6:
C3.4.1.2. Socialization within the Component. Coordinate with subject matter experts of the issue and postulate alternative solutions. A thorough preliminary vetting of the problem statement and alternatives by the Component subject matter experts provides an internal validation of the problem statement, ensures that all viable alternatives have been developed and that there are no unforeseen/undocumented detrimental impacts to other processes and process owners.

C3.4.1.3. Initial heads-up: contact with Component PRC representative and DLMS PRC chairperson. Early contact with the Component PRC representative and PRC Chair allows for a determination if similar solutions have been submitted and rejected and why, other applicable solutions from other Components that have either been adopted or are proposed, being worked, and are applicable to the stated problem resolution.

C3.4.1.4. Strict adherence to DLM 4000.25 PDC instructions. The adherence to the instructions for drafting PDCs is the first item of review by the applicable DLMS PRC Chair. Following the instructions aids the overall process by eliminating rejects back to the submitter for administrative errors, lack of clarity, omissions, and incompleteness.

C3.4.1.5. Provide advance unofficial draft copy to DLMS PRC chairperson. Providing an advance copy allows the PRC Chair to do a quick review and provide feedback to the submitter on any administrative errors, lack of clarity, omissions, and incompleteness that should be corrected prior to the submitters staffing the draft proposal inside their Component.

C3.4.1.6. Internal Component staffing, review, finalization. Prior to draft PDC submission to the DLMS PRC Chair, the final draft proposal should be fully vetted within the Component.

C3.4.1.7. Submit PDC to Component PRC Representative. While anyone can initiate a PDC, the EBSO only accepts draft PDC submissions from the designated Component representative to the PRC. Once submitted to the EBSO by the Component PRC representative, the draft proposal is treated as that Component’s official position and all internal Component staffing and vetting is presumed to have occurred.

C3.4.2. Information Exchanges. PDCs will also be used to effect new or revised information exchanges. Information exchange is defined as the process of transferring data between two or more applications. The DLMS ICs prescribe the transfer of data among applications when transactional business events are communicated. Strict adherence to the notes contained in the DLMS ICs is critical to the successful communication among applications. The three major categories of notes contained in the DLMS ICs are:

C3.4.2.1. ANSI ASC X12 Standard Syntax and Semantic Notes. These notes must be universally adhered to by all users of the X12 transaction set.
C3.4.2.2 DLMS Notes. These notes identify the business rules and usage constraints to which all DLMS implementing trading partner users of the DLMS IC must adhere, in addition to the ANSI ASC X12 Standard Syntax and Semantic Notes.

C3.4.3. Submission. The applicable DoD Component PRC member must submit PDCs to EBSO. The EBSO may also accept proposed changes submitted through joint Service/Agency process action teams or the equivalent sponsoring organization.

C3.4.4. Procedures. Appendix 9 is a flow chart that illustrates the process to submit a PDC and the processing of the PDC by the applicable DLMS PRC through the issuance of an ADC. In summary, processing a change, waiver, or deviation to DLMS involves the following steps and the normal associated timeframes (NOTE: The PRC Chair may accelerate the change process from the timeframes indicated and may, when appropriate, extend them):

C3.4.4.1. Step 1. The PDC sponsor (see C3.4.3) submits a PDC (or waiver or deviation request) in the format available on the EBSO Website to the Director, EBSO, or appropriate PRC Chair. The instructions are included at the end of the change proposal template. When more than one committee is involved, for example, supply, finance, or pipeline measurement, the PRC Chairs involved will determine the lead PRC and coordination required.

C3.4.4.2. Step 2. Within 10 calendar days of receipt of proposal, the PRC Chair evaluates the proposal and determines appropriate action, (e.g., return for additional information, work with PDC sponsor to clarify/amend, accept for staffing). The PRC Chair will verify that the submitter adequately addresses the following items in the PDC:

- Identify impact to current business processes
- Identify organizations and systems and respective roles
- Identify new business procedures and associated business rules
- Define new DLMS data elements and/or changes to existing ones
- Define new information exchanges and/or changes to existing ones
- Identify the required implementation timelines by impacted systems
- Identify any impact to existing DoD policy.

C3.4.4.3. Step 3. If the proposal is accepted for staffing, the PRC Chair assigns a PDC number and updates the draft PDC to ensure the following items are included, as applicable:

- Insert required changes to DLM 4000.25 series of manuals
- Insert required changes to DLMS ICs
- Assess interoperability impact to DoD global supply chain
- Identify any additional DoD impacts
• Identify and coordinate with OSD on possible DoD policy impacts
• Optimize solution for reuse, effectiveness and efficiency

C3.4.4.4. Step 4. Once the submitting organization and the DLMS PRC Chair are in agreement with the PDC content, the PRC Chair will release the PDC to the DoD Component PRC members for coordination. The PRC Chair also determines if submission to external standards bodies such as ANSI ASC X12 is required. If the PDC includes a change to a DLMS IC that requires review and approval by the external standards bodies, the PRC Chair will forward the IC change(s) and/or related data maintenance request(s) to those groups/committees for processing after the proposal is approved or in conjunction with staffing, as appropriate.

C3.4.4.5. Step 5. The PRC members provide the PRC Chair a fully coordinated DoD Component or participating Agency response, including a proposed implementation strategy including the desired/required implementation timeline when available, by the due date provided in the proposal, normally within 30 days of the date on the PDC. If the Component/Agency response is a non-concur, it is incumbent on the PRC representative to explain the issue and provide a proposed resolution to the DLMS PRC Chair.

C3.4.4.6. Step 6. The PRC Chair may initiate a follow up for non-response five calendar days after the due date. Additional follow up may be elevated as appropriate.

C3.4.4.7. Step 7. The PRC Chair will evaluate all comments on the PDC within 10 calendar days from receipt of all outstanding comments or in conjunction with the next scheduled PRC meeting. If necessary, the PRC will resolve comments and/or disagreement and establish an implementation date. If the Component comments cannot be resolved by the PRC membership or policy issues exist, unresolved issues may be elevated to the applicable OSD proponent for resolution. If the PRC approves the PDC, the PRC Chair will establish an implementation date based on consensus. If the PDC is disapproved by the PRC, the sponsor is notified of the disapproval.

C3.4.4.8. Step 8. Based on PDC responses, and the interface requirements associated with the specific change, the PRC Chair will establish a joint implementation date, or when appropriate, either authorize DoD Components and participating organizations to implement on a staggered schedule or authorize a limited implementation by impacted Components. This information will be included in the ADC. PDCs that begin with the 1000 number series will retain that same number in the ADCs.

C3.4.4.8.1. When an implementation date is not known/provided as part of the PDC adjudication process, the PRC Chair will include in the ADC a requirement for the DoD Components and participating organizations to actively monitor for implementation of the ADC and provide implementation dates when they become available.
C3.4.4.8.2. When one Component provides an extended implementation date, which would delay implementation by the other Components, the PRC Chair will attempt to resolve the issue with the appropriate Component or seek a methodology that will permit a phased or staggered implementation. When a satisfactory implementation date cannot be jointly agreed upon, the PRC Chair may refer the matter to the applicable OSD proponent for resolution.

C3.4.4.9. **Step 9.** The DLMS PRC Chair will prepare the ADC by updating the PDC content based on adjudication of Component responses to the PDC. This includes the following:

- Formalize changes to DLM 4000.25 series of manuals.
- Formalize changes to DLMS ICs.
- Create SEF and XSD files in support of DLMS IC changes.

C3.4.4.10. **Step 10.** When approved, all ADCs are formally incorporated into the Defense Logistics Management Standards manual and posted on the EBSO Website on the Process Changes Page. Text changes in the manuals are identified by bold italicized print. Approved DLMS changes are also posted with the appropriate DLMS IC on the DLMS IC web page.

C3.4.5. **Post-Approved DLMS Change (ADC) Issuance Component Implementation Responsibilities.**

C3.4.5.1. Review ADC and determine affected Component organizations and systems.

C3.4.5.2. Distribute ADC to affected organizations.

C3.4.5.3. Affected activities prepare system change requests (SCRs) for system developers/integrators.

C3.4.5.4. Affected system developers/integrators develop rough order of magnitude (ROM) estimates of resources and schedules required to implement ADC.

C3.4.5.5. Submit SCRs/ROMs to applicable system configuration management boards for prioritization, resourcing and scheduling.

C3.4.5.6. Perform system lifecycle release management tasks of documentation, coding, testing, and release for affected systems.

C3.4.5.7. Make necessary change to affected Component publications.

C3.4.5.8. Conduct necessary training for affected Component personnel.

C3.4.5.9. Provide implementation status updates to the PRC Chair at any time, to include full and partial implementation or required deviation. When Components are unable to meet established implementation dates, prior coordination with the PRC
Chair is required. Additionally, the PRC members must provide the PRC Chair a semiannual status report on implementation of approved changes (RCS DD-A&S(Q&SA)1419 applies) per the guidance in DoDM 4140.01. The semiannual reporting of implementation status is due June 15 and December 15.
C4.1. INTRODUCTION

C4.1.1. Purpose. DoD Components, Federal Agencies, contractors, and foreign governments may use a variety of application systems to exchange Electronic Data Interchange (EDI) data based on Defense Logistics Management Standards (DLMS) Implementation Conventions (IC). The primary purpose of this manual is to establish standards through which these varied systems can interoperate technically and functionally. This chapter describes use of the DLMS 824R, Reject Advice Transaction to exchange information about functional errors not covered by DLMS status transactions. The DLMS 824R Reject Advice Transaction is not used to reject a transmission due to ASC X12 syntactical errors. A DLMS IC 997, Functional Acknowledgment Transaction is used for that purpose (DLM 4000.25-4, “Defense Automatic Addressing System”).

C4.1.2. Error Reduction. The primary means for reducing errors is for each DoD Component to ensure that outbound transactions are thoroughly edited to fully comply with the DLMS standards and any DoD Component-unique requirements. Receiving applications will likely perform edits to preclude processing erroneous transactions that may cause incorrect actions, disrupt the integrity of other data, or disrupt the operation of the system as a whole.

C4.1.3. Error Reporting. When receiving applications apply edit checks and discover functional errors, the errors may be reported back to the originating activity using DLMS 824R.

C4.2. DLMS 824R REJECT ADVICE

C4.2.1. Implementation Convention Content. The DLMS 824R, Reject Advice will convey the following information when reporting errors to the originator:

C4.2.1.1. Table 1 Data. Identifies the originator of the DLMS 824R and the recipient, which is the originator of the erroneous transaction being rejected.

C4.2.1.2. Table 2 Data

C4.2.1.2.1. Identifies the erroneous transaction, specifically including the following data:
C4.2.1.2.1.1. Document number or procurement instrument identifier (PIID). When a contract is authorized under a PIID call/order number (F in 9th position), provide the value in the PIID field.

C4.2.1.2.2. Transaction set control number.

C4.2.1.2.3. Transaction set identifier code.

C4.2.1.2.4. Beginning segment information as applicable (e.g., transaction set purpose code, transaction type code, report type code, action code).

C4.2.1.2.5. Identifying materiel number (e.g., National Stock Number (NSN), part number (PN)/CAGE)

C4.2.1.2.6. Transaction creation date.

C4.2.1.2.7. The application error condition code identifying error type.

C4.2.1.2.8. Copy of the bad data element (optional).

C4.2.1.2.9. Free-form text message describing the error (optional).

C4.2.2. Reject-Error Routing. Routing of the reject is from the rejecting activity to the sending activity. This will typically lead to one of three scenarios:

C4.2.2.1. Defense Automatic Addressing System (DAAS) Transaction Reject. DAAS uses the DLMS 824R, Reject Advice Transaction, to report the error back to the originating activity, which must correct and retransmit the transaction.

C4.2.2.1.1. The Reject Advice Transaction reports the unique document number of the erroneous transaction and/or other pertinent information to identify the erroneous transaction including reject advice codes (when available) identifying one or more specific error conditions.

C4.2.2.1.2. Where specific reject advice codes are not established to identify the error condition causing the transaction to fail, DAAS uses the DLMS 824R to provide narrative message rejection of any DLMS transaction using procedures described in paragraph C4.2.4.2.

C4.2.2.1.3. A combination of reject advice codes and clarifying narrative may be used to facilitate interpretation of the error condition.

C4.2.2.2. Activity Transaction Reject to Sending Activity. The activity receiving a transaction from DAAS uses the DLMS 824R to report an error back to the

---

1 Use the legacy PIIN pending transition to the PIID.
transaction originator.\textsuperscript{2,3} DAAS will not compare the rejected information to an image of the transaction as they received it from the originating activity. Instead, DAAS will route the DLMS 824R transaction to the identified Message-To addressee without further processing. Action Code DR Direct in data element 1/BGN08/020 of the DLMS 824R Reject Advice Transaction identifies this rejection process.

**C4.2.2.3. Activity Transaction Reject to DAAS.** A potential future enhancement will allow an activity receiving a transaction from DAAS to report the error back to the transaction originator using DLMS 824R.\textsuperscript{4} Under the planned enhancement, DAAS will compare the rejected information to an image of the transaction as they received it from the originating activity. If DAAS determines it caused the error, DAAS will correct and retransmit the transaction. If DAAS determines the originating activity caused the error, then DAAS will initiate another Reject Advice Transaction back to the originating activity, as in the first scenario. Action Code 80 Reconcile in data element 1/BGN08/020 of the DLMS 824R Reject Advice Transaction identifies this planned enhancement.

**C4.2.3. Application Program Use of DLMS 824R, Reject Advice.** If a DoD Component application program cannot process a received transaction, it will send a DLMS 824R, Reject Advice Transaction back to the sending activity. The Reject Advice Transaction reports the unique document number, and/or other pertinent information to identify the erroneous transaction, and codes identifying one or more specific error conditions.

**C4.2.3.1. Rejection by Specific Reject Advice Code.**

**C4.2.3.1.1.** Initially, DLMS 824R was developed to provide the functionality of legacy Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP) Document Identifier Code (DIC) DZG, Transaction Reject. As such it rejects the following DLMS transactions with legacy MILSTRAP functionality: DLMS Transactions 527D, 527R, 536L, 830R, 830W, 846A, 846D, 846F, 846I, 846P, 846R, 846S, 867D, 867I, 870L, 888I, and 947I, citing specific reject advice codes in the LQ segment.

**C4.2.3.1.2.** Additionally, the DLMS 824R is authorized for use with DLMS supply (including MILSTRIP transactions), finance, and contract administration transactions that are not specifically identified in this chapter.

**C4.2.3.2. Use of DLMS 824R does not replace procedures for error identification addressed by DLMS 140A, Small Arms and Light Weapons (SA/LW) Reporting, DLMS 870S, Supply Status, or DLMS 842A/R, DoD Supply Discrepancy**

---
\textsuperscript{2} Not available for use without prior coordination.
\textsuperscript{3} Authorized for use on an intra-Air Force basis for Government Furnished Property (GFP) accountability. Refer to ADC 1226 for detailed procedures.
\textsuperscript{4} Not available for use without prior coordination.
Report Reply. DLMS 824R codes may be expanded in the future as requirements are identified and implemented.

C4.2.4. Characteristics of Use

C4.2.4.1. Application Identified Error Examples. Even with stringent editing performed by the EDI translator, some error conditions will occur that only the more complex application program edits can identify. These errors may include:

C4.2.4.1.1. Invalid item identification.

C4.2.4.1.2. Quantity of zero when a nonzero quantity is required.

C4.2.4.1.3. Invalid DLMS code received in the LQ02 Segment. The DLMS 824R applies only when a received transaction fails to comply with the application-level rules/formats specified in the implementation convention.

C4.2.4.2. DAAS Receipt and Generation of DLMS 824R Reject Advice

C4.2.4.2.1. Processing Data. As DAAS receives DLMS interchange envelopes it will process the data through an EDI translator and then break the contents down to the transaction level. DAAS will apply appropriate DLMS and DoD Component edit checks on received transactions.

C4.2.4.2.1.1. If DAAS software detects a nonbusiness process error, it will reject the transaction back to the sender using DLMS IC 997 or DLMS 824R, as applicable.

C4.2.4.2.1.2. If DAAS detects data errors preventing the correct routing or processing of the transaction, DAAS will reject the transaction back to the originator with a DLMS 824R containing a narrative message in the NTE segment identifying the error(s) that prevented the routing/processing. DAAS will also use the enveloping information to identify the rejected transaction.

C4.2.4.2.2. Loading Transactions. DAAS will load transactions that do not contain errors into the Logistics Online Tracking System (LOTS).
C5. CHAPTER 5

DLMS DATA MANAGEMENT

C5.1. PURPOSE. The chapter describes the critical factors in developing, managing, and enabling information sharing through the use of Defense Logistics Management Standards (DLMS) data management practices. Details about data management concepts, procedures, and tools are covered in subsequent chapters.

C5.2. GUIDING PRINCIPLES

C5.2.1. Compliance. DLMS conform to DoD policies for data management policies as noted in the references identified in Chapter 1 (C1.3) and Chapter 2 (C2.3). DLMS also use standards from voluntary consensus standards organizations such as Accredited Standards Committee (ASC) X12. DLMS data management helps ensure compliance with DoD and voluntary consensus standards.

C5.2.2. Interoperability. DLMS data management supports data element coordination to provide interoperability among logistics trading partners. The use of DLMS procedures and metadata repository (e.g., Logistics Data Resource Management System (LOGDRMS)) simplifies and enables understanding and accessibility of data elements and their syntactical representations.

C5.2.3. Data Quality. Data quality deficiency is often due to inconsistent or inaccurate data usage, or conflicting business rules or business processes. The Enterprise Business Standards Office coordinates data issues under the governance of the Process Review Committees (PRC). Revisions to the DLMS procedures and component systems are necessary to harmonize data.

C5.2.4. Revisions to Data Requirements. Revisions to the DLMS and data requirements are proposed and incorporated under the PRC forum for the respective logistics functional area. Submit all proposed change requests through the designated DoD Component PRC representatives. More information on the DLMS PRC process can be found in Volume 1, Chapter 3 of this manual on the EBSO Website on the Process Changes page.

C5.3. GOVERNANCE

C5.3.1. Approach

C5.3.1.1. The process for adding, modifying, and deleting DLMS data elements is part of the Proposed DLMS Change (PDC)/Approved DLMS Change (ADC) process. The DLMS PDC and ADC templates provide sections to identify changes to DLMS data elements. Information on data element proposals should be included in relevant PDC/ADC sections as appropriate, but common practice is to include data element changes in the description of change, the impacts, explanations, and any
descriptions of DLMS IC changes. The PDC/ADC procedures are in Volume 1 Chapter 3 of this manual and at the Process Changes page.

C5.3.1.2. Changes to data representations in DLMS Implementation Conventions are made when the ADC is published.

C5.3.1.3. Approved data element changes are represented in LOGDRMS upon the implementation date identified in the ADC. If no implementation date is explicitly designated, LOGDRMS will be updated concurrent with the date of the ADC.

C5.3.2. Responsibilities

C5.3.2.1. Components. Components contribute to the maintenance of DLMS by developing and commenting on PDCs and ADCs.

C5.3.2.2. Enterprise Business Standards Office. The Enterprise Business Standards Office is the DoD Executive Agent for Logistics Data Interchange and is responsible for change management concerns and technical issues related to the implementation of DLMS Data Elements and Information Exchanges as defined by Defense Logistics Manual (DLM) 4000.25. The Enterprise Business Standards Office oversees LOGDRMS for maintaining and presenting DLMS data elements. Prior to staffing a PDC, and again with the ADC, the relevant PRC Chair coordinates content and quality review of additions and modifications to data elements among Enterprise Business Standards Office staff.

C5.4. METADATA MANAGEMENT. Metadata are the defining characteristics about data elements of a database or transaction. However, DLMS managed metadata expands beyond the simple characteristics of data elements or a transaction. It also includes, associated code values, business rules, transaction formats, and the repository that hold the information. These data categories reflect distinctions between generic and context-specific definitions as well as different representations when applied within syntactical standards, or how they’re used in a particular business transaction. Understanding the relationship among the data categories and the governing process will improve data quality through the use of consistent data assets. Table C5.T1 identifies the DLMS Metadata Categories, the details of these categories are described in the subsequent chapters.
Table C5.T1. DLMS Metadata Categories

<table>
<thead>
<tr>
<th>Category</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Core Data Element</td>
<td>The most general definition of a data element that forms the basis of more specific DLMS data element (e.g., DoD activity address code (DoDAAC)).</td>
</tr>
<tr>
<td>DLMS Data Element and associated business rules/code values</td>
<td>The specific DLMS data element coordinated for use in the logistics community. It may be identical to the core data element, or a business context-specific version of a core data element to recognize different contextual uses of a core data element. (e.g., Bill-to DoDAAC). Some DLMS data elements have explicit business rules and/or code values that specify their usage in a business transaction.</td>
</tr>
<tr>
<td>Accredited Standards Committee (ASC) X12 Representation</td>
<td>The ASC X12 syntax structures to which DLMS data elements are mapped in DLMS ICs. (e.g., code BT, Bill-To-Party, qualifies the X12 entity to which the DLMS element Bill-to DoDAAC is mapped).</td>
</tr>
</tbody>
</table>

C5.4.1. The following information is recorded in LOGDRMS. LOGDRMS is a publically accessible webpage.

C5.4.1.1 Metadata for each data element, including a definition, minimum and maximum characters, data type, and authoritative source(s)

C5.4.1.2 Code values and special business rules

C5.4.1.3 DLMS data elements and their relationships to X12 syntax representations

C5.4.1.4 Mapping of DLMS data elements and code values in the DLMS transactions

C5.4.2. Developing DLMS Data Requirements. Data elements, business rules, and code values.

C5.4.2.1. Data requirements identified during PDC development (Volume 1, Chapter 3), are compared against the DLMS elements recorded in LOGDRMS to check if the element is already supported, needs to be modified, or needs to be added. While preferable for DLMS data elements to use terms commonly used by subject matter experts, reuse of an existing DLMS element with the same semantic meaning may take precedence in the interest of interoperability. Conversely, DLMS data elements may be adjusted from common industry usage to distinguish concepts that are almost the same but should not be confused as synonyms. These same concepts are used to develop code values and business rules.
C5.4.2.2. The creation of a core data element occurs when an Approved DLMS ADC adds a new DLMS data element that does not represent a context-specific version of an existing core element. The core element name and definition are derived from the approved DLMS element and are to be made as generic as possible. It is possible that the Core element may duplicate the DLMS element if the DLMS element is generic.

C5.4.2.3. When ADCs include mappings of DLMS elements to X12 structures in the DLMS ICs, LOGDRMS is updated to reflect the use of X12 data elements.

C5.5. COMMUNITIES OF INTERESTS (COI). The orchestration of logistics data management requires continuous dialog and coordination with the other DoD Components, Federal agencies, and Commercial communities to ensure shared data is visible, understandable, and interoperable. The Enterprise Business Standards Office staff participates in various COIs focused on enterprise data standards and interoperability issues.

C5.5.1 DoD Metadata Registry (MDR). Directive DoD 8320.02, “Data Sharing in a Net-Centric Department of Defense”, April 23, 2007, requires that Data assets must be made understandable and discoverable by publishing associated semantic and structural metadata in a federated MDR. Enterprise Business Standards Office is the manager of the Logistics namespace in the MDR. When DLMS ICs are updated by ADCs, an XML schema is generated from the DLMS IC as an alternative syntactical approach. These XML schemas are posted to the MDR on a regular basis.

C5.5.2. Country Code Working Group (CCWG). Enterprise Business Standards Office is a voting member of the CCWG. It was established to create and maintain the configuration management process for the maintenance of the Geopolitical Entities, Names, and Codes (GENC) Standard for use by the U.S. Federal Government and the Department of Defense. GENC is the U.S. Government profile of ISO 3166, modified only where necessary to comply with U.S. law and U.S. Government recognition policy. The complete set of entries in the GENC Standard may be browsed and searched from the GENC Discovery page. Federal and DoD Component systems, including MAPAD and DoDAAD must be in compliance with the GENC Standard.

C5.5.3. Business Enterprise Architecture (BEA). In 2005, the National Defense Authorization Act mandated the establishment and use of a BEA: An organizational system designed to provide overarching governance across all business systems, functions, and activities for 15 End-to-End (E2E) business processes within the DoD. The entire BEA content is available on the BEA Website. BEA compliance is one of the requirements in the DoD Investment Review Board (IRB) process, which certifies funding for Defense Business Systems that have an expected total cost of greater than $1 million. The IRB process is available on the IRB Website. The Enterprise Business Standards Office has significant interest in the BEA E2E business processes such as: “Order to Cash”, “Procure to Pay”, “Plan to Stock”, and “Acquire to Retire”. Given that all DoD trading partners must comply with BEA, it is imperative that the relevant BEA
content is valid and interoperable with DLMS. With over 60 published DLMS transactions (e.g., Requisition, Advance Shipment Notice), including business processes, information exchanges, business rules and data requirements; the DLMS continue to contribute to the BEA development process by incorporating the logistics business processes, business rules, and data requirements into the relevant E2E processes, Standard Financial Information Structure, and Procurement Data Standards. DLMS policies and procedures are also included in the BEA Laws, Regulations, and Policies and they are linked as constraints to the various business processes in the architecture models. In addition to the BEA and DLMS compliance, the Components have additional processes, business rules and data for managing customers within their respective business systems.
C6. CHAPTER 6

STANDARDS AND CONVENTIONS

C6.1. PURPOSE. The purpose of this chapter is to assist the reader in understanding the basic concepts and semantics of the standards involved in processing logistics transactions: Defense Logistics Standard Systems (DLSS); American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 (hereafter referred to as ASC X12) Standards; and Extensible Markup Language (XML) standards.

C6.2. DEFENSE LOGISTICS STANDARD SYSTEMS/MILITARY STANDARD SYSTEMS. DLSS are commonly referred to as Military Standard Systems (MILS) and are legacy 80 record position, fixed-length, DoD-unique standards for DoD logistics transactions.

C6.2.1. Developed in the 1960s, each DoD logistics transaction was based on the 80-record position (fixed-length) punch card. Each record position (column) on the punch card contains a datum as defined in the requirements of that particular transaction. Figure C6.F1 is an example of two data items, their record positions and their associated values:

<table>
<thead>
<tr>
<th>Record Position</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-3</td>
<td>Document Identifier Code (DIC)</td>
<td>A three-position code that indicates the purpose and use of the document</td>
</tr>
<tr>
<td></td>
<td>An example of a DIC is A0A, which stands for domestic shipment/with National Stock Number (NSN)/North Atlantic Treaty Organization (NATO) stock number</td>
<td></td>
</tr>
<tr>
<td>4-6</td>
<td>Routing Identifier Code (RIC)</td>
<td>A three-position code used to represent the recipient of the document</td>
</tr>
<tr>
<td></td>
<td>An example of a RIC is SMS, which identifies Defense Logistics Agency (DLA)</td>
<td></td>
</tr>
</tbody>
</table>

C6.2.2. Since their inception, the DLSS legacy formats have provided the backbone of cross-functional interoperability between DoD Components and their commercial trading partners. However, the rigid fixed-length formats are functionally constrained, technologically obsolete, and unable to support current DoD business goals.

C6.3. ASC X12 STANDARDS. In 2000, the Department of Defense issued a directive that mandated the use of Electronic Data Interchange (EDI) Standards for the exchange of DoD logistics business transactions (DoDD 8190.01E “Defense Logistics Management Standards (DLMS)”, January 9, 2015). This means that logistics transactions must migrate from DLSS legacy standards to the DLMS. DoD adopted the ASC X12 EDI standards as the basis for the DLMS.
The ASC X12 standards define commonly used business transactions in a formal, structured manner called transaction sets. The structure of the transaction set comprises specific syntax rules for the EDI constructs. The standard defines the data elements, codes, and segments within each transaction set. Most importantly, it also defines specific rules and formats for the content of data within the data elements.

C6.4. STRUCTURE OF EDI TRANSMISSION. To allow different types of transaction sets to be transmitted from one party to another in the same transmission, a hierarchical structure of headers and trailers allows the data to be segregated logically for easy interpretation by the transmitter and receiver. Figure C6.F2 shows an example of the EDI structure.

Figure C6.F2. EDI structure Example

1 Each layer of the EDI enveloping structure and transaction set detail is described below, beginning with the outer layer (Interchange Control Header/Trailer) and moving to the innermost layer (Transaction Set Details).
C6.4.1. **Interchange Control Header (ISA) and Trailer (IEA) Segments.** Interchange Control consists of one or more Functional Groups enclosed in an envelope defined by an ISA Interchange Control Header segment and ending with an IEA Interchange Control Trailer segment. Details of the envelope:

- Contains the structured mailbox address of the sender and the receiver.
- Contains control numbers and counts of the different types of functional groups inside.
- Contains a time/date stamp.
- Specifies the format and version of the interchange envelopes.
- Specifies the characters used for data element delimiters (separators) and segment terminators.

C6.4.2. **Functional Group Header (GS) and Trailer (GE) Segments.** A Functional Group is a group of one or more related Transaction Sets within an EDI transmission. Functional Groups start with a GS Functional Group Header segment and end with a GE Functional Group Trailer segment. The details in the Functional Group GS/GE envelope are often used to route the group’s transaction sets to the target environment. Functional Group detail:

- Contains a functional group ID (e.g., RN (511), MD (527)).
- Contains transaction set counts and functional group control numbers.
- Contains a time/date stamp of when the group was generated.
- Provides format, version, and release specifications of the transactions within the group.

C6.4.3. **Transaction Set Header (ST) and Trailer (SE) Segments.** The Transaction Set Header and Trailer are used to uniquely identify the transaction set. The transaction set begins with an ST Transaction Set Header segment and ends with an SE Transaction Set Trailer segment.

C6.4.3.1. **Transaction Set Header.** The Transaction Set Identifier Code (ST01) is the first data element of the transaction set header segment. It is used by the translation routine of the interchange partners to select the appropriate transaction set definition (e.g., 511 selects the Requisition transaction set). The Transaction Set Control Number (ST02) uniquely identifies an instance of the transaction set and is assigned by the originator of a transaction set. The control number in ST02 must match the control number in SE02. Some DLMS transactions use the ASC X12 version release 4030 which contains an additional data element in the ST Segment; the Implementation Convention Reference (ST03) uniquely identifies the DLMS IC used in the transaction.

C6.4.3.2. **Transaction Set Trailer.** The purpose of the transaction set trailer is to indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments). The number of the
included segments (SE01) is used to indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segment). The Transaction Control Number (SE02) must match the one in ST02 to ensure that entire transaction set was received. Figure C6.F3 shows an example of the Header and Footer segments.

Figure C6.F3. Header/Footer Example: ST and SE

<table>

</tr>
</tbody>
</table>

C6.4.4. Transaction Set Detail (Data) Segments. A Transaction Set is a group of data segments, as defined by the X12 Standard, conveyed between trading partners. The information, in the form of a transaction set, is generally patterned after a conventional paper document, such as a requisition or invoice.

C6.4.4.1. A Transaction Set consists of a number and name (e.g., 511 Requisition), purpose, Functional Group ID, table listing the included segments, their position numbers, requirement designation, maximum usage, and loop repeat counts.

C6.4.4.2. The Transaction Set Detail comprises data elements and data segments specific to the business (requisition) transaction. Examples of data in the detail section are: identity of ordering activity, item ordered, quantity, order priority, delivery point, and identity of paying activity.

C6.4.4.3. Data Element. The data element is the smallest named unit of information in the standard. A simple data element is equivalent to a field in a data dictionary. It has a name, a data element number, a brief description, a data type, and a minimum and maximum length. When a group of two or more simple data elements are linked together to form a single data element, they are referred to as a composite data structure.

C6.4.4.3.1. Data Element Types. There are seven types of data elements identified in Table C6.T1.
Table C6.T1. Data Element Types

<table>
<thead>
<tr>
<th>Data Element Type</th>
<th>Data Element Type Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AN – Alphanumeric</td>
<td>Sequence of letters, numbers, spaces, and/or special characters. The contents are left-justified and trailing spaces should be suppressed.</td>
</tr>
<tr>
<td>B – Binary</td>
<td>Any sequence of octets ranging in value from binary 00000000 to 11111111. This data element type has no defined maximum length. Actual length is specified by the immediately preceding data element. The binary data element type may only exist in the Binary segment and is not used in the DLMS at this time.</td>
</tr>
<tr>
<td>DT – Date</td>
<td>Used to express the standard date in (CC)YYMMDD format in which CC is the century, YY is the year, MM is the month (01 to 12), and DD is the day of the month (01 to 31). DLMS require the use of century to satisfy Y2K compliance.</td>
</tr>
<tr>
<td>ID – Identifier</td>
<td>Contains a unique value from a predefined list of values maintained by ASC X12, the DoD, or other responsible organization referenced by the data element dictionary. All code lists employed under DLMS, including those maintained by ASC X12 are available via LOGDRMS. The contents are left-justified and trailing spaces should be suppressed. Identifier type data elements are frequently used as qualifiers to identify by code the type of information contained in an associated data element. For example, the identifier type data element, Product/Service ID Qualifier, may be transmitted with a value of FS to indicate that the value contained in the associated data element Product/Service ID is a national stock number. In this instance, the list of valid identifier codes is maintained by X12. The conventions normally specify which of these values are permissible entries for the specific use under DLMS.</td>
</tr>
<tr>
<td>Nn – Numeric</td>
<td>Represented by one or more digits with an optional leading sign representing a value in the normal base of 10. The value of a numeric data element includes an implied decimal point. It is used when the position of the decimal point within the data is permanently fixed and is not to be transmitted with the data. The symbol for this data element type is Nn where “N” indicates that it is numeric and “n” indicates the number of decimal positions to the right of the implied decimal point. If no decimal positions are allowed, the symbol is written as N or N0. A leading minus sign (-) is used to express negative values. Absence of a sign indicates positive value. Leading zeros should be suppressed unless necessary to satisfy a minimum length requirement. The length of a numeric type data element does not include the optional minus sign. For example, where the numeric type is N2 (indicating an implied decimal placement two positions from the right), the value -123.4 would be transmitted as -12340. The length of the value within the data stream is five.</td>
</tr>
<tr>
<td>R – Decimal</td>
<td>Contains an explicit decimal point and is used for numeric values that have a varying number of decimal positions. The decimal point is always carried in the transmission unless it occurs at the right end of the value. A leading minus sign (-) is used to express negative values. Absence of a sign indicates positive value. Leading zeros should be suppressed unless necessary to satisfy a minimum length requirement. Trailing zeros following the decimal point should be suppressed unless used to express precision. Use of commas within the numeric value is prohibited. The length of a numeric type data element does not include the optional minus sign or the decimal point. For example, the numeric value - 123.45 would be transmitted as -12345. The length of this entry is five.</td>
</tr>
<tr>
<td>TM – Time</td>
<td>Used to express the time in HHMMSSdd format in which HH is the hour for a 24-hour clock (00 to 23), MM is the minute (00 to 59), SS is the second (00 to 59) and dd is the decimal seconds. Seconds and decimal second are optional. Trailing zeros in decimal seconds should be suppressed unless necessary to satisfy a minimum length requirement or unless necessary to indicate precision.</td>
</tr>
</tbody>
</table>
C6.4.4.3.2. Data Element Length. Each data element is assigned a minimum and maximum length, which may be the same. The length of the data element value is the number of character positions used except as noted for numeric, decimal, and binary elements. A data element is of variable length unless the minimum and maximum lengths are equal, in which case it is of fixed length. The length attribute of a data element is expressed as minimum length / maximum length, (e.g., 2/30).

C6.4.4.4. Data Segment. The data segment comprises simple data elements and/or composite data structure(s) and separators, as an intermediate unit of information in a transaction set. Each data segment has a unique segment ID and is used to convey a grouping of functionally-related user information.

C6.4.4.4.1. Condition Designator. The condition designator (or requirement designator) is used to define the circumstances under which a data element is required to be present or absent in a particular usage. These conditions are of three basic types: mandatory, optional, and conditional. Under DLMS, optional and conditional designations can be further defined as either recommended or required. Condition designators shown in Table C6.T2 are identified by the symbol as specified in parentheses.

<table>
<thead>
<tr>
<th>Condition Designator</th>
<th>Condition Designator Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mandatory (M)</td>
<td>The designation of mandatory is absolute in the sense that there is no dependency on other data elements within the segment or composite data structure. A mandatory data element must appear in the segment.</td>
</tr>
<tr>
<td>Optional (O)</td>
<td>The designation of optional means that there is no syntactic requirement for the presence of the data element within the segment or composite data structure. Optional data elements may be included or omitted based upon instructions provided in the DLMS ICs or at the discretion of the transmitting activity (as applicable).</td>
</tr>
<tr>
<td>Conditional (X)</td>
<td>A designation of conditional defines a special relationship between two or more data elements within a segment or composite data structure. Relational conditions are based upon the presence of one of those data elements. The specific relationship is defined in a syntax note. The first character of the syntax note identifies one of the following conditions: (1) Paired (P). If any specified data element is present, then all of the specified data elements must be present. (2) Required (R). At least one of the specified data elements must be present. (3) Exclusion (E). Not more than one of the specified data elements may be used. (4) Conditional (C). If the specified data element is present, then all other specified data elements must be present. However, any or all of the data elements not specified as the first in the condition may appear when the first is not present. (5) List Conditional (L). If the first specified data element is present, then at least one of the remaining specified data elements must be present. However, any or all of the data elements not specified as the first may appear when the first is not present.</td>
</tr>
</tbody>
</table>
C6.4.4.4.2. **Data Segment Loops.** Data Segment Loops are groups of two or more data segments that represent a block of related information in a Transaction Set. Different loops may be nested within each other, and loops may repeat up to the maximum loop occurrences specified within the Transaction Set. In some cases, it may be specified as having an unlimited number of occurrences (noted as “>1”). Loops can be Unbounded or Bounded as defined in the X12 Standard.

C6.4.4.4.2.1. **Unbounded.** An Unbounded loop starts with a specific segment, and all of the other segments in the loop may be considered children of that segment. To establish the iteration of a loop, the first data segment in the loop must appear once and only once in each iteration. Loops may have a specified maximum number of repetitions. A specified sequence of segments is in the loop. Loops themselves are optional or mandatory. The requirement designator of the beginning segment of a loop indicates whether at least one occurrence of the loop is required. Each appearance of the beginning segment defines a new occurrence of the loop. The requirement designator of any segment within the loop after the beginning segment applies to that segment for each occurrence of the loop. If there is a mandatory requirement designator for any data segment within the loop after the beginning segment, that data segment is mandatory for each occurrence of the loop. If the loop is optional, the mandatory segment only occurs if the loop occurs.

C6.4.4.4.2.2. **Bounded.** The characteristics of unbounded loops described previously also apply to bounded loops. In addition, bounded loops require a Loop Start Segment (LS) to appear before the first occurrence of the loop and a Loop End Segment (LE) to appear after the last occurrence of the loop. If the loop does not occur, the LS and LE segments are suppressed.

C6.4.4.5. EDI fields and records are separated by delimiter characters. The delimiter for a field and the delimiter for a record are set externally by the Interchange Control Header (ISA) segment. This means, the EDI parser may not know what the delimiters will be until it has begun to parse the file. EDI handles this problem by making the first segment, ISA, fixed length and defining the delimiters in the ISA segment of the EDI interchange. In an actual interchange, ASCII Hexadecimal characters are used, a graphic representation is used for print examples.

C6.4.4.5.1. **Delimiters.** In ASC X12 EDI interchanges (*Releases 4010 and 4030*), there are three delimiters. The delimiters cannot appear as a value in the business transaction; otherwise the syntax rule will fail.

C6.4.4.5.1.1. **Data Element Separator.** The first delimiter is the data element separator. This defines the delimiter between each field within the record. This character will likely be the most common character used for any given EDI file.

C6.4.4.5.1.2. **Component Element Separator.** The second, and least commonly used, is the component element separator. ASC X12 supports the use of sub-elements in transactions employing a Composite data element such as in the
Unit of Measure (MEA) and Reference (REF) segments. The component element separator delimits the sub-elements.

C6.4.4.5.1.3. Segment Terminator. Lastly, the segment terminator defines the end of each segment within the transaction.

C6.4.4.5.2. EDI Interchange and Delimiter Example. Figure C6.F4. shows an example of the EDI data in an interchange that includes the delimiters.

Figure C6.F4. ASC X12 Delimiters

| ISA*00*   | 00* | *01*1515151515 | *01*5151515151 |

| GE*1*128~ |
| IEA*1*000032123~ |

Data Element Separator = * (Asterisk). Defined in the fourth position of the ISA Segment Component Element Separator = \ (Back slash). Defined in the 3rd to last position of ISA segment Segment Terminator = ~ (Tilde). First occurrence defines the segment termination

C6.4.4.6. Special Character Use in DLMS Transaction

C6.4.4.6.1. XML Reserved Characters. DLMS develops and publishes XML schemata (paragraph C6.5.) that are equivalent to the X12-based DLMS ICs. Because the W3C XML standard defines a number of reserved characters that senders may not convey in the XML data element values, senders of X12-based transactions also may not convey these characters in DLMS X12-based transactions as data element values, because they will result in errors if the X12-based transactions are translated to XML.

C6.4.4.6.2. DoD Allowed Special Characters. DoD has identified a number of special characters as valid for use in specific DoD data values, (e.g., the dash (-) and the slash (/) characters are valid in a unique item identifier). Because trading partners may legitimately convey these characters in their EDI data content, senders must not use these special characters as delimiters in DLMS transactions that may require the use of these characters in the transaction data. To avoid any possibility of this type of data collision, DLMS procedures do not allow the use of these DoD allowed special characters as X12 EDI delimiters in any DLMS transactions. Table C6.T3, Special Characters Allowed as Delimiters in X12-based DLMS Transactions, lists the characters that are valid for use as X12
delimiters in DLMS transactions. Senders may choose delimiters from among this list and encode those delimiters in the ISA segment of the DLMS transactions they send. Table C6.T4, Preferred Special Characters as Delimiters for use in X12-based DLMS Transactions, lists the special characters that are preferred for use by type of delimiter.

C6.4.4.6.3. In addition to the above, see Volume 2, Chapter 17 for SDR special character exceptions/inclusions.

Table C6.T3 – Special Characters Allowed as Delimiters in X12-based DLMS Transactions

C6.5. **XML STANDARDS.** DLMS use XML as an alternative to EDI for exchanging data between logistics trading partners. XML offers a flexible way to describe and tag content (data, word, phase, etc.) in a structured way. The XML standard emphasizes simplicity and usability over the Internet. It is a textual data format with worldwide support. Though originally designed to focus on documents, it is widely used to represent data structures (e.g., DLMS) and is the foundation of web services. XML only refers to the data; the XML Schema (e.g., XSD file) is used to express the set of business rules to which the XML must conform to be considered valid. The schema is an abstract collection of metadata components. The XML instance document is validated against the schema (a process known as the assessment) prior to sending the transaction for processing. This validation ensures required fields are present, the elements are in the correct format and valid codes are used (when defined in the schema).

C6.5.1. **Well-Formed.** The XML specification defines an XML document as text that is well-formed; for example, it satisfies a list of syntax rules provided in the specification. Some of the key criteria are:

C6.5.1.1. It contains only properly encoded legal Unicode characters.

C6.5.1.2. None of the special syntax characters such as "<" and ">

C6.5.1.3. The beginning, ending, and empty-element tags that delimit the elements are correctly nested, with none missing and none overlapping.

C6.5.1.4. The element tags are case-sensitive; the beginning and end tags must match exactly. Tag names cannot contain any of the characters

C6.5.1.5. The XML instance document is validated against the schema (a process known as the assessment) prior to sending the transaction for processing. This validation ensures required fields are present, the elements are in the correct format and valid codes are used (when defined in the schema).
C6.5.1.5. There is a single "root" element that contains all the other elements. The XML instance document must adhere to all the rules of a well-formed file or it is not XML. An XML processor that encounters violation of the well-formed rules is required to report such errors and to cease normal processing.

C6.5.2. In addition to being well-formed, DLMS XML must be valid. This means that it contains a reference to a schema (XSD file) and that its elements and attributes are declared in that schema and follows the grammatical rules for them that the schema specifies. Additional usage information is further described in Chapter 8.

C6.5.3. XML Tags. XML and EDI tag names are similar, but XML fields and records are handled differently than in EDI. In EDI, data is separated by delimiters. In XML, documents are comprised of markup code to delimit content. Markup and content are distinguished by syntactic rules. All strings that constitute markup begin with the character < and end with a >. These bracketed strings are called XML tags. Strings of characters that are not XML tags are content.

C6.5.3.1. XML tags define the beginning and end of each section of the XML transaction. The start tag contains the field or record name. The end tag will use the same name, but will be preceded by a forward slash. Anything in between the two tags is content. For example, to define the value 1000 in the quantity field the XML might appear as <quantity>1000</quantity>. Figure C6.F5 shows the hierarchy:

Figure C6.F5. XML Hierarchy

```
<segment>
 <code>ISA</code>
 <element>00</element>
 <element></element>
 <element>00</element>
 <element></element>
 <element>01</element>
 <element>1515151515 </element>
 .
 .
 </segment>
```

C6.5.3.2. XML is self-validating. Each DLMS XML transaction has an XSD (XML Schema Definition) file. The XSD defines the data types (e.g., string, numeric, binary) and detailed constraints (e.g., size, optional/required, enumeration value (lookup table), and format). The process of checking to see if an XML transaction conforms to a schema is called validation, which is separate from XML’s core concept of being syntactically well formed. All XML transactions must be well formed or they cannot be parsed. The schema ensures the transaction conforms to the process rules. Validation of an instance transaction against a schema can be regarded as a conceptually separate operation from XML parsing. In practice, the schema validation is integrated within the XML parser.
C7.1. PURPOSE. The purpose of this chapter is to describe Defense Logistics Management Standards (DLMS) use of Accredited Standards Committee (ASC) X12 standards.

C7.2. IMPLEMENTATION CONVENTION. ASC X12 develops uniform standards for electronic interchange of business transactions. The main objective of ASC X12 is to provide standards to facilitate electronic interchange of general business transactions. The standards provide a broad range of transaction setup upon which trading partners may base specific implementation conventions (IC). By agreement between trading partners, ICs are developed to satisfy a specific business interchange. These ICs do not incorporate the full range of allowable business information in a transaction set but tailor the configuration of the transaction sets to identify selected data segments and data elements essential to the business interchange. The Logistics Community has exercised a similar judgment in developing and defining the DLMS ICs.

C7.3. DLMS IMPLEMENTATION CONVENTION

C7.3.1. The DLMS ICs represent a combination of ASC X12 standards and implementation guidance specific to the DLMS. The main objective is to provide standards to facilitate electronic interchange of general business transactions. DLMS ICs identify and define the segments, data elements, and codes that DLMS trading partners use in each IC. Most importantly, DLMS ICs specify rules and formats for the content within the data elements. DLMS ICs address how the standards are implemented. One X12 transaction set may be used in several different functional areas or repeatedly within the same functional area. Each separate interpretation of the standards according to a specific usage is called an application. DLMS ICs are found on the Enterprise Business Standards Office Website at the DLMS IC page.

C7.3.2. Structure. Each DLMS IC consists of a cover page, X12 transaction set table diagram, segment hierarchy, and notes.

C7.3.2.1. Cover page. The cover pages includes the transaction designation (e.g., 527R, Material Due-In and Receipt), the purpose of the transaction (brief narrative description of how this transaction is used), notes (a more detailed description of the transaction within the scope of the Supply Chain), and a change history (a list of ADCs and a short description of the enhancement).

C7.3.2.2. X12 Transaction Set Table Diagram. The information here contains an outline of the X12 standard transaction set. There may be semantic notes, but only high level information is contained within this section.
C7.3.2.3. **Segment Hierarchy.** The segment hierarchy includes a data element summary with information pertaining to each data element in the segment. In general, information printed in normal typeface is extracted from ASC X12 standards and information printed in italics prefaced by "DLMS Note" relates to the DLMS implementation of the standards.

C7.3.2.4. **Instructions on Use of the ASC X12 Standard.** In many instances, exact equivalents are not available to map the DoD information requirements to the ASC X12 standard. Specific instructions on how a particular portion of the standard is used under DLMS ICs are provided in the form of DLMS notes. The DLMS notes explain what data may be carried where. The DLMS notes are printed in italics in a gray box. Notes may be applicable to a transaction set, segment, data element, or a specific code value.

C7.3.2.5. **Importance of DLMS Notes.** The information provided in DLMS notes is crucial to understanding the DLMS IC. At times, the ASC X12 data element or code value name has little similarity to the commonly used DoD name for a piece of information. Additionally, an ASC X12 data element or code value may be used as a migration code (C7.4.1.3) or local code (C7.4.1.4) to carry DLMS required data not otherwise provided for by the standard. The DLMS notes explain these circumstances.

C7.3.2.6. **Syntax and Semantic Notes.** The terms “syntax” and “semantic,” when used in the context of EDI implementations, refer to the structure and meaning of X12-formatted information respectively.

C7.3.2.6.1. Syntax is the structure of the data. This includes establishing the method of encoding a piece of data by its attributes and identifying that data in the transfer. Defining minimum and maximum field lengths of a data element or the designation of a relevant code list are examples of syntax requirements.

C7.3.2.6.2. Semantic relates to the meaning of the data transferred. For example, a semantic note might indicate the relationships in the meaning of one or more data elements in an instance of the segment.

C7.4. **DLMS USE OF ASC X12 CODES.** Most DLMS ICs are based on ASC X12 version/release 4010 or 4030. When DLMS uses codes from a higher version/release, it is referred to as a Migration Code. The X12 standard currently does not allow for use of codes from a higher version/release, nor does it allow substantially changing the meaning of the underlying code, hence creating confusion and non-compliance with respect to semantic equivalence. Although technically regarded as syntactically non-compliant by the X12 standard, the DLMS authorize limited use of higher version/release codes to support Component data requirements. DAAS, DoD Components, trading partners, and Value Added Networks (VAN) will ensure commercial software products are configured in accordance with the DLMS IC.

C7.4.1. **Code Sources**
C7.4.1.1. Deriving Code Values. Code values associated with data elements may be derived from several locations. Many of the applicable code values for DLMS data elements are listed in the DLMS ICs. DLMS will continue to support other legacy code structures used in the Defense Logistics Standard System (DLSS). Three data elements, transportation mode/method code (transportation method/type code), unit of issue (unit or basis for measurement code), and type pack code (packaging code) use conversion guides to convert the DoD legacy fixed-position code structure to the ASC X12 code structure. Special processing at the sending node provides conversion from a DoD code value to an ASC X12 code value for transmission of the transaction set. The sender and the receiver employ the conversion guide so that the users see only the familiar DoD code values. DoD/ASC X12 Conversion Guides are available from the Enterprise Business Standards Office Website.

C7.4.1.2. References to Code Source. In DLMS ICs, some data elements reference a significant number of code values that are applicable to a DLMS application. When the specific codes are not listed in the DLMS IC, a reference to a code source is provided.

C7.4.1.3. Migration Code. A “migration code” is a code used from a higher ASC X12 version/release (e.g., 5030) that is used in a lower version/release (e.g., 4010). The semantic meaning and syntax are consistent with the higher version/release. Use of a migration code refers to establishing agreement among all trading partners to use a valid X12 code from a higher version/release, with its approved X12 definition, in a lower version/release of X12. Manual intervention may be needed for some commercial ANSI ASC X12 parsers to accept the higher version/release code.

C7.4.1.4. Local Code. A “local code” is a code value that is not in the current version/release, and has not been established in a higher ASC X12 version/release. A data maintenance action with ASC X12 is in process to establish the code in a higher version/release. Once approved by ASC X12, the local code becomes a migration code. Manual intervention may be needed for some commercial applications to accept the local code.

C7.4.1.5. Borrowed Code. Use of a “borrowed code” refers to establishing an agreement among all trading partners to use a valid X12 code at the correct version but altering the code’s semantic meaning (i.e., the code is used because it conforms to syntax rules, even though its intended meaning is different from its use in the identified context). The borrowed value must be a value that is otherwise unused by the trading partners allowing its definition to be mutually changed. When a borrowed code is identified for DLMS use, Enterprise Business Standards Office will submit an ASC X12 data maintenance (DM) action to establish a new qualifier to be approved for use in a higher (future) ASC X12 version/release. The borrowed code may be used indefinitely until DoD migrates to a higher version of ASC X12; however, it is more likely to be permanent, since migration to higher versions is very rare.

C7.4.1.6. DLMS Qualifiers
C7.4.1.6.1. DLMS qualifiers are ASC X12 Data Element 1270 Codes that identify a DoD code list. X12 Data Element 1271 (Industry Code) is the actual code from the code list identified (or qualified) in X12 Data Element 1270. DLMS Qualifiers are available from the Enterprise Business Standards Office Website. See Chapter 6 of this volume for more information about how Logistics Data Resources Management System (LOGDRMS) presents qualifiers.

C7.4.1.6.2. Qualifier values are selected from codes approved for use by ASC X12 in the version/release applicable to the DLMS IC. At times, there is no suitable qualifier available within the X12 dictionary and an alternative code must be used to identify and pass the data associated with the business process (migration or borrowed code).
C8. CHAPTER 8

MILITARY STANDARD SYSTEMS/DEFENSE LOGISTICS MANAGEMENT STANDARDS MAPPING

C8.1. GENERAL. This chapter provides an overview of data mapping procedures between Military Standard System (MILS) and Defense Logistics Management Standards (DLMS) transactions. MILS official name is the Defense Logistics Standard System (DLSS), however most users know it as MILS, MILS will be used throughout this chapter.

C8.2. APPLICABILITY AND SCOPE. The data mapping identifies the data content and location within the MILS and DLMS formats. The DLMS maps are created and maintained by DAAS and support translation of data both from MILS to DLMS and DLMS to MILS. Because DLMS transactions have the capacity to convey more data than the MILS, the mapping also highlights the gaps in the DLMS and MILS translation processes (e.g., information may be lost when translating a DLMS transaction to a MILS transaction because only values that exist in both DLMS and MILS can be translated).

C8.3. DATA TRANSFORMATION

C8.3.1. Mapping is a step in a larger process known as data transformation. Data transformation is the process of converting information from one format to another format. MILS is based on 80-column card images developed in the 1960s and was the sole DoD transaction format for decades. The records are fixed length and fields are based on a column position within the record.

C8.3.2. DLMS currently supports two industry standard formats: American Accredited Standards Committee (ASC) X12 Electronic Data Interchange (EDI) and eXtensible Markup Language (XML). To make data mapping easier between the multiple formats, DLMS XML uses the EDI X12 element names for the markup tags. For example, if the EDI element name is “Reference Identification”, “<E_Reference_Identification>” and “</E_Reference_Identification>” will be used as the beginning and ending tags within XML.

C8.3.3. DAAS’s transformation process involves the use of executable programs to convert transactional data between MILS, DLMS EDI, and DLMS XML.

C8.4. MILS-DLMS EDI MAP CONSTRUCT

C8.4.1. While the DLMS maps are based on the MILS transaction format, multiple MILS transaction formats may be mapped to a single DLMS transaction. For example, Document Identifier Codes (DIC) D4_, D6_, DRA, DRB, DRF, DZK, D6T, BAY, C3D, C2_, DX_, Z6T, Z4S, Z6S, BG1 and BG2 are all mapped to the DLMS 527R Receipt, Inquiry Response and MRA transaction. Due to this many-to-one relationship, the maps
contain conditional statements defining how MILS elements map to the corresponding DLMS elements. For example, the national stock number (NSN) element appears in record position 12 to 24 in both the MILS BG1 and BG2 while other MILS transaction formats use record position 8 to 20, all of which map to a single element (LIN03) in DLMS 527R. The MILS-DLMS maps comprise two sections.

C8.4.2. MILS Section of the Data Map. The legacy 80 record position MILS format is a fixed-length data format, meaning each data value resides in a specific range within the record layout. The MILS section of the map comprises three parts: field name, record position and conditions for translation (if required).

C8.4.2.1. Field name is the data member within the data structure.

C8.4.2.2. Record position defines the beginning and ending position of the data value within the data structure.

C8.4.2.3. The translation describes the conditions for mapping the data between the MILS and DLMS formats.

C8.4.2.3.1. The mapping describes how an individual MILS transaction is translated to the DLMS. The conditional mapping also provides information about values within the record.

C8.4.2.3.2. For example, the MILS transaction format is limited to a fixed number of columns; DLMS are variable length format and do not have the same restriction. In the MILS quantity field, M is used to designate thousands. The map translates M to 000 so the value stored in the DLMS is a numeric quantity.

C8.4.3. DLMS Section of the Data Map. The DLMS section of the data map comprises three parts: DLMS Data Element, Table, and Update information. The DLMS data element relates back to the MILS field name (if one exists) and its MILS record position. In many cases the MILS record position will be “none” because the DLMS transaction is an expanded/enhanced version of the legacy 80 record position MILS transaction. DLMS are designed to support new elements and features that do not exist in the MILS version of the transactions. The table column (next to last column in Figure C8.F3.) is an X12 EDI concept and exists to distinguish among the header, detail, and summary segments of the X12 transaction. DLMS data elements in Table 1 (header segments) contain the transaction information, receiving location and routing information. DLMS data elements in Table 2 (detail segments) contain the values to be used for processing the transaction. DLMS data elements in Table 3 (summary segments) contain summary data for the transaction.
### Partial Example of the DLMS 527R Material Due In and Receipt Map

---

**Figure C8.F3.** Partial Example of the DLMS 527R Material Due In and Receipt Map
C8.4.4. **XML Mapping.** There are no MILS to XML maps. DLMS XML is “EDI based”. This means the segments, elements, and looping structure of the EDI transaction are exactly the same in XML as they are in EDI. For example, if the routing identifier code (RIC) is stored in the “N104” element in EDI, XML will use “N104” as the XML tag name when storing the RIC value in XML (e.g., <N104>S2B</N104>).

C8.5. **USING THE MAPS**

C8.5.1. DAAS business rules define the routing of transactions and the type of transactions used by each communication system (e.g., EDI, XML, MILS). The DLMS maps are used when the data needs to be transformed between MILS and EDI/XML.

C8.5.2. DAAS uses the DLMS maps to translate the input file from one format to another. Missing data, incorrect data types, values outside the parameters and many other reasons can cause the transaction to reject. If the transaction is rejected, DAAS sends a notification back to the source system so the transaction can be corrected and resubmitted.

C8.5.3. Components migrating to the DLMS will need to locate the MILS format within the DLSS/DLMS cross reference table. The cross reference will indicate the correct DLMS transaction for a given MILS transaction. Components should compare the MILS format to any existing Service unique formats and document any deltas. The DLMS transactions can be updated in response to changing business needs. If the Component has a unique requirement, a Proposed DLMS Change (PDC) can be submitted to have the specific transaction enhanced (Volume 1, Chapter 3 of this manual).
C9. CHAPTER 9

LOGISTICS DATA RESOURCE MANAGEMENT SYSTEM

C9.1. PURPOSE. This chapter provides basic information about DLMS data dictionaries and simple navigation in the Logistics Data Resource Management System (LOGDRMS). The data maintenance process is described in C5.3 and C5.4.

C9.2. LOGDRMS. LOGDRMS is the online repository of Defense Logistics Management Standards (DLMS) data elements, definitions, qualifiers, and the DLMS Supplement (hereafter referred to as DLMS Implementation Convention (IC)) transaction structures.

C9.3. ACCESS. The LOGDRMS website is publically accessible from the Enterprise Business Standards Office Website. There is no logon or common access card (CAC) requirement to see data on LOGDRMS. Only unclassified, publicly releasable content is to be provided on LOGDRMS.

C9.4. HOMEPAGE. The LODGRMS homepage contains overview information and links to the suite of directories in LOGDRMS. LOGDRMS contains three views with subdirectories. Figure C9.F1 shows the expanded definition for the three views identified below.

- DLMS Data Element Dictionary/Directory (DEDD)
- Dictionary/Directory of DLMS Qualifiers (Reference Tables)
C9.4.1. DLMS Data Element Dictionary/Directory. The DEDD is the central directory for all DoD logistics data elements used in the DLMS. Entries are made for core, domain, and DLMS data element definitions. Select one of the three elements shown below from the drop down list and click the search button next to the element to show the details of the element (Figure C9.F2).

- Core Elements
- Domain Codes and Qualifier Element
- DLMS Element

Core Elements, Domain/Qualifiers, and DLMS Elements are discussed in more detail in the following subsections.
Figure C9.F2. DLMS Data Element Dictionary

C9.4.1.1. Core Elements

C9.4.1.1.1. This section describes the results of selecting a Core data element from Figure C9.F2. A Core data element is a logical concept that is the foundation for one or more DLMS elements. The Core data element page (Figure C9.F3) will display the applicable Core data element, related DLMS data elements, and applicable domain data (data codes). It will also show associated DLMS IC, numbers with identified location(s) within each IC.

C9.4.1.1.2. For example, the Core data element “DoDAAC (Department of Defense Activity Address Code)” (Figure C9.F3.), displays the core definition that underlies the use of DoDAAC with the DLMS and the associated DLMS data elements (e.g. DoDAAC - BILL AND SHIP TO PARTY, DoDAAC - BILL TO PARTY (FOR DISPOSAL OF HAZARDOUS MATERIEL)).

C9.4.1.1.3. Clicking on the “Logistics Qualifier Link” (Figure C9.F3.) will display the page for a linked qualifier, if there is a qualifier reference table for the element.
C9.4.1.2. **Domain Codes.** This section describes the results of selecting a Domain from Figure C9.F2. Domain codes are DoD codes mapped to codes of an ASC X12 standard element. The X12 code may or may not match the DoD code, but should be as close as possible. For example, Unit of Measure (UoM) (core data element) contains set of measurement values: Cubic Foot, GA-Gallon. “Type of Unit Price Code” has codes associated with the Core data element, (Figure C9.F4.). Even though every Core Element is in the Domain drop down list, not every Core data element has Domain codes. The Domain result page may also link to a DLMS qualifier list.
C9.4.1.3. **DLMS Data Elements.** This section describes the results of selecting a DLMS Element from Figure C9.F2. above. DLMS elements are the functional data standards for the logistics community and are the basis for identifying transaction data requirements. For example, the core data element, "Department of Defense Activity Address Code (DoDAAC)" is the parent and includes DLMS data variations like "DoDAAC – Bill To Party" and "DoDAAC – Delivery Address". The results of the DLMS inquiry will display a list of DLMS ICs in which the DLMS data element are used (Figure C9.F5.).
C9.4.1.4. **DLMS Implementation Convention Inquiry.** This section describes the results of searching a DLMS IC from Figure C9.F2. above. The resulting DLMS IC will display all associated DLMS data elements, X12 qualifiers, and locations in a particular IC. The example in Figure C9.F6. shows the results for DLMS IC “004010F511R4RA05”.

display all associated DLMS data elements, X12 qualifiers, and locations in a particular IC. The example in Figure C9.F6. shows the results for DLMS IC “004010F511R4RA05”.

C9.4.2. **DLMS Qualifiers.** In Figure C9.F7., the DLMS Qualifiers page provides a way to browse or search for the DLMS managed code lists used in the DLMS IC. The DLMS Qualifiers represent a combination of DoD logistics functional data elements for which the authoritative source is DLM 4000.25, Defense Logistics Management System manual.
C9.4.2.1 Users may enter specific keyword searches to retrieve the desired Qualifier lists, however the best way to view the information is to click on the “Complete Listing” tab for a comprehensive view of all Qualifiers, as shown in Figure C9.F8.

C9.4.2.2 External qualifiers are DoD codes recognized within the X12 Standard as being managed by an external source. For most qualifiers in DLMS, the Enterprise Business Standards Office is the recognized code source. The DLMS also use qualifier codes from other sources such as U.S. Transportation Command.
(USTRANSCOM) for certain transportation related code lists. A qualifier code value will always be the code transacted. Most of the DLMS qualifiers are registered under ASC X12 Data Element 1270 (Code List Qualifier Code) and are used in Data Segment LQ identifying the coded entry to its qualifier. The presence of an asterisk (*) in the qualifier code indicates one of the following conditions:

- The entry represents a conversion guide required or used in the legacy 80 record position Defense Logistics Standard Systems (DLSS)/DLMS translation process. The conversion guide is available on the DLMS Website.
- The entry shows a secondary sequence of a data code within a qualifier (alphabetic/alphanumeric code sequence or clear-text name),
- The entry is a guide for cross-reference of DoD Document Identifier Codes (DIC) to DLMS ICs.
- The entry identifies a DoD managed code list (qualifier not in the X12 DE1270 code list).

C9.4.2.3. Service and Agency Code Example. Selecting “Service and Agency Code” from Figure C9.F8. above will display a list of valid codes and associated agency names and usage criteria. For example, B – US Army, FMS AND GRANT AID USE ONLY and C – US Army, CONTRACTOR USE ONLY. The results of the inquiry are displayed as shown in Figure C9.F9.
C9.4.3. ANSI X12 Repository. The ANSI X12 Repository reflects the ANSI X12 structures of the DLMS ICs, leaving out the notes. The side navigation bar for LOGDRMS has links to the DLMS IC, segments, composite data elements, simple data elements views. The structures are hyperlinked to enable browsing up or down the parent/child relationships of the structures. The details of X12 concepts are described in Chapter 6.

C9.4.3.1. Directory of DLMS Implementation Conventions. A directory of all DLMS ICs in abbreviated format, i.e., transaction set identifying all American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 data segments and simple/composite data elements. This directory also identifies applicable X12 version and release (Figure C9.F10.). NOTE: The authoritative source for the DLMS IC is located on the DLMS IC page.
C9.4.3.2. Once a user clicks on “View” link in Figure C9.F10. (e.g., 511R), the DLMS IC Transaction Set Specifications will be displayed (Figure C9.F11.).
C9.4.3.3. **Directory of DLMS Segments.** This directory identifies only those X12 segments that are used in the DLMS ICs (Figure C9.F12.).

**Figure C9.F12. Segments**

C9.4.3.4. Once a user clicks on “View” link in Figure C9.F12, (e.g., “Beginning Segment”), the Segment Specifications will display (Figure C9.F13.).

**Figure C9.F13. Segment Specifications**
C9.4.3.5. **Directory of ANSI ASC X12 Simple Data Elements.** Figure C9.F14. shows X12 data elements used in DLMS ICs.

**Figure C9.F14. X12 Simple Data Elements**

AP2. APPENDIX 2

TERMS AND DEFINITIONS

ACCESSORIAL COSTS OR CHARGES. Certain expenses incident to issues, sales, and transfers of materiel. They are defined to include: packing, handling, and crating costs; transportation costs; port loading and unloading costs; and positioning costs.

FOREIGN MILITARY SALES (FMS). Separate charges added to the standard price of materiel for each foreign military sales case. The charges cover expenses of packing, handling, crating, transportation, and supply operations associated with preparation and delivery of foreign military sales materiel.

LAND. Charges by a carrier for rendering service in addition to the line haul. Such services may include sorting, packing, cooling, heating, switching, delivering, storage, and reconsigning.

OCEAN. Those services for which the ocean carrier is not responsible under the terms of the applicable commercial tariff or Military Sealift Command (MSC) contract rate, but which are required to complete the receipt and delivery of freight between common carriers, consignors, or consignees.

ACCOUNTABILITY. (DoD) The obligation imposed by law or lawful order or regulation on an officer (accountability officer) or other person for keeping accurate record of property, documents, or funds. The person having this obligation may or may not have actual possession of the property, documents, or funds. Accountability is concerned primarily with records, while responsibility is concerned primarily with custody, care, and safekeeping.

ACCOUNTABLE OFFICER. See “Accountability.”

ACCOUNTABLE PROPERTY SYSTEM OF RECORD. The Government system used to control and manage accountable property records; a subset of existing organizational processes related to the lifecycle management of property; the system that is integrated with the core financial system. (Source: DODI 5000.64, May 19, 2011)

ACCOUNTABLE RECORD. See “Property Accountability Record.”

ACCOUNTING CLASSIFICATION REFERENCE NUMBER (ACRN). A two-position alphanumeric control code assigned (under DFARS 204.7108) to each accounting classification used in a single contract.

ACCREDITED STANDARDS COMMITTEE (ASC) X12. Accredited by the American National Standards Institute in 1979, ASC X12, Electronic Data Interchange, is a voluntary standards group charged with developing American National Standards for electronic data interchange.
ACTION ACTIVITY. Any activity required to take action as a result of a supply discrepancy report (SDR), (e.g., distribution depot, inventory control point/integrated materiel manager, contract administration office, packaging control point, international logistics control office or shipping activity).

ACTIVE FILE. (DoD Small Arms/Light Weapons Registry (SA/LW) and Components Registry). A list of weapon serial numbers for which the Component Registry’s Military Department or Agency maintains accountability.

ACTIVITY. A unit, organization, or installation performing a function or mission, (e.g., reception center, redistribution center, naval station, naval shipyard). (Source: JCS Publication 1-02, "DoD Dictionary of Military Terms.")

ACTS OF GOD. Happenings outside the control of humans.

ADJUSTMENT REQUEST. Data forwarded to billing offices to request and provide information necessary for adjustment of billings. Adjustment requests also include follow-ups for adjustments for validated discrepancy reports and promised materiel return program credits.

ADJUSTMENTS, BOOK-TO-BOOK. Mismatches within the storage activity’s management system between the quantity-by-location and the owner balances.

ADJUSTMENTS, PHYSICAL INVENTORY. The accounting transaction that corrects a book balance to agree with the quantity of the item in storage. Such adjustments may result from (1) physical inventory, (2) a potential discrepancy revealed by a materiel release denial or location survey/reconciliation, (3) capitalization/decapitalization actions, (4) reidentification of stock, (5) type of pack changes, (6) catalog data changes, (7) supply condition and purpose code changes, etc.

ADMINISTRATIVE COSTS. General overhead expenses and other costs in operating the DoD or General Services Administration logistics systems that are incident to the issue, sale, or transfer of materiel and are not included in the price of the materiel, or as an accessorical cost.

ADVANCE PAYMENT. Amounts paid for materiel in advance of performance or delivery of the materiel. Amounts paid for other purposes in advance of the time the amounts are earned by the payee.

ADVICE CODE. A coding structure for the purpose of transmitting instructions considered by the creators of requisitions to be essential to the desired supply action. Insertion of advice codes is at the discretion of the initial document creator.

AERIAL PORT OF DEBARKATION (APOD). A station that serves as an authorized port to process and clear aircraft and traffic for entrance to the country where located. It is identified by a three-position Air Terminal Identifier Code (Reference DTR 4500.9-R, “Defense Transportation Regulation”).
AERIAL PORT OF EMBARKATION (APOE). A station that serves as an authorized port to process and clear aircraft and traffic for departure from the country where located. It is identified by a three-position Air Terminal Identifier Code (Reference DTR 4500.9-R, “Defense Transportation Regulation”).

AGREEMENT LINE ITEM NUMBER (ALIN). Identifies an item of supply listed in an agreement document.

AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI). The national coordinator of voluntary standards for the United States and approves a standard only when it has verified evidence which the standards developer presents, showing that those whom the standard materially affects substantially agree by consensus to its provisions.

AMMUNITION/EXPLOSIVES. A device charged with explosives, propellants, pyrotechnics, initiating composition, nuclear, biological, or chemical materiel for use in connection with defense or offense, including demolitions. Ammunition that can be used for training, ceremonial, or nonoperational purposes is included.

ANTICIPATED NOT-MISSION-CAPABLE SUPPLY (ANMCS). A condition which is anticipated to occur within 15 days in the continental United States (CONUS) or 20 days outside the continental United States (OCONUS) of the requisition date when the lack of items or equipment required causes mission-essential systems or equipment of being incapable of performing any of their assigned missions.

ASSEMBLAGE IDENTIFICATION NUMBER (AIN). AIN is a 2-position numeric ranging from 01-20 and is the second level identifier for medical and industrial kits/sets. It is system generated at the build manager level based on the number of kits required.

AVAILABLE FOR ISSUE BALANCE. The total balance on-hand by stock number at the storage location minus materiel allocated to fulfill release orders.

BASIC ISSUE ITEM (BII). Those essential auxiliary items that are required to operate equipment and enable it to perform the mission and function for which it was designated.

BATCH SERIAL NUMBER. A consecutive number assigned by the paying office to each batch of contract payment notices. On October 1st, each batch for each accounting point begins with one. The batch serial number identifies the number of batches transmitted to the specific accounting point since the first day of the fiscal year.

BILL. A statement of the amounts owed for the transfer or sale of materiel and for the performance of services incident to the transfer.
BILL NUMBER. A five character alphanumeric identifier assigned by the billing office to identify a bill. The bill number is unique to the billing office DoD activity address code (DoDAAC) and may not be duplicated within a calendar year.

BILL OF LADING (B/L). The primary document used to procure freight and express transportation and related services from commercial carriers, including freight forwarders.

BILL OF MATERIAL (BOM). A list of raw materials/component parts, etc. and the quantities of each needed to assemble/manufacture/repair an end item or final product.

BILLED ERROR. An error in a bill, at the summary bill or detail billing record level, which has one or more of the following characteristics: duplicates a previous bill or detail record; contains an error in amount; contains a SLOA data mismatch (discrete values for the SLOA data elements in the transaction do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction); provides an invalid fund code; assigns the wrong billed office, (i.e., designates the billed office in a manner that violates the requirements of Volume 4, Finance; was not billed under the proper method (noninterfund versus interfund); or should not have been billed, (e.g., was nonreimburseable, the requisition was cancelled, or accessorial charge was inappropriate)).

BILLED OFFICE. Any office designated to receive a bill.

BILLING DISCREPANCY. A discrepancy related to duplicate or multiple billings per individual shipment or a single billing with no ship line. Such discrepancies are reportable by security assistance customers on a supply discrepancy report. Within U.S. Government channels, all billing discrepancies will be processed under Volume 4, Finance.

BILLING OFFICE. An office that prepares bills for materiel’s and services subject to the requirements of Volume 4, Finance.

BILL OF MATERIAL (BOM). A list of raw materials/component parts, etc. and at the quantities of each needed to assemble/manufacture/repair an end item or final product.

BUILD DIRECTIVE NUMBER (BDN). BDN is a 4-position alphanumeric value used to identify a specific build order of a medical/industrial kit. It is system generated at the build manager level and serves as the first level identifier.

BUSINESS RULE. A statement that defines or constrains some aspect of the business. It is intended to assert business structure or to control or influence the behavior of the business.

CALL/ORDER NUMBER. A release against a basic contract. This is a legacy four-position field (that must be used in conjunction with a legacy PIIN). The new identifier
for call/order number under the PIID rules is designated by F or M in the 9th position of the PIID and is treated as a contractual document. See PIID definition.

**CAPITAL EQUIPMENT.** Capital equipment is defined as tangible personal property end items that: (1) have an acquisition cost at or above the current capitalization threshold, with a useful service life of two or more years; (2) are functionally complete for their intended purpose, durable, and nonexpendable; (3) are not intended for sale in the ordinary course of business; (4) do not ordinarily lose their identity or become a component part of another article when put into use; and (5) are available for the use by the reporting entity for its intended purpose (Reference DoDI 5000.64). Source of definition: Guidelines for Registering Government Serialization, Type Designation and Ownership of Major End Items, Assemblies and Subassemblies and Capital Equipment in the IUID Registry, Version 1.1 October 15, 2007.

**CAPITAL EQUIPMENT CANDIDATE.** Capital equipment candidate end items have the following characteristics; (1) have a FLIS IUID Indicator (Y); (2) are within Classes of Supply II, VII, and VIII; and (3) have a current Unit Price recorded in the FLIS of at least $100,000. Not all capital equipment candidate items will ultimately be reported on financial accountability statements due to the decision to implement uniform serialization across a NIIN and to not track actual acquisition cost of each equipment in supply chain AISs. However, all capital equipment candidate items will be subject to serialized data visibility procedures.

**CAPITALIZATION.** The receipt or transfer in of inventories from a different fund or fund subdivision without charge or income. The inventory increases the transferee's fund equity (capital) directly and does not increase operational income or expense.

**CARE OF SUPPLIES IN STORAGE (COSIS).** A program composed of a set of processes and procedures whose purpose is to ensure that materiel in storage is maintained in ready-for-issue condition or to prevent uneconomic deterioration of unserviceable materiel. With proper COSIS, supplies and equipment in storage will be preserved and maintained in a serviceable condition through inspection and actions taken to correct any forms of deterioration and to restore materiel to ready-for-use condition. The COSIS includes in-storage inspection, minor repair, testing, exercising, preservation, and packing of materiel, and all intra-depot materiel movement to perform those tasks.

**REIMBURSABLE COSIS.** Those COSIS activities such as testing, exercising, preservation, and packing of materiel in storage resulting from COSIS inspections and not funded under discrete pricing and, in general, entails those actions necessary to correct the problems with the materiel, and/or packaging identified by the routine COSIS. Reimbursable COSIS includes the costs for any component parts required in performing minor repairs. This applies to both receipts from Military Service activities as well as materiel in storage, and includes both minor repairs and necessary packaging that will maintain the stored materiel in assigned materiel condition codes. Funding for this work is outside of the scope of the discrete pricing as defined in the Defense Capital Working Fund.
STANDARD COSIS. Standard COSIS inspections are included in the discrete pricing rate and as a minimum, consist of an annual survey of the materiel in storage. The instructions in DLAI 4145.4/AR 740-3/AFJMAN 23-231/NAVSUPINST, “Stock Readiness,” January 6, 2003, provide specifics for various materiel types and categories.

CENTRAL SERVICE POINT. A representative designated by each Service/Agency to update the DoD activity address directory (DoDAAD) and military assistance program address directory (MAPAD) databases and to maintain liaison with Transaction Services and the DoDAAD and MAPAD System Administrators.

CHANGE NUMBER. The change number is assigned by Transaction Services and consists of four positions, (i.e., a one-position calendar year code and a three-position serial number).

CLEAR TEXT ADDRESS. The in-the-clear address of the ship-to and/or the mark-for activity identified by the military assistance program address code (MAPAC).

COMMUNICATION ROUTING IDENTIFIER (COMMRI). A 7-character code that uniquely identifies an International Logistics Communication System (ILCS) account, established with the Transaction Services, to electronically transmit and receive logistics data between the foreign military sales and the US DoD supply systems.

COMPONENT REGISTRY. The Military Service or Defense Agency system which maintains visibility of all small arms and light weapons (SA/LW) serial numbers within that Component and provides the DoD SA/LW Registry with small arms and light weapons status.

CONSIGNEE. The recipient (unit, depot, or person) to whom cargo is addressed or consigned for final delivery. Activity that is receiving the product.

CONSIGNOR. The person or activity that is the supplier or shipper of a product.

CONSTRUCTED DOCUMENT NUMBER. A document number created and used in place of the original requisition number when the original number cannot be determined. The constructed document number may be employed in reporting selected product quality and supply discrepancies. Under DLMS a constructed document number is identified through the use of a utilization code.

CONSTRUCTIVE DELIVERY. The delivery of materiel to a commercial carrier, freight forwarder, United States or international post office, or customer at point of production, storage, or test. Delivery is evidenced by completed copies of shipping documents, materiel shipment status of shipping documents, drop from inventory, or a list of deliveries in a post office.

CONTRACT ABSTRACT. A representation, in machine format, of key elements of contractual data that are used to establish the contract record in the recipient's database.
CONTRACT ADMINISTRATION OFFICE (CAO). A DoD contract administration service (CAS) DoD Component that performs assigned functions, or a purchasing office which retains functions related to the administration of contracts. (Included in this definition are all geographic and plant-type organizations engaged in the performance of field contract administration services.)

CONTRACT LINE ITEM. An item of supply or service on a contractual document usually identified by a contract line item number (CLIN). (See DFARS 204.7103.)

CONTRACT MAINTENANCE. Any depot level maintenance performed under contract by commercial organizations, including original manufacturer. (Source: OPNAVINST 4790.14.)

CONTRACT MODIFICATION. Any written alteration in the specifications, delivery point, rate of delivery, contract period, price, quantity, or other contract provision of an existing contract, whether accompanied by unilateral action under a contract provision, or by mutual action of the parties to the contract. It includes: (1) bilateral actions such as supplemental agreements; and, (2) unilateral actions such as change orders, administrative changes, notices of termination, and notices of the exercise of a contract option.

CONTRACTOR-FURNISHED MATERIEL (CFM). Materiel that the contractor is contractually required to provide. The source of supply for CFM may be the commercial market or the federal supply system when authorized by contract.

CONTROLLED INVENTORY ITEMS. Those items designated as having characteristics which require that they be identified, accounted for, secured, segregated, or handled in a special manner to ensure their safeguard or integrity. Controlled inventory item categories in descending order of degree of control normally exercised are, as follows:

CLASSIFIED ITEMS. Materiel that requires protection in the interest of national security.

PILFERABLE ITEMS. Materiel having a ready resale value or application to personal possession and which is, therefore, especially subject to theft.

SENSITIVE ITEMS. Materiel which requires a high degree of protection and control due to statutory requirements or regulations, such as narcotics and drug abuse items; precious metals; items which are of a high value, highly technical, or hazardous nature; and small arms, and ammunition. (See DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures: Operational Requirements,” February 10, 2014.)

CONVENTIONAL AMMUNITION. A device charged with explosives, propellants, pyrotechnics, or initialing composition for use in conjunction with defense or offense, including demolitions. Certain ammunition can be used for training, ceremonial, or non-operational use.
CONTROL POINT. An activity designated by a Military Service, DLA or the General Services Administration (GSA) to monitor packaging discrepancies for their respective Service/Agency (S/A).

COUNTRY CODE. 1) Identifies the Geopolitical Entities, Names, and Codes (GENC) standard. The GENC standard is the U.S. government profile of ISO 3166 (Parts 1 and 2) names and code elements, with modifications only where necessary to comply with U.S. law and U.S. government recognition policy. The authoritative source for GENC is the Geopolitical Entities, Names, and Codes (GENC) Registry. 2) Country used for distribution and the physical location used for clear text addressing under DLMS.

COUNTRY REPRESENTATIVE/FREIGHT FORWARDER CODE. A code to identify the CR and/or FF authorized to received documentation and/or shipment for FMS transactions.

CRITICAL SAFETY ITEM (CSI). A part, assembly, installation, or production system with one or more essential characteristics that, if not conforming to the design data or quality requirements, would result in an unsafe condition that could cause loss or serious damage to the end item or major components, loss of control, or serious injury to personnel. Also called CSI. (See Joint Pub 1-02.)

CUSTODIAL ACCOUNTABILITY. The responsibility of the Single Manager for Conventional Ammunition (SMCA) to maintain data elements in the wholesale inventory record to reflect by ownership code the receipt, issue, balance, and other quantitative and financial data essential for proper control and management of assets which are in the single manager's custody but are owned by another DoD Component. Custodial accountability includes the responsibility to initiate and approve adjustment actions and financial liability investigation of property loss reports.

CUSTODIAL RESPONSIBILITY. The responsibility of a storage activity, depot, or agent, which is not the designated single manager, to maintain proper custody, care, safekeeping, receipt, issue, and balance data for stored DoD wholesale materiel.

CUSTOMER COLLABORATION. A confluence of strategic, tactical, and operational time base quantitative and qualitative sharing of information between DLA and its customer activities, including, but not limited to, formalized collaboration partnerships, exception handling by detection and notification, and DLA/customer collaborative demand planning.

CUSTOMER RETURN IMPROVEMENT INITIATIVE (CRII). A DLA program developed to reduce the likelihood that depots would receive nonconforming returned materiel.

DAMAGE. Partial or total marring of the appearance or reduction in usability of the materiel for its intended purpose. For security assistance, damage describes a condition creating impaired item functionality. Applicable to U.S. Postal Service and security assistance shipments only.

DATA ELEMENT. A basic unit of information in a business transaction.
DATA ELEMENT IDENTIFIER (DEI). A type of data qualifier used in the ANSI MH10.8.2 Format Header 07 to describe authorized DoD data elements.

DATA IDENTIFIER (DI). A type of data qualifier used in the American National Standards Institute for Material Handling (ANSI MH10.8.2) Format Header 06 to identify authorized ANSI data elements

DATA ITEM. A subunit of descriptive information or value classified under a data element.

DATA MODEL. A visual depiction that identifies data, attributes, and relationships associated with other data.

DATA SEGMENT. A series of data elements defined and placed in a single group in a specific sequence. A data segment directory, defines the proper data element sequence for each data segment and is part of the ASC X12 standards.

DATE PACKED. (Shelf-Life Item). For all items required to be marked with date packed, the date packed will be that date on which the product was packaged in the unit container, regardless of dates of packing, shipping, or additional processing. (See DoD 4140.27-M, "Shelf Life Item Management Manual," May 5, 2003.)

DECAPITALIZATION. The issue or transfer out of inventories to another fund or fund subdivision without expense or reimbursement. The cost of the inventory decreases the transferor’s fund equity (capital) directly and does not increase operational expenses or income.

DEFENSE LOGISTICS MANAGEMENT STANDARDS (DLMS). A process governing logistics functional business management standards and practices across DoD. A broad base of business rules, to include uniform policies, procedures, time standards, transactions, and data management, designed to meet DoD requirements for global supply chain management system support. DLMS enables logistics operations to occur accurately and promote interoperability between DoD and external logistics activities at any level of the DoD organizational structure. The DLMS supports electronic business capabilities such as: ANSI Accredited Standards Committee (ASC) X12 EDI, upon which the DLMS transaction exchange was founded; automatic identification technology, including passive RFID and linear and 2D bar coding; extensible mark-up language (XML); and web-based technology. The DLMS encompasses standardization of logistics processes including, but not limited to: Military Standard Billing System (MILSBILLS), Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP), Military Standard Requisitioning and Issue Procedures (MILSTRIP), and Supply Discrepancy Reporting.

DELIVERY TERM CODE (DTC). A code (prescribed in FMS cases) identifying the point at which the responsibility for moving an item as an FMS shipment passes from the United States DoD to the purchasing nation or international organization.
DEPARTMENT OF DEFENSE ACTIVITY ADDRESS CODE (DoDAAC). A distinctive code assigned to identify specific units, activities, and/or organizations. The first position indicates the Component or other Government element of ownership or sponsorship. The remaining five positions are assigned under established products by the Service point of the participating Component.

DLMS TRADING PARTNER AGREEMENT. A written instrument of understanding negotiated between trading partners that specifies contractual matters and protocols regarding Government DLMS transactions. (Reference DLM 4000.25, “Defense Logistics Management Standards.”)

DEFENSE TRANSPORTATION SYSTEM (DTS). That portion of the worldwide transportation infrastructure that supports DoD transportation needs in peace and war. The DTS consists of two major elements: military (unique) and commercial resources. These resources include aircraft, assets, services, and systems unique to, contracted for, or controlled by the Department of Defense. The Defense transportation infrastructure, including ports, airlift, sealift, railway, highway, intranet visibility, information management systems, customs, and traffic management that the Department of Defense maintains and exercises in peacetime, is a vital element of the DoD capability to project power worldwide. It provides for responsive force projection and a seamless transition between peacetime and wartime operations.

DEMAND DATA EXCHANGE. A systematic method use for submitting collaborative customer projected supply plan materiel requirements to DLA.

DEPARTMENT OF DEFENSE SMALL ARMS/LIGHT WEAPONS (SA/LW) REGISTRY. DoD central repository for SA/LW serial numbers. The registry serves as the single point of access for inquiries relating to the last known record of SA/LW serial numbers. Serial numbers are provided by the Component Registries on a scheduled and as required basis.

DEPOT. See “Storage Activity.”

DEPOT MAINTENANCE INTER-SERVICE SUPPORT AGREEMENT (DMISA). A formalized agreement similar to a contract whereby one Service (the Agent) obligates itself to provide depot maintenance support for another Service (the Principal). (Source: OPNAVINST 4790.14A, et.al) For the purpose of this manual, DMISA also covers depot maintenance provided for under inter-Service support agreements not covered by the referenced joint regulation.

DETAIL BILLING RECORD. The lowest level of detail in a bill. At this level of the bill, billings for materiel are identified by the transaction number. When more than one shipment is involved, the partial shipment, identified by a suffix, is the lowest level of detail.

DETERIORATION. A breakdown in composition of an item that makes it inferior in quality and value.
DIRECT PROCUREMENT METHOD (DPM). A method of personal property shipment in which the government manages the shipment throughout. Packing, containerization, local drayage, and storage services are obtained from commercial firms under contract arrangements or by the use of government facilities and personnel.

DIRECT VENDOR DELIVERY (DVD). (DoD) A materiel acquisition and distribution method that requires vendor delivery directly to the customer.

DISPOSAL AUTHORITY CODE. A code entered on disposal related documentation to indicate that the item(s) being transferred to the DLA Disposition Services Field Office are authorized to be transferred to disposal because of instruction of the ICP/IMM relayed through the MRP or other proper authority.

DISTRIBUTION CODE. A code that indicates which activity will receive 100 percent supply status as well as other management data.

DISTRIBUTION DEPOT. See “Storage Activity.”

DISTRIBUTION SYSTEM. That complex of facilities, installations, methods, and procedures designed to receive, store, maintain, distribute, and control the flow of military materiel between the point of receipt into a DoD supply system and the point of issue to using activities and units. (See Joint Pub 1-02.)

DLMS SUPPLEMENT. An obsolete term for the composite guideline that documents a specific business interpretation of an ASC X12 transaction set standard. A DLMS Supplement defines the structure, content and DLMS business rules for a specific business interpretation; it maps application data requirements into specific data fields within the X12 transaction set (TS) and establishes parameters for its business usage for implementation in the DLMS. DLMS Supplements are also known as either DLMS Implementation Conventions or DLMS Logistics Implementation Conventions. The term DLMS Supplement has been superseded by either of the terms DLMS Implementation Convention or DLMS Logistics Implementation Convention.

DOCUMENT IDENTIFIER CODE (DIC). A means (legacy 80 record position) of identifying a given product (i.e., requisition, referral action, status document, follow-up, cancellation) to the system to which it pertains and further identifies such data as to its intended purpose and usage and the operations dictated.

DOCUMENT NUMBER. A unique reference number assigned to a requisition or a release/receipt document in order to identify the transaction throughout the logistics system and for the life of the transaction until its retirement is authorized in official audit reports. The first six positions are the DoDAAC of the reporting activity; the next four positions are the year and three position numerical day of the year; the next position is the utilization code; and the last three positions are the activity serial number.
DoDAAC AUTHORITY CODE. Establishes a basis for restricting processing of DLSS/DLMS Requisition, shipping and billing transactions by establishing limitations on the authority of an individual activity assigned a DoDAAC to submit specifically identified transactions to the Defense Automatic Addressing System.

DROP FROM INVENTORY. Reduction of the quantitative inventory balance.

DUNS (Data Universal Numbering System) NUMBER. A 9-digit numerical identifier/number created for an organization by Dunn & Bradstreet. A different DUNS number will be assigned for each physical location different address of an organization, as well as each legal division that may be co-located. A DUNS number is frequently required to register with the Central Contractor Registration (CCR).

DUPLICATE BILL. An exact duplicate of a previous bill or a bill supported entirely by duplicate billing records.

DUPLICATE DETAIL BILLING RECORD. A second or subsequent detail billing record for a single shipment.

DUPLICATE SHIPMENT. A shipment which corresponds exactly to a previous shipment.

EFFECTIVE DATE. The five-position ordinal date (two-position year and three-position day) when an address (DoDAAD/MAPAD) change becomes effective.

ELECTRONIC MALL (EMALL). An internet-based electronic mall designed to make it easier for customers to place and track orders and pay for products. For additional information see the DoD EMALL Website.

ENEMY ACTION. Those courses of action imposed by the enemy that could affect the friendly mission.

ENTERPRISE IDENTIFIER (EID). An identifier, which relies on the Data Universal Numbering System (DUNS) as a primary key for non-DoD entities, and an extended DoD activity address code (DoDAAC) for DoD activities. DUNS+4, an additional 4-digit suffix to the DUNS code, allows for the identification of payment location used by business partner (represented by a DUNS) when that partner has multiple locations. Other alias identifiers recorded to date include the contractor and Government entity (CAGE) code, the austin-tetra number, and taxpayer identification number (TIN).

ESSENTIALITY CODE. Indicates that the assembly or component is essential to the performance of the primary and/or secondary missions of the weapon system and/or end item. The degrees of assembly and/or component essentiality depend on the effect their failure would have on a weapon system and/or end item readiness.

EVIDENCE OF SHIPMENT. Any legible movement document or receipt, duly signed by a carrier representative, which shows that the United States has shipped or released the materiel in question to a carrier for shipment to the country’s designated
representative, constitutes evidence of shipment. Such documents generally show the quantity, national stock number (NSN), mode date, transportation control number (TCN), notice of availability (NOA) number/bill of lading (B/L)/parcel post insured, registered number, addressee, vessel, or flight number (to the extent possible), and name of shipper and carrier to include weight and cube information, and number of pieces, etc.

EXCEPTION MATERIEL. Security Assistance Program materiel which, due to its peculiar nature and increased transportation risks, requires special handling in the transportation cycle and deviation from normal shipping procedures. This includes classified materiel, sensitive materiel, firearms, explosives, lethal chemicals, and other dangerous and hazardous materiel that requires rigid movement control and air cargo of such size that the item exceeds commercial capability.

EXHIBIT LINE ITEM. An item of supply or service listed on an exhibit or schedule forming a part of the contractual document usually identified by an exhibit line item number (ELIN). (See DFARS 204.7105.)

EXPEDITED HANDLING SHIPMENTS. Items identified by special requirements handling codes (A, B, C, or D) in the requisitions. Items so identified override normal precedence in processing and moving shipments.

EXPIRATION DATE (Shelf-Life Item). The date beyond which non-extendible shelf-life items (Type I) should be discarded as no longer suitable for issue or use. (See DoD 4140.27-M, “Shelf-Life Item Management Manual”).

EXPIRED SHELF-LIFE. The length of time during which an item of supply, subject to deterioration or having a limited life which cannot be renewed, has expired.

FEDERAL SUPPLY CLASSIFICATION (FSC). The first 4-digits of the 13-digit national stock number. The FSC relates/separates items of supply.

FEDMALL. An internet-based electronic mall designed to make it easier for customers to place and track orders and pay for products. FedMall replaces DoD EMALL. For additional information see the FedMall Website.

FINANCIAL DISCREPANCY. The following definition applies to security assistance discrepancy reporting only. A discrepancy related to administrative and/or accessorial charges that will be processed by the Defense Finance and Accounting Service – Denver, Deputy for Security Assistance (DFAS-DE/I).

FIRE. A phenomenon of combustion manifested in light, flame, and heat.

FOLLOW-UP. Inquiry originated by an authorized source requesting the status of a previously submitted document.

FOREIGN MILITARY SALES (FMS). That portion of the United States security assistance authorized by the Foreign Assistance Act of 1961, as amended, and the
Arms Export Control Act of 1976, as amended. This assistance differs from the International Military Education and Training Program in that the recipient provides reimbursement for defense articles and services transferred. Also called FMS. (See Joint Publication 1-02.)

FOREIGN MILITARY SALES (FMS) CASE DESIGNATOR. A unique designator within a single country assigned by the implementing Service to each FMS case, to identify a specific offer to a country. This designator stays with and identifies the sale or offer of a sale.

FOREIGN MILITARY SALES COUNTRY REPRESENTATIVE (CR). The designated country official (Consulate, Attaché, Director of Movements) duly authorized to control FMS case transactions.

FOREIGN MILITARY SALES FREIGHT FORWARDER/INTERNATIONAL FREIGHT FORWARDER. A private firm that serves as a contractual agent for the FMS customer. These companies, as a minimum, receive, consolidate, and stage materiel within the United States for onward shipment to the purchasing country.

FOREIGN MILITARY SALES OFFER RELEASE OPTION CODE.¹ Method by which countries participating in the FMS program advise sources of supply by coded entry on requisitions whether or not prior notice to the freight forwarder or country representative (FF/CR) is required before release of materiel shipments. The type of offer release option will be determined as a result of negotiations between the CR and the Service at the time case agreement is reached and will prescribe actions required in regard to shipments against the case except when the shipping activity determines a need for added protection and/or controls covered under chapter C25, paragraph C25.11.

1. Type A. Shipments are to be released automatically by the shipping activity without advance notice.

2. Type X. The U.S. Service and the CR have agreed that the:

   a. U.S. Service will sponsor the shipment to a country address. Under this agreement Block 34 (FF code) of the DD Form 1513 must contain “X” and a mark-for code must be entered in Block 33. The MAPAD must contain the CC code and addresses for each type of address required; such as, parcel post, freight, and documentation.

   b. Shipments are to be made to an assembly point or staging area as indicated by clear text instructions on exception requisitions. Under this agreement block 34 of the DD Form 1513 must contain “W.” A mark-for code may be entered in Block 33 and the MAPAD must contain the mark-for code if the mark-for address is to be used on the shipment to the assembly point or staging area.

¹ See DOD 5105.38-M for additional data concerning the use of these codes and complete instructions for preparing the DOD Offer and Acceptance.
3. Type Y. Advance NOA to the FF/CR is required before release of shipments, but shipment may be released automatically if release instructions are not received by the shipping activity within 15 days subsequent to the date of the NOA.

4. Type Z. Advance NOA to the FF/CR is required before release of shipment and specific release/shipping instructions must be received by the shipping activity before shipment may be made.

FOREIGN ORIGIN. Those goods produced or manufactured in a foreign country located outside the CONUS, its possession, or Puerto Rico. It also includes those aforementioned that are physically located in bonded warehouses or foreign trade zones within the United States (U.S.), its possessions, or Puerto Rico, but it does not include foreign produced or manufactured goods that have otherwise been lawfully imported into the United States, its possessions, or Puerto Rico.

FREE-ON-BOARD (FOB) DESTINATION. Product is accepted at destination by the Government. Shipper provides transportation.

FREE-ON-BOARD (FOB) ORIGIN. Product is accepted at origin (source) by the Government. Government provides transportation with commercial carriers.

GAINING INVENTORY MANAGER (GIM). The inventory manager responsible for assuming wholesale materiel management functions.

GENERAL AGENCY AGREEMENT (GAA). Pertains to Government-owned ships operated under cost plus fixed-fee contracts by commercial ocean carriers acting as general agents for the Maritime Administration, U.S. Department of Commerce, with whom the MSC has entered into agreements for the exclusive use of such ships.

GLOBAL EXCHANGE (GEX). The Global Exchange eBusiness Gateway is the Electronic Data Interchange (EDI) hub for Department of Defense. The GEX functions as the single interface among Government and commercial trading partners conducting electronic commerce and EDI activities. It provides translation, routing, and archive services for EDI transactions that are sent between two or more Government systems or between Government systems and their commercial trading partners. There are two GEX sites operated by Transaction Services.

GOVERNMENT-FURNISHED MATERIEL (GFM). Materiel in the possession of, or acquired by, the Government and later delivered or otherwise made available to a contractor. GFM is property that may be incorporated into or attached to a deliverable end item or that may be consumed or expended in performing a contract. GFM includes assemblies, components, parts, raw and processed materials, and small tools and supplies that may be consumed in normal use in performing a contract.

GOVERNMENT-FURNISHED PROPERTY (GFP) INTRANSIT BALANCE. The total quantity of confirmed GFP shipments without a matching materiel receipt acknowledgment from the receiving activity. The MRA/TRA received from the customer/DLA Disposition Services Field Office constitutes the receipt acknowledgment. The
intransit balance is a cumulative calculation and is not restricted to activity occurring during the day or month being reconciled. For Air Force Contractor Inventory Control Points (CICPs), the intransit balance excludes property issued for local disposal, internal CICP deliveries, and customer pick-up. This is because property issued under these exclusions, will not be retained on an owner property record and intransit tracking is not required.

**GRANT AID.** Military assistance rendered under the authority of the Foreign Assistance Act of 1961, as amended, which provides defense articles and services to recipients on a nonreimbursable (grant) basis.

**HANDGUNS.** Handguns are divided into one of two major groups depending on the location of the chamber. Revolvers have a revolving chamber; pistols have a chamber integral with the barrel. Some handguns include single-shot pistols, revolvers, semi-automatic pistols, and fully automatic, or machine pistols.

**HAZARDOUS MATERIEL (DANGEROUS GOODS).** A substance of materiel that has been determined to be capable of posing an unreasonable risk to health, safety, and property when transported. This materiel includes explosives, gasses (compressed, liquefied, or dissolved under pressure), flammable liquids, flammable solids or substances, oxidizing substances, poisonous and infectious substances, radioactive substances, corrosives, and miscellaneous dangerous substances presenting real or potential hazards to life and property. Procedures for handling this materiel are specified in applicable publications of the Department of Transportation, the Interstate Commerce Commission, Federal Aviation Agency, U.S. Coast Guard, U.S. Agriculture Department, U.S. Public Health Service, Intergovernmental Maritime Consultative Organization, the International Civil Aviation Organization, and in federal or military documents. Dangerous goods are the term applied to hazardous materiel in international movement.

**IMPLEMENTATION CONVENTION.** The composite guideline that documents a specific business interpretation of an ASC X12 transaction set standard. Conventions define the structure, content and DLMS business rules for a specific business interpretation; it maps application data requirements into specific data fields within the X12 transaction set (TS) and establishes parameters for its business usage for implementation in the DLMS. DLMS Implementation Conventions are also known as either DLMS Supplements or DLMS Logistics Implementation Conventions. DLMS Implementation Conventions are also known as DLMS Logistics Implementation Conventions, particularly by the DoD Transportation community. DLMS Implementation Conventions were formerly known as DLMS Supplements.

**INCORRECT ITEM.** An item received in lieu of the item requisitioned. This is an erroneous item shipped due to shipper error and not an intended interchangeable/substitute item. See also, WRONG ITEM.

**INTEGRATED MATERIEL MANAGER (IMM).** Any DoD activity or agency that has been assigned wholesale materiel management responsibility for the Department of
Defense and participating Federal Agencies. Integrated wholesale materiel management responsibilities include requirements determination, procurement, distribution, overhaul, and repair of reparable materiel, and disposal of materiel. (See DoDM 4140.01.)

**INTERCHANGEABLE/SUBSTITUTABLE ITEM.** An item that possesses such functional and physical characteristics as to be equivalent in performance, reliability, and maintainability, to another item of similar or identical purposes, and is capable of being exchanged for the other item without selection for fit or performance, and without alteration of the item itself or of adjoining items, except for adjustment. (See DoDM 4140.01.)

**INTERFUND BILL.** A bill processed under the interfund billing system. These bills are not only "bills" but notices to the billed office that its funds have been disbursed and the bill "paid."

**INTERFUND BILLING SYSTEM.** An automated billing fund transfer system.

**INTERMEDIATE DEFENSE FUEL SUPPORT POINT (DFSP).** Bulk fuel storage facility where product is stored for subsequent issue to multiple end customers.

**INTERNATIONAL LOGISTICS CONTROL OFFICE (ILCO).** The central U.S. Military Service control point in CONUS that monitors requisitions and related transactions for FMS and Military Sales and Grant Aid (GA).

**INTER-SERVICE SUPPORT.** Action by one Military Service, or element thereof, to provide logistic and/or administrative support to another Military Service, or element thereof. Such action can be recurring or nonrecurring in character, on an installation, area, or worldwide basis.

**INTO-PLANE.** A supply technique whereby the U.S. Government contracts with a contractor to refuel military aircraft at commercial airports. The contractor supplies the fuel, lube oil, and refueling facilities (storage tank, vehicle, and equipment). The use of Government refueling trucks, equipment, bladders, etc., is not authorized unless so stipulated in the into-plane contract. (NOTE: Commercial aircraft under a Government charter may be refueled at into-plane locations; and occasionally, into-plane locations may be at a military base.)

**INTRA-SERVICE SUPPLY.** Exchange of materiel, inventory control documentation, and other management data within or between the distribution systems of a single Service or Agency.

**INTRA-THEATER.** Movement of materiel from a point in a theater to another point within the same theater.

**INVENTORY.** Materiel, titled to the U.S. Government, held for sale or issue, held for repair, or held pending transfer to disposal.
INVENTORY CONTROL POINT (ICP). An organizational unit or activity within a DoD supply system that is assigned the primary responsibility for the materiel management of a group of items either for a particular Service or for the Defense Department as a whole. Materiel inventory management includes cataloging direction, requirements computation, procurement direction, distribution management, disposal direction, and, generally, rebuild direction. (Source: JCS Publication 1-02.)

INVENTORY LOT/SEGMENT. A sub grouping of the total items in storage for the purpose of physical inventory counting or record reconciliation. The lot/segment is generally by Federal supply classification (FSC), warehousing, picking station, or some form of commodity grouping.

INVENTORY, SCHEDULED. A physical inventory that is to be conducted on a group of items within a specified period of time, according to an established plan. There are two types of scheduled inventories:

   INVENTORY, COMPLETE. An inventory of all conditions of all stock numbers within specified categories.

   INVENTORY, SAMPLE. A sample of items selected from an inventory lot in such a manner that each item in the lot has an equal opportunity of being included in the sample.

INVENTORY, UNSCHEDULED. A physical inventory which is to be conducted on a specific item as a result of some unscheduled inventory requirement such as an inventory manager or locally initiated request, materiel release denial, location survey or location reconciliation request. There are two types of unscheduled inventories:

   INVENTORY, SPECIAL. A physical inventory of a specific item(s) as a result of a special requirement generated by the record reconciliation program, preprocurement, or any other reason deemed appropriate by the item manager, Accountable Property Officer (APO), or the APO designated representative, or the storage activity.

   INVENTORY, SPOT. A physical inventory required to be accomplished as a result of a total or partial materiel denial.

ISSUING AGENCY CODE. The IAC represents the registration authority that issued the enterprise identifier. The value for the IAC is assigned by the Registration Authority for ISO/IEC 15459-2, Registration Procedures. The current Registration Authority of ISO/IEC 15459-2 is NEN – Nederlands Normalisatie-Instituut.

ITEM. An item is a single hardware article or a unit formed by a grouping of subassemblies, components or constituent parts. In the DoD, an item is any article produced, stocked, stored, issued, or used; or any product, including systems, materiel, parts, subassemblies, sets and accessories.

ITEM DEFICIENCY. See SF 368, “Product Quality Deficiency Report.”
ITEM UNIQUE IDENTIFICATION (IUID) OF ITEMS. The application of a set of data elements that is globally unique and unambiguous, ensures data integrity and data quality throughout life, and supports multifaceted business applications and users. (See UNIQUE ITEM IDENTIFIER for additional definitions of IUID related terms)

JOINT COLLABORATION AGREEMENT. A collaborative and coordinated consensus between DLA and customer activities that cites mutual responsibilities and expectations of both parties in the process of demand data exchange (DDE).

LATENT DEFECTS. This definition is provided for supply discrepancy reporting of product quality deficiencies against security assistance shipments. A deficiency in an article that effects item operability and is not normally detected by examination or routine test, but which was present at the time of manufacture.

LATERAL REDISTRIBUTION. The release and shipment of materiel from a post, camp, station, or base to another similar activity to satisfy a specific demand.

LESS THAN RELEASE UNIT (LRU). A shipment unit that can be shipped without requiring an export release from the appropriate authority.

LETTER OF OFFER AND ACCEPTANCE. The U.S. document by which the U.S. Government offers to sell defense articles and defense services to a foreign government or international organization. The LOA lists the items and/or services, estimated costs, the terms and conditions of sale, and provides for the foreign government’s signature to indicate acceptance.

RECORD RECONCILIATION PROGRAM. Consists of actions required to assure compatibility between the assets in storage and the locator records and between the locator records and the accountable records. Record reconciliation programs may include quantity. This program is accomplished in two phases:

LOCATION RECONCILIATION. A match between valid storage activity records and the accountable records, in order to identify and correct situations where items are in physical storage but not on record, on record but not in storage, or where common elements of data, including quantity, do not match. Research of mismatches, including special inventories when required, results in corrective action.

LOCATION SURVEY. A physical verification, other than actual count, between actual assets and recorded location data to ensure that all assets are properly recorded as to location, identity, condition, and unit of issue.
LOCATION RECONCILIATION DISCREPANCIES. Location reconciliation discrepancies are classified into one of four categories as listed below:

a. Owner/Manager Record. Shows balance for storage activity; no location reconciliation transaction received (Type I Location Reconciliation Error).

b. Location Reconciliation Transaction. Received from storage activity; no corresponding owner/manager record (Type II Location Reconciliation Error).

c. Mismatch of Data Elements. Mismatch of any of the following (Type III Location Reconciliation Error):
   1). Unit of issue.
   2). Ownership/manager identifier.
   4). Type of pack code (subsistence).
   5). Shelf-life code.
   6). Date packed/expiration date (subsistence only).

d. Quantity Discrepancy (Type IV Location Reconciliation Error).

LOCATION SURVEY DISCREPANCIES. Location survey discrepancies are classified into one of three categories as listed below:

a. Locator Record Deleted. The removal or change of a locator record when there is a recorded location but there are no physical assets unless the location is being held open for new receipts (Type I Location Survey Error).

b. Locator Error Established. The recording of locations when assets are physically found in storage and no locator records exist, or when the recorded stock number disagrees with the materiel in the location (Type II Location Survey Error).

c. Locator Record Corrected. Changes to the locator record when physical materiel characteristics differ from any of the following data elements (Type III Location Survey Error):
   1). Unit of issue
   2). Supply condition code.
   3). Controlled inventory item code (see DoD 4100.39-M, Volume 10). Verification of the code must consist of ensuring that assets are stored in areas providing the degree of security commensurate with the assigned code.
4). Type of pack code.
5). Lot number or unique item identifier (for ammunition only).
6). Completeness and accuracy of magazine data card (for ammunition only).

LOGISTICS REASSIGNMENT (LR). The transfer of IMM responsibilities from one manager to another. (See DoDM 4140.01.)

LOOP. A group of semantically related segments in ANSI ASC X12 Transactions. An example is the N1 loop, which contains name and address information.

LOSSING INVENTORY MANAGER (LIM). The inventory manager responsible for relinquishing wholesale materiel management functions.

LOT/SEGMENT (INVENTORY). A sub-grouping of the total items in storage for the purpose of physical inventory counting or record reconciliation. The lot/segment is generally by federal supply class, warehousing, picking station, or some form of commodity grouping.

LOWEST OVER ALL COST. The aggregate of shipment costs known or reasonably estimated; (i.e., transportation rate(s), accessorial, drayage, storage, in transit, packing and crating, unpacking, and port handling costs).

MAINTENANCE (MATERIEL). All action taken to retain materiel in a serviceable condition or to restore it to serviceability. It includes inspection, testing, servicing, classification as to serviceability, repair, rebuilding, and reclamation. (Source: JCS Publication 1-02.). Maintenance, used generically in this manual, also includes evaluation, assembly, disassembly, conversion, and modification.

MAJOR DISASTER. Any disaster as a result of enemy action, insurrection, civil disturbance, flood, fire, hurricane, tornado, earthquake, or other catastrophe which, in the determination of the President, is or threatens to be of sufficient severity and magnitude to warrant disaster assistance by the Federal Government under Public Law 91 - 606, “Disaster Relief Act”, 91st Congress (42 United States Code 58) to supplement the efforts and available resources of State and local governments in alleviating the damage, hardship, or suffering caused thereby.

MAJOR INVENTORY VARIANCE. Total dollar value of the item overage or shortage for the stock number exceeds $5,000 or a variance of any value for controlled items.

MANAGEMENT CONTROL ACTIVITY (MCA). A DoD Component, DoD activity, or non-DoD activity, if participating by separate agreement (e.g., the Coast Guard), designated to receive, screen, and validate Military Service-initiated and contractor-initiated requisitions for direct shipment to contractors of materiel sourced from the wholesale supply system to support DoD contracts or requirements. MCA procedures are applicable to materiel requisitioned for shipment to a contractor on either a reimbursable or non-reimbursable basis as specified in the contract.
MAPPING. A process for diagramming what electronic data are to be exchanged, how the data are to be used, and what internal application system requires the data.

MATERIEL. All items (including ships, tanks, self-propelled weapons, aircraft, etc., and related spares, repair parts, and support equipment, but excluding real property, installations, and utilities) necessary to equip, operate, maintain, and support military activities without distinction as to its application for administrative or combat purposes. (See Joint Publication 1-02.) Materiel is either serviceable (i.e., in an issuable condition) or unserviceable (i.e., in need of repair to make it serviceable.) (See DoDM 4140.01.)

MATERIEL ACCOUNTABILITY. The act of safeguarding, answering for, and exercising proper quantitative and physical controls over DoD materiel, supplies, and equipment in the care and custody of DoD activities.

MATERIEL CONDITION. A classification of materiel that reflects its readiness for issue and use or to identify the action underway to change the status of materiel. (See DoDM 4140.01)

MATERIEL DENIAL. A transaction notifying the IMM that there is insufficient materiel in storage to satisfy, in total or in part, the quantity directed for issue and specifying the quantity that may not be issued. (See DoDM 4140.01.)

MATERIEL OBLIGATION. The unfilled portion of a requisition (for a stocked or non-stocked item) that is not immediately available for issue but is recorded as a commitment for future issue, either by direct vendor delivery or backordered from stock.

MATERIEL RECEIPT ACKNOWLEDGEMENT (MRA). A computer processed transaction or manual form used to advise that materiel has been received and posted and/or to indicate that a discrepancy affects the receipt posting/acknowledgement process.

MATERIEL RELEASE CONFIRMATION (MRC). A notification from a shipping or storage activity advising the originator of a materiel release order of the positive action taken on the order.

MATERIEL RELEASE DENIAL (MRD). A notification from a storage site advising the originator of a materiel release order of negative (warehouse refusal) action on the order.

MATERIEL RELEASE ORDER (MRO). An order issued by an accountable supply system manager (usually an ICP or accountable depot or stock point) directing a non-accountable activity (usually a storage site or materiel drop point) within the same supply distribution complex to release and ship materiel. (See Joint Publication 1-02.) Also used to direct redistribution and shipment of materiel from a post, camp, station, or base to another similar organization to satisfy a specific demand.
METADATA. Information describing the characteristics of data; data or information about data; and descriptive information about an organization’s data, data activities, systems, and holdings.

MILITARY ASSISTANCE PROGRAM ADDRESS CODE (MAPAC). A code constructed by the ILCO for security assistance program shipments. MAPAC is used to identify the consignee in transportation documents and to obtain clear-text address and other shipment information from the military assistance program address directory (MAPAD).

MILITARY ASSISTANCE PROGRAM ADDRESS DIRECTORY (MAPAD). An automated database of addresses maintained for each country or international organization.

MILITARY ASSISTANCE SERVICE-FUNDED PROGRAM. Programs which, by their nature, are security assistance, except that the funding source is a DoD appropriation.

MILITARY STANDARD BILLING SYSTEM (MILSBILLS). A broad base of logistics transactions and procedures designed to meet DoD requirements to establish standard codes, forms, formats, (both DLMS and legacy 80 record position) and procedures for billing, and related adjustments and collections for sales of materiel and related services for logistics support. It prescribes uniform procedures and time standards for the interchange of logistics information relating to logistics bills. The procedures govern the interchange of information for all logistics related financial management of the Department of Defense and participating external organizations unless specifically exempted by the Assistant Secretary of Defense for Logistics and Materiel Readiness (ASD(L&MR)).

MILITARY STANDARD TRANSACTION REPORTING AND ACCOUNTABILITY PROCEDURES (MILSTRAP). A broad base of logistics transactions and procedures designed to meet DoD requirements to establish standard codes, formats (both legacy 80 record position), and procedures for inventory accountability and reporting processes. MILSTRAP prescribes uniform procedures for recording inventory management data passed between elements of a single Service or Agency distribution system or between the various distribution systems of the Department of Defense. The procedures govern the interchange of logistics information, and related financial management information, for materiel in the supply control/distribution systems of the Department of Defense and participating external organizations, unless specifically exempted by the Assistant Secretary of Defense for Logistics and Materiel Readiness (ASD(L&MR)). The financial management aspects of MILSTRAP pertain only to financial data produced as a by-product of receipt, issue, and inventory adjustment processing.

MILITARY STANDARD REQUISITIONING AND ISSUE PROCEDURES (MILSTRIP). A broad base of logistics transactions and procedures designed to meet DoD requirements to establish standard data elements, codes, forms, transaction formats (both legacy 80 record position and DLMS) and procedures to requisition, release/issue,
and dispose of materiel and prepare related documents. It prescribes uniform procedures and time standards for the interchange of logistics information relating to requisitioning, supply advice, supply status, cancellation, materiel release/issue, lateral redistribution, materiel return processes, materiel obligation validation, contractor access to government sources of supply, and selected security assistance processes. The provisions apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. It also applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

**MISDIRECTED MATERIEL.** Materiel which is improperly addressed and/or shipped to the wrong destination.

**MISIDENTIFIED ITEM.** An item for which the label on the container is different than the item in the container, or tag attached to the item. See also, **WRONG ITEM.**

**MUTILATION.** The act of making materiel unfit for its intended purpose by cutting, tearing, scratching, crushing, breaking, punching, shearing, burning, neutralizing, etc.

**NATIONAL ITEM IDENTIFICATION NUMBER (NIIN).** The last 9-digits of the national stock number (NSN). NIIN consists of a 2-digit National Codification Bureau number designating the central cataloging office (whether North Atlantic Treaty Organization or other friendly country) that assigned the number and a 7-digit (xxx-xxxx) nonsignificant number.

**NONINTERFUND BILL.** A bill that requires payment by a method other than the interfund billing system; (e.g., check payment). An example of this bill is one prepared on an SF 1080, Voucher for Transfers Between Appropriations and/or Funds.

**NONTRACEABLE SHIPMENT.** A shipment by a mode or method wherein an audit trail between the various shipping elements and the consignee is not available or signed delivery receipts are not required from the consignee. The shipping transportation office normally makes the nontraceability determination.

**NOT MISSION CAPABLE SUPPLY (NMCS).** Materiel condition indicating that systems and equipment are not capable of performing any of their assigned missions because of maintenance work stoppage due to supply shortage. (See Joint Publication 1-02.)

**NOTICE OF AVAILABILITY (NOA).** The method by which the U.S. shipping installation will provide advance notification to the designated FMS country representative (CR) or freight forwarder (FF) that the materiel is ready for shipment and, where appropriate, that the shipment requires an export release under the provisions of AR 55-355, et al.

**NOTICE OF AVAILABILITY (NOA) NOTICE NUMBER.** A number reflecting the number of times the NOA has been sent to the Freight Forwarder/Country.
Representative. Each repetitive communication of the NOA will be interpreted as a follow-up.

OFFER OF MATERIEL REPORT (OMR). A report under the Defense Logistics Management Standards (DLMS) that allows inventory control points and integrated materiel managers to use a DLMS transaction to provide disposition instructions or to inquire or respond as to the status of materiel reported as excess or available for redistribution under the DLMS materiel returns program.

OFFER OR RELEASE OPTIONS. Methods by which countries participating in the FMS program advise supply sources whether materiel shipments should be released without prior notice to the CR or FF. The type of offer or release option will be determined as a result of negotiations between the CRs and the U.S. Military Service at the time the case agreement is reached.

OFFER/RELEASE OPTION CODES. Methods by which countries participating in the FMS program, advise sources of supply by coded entry on requisitions whether or not prior notice to the CRs or FFs is required before release of materiel shipments. The type of offer/release option will be determined as a result of negotiations between the CR and the Service at the time the case agreement is reached and will prescribe actions required in regard to shipments against the case except when the shipping activity determines a need for added protection and/or controls (DoD 5105.38-M. “Security Assistance Management Manual (SAMM)").

ORGANIC MAINTENANCE. Maintenance performed by a military department under military control, utilizing Government-owned or controlled facilities, tools, test equipment, spares, repair parts and military or civilian personnel. Depot maintenance support by one Service for another is considered organic within the Department of Defense. (Source: OPNAVINST 4790.14A, et.al.).

OVERAGE. Item overage is when the quantity received is greater than that ordered or shown on shipping document. This type of overage is not evident on delivery but is discovered when the article is opened and the contents are checked. Transportation overages reportable under DTR 4500.9-R, are overages of boxes, packages, or freight (packaged or loose) found to be in excess of the quantity or articles recorded on the bill of lading or transportation document covering the shipment. NOTE: Overage on SEAVAN/container that is source-loaded and moved under a shipper's load and count, and arrives at destination with original seal (s) intact, is a supply discrepancy.

OWNER. The activity holding title to the tangible personal property.

PACKAGING. A generic term that includes the processes of preserving, packing, marking, and unitization as defined below:

MARKING. Application of numbers, letters, labels, tags, symbols, or colors for handling or identification during shipment and storage.
PACKING. Assembly of items into a unit, intermediate, or exterior pack with necessary blocking, bracing, cushioning, weatherproofing, reinforcing, and marking.

PRESERVATION. Application of protective measures to prevent deterioration; includes cleaning, drying, preservation materiel's, barrier materiel's, cushioning, and container, when necessary.

UNITIZATION. Assembly of packs of one or more line items of supply into a single load in such a manner that the load can be handled as a unit through the distribution system. Unitization (unitized loads/unit loads) encompasses consolidation in a container, placement on a pallet or load base, or securely binding together.

PACKAGING CONTROL POINT. An activity designated by a Military Service which monitors packaging discrepancies.

PACKAGING DISCREPANCY. Any unsatisfactory condition due to improper or inadequate packaging (including marking, packing, preservation, or unitization) and which causes the item, shipment, or package to be vulnerable to loss, delay, or damage, or unnecessary expense to the U.S. Government, as in excessive packaging.

PACKING, HANDLING, AND CRATING COSTS. Costs incurred for labor, materiel, or services in preparing materiel for shipment from or between storage and distribution points.

PARTIAL SHIPMENT UNIT. A shipment unit separated at the origin shipping activity into two or more increments with each increment identified and documented separately.

PASSING ACTIONS (GENERIC TERM). A general term identifying the transactions associated with materiel demands within the supply distribution system. This term is applicable when forwarding materiel demands from the initial source of supply to the ultimate source of supply.

PASSING ORDER. An order used to pass an erroneously routed requisition to the appropriate depot or distribution point, and to pass a requisition from one distribution system to another.

PAYBACK. When the Single Manager for Conventional Ammunition issues materiel from a location where the requesting service owns no materiel, the owning service is compensated for its loss of materiel by a like item and quantity at a location where the requesting service owns some materiel. The payback of the materiel is accomplished by ownership gain/loss transactions.

PERSONAL PROPERTY. Property of any kind or any interest therein, except real property. Tangible personal property includes military equipment, plant equipment, other equipment (general property, plant and equipment), reparables and consumables. For the purpose of this issuance, personal property discrepancies identify personal property as household goods, unaccompanied baggage (personal effects), house trailers (mobile homes), houseboats, railcars, and privately owned vehicles. (reporting
applicable to packaging discrepancies only not applicable to security assistance (See Joint Travel Regulation, Volume 1).

PHYSICAL INVENTORY CUTOFF DATE. A date established for striking the property accountability record balance. This date serves as the reference point for considering the relationship between pre inventory/post inventory transactions and the physical count quantity to determine if the count is in agreement with the inventory record balance.

PHYSICAL INVENTORY INFLOAT CONTROL DATE. Established for initiating controls on all in-process transactions and materiel’s that could affect the outcome of the inventory.

PLANT EQUIPMENT. Personal property of a capital nature, consisting of equipment, furniture, vehicles, machine tools, test equipment, and accessory and auxiliary items, but excluding special tooling and special test equipment, used or capable of use in the manufacture of supplies or for any administrative or general plant purpose.

PORT OF DEBARKATION (POD). The geographic point at which cargo or personnel are discharged. This may be a seaport or aerial port of debarkation; for unit requirements; it may or may not coincide with the destination. (See Joint Publication 1-02.)

PORT OF EMBARKATION (POE). The geographical point in a routing scheme from which cargo or personnel depart. This may be a seaport or aerial port from which personnel and equipment flow to a port of debarkation; for unit and non-unit requirements, it may or may not coincide with the origin. (See Joint Publication 1-02.)

POSITIONING COSTS. Costs incurred in prepositioning items in the supply distribution system of a Military Department at locations OCONUS in anticipation of support to other authorized customers.

POST INVENTORY TRANSACTION. Any transaction, causing an increase or decrease to the property accountability record balance, dated after the established physical inventory cutoff date.

POST-POST TRANSACTION. The posting of a transaction to add to or subtract from the accountable stock record balance subsequent to physical issue or storage of a stocked item.

PREINVENTORY PLANNING. Pre inventory planning is conducted prior to the physical inventory cutoff date to reduce the potential for inventory inaccuracies through: (1) Actions to ensure location integrity by resolving such situations as unbinned/loose materiel; questionable identity of materiel in location; and multiple conditions, shelf-life (including date of pack/date of expiration), and/or materiel lots stored in a single location; and (2) document cleanup to ensure to the extent possible that adjustments and transaction reversals are posted to the record, in-process receipts are stored in
location, and related transactions are transmitted to the IMM prior to the established physical inventory cutoff date.

**PREINVENTORY TRANSACTION.** Any transaction, causing an increase or decrease to the property accountability record balance, dated prior to the established physical inventory cutoff date.

**PREPOST TRANSACTION.** The posting of a transaction to add to or subtract from the accountable stock record prior to physical issue or storage of a stocked item.

**PRE-POSITIONED WAR RESERVE (PWR).** That portion of the war reserve materiel requirement that the current Secretary of Defense guidance dictates be reserved and positioned at or near the point of planned use or issue to the user prior to hostilities, to reduce reaction time, and to assure timely support of a specific force or project until replenishment can be effected. (See Joint Publication 1-02.)

**PRINCIPAL (DMISA).** The Military Service(s) or other Federal Department or Agency(s) [owner(s)] receiving depot maintenance support from the Agent. (Source: OPNAVINST 4790.14A. et.al)

**PRINCIPAL ITEMS.** An end item or a replacement assembly of such importance to operational readiness that management techniques require centralized individual item management throughout the supply system to include items stocked at depot level, base level, and using item level. (See DoDM 4140.01.)

**PRIORITY DESIGNATOR (PD).** A 2-position numeric code (01 – 15) that identifies the relative priority of the competing requisitions. As an integral of the UMMIPS, it is used by the materiel management systems to allocate available stocks among competing requisitions and is based on the combination of the F/AD assigned to the requisitioning activity and the urgency of need as prescribed in Volume 2, Supply. (See DoDM 4140.01.)

**PROCESS REVIEW COMMITTEE (PRC).** A component body that processes and recommends the disposition of Defense Logistics Management Standards change requests. See Chapter 1 for further information.

**PROCUREMENT INSTRUMENT IDENTIFICATION NUMBER (PIIN).** Identifies legacy contractual documents. Use of the PIIN is authorized in the DLMS and legacy MILSTRIP/MILSTRAP procedures, pending transition to the procurement instrument identifier (PIID).

**PROCUREMENT INSTRUMENT IDENTIFIER (PIID).** A standard unique identifier for a solicitation, contract, agreement, or order and related procurement instruments, see DFARS Subpart 204.16. The new identifier for call/order number under the PIID rules is designated by F in the 9th position. However, there is an exception authorized for DLA procurement instruments supporting FEDMALL to identify the delivery/call order using an M in the 9th position. The PIID call/order number is always treated as a contractual agreement even when the base contract number is available. If a base PIID contract
number and PIID call/order number are available, provide the PIID call/order number (F or M PIID) only.

**PRODUCT QUALITY (ITEM) DEFICIENCY.** A defect or nonconforming condition which limits or prohibits the product from fulfilling its intended purpose. Included are deficiencies in design, specification, material, manufacturing, and workmanship.

**PROGRESS PAYMENT.** Amounts paid for goods or service, not yet delivered, to finance that portion on which performance has been completed.

**PROOF OF DELIVERY.** A legible data and signature of the designated receiver listed on the delivery manifest, certifying the item was received. Proof of delivery must also reflect the number of cases/containers received to agree with the number shown on supply documentation and actual weight received within weight-range variation. The proof of delivery establishes transfer of custody and liability to the receiver (Defense Transportation Regulation definition). In the case of nonreceipt of SDRs, the DoD ICP/IMM/shipping depot and the General Services Administration are required only to provide evidence of shipment.

**PROPERTY ACCOUNTABILITY.** The assignment of duties and responsibilities to an individual or organization that mandates jurisdiction, security, and answerability over public property. (See DoDM 4140.01.)

**PROPERTY ACCOUNTABILITY RECORD.** The official record of tangible personal property, including inventory, owned by the Department of Defense that is maintained to identify the quantities of items on-hand, unit prices, locations, physical condition, receipt and issue records, authorized stock numbers, item descriptions, and other such information necessary to properly account for materiel and exercise other inventory management responsibilities. (See DoDM 4140.01.)

**PROPERTY RECORD.** A formal record of property and property transactions in terms of quantity and/or cost, generally by item. An official record of Government property required to be maintained. Also called property account. (See Joint Publication 1-02.)

**PROVISIONING ORDER.** A written notification to a contractor to deliver spare repair parts against a line item already contained in a contractual instrument. (Both delivery date and prices may be estimated on the order subject to later definitized on a supplemental agreement.)

**PURCHASING OFFICE (PO).** The office that awards or executes a contract for supplies or services.

**QUALIFIER.** A data element that identifies or defines a related element, set of elements, or a segment. The qualifier contains a code taken from a list of approved codes.

**QUANTITY RESTRICTION.** A restriction in quantity on a single requisition to limit the number of shipment units to 25 each to accommodate structure if MILSTRIP
**TCNs only.** Quantity restriction is applied to requisitions constituting volume shipments of equipment as specified by the Services. For example, wheeled/tracked and other items of equipment when a unit of issue of one each constitutes a single shipment unit. (Applicable to FMS only.)

**RADIO FREQUENCY IDENTIFICATION.** RFID systems consist of an antenna, a transceiver with a decoder, and a transponder, typically called an RFID tag. Depending on the type of tag used, the RFID tag may contain a simple “license plate” uniquely identifying the specific tag, or it may be programmed with application-specific information. The antenna acts as a link between the tag and the transceiver. Often, the antenna is packaged with the transceiver and decoder to become a reader, also known as an interrogator. Interrogators can be handheld or fixed-mount devices. The reader decodes the data and passes that information to a computer for processing. The information can be used for a wide variety of inventory management or other identification applications through a central database.

- **Passive RFID tags** have no on-board battery and they provide short communication ranges (1-5 meters). These tags have a low data bandwidth and cannot initiate communications, they must be read.

- **Semi-passive RFID tags** have an internal power source for tag circuitry which allows the tag to complete functions such as monitoring of environmental conditions and which may extend the tag signal range.

- **Active RFID tags** allow extremely low-level RF signals to be received by the tag and the tag (powered by its internal source) can respond by generating a high-level signal back to the reader/interrogator. Active RFID tags can hold large amounts of data, are continuously powered, and are normally used when a longer tag read distance is desired.

**RECLAMATION ACTIVITY.** An activity that performs the process of reclaiming required serviceable and economically repairable components and materiel from excess or surplus property for return to the proper supply activity.

**RECONCILIATION, PHYSICAL INVENTORY.** To obtain agreement between the physical count and record balance by attempting to account for all transactions representing inflot documents.

**RECONCILIATION, SMALL ARMS, & LIGHT WEAPONS.** The process of matching records between the activity(s) having physical custody and/or accountably of small arms and light weapons and the Component Registry for the purpose of ensuring that the records are in agreement and/or adjusting the difference between the records so that the records agree.

**RECORD RECONCILIATION PROGRAM.** The record reconciliation program consists of actions required to assure compatibility between the assets in storage and the locator records and between the locator records and the owner records. Record reconciliation programs may include quantity. This program is accomplished in two phases:
a. Location Reconciliation. A match between valid storage activity records and the owner records, in order to identify and correct situations where items are in physical storage but not on record, on record but not in storage, or where common elements of data (may include quantity) do not match. Research of mismatches, including special inventories when required, results in corrective action.

b. Location Survey. A physical verification, other than actual count, between actual assets and recorded location data to ensure that all assets are properly recorded as to location, identity, condition, and unit of issue.

**REDISTRIBUTION ORDER.** An order issued by a responsible IMM to an accountable supply distribution complex directing release of materiel to another supply distribution activity within the same supply complex. For intra-Service use, an RDO may be used to direct release and shipment of materiel from a post, camp, station, or base to another similar activity to satisfy a specific demand.

**REFERRAL ORDER.** An order used between supply sources and distribution systems for the purpose of passing requisition or continued supply action when the initial activity cannot fill the demand.

**RELEASE.** A title given to annual updates of standards.

**REPAIR AND RETURN.** Consignment, without change in ownership, of reparable materiel from an owning activity to a Government, commercial, or industrial maintenance activity for repair and shipment directly back to the owning activity. The owning activity is responsible for negotiating maintenance agreements and preparation of applicable turn-in documents. The activity having custody of the materiel is responsible for maintaining the property accountability record (materiel accountability) prior to an assets induction into maintenance and following its return from maintenance.

**REPORT OF DISCREPANCY.** See Supply Discrepancy Report (SDR).

**REPORTING ACTIVITY.** Within the context of MRA, the reporting activity for U.S. Forces is the activity identified by the ship-to DoDAAC designated in the requisition. The reporting activity is normally the requiring activity or unit that receives the materiel and posts it to a record such as a retail stock record, stock record amount property account, etc. For security assistance shipments, the responsible Military Service ILCO will serve as the reporting activity. Within the context of MRP, the reporting activity is a Service or Agency organization that has reported materiel to an ICP/IMM.

**REQUIRED AVAILABILITY DATE (RAD).** A date specifying when end items and concurrent spare parts are committed to be available for transportation to a Foreign Military Sales, Grant Aid, or Security Assistant Program recipient.

**REQUIRED DELIVERY DATE (RDD).** A date specifying when materiel is actually required to be delivered to the requisitioner and is always earlier or later than the computed standard delivery date. A required delivery date cannot exactly equal a computed standard delivery date.
REQUIRED DELIVERY PERIOD (RDP). A period of time specifying the earliest and the latest acceptable date materiel can be delivered. (Applies to conventional ammunition requisitions only.)

REQUISITION. An order for materiel initiated by an established, authorized organization (i.e., a DoD or non-DoD organization that has been assigned a DoD Activity Address Code) that is transmitted either electronically, by mail, or telephoned to a supply source within the Department of Defense or external to the Department of Defense (the General Services Administration (GSA), the Federal Aviation Administration (FAA), or other organizations assigned management responsibility for categories of materiel), according to procedures specified in Volume 2, Supply.

RESEARCH, PHYSICAL INVENTORY. An investigation of potential or actual discrepancies between physical count and recorded balances. The purpose of research is to determine the correct balance and determine the cause of discrepancies. There are three types of research:

   CAUSATIVE RESEARCH. An investigation of discrepancies; i.e., gains and losses, consisting of, as a minimum, a complete review of all transactions to include supporting documentation, catalog change actions, shipment discrepancies, and unposted or rejected documentation occurring since the last completed inventory. The purpose of causative research is to identify, analyze, and evaluate the cause of inventory discrepancies with the intention of eliminating repetitive errors. Causative research ends when the cause of the discrepancy has been discovered or when, after review of the transactions, no conclusive findings are possible.

   POSTCOUNT VALIDATION. A comparison of physical count with recorded balances or another count, with consideration of transactions that have recently occurred. The purpose of postcount validation is to determine the validity of the count. Postcount validation research ends when the accuracy of the count has been verified or when any necessary recounts have been taken.

   PREADJUSTMENT RESEARCH. A review of potential discrepancies that involves consideration of recent transactions and verification of catalog data. The purpose of preadjustment research is to determine the correct balance. Preadjustment research ends when the balance has been verified or the adjustment quantity determined.

RESPONSIBLE ACTIVITY. Any activity required to take action as a result of a Supply Discrepancy Report (SDR); (e.g., ICP, contract administration office, packaging control point, or a shipping activity of shipments from an RDO).

RETAIL STOCK. Stock held in the custody or on the record of a supply organization below the wholesale level. (See DoDM 4140.01.)

RETROGRADE CARGO. A movement of materiel opposite of the normal flow, e.g., cargo returned from OCONUS to CONUS.
SCRAP. Materiel that has no value except for its basic materiel content.

SEAPORT OF DEBARKATION (SPOD). An authorized point of arrival from a foreign country or the United States located at a seaport. It is identified by a three-position water port identifier code (Reference DTR 4500.9-R).

SEAPORT OF EMBARKATION (SPOE). An authorized point of departure from a foreign country or the United States located at a seaport. It is identified by a three-position water port identifier code (Reference DTR 4500.9-R).

SECURITY ASSISTANCE ORGANIZATION (SAO). All Department of Defense elements located in a foreign country with assigned responsibilities for carrying out security assistance management functions. It includes military assistance advisory groups, military missions and groups, offices of defense and military cooperation, liaison groups, and defense attaché personnel designated to perform security assistance functions.

SECURITY COOPERATION CASE DESIGNATOR. The Security Cooperation case designator code is used to reflect a FMS contractual sales agreement (Letter of Offer and Acceptance) between the U.S. and an eligible foreign country. It is a unique code used with a country identification code to identify a particular foreign military sale. The Security Cooperation case designator is a minimum three, maximum four-character designation; however, it is restricted to three positions under DLMS.

SECURITY COOPERATION CUSTOMER CODE. The Security Cooperation (SC) customer code is a code used by Defense Security Cooperation Agency to represent the country, international organization, region or program authority associated with transactions recorded in Security Cooperation systems and associated with programs implemented in the Foreign Military Sales Trust Fund. The Security Cooperation customer code is a minimum two, maximum three-character designation; however, it is restricted to two positions under DLMS. Pending separation of the country and activity codes used for distribution and physical location in clear text addressing under the DLMS, the SC customer code values and the country and activity codes are maintained in a mixed-purpose table in LOGDRMS (in association with Qualifier 85 an 85*.

SECURITY COOPERATION IMPLMENTING AGENCY. The implementing agency (IA) code identifies the military department or defense agency responsible for the execution of military assistance programs. With respect to FMS, this is the military department or defense agency assigned responsibility by the Defense Security Cooperation Agency to prepare a Letter of Offer and Acceptance (LOA) and to implement an FMS case. The implementing agency is responsible for the overall management of the actions that will result in delivery of the materials or services set forth in the LOA that was accepted by a foreign country or international organization. For Military Service and Missile Defense Agency sponsored FMS cases, the IA code is equivalent to the Service/Agency code used in the first position of the document number; for all other Defense Agencies the IA does not equate to the Service/Agency code. The only IA codes authorized for
MILSTRIP requisitioning are B (Army), D (Air Force), I (Missile Defense Agency), P (Navy), and R (DLA).

**SEGMENT.** Consists of logically related data elements in a defined sequence. A data segment consists of a segment identifier, one or more data elements each preceded by an element separator, and ends with a segment terminator. (See Volume 1, Chapter 7, for additional descriptive information.)

**SHELF-LIFE.** The length of time during which an item of supply, subject to deterioration or having a limited life which cannot be renewed, is considered serviceable while stored. (See Joint Publication 1-02.)

**SHELF-LIFE ITEM.** An item of supply possessing deteriorative or unstable characteristics to the degree that a storage time period must be assigned to assure that it will perform satisfactorily in service.

**SHIP-TO/MARK-FOR CODE.** A one-position alphabetic or numeric code that identifies the mark-for address of the activity to receive the materiel. This code will also identify the ship-to address for materiel/documentation for shipment moving through the Defense Transportation System (DTS).

**SHIPMENT.** Movement of materiel from point of origin to destination by any mode.

**SHIPMENT STATUS.** Informs activities of the actual shipping dates (such as the date released to the carrier), the release criteria for shipments, or shipment delay notifications. Also provides for an interface with transportation and for shipment tracing by activities under DTR 4500.9-R.

**SHIPMENT UNIT.** One or more items assembled into one unit that becomes the basic entity for control throughout the transportation cycle.

**SHIPPER.** Any organization, service, or agency (including the contract administration or purchasing office for vendors) that originates/delivers materiel to a carrier for movement. The shipper may be a Military organization or activity, other Government agency, or a manufacturer or vendor. The functions performed include planning, assembling, consolidating, documenting, and arranging for movement of materiel.

**SHIPPING ACTIVITY.** A Service/Agency activity that originates shipments and plans, assembles, consolidates, documents, and arranges for movement of materiel.

**SHIPPING (ITEM) DISCREPANCY.** Any variation in quantity or condition of materiel received from that shown on the covering authorized shipping documents, e.g., DD Form 1348-1A, Issue Release/Receipt Document, or purchase order. Shipping discrepancies include incorrect and misdirected materiel, receipt of canceled requirements, improper, inadequate technical or supply documentation, or other discrepancies as enumerated in, Volume 2, Supply, and not the result of a transportation error or product quality deficiency.
SHORTAGE. Item shortage is when the quantity received is less than the quantity ordered or shown on the shipping document. The shortage is not evident on delivery but is discovered when the container is opened and the contents are checked. Transportation shortages reportable under DLAR 4500.15, are shortages of boxes, packages, or loose articles of freight in a SEAVAN/Military Van (MILVAN), roll on/roll off, or a Container Express (CONEX) found to be less than the quantity of freight as recorded on the applicable bill of lading. NOTE: Shortage on SEAVAN/container that is source loaded and moves under shipper's load and count, and arrives at destination with original seal(s) intact, is considered a supply discrepancy.

SHRINKAGE. A reduction in size, weight, or substance.

SINGLE MANAGER FOR CONVENTIONAL AMMUNITION (SMCA). The responsibility assigned to the Secretary of the Army by the Secretary of Defense for the procurement, production, supply, and maintenance/renovation of conventional ammunition within the Department of Defense. Specific responsibilities, functions, authority, and relationships are contained in DoDD 5160.65, “Single Manager for Conventional Ammunition,” August 1, 2008

SMALL ARMS AND LIGHT WEAPONS. For the purpose of DoD small arms and light weapons reporting, small arms and light weapons are defined as man-portable weapons made or modified to military specifications for use as lethal instruments of war that expel a shot, bullet or projectile by action of an explosive. Small Arms are broadly categorized as those weapons intended for use by individual members of armed or security forces. They include handguns; rifles and carbines; sub-machine guns; and light machine guns. Light weapons are broadly categorized as those weapons designed for use by two or three members of armed or security forces serving as a crew, although some may be used by a single person. They include heavy machine guns; hand-held under-barrel and mounted grenade launchers; portable anti-aircraft guns; portable anti-tank guns; recoilless rifles; man-portable launchers of missile and rocket systems; and mortars. Associated suppressors, silencers, mufflers, and noise suppression devices appropriate for previously listed small arms and light weapons are included and will be reported within the Component and DoD registries.

SMALL ARM AND LIGHT WEAPONS SERIAL NUMBER. The total series of characters appearing on the firing component part of small arms or light weapons.

SMALL ARMS AND LIGHT WEAPONS TRANSACTION REPORTING. Reporting of individual transactions affecting the small arms and light weapons serial numbers’ status within any Component registry.

SOURCE OF SUPPLY. Any Federal Government organization exercising control of materiel and to which requisitions are directed. (See DoDM 4140.01.)

SPECIAL PROGRAM REQUIREMENT (SPR). Automated procedure to forecast select future nonrepetitive requirements that cannot be forecast by the ICP based on demand.
data and which have the greatest probability of resulting in the eventual submission of requisitions.

**SPLIT SHIPMENT UNIT.** A whole or partial shipment unit separated at a transshipment point into two or more increments with each increment identified and documented separately.

**STANDARD DELIVERY DATE (SDD).** A date computed by adding the individual Uniform Materiel Movement and Issue Priority System (UMMIPS) time standards to the requisition date.

**STANDARDS.** The technical documentation approved for use in the DLMS; specifically, transaction sets, segments, data elements, and code sets. Standards provide the framework for structuring each DLMS transaction.

**STATUS RECIPIENT.** Includes, but not limited to, requisitioners, International Logistics Control Offices/monitoring activities (Security Assistance and Foreign Military Sales (FMS)), designated MAPAD TAC 4 country designees (FMS), and MAPAD TAC 3 country/in-country security assistance activities status designees (Grant Aid customers).

**STOCK READINESS.** A DoD program involving the tasks needed to assure that the proper condition of materiel in storage is known and reported, that the condition is properly recorded, and that the materiel is properly provided with adequate packaging protection to prevent any degradation to lower condition codes. Stock Readiness concerns itself with the in-storage inspection, minor repair, testing, exercising of materiel, and packaging aspects associated with these efforts. Stock Readiness includes the elements of COSIS plus the functions related to the receipt, identification, classification, and packaging of materiel during the receipt process. Stock Readiness excludes those actions that fall under the area of general warehouse care and depot maintenance, including the use of proper storage aids, identification of materiel/storage locations, and rewarehousing actions.

**STOCK RECORD ACCOUNT.** A basic record showing by item the receipt and issuance of property, the balances on hand, and such other identifying or stock control data as may be required by proper authority.

**STORAGE ACTIVITY.** The organizational element of a distribution system which is assigned responsibility for the physical handling of materiel incident to its check-in and inspection (receipt), its keeping and surveillance in a warehouse, shed, tank, or open area (storage), and its selection and shipment (issue). (See DoDM 4140.01.)

**STORAGE LOCATION.** The physical location within a storage activity where materiel is stored.

**SUBSISTENCE TYPE OF PACK CODE.** Use only in subsistence requisitions to indicate the required level of pack to be applied to shipments of perishable and nonperishable subsistence materiel.
**SUBSTITUTABLE ITEM.** An item possessing functional and physical characteristics that make it capable of being exchanged for another only under specified conditions or for particular applications and without alteration of the items themselves or of adjoining items. That term is synonymous with the phrase “one-way interchangeability,” such as item B will be interchanged in all applications for item A, but item A will not be used in all applications requiring item B. (See DoDM 4140.01.).

**SUB TIER CODE.** A field in the DoDAAD that indicates if a DoDAAC is tied to a specific Federal Agency Sub Tier (a.k.a. bureau) for business uses within the Federal Procurement Data System (FPDS).

**SUMMARY BILLING RECORD (SBR).** A record, used in the interfund billing system, which summarizes the values of detail billing records and provides other information needed to support transfers of funds between appropriations.

**SUPPLEMENTARY ADDRESS.** *The activity address of a customer when the recipient of materiel and/or the billing activity is other than the requisitioner address.*

**SUPPLEMENTARY PROCUREMENT INSTRUMENT IDENTIFIER (Supplementary PIID).** Identify amendments or modifications to the procurement instrument. The Supplementary PIID must be used in conjunction with the PIID.

**SUPPLY DISCREPANCY.** Errors reportable under Volume 2, Supply. For example any variation in goods received from data shown on the covering shipping documents (General Services Administration or Single Line Item Release/Receipt Document; Issue Release/Receipt Document (IRRD); Requisition and Invoice/Shipping Document; authorized procurement delivery document or vendor's packing list; or other authorized shipping document) which is not the result of a transportation discrepancy or product quality deficiency. Supply discrepancies encompass variations in condition or quantity including damaged or lost USPS shipments (except lost registered, insured, or certified), item shortage or overage, incorrect and misdirected materiel, receipt of canceled requirements, improper or inadequate technical data or supply documentation, and any unsatisfactory condition due to improper packaging which causes the materiel to be vulnerable to loss, delay, or damage or which imposes unnecessary expense to the U.S. Government; e.g., excessive packaging.

**SUPPLY DISCREPANCY REPORT (SDR).** An electronic transmission or manual form used to report a supply discrepancy. Other types of discrepancies may be reported via SDR only as specifically authorized under Volume 2, Supply, Chapter 17.

**SUPPLY SOURCE.** *The Component installations or activities in their respective distribution systems designated to receive and process requisitions and related transactions; for example, the ICP, DLA Supply Chains, IMM, stock point, or depot*

**SUPPLY STATUS.** Informs activities of action taken or being taken on materiel requisitioned but not shipped, shipment consignments instructions, or disposition instructions for materiel offered under the materiel returns program (MRP).
SUPPLY SYSTEM RESPONSIBILITY ITEM (SSRI). These items are furnished by the supply system when the end item is issued and will be transferred with the end item during redistribution or other changes of custody unless otherwise specifically directed by the appropriate authority. This term equates to Components of End Item (COEI).

THEFT. The felonious taking and removal of materiel.

TOTAL ITEM PROPERTY RECORD. The record or record set maintained by the IMM that identifies the quantity, condition, and value of the items assets for each organizational entity having physical custody of these assets. The total item property record includes materiel that is due in, in transit, in organic wholesale repair facilities, in a contractor's custody, on loan, on hand in wholesale distribution centers, on hand at retail activities, and for reported assets in the custody of users. (See DoDM 4140.01.)

TOTAL NONRECEIPT. Complete nonreceipt of item(s) shipped.

TRANSACTION NUMBER (OR TRANSACTION REFERENCE NUMBER). A unique reference number assigned to a transaction for identification throughout the logistics system and for the life of the transaction until its retirement is authorized in official audit reports. For DLMS transactions, this is the document number.

TRANSACTION SET (TS). The electronic data interchange (EDI) equivalent of a paper business document composed of data elements and data segments.

TRANSPORTATION CONTROL NUMBER (TCN). A 17-position alphanumeric character set assigned to control a shipment unit throughout the transportation cycle of the DTS.

TRANSPORTATION COSTS. Costs paid to common carriers or Government activities to move materiel within the transportation system.

TRANSPORTATION DISCREPANCY REPORT. A form used to report loss and damage to materiel.

TRANSPORTATION PRIORITY (TP). A number assigned to a shipment that establishes its movement precedence by air, land, or sea within the DTS.

TRANSSSHIPPER. A transportation activity, other than the shipper or receiver, that handles or documents the transfer of a shipment between conveyances. A transshipper is usually a consolidation and containerization point (CCP), air or sea port of embarkation, air or sea port of debarkation, or break-bulk point. A transshipper may perform more than one type transshipment.

TYPE I SHELF-LIFE ITEM. An item of supply that is determined through an evaluation of technical test data and/or actual experience to be an item with a definite non-extendable period of shelf life. (See DoD 4140.27-M.)
**TYPE II SHELF-LIFE ITEM.** An item of supply having an assigned shelf-life time period that may be extended after completion of inspection/test/restorative action. (See DoD 4140.27-M).

**TYPE OF ADDRESS CODE (TAC).** A one-position alphabetic or numeric code which designates the use of a DoDAAD or MAPAD address.

**UNCLASSIFIED PROPERTY RECORD.** A stock account belonging to a DoD activity whose mission is not classified, whereas a classified account contains information of a sensitive nature, the disclosure of which may be detrimental to the U.S. Government's interest (e.g., small arms or light weapons belonging to intelligence-gathering activities).

**UNIFORM MATERIEL MOVEMENT AND ISSUE PRIORITY SYSTEM (UMMIPS).** A structure that establishes time standards, based on the mission and urgency of need of the requestor, for the supply of materiel from the date of the requisition to the time that the acknowledgment of physical receipt is posted to the requisitioner’s inventory record. (See DoDM 4140.01.)

**UNIQUE ITEM IDENTIFIER (UII).** An identifier used to uniquely identify an individual asset used within DoD. The UII may be derived from a DoD recognized IUID equivalent [e.g., Vehicle Identification Number] or a composite structure defined by the DoD [refer to UII Construct 1 and UII Construct 2]. Formation of the UII relies upon two primary methods of serialization: (1) Serialization within the enterprise and (2) Serialization within the original part number of the enterprise. Refer to OSD policy and supporting documentation for specific guidance. Refer to the current version of MIL-STD-130 for specific guidance on marking of U.S. Military property. The generic term, UII, has evolved through usage to mean the concatenated UII as a common database key without regard to the UII data set being used.

**UNIQUE ITEM IDENTIFIER (UII) TYPE.** A designator that identifies the specific structure and syntax of a type of UII. Specific examples of the UII Type are: Vehicle Identification Number (VIN), UII Construct I (UII 1), UII Construct 2 (UII 2).

**UNIQUE ITEM IDENTIFIER (UII) CONSTRUCT 1.** This is a concatenated UII based upon serialization within the enterprise. The concatenated UII Construct 1 contains the IAC, EID, and serial number.

**UNIQUE ITEM IDENTIFIER (UII) CONSTRUCT 2.** This is a concatenated UII based upon serialization within the part, lot, or batch number within the enterprise. The concatenated UII Construct 2 contains the IAC, EID, original part number, lot or batch number, and serial number.

**UNIQUE ITEM TRACKING (UIT).** A program within DoD for tracking selected items to maintain visibility of each uniquely identified asset for the primary purpose of inventory control and/or engineering analysis.
**USTRANSCOM REFERENCE DATA MANAGEMENT (TRDM).** A utility for managing transportation reference tables utilized by various Department of Defense (DoD) systems. It distributes the data to systems using a variety of methods according to individual system requirements and has an application for entering data.

**VALIDATED DISCREPANCY REPORT.** A discrepancy report in which the authorized processing point has both accepted for processing and confirmed or has a reason to believe the discrepancy has occurred. For adjustment purposes, an SDR for non-receipt is considered validated when the shipping office determines the non-traceability of the shipment.

**VERSION.** A title given to the updates (every 3 years) of a Defense Logistics Management Standard that has officially been approved by ASC X12.

**WAR MATERIEL REQUIREMENT.** The quantity of an item required to equip and support the approved forces specified in the current Secretary of Defense guidance through the period prescribed for war materiel planning purposes.

**WHOLESALE STOCK.** Stock, regardless of funding sources, over which the IMM has asset knowledge and exercises unrestricted asset control to meet worldwide inventory management responsibilities. (See DoDM 4140.01.)

**WIDE AREA WORK FLOW - RECEIPT and ACCEPTANCE (WAWF-RA).** WAWF-RA is the designed program to automate Commercial Invoices and Government Receiving Reports in a web-based, paperless environment. WAWF-RA electronically captures and coordinates the four basic pieces of the payment process. WAWA-RA users input their invoices and receiving reports by transition or via the Internet. These are compared to contracts stored in the Defense Finance Accounting System (DFAS) - Electronic Document Access (EDA) system. Once the invoice and receiving reports are approved and processed, payment transactions are initiated via Electronic File Protocol (EFT) to the contractor's bank account.

**WOOD PACKAGING MATERIEL (WPM).** Wood or wood products (excluding paper products) used in supporting, protecting, or carrying a commodity (includes dunnage). Examples of WPM include but are not limited to pallets, skids, pallet collars, containers, crates, boxes, cases, bins, reels, drums, load boards, and dunnage. Wood packaging made of exempt materiel's but combined with solid wood components must still be treated and marked. WPM does not include processed wood materiel's and manufactured wood products.

**WRONG ITEM.** Any incorrect or misidentified item or unacceptable substitute item received requiring submission of a discrepancy report. See also, MISIDENTIFIED ITEM and INCORRECT ITEM.

AP4. APPENDIX 4

DoD/ASC X12 CONVERSION GUIDE

AP4.1. Three sets of conversion guides contain cross references between DoD domain codes (data item codes) and Accredited Standards Committee (ASC) X12 domain code values. DoD systems that store internal data in DoD format and exchange data in X12-based DLMS format must implement all three conversion guides to convert outbound DoD data values to the corresponding ASC X12 code values and vice versa for inbound data values. The applicable conversion guides are available under the quick links on the Enterprise Business Standards Office Website.

AP5. APPENDIX 5

DLMS TO DLSS CROSS-REFERENCE TABLES

AP5.1. The Defense Logistics Management Standards (DLMS) – Defense Logistics Standard System (DLSS) (legacy 80 record position format) cross reference tables provide the following information, which can be found on the DLSS/DLMS Cross Reference page on the DLMS Website.

AP5.1.1. A cross-reference of each DLSS Document Identifier Code (DIC) (e.g., A01) to DLMS Implementation Convention, also known as DLMS Supplement, number (e.g. 511) for all DLSS legacy processes in two sequences: DIC sequence; DLMS transaction sequence.

AP5.1.2. A Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP) customer assistance aid consisting of correlation tables between MILSTRAP legacy DIC series, (e.g. .D4_, D6_, D7_, etc.) and DLMS provides general functional equivalency between each MILSTRAP DIC and DLMS Implementation Convention. In addition to identification of the DIC/DLMS basic cross-references, actual physical location of the applicable transaction type code(s) within each DLMS Implementation Convention and clarifying information required for defining a valid correlation are provided.
AP6. APPENDIX 6

DEFENSE LOGISTICS MANAGEMENT STANDARDS CODE LISTS/QUALIFIERS

AP6.1. The Defense Logistics Management Standards (DLMS) Implementation Conventions, also known as DLMS Supplements, frequently employ a specific combination of data segments and data elements to convey encoded information. The DLMS Qualifiers represent a combination of DoD logistics functional data elements for which the authoritative source is Assistant Secretary of Defense (Logistics & Materiel Readiness) and data elements developed and maintained by other functional data administrators; but, are used in the DLMS, (e.g., procurement, finance, contract administration and personnel). Many of the listed data elements are registered under American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 Data Element 1270 (Code List Qualifier Code) and are used in Data Segment LQ identifying the coded entry to its qualifier. The presence of an asterisk (*) in the qualifier code indicates either of the following conditions:

- The entry represents a conversion guide required or used in the legacy 80 record position Defense Logistics Standard Systems (DLSS)/DLMS translation process.
- The entry shows a secondary sequence of a data code within a qualifier (alphabetic/alphanumeric code sequence or clear-text name).
- The entry is a guide for cross-reference of DoD Document Identifier Codes (DIC) to DLMS ICs.
- The entry identifies a DoD managed code list (qualifier not in 1270)

AP6.2. DLMS Codes Lists/Qualifiers are available from the Defense Logistics Management Standards Program Office Website
AP7. APPENDIX 7

DEFENSE LOGISTICS MANAGEMENT STANDARDS
TRANSACTION FORMATS

AP7.1. DEFENSE LOGISTICS MANAGEMENT STANDARDS TRANSACTION FORMATS. Defense Logistics Management Standards (DLMS) transaction formats are stored on the Defense Logistics Management Standards Program Office Website at the DLMS IC page.

AP7.2. DEFENSE LOGISTICS STANDARD SYSTEM FORMATS. The Defense Logistics Management Standards Program Office Website contains a link to the legacy 80 record position Defense Logistics Standard System (DLSS) transactions associated with each DLMS transaction listed, on the DLMS IC page.

AP7.3. DEFENSE LOGISTICS MANAGEMENT STANDARDS TRANSACTION USAGE. DLMS Implementation Conventions, also known as DLMS Supplements, address how the standards are implemented. One transaction set may be used in several different functional areas or repeatedly within the same functional area. Each separate interpretation of the standards according to a specific usage is called an application. See Volume 1, Chapter 7, Standards and Conventions, for more information on DLMS transactions.
AP8. APPENDIX 8

TRANSACTION SET 997 IMPLEMENTATION CONVENTION – FUNCTIONAL ACKNOWLEDGEMENT

AP8.1. This implementation convention (IC) contains the format and establishes the data contents of the functional acknowledgement transaction set (997) for use within the EDI environment. This IC is used to acknowledge receipt and acceptance or rejection of a functional group and the transaction sets (ICs) contained therein based upon EDI translation software syntax edits. This IC does not cover the semantic meaning of the information encoded in the ICs. This IC is available on the Defense Logistics Management Standards Program Office Website on the DLMS IC page.
AP9. APPENDIX 9

DLMS CHANGE PROCESS FLOW CHART

Begin

Initiator Submits Change Proposal to Component PRC Representative

Component PRC representative coordinates with Component

Component PRC representative submits to appropriate PRC Chair

PRC Chair reviews for methodology, compliance, and completeness

PRC Chair consolidates coordination comments and submits proposal package to director, Defense Logistics Management Standards for signature

Signed change proposal package approved and submitted to component PRC members to evaluate and comment

PRC representative provides concurrence/non-concurrence to PRC Chair

Comments received by PRC Chair

PRC Chair reviews/evaluates comments, coordinates comments with PRC as required, and completes change proposal package

PRC Chair submits change proposal package for approval

Approved?

Yes

Defense Logistics Management Standards determine impact and forward change request to ASC X12 through appropriate channels

Change Approved by ASC X12?

Yes

PRC Chair to coordinate change to ADC

No

No

Does change need ASC X12 approval?

Yes

Notification of disapproval

PRC Chair

PRC S/A Member

Initiator

End

No

No

Component and DLA Transaction Services implement change

Components provide implementation status updates to PRC Chair

All concurrences?

Yes

No

Defense Logistics Management Standards forward unresolved disagreements to ASD(LMR/SCI) for resolution

Issues?

Yes

No

All concurrences?

Yes

No
DEFENSE LOGISTICS MANAGEMENT STANDARDS COMPLIANCE

AP10.1. DEFENSE LOGISTICS MANAGEMENT STANDARDS COMPLIANCE LEGISLATIVE & POLICY AUTHORITY CHAIN. To facilitate interoperability of logistics business functions across the global supply chain management system, the Defense Logistics Management Standards (DLMS) prescribe standard logistics business processes, business rules, information exchange formats and data standards. Transaction based information exchanges must be executed in the applicable DLMS format, including DLMS X12 Electronic Data Interchange (EDI) and DLMS eXtensible Markup Language (XML). Automated information systems (AIS) executing business processes covered by the DLM 4000.25 series of manuals and interfacing with other systems in the performance of those processes must assert their compliance with the DLMS.

AP10.1.1. TITLE 10 UNITED STATES CODE § 2222

AP10.1.1.1. Specifies requirements for investment review and certification of defense business systems before funds, whether appropriated or non-appropriated, can be obligated.

AP10.1.1.2. Requires establishment of a Department-wide Business Enterprise Architecture (BEA).

AP10.1.1.3. Requires Business Process Reengineering (BPR) and alignment to the BEA.

AP10.1.1.4. Requires the establishment of a single Investment Review Board (IRB) chaired by the DoD Deputy Chief Management Officer (DCMO) and an investment management process.

AP10.1.2. Office of Deputy Chief Management Officer. The Office of Deputy Chief Management Officer (DCMO) issues guidance governing the following:

AP10.1.2.1. BEA development, maintenance, and compliance

AP10.1.2.2. IRB rules

AP10.1.2.3. Annual delivery of BEA for the Department of Defense Business Mission Area (BMA) to help defense business system owners and program managers make informed decisions.
AP10.1.3. **Defense Business Council/Investment Review Board.** The Defense Business Council/Investment Review Board (DBC/IRB) oversees the implementation of the DCMO guidance through:

- **AP10.1.3.1.** Review of business area functional strategies and approval of the Components’ Organizational Execution Plans (OEPs) to implement the functional strategies.
- **AP10.1.3.2.** Definition of the Department’s target business environment and approval of the content for the DoD BEA. The BEA specifies the enterprise standards to which DoD business systems must adhere.

AP10.1.4. **DoD Component Chief Information Officers.** They must annually assert the following items for automated information systems under their purview:

- **AP10.1.4.1.** BEA compliance of any business system with a total cost in excess of $1M over the period of the current future-years defense program (FYDP), regardless of type of funding or whether any development or modernization is planned.
- **AP10.1.4.2.** BEA certifications using the Architecture Compliance and Requirements Traceability (ACART) Tool to provide an automated assessment of system compliance against the data standards, business rules, laws, regulations, and policies defined in the DoD BEA.
- **AP10.1.4.3.** DLMS compliance for any business system with a total cost less than $1M over the FYDP, but which executes business processes covered by the DLM 4000.25 series of manuals.

AP10.1.5. **Defense Logistics Management Standards.** DLMS are authorized by the following DoD policy documents:

- **AP10.1.5.1.** DoD Directive 8190.01E, “Defense Logistics Management Standards (DLMS)”
  - **AP10.1.5.1.1.** Directs that the Defense Logistics Management Standards Program Office serve as the Department’s executive agent for DLMS change management,
  - **AP10.1.5.1.2.** Establishes the American National Standards Institute (ANSI) Accredited Standard Committee (ASC) X12 as the baseline logistics data exchange standard upon which the DLMS are based, and
  - **AP10.1.5.1.3.** Requires the DoD Components to implement the DLMS in all AISs that perform business functions covered by the DLM 4000.25 series of manuals.
AP10.1.5.2. DoDI 4140.01, “DoD Supply Chain Materiel Management Policy” authorizes and directs publication of the 4000.25 series of Defense Logistics Manuals (DLM).

AP10.1.5.3. DoDI 4140.01, “DoD Supply Chain Materiel Management Policy” directs that the DLMS serve as the primary system governing logistics functional business management standards and practices.

AP10.1.6. DoD Acquisition and Logistics Functional Strategy, FY 2013

AP10.1.6.1. Identifies the DLMS as an enterprise standard,

AP10.1.6.2. Sets the target for Component Automated Information Systems to be “Fully DLMS compliant by 2019.” This target fulfills the requirement to increase the level of data and process standardization.

AP10.2 DEFENSE LOGISTICS MANAGEMENT STANDARDS IS A BUSINESS ENTERPRISE ARCHITECTURE ENTERPRISE STANDARD

AP10.2.1. The DLMS are included in the DoD BEA as a mandatory enterprise standard of the DoD architecture’s target business environment.

AP10.2.2. The DLMS are a set of artifacts documenting logistics business management standards whose implementation in automated information systems ensures interoperability within and across functional domains. The DLMS interpret, prescribe, and implement DoD policy in multiple functional areas including specifically supply, transportation, acquisition (contract administration), maintenance, and finance. The DLMS document the approved standard business processes and the supporting business rules, information exchanges, and data standards. As an enterprise standard, the DLMS are applicable to all the DoD Components and by agreement, to external organizational entities conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) agencies of the U.S. Government other than DoD; (c) State and Local Government entities; (d) foreign national governments; and (e) international government organizations.

AP10.2.3. DLMS Business Processes & Rules are published in the Defense Logistics Manual (DLM) 4000.25 series of manuals authorized by DoDI 4140.01. The DLMs are available on the Publications page. The DLMS Information Exchanges supporting the business rules and processes are available on the DLMS IC page. The DLMS Data used by the business and processes and conveyed in the DLMS Information Exchanges can be found in LOGDRMS, which is accessible through the DLMS Website.
AP10.3 COMPONENT CERTIFICATION OF COMPLIANCE WITH THE BEA ENTERPRISE STANDARD “DEFENSE LOGISTICS MANAGEMENT STANDARDS”

AP10.3.1. The Component ACART certification of a system’s DLMS Compliance is a two-step approach.

AP10.3.1.1. **Step 1: Applicability of the DLMS.** Determine if the DLMS are applicable to the system under review. If the DLMS are not applicable to the functional processes supported by the system under review, then no DLMS compliance certification is necessary. The determination of applicability is made by reviewing functional business processes that the system supports and determining whether or not the system under review exchanges transactional information with other systems to execute its business processes.

AP10.3.1.1.1. Systems that are within the DLMS functional scope are those that support business functions covered by the DLM 4000.25 series of manuals. The system under review may identify DLMS applicability for all or selected individual business processes supported by the DLMS. A review of the DLM 4000.25 series manuals “Tables of Contents” is a quick way to identify the specific business processes supported by the DLMS. To aid program managers in determining the applicability of the DLMS to a particular system, a DLMS Compliance Checklist is on the DLMS Implementation page. Program managers must review the DLMS Compliance Checklist to determine DLMS applicability to their programs.

AP10.3.1.1.2. Systems that are within the DLMS functional scope and are dependent on incoming transactions or exiting transactions to support those functional processes can compare the systems transactions to the transactions identified within the DLM 4000.25 series of manuals to ascertain the scope of information exchange impacts.

AP10.3.1.2. **Step 2: DLMS Compliance Determination.** Step 2 begins with the finding in Step 1 that the DLMS are applicable to functional processes supported by the system under review. The following describe several levels of compliance. A determination of Level 1, “Basic DLMS Compliance” is required for a Component to make the assertion that the system is DLMS Compliant within the ACART tool.

AP10.3.1.2.1. **Level 0: DLMS NON-COMPLIANT.** A system is declared DLMS Non-compliant when it

- executes business processes covered by the DLM 4000.25 series of manuals,
- interfaces with other systems in the performance of those processes, but does not adhere to the DLMS standard processes, business rules, information exchange formats, or data standards, and
- there are no active efforts to implement the DLMS.
Transaction based information exchanges must be executed in the applicable DLMS format including DLMS X12 EDI and DLMS XML. The DLMS are a broad-based body of logistics management, responsibilities, procedures, business rules, data and information exchange standards that are documented in the Defense Logistics Management System manual and Approved DLMS Changes (ADCs) published and posted to the Defense Logistics Management Standards Program Office Website.

**AP10.3.1.2.2. Level 1: BASIC DLMS COMPLIANCE.** A system is declared Basic DLMS Compliant when it

- executes business processes covered by the DLM 4000.25 series of manuals,
- has the capability to interface with other systems using the standard DLMS transactions (either DLMS EDI or DLMS XML), and
- implements the DLMS basic business function rules and data standards.
- Basic business process rules, formats, and data conform to those prescribed by legacy MILSTRIP, MILSTRAP, and MILSBILLS.
- At a minimum, the system must be capable of communicating via DLMS transactions equivalent to the legacy 80 record position transactions, but may not have implemented all the applicable enhanced capabilities of the DLMS.

While the system has not fully implemented all of the applicable DLMS enhancements, it has begun doing so, and has detailed plans and actions ongoing to reach full DLMS compliance. These systems are characterized as Level 1 and are considered to have reached basic DLMS Compliance for BEA/IRB compliance certification purposes.

**AP10.3.1.2.3. Level 2: ENHANCED DLMS COMPLIANCE.** A system is declared “Enhanced DLMS Compliant” when it

- executes business processes covered by the DLM 4000.25 series of manuals,
- has the capability to interface with other systems using the standard DLMS transactions (either DLMS EDI or DLMS XML),
- implements DLMS basic business function rules, formats and data standards, and
- has implemented the preponderance of applicable DLMS enhancements.

While the system has not fully implemented all of the applicable DLMS enhancements, it has detailed plans and actions ongoing to reach full DLMS compliance. Systems are
characterized as Level 2 and are considered to have reached Enhanced DLMS Compliance for BEA/IRB compliance certification purposes.

AP10.3.1.2.4. **Level 3: FULL DLMS COMPLIANCE.** A system is declared “Full DLMS Compliant” when it

- executes business processes covered by the DLM 4000.25 series of manuals,

- has the capability to interface with other systems using the DLMS transactions (either DLMS EDI or DLMS XML),

- implements the DLMS basic business function rules, formats and data standards, and

- has implemented all of the applicable DLMS enhancements.

These systems are characterized as Level 3 and are considered to have reached Full DLMS Compliance for BEA/IRB compliance certification purposes.

AP10.3.2. The IRB will actively monitor Component ACART certifications of a system’s level of DLMS Compliance. For those systems that are not at Level 3 Fully DLMS Compliant, the IRB will review Component plans and ongoing actions to ensure the appropriate resources and priority are being applied to enable the system to be declared Level 3 Fully DLMS Compliant.

AP10.3.3. As new DLMS enhancements are approved for implementation, Components must continually update the Component ACART certifications to ensure the system is remaining current with DLMS. It is possible for a system that was declared Level 3 Fully DLMS Compliant to revert to Level 2 if new DLMS enhancements have not been implemented. If this occurs, the Component must submit to the IRB detailed plans and demonstrate ongoing actions for implementing the new DLMS enhancements.
AP11. APPENDIX 11

OFFICIAL LETTER OF APPOINTMENT and SAMPLE OFFICIAL PDC RESPONSE MEMORANDUM

Official Letter of Appointment

Date

MEMORANDUM FOR: Program Manager, Enterprise Business Standards Office

SUBJECT: Appointment to the <Enter Process Review Committee (PRC), or Work Group (WG), Name>

REFERENCES:
(a) DoDD 8190.01E, “Defense Logistics Management Standards (DLMS),” January 9, 2015
(b) DoDI 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011
(d) DLM 4000.25, “Defense Logistics Management Standards (DLMS), Volume 1, Concepts and Procedures” May 19, 2014

In accordance with References (a) through (d), the following individuals are hereby appointed to the <Enter PRC/WG Name> to represent the <Enter Service/Agency> in all matters relevant to this PRC/WG. This includes any Proposed DLMS Changes (PDCs), Approved DLMS Changes (ADCs), and any data calls or other tasks that may be directed from time to time by the Office of Under Secretary of Defense for Acquisition, Technology, and Logistics (OUSD AT&L); Deputy Assistant Secretary of Defense, Supply Chain Integration (DASD SCI); Director, Defense Procurement and Acquisition Policy (DPAP); or the Under Secretary of Defense Comptroller, Business Integration Office (BIO):

Primary Representative:
Name: (First Mi. Last)
Official mailing address:
Email: XXXXXX@XXX.XXX
Comm: 999-999-9999; DSN: 999-9999

Alternate Representative:
Name: (First Mi. Last)
Official mailing address (if different than Primary):
Email: XXXXXXX@XXX.XXX
Comm: 999-999-9999; DSN: 999-9999
All previous appointees are hereby removed for this Service/Agency. If there are any additional questions or concerns, please contact me at 999-999-9999, email: XXX@XXX.XXX.

XXXXX X. XXXXXX
Authorized Service/Agency Representative

cc:
PRC/WG Chair
MEMORANDUM FOR: Program Manager, Enterprise Business Standards Office

SUBJECT: Response to Proposed Defense Logistics Management Standards (DLMS) Change (PDC) <Enter Number and Title>

- **Agency/Service** has reviewed subject PDC and concurs as written.
- **Agency/Service** has reviewed subject PDC and concurs with comment.
  - Official comments detailed here.
  - Recommended resolution to comments
- **Agency/Service** has reviewed subject PDC and non-concurs for following reasons
  - Non-concur comments here.
  - Recommended resolution to non-concur comments
- **Agency/Service** has reviewed subject PDC and abstains.

<Delete or remove any of the above bullets that do not apply.>

If there are any additional questions or concerns, please contact me at 999-999-9999, email: XXX@XXX.XXX.

DEFENSE LOGISTICS MANAGEMENT SYSTEM

VOLUME 2

SUPPLY STANDARDS
AND PROCEDURES

June 13, 2012

DEPUTY ASSISTANT SECRETARY OF DEFENSE
(SUPPLY CHAIN INTEGRATION)
I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 13, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 13 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). The name of the Material Safety Data Sheet (MSDS) is updated to Safety Data Sheet (SDS). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per the current style guide for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1066B dated March 21, 2019. Updates DoD WebSDR processing to limit changes to input made to the Owner/Manager/Source of Supply data entered on the original SDR submissions. Revises Chapter 17 Supply Discrepancy Reporting and Appendix 7.28 Supply Discrepancy Report Relevant Data Elements.

B. ADC 1227B dated February 12, 2019. Revises the DLMS 832N implementation convention (IC) to clarify when Air Force CICPs should use certain data elements. Revises DLMS IC 832N; No changes to the DLMS manual.

C. ADC 1236 May 16, 2019. Revises reconsideration request procedures in Chapter 17 and replaces the term “customer” with “submitter” to support all SDR document types. Updates the DLMS 842A/W implementation convention (IC) to reflect the correct term and clarify it can be used for all SDR Document Type Codes. Implements new edit for WebSDR direct online application input and SDR transactions to reject any SDR using Reply Code 504 for other than SDR Document Type Code 7 or R or in conjunction with any other reply code. Removes business rules regarding Air Force Security Assistance Command (AFSAC) historical SDR procedures. Revises Chapter 17, Supply Discrepancy Reporting and Appendix 7.28, Supply Discrepancy Report Relevant Data Elements. Revises the DLMS IC 842A/W IC.
D. ADC 1276 dated March 21, 2019. Documents ownership and routing changes pertaining to Army Life Cycle Management Command/Program Manager (LCMC/PM) and LCMC/Army Working Capital Fund (AWCF) materiel stored in DLA Distribution Centers in support of Army Total Package Fielding (TPF). Supports the Army/DLA coordinated agreement to synchronize inventory between DLA DSS and Army LMP during FY18. The transition of this inventory to the appropriate owner RIC occurred in February 2019. Revises Chapter 17, Supply Discrepancy Reporting.

E. ADC 1323 dated May 3, 2019. Updates DLA Disposition Services and Component procedures to authorize use of the receipt reversals process in response to an incorrect receipt or in support of a supply discrepancy report (SDR) after receipt. Appendix 7.32 identifies the authorized reasons for reversal codes. The reason for reversal codes will also provide an audit trail for the resolution of discrepant receipts when using reversal codes. Revises Appendix 7.32 Reason for Reversal Codes, and Chapter 16 Disposition Services.

F. ADC 1326 dated March 25, 2019. Revises DLMS 947I Inventory Adjustment IC to authorize use of purpose code in a dual inventory adjustment when changing the condition of an item. Allows Army to segregate materiel by purpose code. No changes to the DLMS manual; Revises DLMS IC 947I Inventory Adjustment IC.

G. ADC 1330 dated March 22, 2019. Revises the MRA Report to include an option to download the complete list of transactions by Component (all DoDAACs) where an MRA was not received (CONUS/OCONUS). This applies to the MRA type 02 Direct Vendor Delivery, MRA type 36 Stock Shipment, and MRA type 37 Direct Vendor Delivery and Stock Shipment Reports. Revises Chapter 10 Materiel Receipt Acknowledgement.

H. ADC 1345 dated March 21, 2019. Converts four Federal EDI Implementation Conventions (ICs) to DLMS ICs and reposts them to the DLMS IC section of the EBSO Website. Revises Federal ICs: 856 Advance Ship Notice, 857 Shipment and Billing Notice, 861 Acceptance Report, and 997 Functional acknowledgement. No Changes to the DLMS manual.

I. ADC 1346 dated June 18, 2019. (Administrative Change) Part of a series of DLMS changes to align DLM 4000.25.1, MILSTRIP and DLM 4000.25-2, MILSTRAP, with the companion procedures in DLM 4000.25, supporting the ongoing effort to sunset the MILSTRIP and MILSTRAP manuals. Moves MILSTRAP Appendices 1, 2, and 3 to DLMS Appendices 1, 2, and 3, and moves MILSTRIP Appendices 1, 2, and 3 to DLMS Appendices 6, 7, and 8.

[Signature]

Steven P. Whitney, Brig Gen, USAF
Acting Deputy Assistant Secretary of Defense for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 13, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 12 include, but are not limited to, the following: Office names and symbols that have changed are updated (e.g., ODASD(Logistics)). Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per the current style guide for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1156A dated November 26, 2018. Adds two new data elements to the DLMS 511R Requisition transaction to allow DLA Disposition Services to transmit the Special Programs Hold Override Indicator and the Freeze Code. Adds a data element to the DLMS 940R Materiel Release transaction to enable transmission of FMS costs for DLA Disposition Services and revises DLMS 856S Shipment Status transaction to identify the FMS Security Corporation Case Designator Code. Revises Chapter 16; Revises DLMS 511R, DLMS 856S (4030), and DLMS 940R (4030).

B. ADC 1188 dated December 26, 2018. Aligns DoD code names in the Type of Pack and Transportation Method/Type Code conversion guides with the USTRANSCOM Reference Data Management (TRDM) registry code names, and maps the TRDM to X12 code names. It also adds a new mapping for Tank Car to the Type of Pack conversion guide. This change updates the Unit of Materiel Measure (Unit of Issue/Purchase Unit) conversion guide to ensure DoD codes, other than those represented in the Federal Logistics Information System (FLIS) as documented in Cataloging Data and Transaction Standards, Volume 10, Tables 53 and 81, have the name assigned by X12. Additional updates correct some erroneous mappings for DoD Codes. Revises Chapter 1.
C. ADC 1225A dated November 5, 2018. Modifies the DLMS 527R Materiel Receipt Implementation Convention to allow Air Force Contractor Inventory Control Points (CICPs) to identify the moving average cost (MAC) and latest acquisition cost (LAC) in the same receipt. Revises DLMS 527R IC.

D. ADC 1280 dated December 26, 2018. Adds content from DLM 4000.25-1, MILSTRIP and DLM 4000.25-2, MILSTRAP, Chapter 1 “General Information” to appropriate areas in the DLMS Manual. Also adds content from MILSTRAP Chapter 2 “MILSTRAP Features” to the DLMS Manual. Revises Chapter 1.

F. ADC 1302 dated November 5, 2018. Aligns DLM 4000.25-2 MILSTRAP, Appendix 2 code lists containing record positions in the code definitions with the corresponding DLMS Supply transactions. Incorporates user-friendly cross references between legacy MILSTRAP and DLMS that will help DOD Components during their transition to become DLMS compliant.

G. ADC 1316 dated November 15, 2018. Adds Purpose and Ownership Codes to the DLMS 180M Materiel Returns Reporting Implementation Convention (IC) to support a Navy requirement for inclusion of this information for Security Risk Category (SRC) I and II requirements. Revises DLMS 180M IC.

H. ADC 1318 dated November 15, 2018. Adds the project code data element to the DLMS 846R Location Reconciliation Request transaction to provide stratification of inventory during reconciliation for Program Manager (PM)-owned stock maintained at DLA DSS Unit Materiel Fielding Points (UMFP) and Global Combat Support System (GCSS) Army (Fielding Site) TPF locations. This change is primarily for intra-Army use and for third party vendors who do business with the Army. Revises DLMS 846R IC.

I. ADC 1322 dated December 26, 2018. Aligns DLM 4000.25-1 with the companion procedures in DLM 4000.25 Volume 2 to support the retirement of the DLM 4000.25-1. Revises Chapter 4, Chapter 5, Chapter 8, and Chapter 11. Adds new Chapter 29.
III. The list below identifies the chapters, appendices or other files from the manual that are added or replaced by this change:

Jan Mulligan  
Performing the Duties of  
Deputy Assistant Secretary of Defense  
for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 13, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Logistics under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 12 include the following: Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per the current style guide for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions, including changes previously approved in ADCs 328 and ADC 1260 that had been inadvertently omitted, and an administrative update related to the Withdrawal of ADC 33 have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1161B dated June 6, 2018. Updates the DLMS 536L Logistics Reassignment Management Data to enable identification of the PIID associated with the base contract number on Logistics Reassignment – Contract History Data transactions. Enables a capability removed during the transition to PIID numbering under ADC 1161A. Including the base contract number and the PIID call/order number(s) will help associate both data elements for a complete contract history for an item being logistically reassigned. Revises DLMS 536L.

B. ADC 1181B dated April 6, 2018. Documents functional enhancements and adds required functionality to the existing SDR vendor noncompliance system exchange and business rules between WebSDR and Supplier Performance Risk System (SPRS). Revises Chapter 17, and Appendices 7.28 and 8.56.

C. ADC 1224A dated April 4, 2018. Makes additional changes to the implementation convention tables not initially documented as intended under ADC 1224. All existing requirements documented in ADC 1224 will remain unchanged and implementation efforts must take place accordingly. No change to the DLM manuals. Revises DLMS ICs 527R, 846P, 846R, 867I, 945A, and 947I.
D. ADC 1227A dated June 15, 2018. Enables Contractor Inventory Control Points (CICPs) to provide MAC and LAC through cataloging data when the CICP is unable to make the calculations at the time of receipt. No changes to the DLM 4000.25 manuals. Revises DLMS IC 832N Catalog Data Support.

E. ADC 1230A dated February 22, 2018. Include the DLMS 867I Issue Transaction and Associated Procedures for Air Force Government Furnished Property Accountability use. Extends the capability for Air Force Contractor Inventory Control Points (CICPs) to use a batch number, serial number, and unique item identifier (UII) in DLMS 867I transmitted to the Air Force Property System of Record (APSR) as required for bearer, walk-through scenarios. Revises DLMS IC 867I.

F. ADC 1241 dated December 7, 2017. Clarifies the procedures and responsibilities of all parties to resolve nonreceipt SDRs for shipments through DLA CCPs. Overarching procedures are applicable to all Components; however, unique business rules applicable to General Services Administration (GSA)-directed shipments are included. Revises Chapter 17 and Appendix 7.28.

G. ADC 1244 dated June 7, 2018. Defines procedures and establish a coordinated implementation to exchange item unique identification (IUID) and serialization data in accordance with DODM 4140.01. Adds DLMS procedures to include serialization data in all DLMS balance-affecting transactions and selected additional transactions for UIT programs. Adds a new chapter titled “Procedures for Serially Managed Materiel Requiring Owner Visibility”, and allows for expansion to other areas as ODASD Logistics and the DoD IUID Working group identify additional IUID requirements for serially managed materiel requiring owner visibility while physically located at DLA Distribution Centers. Revises Chapters 4, 5, 6, 7, 11, 13, and 17. Deletes Chapter 19 and marks it "Reserved". Adds new Chapter 30. Revises Appendix 7.28. Revises DLMS ICs 527D, 527R, 842A/W, 842P, 842S/Q, 846P, 846R, 856R, 856S, 945A (version 4030), and 947I (version 4030).

H. ADC 1249 dated December 22, 2017. Revises business rules for document number assignment for directed return of materiel stored in DLA Distribution Centers. Current procedures state that the original owner/manager providing SDR disposition for return of discrepant materiel must direct the customer to use the original shipment document number. Revises Chapters 11, 17, and 24. Revises DLMS ICs 527D, 527R, 842A/R, and 856R.

I. ADC 1250, dated March 1, 2018. Mandates synchronization of all Component SDR systems for identification of a duplicate SDR. This requirement applies to DOD WebSDR and Component systems generating and receiving SDR transactions. Revises Chapter 17.

J. ADC 1262 dated January 22, 2017. Allows storage sites to utilize various physical counts and formal inventories to satisfy the location survey requirement in combination with targeted complete annual location surveys. The change will also add the flexibility to apply resources to target critical inventories while maintaining a high inventory accuracy rate. Revises Chapter 6.
K. ADC 1267 dated June 4, 2018. Revised procedures to authorize the use of DLMS 830D Demand Data Exchange (DDE) as the primary exchange method for reporting GDP between DoD Components. Authorizes DoD Components to use Legacy Document Identifier Code (DIC) CDD as an alternative until they can fully implement use of the DLMS 830D. Also revises DLMS 830D DDE projected supply plan procedures, authorizes submission of 60 month plan periods using a 0 (zero) for those months with no plan data, and allows two (2) decimal positions in all quantity fields to include zeros at the end. Revises Chapter 2 and Appendix 7. Adds new AP 7.33. Revises DLMS IC 830D.

L. ADC 1268 dated December 14, 2017. Updates WebSDR processing of contract information on SDRs to improve data retrieval from EDA. Provides capability to query by base contract number and provides visibility of the base contract number in SDR management reports. Clarification and expanded edits applicable to the contract number will support contractor performance evaluation. Also provides guidance and updates DLMS Implementation Conventions (ICs) to create PMRs, Receipts, and SDRs associated with commercial returns shipped on a contract number with a secondary document number. Revises Chapter 17. Revises DLMS ICs, 527D, 527R, 842A/R, and 842A/W.

M. ADC 1273 dated April 23, 2018. Updates DLA Distribution and Component procedures to authorize use of the SDR process to request a receipt reversal in response to a receipt and associated SDR submitted to the wrong owner. This process only applies to SDRs identifying that no matching prepositioned materiel receipt (PMR) was available for the shipment and, as a result, the receiving activity inadvertently receipted the materiel to the wrong owner account in the DLA Distribution Standard System (DSS). The SDR reply will provide an audit trail to resolve the discrepant receipt using receipt reversal and reprocessing of the receipt and SDR to the correct owner under DLMS/MILSTRAP and SDR procedures. Revises Chapters 13, 17, and Appendices 7.28 and 7.32. Revises DLMS IC 527R.

O. ADC 1279 dated April 4, 2018. Establishes procedures for the DLA Distribution Standard System (DSS) to provide supply status transactions (DLMS 870S/legacy MILSTRIP Document Identifier Code (DIC) AE8 when Material Processing Centers (MPCs) transship materiel to other MPCs. Revises Chapter 5. Revises DLMS IC 870S.

P. ADC 1281 dated July 12, 2018. Administratively aligns DLM 4000.25, Volume 2, Chapter 10, Materiel Receipt Acknowledgement with its companion chapter in DLM 4000.25-2, MILSTRAP, Chapter 6, Materiel Receipt Acknowledgement. Marks MILSTRAP MRA Chapter 6 and associated appendices as “Reserved” with pointer to DLM 4000.25, DLMS Manual. There are no changes to the MRA procedures. Revises Chapter 10. Revises DLMS IC 527R.

with the corresponding DLMS Supply transactions supported by DLM 4000.25, DLMS Volume 2. Change 1 in a series of 2. Revises Chapter 2.

R. ADC 1290 dated April 23, 2018. Allows shippers to include the full exception address in the DLMS 945A Materiel Release Confirmation. Requires Air Force Contractor Inventory Control Points to provide the full exception address to the Air Force Accountable Property System of Record. Revises Chapter 4. Revises DLMS IC 945A.

S. ADC 1305 dated April 4, 2018. Updates the title of DLM 4000.25 Volume 2, Chapter 12 and replaces the term “advance receipt information” (ARI) with the more common term “pre-positioned materiel receipt” (PMR). This is a global change in the chapter and global change throughout the DLM 4000.25 Manuals to update any remaining occurrences of ARI to PMR. Revises, Chapter 12 and the Table of Contents.

T. ADC 1306 dated June 6, 2018. Authorizes DLA to send shipment information to FEMA using the Defense Transportation Electronic Business (DTEB) 856F Advance Ship Notice (ASN). This transaction will allow FEMA to quickly process inbound shipments from DLA at its forward-staging sites during disaster relief operations. Revises DLMS ICs to include data FEMA needs in the 856F. No changes to the DLM 4000.25 manuals. Revises DLMS ICs 511R, 511M, 869F and 940R.

U. ADC 1307 dated June 28, 2018. Adds the identifiers to the DLMS 511R, DLMS 511M, DLMS 869F, and DLMS 940R ICs: GTIN-13 (formerly EAN-13); GTIN-14 (formerly UCC-14); GTIN-12 (formerly UCC-12) to provide required data to populate the DTEB 856F Shipment transaction for NEXCOM. No changes to the DLM 4000.25 manuals. Revises the DLMS 511R, DLMS 511M, DLMS 869F, and DLMS 940R.

V. ADC 1310 dated July 9, 2018. Replaces ADC 282A in its entirety, with the exception of the removal of the restriction to suppress outbound replies to the submitter originally documented in ADC 282A for Consolidation and Containerization Points (CCP)-Originated SDRs including Noncompliant WPM discrepancies in DLM 4000.25 Volume 2 Chapter 17. All other changes approved in ADC 282A remain unchanged. Revises Chapter 17. Revises DLMS ICs 842A/W and 842A/R.

W. ADC 1319 dated July 11, 2018. Aligns DLM 4000.25-2, MILSTRAP, with the companion procedures in DLM 4000.25 to support the ongoing effort to cancel the DLM 4000.25-2 MILSTRAP manual. Documents administrative changes that are necessary for this effort. The change does not modify or alter the underlying procedures identified in MILSTRAP Chapters. Revises DLMS Volume 2 comparable chapters. Revises Chapter 2, Chapter 3, Chapter 6, Chapter 7, Chapter 9, Chapter 12, Chapter 13, Chapter 14, and Chapter 22.

IV. This change is incorporated into the on-line DLM 4000.25 series of manuals and the PDF files containing the entire set of change files on the publications page of the Defense Logistics Managements Standards Website: [www.dla.mil/does/dlms-pubs](http://www.dla.mil/does/dlms-pubs)

[Signature]

Jan Mulligan  
Performing the Duties of  
Deputy Assistant Secretary of Defense  
for Logistics
I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 13, 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 10 include the following: Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per the current style guide for DoD issuances. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”. In addition, minor typographical and similar editing errors in previous versions, including changes previously approved in ADCs 328 and ADC 1260 that had been inadvertently omitted, and an administrative update related to the Withdrawal of ADC 33 have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Enterprise Business Standards Office memorandum:

A. ADC 1151 dated September 14, 2017. Removes references to specific record retention periods for documents/transactions, and advises the Components to retain data created as a result of DLMS business processes in accordance with the DODI 5015.02, DOD Records Management Program. Revises Chapter 2, Chapter 4, Chapter 5, Chapter 13, Chapter 16, Chapter 17, and Chapter 19.

B. ADC 1175 dated July 24, 2017. Clarifies guidance for the turn-in of partial/incomplete weapons by the weapon NSN to DLA Disposition Services for reutilization or demilitarization. Stipulates the need for a missing parts list or equivalent missing parts certification to accompany the turn-in of the serialized receiver with missing or removed parts. The turn-in activity must provide a missing parts list or annotate equivalent certification on the Issue Release/Receipt Document (IRRD) (DD Form 1348-1A, or DD Form 1348-2), Defense Turn-in Document (DTID), or an attached continuation page. Revises Chapter 17, Chapter 16, Chapter 18, and Appendix 7.28.

C. ADC 1198 dated October 6, 2016. One of a series of DLMS changes to define procedures and establish a coordinated implementation to exchange serial number and unique item identifier (UII), when available, to support Financial Improvement and Audit Readiness
(FIAR) compliance and accountability over service owned capital equipment stored at DLA. The change is based upon the capital equipment candidate requirements in the DoD Integrated Requirements Set (IRS) for Item Unique Identification (IUID) in Supply Business Processes. Revises Chapter 4, Chapter 5, Chapter 6, Chapter 7, Chapter 11, Chapter 13, Chapter 14, and Chapter 17. Revises DLMS ICs 527R, 842A/W, 842S/Q, 846R, 856R, 856S, 867I, 945A, and 947I.

D. ADC 1198A dated September 6, 2017. Addresses several issues identified by DLA Distribution during implementation planning for ADC 1198 relating to the serial number and UII, which require updates to the ADC 1198 DLMS procedures for capital equipment candidates. The areas addressed are: 1) No serial number during receipt, 2) Missing Serial Number for an Item in Stock, 3) Reintroduction of IUID Items into the DOD Supply Chain, 4) DLA 867I Issue Transaction with Serial Number/UII, 5) Clarification of Complete Inventory Requirement, and 6) Serial Number/UII Mismatch Dual Inventory Adjustment Functionality. Revises Chapter 6, Chapter 13, Chapter 14, Chapter 17, and Chapter 21. Revises Appendix 7.28 and Appendix 7.29.

E. ADC 1217 dated September 27, 2017. Establishes new procedures for directing disposition instructions to storage activities subsequent to storage activity reply and closure of the SDR within the storage activity SDR system. The new procedures will cause the source of supply response to trigger reopening of the SDR in the storage activity system so that the source of supply can communicate disposition instructions to the storage activity systemically, thus providing an audit history for the resulting action. Revises Chapter 17 and Appendix 7.28.

G. ADC 1256 dated September 7, 2017. Requires all Service maintenance activities/repair agents under an inter-Service agreement, including Depot Maintenance Inter-Service Support Agreements, to use MILSTRIP Materiel Returns Program automatic return notification procedures when returning a reparable item carcass in Supply Condition Code F (Unserviceable (Reparable)) to the owner/principal. The owner/principal and maintenance activity/repair agent must be able to use this process even when that Service does not have a Nonconsumable Item Material Support Code 5 Secondary Inventory Control Activity relationship with the owner/principal. Project Code 3HX (rather than existing Project Code 3AD) will apply when the owner/principal must provide credit to the returning maintenance activity for the automatic return of reparable component carcasses removed and replaced during maintenance. Revises Chapter 11.

H. ADC 1269, dated October 4, 2017. Revises procedures to clarify and document the KCC inspection process at DLA Distribution Centers. Clarifies Kind, Count, and Condition (KCC) of the bare item part number verification process for new procurement receipts in line with DLAI 4145.4 as conducted at DLA Distribution Centers. DLA Distribution Centers will conduct the part number verification for non-critical new procurement items by verifying the part number/NSN in the contract to the Military Standard...
(MIL-STD) 129 label. DLA Distribution Centers will perform all other aspects of the KCC process. Critical items and non-procurement items will be subject to part number verification to bare item markings. Administrative update to Chapter 13 to replace the term advance receipt information (ARI) with the more common term pre-positioned materiel receipt (PMR) used in the MILSTRAP Manual. Revises Chapter 13 and Chapter 17.

III. The list below identifies the chapters, appendices or other files from the manual that are added or replaced by this change:

IV. This change is incorporated into the on-line DLM 4000.25 series of manuals and the PDF files containing the entire set of change files on the publications page of the Defense Logistics Managements Standards Website: [www.dla.mil/does/dlms-pubs](http://www.dla.mil/does/dlms-pubs)

[Signature]

Jan Mulligan
Performing the Duties of
Deputy Assistant Secretary of Defense
for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 9 include the following: "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards" to reflect the most recent name change for the DLMS Program Office. Abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Occurrences of “shall” are changed to “will” per the current style guide for DoD issuances. “Defense Logistics Management System” is updated to “Defense Logistics Management Standards”. “DoDM 4140.1-R” is updated to “DoDM 4140.01”. References to “(DLA) Transaction Services” are changed to “Defense Automatic Addressing System (DAAS)” and “DLA Logistics Information Services” to “Logistics Information Services”; and minor typographical and similar editing errors in previous versions, including changes previously approved in ADC 229, ADC 1123 that had been inadvertently omitted, have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1161A dated February 23, 2017. Replaces ADC 1161 in its entirety and removes an incorrect business rule in position 10 of the PIID, updates the list of references to reflect approved (rather than draft) documents, and updates the implementation date to no later than March 31, 2017. There are no additional changes to the procedures or DLMS transactions identified in ADC 1161, which updated DLMS procedures to accommodate the PIID numbering system. This is a mandated change required by recent changes to the FAR and DFARs and all Components must comply with the PIID numbering requirements of DFARS subpart 204.16 for all new solicitations, contracts, delivery calls/orders, and agreements issued, and any amendments and modifications to those new actions. Additionally, this change provides guidance for legacy procurement instrument identification number (PIIN)/legacy call/order number during the initial transition. Revises Chapter 4, Chapter 17, Chapter 20, Chapter 21, and Chapter 26. Revises the DLMS Data Dictionary.

B. ADC 1174 dated January 11, 2017. Identifies multiple updates to DLMS SDR processing and procedures. These changes improve existing processing, and improve the
visibility and accuracy of SDRs. Selected changes with minimal impact are already implemented and are identified to document the procedures within a DLMS change and provide wider visibility. Revises Chapter 17, and Appendix 7.28. Revises DLMS ICs 842A/W and 842A/R.

C. ADC 1176 dated March 29, 2017. Revises and clarifies procedures to support requisitioning under a Depot Maintenance Inter-Service Agreement (DMISA) or comparable agreement. Updates DAAS to pass (rather than route) all requisitions containing Project Codes 3AB and 3BB to the activity identified by the RIC-To. Revises MILSTRIP procedures to provide guidance specific to using these three project codes inclusive of the intended recipient or requisitions of parts needed to complete a maintenance action. Revises MILSTRIP requisition data content rules to allow use of the supply condition code by the repair agent when requisitioning for induction to maintenance. Revises Chapter 2, Chapter 4, and Chapter 23. Revises DLMS ICs 832N, 511R, 511M, and 869F.

D. ADC 1179 dated April 16, 2017. Revises receipt and disposal procedures to authorize automatic disposal at DLA Distribution Centers during receipt of returned materiel previously managed under now obsolete DLA RIC (S9_). Revises Chapter 13, Chapter 17, and Appendix AP7.28.

E. ADC 1181A dated February 14, 2017. Requires all DoD Components to assign a cause code identifying contractor/vendor noncompliance (when applicable as the reason for the discrepancy) on the final SDR reply by the item manager (action activity). The cause code will trigger transmission of SDR data from WebSDR via a new interface for use in evaluating vendors’ performance in PPIRS-SR. WebSDR will determine if the SDR record removed, updated, or added the contractor noncompliance Cause Codes CN, CS, or CP and will send the updated record to PPIRS-SR. Revises Chapter 17, Appendix 7.28, and adds Appendix 8.56.

F. ADC 1203 dated January 30, 2017. Documents procedures for processing DLMS SDRs submitted for reimbursement of repackaging costs. These procedures are primarily applicable to (a) FMS shipments frustrated at the freight forwarder facility due to packaging and documentation discrepancies and (b) retail/tactical activity discrepant receipts where repackaging is required prior to storage or distribution. Revises Chapter 17, and Appendix 7.28, Revises DLMS ICs 842A/W and 842A/R.

G. ADC 1205 dated August 26, 2016. Revises the Physical Inventory Control procedures for single item-inventory record data sharing to support the DODM 4140.01 change requiring that inventory control points and storage activities “collaborate and ensure that the inventory data in their respective systems is the same, thus becoming, in effect, a single item inventory record.” Revises Chapter 6.

H. ADC 1214, dated May 30, 2017. Establishes the DLMS 824W DTID and HWPS Validation transaction, which will replace the GenComm Standard Version 5.0 Log File that the DLA Distribution Standard System (DSS) sends back to the hazardous waste generator. The DLMS 824W will identify the waste profile sheet (WPS) and DTID numbers
that processed along with the reject advice code for data content that is rejected. Revises Chapter 16. Establishes new DLMS IC 824W.

I. ADC 1216 dated February 6, 2017. Revises the instructions for retaining accountable documentation under the physical inventory control procedures to clarify that the existing responsibilities apply to both the materiel owners and storage activities, as applicable. Provides clarification regarding retention of research documentation applicable to accounting error inventory adjustments associated with the location reconciliation process. Revises Chapter 6, Physical Inventory Control.

J. ADC 1222 dated September 28, 2016. Revises the current procedures under inventory prioritization to remove the requirement for the CFO Annual Statistical Sample Inventory Plan to be posted on the Joint Physical Inventory Working Group webpage. Updates procedures under inventory prioritization, to document that DLA distributes the DoD CFO Annual Statistical Sample Inventory Plan once a year to each applicable centralized Service point of contact. Documents DLA’s responsibility to distribute the DoD CFO Annual Statistical Sample Inventory Plan results to all Services. Revises Chapter 6.

K. ADC 1224 dated March 1, 2017. Revises multiple DLMS transactions that impact the Air Force owned inventory in possession of the CICP to clarify identification of the CICP as the custodial activity for GFP accountability reporting and the Air Force program manager as the owner of the property. Enhances the visibility of GFP through logistics transactions to maintain required accountability. Revises DLMS ICs 527R, 846P, 846R, 867I, 945A, and 947I.

L. ADC 1225 dated March 7, 2017. Adds a data element for the MAC to the DLMS 527R Receipt, and authorizes the DLMS enhancement for Acceptance Date and LAC for use with the Air Force Accountable Property System of Record. Provides revisions needed to clarify that the Air Force CICP sends the receipt transactions to the Air Force program manager for GFP accountability. Revises DLMS IC 527R.

M. ADC 1227 dated June 2, 2017. Updates the DLMS 832N Catalog Data Support transaction to include a new information exchange requirement along with the supporting data elements. Revises Chapter 23. Revises DLMS IC 832N.

O. ADC 1232 dated June 5, 2017. Revises DLMS 846D Logistics Reassignment Transfer and Decapitalization and DLMS 846S Logistics Reassignment Storage Information transactions to allow the Air Force Contractor Inventory Control Points (CICP) to send an image transaction to the Air Force APSR, identify the CICP, identify the authorizing procurement instrument identifier (PIID), and authorize use of the transaction set preparation date and time. Revises DLMS ICs 846D and 846S.
P. ADC 1234 dated March 1, 2017. Updates the DLMS 832N Catalog Data Support transaction to support DLA Disposition Services Scrap and Salvage Recycling contracts, which will replace the existing Scrap Venture contract; it adds the disposition sub-category code, and the contract start, effective, expiration, and extension dates to the existing data elements in the DLMS 832N. Establishes a new Disposition Sub-Category Code SR - Scrap and Salvage Recycling that will be used in the DLMS 832N and DLMS 511R Requisition transactions. Revises Chapter 16. Revises DLMS ICs 511R, 832N, and 846C.

Q. ADC 1238 dated March 1, 2017. Updates the DLMS 527R Materiel Receipt Acknowledgement (MRA) and Disposition Services Turn-in Receipt Acknowledgement (TRA) to allow Air Force CICPs to transmit images of MRA and TRA transactions to update intransit balances on the Air Force APSR (Defense Property Accountability System (DPAS)). Revises DLMS IC 527R.

S. ADC 1254 dated March 22, 2107. This administrative change modifies DLMS XML schema files that use X12 Data Element (DE) 355, Unit or Basis for Measurement Code. The inclusion of unit of measure (UoM) code values under Data Element 355 will be turned off in all applicable XML schema files. This change lifts the UoM code restrictions in XML schemas that currently have this restriction in place. Revises the DLMS ICs 511M, 511R, 527D, 536L, 650A, 832N, 841W, 842C/R, 842P, 842S/Q, 846C, 846F, 846I, 846P, 846S, 856N, and 945A (4010 & 4030).

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by *bold, italicized* print. Exceptions are when an entire chapter or appendix is replaced, a new one added, or an administrative update is made. Administrative updates in Change 8 include the following: "DLA Logistics Management Standards” is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMS office, abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses, occurrences of “shall” are changed to “will” per the current style guide for DoD issuances, “Defense Logistics Management System” is updated to “Defense Logistics Management Standards”, “DoDM 4140.1-R” is updated to “DoDM 4140.01”, in accordance with General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”, page number formats in the “front matter” (Table of Contents, Process Change History page, etc.) of the volume have been revised, and minor typographical and similar editing errors in previous versions have been corrected.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 222 dated January 9, 2007. Modifies and adds Disposition/Status Codes available for use in SDR replies. Assignment of these codes within SDR transactions must be recognized by automated SDR applications. Revises Chapter 17, and Appendix 7.28.

B. ADC 1114 dated April 28, 2016. Allows an automated follow-up for delinquent materiel receipt acknowledgment (MRA) transactions at a number of days beyond shipment more aligned with the time definite delivery (TDD) standards set forth in the DoDM 4140.01, Volume 8, DoDI 4160.61, and the DoD Time Standards for Order Process and Delivery. Provides for MRA submission timeframes associated to TDD. Modifies the timeframe to send an MRA Reply to Follow-Up transaction and modifies the timeframe for submission of MRA after receipt of materiel to align with DoDM 4140.01 timeframe for receiving activities to process receipts after materiel delivery. Adds new Discrepancy Indicator Code H (Materiel Still in Transit). Revises Chapter 10, and Appendix 12.

D. ADC 1160 dated January 19, 2016. Clarifies procedures to prepare SDR replies when used to request/report a financial adjustment for a validated discrepancy; updates available SDR reply codes; updates DLMS guidance for use of the issue reversal transaction and establishes a requirement to include an issue reversal reason code for all Components as a DLMS enhancement; expands the scope of available codes beyond those currently used; clarifies requirement for generation of the prepositioned materiel receipt (PMR) for directed discrepant materiel returns and tracking for the return shipment; updates Military Standard Billing System (MILSBILLS) procedures to formally document the option to provide credit to the billed activity for discrepant shipments prior to storage activity receipt of the returned discrepant materiel. Revises Chapter 14; Chapter 17, Appendix 7.28; Adds new Appendix 7.32; Revises DLMS IC 867I.

F. ADC 1169 dated April 25, 2016. Approves denial scenarios when a materiel release order or disposal release order identifying a Product Quality Deficiency Report (PADR) exhibit cannot be shipped by the DLA Distribution Center because the specified exhibit(s) cannot be located and expands the definition of Management Code Q to explain why the denial occurred. Revises Chapter 4 and Chapter 16.

G. ADC 1185 dated May 3, 2016. Revises the DLMS IC 527R to enable transactions originating from Air Force ILS-S to convey the Ship-From DoDAAC for use in Air Force retail receipts of shipments from Air Force retail activities.

H. ADC 1202 dated July 12, 2016. Establishes a requirement for the Defense Logistics Agency (DLA) Distribution Standard System (DSS) to capture certificate of
conformance (CoC) and alternate release procedures (ARP) indicators when present in the DLMS 856 Advance Shipment Notice (ASN) provided via Invoicing, Receipt, Acceptance, and Property Transfer (iRAPT), formerly Wide Area Work Flow (WAWF), interface. DSS will recognize inclusion of the ARP or CoC indicator in the DLMS 856 ASN and store the ARP and CoC indicators for use upon receipt of the shipment matching on procurement instrument identifier (PIID)/contract number and contract line item number. Additionally, a new edit in DSS is established to prevent creation of a Supply Deficiency Report (SDR) with Discrepancy Code D4 when ARP or CoC indicators are present. Revises Chapter 17. Revises DLMS IC 856, Advanced Shipment Notice.

I. ADC 1206, dated July 27, 2016. Establishes the requirement for transportation account code (TAC) validation prior to shipment of cargo by transportation as part of the retail supply and transportation interchange procedures prescribed in DLM 4000.25, Volume 3, Chapter 2. Revises Appendix 7.17. Revises the DLMS 940R IC.

J. ADC 1207 dated August 5, 2016. Establishes a new shipment hold code to flag materiel frozen by the DLA Disposition Services Field Office for redistribution to another field office. This information will be conveyed in the DLMS 945A Materiel Release Confirmation (MRC) and sent to DLA Disposition Services. Deletes the unused Disposal Consolidation Number data element and its associated business processes. Revises the procedures for relocation of materiel between DLA Disposition Services Field Offices to use the DLMS 945A MRC rather than the DLMS 867I Issue transaction. Revises Chapter 14, 16; and Appendix 7.17. Revises DLMS ICs 867I, 945A (versions 4010 and 4030), and 511R.

K. ADC 1221 dated July 29, 2016. Establishes a requirement for DLA Distribution Centers to send a supply discrepancy report (SDR) to the owner/manager when the distribution center processes a receipt without a PMR, for materiel owned by that organization and applicable to all types of procurement and non-procurement source receipts. DoD WebSDR will prepare and disseminate a monthly report delineating SDRs prepared by DLA Distribution Centers indicating lack of a PMR. Revises Chapters 12, 13, and 17.

L. ADC 1233 dated August 5, 2016. Revises the page numbering of the “front matter” (Foreword, Process Change History, Table of Contents, Acronyms and Abbreviations, Definitions and Terms, References) in the DLM 4000.25 series of manuals to prepend an alphabetic indicator to the page numbers in each section of the front matter. Each page number will begin with an abbreviation of that section's name. Revises the front matter of the manual.

DEFENSE LOGISTICS MANAGEMENT STANDARDS
VOLUME 2, SUPPLY STANDARDS AND PROCEDURES
CHANGE 7

I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 7 also includes administrative updates: In all updated documents "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMSO office and abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Change 7 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances, updating “Defense Logistics Management System” to “Defense Logistics Management Standards”, and updating “DoDM 4140.1-R” to “DoDM 4140.01”.

In accordance with DLA General Order No. 07-15 (09/14/2015), references to “DLA Transaction Services” are changed to “Transaction Services” and “DLA Logistics Information Services” to “Logistics Information Services”.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1025D dated October 22, 2015. Administrative Update of the United States Navy Reserve DOD Activity Address Codes for the Logistics Metrics Analysis Reporting System (LMARS). Identifies a methodology for identifying Department of Defense Activity Address Codes (DoDAACs) for U.S. Navy Reserve units for inclusion in appropriate LMARS Reserve reports.

B. ADC 1043E dated October 5, 2015. Extends Defense Automatic Addressing System (DAAS) edits for invalid or missing fund codes to include transactions with Signal Codes A, B, J, and K and one scenario pertaining to Signal Codes C and L that had previously been omitted. Revises DLMS Chapters 4, 8, 11, 16, 17, and Appendix 7.28.
C. ADC 1045 dated November 18, 2015. Expands the DLMS user community for these transactions beyond DLA supply chains and DLA Distribution Centers. Clarifies procedures associated with stock screening and SQCR, including future inclusion of item unique identification (IUID) in the SQCR; updates data elements; incorporates identification of a receipt restriction requirement; and adopts several administrative corrections to the DLMS transaction formats. Revises DLMS Chapter 21, Appendices 7.28 and 7.29. Revises DLMS Stock Screening Request transactions 842C/I and 842C/R and SQCR transactions 842S/Q and 842S/R.

D. ADC 1084 dated November 25, 2015. Allows credit to be issued for non-manager owned suspended stock stored at a DLA Distribution location when a stock screening request results in identification of non-compliant materiel. Leverages existing procedures for processing of the Stock Screening Request, Storage Quality Control Report (SQCR), SDR, and Materiel Release Order (MRO) to accomplish the necessary steps to recognize, suspend, provide notification of suspected non-conforming materiel, provide credit to the materiel owner if the materiel is determined to be non-compliant, and transfer ownership to the manager. Adds new SQCR specific action codes and disposition/reply codes to the Stock Readiness Relevant Data Elements list. Revises DLMS, Chapter 21, Appendices 7.7, 7.28, and 7.29. Revises DLMS SQCR ICs 842S/Q and 842S/R.

E. ADC 1123 dated December 2, 2015. Establishes a requirement for MCA validation for CFM regardless of the Component sponsoring the contractor. All MCA MILSTRIP procedures applicable to GFM will be extended to CFM. Transaction Services’ edits for pseudo MCA processing of DOD EMALL CFM requisitions paid via credit card will be eliminated upon Component implementation of MCA validation to mirror existing GFM procedures. Revises DLMS Chapter 26 and DLMS IC 517G.

F. ADC 1131 dated November 25, 2015. Establishes two new DLMS Implementation Conventions (IC) that provide the current functionality of the legacy flat file GenComm Standard Version 5.0 as documented in in the DLMS manual. The DLMS 841W HWPS will support the required HWPS functionality, to include the capability to transmit multiple profile sheets in one transaction. The DLMS 856WHM/HW Shipment Status will support the requirement to document the DTID information associated with an HM/HW disposal turn-in; its functionality is similar to the DLMS 856S Shipment Status/MILSTRIP Legacy Document Identifier Code AS3. Also documents several updates to the data content for the HWPS and the associated DTID data content. Revises DLMS, Chapters 16 and 17, Appendix 9, and establishes new Appendix 7.30 and DLMS ICs 841W and 856W.

G. ADC 1152 dated December 8, 2015. Revises DLMS Chapter 4 and Chapter 28. Revises the DLMS 940R to allow the suffix code to be populated for redistribution order transactions to support DLA’s IPV program. This revision is for restricted intra-DLA use.

H. ADC 1159 dated November 25, 2015. Assigns new Supply Condition Code (SCC) X, Suspended (Repair Decision Delayed) and establishes procedures for use. Assignment of SCC X under the business rules established is optional at the discretion of the materiel owner. Revises DLMS Chapter 6, Chapter 7, and Chapter 9.
I. ADC 1165 dated August 4, 2015. Modifies the Defense Automatic Addressing System (DAAS) routing of the DLMS 856S, Version 4030, Shipment Status Transaction, to send images to Transaction Services GEX for translation and systemic creation of the WAWF iRAPT 856 GFP Property System Notification (PSN) Property Transfer Document (PTD) (856 GFP PSN (PTD)) transaction. Also modifies the DAAS routing of the DLMS 527R Receipt with related GFP contract number, without restriction to Document Identifier Code (DIC) D4M, to send images to GEX for translation and transmission to iRAPT. Updates the GFP Module of the WAWF IUID Registry based on the PTD transaction and the data is captured for use in the WAWF Management Reporting System (MRS) reporting database. No change to DLM manuals or DLMS Implementation Conventions.

J. ADC 1172 dated July 31, 2015. Identifies several mapping product unique data elements for the DLMS 527D Due-In and Prepositioned Materiel Receipt (PMR) transactions. Mapping Enterprise Business System (MEBS) sends the PMR to Distribution Standard System (DSS). These data elements are: Mapping Product Type, Cycle Frequency for Flight Information Program (FLIP) products, Mapping Product Procurement Type, Total Automatic Initial Distribution (AID) Quantity, and AID Required Indicator. Updates DLMS Table of Contents (TOC) and Appendix 7; adds new Appendix 7.31. Revises DLMS 527D IC.

K. ADC 1173 dated October 14, 2015. Serves as documentation of the revised flow for transactions associated with Navy publications (Cognizance Code (COG) 6I) from NATEC to SCES for the Navy Increment 1 target state. NATEC desires to send requisitions and supply status transactions through Transaction Services to the SCES. The NATEC information exchanges flow only one way and are initiated by FMS logistics element managers (LEM) using the FMS Module of the Technical Manual Application System (TMAPS) on the NATEC Website. No change to manuals or DLMS Implementation Conventions.

L. ADC 1177 dated December 8, 2015. Documents the interim state routing solution that has been developed and tested by the Defense Security Assistance Development Center (DSADC) for the SCES Program, working in cooperation with Naval Supply Systems Command, Weapon System Support (NAVSUP WSS), DLMSO, and Transaction Services. SCES interim state is the period between the Limited Deployment Decision (LDD) and Full Deployment Decision (FDD). Revises DLMS Chapter 25.

M. ADC 1182 dated November 25, 2015. Increases the existing MILSTRAP/DLMS receipt processing performance standards, for receipting and storing materiel after materiel is turned over by the carrier, from 7 to 10 days on redistribution order (RDO) receipts. The timeframe for posting materiel receipt to the accountable and the owner record remains unchanged (i.e., no later than 5 business days from date materiel is received). Revises DLMS Chapter 13.

N. ADC 1183 dated October 28, 2015. Implements two changes:
   (1) Adds the Final Shipment Indicator in Ship Notice/Manifest Report (Federal IC 856, 4010 Version). Also affects extracts carrying this field, such as Advance Shipment Notice (DLMS 856, Version 4010).
(2) Adds the Final Invoice Indicator in Shipment and Billing Notice (Federal IC 857, Version 4010). Also revises the Federal Notes in 2/N901/110 for, Code SI, Shipper's Identifying Number for Shipment (SID), to indicate that the shipment is not final, and Code FS, Final Sequence Number, to include new business rules for final shipment. Revises Federal ICs 856 and 857; revises DLMS IC 856 (ASN).

O. ADC 1184 dated December 8, 2015. Removes the Internal Order Number (ION) data field in DLMS requisitioning transactions used by DOD EMALL to provide the Modular Ordering Management System (MOMS) supplier order number (DLMS 511R Requisition and 511M Modification). This information will no longer be needed upon transition to FEDMALL. Revises DLMS 511R, 511M, and 869F.

DEFENSE LOGISTICS MANAGEMENT STANDARDS
VOLUME 2, SUPPLY STANDARDS AND PROCEDURES
CHANGE 6

I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by *bold, italicized* print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 6 also includes administrative updates: In all updated documents "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMSO office and abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Change 6 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards”.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

B. ADC 1066A dated June 30, 2014. Updated DOD WebSDR processing to enable source of supply (SoS) systems to properly process transactions used for SoS notification of relevant SDR information. Revises Chapter 17.

C. ADC 1085 dated April 22, 2015. Revises procedures for end of day processing to clarify programmed research of imbalances using transaction history data and authorizes up to seven work days to complete programmatic research portion of the end of day reconciliation process. This change does not affect the transactional flow or data elements required to complete end of day processing. It restates procedures to include: closing balance comparisons at end of day; and, for imbalances, the programmatic research elements
to be considered to include in-float, suspended, and duplicate transactions prior to adjusting the total item property record (TIPR). Revises Chapter 6.

D. ADC 1099 dated June 15, 2015. Realigned and revalidates the Installation Closure Procedures in this manual and DLM 4000.25-1 (MILSTRIP). This is one of a series of DLMS changes to update DLM 4000.25, Volume 2 requisitioning and issue procedures to align with the companion procedures in DLM 4000.25-1. Once all the DLM 4000.25-1 chapters are fully aligned into DLMS Volume 2, then DLM 4000.25-1 will be cancelled. Chapter 15 outlines DLMS enhanced procedures for Installation Closure using DLMS formats (X12 Electronic Data Interchange (EDI) and eXtensible Markup Language (XML)). Revises Chapter 15.

E. ADC 1102A dated April 13, 2015. Amends procedures established under ADC 1102 for unauthorized/discrepant Air Force returns to DLA Distribution Centers. Establishes specific guidance to report DLA Distribution Center receipts and SDRs for unauthorized/unexpected consumable item returns to the returning Service (rather than the item manager) using a pre-designated routing identifier code (RIC) when the returning Service is an Air Force activity. Revises Chapter 13 and Chapter 17.

F. ADC 1118 dated February 5, 2015. Establishes the initial baseline requirements for a new web-based project code management system (PCMS) to be hosted at DLA Transaction Services and updates project code management procedures. Adds new Appendices AP6.40, AP6.41 and revises Appendix AP7.13.

G. ADC 1124 dated April 7, 2015. Revises time standards for receipt processing to support DODM 4140.01, Volume 5 policy that states receiving activities will “record receipts no later than 5 business days from date materiel received”. This change also clarifies the requirement to make associated assets visible from the point of inspection and acceptance within 24 hours. Revises Chapters 13, 16 and 20.

I. ADC 1127 dated October 20, 2015. Provides enhanced SDR guidance for Foreign Military Sales, SDR time standards for controlled inventory items, SDR Forwarding after Logistics Reassignment, Packaging SDRs, and administrative updates. Revises Chapter 17 and Appendix 7.28. Revises DLMS 842A/R and 842A/W.

J. ADC 1128 dated April 23, 2015. Updates the DLMS 527D Prepositioned Materiel Receipt (PMR) and 527R Receipt and Associated procedures to support Marine Corps base realignment and closure storage and distribution interface to communicate enhanced DLMS data between the Marine Corps Maintenance Centers (MCMC) and DLA at the Distribution Centers operating under the Distribution Standard System (DSS). Revises DLMS 527D and 527R.
K. ADC 1132 dated June 15, 2015. Implements a fully systemic solution for processing mass and universal cancellations and the associated DLMS enhancements. This change also establishes a new Chapter 27 in DLM 4000.25, Volume 2 that consolidates procedures, both DLMS enhanced and legacy, associated with mass and universal cancellation procedures into one location. This change administratively aligns the new Volume 2, Chapter 27 with its companion chapter in DLM 4000.25-1, and MILSTRIP Chapter 8. Adds new Chapter 27, revises Chapter 4 and updates Appendices 7.1 and 8.19. Revises DLMS 856S, 869C, 940R.

L. ADC 1138 dated April 15, 2015. Revises the DLMS 830D Demand Data Exchange (DDE) projected supply plan to provide a date representing the start date of forecast bucket that incorporates the use of the actual forecast date, aligned to the forecast quantity for that date, in the DDE Projected Supply Plan (DLMS 830D) transaction. Revises DLMS 830D.

M. ADC 1149 dated July 6, 2015. Requires that Service ammunition systems include ownership code in DLMS 947I Inventory Adjustment for dual supply condition code change transactions (legacy DAC functionality). Revises the DLMS 947I dual inventory adjustments for clarity on use of ownership, purpose and supply condition codes with dual inventory adjustments. Revises DLMS 947I.

N. ADC 1150 dated November 18, 2014. Modifies the mapping of the DLMS 940R Materiel Release Order/Disposal Release Order Exception Data to allow 12 iterations of the NTE segment for pick/pack data in support of Army Logistics Modernization Program (LMP) and DLA Distribution Standard System (DSS) processing. No change to manuals or DLMS Implementation Conventions.

O. ADC 1153 dated April 16, 2015. Includes four supply discrepancy report enhancements to improve visibility of discrepancies involving hazardous materiel shipments and clarifies guidance for the selection of the appropriate SDR action code by transshipper. Revises Chapter 17 and Appendix 7.28. Revises DLMS 842A/W, and 842A/R.

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

Ms. Dee Reardon  
Deputy Assistant Secretary of Defense for Supply Integration
I. This change to DLM 4000.25, Defense Logistics Management Standards, Volume 2, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by *bold, italicized* print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 5 also includes administrative updates: In all updated documents "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMSO office and abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. Change 5 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances and updating “Defense Logistics Management System” to “Defense Logistics Management Standards.” Subsequent to ADC 1135’s updates, “Regional Hazardous Inventory Control System” was updated to “Hazardous Material Management System.”

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

A. ADC 1007C dated July 31, 2014. Documented new and revised codes for use in processing Product Quality Deficiency Reports (PQDR) and updated the DLMS IC 842P as approved for implementation. Adds Appendix 7.27. Revises DLMS IC 842P.

B. ADC 1009A dated August 6, 2014. Established revised procedures for formatting the DLMS requisition transactions with impact to multiple functional processes. It also eliminated authorization for the DLA Transaction Services Defense Automatic Addressing System (DAAS) to block transmission of supply and shipment status in response to requisitions originated in DOD EMALL that use purchase card/credit card payment. Revises Chapters 4, 5, and 16. Revises DLMS ICs 511M, 511R, 856S, 869A, 869F, 870S, 940R, and 945A.

C. ADC 1022A dated September 2, 2014. Amended procedures as originally approved under ADC 1022. Revised MILSTRAP procedures to support DLA Distribution Center processing and automatic disposal of materiel categorized as Supply Condition Code (SCC) H, Unserviceable (Condemned), with specific exceptions identified including exclusion of materiel from an FMS customer or owned by the Air Force. Revises Chapter 13.
D. ADC 1032 dated January 31, 2013. Withdrew the change to allow the use of a numeric value in addition to existing alphabetic values identifying the Service and Agency as identified in the first position of the RIC. Withdrawn April 8, 2014. Revises Appendix 7.2.

F. ADC 1043B dated October 1, 2014. Amended ADC 1043 to revise the business rules within the DLMS and the Web Fund Code Application to allow the SLOA data element, Beginning Period of Availability Fiscal Year Date, to be used in DLMS transactions to represent Program Year when the Availability Type Code is X, which indicates No Year, non-expiring funds. Revises DLMS ICs 180M, 511M, 511R, 517M, 810L, 842A/W, 856S, 867I, 869F, and 940R.

G. ADC 1044A dated September 9, 2014. Supplements ADC 1044 and provides updates to published procedures. The purpose of this change is to clarify business rules associated with ADC 1044. Revises Chapter 17.

H. ADC 1070 dated September 12, 2014. Eliminated procedures for use of an Inventory Adjustment – Supply Condition Code Change (DLMS 947I/legacy DAC), as a mechanism to move assets into, or out of, maintenance. Revises Chapters 7, 13, and 14.

I. ADC 1071 dated March 26, 2014. Implemented inclusion of the IUID content in the Version 4030 DLMS 856R Shipment Status Materiel Returns when the National Stock Number (NSN) has a Federal Logistics Information System (FLIS) IUID Indicator Y (Yes). Revises Chapter 11 and DLMS IC 856R.

K. ADC 1086 dated June 18, 2014. Eliminated the MRA 04, Shipment Discrepancy Report by Depot; created a new MRA Report by Source of Supply to enable wholesale inventory control points (ICP) to report metrics on how well the Services acknowledge receipt of materiel the wholesale ICP shipped out of wholesale assets, for a given Component; and created a requisition data download file capability after accessing the MRA Report Detail page for all reports. Revises Chapter 10.

L. ADC 1087 dated June 12, 2012. Revised the Materiel Receipt Acknowledgement (MRA) Report selection criteria to exclude intra-Component shipments of wholesale assets when those assets are reported by a Materiel Receipt (aka Receipt)
transaction to the issuing wholesale Inventory Control Point (ICP), rather than by an MRA transaction. Revises Chapter 10.

M. ADC 1088 dated October 1, 2014. Updated the MRA Report selection criteria by MILSTRIP legacy document identifier code (DIC) (and corresponding DLMS transaction); and aligns the MRA exclusions identified in the DLM 4000.25-2, DLM 4000.25, and DLM 4000.25-4 Manuals. Revises Chapter 10.

P. ADC 1096 dated May 29, 2014. Requested the option for DLA Disposition Services sites to utilize the Commercial Venture (CV) Workload Location List (WLL) in lieu of an IRRD. Revises Chapter 16.

Q. ADC 1098 dated November 7, 2014. Updated the DD Form 1348-5, Notice of Availability; updated the DLMS 856N NOA and DLMS 870N NOA Reply to align with the hard copy data content of the DD Form 1348-5; established the foundation for a mechanized implementation for the NOA process to provide the International Logistics Control Office (ILCO) visibility; and updated procedures for ensuring timely replies to NOAs by actively engaging the ILCOs when there is no response to a follow-up NOA. Revises Chapter 25. Revises Appendices 6.4, 8.30, 8.31, and 8.32. Revises DLMS ICs 856N and 870N.

R. ADC 1102 dated June 5, 2014. Established specific guidance to report DLA Distribution Center receipts and SDRs for unauthorized consumable item returns to the returning Service using a pre-designated routing identifier code (RIC) (rather than the item manager); revised DOD WebSDR routing rules to require distribution of an information copy to the DLA Distribution Center when the shipment was directed by the Army and the materiel was shipped from the Distribution Center; and updated the SDR transaction format and discrepancy code list for clarification and as a corrective action for identified gaps in data transmission. Revises Chapters 13 and 17. Appendices 3 and 4 marked as reserved and moved to Appendices 7.28 and 6.39. Revises DLMS IC 842A/R.

S. ADC 1103 dated August 20, 2014. Modified the DLMS 824R to expand the scope to include rejection of logistics bills and make administrative adjustments to convert the supplement into an IC and to reflect current element use by DLA Transaction Services. Revises Chapter 1 and DLMS IC 824R.

T. ADC 1104 dated April 2, 2014. Revised the DLMS 943A Warehouse Service Advice transaction to add a warehouse storage location update function to be passed from the DLA Disposition Services Field Office to the DLA Disposition Services, and then from EBS to Reutilization Transfer Donation Web (RTD Web), and subsequent to a DTID re-warehousing action. Revises Chapter 16 and DLMS IC 943A.
U.  ADC 1105 dated April 17, 2014.  Revised DLMS IC 830D to clarify use of organization DOD activity address codes (DoDAAC), the FST segment forecast timing qualifiers, and the SDQ segment.  Revises Chapter 2 and DLMS IC 830D.

V.  ADC 1106 dated April 10, 2014.  Established a new DLA Disposition Services Term Sales code to be used by the DLA Disposition Services Field Office personnel to indicate specific item characteristics based on receipt examination and pre-established business rules.  Revises Chapter 16.  Revises DLMS ICs 940R and 527R.

W.  ADC 1109, dated March 26, 2014.  Revised the DLA Disposition Services Upgrade from Scrap process, and associated DLMS 527R, to recognize a local stock number (LSN) item in the DLMS 527R Receipt, with LIN01 Source of Materiel Received/Returned Code V, when upgrading items from a scrap LSN.  Revises Chapter 4, 5, and 16.  Revises DLMS ICs 511M, 511R, 856S, 869A, 869F, 870S, 940R, and 945A.

Y.  ADC 1111 dated August 27, 2014.  Revises the procedures for intransit control of materiel turned in to DLA Disposition Services and establishes use of DLMS 527R as a new Disposition Services Turn-In Receipt Acknowledgement transaction.  Revises Chapter 16 and DLMS IC 527R.

Z.  ADC 1115 dated April 4, 2014.  Adds Appendix 11 to identify the correlation of MILSTRAP legacy document identifier code (DIC) functionality to DLMS IC coding.  Adds Appendix 11.

AA.  ADC 1117 dated July 2, 2014.  Improved and refined the business rules associated with the type address codes (TAC) used in the DoDAAD and removes TAC 4.  Revises Chapter 4.

BB.  ADC 1135 dated November 19, 2014.  Updated the data mapping of the DLMS 832N Catalog Data Support for successful use by the Navy Fleet Readiness Center (FRC).  Revises Chapter 23 and DLMS IC 832N.

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.
DEFENSE LOGISTICS MANAGEMENT SYSTEM
VOLUME 2, SUPPLY STANDARDS AND PROCEDURES
CHANGE 4

I. This change to DLM 4000.25, Defense Logistics Management System, Volume 2, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 4 also includes administrative updates: In all updated documents "DLA Logistics Management Standards" is changed to "Defense Logistics Management Standards Office" to reflect the most recent name change for the DLMSO office and abbreviations such as etc., e.g., and i.e. are incorporated inside the parentheses. In accordance with new direction for issuances, “shall” has been replaced by “will”, “must”, or other appropriate words or phrases throughout the updated documents. Administrative updates are incorporated based on the Defense Security Cooperation Agency (DSCA) updates to the Security Assistance Management Manual (SAMM), now published in electronic (e-SAMM) format.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Change (ADC) published by Defense Logistics Management Standards Office memorandum:

C. ADC 1068 dated October 3, 2013. Modified the requirements for a DLMS transaction exchange for funds verification request/funds verification response prior to submission of internet “off-line” orders to the Source of Supply (SoS). Revises Appendix 7.16. Revises DLMS Implementation Conventions 511R, 511M,

F. ADC 1067, dated November 20, 2013. Update to DLMS/MILSTRIP Guidance for Status Dissemination Including Elimination of GSA Form 10050 (GSA Mailer) and Revised Media and Status Codes. This change eliminates the use of GSA Form 10050 (GSA Mailer) used to provide MILSTRIP status to civil agency customers with no alternative method of communication. Although originally a valuable tool, in current times, the use of the GSA Mailer has proved to be ineffective for providing customers with the status of their requisitions and will be replaced with a web portal for viewing status. Upon completion of enhancements to GSA Advantage!, customers will view status details via the GSA requisition status web portal. The web portal will obtain supply status using standard MILSTRIP transactions / routing. MILSTRIP/DLMS guidance for the media and status code is updated to support elimination of the GSA Mailer and to more fully document its use within the DLMS (rather than relying solely on legacy 80 record position formats). Revises Appendices 6 Forms / Message Formats Index and 7.4 Media and Status Codes. Deletes Appendix 6.7 GSA Form 10050 Supply / Shipment Status.

H. ADC 1097 dated December 20, 2013. Established a new chapter that consolidates procedures, both DLMS enhanced and legacy, associated with contractor access to government sources of supply into one location. Revises Chapter 4 and adds Chapter 26.

III. The list below identifies the chapters, appendices, or other files from the manual that are updated by this change:

Ms. Dee Reardon
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 2, December 19, 2013, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by **bold, italicized** print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 3 also includes administrative updates not marked by bold italics, to include changing “shall” to “will” per a style change for DoD issuances.

II. This change includes Approved Defense Logistics Management Standards (DLMS) Changes (ADC) published by DLA Logistics Management Standards Office memorandum:

   C. ADC 1007A dated February 27, 2013. Enhanced Pre-positioned Materiel Receipt (PMR) Data for Product Quality Deficiency Report (PQDR) Exhibit Tracking. Revises Chapter 12 and DLMS 527D.

   D. ADC 1007B dated July 18, 2013. Administrative Update to the DLMS 842P Product Quality Deficiency Report (PQDR) Data Exchange. This change documents administrative updates to the DLMS 842P PQDR Data Exchange as previously approved by ADC 1007. Revises DLMS 842P.

L. ADC 1050 dated March 18, 2013. New DOD EMALL DoDAAC and Supply Status Cancellation Codes for DOD EMALL Credit Card Billing. Revises Chapter 4 and Appendix 7.16 (linked file). Revises DLMS 511R, 511M, and 869F.

O. ADC 1059 dated March 12, 2013. Mandatory Use of Four-Character Packaging Discrepancy Codes on Supply Discrepancy Reports (SDRs) and Storage Quality Control Reports (SQCRs). Revises Chapter 17 and Appendix 3. Revises DLMS 842A/W and 842A/R.

P. ADC 1062 dated June 20, 2013. Non-Inventory Control Point/Integrated Materiel Manager (ICP/IMM)-Directed Inter-Service Lateral Support via Retail Level
Passing Order. Revises Chapters 11, 17, Appendix 3, and DLMS 511R.

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

Paul D. Peters
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. This change to DLM 4000.25, Defense Logistics Management System (DLMS), Volume 2, June 2012, is published by direction of the Deputy Assistant Secretary of Defense for Supply Chain Integration under the authority of DoD Instruction (DoDI) 4140.01, “DoD Supply Chain Materiel Management Policy,” December 14, 2011. Unless otherwise noted, revised text in the manual is identified by bold, italicized print. The exception would be when the entire chapter or appendix is replaced, or a new one added. Change 1 also includes administrative updates in Chapter 16, not marked by bold italics, to change “shall” to “will” per a style change for DoD issuances.

II. This change includes Approved Defense Logistics Management System (DLMS) Changes (ADC) published by DLA Logistics Management Standards Office memorandum:

G. ADC 1016 dated June 16, 2012. Adds a new Disposition Services Indicator for Controlled Property Branch Verified, for DLA Disposition Services use with DLMS 527R Receipt Transactions under Reutilization Business Integration. Revises Chapter 16 and DLMS Supplement 527R.

H. ADC 1021 dated July 17, 2012. Revises intra-DLA Procedures and DLMS 527D Pre-Positioned Materiel Receipt to Add Container Detail Supporting Relocation of Materiel between DLA Disposition Services Field Offices under RBI. Revises Chapter 16, and Administrative Update to DLMS Supplements, 511R, 527R, and 940R.

- Appendix 7.3
- Appendix 9 (New)

IV. This change is incorporated into the on-line DLMS manual at the Defense Logistics Managements Standards Website Publications Page and the PDF file containing the entire set of change files is available on the Formal Changes Page.

Paul D. Peters
Deputy Assistant Secretary of Defense for Supply Chain Integration
I. The Defense Logistics Management System (DLMS) manual is reissued as Defense Logistics Manual (DLM) 4000.25, Defense Logistics Management Standards (DLMS), under the authority of DoD Instruction (DoDI), 4140.01, DoD Supply Chain Materiel Management Policy. DLM 4000.25 is composed of multiple volumes, each supporting functionally related business processes. Volume 2 prescribes uniform procedures, data elements and codes, formats, forms, and time standards for the interchange of logistics information relating to requisitioning, supply advice, supply status, materiel issue/receipt, lateral redistribution, materiel return, and inventory control processes.

II. The provisions of this manual apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

III. This manual incorporates the Approved Defense Logistics Management Standards (DLMS) Changes (ADC) listed in the Process Change History page immediately following this Foreword. ADCs are published electronically on the ADC page of the DLMS Website. Recommended revisions to this manual will be proposed and incorporated under the Process Review Committee (PRC) forum for logistics functional areas. Submit all proposed change requests through your designated DoD Component PRC representatives. The procedures are in Volume 1, Chapter 3 of this manual and is available on the DLMS Website.

IV. This Volume is approved for public release and is available electronically on the DLMS Website. Use the comment form to contact the Enterprise Business Standards Office (EBSO).

Paul D. Peters
Deputy Assistant Secretary of Defense for Supply Chain Integration
### Volume 2 – SUPPLY STANDARDS AND PROCEDURES

#### PROCESS CHANGE HISTORY

<table>
<thead>

<tbody>
<tr>
<td>93A</td>
<td>08/29/12</td>
<td><strong>Addendum 93A to include Status Code BP in Cancellation Procedures.</strong> This change corrects an administrative oversight in documented procedures for source of supply processing of single line requisition cancellation requests to check for Status Code BP. Revises Chapter 4, Requisitioning.</td>
<td>1</td>
</tr>
<tr>
<td>102</td>
<td>8/15/2009</td>
<td><strong>Revised Service Code V Use in Routing Identifier Codes (RICs).</strong> This change reassigns the use of Service and Agency Code V applicable to Routing Identifier Codes (RICs) to the Navy. Although the Service and Agency Code V belongs to the Navy for DoDAAC assignment, its use in RICs does not. The V-series when used as the RI-To is currently assigned to the National Aeronautics and Space Administration (NASA) for use in logistics transactions (NASA also used as RI-From). Under this ADC, all new RIC assignments in the V-series will belong to the Navy for use to designate Navy contractor locations. Any existing V-series RI values previously assigned for NASA will be deleted. To satisfy NASA requirements, new RICs in the appropriate G-series will be assigned in coordination with the General Services Administration (GSA).</td>
<td>2</td>
</tr>
<tr>
<td>103</td>
<td>07/23/2003</td>
<td><strong>DAAS Processing Rules for Project Code 3AD (Supply/MILSTRIP) (Staffed as PDC 99).</strong> This change requires the Defense Automatic Addressing System (DAAS) to pass (instead of route) all DIC A0_ requisitions containing Project Code 3AD to the activity identified in the Routing Identifier Code (To). This will direct the requisition to the Principal whose assets will be used for the repair as requested by the Agent (or Source of Repair) under the Depot Maintenance Inter-Service Agreement (DMISA). Revises Chapter 4, Requisitioning.</td>

<tr>
<td>221A</td>
<td>8/3/2011</td>
<td>Revised Procedures associated with the DLMS Enhancement for Communication of Unit Price. This change supplements ADC 221 with enhanced business rules for conversion mapping from DLMS to legacy 80 record position formats to block the perpetuation of any price exceeding seven positions (five digits dollars and two digits cents), and block the perpetuation of any price consisting of all &quot;9&quot;s. Revises DLMS 511R, 511M, 527D, 527R, 536L, 810L, 812L, 812R, 846D, 856S, and 869F.</td>
<td>0</td>
</tr>
<tr>
<td>222</td>
<td>1/9/2007</td>
<td>Discrepancy Disposition/Status (Reply) Code Revisions. Modifies and adds Disposition/Status Codes available for use in SDR replies. Assignment of these codes within SDR transactions must be recognized by automated SDR applications. Revises DLMS Volume 2, Chapter 17, Supply Discrepancy Reporting and Appendix 7.28, Supply Discrepancy Report Relevant Data Elements.</td>
<td>8</td>
</tr>
<tr>
<td>237</td>
<td>4/25/2007</td>
<td>Rename Location Audit Program to Record Reconciliation Program. This change renames the Location Audit Program to the Record Reconciliation Program. Revises Chapter 7 Physical Inventory Control.</td>
<td>0</td>
</tr>
<tr>
<td>242B</td>
<td>7/8/2009</td>
<td>Inclusion of Additional Customers under Material Processing Center (MPC) Shipment Status Distribution Rules. This change allows for the inclusion of additional customers, regardless of Service/Agency, to receive a copy of the DLMS 856S to support MPC processing. Revises Chapter 5, Status Reporting.</td>
<td>0</td>
</tr>
<tr>
<td>245C</td>
<td>7/21/2011</td>
<td>Notification for Distribution Depot Product Quality Deficiency Report (PQDR) Exhibit Receipt - Product Data Reporting and Evaluation Program-Automated Information System (PDREP-AIS) Interface. This change expands DoD WebSDR business rules associated with ADC 245. Under the updated procedures, WebSDR routes action and information copies of the DLMS 842A/W SDR containing a Discrepancy Code Q11 (Returned PQDR Exhibit Deficiency) from the distribution depot to the PDREP-AIS to update the related PQDR’s exhibit information. Revises Chapter 17, Supply Discrepancy Reporting, and DLMS 842A/W.</td>

<td>256</td>
<td>12/19/2007</td>
<td><strong>WebSDR/SDR Transaction Edits: Forwarding and Follow-up Timeframes.</strong> This change approves two new edit processes for DoD WebSDR that improve data quality and enforce existing business rules. Under this change follow-up transactions are edited to ensure that an appropriate time has elapsed before follow-ups are submitted. A new edit is established in DoD WebSDR to block forwarding of SDRs where the historical record does not contain sufficient data to establish a basic SDR. Revises Chapter 17, Supply Discrepancy Reporting.</td>
<td>0</td>
</tr>
<tr>
<td>264</td>
<td>1/30/2008</td>
<td><strong>DLMS Enhancement for Part-Numbered Requisition Format and USAF Unique Rules for Descriptive Information including Technical Order (T.O.) Number.</strong> This change adds capability to provide technical/descriptive data for part-numbered requisitions. This change includes administrative updates to MILSTRIP-identified descriptive information data associated with part-numbered requisitions, during the transition to DLMS from the MILS-based procedures and removes screening code Z from DAAS maps. Revises DLMS 511R, 511M, and 869F.</td>
<td>0</td>
</tr>
<tr>
<td>278</td>
<td>9/22/2008</td>
<td><strong>Establish New DLMS 830D, Version 4030, for Demand Data Exchange (DDE) Projected Supply Plan.</strong> Establishes DLMS 830D Demand Data Exchange (DDE) Projected Supply Plan.</td>
<td>0</td>
</tr>
<tr>
<td>282</td>
<td>5/8/2008</td>
<td><strong>Consolidation and Containerization Points (CCP)-Originated SDRs including Noncompliant Wood Packaging Material (WPM) Procedures and Shipment Hold Code.</strong> This change supports generation of SDRs at the CCP for shipments using noncompliant WPM to OCONUS sites. Revises Chapter 17, Supply Discrepancy Reporting.</td>

</tr>
<tr>
<td>282A</td>
<td>7/16/2008</td>
<td><strong>CCP-Originated SDRs including Noncompliant WPM Procedures with Cost Breakdown and New Procedures for Closing WPM and Passive RFID SDRs.</strong> This change identifies two additional DLMS SDR transaction data elements to report material and labor costs for repackaging to be used optionally when reporting packaging discrepancies. This change also establishes procedures for closing SDRs with passive Radio Frequency Identification (pRFID) and WPM discrepancies thereby reducing manual workload. It establishes an option for forwarding CCP-originated transshipment SDRs to the action activity by email. Revises Chapter 17, Supply Discrepancy Reporting, as well as DLMS 842A/W.</td>
<td>0</td>
</tr>
<tr>
<td>284A</td>
<td>5/13/2008</td>
<td><strong>Revisions to DLMS Supplements to Add Shop Service Center for BRAC Inventory Management and Stock Positioning (IMSP).</strong> This change adds a new DLMS data element for Shop Service Center, also known as Shop Store Identifier. Revises DLMS 511R, 511M, 869F, 869A, 940R, 945A, 870S, 856S, 830D, 830R, and 867D.</td>
<td>0</td>
</tr>
<tr>
<td>285</td>
<td>6/10/2008</td>
<td><strong>Administrative Revision to MILSTRIP and DLMS Supplement 869C, Requisition Cancellation for Inclusion of Missing Passing Activity Identification.</strong> This change updates the MILSTRIP/DLMS procedures, the DLMS 869C, and Defense Automatic Addressing System (DAAS) conversion mapping for MILSTRIP DIC AC_/AK_ transactions to permit inclusion of the party passing the transaction in the cancellation and cancellation follow-up. Revises Chapter 4, Requisitioning, as well as DLMS 869C.</td>
<td>0</td>
</tr>
<tr>
<td>286B</td>
<td>6/2/2008</td>
<td><strong>Administrative Update for MILS/DLMS Conversion for MILSTRIP ACP/ACM Cancellation Formats.</strong> This change updates the DLMS 869C and DIC ACP/ACM maps at DLA Transaction Services to add a code for the party to receive the transaction. Revises DLMS 869C.</td>
<td>0</td>
</tr>
<tr>
<td>287</td>
<td>6/24/2008</td>
<td><strong>Special Program Requirements (SPR) Status and Corresponding DLMS Manual Procedures; Administrative Update to DLMS 830R, SPR.</strong> This change revises SPR procedures in the DLMS manual to bring the DLMS procedures in line with corresponding Military Standard Transaction Reporting and Accounting Procedures (MILSTRAP) procedural requirements and the existing SPR process.</td>

</tr>
<tr>
<td>288</td>
<td>6/23/2008</td>
<td><strong>Local Delivery Manifesting Shipment Status.</strong> This change authorizes expanded use of the CCP shipment status format to include other consolidation processes performed subsequent to creation of shipment status, such as local delivery manifesting, for the purpose of providing pRFID and updated status. Revises Chapter 5, Status Reporting, as well as DLMS 856S.</td>
<td>0</td>
</tr>
<tr>
<td>289</td>
<td>10/21/2009</td>
<td><strong>Revisions to Security Assistance Program Procedures, Modification of the Definition of the Security Assistance Type of Assistance and Financing Codes and Policy Change to Billing Procedures.</strong> This change revises procedures applicable to: the timeframe for shipments using a required availability date, the use of extended required delivery dates, storage charges for materiel awaiting notice of availability responses, and makes minor changes to program names and acronyms. Revises Chapter 4, Requisitioning.</td>
<td>0</td>
</tr>
<tr>
<td>292</td>
<td>7/23/2008</td>
<td><strong>Administrative Update to Chapter 14, and DLMS 846F, Ammunition Freeze/Unfreeze Transaction.</strong> This change addresses the DLMS Accredited Standards Committee (ASC) X12 transactions beginning segment report type codes, and their correlation to MILSTRAP DIC functionality. Revises Chapter 14, Issue, Loan, Demand, and Ammunition Freeze/Unfreeze.</td>
<td>0</td>
</tr>
<tr>
<td>293</td>
<td>8/13/2008</td>
<td><strong>Revised Time Standards, Codes, and Procedures for Reporting and Processing of Supply Discrepancies.</strong> This change identifies revisions to SDR procedures and time standards for customers (Security Assistance and U.S.), International Logistics Control Offices, and action activities. Additionally, this change updates SDR code lists, adds SDR transaction data elements for Controlled Inventory Item Code for the wrong item received and Demilitarization Code for the requisitioned item and the wrong item received, and consolidate guidance for SDRs submitted by Security Assistance customers. Revises Chapter 17, Supply Discrepancy Reporting, as well as DLMS 842A/W.</td>

<tr>
<td>295</td>
<td>8/6/2008</td>
<td><strong>Use of DLMS Qualifier for Local Stock Number/Management Control Numbers.</strong> This change is intended to insure that all systems operating in a DLMS environment must recognize and process materiel identification Qualifier ZZ in all applicable DLMS transactions. This unique qualifier accommodates an existing requirement for data covered under the Defense Logistics Standard System (DLSS) ‘stock or part number field and supports interfaces in a mixed DLSS/DLMS environment. Revises DLMS 527D, 527R, 846P, 846R, 867D, 867I, 888I, and 947I.</td>
<td>0</td>
</tr>
<tr>
<td>296</td>
<td>8/12/2008</td>
<td><strong>Passive Radio Frequency Identification (pRFID) Transactions.</strong> This change adds two new values, Delivered and Undelivered/Attempted Delivery, to the Reader Function Code data element in the XML Visibility transaction in support of local delivery processing. Revises Chapter 24, Passive Radio Frequency Identification. NOTE: This chapter was subsequently moved to DLMS Volume 3 per ADC 305.</td>
<td>0</td>
</tr>
<tr>
<td>305</td>
<td>10/23/2008</td>
<td><strong>Revision to DoD 4000.25-M, DLMS Manual, Volume 3, Transportation.</strong> This administrative change moves Volume 2, Chapter 24, Passive Radio Frequency Identification to DLMS Volume 3, Chapter 3, Transportation to better align it with other related procedures associated with the interchange of information between the logistics and transportation domains.</td>
<td>0</td>
</tr>
<tr>
<td>306</td>
<td>11/10/2008</td>
<td><strong>Administrative Change to Rail Transportation Mode/Method Codes and Definitions.</strong> This change updates the DoD codes, definitions, X12 conversion and appendix references to synchronize with the United States Transportation Command’s Authorized Data Source for transportation mode/method codes. Revises AP8.14, AP8.15, AP8.19, AP8.30, and AP8.39.</td>

<tr>
<td>307</td>
<td>11/10/2008</td>
<td><em>Administrative Update to Chapter 6, Physical Inventory Control, and DLMS 846P, 846R, and 888I.</em> This change correlates between the ASC X12 beginning segment Report Type Code for DLMS 846P and 846R, and Transaction Type Code for DLMS 888I, as well as the functionality of the corresponding MILSTRAP legacy DICs. Additionally, the chapter uses a generic name for the transactions so that the procedures are format neutral and lend themselves to both DLMS and MILSTRAP use. Revises Chapter 6, Physical Inventory Control, DLMS 846P Physical Inventory, DLMS 846R, Location Reconciliation, and DLMS 888I.</td>
<td>0</td>
</tr>
<tr>
<td>308</td>
<td>1/12/2009</td>
<td><em>Update to DLMS Chapter for Asset Status Reporting and Migration of Army Single Stock Fund (SSF) Asset Balance Reporting Transaction, DIC BSS, to DLMS 846I, Asset Status.</em> This change established a separate chapter in DLMS for Asset Status Reporting, rather than have it included in the chapter addressing supply and shipment status. In addition, the change migrates Army DIC Code BSS data requirements into DLMS 846I to support Army’s migration to DLMS, and updates the chapter to address intra-Army requirements for the DLMS 846I associated with DIC BSS. Adds Chapter 22, Asset Reporting Status.</td>
<td>0</td>
</tr>
<tr>
<td>309</td>
<td>6/3/2009</td>
<td><em>Notice of Availability (NOA) and NOA Reply Transaction Data Content/Mapping including Addition of Type Pack Code for 463L Pallets.</em> This change updates the data content for the NOA and NOA Reply, resolves a DLMS/MILS conversion issue between the DIC AD5 and DLMS 870N, adds NOA submitter as a new data element, and modifies the location of the type pack code in the DLMS 856N. Revises the DLMS 856N, and 870N.</td>
<td>0</td>

<td>New Distribution Code (111) for the Retail Transportation and Supply Receipt/ Acknowledgement Interchange Transaction. This change revises the distribution code from 1 to 111 to clearly identify the transactions used for the Retail Transportation and Supply Receipt and Acknowledgement Interchange. Revises DLMS 940R and 945A.</td>
<td>0</td>
</tr>
<tr>
<td>316C</td>
<td>1/15/2010</td>
<td>Revise DLMS 940R Material Release and DLMS 945A Material Release Advice, to Support Unique Item Tracking for Air Force Positive Inventory Control (PIC) under the Retail Transportation and Supply Receipt and Acknowledgement Interchange. This addendum authorizes the generation of DLMS 940R and 945A information copies to the Air Force PIC Fusion. Revises Chapter 19, Unique Item Tracking.</td>
<td>0</td>
</tr>
<tr>
<td>316D</td>
<td>8/3/2010</td>
<td>Air Force-Unique Document Identifier Code Mappings to 940R under the Retail Transportation and Supply Receipt and Acknowledgement Transactions. This change adds DAAS mappings for the Air Force unique DICs XAA and XAR to the DLMS 940R. Revises DLMS 940R and DLMS 945A.</td>
<td>0</td>
</tr>
<tr>
<td>317</td>
<td>2/17/2009</td>
<td>Revised Business Rules for Transshipper-Prepared SDRs. This change establishes new procedures associated with reporting supply discrepancies discovered while the shipment is in-transit. It authorizes two new SDR action codes to distinguish between SDRs requiring expedited response to resolve frustrated freight problems and those requiring no response, but which may be used by the action activity to correct shipping/packaging errors, recoup money from noncompliant vendors, and identify trends. A time standard of 5 days is established for those SDRs requesting expedited response. Revises Chapter 17, Supply Discrepancy Reporting.</td>

<td>DLMS 869A, Requisition Inquiry/Supply Assistance Request, Correction and Clarification of Data Mapping, Administrative Updates, and Coordination of Procedures for Transaction-Based Supply Assistanes Requests. This change standardizes the procedures for implementation of the DLMS enhancements associated with the supply assistance requests for planned implementation during modernization. Revises Chapter 4, Requisitioning, and DLMS 869A.</td>
<td>0</td>
</tr>
<tr>
<td>328</td>
<td>7/28/2009</td>
<td>“Off-Line” Requisition Processing: Internet Ordering Application Request for Component Verification of Funds Availability and Recording of the Financial Obligation. This change provides guidance for an interface to be established between the various internet ordering applications and the applicable Service/Agency financial application. The purpose of the interface is to ensure funds availability before allowing the requisition to be processed, and, as a separate, subsequent action, to establish the required obligation within the financial system. Revises Chapter 4, Requisitioning, and DLMS 511R.</td>
<td>0</td>
</tr>
<tr>
<td>333</td>
<td>8/5/2009</td>
<td>Revision to DLMS, Volume 2, Chapter for Logistics Asset Support Estimate (LASE). This change made administrative updates to the DLMS LASE chapter. ADC 333 is overcome by ADC 400 which eliminates the LASE process.</td>
<td>0</td>
</tr>
<tr>
<td>334</td>
<td>8/31/2009</td>
<td>SDR Process for AF Retail Storage Activity Denials. This change documents the process by which the Air Force will identify a supply discrepancy and request credit as the result of storage activity denials after DLA assumes support functions at the three Air Logistics Centers under BRAC. The Air Force will submit a DLMS 842A/W SDR to DLA in response to a storage activity denial. This change requires identification of the denial document number in the SDR using the customer-assigned SDR number field. Revises Chapter 17, Supply Discrepancy Reporting, as well as DLMS 842A/W and 842A/R.</td>

<td>Revised Procedures for Inclusion of Government-Furnished Property (GFP)/Contractor-Acquired Property (CAP) Contract Data – Updated Mapping for Concurrent Identification of the Manufacturing Directive Number (MDN) and the Contract Line Item Number (CLIN) (Supply and Contract Administration). This addendum supplements the procedures authorized in ADC 1014 to further enhance the visibility of Government Furnished Materiel (GFM) and CAP in associated logistics transactions. GFM is that portion of GFP that can be obtained under MILSTRIP procedures; CFM refers to that portion of CAP that can be obtained under MILSTRIP requisitioning procedures. Under ADC 1014, DLMS transactions are able to support the inclusion of the authorizing contract number, call or order number, and either the CLIN or MDN. This addendum allows for simultaneous identification of the CLIN and the MDN when both are applicable and required by the authorizing Service/Agency and optional validation of the CLIN. All other aspects of ADC 1014 are unchanged. Revises Chapter 4, Requisitioning. Revises Appendices 7.15, Advice Codes, and 7.16, Status Codes. Revises DLMS Implementation Conventions 511M, 511R, 517G, 869C, and 869F.</td>

<td><strong>New DoD EMALL DoDAAC and Supply Status Cancellation Codes for DoD EMALL Credit Card Billing.</strong> Four new requisition supply status codes are established for cancellation status for DoD EMALL Government purchase card or corporate credit card billing. These codes will be used to identify the specified reasons the purchase/credit card was rejected (causing the order to be cancelled) back to the customer. These cancellations codes are unique to the purchase/credit card purchases made through DoD EMALL for Federal and non-Federal customers. The new status codes will be provided to EMALL and transmitted transactionally via DLA Transaction Services (for customers capable of receiving supply status transactions (MILSTRIP/DLMS 870S/Document Identifier Code AE_). Additionally, cancellation status codes will also be provided to DoD EMALL customers via e-mail. In conjunction with the transition of billing to DLA's Enterprise Business System (EBS) the DoD Activity Address Code (DoDAAC) used to recognize EMALL purchase/credit card billing will change from SP5200 to SC4210. Revises Chapter 4, Requisitioning. Revises Appendix 7.16, Supply Status Codes. Revises DLMS 511R, 511M, and 869F.</td>
<td>3</td>

<tr>
<td>1052</td>
<td>5/3/2013</td>
<td><strong>DoD Web Supply Discrepancy Report (WebSDR) Processes Enhancement and Interface with Electronic Document Access (EDA) System.</strong> This change establishes an interface between the EDA System and the DoD WebSDR application to obtain essential information for populating SDR records. This interface will make available to WebSDR the identification of the contract administration office (CAO) DoD Activity Address Code (DoDAAC) and the vendor/contractor commercial and government entity (CAGE) Code for the discrepant shipment when the contract number is provided in the SDR by the submitter or action activity. WebSDR will then have the functionality to transmit SDRs to the CAO regarding new procurement, type 9, packaging supply discrepancies in an effort to manage vendor performance by contracted suppliers. Revises Chapter 17, Supply Discrepancy Reporting, and Appendix 3, Supply Discrepancy Report Relevant Data Elements. Updates DLMS 842 A/W and 842 A/R.</td>

<td>1067</td>
<td>11/20/2013</td>
<td><strong>Update to DLMS/MILSTRIP Guidance for Status Dissemination Including Elimination of GSA Form 10050 (GSA Mailer) and Revised Media and Status Codes.</strong> This change eliminates the use of GSA Form 10050 (GSA Mailer) used to provide MILSTRIP status to civil agency customers with no alternative method of communication. Although originally a valuable tool, in current times, the use of the GSA Mailer has proved to be ineffective for providing customers with the status of their requisitions and will be replaced with a web portal for viewing status. Upon completion of enhancements to GSA Advantage!, customers will view status details via the GSA requisition status web portal. The web portal will obtain supply status using standard MILSTRIP transactions/routing. MILSTRIP/DLMS guidance for the media and status code is updated to support elimination of the GSA Mailer and to more fully document its use within the DLMS (rather than relying solely on legacy 80 record position formats). Revises Appendices 6 Forms/Message Formats Index and 7.4 Media and Status Codes. Deletes Appendix 6.7 GSA Form 10050 Supply/Shipmen Status.</td>

<td>Revised Supply Discrepancy Report (SDR) Routing Rules for Non-Manager Owned Suspended Stock Identified at Time of Receipt at DLA Distribution Centers and Improved Identification of Owner and Manager on SDR Transactions. This change revises routing rules and provides improved procedures for processing “receipt notification” SDRs for materiel suspended upon receipt based upon manager-provided screening criteria. These SDRs do not report a supply discrepancy; they instead report receipt of materiel meeting specific quality-related criteria identified by the three-position Q-series discrepancy codes. Additionally, this change modifies SDR transaction formats to support data fields to identify the owner and manager as distinct organizations separate from the current mixed use data field used for owner, item manager, or source of supply dependent upon the document type code/scenario. Revises Chapter 17 Supply Discrepancy Reporting and Appendix 7.28 Supply Discrepancy Report Relevant Data Elements. Revises DLMS 842A/R and 842 A/W.</td>

<td><strong>Enhanced SDR Guidance for Foreign Military Sales (FMS), SDR Time Standards for Controlled Inventory Items, SDR Forwarding after Logistics Reassignment (LR), Packaging SDRs, and Administrative Updates.</strong> Establishes forwarding procedures to support transactional forwarding of SDRs by the losing item manager (LIM) to the gaining item manager (GIM) subsequent to a logistics reassignment (LR), and clarifies reporting procedures for procurement source receipts after LR where the LIM issued the contract including directing the SDR to the LIM (owner) as the action activity when a prepositioned materiel receipt (PMR) is provided. This change also specifies the allowable number of International Logistics Control Office (ILCO) rejections per SDR, removes the current FMS restriction on using Discrepancy Code Z2 (repetitive discrepancy), specifies the allowable number of International Logistics Control Office (ILCO) rejections per SDR, eliminates the DLM exclusion for SDR reporting by activities using non-appropriated funds to requisition wholesale materiel, updates the time standards for SDRs associated with materiel classified secret and above, and nuclear weapons-related materiel (NWRM) to require accelerated response, updates procedures to prescribe business rules for routing of packaging discrepancy SDRs resulting from redistribution of stock between storage activities, updates procedures for submission of information only (vice action) SDRs for packaging discrepancies, revises business rules associated with resubmission of an SDR after customer cancellation of the original submission or storage activity completion notice, and adopts multiple administrative changes to support the above updates. Revises Chapter 17 Supply Discrepancy Reporting and Appendix 7.28 Supply Discrepancy Report Relevant Data Elements. Revises DLMS 842A/R and 842A/W.</td>
<td>6</td>

ADC Number | Date | Change Description | Change Number
--- | --- | --- | ---
1161 | 8/1/2016 | Update Uniform Procurement Instrument Identifier (PIID) Numbering System in the Federal/DLMS Implementation Conventions and DLMS Manuals. Updates DLMS procedures to accommodate the PIID numbering system as required by recent changes to the Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS). All Components must comply with the PIID numbering requirements of DFARS subpart 204.16 for all new solicitations, contracts, delivery calls/orders, and agreements issued, and any amendments and modifications to those new actions. Additionally, this change provides guidance for legacy procurement instrument identification number (PIIN)/legacy call/order number during the initial transition. Revises Chapters 4, Requisitioning; 17, Supply Discrepancy Reporting; 20, Medical Unit Assembly Program; 21, Stock Readiness Program; and 26, Contractor Access to Government Sources of Supply. Revises DLMS ICs version 4010: 511M, 511R, 517G, 527D, 527R, 536L, 567C, 810L, 812L, 812R, 824R, 846A, 846D, 846I, 856, 861, 867I, 869C, 869F, 870S, 945A, 947I. Revises DLMS ICs version 4030: 842A/R, 842A/W, 842C/I, 842C/R, 842P, 842S/Q, 856R, 856S, 856W, 940R, 945A, 947I. Revises the Logistics Data Resource Management System (LOGDRMS). | 8

<td><strong>Establishing Visibility of Unique Item Tracking (UIT) Program Items for Service-Owned Assets Stored at DLA Distribution Centers and Corresponding Revisions to Inventory Procedures Related to Capital Equipment.</strong> Defines procedures and establish a coordinated implementation to exchange item unique identification (IUID) and serialization data in accordance with DODM 4140.01. Adds DLMS procedures to include serialization data in all DLMS balance-affecting transactions and selected additional transactions for UIT programs. Adds a new chapter titled “Procedures for Serially Managed Materiel Requiring Owner Visibility”, and allows for expansion to other areas as ODASD Logistics and the DOD IUID Working group identify additional IUID requirements for serially managed materiel requiring owner visibility while physically located at DLA Distribution Centers. Revises Chapter 4, Requisitioning, Chapter 5, Status Reporting, Chapter 6, Physical Inventory Control, Chapter 7, Inventory Adjustments, Chapter 11, Materiel Returns, Redistribution of Assets, Directed Discrepant/Deficient Materiel Returns and Retrograde Returns, Chapter 13, Materiel Receipt, and Chapter 17, Supply Discrepancy Reporting. Deletes Chapter 19, Unique Item Tracking and marks it &quot;Reserved&quot;, Adds new Chapter 30, Procedures for Serially Managed Materiel Requiring Owner Visibility. Revises Appendix 7.28, Supply Discrepancy Report Relevant Data Elements. Revises DLMS ICs 527D, 527R, 842A/W, 842P, 842S/Q, 846P, 846R, 856R, 856S, 945A (version 4030), and 947I (version 4030).</td>

<td><strong>Revision to Kind, Count, and Condition (KCC) Inspection Requirements at DLA Distribution Centers.</strong> Revises procedures to clarify and document the KCC inspection process at DLA Distribution Centers. Clarifies KCC of the bare item part number verification process for new procurement receipts in line with DLAI 4145.4 as conducted at DLA Distribution Centers. DLA Distribution Centers will conduct the part number verification for non-critical new procurement items by verifying the part number/NSN in the contract to the Military Standard (MIL-STD) 129 label. DLA Distribution Centers will perform all other aspects of the KCC process. Critical items and non-procurement items will be subject to part number verification to bare item markings. Administrative update to Chapter 13 to replace the term advance receipt information (ARI) with the more common term pre-positioned materiel receipt (PMR) used in the MILSTRAP Manual. Revises Chapter 13, Materiel Receipt and Chapter 17, Supply Discrepancy Reporting.</td>

<td>4/23/2018</td>
<td><strong>Supply Discrepancy Report (SDR) Disposition Instructions Authorizing Receipt Reversal for Receipts and Associated SDRs Submitted to the Wrong Owner and Use of Reason for Reversal Code on Receipt Transaction.</strong> Updates DLA Distribution and Component procedures to authorize use of the SDR process to request a receipt reversal in response to a receipt and associated SDR submitted to the wrong owner. This process only applies to SDRs identifying that no matching prepositioned materiel receipt (PMR) was available for the shipment and, as a result, the receiving activity inadvertently receipted the materiel to the wrong owner account in the DLA Distribution Standard System (DSS). The SDR reply will provide an audit trail to resolve the discrepant receipt using receipt reversal and reprocessing of the receipt and SDR to the correct owner under DLMS/MILSTRAP and SDR procedures. Revises Chapter 13, Materiel Receipt, Chapter 17, Supply Discrepancy Reporting, Appendix 7.28 Supply Discrepancy Report Relevant Data Elements, and Appendix 7.32, Reason for Reversal Code. Revises DLMS IC 527R.</td>

C29.F1. INSTRUCTIONS FOR COMPLETION OF DD FORM 1348-1A (OR DD FORM 1348-2), USED FOR RETURNS TO STOCK TRANSFERS (EXCLUDING TRANSFERS TO DLA DISPOSITION SERVICES FIELD OFFICES) .......................................................... C29-7
C1. CHAPTER 1

INTRODUCTION

C1.1. GENERAL

C1.1.1. Purpose. This volume provides Department of Defense (DoD) standard procedures and electronic data interchange (EDI) conventions to effect supply actions using American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 transactions with the Defense Logistics Management Standards (DLMS).

C1.1.1.1. This volume contains some of the legacy 80 record position transaction procedures associated with the respective DLMS transaction to ensure the functionality of the Military Standard Requisition and Issue Procedures (MILSTRIP) and Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP). This is included where necessary to operate in a mixed legacy 80 record position and the upgraded DLMS environment. Upon full DLMS implementation, any specific legacy procedures wording will be removed.

C1.1.2. Defense Logistics Management Standards Volume Access. Use of this volume requires simultaneous access to DLMS Manual Volume 1 administrative items such as the lists of acronyms and abbreviations, terms and definitions, and references; instructions for acquiring access to the DLMS standards data base; specific guidance that applies to all DLMS Implementation Conventions (IC); DLMS to Defense Logistics Standard System (DLSS) cross-references and DoD/ASC X12 Conversion Guides and both functional and technical information that is relatively stable and applies to the DLMS as a whole.

C1.2. POLICY. The DoD policy governing the procedures in this volume are:

C1.3. APPLICABILITY. This volume applies to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. The manual applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Federal agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.

C1.4. SUPPLY PROCESS REVIEW COMMITTEE. The Supply Process Review Committee (PRC) is the forum through which the DoD Components and other
participating organizations may participate in the development, expansion, improvement, maintenance, and administration of supply requirements for the DLMS. The Supply PRC chairperson, in coordination with the DoD Component Supply PRC representatives, is responsible for the contents of this volume of the DLMS. Representatives to the Supply PRC are identified on the Enterprise Business Standards Office (EBSO) Website. See DLMS Volume 1, Chapter 1 for a discussion of DLMS PRC functions and responsibilities.

C1.5. SUPPLY DISCREPANCY REPORTING PRC. The Supply Discrepancy Reporting (SDR) PRC provides a joint Service/Agency forum to develop, expand, improve, maintain, and administer supply discrepancy reporting policy and procedures. The SDR PRC chairperson, in coordination with the DoD Component SDR PRC representatives, is responsible for the SDR related contents of this volume of the DLMS. The EBSO Website identifies the Representatives to the SDR PRC.

C1.6. JOINT PHYSICAL INVENTORY WORKING GROUP. The Joint Physical Inventory Working Group (JPIWG) recommends guidance and develops program enhancements for the physical inventory control of DoD supply system materiel. The JPIWG chairperson coordinates with DoD Component representatives for general supplies and ammunition to maintain the physical inventory control procedures contained in Chapter 6 of this volume. Representatives to the JPIWG are identified on the EBSO Website.

C1.7. NONCOMPLIANCE. If reasonable attempts to obtain compliance with prescribed procedures or resolution of DLMS supply or SDR-related problems are unsatisfactory, the activity having the problem may request assistance from their respective EBSO PRC representative. For noncompliance issues that impact the JSA/LWCG as well as the JPIWG, refer concerns to the Service/Agency representative on the aforementioned committees. The request should include information and copies of all correspondence pertinent to the problem; including the transaction set number, the document number and the date of the transaction involved. The appropriate representative should take the necessary actions to resolve the issue or problem. The actions may include requesting assistance from the Supply PRC chairperson.

C1.8. TRANSACTION REVERSAL. Processing activities may reverse select functional area transactions. See the following DLMS Volume 2 chapters for specific details on reversals:

- Chapter 6 for quality control requirements and for additional controls required when reversing physical inventory adjustments,
- See Chapter 9 for additional controls required when reversing logistics transfer/decapitalization transactions,
- Chapter 12 for additional controls required when reversing prepositioned materiel receipt transactions,
• Chapter 13 for additional controls required when reversing receipt transactions, and

• Chapter 14 for additional controls required when reversing issue transactions.

C1.9 TRANSACTION REJECTION. DLMS Volume 1, Chapter 4 prescribes the procedures for the use of the DLMS 824R Reject Advice Transaction to exchange information about functional errors not covered by DLMS status or other type of supply transaction, including MILSTRIP and MILSTRAP functional areas. The Reject Advice Transaction reports the unique document number, and/or other pertinent information to identify the rejected transaction, and codes identifying one or more specific error conditions. Where specific reject advice codes are not established to identify the error condition causing the transaction to fail, Defense Automated Addressing System (DAAS) may use the Reject Advice Transaction to provide narrative message rejection of the erroneous DLMS transaction. A combination of reject advice codes and clarifying narrative may be used to facilitate interpretation of the error condition.

C1.10. MILITARY STANDARD REQUISITIONING AND ISSUE PROCEDURES

C1.10.1. Definition. “A broad base of logistics transactions and procedures designed to meet DoD requirements to establish standard data elements, codes, forms, transaction formats (both legacy 80 record position and DLMS) and procedures to requisition, release/issue, and dispose of materiel and prepare related documents. It prescribes uniform procedures and time standards for the interchange of logistics information relating to requisitioning, supply advice, supply status, cancellation, materiel release/issue, lateral redistribution, materiel return processes, materiel obligation validation, contractor access to government sources of supply, and selected security assistance processes. The provisions apply to the Office of the Secretary of Defense, the Military Departments, the Joint Staff, the Combatant Commands, and Defense Agencies. It also applies, by agreement, to external organizations conducting logistics business operations with DoD including (a) non-Government organizations, both commercial and nonprofit; (b) Agencies of the U.S. Government other than DoD; (c) foreign national governments; and (d) international government organizations.”

C1.10.2. Purpose. Prescribes uniform procedures, data elements and codes, formats, forms, and time standards for the interchange of logistics information relating to requisitioning, supply advice, supply status, materiel issue/receipt, lateral redistribution, and materiel return processes. The procedures govern the interchange of information for all materiel commodities (unless specifically exempted by the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) between supported activities and supply control/distribution systems of the Department of Defense (DoD) and other participating Component activities. Consideration of the requirements of other functional areas (exclusive of specific codes and procedures) related to requisition and issue processing are included to provide procedural clarity and/or
to depict procedural interfaces with other standard DoD systems. The specific codes and procedures within these related functional areas (such as: priority designation, stock control, box marking, shipment planning, shipment documentation, communication processing, and contractor shipments) are prescribed in the applicable regulatory documents of the standard system.

C1.10.3. Applicability. MILSTRIP procedures are mandatory for use by:

C1.10.3.1. All Component requisitioners authorized to request supply support from any Component distribution system and from GSA.

C1.10.3.2. All contractors authorized under Component contracts to requisition government furnished materiel (GFM) from the Component.

C1.10.3.3. The Component sources of supply and storage activities furnishing supply support to authorized requisitioners, including foreign country requisitioners participating in foreign military sales (FMS), Cooperative Logistics Supply Support Arrangement (CLSSA), and Grant Aid (hereafter referred to collectively as “Security Assistance” or “SA”).

C1.10.4. Exclusions. These procedures are not applicable to the following:

C1.10.4.1. Bulk petroleum.

C1.10.4.2. Inter-Departmental and intra-Departmental purchasing operations.

C1.10.4.3. Forms and publications. (However, requirements placed on GSA and Navy for these items will be submitted in the prescribed MILSTRIP requisition format.) Forms and publications assigned national stock numbers (NSNs) may be requisitioned using these procedures.

C1.10.4.4. Communications security (COMSEC) equipment, COMSEC aids (keying materiel), and all items including classified Components, individual elements and repair that are classified and designated crypto or are normally handled through crypto channels.

C1.11. MILITARY STANDARD TRANSACTION REPORTING AND ACCOUNTABILITY PROCEDURES. A broad base of logistics transactions and procedures designed to meet DoD requirements to establish standard codes, formats (both DLMS and legacy 80 record position), and procedures for inventory accountability and reporting processes. MILSTRAP prescribes uniform procedures for recording inventory management data passed between elements of a single Service or Agency distribution system or between the various distribution systems of the Department of Defense. The procedures govern the interchange of logistics information, and related financial management information, for materiel in the supply control/distribution systems of the
Department of Defense and participating external organizations, unless specifically exempted by the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)). The financial management aspects of MILSTRAP pertain only to financial data produced as a by-product of receipt, issue, and inventory adjustment processing.

C1.11.1. **MILSTRAP Purpose**

C1.11.1.1. The forms, formats, and codes prescribed herein were developed on the basis of the DoD Components’ requirement for standard transaction reporting and accountability procedures for item accountability and financial inventory of DoD materiel. The prescribed codes are mandatory for inter- and intra-DoD Component use when data are interchanged among distribution system elements.

C1.11.1.2. The requirements of other logistics functional areas (exclusive of the specific codes and procedures) related to MILSTRAP) have been considered and are included to provide procedural clarity and/or to describe procedural interfaces with other DoD logistics standard systems. Certain techniques for deriving financial billing data in the legacy 80 record position transactions are provided within the purview of this manual. Financial billing procedures are prescribed in appropriate DoD publications.

C1.11.2. **MILSTRAP Exclusions**

C1.11.2.1. Excluded are supply transactions below the inventory control point (ICP) and storage activity level in the distribution system (i.e., transactions at post, camp, station, base (or equivalent) level or between post, camp, station, base (or equivalent) and using organizations), unless a DoD Component establishes an internal requirement for use at this level.

C1.11.2.2. As provided in Chapter 10, materiel receipt acknowledgment is required below the wholesale level and is not excluded.

C1.11.2.3. As provided in Chapter 22, asset status reporting is required below the wholesale level and is also not excluded.

C1.11.2.4. Specific commodities excluded from MILSTRAP procedures are identified in Chapter 6 under Exclusions:

C1.11.3. **MILSTRAP Principles and Objectives**

C1.11.3.1. MILSTRAP holds to the principle that the structure of the system provides essential information to inventory control points (ICPs) for the exercise of supply and financial management without encumbering the system with details peculiar to differing types of materiel. A standard system of this design imparts uniformity without limiting the ICP’s internal management options for the items of supply it controls.
C1.11.3.2. MILSTRAP establishes standard codes, forms, formats, and procedures for the inventory accountability and reporting process, which is mandatory for use by Components. These procedures are designed to provide:

C1.11.3.2.1. A standardized coding structure for inventory transactions and related management actions that conveys the information required for effective inventory management.

C1.11.3.2.2. Uniformity in the interchange of inventory accountability information within and between the DoD Components.

C1.11.3.2.3. An integrated system of item accountability which permits the accumulation of financial data for financial reporting as an adjunct of updating the inventory record.

C1.11.3.3. MILSTRAP is not designed to accommodate every transaction relevant to an inventory control system nor does it embody all data elements integral to existing systems. Rather, MILSTRAP isolates and concentrates on transactions that are fundamental to any inventory control system and on related data elements which are interchanged between distribution systems or elements of systems with sufficient frequency to justify standardization and universal recognition.

C1.11.3.4. The design of MILSTRAP recognizes that supply policy may obviate use of a prescribed code or may demand system oriented codes. Accordingly, the procedure allows selectivity in the application of codes and permits intra-Component assignment of certain supplemental codes within the basic coding structure. Codes established under this option will not duplicate or circumvent the intent of codes utilized in the basic uniform system nor must use of these codes exceed the confines of applicable distribution system(s).

C1.11.3.5. Legacy 80 Record Position Multiuse Fields. This paragraph applies only to users that have not implemented the use of DLMS transactions.

C1.11.3.5.1. Needs for internal Component data are met by allowing multiuse data in certain record positions and fields in the legacy 80 record position transactions and as defined in the legacy 80 record position format appendices. The need for Multiuse fields only pertains to the legacy 80 record position transactions. Internal Component data is accommodated as necessary in the respective DLMS transactions as defined in the respective Implementation Convention(s).

C1.11.3.5.2. Where legacy transactions are still being used, Multiuse record positions will be blank in inter-Component supply transactions, unless otherwise stated in this manual. However, internal data may be entered in these fields in intra-Component supply transactions. Each Component will define internal data and incorporate the data into the appropriate DLMS transaction(s).
using the DLMS change process. Such data is meaningful only within the Component’s system(s).

C1.11.3.5.3. Legacy record positions and fields labeled blank must be left blank. Components will not define internal entries in these fields or record positions; they are reserved for future assignment by the Department of Defense.

C1.11.4. Inventory Segmentation Codes

C1.11.4.1. Information regarding an item’s stock balance will be obtained by dividing the inventory of an item into meaningful categories having distinctive characteristics. This process is called inventory segmentation. The inventory control system (designed to account for items of supply controlled, managed, or stocked in the distribution system) is based on the concept of inventory segmentation by ownership/purpose, supply condition, and location. The coding information indicates who owns the assets (ownership), for what purpose the materiel is held within an ownership (purpose), the condition of the materiel in terms of serviceability and readiness for issue (supply condition), and where the materiel is physically stored (location). These basic data elements are required for inventory management, requisition processing, and distribution management. This information is also required for preparing financial and supply status reports required for management and decision making.

C1.11.4.2. The range of inventory segmentation codes is designed to accommodate the distribution system as a whole. The full range of codes may not apply to the materiel managed by any one ICP, but use of codes that do apply is mandatory. Codes provided but not required by an ICP will not be used for another purpose.

C1.11.4.2.1. Ownership/Purpose Codes

C1.11.4.2.1.1. Ownership codes segment and identify, on the inventory control record maintained by other than the owner, the Military Service or other activity having title to the assets. This is shown by a numeric code assignment (Appendix AP2.3). Purpose codes segment and identify, on the inventory control record maintained by the owner, the purpose or reservation for which the materiel is held. This is shown by an alphabetic code assignment prescribed by the individual Component (Appendix AP2.4).

C1.11.4.2.1.2. To preclude unwarranted sophistication in accountability, identification, and reporting of assets, ownership and purpose codes—although separate and distinct elements of data—will be entered in the inventory control record as a single data element. Accordingly, when one Component is accountable for assets owned by another, the entire balance is maintained by the accountable activity under the numeric code assigned to the owning Component. Further breakout by purpose (alphabetic code) is neither prescribed nor intended.
C1.11.4.2.1.3. In summary, any numeric entry reflects ownership by another activity and the numeric itself identifies the owner. Conversely, any alphabetic entry reflects ownership by the activity maintaining the inventory control record and the alphabetic code itself identifies the purpose for which the materiel is reserved.

C1.11.4.2.2. Supply Condition Codes. Supply Condition Codes (SCCs) are part of the Federal Condition Code (Legacy MILSTRAP Appendix AP2.5). SCCs segment and identify, on the inventory control record, the physical state of the materiel or actions underway to change the status of the materiel.

C1.11.4.2.3. Location Codes

C1.11.4.2.3.1. Location codes segment and identify on the inventory control record, the activity where materiel is physically stored or located.

C1.11.4.2.3.2. The three-digit routing identifier code (RIC) structure established by MILSTRIP provides a standard system for identifying activities within established supply distribution systems, including those that store materiel. To make use of this existing structure, location codes used to identify activities storing materiel correspond to the RICs established by MILSTRIP.

C1.11.4.2.3.3. Location codes need not be entered on the inventory control record in their RIC configuration. If an alternate means is used to identify the physical storage site for record purposes, the storage record code must be directly relatable to the RIC of the storage activity entered on input and output documentation.

C1.11.5. Inventory Transaction Coding

C1.11.5.1. An inventory transaction is a full description of a supply action furnished to or developed by an ICP for use in the management of items under its control, from both a financial and supply point of view. In turn, properly aggregated inventory transactions form the essential information required by an ICP for review and for reporting the results of its management effort to higher authority.

C1.11.5.2. Legacy document identifier codes (DIC), Standard DICs in the A_ series identify MILSTRIP inventory transactions related to the requisitioning and issuing. Standard DICs in the D_ series identify inventory transactions pertinent to the inventory accountability and reporting process. The D_ series DICs are listed in Appendix AP2.1. In the migration to DLMS, the DICs were retained as data in the DLMS transactions as an identifier of the discrete transaction purpose (e.g., the type of inventory adjustment or the type of receipt).
C2. CHAPTER 2

SPECIAL PROGRAM REQUIREMENTS AND DEMAND DATA EXCHANGE PROJECTED SUPPLY PLAN

C2.1. GENERAL

C2.1.1. Purpose. This chapter provides procedures for Special Program Requirements (SPR) and for Demand Data Exchange (DDE) Projected Supply Plan.

C2.1.2. Transactions. This chapter addresses the procedures applicable to the SPR and DDE functions using DLMS 830R and DLMS 830D respectively. Other Defense Logistics Management System (DLMS) formats such as extensible markup language (XML) are also available. See the Defense Logistics Management Standards Program Office Website for available formats on the DLMS IC page.

C2.1.2.1. The DDE Projected Supply Plan function uses DLMS 830D (version 4030) identified by Accredited Standards Committee (ASC) X12 beginning segment (1/BFR12/0200) Planning Schedule Type Code AA—Customized Ordering Forecast. The DDE function is further broken down in 1/LN01/0100 to identify a DDE Projected Supply Plan submission (LN01 Code H) and a DDE Projected Supply Plan cancellation (LN01 Code C) for a given national item identification number (NIIN). This transaction is a DLMS enhancement and has no corresponding DLSS MILSTRAP legacy transaction.

C2.1.2.2. The SPR function uses DLMS 830R (version 4010) identified by ASC X12 beginning segment (1/BFR12/0200) Planning Schedule Type Code XA—Requirement Forecast. SPR functions are further broken down in 2/LIN01/10 to identify SPR Request, SPR Security Assistance Request, SPR Cancellation, SPR Modification, SPR Acceptance or Rejection of Substitute Item, and SPR Inquiry. The corresponding MILSTRAP legacy 80 record position transaction functionality is identified for information purposes in a mixed DLSS/DLMS environment. DLMS 830R provides functionality of MILSTRAP legacy Document Identifier Codes (DIC) DYA, DYB, DYC, DYD, DYG, DYH, DJY, DYL, and DYM. Table C2.T1. provides the specific 2/LIN01/10 correlation to the legacy DICs.

C2.1.2.3. SPR Status transaction is DLMS 870L identified by ASC X12 beginning segment (1/BSR01/020) Status Report Code 9–Response to a Requirement Forecast. This transaction provides MILSTRAP legacy DIC DYK functionality.

C2.1.2.4. Status Notification is DLMS 870L identified by beginning segment (1/BSR01/020) Status Report Code 3–Unsolicited Report. This transaction provides MILSTRAP legacy DIC DZ9 functionality.

C2.2. SPECIAL PROGRAM REQUIREMENTS. This section provides requirement forecasting procedures for items required to support nonrepetitive special programs or projects that cannot be forecast by the inventory control point (ICP) based on demand data, and which have the greatest probability of materializing and resulting in the eventual submission of requisitions. GSA does not participate in the SPR process.

C2.2.1. Forecasting activities may submit SPR requests for requirements meeting one or more of the following criteria:

C2.2.1.1. One-time training exercises or maneuvers.

C2.2.1.2. Repair or rebuild programs that are either nonrecurring or are seldom or irregularly programmed.
C2.2.1.3. New constructions (e.g., ships, buildings).

C2.2.1.4. One-time alterations, modifications, or conversion programs.

C2.2.1.5. Initial issue of existing items (e.g., outfittings, activations, and changes in authorized allowances).

C2.2.1.6. Initial requirements for special operational projects.

C2.2.1.7. Initial testing.

C2.2.1.8. Government-furnished property.

C2.2.1.9. Infrequently planned support operations such as Arctic and Antarctic resupply missions.

C2.2.1.10. Special nonrepetitive situations required to support authorized Security Assistance Program requirements (e.g., initial pipeline stockage requirements in support of approved CLSSA).

C2.2.2. Excluded Requirements. The following types of requirements are excluded from identification as SPRs:

C2.2.2.1. Provisioning, recurring type.

C2.2.2.2. War Materiel Requirements.

C2.2.2.3. Requirements for which the DoD Component has a recurring demand.

C2.2.2.4. Subsistence, all categories.

C2.2.3. SPR Submission and Routing

C2.2.3.1. Submission Timeframe. The time window for submission of SPRs is between 90 calendar days and five years prior to the support date (the first day of the month for which it is anticipated that materiel will be requisitioned for the program). When procurement is necessary, delivery for an early support date may not be possible since the procurement lead time for most items will be greater than 90 calendar days. Therefore, forecasting activities should submit SPRs to ICPs as far in advance of the support date as practical.

C2.2.3.2. Forecasting. Forecasting activities shall prepare an SPR Request Transaction to transmit SPR data to the ICP. When the requirement for an item is such that materiel will be required in phases (e.g., 100 each per month; 100 per quarter), the forecasting activity shall stratify the forecast quantity by the support date as allowed by the DLMS Transaction.
C2.2.4. **DAAS Processing.** DAAS shall pass or route SPR inquiries as follows:

Upon receipt of the DLMS 830R SPR transactions, DAAS shall edit the national stock number (NSN) of the incoming transaction to determine whether 1) the NIIN can be identified, 2) the Federal supply class (FSC) is compatible with the NIIN, and 3) the transaction is directed to the correct source of supply. DAAS shall pass the transaction, reject the transaction, or effect necessary changes to process the transaction and provide appropriate status notification or reject transactions to the submitter as follows:

C2.2.4.1. If the NIIN is valid (including NIINs coded obsolete/inactive) but the FSC and NIIN are not compatible, DAAS shall correct the FSC and provide a DLMS 870L Status Notification Transaction to the submitter. DAAS shall prepare the notification whenever the FSC is corrected in the incoming transaction. Show the correct FSC and Status Code BG in the Status Notification Transaction.

C2.2.4.2. If the NIIN is valid (including NIINs coded obsolete/inactive), screen the source of supply file Service record (or Integrated Materiel Manager (IMM) record when the Service record source is either another DoD Component activity or matches the input transaction “From” organization) and process as follows:

C2.2.4.2.1. **Correct Source of Supply.** If the transaction is directed to the correct non-GSA source of supply, DAAS shall pass the transaction to that activity.

C2.2.4.2.2. **Incorrect Source of Supply—Reroute.** If the inquiry is directed to an incorrect source of supply, and the correct source of supply is not GSA, DAAS shall reroute the transaction to the correct source of supply and transmit a Status Notification to the submitter citing Status Code BM. DAAS shall identify the correct source of supply in the notification transaction.

C2.2.4.2.3. **GSA Directed Transactions.** If the inquiry is directed to a correct GSA source of supply or to an incorrect source of supply, but GSA is the correct source of supply, DAAS shall reject the transaction to the submitter with DLMS 824R, Reject Advice citing Reject Advice Code AX.

C2.2.4.3. If the NIIN cannot be identified, DAAS shall reject the transaction to the submitter citing Reject Advice Code AD.

C2.2.5. **Reject Advice Transaction Recipients.** Activities in receipt of DLMS 824R Reject Advice transactions shall take appropriate action as indicated by the reject advice code. In addition, recipients of Reject Advice Code AB shall advise their designated DoD Component cataloging data contact point of a DAAS source of supply file discrepancy.

C2.2.6. **Status Notification Transaction Recipients.** Activities in receipt of Status Notification Transactions shall notify other activities requiring knowledge of the change.

---

1 Source of supply for obsolete/inactive items will be taken from the source of supply file when possible; otherwise, the source of supply will be the activity identified as the “To” activity in the incoming transaction.
and ensure that all future SPR transactions show the change identified by the status code in the notification.

C2.2.6.1. Recipients of Status Code BG shall update internal SPR records to show the correct FSC identified in the notification. The recipient shall review the NSN (FSC and NIIN) to ensure the SPR being processed is for the desired item. If the NSN is not the desired item, the SPR originator shall submit an SPR Cancellation to the source of supply.

C2.2.6.2. Recipients of Status Code BM shall update their records to show the correct source of supply.

C2.2.7. IMM Processing of SPR Requests

C2.2.7.1. Source of Supply Risk. The IMM measures the size of the requirement being forecasted to determine its acceptability in terms of the risk of long supply being generated. This measurement requires consideration of the size of the forecasted quantity in relation to the normal demand estimated for the item being forecasted, the value (cost) of this quantity, the supply status of the item being forecasted, funding capability of the IMM, accuracy of past forecasts, and the degree of assurance that requisitions will follow.

C2.2.7.2. SPR Status Transaction. The IMM shall determine action to be taken on the SPR and within 15 calendar days after receipt of the request shall provide appropriate status using SPR Status Transaction. SPR status transactions shall advise the forecasting activity of acceptance, rejection (other than for correction and resubmission), or other action required on the SPR. When an IMM receives an SPR Request Transaction that cannot be processed due to erroneous or missing data, the IMM shall reject the request using DLMS 824R for correction and resubmission.

C2.2.8. Inquiry on SPR Requests. When the forecasting activity has not received an SPR Status Transaction or a DLMS 824R within 21 calendar days from the SPR request submission date, the forecasting activity may submit an SPR Inquiry Transaction to the ICP.

C2.2.9. ICP Action on SPR Follow ups

C2.2.9.1. No Record of Receipt. When there is no record of receipt of the original SPR request, the IMM shall process the SPR Inquiry Transaction as an original SPR request.

C2.2.9.2. Replies to SPRRequests. IMMs shall prepare replies to SPR inquiries, as specified in paragraph C2.2.7.

C2.2.10. Modification of SPR Requests. The forecasting activity shall send an SPR Modification Transaction to submit changes for a previously submitted SPR request to replace data in the original request. Submit SPR modifiers only to change the quantity, the project code, the coast designator, the support date, the ship-to address, and/or the
initiator of the SPR requirement. If the originator of the SPR modifier differs from the originator of the original SPR, maintain a record of the revised originator.

C2.2.11. **Response to SPR Modification.** The ICP shall prepare replies to SPR modifiers, as specified in paragraph C2.2.7.

C2.2.12. **Cancellation of SPR Requests.** The forecasting Activity may submit an SPR Cancellation Transaction for a previously submitted SPR request. Cancellations must be for the total quantity applicable to the SPR.

C2.2.13. **Response to SPR Cancellations.** The ICP shall reply to SPR Cancellation Transactions with an SPR Status Transaction citing SPR Status Code PD indicating that the cancellation was accepted.

C2.2.14. **Acceptance/Rejection of Substitute Item.** Forecasting activities in receipt of SPR responses offering a substitute item shall transmit an SPR Acceptance or Rejection of Substitute Item Transaction to indicate acceptance or rejection of substitute materiel.

C2.2.15. **Response to Substitute Item Rejection.** The IMM shall initiate action on the item originally requested. The IMM must prepare status responses as specified in paragraph C2.2.7.

C2.2.16. **Retention of SPR Requests.** The ICP will retain SPR requests until:

C2.2.16.1. The support date of those requirements for which SPR Status Code PA was furnished or until a requisition is received that can be identified to all or a portion of a particular SPR quantity.

C2.2.16.2. One procurement lead time/assembly time away from the support date when procurement/assembly is required in support of those requirements for which SPR Status Code PB was furnished.

C2.2.16.3. Assembly time prior to support date when extra time is required for assembly in support of those requirements for which SPR Status Code PC was furnished.

C2.2.16.4. SPR requests should be retained in accordance with DoDI 5015.02, DoD Records Management Program.

C2.2.17. **Follow-on Status.** The IMM shall provide revised SPR Status Transactions when the situation changes (e.g., change in procurement lead time, procurement is required for materiel originally anticipated to be available from stock). Generally, these situation changes are unusual in nature, are not programmed, and require off-line processing. IMMs must provide the status as specified in paragraph C2.2.7.
C2.2.18. **Preparation of SPR Requisitions**

C2.2.18.1. **Response Timeframe.** When an SPR Status Transaction citing SPR Status Code PA is received, requisitions citing Demand Code P should be submitted for the SPR-related requirements in time to allow for delivery within the appropriate Uniform Materiel Movement and Issue Priority System (UMMIPS) time standard. Demand Code P indicates to the ICP that the requisition is for materiel previously forecasted as an SPR. This enables the ICP to control and apply the appropriate logic for the demand generated by the requisition.

C2.2.18.2. **Establishing Audit Trail.** Requisitions submitted as a result of an SPR shall include the document number from the original SPR to establish an audit trail between the SPR and the subsequent requisitions. This audit trail provides a means to determine whether follow-on requisitions are submitted for requirements forecasted through SPRs.

C2.2.18.3. **Item Deletion.** When an SPR Status Transaction is received citing SPR Status Code PR, the SPR is being deleted and the item is a procurement lead time/assembly time away from the support date. If the requirement is still valid, the requiring activity must immediately submit a DLMS 511R, Requisition citing Demand Code O.

C2.2.19. **Logistics Reassignments**

C2.2.19.1. **Logistics Loss.** When an item is involved in a logistics loss to an IMM of another DoD Component, the losing inventory manager (LIM) shall send an SPR Status Transaction to the forecasting activity containing SPR Status Code PV. This status indicates that the item has been involved in a logistics reassignment and a new SPR Request Transaction must be submitted to the gaining inventory manager (GIM).

C2.2.19.2. **Logistics Loss within Same DoD Component.** When the logistics loss is to an IMM within the same DoD Component, the LIM shall forward the record of the SPR Request Transaction to the GIM. No status need be furnished the forecasting Activity.

C2.3. **DEMAND DATA EXCHANGE PROJECTED SUPPLY PLAN.** This section provides procedures for the exchange of DDE projected supply plan data between DoD Customers. The two components of this business process are the transmission of customer requirements via DDE and DLA/customer collaboration. DLA, in collaboration with participating Components, will document the business rules for submitting and processing DDE, GDP, and ASP via a Joint Collaboration Agreement or Memorandum of Agreement. This agreement must be in place prior to the initial submission of DDE. DLA will use the DDE/collaboration process to improve the accuracy of demand planning to support customer requirements.

C2.3.1. DDE supply planning activities may submit to DLA their projected supply plan/collaboration data for future requirements expected to be obtained from DLA using the DLMS 830D, DDE Projected Supply Plan Transaction. Separate projected supply
plans into monthly periods based on the projected **requirement date materiel is expected for a planned maintenance schedule. Use of the formal collaboration process is restricted to Class IX materiel. Condition guidelines for collaborative forecasting include, but not limited to:**

C2.3.1.1. Requirements for which the DOD Component has a recurring demand.

C2.3.1.2. Subsistence, all categories.

C2.3.1.3. One-time training exercises or maneuvers.

C2.3.1.4. Repair or rebuild programs which are either nonrecurring or which are seldom or irregularly programmed.

C2.3.1.5. **Acquisition of new programs (e.g., Weapon System, Component Equipment).**

C2.3.1.6. One-time alterations, modifications, or conversion programs.

C2.3.1.7. Initial issue of existing items (e.g., out fittings, activations, and changes in authorized allowances).

C2.3.1.8. Initial requirements for special operational projects.

C2.3.1.9. Requirements for initial testing.

C2.3.1.10. Requirements for infrequently planned support operations such as Arctic and Antarctic resupply missions.

C2.3.1.11. Zero or reduced requirements, which are different from past customer demand history patterns.

C2.3.2. **DDE, GDP, ASP Projected Supply Submission and Routing**

C2.3.2.1. **Submission Timeframe.** Submit **DDE forecasting transactions each month during the period of the 22nd through the 28th day of each month.**

C2.3.2.2. **DDE Projected Supply Plan.** Participating DoD Components will prepare **DLMS 830D** DDE projected supply plan for each item Demand Forecast Unit (e.g., NIIN, Ship to DoD activity address code (DoDAAC), and requisitioner (Sold To) DoDAAC) for which the customer wishes to collaborate with DLA. Each transaction set must include the projected supply plan period beginning date and the projected supply plan period ending date. The projected supply plan period span can be as short as 12 months or as long as 60 months; however, DLA recommends that DDE projected supply plans be provided for 60 months in the plan period. **Months with no plan data must include zero quantity projections.**
C2.3.2.3. **Intra-Component optional fields.** Components may use optional fields available in DLMS 830D and 870L to carry intra-Service information as necessary. Optional information received in a DLMS 830D must be perpetuated in the response back to the originator using DLMS 870L.

C2.3.2.4. **DAAS Processing.** The originator calculates forecasted requirements and transmits a DLMS 830D DDE Projected Supply Plan transaction with the appropriate RIC-TO by NIIN via DAAS. When the originator is unable to identify the RIC-TO, use the DAAS routing identifier code (RIC) SGA. DAAS will receive and validate the transaction. If the 830D data fail DAAS edit during evaluation, DAAS will reply to the originator with an 824R Reject Advice transaction. Once notified, the originator will correct and resubmit the transaction.

C2.3.2.5. **Validation of NIIN.** After successful submission, DAAS will evaluate the NIIN (830D 2/LIN02-03/0100 code ZZ) in the transaction with RIC-TO SGA and use FLIS data to determine and populate the appropriate source of supply. DAAS will route all transactions with LSN (alpha characters in the NIIN field) to RIC-TO SMS. If DAAS is unable to validate the NIIN, DAAS will reject the transaction and report to the originator with appropriate reject advice code (MILSTRAP Appendix 2.8 Reject Advice Codes) via DLMS 824R Reject. After the evaluation is complete, DAAS will create a DLMS 830D transaction by source of supply based on the original transaction and route it to the applicable source of supply RIC. DAAS will transmit an image of each DLMS 830D for which RIC SMS was not the source of supply to DLA RIC-TO SMS in order to maintain full visibility of the initial forecasted request.

C2.3.2.6. **Source of Supply Response.** Upon successful transmission of the forecasted requirement, the source of supply will submit a response back to the originator via DLMS 870L Demand and Supply Planning Status/Notification transaction. The source of supply can either accept or reject any DDE, GDP, or ASP forecasted requirement using one of the status codes under

C2.3.2.7. **Forecasting Request without a response.** Prior to submitting a forecasting request, originators must ensure the recipient source of supply has a service agreement in place as DAAS is unable to identify which recipients are participants. Consequently, forecasting requirements without positive confirmation from the source of supply will be processed as rejects. The originator may conduct offline communications with the source of supply in order to obtain positive confirmation and achieve resolution.

C2.3.3. **Processing of DDE Data.** DLA will compare the collaboration customer's projected supply plan to the projected customer supply plan calculated by the Planning and Collaboration Subsystem or the previous collaborative projected supply plan if the NIIN is a recurring Demand Forecast Unit.
C2.3.3.1. Collaborative items (which may or may not exceed system tolerance parameters) shall be available for collaboration interaction with the customer and DLA via the Planning and Collaboration Subsystem.

C2.3.3.2. Items previously identified for inclusion in DDE that are not in the current DDE submission shall remain flagged as Collaborate with the most recent DDE projected supply plan quantities received from the customer. If the customer would like to remove an item from the DDE effort, the customer shall submit a DLMS 830D, DDE Cancellation Transaction for the NIIN and the item will be removed from the DDE/Collaboration effort.

C2.3.3.3. The setting of system tolerance parameters used in this review requires consideration of the following: size of the DDE projected supply plan quantity in relation to the Planning and Collaboration Subsystem forecasted demand for the item; value (cost) of the projected supply plan quantity; accuracy of customer’s past DDE projected supply plans; and degree of assurance that requisitions will follow.

C2.3.4. Collaboration Interaction. All Collaborative items (which may or may not exceed system tolerance parameters) will be available for monthly collaboration interaction with the customer and DLA. The point of contact for the customer will be alerted, via e-mail by the Collaboration lead at the DLA Field Activity (DLA Aviation, Richmond, VA, DLA Land and Maritime, Columbus, OH, DLA Troop Support, Philadelphia, PA, by the seventh business day of every month, to notify the customer of the open and close dates of the monthly collaboration window. The customer will have until the fourth Thursday of the month to complete the review (specific open and close dates will be cited in the e-mail). The DLA demand planner will then have until the fourth Friday of the month (also know as “Demand Month End”) to complete the review and publish the demand plan for inclusion in the projected supply plan.
C3. CHAPTER 3

WAR MATERIEL REQUIREMENTS AND SIMULATED MOBILIZATION EXERCISES

C3.1. GENERAL

C3.1.1. Purpose. This chapter prescribes procedures for War Materiel Requirements (WMR) and simulated mobilization exercise.

C3.1.2. Transactions. This chapter addresses the procedures applicable to the WMR function using the DLMS 830W, WMR Transaction. The WMR function is identified by the DLMS 830W American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 beginning segment (1/BFR12/020) Planning Schedule Type Code XF–War Reserve Forecast. Other DLMS formats, such as Extensible Markup Language (XML), are also available. The DLMS formats are available on the Defense Logistics Management Standards Program Website on the DLMS IC page. The Defense Logistics Standard System (DLSS) Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP) legacy 80 record position counterpart is provided for information purposes in a mixed DLSS/DLMS environment. The DLMS WMR Transaction provides the functionality of MILSTRAP legacy Document Identifier Codes (DIC) DMA, DMB, DMC, DMD, and DME. The 2/LQ01/190 WMR Code corresponds to the legacy DICs.¹

C3.1.2.2. DIC DMB, Nonrecurring U.S. Other WMR Data = LQ01 qualifier ‘LZ’ WMR Code 8–Nonrecurring U.S. Balance War Reserves.

C3.1.2.3. DIC DMC, Nonrecurring Allies Other WMR Data = LQ01 qualifier ‘LZ’ WMR Code 9–Nonrecurring Allies. Balance War Reserves.

C3.1.2.4. DIC DMD, WMR Forecasted Return Data = LQ01 qualifier ‘LZ’ WMR Code 4–WMR Forecasted Reparable Return.

C3.1.2.5. DIC DME, WMR Visibility Data = LQ01 qualifier ‘LZ’ WMR Code 10–Pre-Positioned War Reserve. Wholesale, Protected and Nonprotected.

¹ Refer to legacy DLM 4000.25, DLMS Volume 2, Appendix 3.28 DM_ War Materiel Requirements Data format.
C3.2. WAR MATERIEL REQUIREMENTS

C3.2.2. WMR procedures provide for:

C3.2.1.1. DoD Component submission of WMR data to the integrated materiel managers (IMMs) of the Military Departments, DLA, and GSA.

C3.2.1.2. IMM edit and validation of WMR Transaction data and rejection of incomplete or invalid input.

C3.2.1.3. Providing output from the losing inventory manager (LIM) to the gaining inventory manager (GIM) upon logistics reassignment of an item.

C3.2.3. This chapter also provides guidelines which affect simulated mobilization exercises.

C3.2.4. DoD Component Input. The DoD Components shall send WMR data to reach IMMs by 15 February of each year and shall submit corrections and/or changes as required. Do not submit zero quantity requirements.

C3.2.5. IMM Responsibility. The IMM shall control each DoD Component’s input WMR Transactions by national stock number (NSN), edit the WMR Transactions, and validate the edited transactions for data adequacy and accuracy. The IMM shall consider validated requirements in the annual computation of the Balance War Reserve, and in any recomputation of these requirements upon receipt of corrected or revised input. When a WMR Transaction contains an invalid NSN, unit of issue, quantity, or date, process a DLMS 824R, Reject Advice. However, when the transaction is invalid for any other reason, manually reject the entire submission to the submitting DoD Component. Include all rejects on a listing showing an image of the input transaction and a code identifying the reason for the reject. Mail the listing together with a letter explaining the reject code and action(s) required of the submitter.

C3.2.6. Logistically Reassigned Items. When items are logistically reassigned, the LIM shall send the GIM a listing of WMR data with a supporting WMR Transaction, as prescribed in the Chapter 9 of this manual.

C3.3. SIMULATED MOBILIZATION EXERCISES

C3.3.1. When establishing plans that require simulated mobilization exercises, identify the associated transactions as simulated mobilization exercise transactions as provided in the applicable DLMS transaction. Do not process simulated mobilization transactions in the supply distribution system(s) as action documents that affect accountable/unit records. The DoD Component activities responsible for initiating these exercises must use extreme caution to ensure explicit procedures and complete coordination with all participants.
C3.3.2. C15.3.2. Military Standard Requisitioning and Issue Procedures (MILSTRIP), prescribe Project Codes in the 3E series that are reserved for use in simulated mobilization exercises.
C4. CHAPTER 4

REQUISITIONING

C4.1. **GENERAL.**

C4.1.1. This chapter prescribes procedures for the preparation and submission of requisitions with specific requisitioning requirements involving Not Mission Capable Supply (NMCS), Anticipated NMCS (ANMCS), Pre-Positioned War Reserve Materiel Stock (PWRMS), conventional ammunition, subsistence, and GSA non-mailable items. This chapter also provides procedures for requisition cancellations, modifications, and inquiries.

C4.1.2. In addition, this chapter prescribes the source of supply and storage activity processing procedures of the aforementioned transactions including the preparation and processing of the materiel release, materiel release advice, and DAAS edits associated with requisition processing.

C4.1.3. Specific requisition requirements involving Government Furnished Materiel and Contractor Furnished Materiel are identified in DLM 4000.25 Volume 2, Chapter 26.

C4.1.4. There are additional processing procedures over and above those contained in this chapter that must be applied for serially managed materiel requiring owner visibility at DLA Distribution Centers. The identity of the materiel and the additive procedures are in Chapter 30.1

C4.1.5. **Transactions.** This chapter address procedures applicable submitting and processing requisition-related transactions. The Enterprise Business Standards Office (EBSO) Website provides DLMS electronic data interchange (EDI) transaction formats on the DLMS Implementation Convention (IC) page. The IC page also includes the corresponding MILSTRIP transaction formats by document identifier code (DIC). The corresponding MILSTRIP legacy 80 record position transaction functionality is identified for information purposes in a mixed DLSS/DLMS environment.

C4.1.5.1. **Requisition Transaction.** This transaction is DLMS 511R with Transaction Type Code A0 – Requisition. This transaction provides the functionality of MILSTRIP legacy DIC A0_.

C4.1.5.2. **Requisition Modification Transaction.** This transaction is DLMS 511M with Transaction Type Code AM – Requisition Modification. This transaction provides the functionality of MILSTRIP legacy DIC AM_.

---

1 Refer to ADC 1244.
C4.1.5.3. Requisition Inquiry Transaction is DLMS 869A with Transaction Type Code AF – Requisition Follow-Up. This transaction provides the functionality of MILSTRIP legacy DIC AF_.

C4.1.5.4. Requisition Supply Assistance Request Transaction is DLMS 869A with Transaction Type Code AR – Supply Assistance. There is no equivalent MILSTRIP legacy DIC.

C4.1.5.5. Passing Order Transaction is DLMS 511R with Transaction Type Code BM – Requisition Passing Order. This transaction provides the functionality of MILSTRIP legacy DIC A3_.

C4.1.5.6. Referral Order Transaction is DLMS 511R with Transaction Type Code BN – Requisition Referral Order. This transaction provides the functionality of MILSTRIP legacy DIC A4_.

C4.1.5.7. Materiel Release Order Transaction is DLMS 940R with Transaction Type Code NA – Material Release Order. This transaction provides the functionality of MILSTRIP legacy DICs A5_ with the exception of A5J, AMJ; or A4_ (except with Distribution Code 2 or 3).

C4.1.5.8. Materiel Release Confirmation Transaction is DLMS 945A with Transaction Type Code NJ – Material Release Confirmation. This transaction provides the functionality of MILSTRIP legacy DIC ARA, ARB, AR0, AUA, AUB, and AU0).

C4.1.5.9. Materiel Release Advice Transaction is DLMS 945A with Transaction Type Code NL – Material Release Advice. This transaction provides the functionality of MILSTRIP legacy DIC AE6.

C4.1.5.10. Materiel Release Denial Transaction is DLMS 945A with Transaction Type Code NK – Material Release Denial. This transaction provides the functionality of MILSTRIP legacy DIC A6_, except A6J.

C4.1.5.11. Materiel Cancellation Advice is DLMS 945A, with Transaction Type Code NR – Material Release Cancellation Advice. This transaction provides the functionality of MILSTRIP legacy DIC AG6.

C4.2. PREPARATION OF REQUISITIONS. Requisitioning organizations must use the DLMS 511R, Requisition, to submit requisitions for all materiel requirements. Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event to include SLOA mandated standard financial information system (SFIS) elements.\(^2\) DLMS requisition transactions support inclusion of SLOA required elements. Pending full implementation of SLOA, Transaction Services will facilitate interoperability by updating selected SLOA data fields based upon

\(^2\) Refer to ADC 1043/1043A.
the requisitioners Service/Agency and Fund Code. If discrete values for the SLOA data elements in the transaction do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction, reject with the DLMS 870S Supply Status citing Status Code CF. If invalid/missing fund code for Signal Code A, B, C, J, K, or L, reject with the DLMS 870S/DIC AE9 Supply Status citing Status Code CF. Requisitions must be edited by the ordering application prior to acceptance of the order for further processing. Image and post-post transactions will not be rejected by the source of supply or DAAS.³

C4.2.1. Document Number. The document number uniquely identifies each requisition within the supply system as follows:

C4.2.1.1. Identification Code. This consists of the first six positions of the document number and is a six-position constructed code for identification purposes. Use the applicable DoD activity address code (DoDAAC) (AAC for Federal Civil Agencies).

C4.2.1.2. Transaction Control Date. This is a four-position ordinal date (one position year of century and three-position day of year) to identify the requisition preparation date. It is located in the seventh through tenth positions of the document number.

C4.2.1.3. Serial Number. This is the assigned four-position line item code for each requisition within the transaction set. It is located in the eleventh through fourteenth positions of the document number. Use the Utilization Code in the LQ segment to identify the purpose of the requisition.

C4.2.2. Priority Designators and Required Delivery Dates

C4.2.2.1. Assignment of PD. The priority designator (PD) is based upon a combination of factors that relate the relative importance of the requisitioners mission, expressed by its Force or Activity Designator (F/AD) (a Roman numeral) and the urgency of need of the end use expressed by the Urgency of Need Designator (UND). The F/AD is assigned by the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, or a DoD Component authorized by the Chairman of the Joint Chiefs of Staff, to assign F/ADs for their respective forces, activities, programs, or projects. The criteria for assignment of an appropriate F/AD is in DoDM 4140.01. The requisitioning activity determines the UND (an alphabetic character).

C4.2.2.2. Commanding Officer Responsibilities. Commanding officers of requisitioning installations are responsible for the accurate assignment of PDs consistent with the F/AD and UND, and the validity of required delivery dates (RDDs) when assigned to requisitions. Commanding officers of ILCOs, receiving requisitions from SA requisitioners, are responsible for review of assigned PDs and delivery dates.

³ Refer to ADC 1043E.
Commanding officers must accomplish the following reviews prior to sending requisitions to the source of supply:

C4.2.2.2.1. **Commander Requirements Review.** Commanders (or acting commanders during absences) must personally review all requirements based on UND A to certify an inability to perform the mission.

C4.2.2.2.2. **Designation of Reviewers.** Commanders must designate, in writing, specific personnel who will personally review all requirements based on UND B to certify that the urgency has been accurately determined.

C4.2.2.3. **Accurate assignment of the PD is a key element in ensuring that potentially scarce resources are appropriately allocated.** To preclude abuse or misuse of the PD, the Office of the Secretary of Defense has directed the Transaction Services to validate use of the PDs 01, 04, and 11, which are associated with special programs and top national priorities. Inappropriate assignments are identified for management review or automatic downgrading based upon Service/Agency guidance. To pass validation, requisitions reflecting PD 01, 04, or 11 must identify the DoDAAC of the activity authorized use of F/AD I in the document number, ship-to, bill-to, or mark for party.  

C4.2.2.4. **Determining UND.** Determine the appropriate UND as follows:

C4.2.2.4.1. **UND A.** Use UND A in requisitioning materiel that is:

C4.2.2.4.1.1. Required for immediate end-use and without which the force or activity is unable to perform its assigned operational mission or without which the force or activity will be unable to perform its assigned operational mission within 15 calendar days (20 calendar days if the force or activity is located outside continental United States (OCONUS)).  

C4.2.2.4.1.2. Required for immediate installation on, or repair of, mission-essential materiel and without which the force or activity is unable to perform its assigned operational mission.

C4.2.2.4.1.3. Required for immediate end-use for installation on, or repair of, direct support equipment (such as ground support and firefighting) necessary for the operation of mission-essential materiel.

---

4 Refer to ADC 1009A. Automatic downgrade for PD 01 requisitions will not be authorized pending implementation of the mark-for party as an alternate location for the authorized activity DoDAAC.

5 Materiel requirements of this nature affect the readiness of mission-essential materiel and actually result in a report of casualty in accordance with equipment readiness information systems authorized by the Office of the Secretary of Defense (OSD), the Chairman of the Joints Chief of Staff, or the DoD Component headquarters.

6 Ibid.
C4.2.2.4.1.4. Required for immediate end-use in the replacement or repair of mission-essential training materiel and without which the force or activity is unable to perform its assigned training missions.

C4.2.2.4.1.5. Required for immediate end-use to effect the replacement or repair of the essential physical facilities of an industrial or production activity and without which that activity is unable to perform its assigned missions.

C4.2.2.4.1.6. Required for immediate end-use to eliminate an existing work stoppage at an industrial or production activity that is engaged in manufacturing, modifying, or maintaining mission-essential materiel.

C4.2.2.4.1.7. Required for immediate end-use to eliminate an existing work stoppage on a production line that is performing repair and maintenance of unserviceable items having a Military Mission Essentiality Code of 1 or 2.

C4.2.2.4.2. **UND B.** Use UND B in requisitioning materiel that is:

C4.2.2.4.2.1. Required for immediate end-use and without which the capability of the force or activity to perform its assigned operational mission is impaired.

C4.2.2.4.2.2. Required for immediate installation on, or repair of, mission-essential materiel and without which the capability of the force or activity to perform its assigned operational missions is impaired.  

C4.2.2.4.2.3. Required for immediate end-use for installation on, or repair of, auxiliary equipment. Auxiliary equipment is defined as equipment that supplements mission-essential materiel or takes the place of such materiel should it become inoperative.

C4.2.2.4.2.4. Required for immediate end-use in the replacement or repair of mission-essential or auxiliary training equipment and without which the capability of the force or activity to perform its assigned missions is impaired.

C4.2.2.4.2.5. Required for immediate end-use to effect replacement or repair of the essential physical facilities of an industrial or production activity and without which the capability of that activity to perform its assigned missions is impaired.

C4.2.2.4.2.6. Required to preclude an anticipated work stoppage at an industrial or production activity that is engaged in manufacturing, modifying, or maintaining mission-essential materiel.

---

7 Materiel requirements of this nature directly affect the capability of the force or activity to perform its mission; it can temporarily accomplish assigned missions and tasks but with effectiveness and efficiency below the DoD Component Headquarters-determined level of acceptable readiness.
C4.2.2.4.7. Required to preclude an anticipated work stoppage on a production line performing repair and maintenance of unserviceable intensive management or critical items.

C4.2.2.4.8. Required for the immediate replacement of the safety level quantity of mission-essential items on allowance and load lists (such as, prescribed load lists, spares kits, station sets, or coordinated shipboard allowance lists) when the last item has already been issued.

C4.2.2.4.9. Required for immediate stock replenishment at overseas forward area supply activities when a customer's mission-essential stock level goes below the safety level and stock due in is not anticipated to arrive prior to stock on hand reaching a zero balance. The quantity ordered should be the minimum amount sufficient to ensure the maintenance of a positive stock balance until materiel that is due in actually arrives.

C4.2.2.4.3. **UND C.** Use UND C in requisitioning materiel that is:

C4.2.2.4.3.1. Required for on-schedule repair, maintenance, manufacture, or replacement of all equipment.

C4.2.2.4.3.2. Required for replenishment of stock to meet authorized stockage objectives.

C4.2.2.4.3.3. Required for purposes not specifically covered by any other UND.

C4.2.2.5. **Deriving PDs.** Refer to Table C4.T1 to derive the PD from the F/AD and UND.

Table C4.T1. **Derivation of Priority Designators (Relating F/AD to UND)**

<table>

C4.2.2.6. **Validation of F/AD Activities.** By direction of the Office of the Secretary of Defense, the Transaction Services will validate F/AD I usage through the requisitioning process. Transaction Services will maintain an edit table consisting of authorized F/AD I activities. To preserve accuracy and timely update, the Joint Chiefs of Staff (JCS) will forward to Transaction Services and GSA all Office of Secretary of
Defense (OSD) approved assignments of F/AD I immediately upon approval. Telephonic or electronic communication, to include online update, with Transaction Services and GSA is authorized for time-sensitive updates; however, formal documentation will be forwarded to Transaction Services and GSA to support inclusion of all F/AD I authorized activities. In order to maintain unclassified communication, the JCS contact points are advised to identify authorized activities by DoDAAC only (no clear-text activity names) and make no reference to the associated F/AD. F/AD I requisitions (DLMS 511R or DLMS 511M, Modification, Transaction Type Codes A0, BM, BN, AM) that do not identify an authorized activity in the document number, ship-to, bill-to, or mark-for fields will be identified for investigation without interruption of normal requisition processing. In addition, Transaction Services will assess the validity of transactions that bypass the F/AD I validation process as a result of alternative requisition submission, (e.g., Defense Supply Expert System (DESEX)) input, using the requisition image transaction. Suspected abuse will be output to the Unauthorized Priority Designator Assignment Report.

C4.2.2.6.1. The Unauthorized Priority Designator Report produced by Transaction Services identifies suspected abuse of PD assignment. This report also provides visibility of requisitions downgraded automatically by Transaction Services during requisition processing based upon the DoD Component authorization. The report is prepared monthly. Summary sections, Parts I, II, IV, and V, are also available quarterly and annually. The report is in seven parts as follows:

C4.2.2.6.1.1. Part I – Service/Agency Summary of Requisitions Submitted Through DAAS,

C4.2.2.6.1.2. Part II – DoDAAC Summary by Service/Agency of Requisitions Submitted Through DAAS,

C4.2.2.6.1.3. Part III – Requisition Detail by DoDAAC of Requisitions Submitted Through DAAS,

C4.2.2.6.1.4. Part IV – Service/Agency Summary of Requisitions Not Submitted Through DAAS,

C4.2.2.6.1.5. Part V – DoDAAC Summary by Service/Agency of Requisitions Not Submitted Through DAAS,

C4.2.2.6.1.6. Part VI – Requisition Detail by DoDAAC of Requisitions Not Submitted Through DAAS,

C4.2.2.6.1.7. Part VII – Requisition Detail by DoDAAC for Requisitions Downgraded to a Lower Priority by DAAS.

C4.2.2.6.2. RESERVED.

C4.2.2.6.3. **GSA Requisitions.** DLMS requisitions submitted directly to GSA for GSA managed items will be reviewed for appropriate PD assignment prior to
further processing. Any requisitions with PD 04 or PD 11 will be downgraded as follows: if the PD is 01 (for USCG, USAF JM accounts and SA only) then DAAS will change to PD 03; if PD 04, DAAS will change to PD 06; and if PD 11, DAAS will change to PD 13.\(^8\) PD 01 requisitions may be downgraded with the exception of Air Force (Service Code F) requisitions.\(^9\) GSA will notify the requisitioner of the downgrade by generating a Supply Status Transaction with BK Status, and route to DAAS for distribution to the correct recipient(s) depending on the Media/Status and Distribution Codes in the transaction. The modified requisition will be forwarded within GSA for processing based on the new PD. GSA will report downgrading action to DAAS via the DLMS 511R (future enhancement) Transaction. Action will allow Transaction Services to merge GSA priority abuse data into the Unauthorized Priority Designator Assignment Report on a monthly basis.

C4.2.2.6.4. FedMall Requisitions. DAAS will apply automatic downgrading to FedMall prepared requisitions unmatched to the Authorized DoDAAC List with exception of Air Force PD 01 and MILSTRIP Order Entry Program (MOES) PD 01.

C4.2.2.6.5. Participating Service/Agency Points of Contact Responsibilities. DoDM 4140.01, Appendix 9, requires the DoD Components to designate a single office of primary responsibility to act as focal point for Uniform Materiel Movement and Issue Priority System (UMMIPS) matters. To provide clear visibility of such points of contact, the JCS, the Military Services, DLA (if needed), and GSA, will provide contact information to the Defense Logistics Management Standards Program Office for publication in the DLM 4000.25, Volume 2, Appendix 7.14. Contact information will include office name/symbol and communications numbers. Primary and alternate information should be included. The DoD Component responsibilities for monitoring F/AD assignments and conducting annual reviews are prescribed in DoDM 4140.01.

C4.2.2.6.6. The Service/Agency F/AD Points Of Contact: Refer to the Defense Logistics Management Standards Website for the list of contacts.

C4.2.2.7. Special Circumstance Precedence. In the following special circumstances, use the stated PD, irrespective of F/AD, but do not use for the routine replenishment of stocks to meet authorized stockage objectives:

---

\(^8\) Effective November 3, 2003, Transaction Services implemented logic change to allow requisitions with DoDAAC N00421 in rp 30-35, Document Number Serial Numbers FQ and GQ (in rp 40-41) and PDs 04 and 11 to pass through Transaction Services processing without being downgraded. Requisitions with DoDAAC N00421, document number serial numbers beginning with FQ and GQ for PDs 01, 04, and 11 will not be included in the monthly Priority Designator Reports.

\(^9\) Refer to ADC 279, Automated Downgrade for Priority Abuse and Reporting Procedures. The exception for the Air Force is an interim waiver pending better methodology for identification of the F/AD 1 authorized activity in AF requisitions.
C4.2.2.7.1. **Emergency Medical/Disaster Supplies.** Use PD 03 for medical or disaster-relief supplies or related items of equipment that are required immediately for:

   C4.2.2.7.1.1. Prolonging life, relieving avoidable suffering, or expediting recovery in case of injury, illness, or disease.

   C4.2.2.7.1.2. Avoiding or reducing the impact of epidemics or similar potential mass illnesses or diseases when in the opinion of medical professionals the probability of epidemics or similar potential mass illnesses is imminent.

C4.2.2.7.2. **Emergency Civil Disturbance Equipment.** Use PD 03 for emergency supplies or items of equipment that are required immediately for controlling a civil disturbance, civil disorder, or rioting.

C4.2.2.7.3. **Individual Emergency Supplies Precedence.** Use PD 06 for emergency supplies of individual and organizational clothing required immediately to provide a minimum of essential clothing to active duty military personnel who are actually without their required clothing.

C4.2.2.8. **Specific End-Use Requisitions.** If local stocks are exhausted and the local supply activity must requisition a specific immediate end-use requirement for a supported activity with a higher F/AD, the supply activity may assign a PD, commensurate with the F/AD of the supported unit, to the specific requirement. Do not use this authority for the routine replenishment requirements of the supported unit.

C4.2.2.9. **Commercial Contractor GFM Requisitions.** Whenever a DoD Component executes a contract that provides that a commercial contractor will requisition GFM from the DoD distribution system, the DoD contracting officer will advise the contractor of the PDs to use in such contractor-prepared requisitions. The advice will be aware of the F/AD of the national priority program, force or activity for which the contract is executed, and the potential urgencies of need.

C4.2.2.10. **Issue Priority Groups.** PDs are grouped into Issue Priority Groups (IPGs) as follows:

   C4.2.2.10.1. PDs 01, 02, and 03 form IPG I
   C4.2.2.10.2. PDs 04, 05, 06, 07, and 08 form IPG II
   C4.2.2.10.3. PDs 09, 10, 11, 12, 13, 14, and 15 form IPG III.

C4.2.2.11. **Required Delivery Dates (RDD)\)**

   C4.2.2.11.1. **Response Time Requirements.** Requisitioning activities, after determining the appropriate PD applicable to requisitions, will determine the appropriate entry for the RDD data field. The combination of the PD and the
designation or nondesignation of an RDD or other allowable entry\textsuperscript{10} will determine the supply and transportation system response time requirements. The response times (UMMIPS time standards) are displayed in DoDM 4140.01.

C4.2.2.11.2. **Nonstandard Delivery Times.** When an RDD shorter than the UMMIPS time standards is assigned, the appropriate PD, consistent with the activity’s F/AD and UND, must be cited in the requisition.

C4.2.2.11.3. **Customer Unspecified Delivery Date.** If the customer does not specify a delivery date, the customer should expect the total time from order placement to delivery to be within the total order and ship time specified by the UMMIPS time standards.

C4.2.2.11.4. **Mandatory RDD Data Field Requirements.** For subsistence, the RDD is mandatory in all requisitions, with the assigned PD prescribing the precedence of internal supply processing actions for requisitions showing identical RDDs. To ensure delivery on the RDD, the Inventory Control Point (ICP)/storage activity may bank the requisitions until the correct processing date; computed by subtracting number of days needed for depot processing and transit time from the RDD. Submit all requisitions using schedules established by the ICP.

C4.2.2.11.5. **Collocated Stock.** If the customer is collocated with the storage activity issuing the materiel, or has, through local negotiations, obtained collocated customer status and does not require the fastest possible service of the supply and transportation system, the customer should cite Special Requirements Code 444 in the LQ segment and not indicate an RDD.

C4.2.2.12. **Expedited Handling and Expedited Transportation.** Requisitioners may request expedited handling and transportation by citing Special Requirements Code 777.

C4.2.3. **Nonreimbursable Materiel.** Use the no-charge indicator in non-excess personal property requisitions to identify the requisitions for nonreimbursable materiel. Use the utilization code in requisitions to the DLA Disposition Services for excess personal property requisitions to denote free issue. See Chapter 16 for reutilization and marketing requisitioning procedures.

C4.2.4. **Requisitioning from DLA Disposition Services.** See Chapter 16, Disposition Services, for requisitioning procedures.

C4.2.5. **Requisitioning Contractor Inventory From Plant Clearance Automated Reutilization Screening System (PCARSS).** Acquiring agencies may view excess Government-furnished property (GFP), create requisitions, and see the status of current requisitions using PCARSS eTools. Authorized users may search for inventory or

\textsuperscript{10} Non-date entries in the RDD field, (i.e., Codes E, F, N, R, 444, 555, 777, and 999), are referenced as Special Requirement Codes under the DLMS.
create alerts to be notified when desired items become available. The requisition content does not conform to MILSTRIP procedures/formatting. Detailed information about PCARSS requisitioning procedures is available on the DCMA Website.

C4.2.6. **Exception Data.** Requisitioners must limit repetitive exception data to aid timely source of supply processing of requisitions to meet IPG processing times, standard delivery dates (SDDs), or RDDs, particularly those that satisfy high priority requirements. Use available requisitioning capabilities to ensure maximum utilization of automated processes. Processing exception data requisitions is resource intensive, prone to errors, and generally delays required support. The sources of supply will disregard all unnecessary exception data (such as ship by commercial air, do not use postal system, ship by fastest traceable means, or ship overnight delivery) and continue processing. Sources of supply will process all requisitions under UMMIPS (see DoDM 4140.01). Within the UMMIPS time segment for transporting the materiel, it is the shipper’s prerogative to select the mode of shipment based on time, distance, item characteristics, and economic factors. The repetitive use of the same exception ship-to address is an uneconomical way of doing business for all concerned. A separate DoDAAC assignment for this type of ship-to address should be made or the Transportation Account Code (TAC) 2 address of the involved activity should be changed and the resulting DoDAAC(s) used on applicable requisitions. Activities having multiple locations should assign a separate DoDAAC to each receiving location. It is incumbent upon the requisitioner to work with the applicable DoD Component focal point to develop procedures to automatically process requisitions.

C4.2.7. **Limitation on Use of Exception Data**

C4.2.7.1. **Applicability.** Exception data will normally be limited to the conditions listed below. Commanders must approve, or delegate in writing to specific personnel the authority to approve, the submission of exception-data requisitions.

C4.2.7.2. **Authorized Conditions.** Authorized conditions for use of exception ship-to addresses are listed below. Requisitions containing exception ship-to addresses other than those listed will be rejected with Status Code D6. As of April 1, 2014, the inclusion of a country code not valid with the current Geopolitical Entities, Names, and Codes (GENC) Standard will result in a DAAS reject. For requisitions (DLMS 511R, 511M, 869F) and materiel release orders (DLMS 940R), DAAS will reject using the DLMS 824R Reject Advice citing Reject Advice Code AU.11

C4.2.7.2.1. Sales/donations/issues of materiel to qualifying Federal, state, or civil organizations or individuals approved by the Service Secretaries.

C4.2.7.2.2. Issues of nuclear assets as directed by Defense Threat Reduction Agency to Department of Energy contractors.

C4.2.7.2.3. Materiel in Supply Condition Code (SCC) L to contractors.

---

11 Refer to ADC 1075.
C4.2.7.2.4. Issues required by national emergency or natural disasters.

C4.2.7.2.5. Shipments of ammunition requiring special controls.

C4.2.7.2.6. Shipments to contractors for special testing.

C4.2.7.2.7. Requisitions from deployed naval units with an R or V in the first position of the document number; Utilization Code E, G, or W; PD 01, 02, or 03; and Special Requirements Code 999.

C4.2.7.2.8 FedMall-generated requisitions using a Government purchase card as the method of payment and the non-contractor ship-to location is not identified by a DoDAAC. Requisitioners must use the DoDAAC applicable to the ship-to locations when assigned. See paragraph C4.2.4. for additional guidance.

C4.2.7.3. Limitations. Exception data will normally be limited to the following:

C4.2.7.3.1. Non National Stock Number (NSN) lumber products identified and ordered by description only or other commodities that require additional descriptive information.

C4.2.7.3.2. Authorization/identification for items when such requirement is imposed by the ICP, by the parent Component, or by the requisitioning activity.

C4.2.7.3.3. NSN requirements needing additional identifying information; for example, requisitions initially rejected with Status Code CG or CJ.

C4.2.7.3.4. Requisitions for LEVEL 1/SUBSAFE and nuclear reactor plant materiel.

C4.2.7.3.5. NSN items for chemicals for boiler water and feed water analysis.

C4.2.7.3.6. Requisitions used to establish a registered user with the ICP in a Primary Inventory Control Activity (PICA)/Secondary Inventory Control Activity (SICA) situation.

C4.2.7.3.7. Requisitions for Marine Corps Pre-Positioned War Reserve (PWR) or Pre-Positioning Ships Program.

C4.2.7.4. Automated submissions of requisitions containing exception ship-to addresses may be authorized by agreement with the source of supply. Exception ship-to addressing is only authorized where the ship-to location is not identified by a DoDAAC. This exception cannot be applied to requisitioning for shipment to a contractor. Automated submissions must include identification of the customer via a system-generated customer identification code that cannot be overridden by the user as described under Volume 2, Appendix 6.35, Customer Identification. DAAS will generate the customer identification for automated submissions (e.g., via Defense Automatic
Addressing System Automatic Message Exchange System (DAMES) of the DLA-supported DIC YRZ requisition trailer for ship-to exception data.

C4.2.7.5. Exception Address Information in the Materiel Release Confirmation. The shipping activity must include address line details in the MRC when the full address details would not otherwise be available to the owner/program manager transactionally. When the owner-generated MRO identifies a clear-text ship-to address there is no requirement to perpetuate this address in the confirmation beyond the first address line containing the organization name.

C4.2.8. Special Program Requirements. Requisitions resulting from special program requirements (SPRs) must cite the associated SPR transaction number to establish an audit trail between the draw-down requisition and the SPR against which the requirement was established.

C4.2.9. Nonstandard Materiel. The requisitioner may cite an estimated unit price to advise the source of supply of a reasonable expectation of the cost of the item. The source of supply may contact the requisitioner, if in its estimation, the price incongruity between estimated price and quoted price warrant further clarification relative to the item being ordered. Requisitioners should use the last price paid as their estimate if they have previously ordered the item or use the price of a similar item ordered if they have not previously ordered the item.

C4.2.10. Preparation/Processing of Requisitions Submitted Via Internet Ordering Applications. Developers and users of internet ordering applications which permit requisitions to be initiated outside the responsible Component’s supply system, (e.g., direct customer input to FedMall, GSA Advantage/GSA Global, etc.) will take precautions to ensure that only authorized personnel place orders and all standard financial and logistics procedures are followed.

C4.2.10.1. DoD Components authorizing the use of ordering processes external to the Component-sponsored supply system will:

C4.2.10.1.1. Establish internal controls to identify/approve authorized users. This may be accomplished in coordination with the ordering application program management or independently in the absence of a satisfactory registration program for the internet ordering process.

C4.2.10.1.2. Notify users that they are required to manually establish an obligation for requisitions dependent on Interfund payment procedures, prior to/concurrent with placing orders via internet ordering applications, except where an interface is established with the requisitioner’s Component application to validate funds availability and establish an obligation.

C4.2.10.1.3. Ensure that appropriate procedures are established to record the demand and establish a due-in/pre-positioned materiel receipt under DoD MILSTRAP/DLMS based upon status provided by the supply source. Alternative
manual Component procedures may be employed pending systemic interfaces to support return of supply and shipment status by the supply source.

C4.2.10.1.4. Ensure materiel receipt acknowledgement under DoD MILSTRAP/DLMS procedures via systemic interface or, where not available, instruct users to provide receipt notification via FedMall (this includes non-FedMall originated orders).

4.2.10.2. Supply sources authorizing the use of ordering processes external to the customer’s Component-sponsored supply system shall:

C4.2.10.2.1. Coordinate with DoD Components to establish controls to ensure users are identified and authorized. If a satisfactory registration program is not available, users must be alerted to comply with Component-directed procedures.

C4.2.10.2.2. Support adherence to standard financial procedures via systemic interface or manual procedures as follows:

C4.2.10.2.2.1. Establish an interface between the external ordering application and the appropriate Component-sponsored application to validate funds availability and establish the obligation, or

C4.2.10.2.2.2. Pending development of automated processing, alert users to comply with Component-directed manual procedures.

C4.2.10.2.2.3. Procedures for real-time funds availability for on-line applications are provided under DLMS Vol 4, Chapter 7.12

C4.2.10.2.3. Use standard requisition formats under MILSTRIP/DLMS where necessary to transmit the requisition from the external ordering application to the source of supply for further processing.

C4.2.10.2.4. Provide order and shipment status information to the customer and applicable status recipients in accordance with MILSTRIP/DLMS.

C4.2.10.2.5. Where feasible, internet ordering applications will integrate use of a replicated DoDAAC table to perform validation of requisitions for authorized ordering, bill-to, and ship-to activities according to the DoDAAC Authority Code. If the DoDAAC fails the authority code edits in C4.10.10., the transaction will be rejected.

C4.2.11. Reserved

12 Refer to ADC 328
C4.2.12.1. General

C4.2.12.1.1. Approval Authority. Commanders will approve, or delegate in writing to specific personnel the authority to approve, all NMCS/ANMCS requisitions and submit the requisitions by the most expeditious means. Commanders of the DoD Component ILCOs will approve, or delegate in writing to specific personnel the authority to approve, all FMS CLSSA requisitions applicable to NMCS or ANMCS conditions.

C4.2.12.1.2. Priority Requirements. Submit NMCS and ANMCS requisitions only for the quantities of materiel needed to return the mission-essential system or equipment to mission capable/operationally ready status or when items are not available in ready-for-issue condition at the supporting post, camp, station, or OCONUS theater. Use overnight or next day delivery service for NMCS and ANMCS shipments whenever possible.

C4.2.12.2. Not-Mission-Capable Supply Conditions Meeting Special Requirements Code 999

C4.2.12.2.1. Use. Use Special Requirements Code 999 in PD 01-03 requisitions for materiel that will cause an NMCS condition to occur in mission-essential systems and equipment. Special Requirements Code 999 identifies transactions related to critical items as requiring expedited handling. Any special requirements code used in the requisition must appear in the materiel release order (MRO) and the shipping documentation. This procedure applies only to NMCS materiel shipped to U.S. Forces OCONUS or to Forces alerted for deployment within 30 calendar days of the date of the NMCS requisition. Special Requirements Code 999 does not apply to SA.

C4.2.12.2.2. Purpose. Special Requirements Code 999 identifies the need for expedited handling of the NMCS materiel when meeting the specific conditions listed below. (The commanding officer of the requisitioning activity will either personally review, or delegate in writing to specific personnel the authority to review, all requisitions identified for expedited handling to certify compliance with the prescribed criteria.)

C4.2.12.2.2.1. The requisitioning unit must possess F/AD I, II, or III, and,

C4.2.12.2.2.2. The items or equipment required are causing mission-essential systems or equipment to be incapable of performing any of their assigned missions (NMCS) or,

C4.2.12.2.2.3. The items or equipment required have been identified during maintenance or testing as necessary to prevent mission-essential systems or equipment from being unable to perform assigned operational missions or tasks within five calendar days of the date of the requisition.

C4.2.12.3. NMCS Conditions Meeting Special Requirements Other Than Special Requirements Code 999. Apply the following to requisitions for NMCS
conditions other than Special Requirements Code 999 originating from activities where Forces in CONUS are not alerted for deployment:

C4.2.12.3.1. Use PDs 01-08 only.

C4.2.12.3.2. Cite Special Requirements Code N. Note: FMS requisitions applicable to NMCS conditions will cite Special Requirements Code N, which identifies transactions related to critical items and requiring expedited handling.

C4.2.12.3.3. Indicate short RDDs.

C4.2.12.3.4. Use the PD to process these requisitions.

C4.2.12.4. ANMCS Conditions. Prepare requisitions for materiel to prevent degradation of the mission capability of such systems/equipment as follows:

C4.2.12.4.1. Use PDs 01-08 only.

C4.2.12.4.2. Cite Special Requirements Code E. Note: FMS requisitions applicable to ANMCS conditions must cite Special Requirements Code E, which identifies transactions related to critical items and requiring expedited handling.

C4.2.12.4.3. Indicate short RDDs.

C4.2.12.4.4. Use the PD to process these requisitions.

C4.2.13. Pre-Positioned War Reserve Material Stock (PWRMS) Requisitions

C4.2.13.1. Initial Fill. Use Demand Code O and Project Code 3AA to identify requisitions for the initial fill of PWRMS consumable item requirements. Use Project Code 3PR in PWRMS replenishment requisitions. DoD organizations cannot submit non-reimbursable requisitions to GSA.

C4.2.13.2. Reimbursements. Use the appropriate treasury symbol number and fund purpose code in all reimbursable requisitions for PWRMS requirements. Only use PDs 11-15 in reimbursable requisitions for PWRMS requirements; however, if overriding or operational situations justify immediate supply support, use PDs 01-03.

C4.2.14. Conventional Ammunition Requisitions

C4.2.14.1. DoD Component owners of single manager for conventional ammunition (SMCA) managed items may grant authority to the SMCA ICP to issue assets below established stock reservation levels. The Component owner must convey this authority to the SMCA ICP by using Advice Code 2S in a DLMS 511R transaction.

C4.2.14.2. Use Advice Code 3Q, 3V, 3W, 3X, 3Y, or 3Z, as applicable, when usable SCC E materiel is acceptable.

C4.2.15. Special GSA Procedures on Non-Mailable Items
C4.2.15.1. **Advice Code 2A Processing.** GSA will process requisitions received with Advice Code 2A (item not available locally) regardless of the possible excessive transportation costs.

C4.2.15.2. **Low Item Value.** GSA will cancel requisitions (with Status Code CW) when received without Advice Code 2A for an item valued at $25 or less if, at the time of shipment, transportation costs incurred for shipping that order is in excess of 50 percent of the item value. GSA will notify the ordering activity when this condition exists and the requisitioner should attempt to procure the item locally. If local procurement cannot be effected, submit a new requisition with Advice Code 2A. In response, GSA will supply the item regardless of the transportation costs.

C4.2.15.3. **Non-Applicability.** These procedures do not apply to SA requisitions.

C4.2.16. **Special Procedures Associated with Industrial/Maintenance Site Requisitions**

C4.2.16.1. **Industrial/Maintenance Site Requisitions Subsequent to Receipt of Product Quality Deficient Materiel.** Under approved procedures for Base Realignment and Closure (BRAC) Supply, Storage and Distribution (SS&D) Inventory Management and Stock Positioning (IMSP) industrial/maintenance sites, the requiring activity is authorized to submit requisitions or requisition alerts (Navy IMSP only) citing Management Code P to request the DLA source of supply satisfy the specified requirement for an alternative source. These replacement requisitions will also include the original funded requisition document number/suffix for cross-reference. This is applicable when timely replacement is required subsequent to receipt of a quality deficient item for which a Product Quality Deficiency Report (PQDR) has been submitted. Use of Management Code P ensures materiel received is not subject to the same quality deficiency as previously supplied materiel and avoids delays while existing wholesale stock is screened for quality.

C4.2.16.2. **Industrial/Maintenance Requisitions Subsequent to Receipt of Storage Activity Denial for Release of Materiel Purchased from DLA.** Under approved procedures for BRAC Inventory Management and Stock Positioning (Navy IMSP only) industrial/maintenance sites, the requiring activity is authorized to requisition citing Management Code 3 or 9 to request the DLA source of supply satisfy the specified requirement from an alternative storage location or new procurement, if no stock is available. This is applicable only when re-requisitioning subsequent to purchase of materiel that was sourced from a collocated depot without visual inspection of the materiel. Use of the Management Code 3 will indicate that purchased materiel did not satisfy shelf-life requirements. Management Code 9 will indicate that the materiel was not available in one continuous length. The prior (original) requisition document number and shipment suffix code (if applicable due to split shipment), must be included on the new requisition. The originally purchased materiel will be returned to DLA via BRAC returns procedures.
C4.2.17. **Timeframes and Submission of Requisitions**

C4.2.17.1. **Frequency.** The frequency of submitting requisitions is the sole prerogative of the requisitioner and, except for subsistence items; the distribution systems will not prescribe scheduling. Submit requisitions when necessary to meet requirements for stock or to meet specific requirements for immediate use. To make the system more efficient and cost-effective, activities should consider consolidating requirements to reduce the submission of low-value requisitions.

C4.2.17.2. **Effective Time Period.** The requisition submission time period extends from the date of the requisition to the date of receipt by the initial wholesale source of supply; for example, the ICP or stock point that maintains any asset availability records for the purpose of filling materiel demands or ordering other supply action.

C4.2.17.2.1. **Requisition Date.** The date of requisition will indicate the actual date of transmittal from the requisitioner to the initial source of supply. Do not predate requisitions to facilitate local processing. The transaction set process will reflect the true date of transmittal.

C4.2.17.2.2. **Approval Time.** Time consumed by review/approval of control offices that are intermediary between the requisitioner and the initial source of supply is counted in the time standard for this segment.

C4.2.18. **Maintenance of Requisition History and Due-In Files**

C4.2.18.1. **Requirement.** All DoD Components must maintain a requisition history and due-in file for each transaction processed.

C4.2.18.2. **Expeditious Processing.** Requisitioners must expeditiously process transaction status and materiel receipts to requisition and due-in files to preclude the unnecessary generation of follow-ups.

C4.2.19. **Special Army Single Stock Fund (SSF) Procedures for Image, Working, and Post-Post Requisitions and Authorization of Edit Action Codes (EACs) for Both SSF and non-SSF Army Activities.** The following procedures are restricted to use by the Army on an intra-Service basis.

C4.2.19.1. These procedures include Army-unique data elements required to accurately process transactions in the Army wholesale system that originate from the Army retail system for SSF activities. For both Army retail replenishment orders for authorized stock listed items and for dedicated customer orders for non-stock listed items, an image of the order containing a special EAC, management code, and date generated is created and passed to the wholesale system. For these replenishment and dedicated customer orders, the EAC indicates that the order is to be held until either post-post issue requisitions are received equaling the image requisition quantity or a live/working requisition is received for the total or residual quantity of the image requisition. Additionally, customer/consumer orders for authorized stock listed items
that cannot be filled by the retail system are backordered at the retail level and an image of the consumer requisition containing an EAC, management code, and date generated is created and passed to the wholesale system. For these backordered consumer requisitions, the EAC indicates that the order is to be held until either post-post issue requisitions are received equaling the image requisition quantity, or a cancellation is received. Based on business rule parameters, these EAC codes facilitate the Army process, that searches for assets at multiple retail levels, prior to requiring a wholesale asset search to fill the retail and consumer level requisitions. The post-post issue requisition also contains an EAC, management code, and date generated. Additionally, the post-post requisition contains the SSF routing identifier code (RIC) of the activity issuing the assets and codes indicating the ownership, purpose and condition of these assets, as well as a suffix code, if it is only a partial issue of the image requisition quantity. The following are the types of requisitions included in this process:

C4.2.19.1.1. **Image Request Order Number Requisition.** An image of the customer’s original requisition containing an EAC, management code and the date generated date is submitted by the SSF site to the Army wholesale source of supply. Upon receipt, the wholesale source of supply builds a document control file, creates a demand record, and freezes the requisition on backorder. The only action that can clear the frozen backorder is a post-post requisition or a cancellation request from the SSF site.

C4.2.19.1.2. **Image Document Order Number Requisition.** An image of the original replenishment requisition containing an EAC, management code, and the date generated is submitted by the SSF site to the Army wholesale source of supply. Upon receipt, the wholesale source of supply establishes a document control file with a requisition quantity control, creates a demand record, and takes no further action until receipt of a post-post or working requisition.

C4.2.19.1.3. **Working Document Order Number Requisition.** Upon receipt of a working document order number requisition by the wholesale source of supply, action will be taken to support the requisition quantity. The document number on both the working and image requisitions are the same; however, the working requisition does not contain an EAC or management code.

C4.2.19.1.4. **Image Dedicated Requisition.** An image of a dedicated requisition containing an EAC, management code, and the date generated is submitted by the SSF site to the Army wholesale source of supply. Upon receipt, the source of supply establishes a document control file with a requisition quantity control, creates a demand record, and takes no further action until receipt of a post-post or working requisition.

C4.2.19.1.5. **Working Dedicated Requisition.** Upon receipt of a working dedicated requisition by the wholesale source of supply, action will be taken to support the requisition quantity. The document number on both the working and image
requisitions are the same; however, the working requisition does not contain an EAC or management code.

**C4.2.19.1.6. SSF Post-Post Requisition.** A post-post requisition containing an EAC, management code and storage site RIC is submitted by the SSF site to the Army wholesale source of supply when assets are issued from an SSF site in support of a previously provided image requisition. Upon receipt, the source of supply creates internal issue transactions and creates an audit trail.

**C4.2.19.2. Post-Post Requisition Processing.** When the requisition is satisfied by an SSF site, the wholesale system will receive a post-post requisition containing a special EAC and management code, as well as the RIC of the SSF site issuing the assets, and codes indicating the ownership, purpose, and condition of these assets. If the post-post issue requisition is for a partial quantity, it will also contain a suffix code. The wholesale system may receive post-post requisitions with the same document number and suffix code, but with different storage activity RICs. These will not be considered duplicates. Based upon receipt of the post-post requisition, the wholesale system will internally generate a materiel release order (MRO), materiel release confirmation (MRC) and a materiel receipt acknowledgment (MRA). The wholesale system receives post-post requisitions in order to record shipments and generate appropriate bills.

**C4.2.19.3. Working Requisition Processing.** If the SSF site can fill the total requisition through post-post issues, the wholesale source of supply will not receive a working requisition. However, if the SSF site is unable to satisfy the total demand quantity of the requisition, the wholesale site will receive either a working requisition for the residual quantity or a cancellation on the same document number as the image requisition. Upon receipt of the working requisition the wholesale source of supply will initiate normal support actions. Any actions taken by the wholesale source of supply on the working requisition will always begin with Suffix Code L. The total quantity of all post-post requisitions and all working requisitions received on a single document number should not exceed the quantity on the original image requisition.

**C4.2.19.4. EAC Authorization.** In addition to the use of the EAC in the above SSF procedures, for both Army SSF and non-SSF activities, the EAC is authorized to be used for requisition reinstatement and other varied purposes.

**C4.2.20. Requisitioning in Support of an Inter-service Maintenance Agreement**

**C4.2.20.1.** When scheduling a reparable item for organic maintenance under a Depot Maintenance Inter-Service Agreement (DMISA) or comparable inter-Service support agreement, based on the repair schedule, the maintenance activity will requisition the reparable item from the Principal (materiel) owner using a DLMS 511R Requisition. All requisitions will cite Advice Code 2J (fill or kill), and the appropriate

---

13 Refer to ADC 1176. Staggered implementation of SCC for requisitions authorized.
supply condition code. Requisitions will cite Project Code 3AB (repair and return under maintenance agreement) or 3BB (repair under maintenance agreement). When requesting specific assets, maintenance activities may cite the supply condition code (SCC) applicable to the reparable item requested. Authorized SCCs include D, F, G, and Q. Requisitions for induction of a Product Quality Deficiency Report (PQDR) exhibit for warranted maintenance will cite SCC Q.

C4.2.20.2. In response to requisitions citing Project Codes 3AB or 3BB, the Principal will direct release of the reparable item from the storage activity to the repair agent. The Principal will establish a due-in and provide a pre-positioned materiel receipt (PMR) to the repair agent to ensure the item is receipted under the correct ownership (refer to Chapters 12 (PMR) and 13 (Receipt) in this volume).

C4.2.20.3. To preclude billing by the materiel owner, the requisition will also contain the following data elements to denote free issue. For requisitions submitted to:

C4.2.20.3.1. **Air Force**: For Air Force principals (RIC TO of F**), use Project Code 3BB.

C4.2.20.3.2. **Navy**: For Navy principals (RIC-TO of NRP), use N00391 in rp 45-50, Signal Code B and Fund Code 26.

C4.2.20.3.3. **Army**: For Army principals (RIC-TO A** or B**), use Project Code 3BB, Fund Code GM, and Signal Code D or M.

C4.2.20.3.4. **Marine Corps**: For Marine Corps principals (RIC-To MPB), use Project code 3BB.

C4.2.20.4. Organic maintenance activities operating under a DMISA or comparable inter-Service support agreement will requisition nonconsumable repair parts required for a maintenance action using Project Code 3AD. Maintenance activities will direct reparable item requisitions to the Principal whose assets are intended are to be used for the repair (rather than to the source of supply). Directing requisitions to the Principal ensures appropriate actions are taken.

C4.2.20.4.1. Directing requisitions to the Principal precludes rejection of the requisition because the repair agent may not be a registered user of the materiel.

C4.2.20.4.2. Passing the requisition to the Principal reduces financial losses that would be incurred to purchase new materiel while previously purchased materiel is sitting in the Principal’s inventory. This will reduce inventory balances as intended at the designated Principal, and does not unnecessarily draw down inventory at the supply source.

C4.2.20.4.3. Requisitioning from the Principal eliminates the possibility that the source of supply will satisfy the requisition with a substitute item which may not be best suited for the repair.
C4.2.20.4.4. This method of requisitioning facilitates accurate demand history capture at the source of supply (where it would otherwise be overstated) and improves forecasting by the Principal (where it would otherwise be understated).

C4.20.5. Organic maintenance activities will direct consumable item requisitions to the source of supply. Project Code 3AD does not apply. DAAS will process requisitions under MILSTRIP routing rules or by Service agreement.

C4.20.6. DAAS will pass requisitions (DIC A0_), modifications (DIC AM_), and follow-ups (DIC AT_) containing Project Codes 3AB, 3AD, and 3BB to the designated recipient (rather than routing to the source of supply).

C4.2.21. DoDAAC Authority Code Edits. Requisitions will be prepared using valid DoDAACs for the purpose(s) intended. DoDAACs designated as the requisitioner, bill-to, or ship-to activity will be validated based upon the authority code assigned to each DoDAAC in the DoD Activity Address File. Refer to DAAS edit of incoming requisitions below for edit rules.

C4.3. RETRANSMITTED REQUISITIONS. Use the FROM address in the requisition to identify the activity passing and/or referring the requisition and TO address to identify the activity to receive the requisition. In addition, indicate the applicable suffix code of the retransmitted requisition if the quantity is less than the original requisition quantity, and the appropriate demand code. Indicate the date of receipt of the demand as recorded by the initial source of supply when retransmitting requisitions to another source of supply. Use Special Requirements Code 888 to identify retransmitted requisitions generated from backorder releases submitted only to the SMCA.

C4.4. REQUISITION CANCELLATIONS

C4.4.1. General

C4.4.1.1. Requests. The requisitioner, monitoring activity, the DoD Component, and authorized command elements may request cancellation of previously submitted requisitions by using the DLMS 869C, Cancellation. The activity initiating the cancellation action, if other than the requisitioner, must advise other interested activities of the cancellation action. Send single line-item cancellations to the last known source of supply holding the applicable requisitions. Under normal circumstances, cancellation requests represent a discontinued need of specific items and quantities. Do not deobligate funds or update individual due-in records until you receive status from the source of supply confirming cancellation.

C4.4.1.2. Receipt from Contractor. Do not submit single line-item cancellations when a CONUS activity has received notice of shipment for materiel from a contractor's facility or a depot.

C4.4.1.3. Minimum Value Item. Do not submit single line-item cancellations when an OCONUS activity has received shipment status and the line-item value of the cancellation is less than $200, or the materiel was shipped by air mail, or parcel post, or
the materiel was shipped more than 10 calendar days by air shipment to an aerial port of embarkation (APOE), or 45 calendar days by surface shipment to a water port of embarkation (WPOE).

C4.4.1.4. **Conditions Not Excluded.** Submit cancellations for conditions not excluded when there is no longer a need for a requisitioned quantity regardless of line-item dollar value or status. Such submissions will authorize the source of supply to properly adjust demands, when appropriate, and initiate cancellation action, when feasible.

C4.4.1.5. **Status Code BV.** Sources of supply may initiate billings to requisitioning activities for transportation charges and/or contract termination costs even though the source of supply is able to effect cancellation/diversion if requisitions are assigned Status Code BV.

C4.4.1.6. **Disposition of Materiel for Failed Cancellations.** The consignee, the appropriate commander, or Service headquarters is responsible for the utilization or disposition of materiel that cannot be canceled or diverted to an alternate consignee.

C4.4.1.7. **Materiel Shortages.** Requisitioning activities must submit a new requisition with a new document number, citing appropriate issue PDs, whenever shortages occur for materiel previously canceled or rejected. Do not submit requests to reinstate previously canceled or rejected requisitions to sources of supply.

C4.4.2. **Reserved**

C4.5 **REQUISITION MODIFICATIONS**

C4.5.1. **Requesting Modifications.** The requisitioner, control office, or monitoring activity may request the modification of previously submitted requisitions using the DLMS 511M, Requisition Modification. Any activity initiating a requisition modification will notify other interested parties of such action, especially if the activity initiating the modification is other than the requisitioner. A requisition modifier will be prepared by originating activities completing all prescribed data element entries for a requisition. Send the requisition modification to the last known source of supply. Requisition modifications may be used to change/modify the following fields in an original requisition document:

C4.5.1.1. **Non-GFM Requisitions**

C4.5.1.1.1. Ship-To and/or Bill-To Address(es)

C4.5.1.1.2. FMS Offer and Release Option Code

C4.5.1.1.3. FMS Freight Forwarder

C4.5.1.1.4. Treasury Symbol Number/Fund Purpose Code
C4.5.1.1.5. Project Code
C4.5.1.1.6. Special Requirements Code
C4.5.1.1.7. PD
C4.5.1.1.8. RDD or RDP
C4.5.1.1.9. Advice Code
C4.5.1.1.10. Ultimate Recipient Code
C4.5.1.1.11. Transportation Priority Code
C4.5.1.1.12. Media and Status
C4.5.1.1.13. Signal Code
C4.5.1.1.14. Distribution Code
C4.5.1.1.15. Fund Code

C4.5.1.2. GFM Requisitions
C4.5.1.2.1. Project Code
C4.5.1.2.2. PD
C4.5.1.2.3. Advice Code
C4.5.1.2.4. RDD
C4.5.1.2.5. Media and Status Code
C4.5.1.2.6. Signal Code
C4.5.1.2.7. Distribution Code
C4.5.1.2.8. Fund Code

C4.5.2. Identifying Applicable Supply Actions. Identify requisitions for which supply action must be continued during mass cancellation situations and submit modifications with Special Requirements Code 555 to the source of supply at the earliest possible date to ensure the continued processing of the requisitions.

C4.5.3. Pertinent Modification Data. Only data on the modification transaction will be changed. All other data will remain as stated on the original requisition.
C4.5.4. **Modifying Codes.** When a requisition modifier is submitted to modify the ship-to and/or bill-to DoDAAC(s), signal code, or fund code, the DAAS DoDAAC authority code edits discussed in C4.10 will be reapplied.

C4.6. **REQUISITION INQUIRIES/REQUESTS FOR SUPPLY ASSISTANCE**

C4.6.1. **General.** Use DLMS 869A, Requisition Inquiry/Supply Assistance, to follow-up or request supply assistance to improve estimated shipping dates (ESD) over the dates indicated in the latest supply status transaction on previously submitted requisitions. Use either DLMS 869A or DLMS 869F, Requisition Follow-Up, to follow up the latest supply transaction on previously submitted requisitions. Management Code P will be perpetuated to all applicable supply status in support of BRAC IMSP.

C4.6.2. **Follow-Ups.** Submit follow-ups to obtain the latest status for a previously submitted requisition.

C4.6.2.1. **Follow-Up Format.** Requisition follow-ups can be accommodated in two formats. DLMS 869A provides a streamlined requisition follow-up. DLMS 869F Requisition Follow-up offers the additional capability of conveying all information provided on the original requisition (with the exception of quantity stratification by weapon system) so that the follow-up may act as a requisition if the inquiry is unmatched to the IMM’s data base. When a DLMS 869F follow-up that may act as a requisition is submitted, it will be subject to the authority code edits of paragraph C4.10.

C4.6.2.2. **Follow-Up Submission Criteria**

C4.6.2.2.1. **Delay Status Not On Hand.** Submit follow-ups when status data is not on hand to indicate a delay in receipt of materiel beyond the SDD or RDD or when the UMMIPS order and shipping time standard for receipt of materiel has elapsed.

C4.6.2.2.2. **Receipt Status Not Received.** Send follow-ups to the source of supply where you sent the requisition if you have not received status indicating another activity is responsible for the demand. When supply status has been received, direct the follow-up to the activity indicated as currently processing the requisition; for example, the last known source of supply. The source of supply may follow up to a shipping activity on open MROs.

C4.6.2.2.3. **Materiel Not Received.** Do not submit follow-ups after receiving shipment status evidencing completion of shipment unless you do not receive the materiel within normal transit time based on the date of the shipment as cited in the shipment status transaction.

C4.6.2.3. **Follow-Up Submission Timeframes**

C4.6.2.3.1. **PD 01-08.** For PD 01-08 demands, submit follow-ups only after expiration of at least three calendar days from the date of the requisition or transaction date of the latest supply status.
C4.6.3.2. PD 09-15. For PD 09-15 demands, submit follow-ups only after expiration of at least seven calendar days from date of the requisition or transaction date of the latest supply status.

C4.6.3  Request for Supply Assistance

C4.6.3.1. Initiation. Requisitioners may initiate requests for supply assistance only for PD 01-08 requisitions after receipt of supply status indicating an unacceptable delivery date. Requests for supply assistance includes status of requisitions, timely supply of requirements, interchangeable and substitutable (I&S) items, release of cancellation or backordered requisitions, and diversion of materiel shipments. Do not generate requests for supply assistance prior to the receipt of supply status indicating open status.

C4.6.3.2. Submission

C4.6.3.2.1. Forward requests for supply assistance on previously submitted PD 01-08 requisitions to the source of supply processing the requirement. Requests for assistance may be done by e-mail, message, letter, or telephone to the appropriate source of supply. Telephone requests should not exceed seven lines; however, the limitation of items will be determined by the source of supply ability to record the items and initiate timely responses. Include the urgently needed quantity (supply assistance may be requested for entire quantity requisitioned or a lesser quantity required for mission performance).

C4.6.3.2.2. DLA accepts supply assistance requests via the DoD FedMall requisition query function for open requisitions PD 01-08 with MILSTRIP Supply Status BB, BV, BZ, or BD.

C4.6.3.2.3. In addition to the above, the DLMS 869A, Supply Assistance request (BS108=AR) is designed to transmit requests electronically. This is a DLMS enhancement that cannot be used without prior coordination to ensure that the receiving source of supply has implemented this business process using transaction exchange. The DLMS format supports identification of point of contact information, identification of acceptable substitute items, alternative sources for the requested item, and a codified mission impact resulting from delay or lack of support for the required item:

C4.6.3.2.3.1. Code 1: Inability to perform assigned mission for a classified project.

C4.6.3.2.3.2. Code 2: Inability to perform assigned mission.

C4.6.3.2.3.3. Code 3: Performance of assigned mission anticipated to be curtailed or stopped if materiel is not received within 15 days continental United States (CONUS) or 20 days other than continental United States (OCONUS).
C4.6.3.2.3.4. Code 4: Mission performance below prescribed level of effectiveness and efficiency.

C4.6.3.2.3.5. Code 5: A classified NMCS condition exists due to lack of required assets.

C4.7. REQUISITION PROCESSING AND RELATED ACTIONS. Sources of supply receiving requisitions, follow-ups, modifications, cancellations, and/or supply assistance requests will process such transactions using these procedures.

C4.7.1. General

C4.7.1.1. Verification. Sources of supply will validate the data elements and codes in these transactions and accomplish changes, continue processing action, or reject with the appropriate status code using DLMS 870S, Supply Status. Rejection of transactions will be done only after an attempt has been made to correct the questionable data element or code. If rejection action is a result of more than one data element or code, and no other reject status code applies, reject using Status Code CA.

C4.7.1.2. Batch Processing. When sources of supply and storage activities utilize the sequential (or batch) method of processing and do not possess real time processing capability, such processing must be done as frequently as necessary in order to meet UMMIPS time standards, or specific RDD for subsistence requisitions as applicable. In every such cycle, cancellation requests (including automatic cancellation initiated by the source of supply) and Material Obligation Validation (MOV) reconciliation requests will be processed prior to backorder releases and new requisitions. Demands will be sequenced as follows:

C4.7.1.2.1. Priority Designator.

C4.7.1.2.2. OSD/the Chairman of the Joint Chiefs of Staff project codes.

C4.7.1.2.3. Special Requirements Code 999 and PD 01, 02, or 03.

C4.7.1.2.4. Special Requirements Code N (NMCS), E (ANMCS), or 555 and PD 01-08.

C4.7.1.2.5. Requisition document number date.

C4.7.1.2.6. RDP, if later than the computed SDD--conventional ammunition only.

C4.7.1.3. Backorders. Backordered requirements will be merged (in the above sequence) with all new transactions in any requisition processing cycle in which additional assets become available; for example, receipts of materiel and debit on hand adjustments.
C4.7.1.4. Receipt Processing. Processing points will record the date of receipt of each requisition received. The date of receipt enables sources of supply to compute the requisition submission time. The computation will be made by subtracting the date in the demand transaction from the date received. The submission time provides a basis for the ICPs to measure the first cycle segment of supply effectiveness.

C4.7.1.5. Document Numbers. The document number, and a suffix, when applicable, will be used as a basis for determining duplicate transactions. The recipient will disregard all duplicate transactions.

C4.7.2. Effect of Priority Designator on Requisition Processing

C4.7.2.1. Assigning PDs. Each requisition must contain a PD assigned by the requisitioning activity, which will not be changed by processing points except in the following conditions:

C4.7.2.1.1. Special Requirements Code 999 is present, requisition is for U.S. Forces, and the PD is not 01, 02, or 03. The source of supply will enter PD 03 and send Status Code BK.

C4.7.2.1.2. An OSD/Joint Chiefs of Staff project code is present, but the PD is not 01-15. The source of supply will cite PD 03 and send Status Code BK.

C4.7.2.1.3. Special Requirements Code N or E is present, and the PD is not 01 – 15. The source of supply will enter PD 08 and send Status Code BK.

C4.7.2.1.4. Special mass cancellation coding 555 is present and the PD is not 01-15. The source of supply will enter PD 08 and send Status Code BK.

C4.7.2.1.5. Special Requirements Code 777 is present and the PD is not 01 – 15. The source of supply will enter PD 08 and send Status Code BK.

C4.7.2.1.6. RAD is present and the PD is not 01-15. The source of supply will enter PD 15.

C4.7.2.1.7. Extended RDD is present and the PD is other than 09-15. The source of supply will enter PD 15 and send Status Code BK, and process.

C4.7.2.1.8. Work stoppage indicator is present and the PD is not 01-08. The source of supply will enter PD 08 and send Status Code BK, and process.

C4.7.2.1.9. Service Code is B, D, K, P, or T and Special Requirements Code is N, E, 555, or 777 and Type of Assistance is not U or V. The source of supply will blank the special requirements code and process using the priority. Type of assistance is identified as the sixth position of the SA identification data portion of the document number or separately in the LQ segment.
C4.7.2.1.10. For all other conditions, if the PD is not 01 - 15, the source of supply will enter PD 15.

C4.7.2.2. **Time Standards.** The assigned PD dictates the precedence of internal supply processing actions (such as, from the receipt of a transaction until release to transportation) and determines the SDD. Mandatory time standards for processing of transactions are covered in DoDM 4140.01, Appendix 8. For subsistence requisitions, the assigned RDD is the primary processing criteria, while the assigned PD dictates the precedence of internal supply processing action for requisitions reflecting identical RDDs. Time standards indicated in UMMIPS do not apply to subsistence requisitions.

C4.7.2.3. **IMM Control Levels.** On occasion, available assets may be insufficient to satisfy all current demands and backorders for specific items. The IMM will reserve assets of such critical items through the use of item control levels and criteria that will restrict issue to specific categories of requirements only, (i.e., those within designated ranges of PDs, Joint Chiefs of Staff approved projects, or firm commitments for delivery of materiel to SA recipients). Control levels will be established for IMMs to reserve stocks for issue only for PD 01-03. These requirements will be satisfied by issue to zero stock balance of serviceable stocks. Control levels may be established at the discretion of the IMM to reserve a greater level of stocks that may not be issued for PD 09-15 requirements.

C4.7.2.4. **Source of Supply Control Levels.** Control levels will also be established by the source of supply to restrict issues against requisitions for the initial fill of PWRMS consumable item requirements to ensure that:

C4.7.2.4.1. **Availability Below Approved Force Acquisition Objective (AFAO).** Assets available below the AFAO are not issued against requisitions for nonreimbursable PWRMS requirements regardless of the PD.

C4.7.2.4.2. **Availability Below Reorder Point.** Assets available below the reorder point (ROP) are not issued against requisitions for nonreimbursable PWRMS requirements that contain a PD of 11-15 during initial processing of the requisition. Later processing of such requisitions is prescribed in paragraph C4.7.5., below.

C4.7.2.5. **OSD/the Chairman of the Joint Chiefs of Staff Project Priority.** These projects, when so designated, and PD 01-03 requisitions containing Special Requirements Code 999, will be ranked above all other requisitions with the same PDs for processing purposes. Special Requirements Code 999 requisitions and related transactions will receive special attention to provide for expedited processing actions.

C4.7.2.6. **Releasing Demands.** When system-wide inventory levels do not permit positive supply action on all requisitions within a given PD, supply procedures will provide for a release of demands containing the specifically designated OSD/Joint Chiefs of Staff project codes and Special Requirements Code 999 as the respective most urgent. PD 01-08 requisitions, including FMS requisitions, containing Special
Requirements Code 555 in the RDD field and other requisitions/materiel obligations, will be processed for release as prescribed in paragraph C4.7.1.2.

C4.7.3. Source of Supply Processing of Requisitions with Advice Code 2D, 27, or 29. Sources of supply will edit all requisitions containing Advice Codes 2D, 27, and 29 to determine if an increase in the requisition quantity to the quantity unit pack is less or more than $5. If less than $5, the source of supply will disregard the advice code in the requisition. If $5 or more, the source of supply will honor the advice code and process the requisition for the exact quantity requested. When a quantity adjustment is made using the above criteria, the source of supply will use Status Code BJ to notify the customer of the quantity adjustment.

C4.7.4. Source of Supply Processing of Requisitions for Quantities that Exceed the Normal Demand. The source of supply may request verification of requisitions that show quantities that exceed normal demands or quantities that appear to be excessive or in error before taking positive supply action. When the source of supply determines that the requisitioned quantity needs to be verified, the source of supply will generate a DLMS 517M, Materiel Obligation Validation, to request verification of the quantity. The source of supply must indicate a response due date in the quantity verification inquiry, normally 30 calendar days for U.S. Forces and 75 calendar days for SA customers. The organization verifying the requisitioned quantity will send a response to the source of supply by the response due date indicated in the quantity verification inquiry; otherwise, the source of supply will automatically cancel the requisition with Status Code D3. The quantity in the response must be the actual quantity required. If the quantity is less than the original requisitioned quantity, the difference will be canceled with Status Code BQ. If the quantity field contains zero, the entire requisition will be canceled with Status Code BQ. Quantity increases are not authorized.

C4.7.5. Source of Supply Processing of PWRMS Requisitions

C4.7.5.1. General. Sources of supply, except GSA, will process funded and unfunded requisitions for the initial fill of PWRMS consumable item requirements using the criteria established below. GSA will process only funded requisitions for PWRMS requirements and does not differentiate between those requisitions and others.

C4.7.5.2. Processing Criteria. Upon receipt of PWRMS requisitions for the initial fill of consumable item requirements (Demand Code O and Project Code 3AA), the source of supply will determine asset availability in excess of the AFAO and:

C4.7.5.2.1. Sufficient Assets Available. If sufficient assets are available in excess of the AFAO to satisfy the total requisition quantity, the total requisition will be processed as free issue.

C4.7.5.2.2. Excess Assets. If the assets available in excess of the AFAO are not sufficient to satisfy the total requisition quantity, then the portion of the requisition quantity equal to the quantity of assets available in excess of the AFAO will
be processed as free issue and the balance of the requisition quantity will be processed as follows:

C4.7.5.2.2.1. When the source of supply determines that assets are not available in excess of the AFAO, the basis of unit price code in the PO1 segment of the PWRMS requisition for the initial fill of consumable item requirements (Demand Code O and Project Code 3AA) will be checked and:

C4.7.5.2.2.2. If free issue, the unfilled quantity on the requisition must be rejected. The rejection will be accomplished under Status Code CB since all unfunded PWRMS requisitions must be processed as fill or kill.

C4.7.5.2.2.3. If a basis of unit price code is not identified, the PWRMS requisitions will be processed as containing Advice Code 2L and the PD must be checked to determine further processing routines.

C4.7.5.2.3. PD 01-03 PWRMS Requisitions. Except for subsistence, PWRMS requisitions with PD 01-03 will be processed for issue using UMMIPS source of supply processing standards. Subsistence requisitions must be processed to meet a specific RDD.

C4.7.5.2.4. PD 11-15 PWRMS Requisitions. Except for subsistence, PWRMS requisitions with PDs 11-15 will be issued from assets available above the ROP or equivalent. When assets above the ROP or equivalent are not available to satisfy the requisitioned quantity, the unfilled quantity will be placed on backorder and the appropriate supply status will be provided with an estimated shipping date (ESD) equal to one procurement lead time. Backordered PWRMS requisitions with PDs 11-15 must be released from backorder at the end of the procurement lead time or when sufficient stocks are available above the ROP. (PWRMS requisitions with PDs 04-10, when received, will be processed in the same manner as PD 11-15 requisitions.)

C4.7.6. Source of Supply Processing of RDP Requisitions (Conventional Ammunition Only)

C4.7.6.1. Earliest Delivery Date within Standard UMMIPS Timeframe. Requisitions with an RDP that has an earliest delivery date that is within the standard UMMIPS timeframes for the PD must be processed using the time period established for that PD.

C4.7.6.2. Earliest Delivery Date Outside Standard UMMIPS Timeframe. Requisitions with an RDP that has an earliest delivery date that is longer than the standard UMMIPS timeframes for the PD will not be placed on backorder. If stock is not available, the requisition will be referred or rejected back to the customer. If stock is available, an MRO will be issued to the storage facility. The shipping activity will establish necessary control mechanisms to provide timely shipment to the customer.

C4.7.6.3. Rejecting Late Requisitions. Requisitions that cannot be delivered within the RDP will be rejected with Status Code CB.
C4.7.6.4. **SA Deliveries.** RDP procedures do not apply to SA requisitions.

C4.7.7. **Source of Supply Processing of Requisitions for Nonconsumable Items from a Nonregistered User.** Process nonconsumable items from nonregistered users according to the following criteria:

   - **C4.7.7.1. PD 01-08.** If the PD is 01-08, process the requisition for issue and provide Status Code DS to the requisitioner.

   - **C4.7.7.2. PD 09-15.** If the PD is 09-15 and assets are available above the ROP, process the requisition for issue and provide Status Code DS to the requisitioner.

   - **C4.7.7.3. Assets Not Available.** If the PD is 09-15 and assets are not available above the ROP, reject the requisition with Status Code CC or CN, as appropriate.

C4.7.8. **Source of Supply Processing of Subsistence Requisitions.** Do not backorder subsistence requisitions. Process subsistence requisitions to meet the specific RDD.

C4.7.9. **Source of Supply Processing of Requisitions with Management Codes 3, 9 and P.**

   - **C4.7.9.1. Requisitions with Management Code P.** Management Code P is only applicable to requisitions/requisition alerts submitted to DLA. All other sources of supply in receipt of Management Code P will disregard and continue processing. DLA will verify that the requisitioning activity is a BRAC IMSP industrial/maintenance sites. If not, DLA will disregard the management code. Where authorized, Management Code P will be recognized as a request for materiel sourced from an alternative source due to previous receipt of like materiel with product quality deficiency reported via PQDR. DLA would apply unique logic applicable to the management code. If the item being requested is managed as a direct vendor delivery (DVD), then the DLA forward-positioned buyer will process for procurement from a vendor other than cited on the PQDR if materiel is available to meet the RDD. If the item is managed as a stocked item, the request will be processed as one-time emergent request and the DLA forward-positioned buyer will process as a customer direct order. In instances where the RDD cannot be met or the forward buyer is unable to locate an alternate vendor, the forward buyer will work directly with the engineer to satisfy the requirement.

   - **C4.7.9.2. Requisitions with Management Codes 3 or 9.** Management Codes 3 and 9 are only applicable to requisitions submitted to DLA. All other sources of supply in receipt of Management Code 3 or 9 will disregard and continue processing. DLA will verify that the requisitioning activity is a BRAC Inventory Management and Stock Positioning (IMSP) industrial/maintenance site authorized to use these codes. If not,

---

14 Expanded use for all DoD Components requisitioning from DLA is planned for future implementation (approximately 2014.)
DLA will disregard the management code. Where authorized, Management Codes 3 and 9 will be recognized as a request for materiel sourced from an alternative storage location or new procurement, if stock is not available, due to previous receipt of materiel that did not support shelf life or continuous length requirements. The prior requisition document number and the shipment suffix (if applicable due to a split shipment) will be used for cross reference to the original requirement and storage location. This process is only applicable to materiel originally sourced from a co-located depot without physical inspection of the materiel. The suitability for shelf life and length could not be determined until directed release by the Service owner at which time the storage activity would provide a denial citing Management Code 3 or 9, as applicable. The DLA would apply unique logic applicable to the management code. If the item is available in an alternative storage site, then a materiel release order would be sourced to that alternative storage site. When no stock is available in the network, a new procurement action will be initiated. The DLA ICP will also update an internal denial table to preclude other comparable requests from being sourced to the original storage activity until inventory balances have been reconciled.  

C4.7.10. Processing of Requisitions for Induction to Maintenance.

C4.7.10.1. Upon receipt of a DLMS 511R Requisition from maintenance for the purpose of inducting a reparable, the materiel owner will process the requisition on a 'fill or kill' basis, and direct the issue to the co-located storage activity. If there are insufficient assets at the co-located storage activity, the requisition will be 'killed' for that portion of the requisition that cannot be issued. No billing will be initiated on requisitions from maintenance activities for DMISA assets, when the requisition was submitted consistent with C4.2.18.2. requirements.

C4.7.10.2. The "Principal" system will interpret the DLMS 511R Requisition with Advice Code 2J (fill or kill) as "no substitution allowed" but will allow for a partial fill, (i.e., do not backorder unfilled quantity, or pass an MRO to other than the co-located storage activity). The source of supply (Principal) will furnish the requisitioning activity (maintenance) DLMS 870S Supply Status using CB status for any unfilled quantity.

C4.7.10.3. DLMS source of supply preparation of materiel release orders (MROs) to the co-located storage activity will be accomplished using the DLMS 940R.

C4.7.11. Maintenance of Requisition History Records. Sources of supply will retain requisition history records in a readily accessible format after the closing of requisition records by cancellation, rejection, or shipment to provide for responsive replies to requisition inquiries in accordance with DoDI 5015.02, DoD Records Management Program.

C4.7.12. Rejection of Requisitions. Sources of supply will provide supply status to requisitioning and status organizations identified in the requisition or follow on

---

15 Refer to ADC 359, implementation date December 2010.
transactions, as notices of requisition rejection with the reason for such action indicated by an appropriate status code.

C4.7.13. Release of Materiel Obligations. A materiel obligation is that quantity of an item requisitioned that is not immediately available for issue, but is recorded as a stock commitment for future issue. Sources of supply will establish procedures for the partial release of the materiel obligation when assets are insufficient to satisfy the entire demand consistent with the PD and delivery requirements of the requisition involved.

C4.7.14. Preparing MROs

C4.7.14.1. Originator. MROs, DLMS 940R, Materiel Release, are prepared by the source of supply as a result of processing requisitions against inventory records and determining that materiel is available. MROs are used as a directive for release and shipment of materiel from stock.

C4.7.14.1.1 MROs directing shipment of requisitioned GFM will perpetuate contract data to include the procurement instrument identifier (PIID) authorizing GFP. When GFM is authorized under a PIID call/order number (F in 9th position), provide the value in the PIID field.\(^{16}\) Include the CLIN when available and directed by the authorizing Component. Contract data will be provided by the source of supply for pushed GFM not initiated by a requisition.

C4.7.14.1.2. MROs directing shipment of reparables for induction for commercial maintenance will include the PIID authorizing GFP, and the call/order and CLIN when available.

C4.7.14.1.3. MROs directing shipment of GFP in contractor custody will include the PIID authorizing GFP, and the call/order and CLIN when available.

C4.7.14.1.4. MROs directing return of discrepant/deficient materiel to vendors at vendor expense will include identification of the carrier and the carrier account number.

C4.7.14.1.5. MROs directing the return of PQDR exhibits will include the PQDR report control number (RCN), if available.\(^{17}\)

C4.7.14.2. Advice Code 2T. Requisitions or MROs that contain Advice Code 2T and do not contain an RDD will be processed under the assigned PD without regard to the advice code.

\(^{16}\) Use the legacy PIIN pending transition to the PIID. When GFM is authorized under a PIIN, include the legacy four-position call/order number associated with the PIIN when available and directed by the authorizing Component. Refer to ADC 1161A.

\(^{17}\) ADC 1169, DLA Distribution Center Denial Scenarios Associated with Product Quality Deficiency Report (PQDR) Exhibits.
C4.7.14.3. Inter-Service Ownership Transfer of Ammunition/Ammunition-related Materiel. When used for inter-Service ownership transfers of non-Single Manager for Conventional Ammunition (SMCA) owned ammunition and ammunition-related materiel stored in a SMCA storage facility with no physical movement of materiel or billing, the MRO will contain Signal Code M indicating a free issue. The MRO will also include the associated data required to accomplish the transfer including the old (from) ownership code associated with the service transferring ownership, the RIC of the Service receiving ownership, and the new/gaining (to) ownership code associated with the Service receiving ownership. Pending transition to DLMS discrete data enhancements, the ownership to/from and new owner RIC will be identified in the supplementary address/supplemental data field beginning with Service/Agency Code Y (see the Appendix 7.9, Supplementary Address/Supplemental Data, for proper sequencing of these data elements into a single, concatenated field). The storage activity will update the custodial/accountable records for the materiel and quantity identified to reflect the new ownership code and RIC of the Service receiving ownership. No shipment status will be provided. See procedures in DLM 4000.25, DLMS, Volume 2, Chapter 7) for inter-Service ownership transfer initiated by the SMCA for SMCA-owned materiel.

C4.7.14.4. Product Quality Deficiency Report (PQDR) Exhibit Tracking. When directing release of a PQDR exhibit, the owner must include the PQDR Report Control Number (RCN) to facilitate exhibit tracking. When the shipment is processed for issue, the shipping activity will perpetuate the PQDR RCN from the MRO to the shipment status.

C4.7.14.5. Expedited/Replacement Shipment Subsequent to Validated Supply Discrepancy Report. MROs directing release of materiel in response to customer requests for expedited or replacement shipment due to shortage, non-receipt, wrong item, or comparable discrepancy/deficiency will be processed using the original document number and the next available suffix code to ensure separate billing and unique TCN assignment. When requested by the customer via Supply Discrepancy Report, an Expedited Transportation Signal 777 may be assigned for the reshipment when the original special requirements code (legacy required delivery date (RDD) field is blank or all numeric (other than 444, 555, 777) or the RDD from the original requisition is less than 8 days from the current date. Inclusion of the Expedited Transportation Signal 777 will normally cause the shipment to move by premium (air) transportation. Shipments identifying Expedited Transportation Signal 777 are subject to air clearance processing whereby the air clearance authority may consult with the requisitioner to determine if the additional expense associated with air transportation is justified and potentially direct shipment movement by a surface mode.\(^\text{18}\)

C4.7.15. Reserved

C4.7.16. Materiel Release Confirmation (MRC)

\(^{18}\) Refer to ADC 1091, SDRs Requesting Expedited or Replacement Shipment.
C4.7.16.1. **Purpose.** The MRC serves as advice from a storage site to the source of supply that initiated the MRO of supply action taken. The MRC will be provided using DLMS 945A. The MRC will include enhanced data content under DLMS to include:

C4.7.16.1.1. Both the TCN, when applicable, and a secondary transportation number, such as the small package carrier number, when this is applicable.

C4.7.16.1.2. Identification of the carrier when other than United States Postal Service (USPS) by Standard Carrier Alpha Code (SCAC).

C4.7.16.1.3. For OCONUS shipments made via Defense Transportation System (DTS), GBL/CBL, parcel post, and small package carrier shipments, specific identification of the Port of Embarkation (POE) or Consolidation and Containerization Point (CCP), the air terminal, water terminal, or CCP by applicable qualifier code. (During MILSTRIP/DLMS transition, DAAS may substitute a generic terminal qualifier for MRC transactions converted from MILSTRIP legacy format transactions where the type of facility is unknown.)

C4.7.16.1.4. Capital Equipment Candidates. In support of Financial Improvement and Audit Readiness (FIAR) compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Submitters must prepare materiel release confirmation citing the applicable serial number(s) and include the UII when available.\(^{19}\)

C4.7.16.2. **Source of Supply Follow-Up.** Sources of supply will follow up on storage activities at least once every 30 calendar days for unconfirmed MROs that are seven calendar days old for PDs 01-08 and 15 calendar days old for PDs 09-15.

C4.7.16.3. **Materiel Release Confirmation Changes/Updates.** In the event a shipment from the storage/shipping activity does not get lifted as originally intended (e.g., shipment is left off the truck), the storage/shipping activities that originate the DLMS 945A Materiel Release Confirmation will send an updated transaction with all of the changed transportation information to the ICP. This ensures required visibility of the shipment information and enables the ICP to prepare an updated DLMS 856S Shipment Status when needed. Examples of changed transportation information would include transportation method code, standard carrier alpha code (SCAC), ship date, bill of lading information, and tracking information.

\(^{19}\) Refer to ADC 1198
C4.7.16.3.1. **Preparation of the Materiel Release Confirmation**

**Change/Update**

C4.7.16.3.1.1. The materiel release confirmation change/update message will be identified by a unique code (W0602 = “RR”) in the transaction to flag it as an updated MRC.

C4.7.16.3.1.2. It will convey a new Shipping Date Change Reason Code (W0610 = “13” Shipping Location Handling) to advise the ICP that the updated MRC corrects erroneous content data (e.g., transportation data, pRFID data).

C4.7.16.3.1.3. It will repeat the information from the original MRC, in addition to any changes to the original information.

C4.7.16.3.1.4. It will convey changed transportation information (e.g., transportation method code, standard carrier alpha code [SCAC], ship date, bill of lading information, and tracking information.)

C4.7.16.3.1.5. When the ICP sends a shipment status in response to a customer follow-up, based on an updated MRC, the DLMS 856S will be transmitted as an original transaction, thereby enabling legacy-based supply systems to receive the converted DIC AS from Transaction Services. Do not use the BSN01 = “RR” and BSN07 = “A40” codes in this case, since the presence of these codes will indicate to Transaction Services not to convert these DLMS transactions to MILSTRIP legacy format.

C4.7.16.3.1.6. The ICP will adjust its Materiel Release Acknowledgment (MRA) follow-up timeframes based on the updated MRC in accordance with standard MILSTRAP business rules.

C4.7.16.3.2. **Transaction Services Distribution of MRC Change/Update.**

Transaction Services will route the MRC change/update to the ICP per standard business rules for distribution of MRC messages. Transaction Services will not distribute the MRC change/update to DLSS-based recipients.

C4.7.16.3.3. **Use of the MRC Change/Update by the ICP.** The value of this transaction to the ICP is to provide corrected transportation data, enabling it to prepare an updated shipment status message. DLMS compliant systems should handle the updated transactions as the official MRC in their application, since they carry the corrected data.

C4.7.17. **Storage Activity Denial or Rejection of Materiel Releases**

C4.7.17.1. **Preparation.** Materiel Release Denials (MRD), DLMS 945As, are prepared by storage sites and sent to the source of supply that initiated the MRO as notification of negative action on the MRO and will show the quantity denied and the appropriate management code.
C4.7.17.2. **Delivery Status.** If the storage activity cannot meet the delivery timeframe specified by the RDP, the storage activity will use the materiel release advice to provide Status Code CB to the source of supply. The source of supply will provide this status advice to the eligible status recipients (applies to conventional ammunition requisitions only).

C4.7.17.3 **Storage Activity Denials of Materiel Releases for Induction to Maintenance.**

C4.7.17.3.1. MRDs prepared under paragraph C4.7.10. will be used to provide a negative response to source of supply (Principal) initiated MROs directing release of a repairable asset for maintenance action.

C4.7.17.3.2. If the storage activity cannot provide the repairable asset for maintenance action in response to directed release, the source of supply (Principal) will provide supply status using CB status to advise the requisitioning activity (maintenance) that the asset is not available for induction.

C4.7.17.4. **Storage Activity Denials for PQDR Exhibits.**

C4.7.17.4.1. DLA storage activities will prepare the DLMS 945A Materiel Release Denial and send it to the source of supply for PQDR exhibits when the MRO containing the PQDR RCN does NOT match any of the RCNs on the storage activity RCN table at MRO allocation.

C4.7.17.4.2. When the DLMS 940R MRO contains the PQDR RCN and the RCN DOES match an RCN on the storage activity RCN table, but the RCN in the bin location is not the expected RCN for the MRO, the DLA storage activity will prepare a DLMS 945A MRD.

C4.7.18. **Component-Owned Stocks Centrally Managed and Stored by DLA under Memorandum of Agreement**

C4.7.18.1. The following procedures have a limited and restricted applicability controlled by a Memorandum of Agreement (MOA) between DLA and the requesting DoD Component. Upon request by a DoD Component and agreement by DLA, DLA will centrally manage Component-owned stocks within the DLA distribution system. All instructions to storage activities relative to the Component-owned stocks accepted under the MOA must originate from the owning ICP as the sole source authorized to direct delivery, issue, or other disposition of stock. Component-owned stocks accepted under the MOA for central management by DLA will be commingled with like DLA-owned stocks.

---

20 ADC 1169, DLA Distribution Center Denial Scenarios Associated with Product Quality Deficiency Report (PQDR) Exhibits
C4.7.18.2. To establish assets controlled by the DLA ICP under the MOA, the DoD Component may initiate an “in-place” sale. To accomplish this, the DoD Component requisitions materiel to be centrally managed by DLA, establishing the Component-owned assets on the DLA records. Ownership changes from DLA to the DoD Component, but DLA maintains item management control and continues to store the item in a DLA Distribution Depot. The DLMS 511R, Requisition, must contain the preferred depot DoDAAC for stock to be commingled and Advice Code 8D. The DLA ICP internally produces and posts the DLMS 940R, Materiel Release, (which is not actually sent to and from depot) and uses a DLMS 867I, Issue (DoD Activities), to drop and a DLMS 527R, Materiel Receipt – Other Than Procurement Instrument Source (DoD Activity) to post assets to the DLA ICP inventory record under Component-ownership. An image of the DLMS 527R, Materiel Receipt – Other Than Procurement Instrument Source (DoD Activity) will also be sent to the Component ICP for recording the financial receipt. Normal procedures will be followed for billing the reimbursable in-place sale.

C4.7.18.3. To direct shipment of these assets, the DoD Component must send a DLMS 511R, Requisition, to the DLA ICP to perform item management. To relate the requisition to Component-owned assets, the following entries are mandatory in the source document: Advice Code 2J; DLA Distribution Depot to indicate the storage location from which shipment of Component-owned materiel is to be made; ownership code; and condition code of the materiel.

C4.7.18.4. Requisitions created by organizational elements other than the Component ICP and sent to the Component ICP for approval will be forwarded to the DLA ICP using DLMS 511R, Referral Order. Mandatory entries prescribed in paragraph C4.7.18.3 for requisitions also apply to referral orders.

C4.7.18.5. DLA will process a requisition or referral order and create a DLMS 940R, Materiel Release. Additionally, DLA will produce and forward a DLMS 867I, Issue (DoD Activities), to the Component ICP for the issue quantity dropped from the DLA inventory records. Quantities not available will be rejected to the Component ICP using Status Code CB.

C4.7.18.6. In the event a warehouse denial occurs, the distribution depot will report the denial in the normal manner. DLA will send a DLMS 867I, Issue (DoD Activities), reversal and a DLMS 947I, Inventory Adjustment – Decrease (Physical Inventory), to the applicable Component ICP. Requisition documents will not be reinstated for continued supply action.

C4.7.18.7. Under the MOA, the DoD Component assets may be issued directly to DLA assembly points. The DLMS 511R, Requisition, must include Advice Code 8L; the depot to ship from, the DLA assembly point DoDAAC, Signal Code M, ownership code, and condition code. DLA will process a requisition in this format and create the MRO. Additionally, DLA will produce a DLMS 867I, Issue (Assembly/Disassembly/Conversion/Modification), and post to the DLA ICP records. An image of the DLMS 867I will be sent to the Component ICP.
C4.7.18.8. To accomplish a redistribution action of Component-owned assets between DLA depots under the MOA the following procedures apply. These actions will be limited to a dual ownership change between the DLA ICP and the Component ICP. That is, no materiel is actually moved; only DLA ICP inventory record changes are made. To accomplish the redistribution action, the DoD Component will provide a DLMS 511R, Requisition, (DLMS 940R, Redistribution Order, is not allowed). The following entries are required: DoDAAC of new depot to show Component-owner assets; Signal Code M; Advice Code 8G (indicates dual ownership change); depot previously showing Component-owned assets; ownership code; and condition code. A DLMS 867I, Issue (DoD Activities), and DLMS 527R, Materiel Receipt – Other Than Procurement Instrument Source (DoD Activities), will be recorded for DLA-owned materiel on the DLA ICP inventory record. A DLMS 867I, Issue (Returned Purchases), and DLMS 527R, Materiel Receipt – Other Than Procurement Instrument Source (DoD Activity), for the Component–owned inventory will be recorded and an image of the DLMS 867I and DLMS 527R will be sent to the Component ICP.

C4.7.18.9. To terminate the asset posture under the MOA, the Component ICP may direct shipment of the materiel using the directed shipment format above, or one of the following methods.

C4.7.18.9.1. Change the ownership while maintaining the inventory at the same depot. To accomplish this, the DoD Component will submit a DLMS 511R. The following entries are required: Advice Code 8H, the depot, ownership code, and condition code. The DLA ICP generates a DLMS 947I Issue (Other), internally and sends the Component ICP an image of the DLMS 947I and a DLMS 527R, Materiel Receipt – Other Than Procurement Instrument Source (Other).

C4.7.18.9.2. Direct the materiel to a DLA Disposition Services Field Office. To accomplish this, the DoD Component will send a DLMS 511R. The following entries are required: Advice Code 8J; depot; and the DLA Disposition Services Field Office.

C4.7.19. Retransmitting Requisitions to Another Source of Supply

C4.7.19.1. Continued Supply Action. The source of supply may retransmit requisitions to another source for continued supply action. The source of supply must always identify the date of receipt of the original requisition in the PO1 Loop, G62 segment, in the retransmitted requisition. The source of supply must always include Special Requirements Code 888 in retransmitted requisitions submitted to the SMCA that are backorder releases from the DoD Component ICPs.

C4.7.19.2. Nonconsumable Items. When a SICA receives a requisition for a nonconsumable item from a SICA activity, the SICA may initiate supply action if stocks are normally held for this purpose, or the SICA may forward the requirement to the PICA. If forwarded to the PICA, the SICA must record the requisition as received from the SICA requisitioning activity and recode the requirement, as necessary, with status addressees, treasury symbol number/fund purpose code, and/or project code that will
ensure PICA output of status, billing, MOV requests, and consignment instructions consistent with the SICA Service's NIP implementing instructions. If the PICA is only to provide status to the SICA, the SICA will not provide Status Code BM to the requisitioning activity. The SICA will provide the SICA requisitioning activity with status received from the PICA based on the data elements and coding contained in the original requisition.

C4.7.19.3. Inter-Service Ownership Transfer of Ammunition/Ammunition-related Materiel. When used for Service-initiated inter-Service ownership transfers of Single Manager for Conventional Ammunition (SMCA) ammunition and ammunition related materiel with no physical movement of materiel or billing, the initiating referral order will cite Project Code CYK and Signal Code M indicating a free issue, in conjunction with the additional data required to accomplish the transfer. This includes the old (from) ownership code associated with the service transferring ownership, the RIC of the Service receiving ownership, and the new/gaining (to) ownership code associated with the Service receiving ownership. Pending transition to DLMS discrete data enhancements, the ownership to/from and new owner RIC will be identified in the supplementary address/supplemental data field beginning with Service/Agency Code Y (see Appendix 7.9, Supplementary Address/Supplemental Data, for proper sequencing of these data elements into a single, concatenated field). The referral order will include an M&S code or distribution code ensuring follow-on status is directed appropriately (e.g., M&S Code B); do not designate status to the supplementary address. No shipment status will be provided.

C4.7.20. Processing Follow-Ups

C4.7.20.1. Time Standards. Process the DLMS 869A or DLMS 869F to determine the current status of requisitions. Time standards for dispatching status in reply to follow ups established for the distribution system are as follows:

C4.7.20.1.1. PD 01-08. For PD 01-08, dispatch status within two calendar days from the date of receipt of the follow-up.

C4.7.20.1.2. PD 09-15. For PD 09-15, dispatch status within five calendar days from the date of receipt of the follow-up.

C4.7.20.2. Providing Shipment Confirmation. A storage activity, in response to a follow-up initiated by a source of supply, will use the DLMS 945A to provide shipment confirmation, denial, or supply status information, as appropriate.

C4.7.20.3. Storage Activity Processing. Storage activities will provide Status Code BE if there is a record of the MRO but no record of having taken action in response to the MRO. Sources of supply in receipt of this status validate the original requirement with the requisitioner or, for GFM requisitions, with the MCA. The MCA is responsible for taking the necessary action to validate GFM requirements with the requisitioner and the source of supply. If the requested materiel has not been received, and the requisitioner or the MCA’s response indicates a continued valid requirement,
the processing point will generate an MRO modifier transaction that contains the same data as the original MRO. Storage activities in receipt of MRO modifiers will process them using paragraph C4.7.23.

C4.7.20.4. Generation of Pseudo Shipment Status. Sources of supply in receipt of Status Code BE, or after 60 calendar days have passed from the MRO generation date without confirmation or receipt of an MRA, will generate a shipment status DLMS 856S with Transaction Type Code NC, to DAAS. Shipment status for SA requisitions will be forwarded to the applicable ILCO. This shipment status will not cite a TCN or the mode of shipment and the generation date will be used as the date released to the carrier. DoD Components will establish a management evaluation program that monitors storage activities providing Status Code BE. Goals should be established and the performance attained be a rating element of the activity commander.

C4.7.20.5. Storage Activity Response with no Record Receipt. Storage activities responding to a follow-up initiated by a source of supply on an MRO for which no record is held at the storage activity will provide Status Code BF.

C4.7.20.6. Source of Supply Follow-Up Response. Sources of supply in receipt of storage activity responses to follow-ups will furnish appropriate status to eligible recipients using section C4.7 procedures.

C4.7.20.7. Request for Supply Assistance

C4.7.20.7.1. Requests for supply assistance require management decisions relative to supply requirements that are not normally programmed in a manner to permit mechanical processing. Therefore, these transactions should be manually reviewed to permit a determination as to whether the ESDs can be improved. Receipt of requests for supply assistance serves as notification of the need for the concerned materiel to be received by consignees on dates earlier than those that would result from the shipments accomplished using the source of supply ESDs. The actual date of the requirement need is the prerogative of the requisitioning activity. Any advancement of the ESDs, including a single day, will be considered by sources of supply as an improvement. Management decisions, designed to improve ESDs, should include one or more of the following, and/or any other additional actions that will improve the ESDs:

C4.7.20.7.1.1. Cannibalization of existing equipment.
C4.7.20.7.1.2. Acceleration of repair programs.
C4.7.20.7.1.3. Offers of I & S items.
C4.7.20.7.1.4. Diversion of materiel shipments.
C4.7.20.7.1.5. Supply from reserve assets.
C4.7.20.7.1.6. Supply from known station or depot excess stocks.
C4.7.20.7.1.7. Supply resulting from screening of materiel held pending classification.

C4.7.20.7.2. **ESD Improvement Considerations.** During the course of actions taken to improve ESDs, follow-up inquiries will not be construed by sources of supply as authority to override any requirements of equal and/or higher priority. Consideration will not be given to diversion of any assets required to satisfy requirements of equal and/or higher priority.

C4.7.20.7.3. **Improving ESD.** When determination is made that requested improvement in ESDs can be accomplished, the revised ESDs will be transmitted to status recipients. When actions taken by management do not result in improved ESDs, status recipients will be provided with the latest status applicable to the requisitions concerned.

C4.7.20.7.4. **Source of Supply Status.** Sources of supply, in receipt of follow-ups on requisitions for which MROs were created directing lateral redistribution of retail stock, will provide applicable status as follows:

C4.7.20.7.4.1. If the current status is BA and the ESD or the UMMIPS timeframes, whichever applies, has not passed, provide Status Code BA with the appropriate ESD to the requisitioner.

C4.7.20.7.4.2. If the current status is BA and the ESD or the UMMIPS timeframes has passed, provide Status Code B5 to the requisitioner and send a DLMS 940R, Materiel Release, with Transaction Type Code NB to the reporting activity. Sources of supply in receipt of responses to follow-ups will send appropriate status to eligible recipients using section C4.7. procedures.

C4.7.20.7.4.3. If the current status is positive shipping status, provide a DLMS 856S with Transaction Type Code AS.

C4.7.20.7.5. **Retransmitting Inquiries.** Processing points retransmitting requisition inquiries to another source of supply for continued action will cite their DoDAAC as the FROM-address. Processing points receiving such retransmitted transactions will not automatically retransmit such transactions back to the processing point from which the transaction was received without obtaining the prior agreement of that activity.

C4.7.21. **Force-Closed MRCs.** After generating pseudo shipment status transactions for unconfirmed MROs under subparagraph C4.7.20.4., sources of supply will hold the MRO record open pending an MRA response (under Chapter 10). If an MRA response is received, use it to close the record. For shipments to SA recipients, the source of supply may elect to use the MRA data or generate a DLMS 940R, indicating the mode of shipment and date shipped from the MRA, to interface with billing. If an MRA response is not received within the initial and follow-up timeframes, the source of supply may force-close the MRO. For shipment to SA recipients, sources of supply will ensure that proper inventory accounting and billing procedures are
applied. In response to an MRA indicating non-receipt, the source of supply may force-close the open MRO and bill for the materiel, or reprocess (ship) the materiel based upon established dollar thresholds.

C4.7.22. Processing Redistribution Orders (RDO)

C4.7.22.1. RDOs are originated by an ICP/IMM to direct release of materiel from a supply distribution activity to another within the same distribution system.

C4.7.22.2. For intra-Service use, an RDO may be used to direct release and shipment of materiel from a post, camp, station, or base to another similar activity within the Service’s distribution system to satisfy a specific Service demand.

C4.7.22.3. For intra-DLA use, an RDO may be used to redistribute DLA stock from a DLA Distribution Center to the contractor location in support of the DLA’s Industrial Product-Support Vendor (IPV) program (refer to Chapter 28).

C4.7.22.4. Prepare RDOs using the DLMS Implementation Convention 940R.

C4.7.23. Processing Requisition and MRO Modifiers

C4.7.23.1. Source of Supply Processing. Sources of supply will process a DLMS 511M, Requisition Modifier transaction to provide for modification of requisitions on backorder or for which MROs have not been processed to storage or retail activities. The corresponding original requisitions in process, and materiel obligations, will be recycled under DoD Component policy and normal processing actions will be continued to accommodate the modified PD, special requirements code, or RDD/RDP.

C4.7.23.1.1. Modification. Modification of MROs is at the discretion of the DoD Components. However, modifications will not be processed against requisitions for which MROs of retail assets have been generated.

C4.7.23.1.2. Direct Delivery Modification. Modification of requisitions that have been submitted to procurement sources for direct delivery is not required, except for requisition modifier transactions that contain:

C4.7.23.1.2.1. A revised country FMS offer/release option code and/or FF code.

C4.7.23.1.2.2. Special Requirements Code 555.

C4.7.23.1.2.3. Changes to the SHIP-TO address.

C4.7.23.1.3. Split Actions. The application of modifiers on requisitions for which split actions have been taken by the source of supply is at the option of the DoD Components.
C4.7.23.1.4.  Source of Supply Status. Sources of supply will provide status (DLMS 870S) after processing requisition modifier transactions as follows:

C4.7.23.1.4.1. Invalid Transaction Entries. When the modifier transaction contains invalid entries for data elements listed in paragraph C4.5.1. or the DoDAAC authority code edits in paragraph C4.10.11., the modifier request will be rejected using Status Code D7.

C4.7.23.1.4.2. Requisition Modifier Transaction Not Honored. When the requisition modifier transaction is not honored because the requested modifications cannot be made, sources of supply will provide Status Code B2 to the activities designated on the unmodified requisition.

C4.7.23.1.4.3. Modifications Successfully Processed. When the requested modifications have been successfully processed, Status Code BK will be provided.

C4.7.23.1.5. In addition, when modifier transactions are processed, sources of supply will provide the latest supply or shipment status to all parties identified in the original or modified requisition transaction.

C4.7.23.1.6. Sources of supply will process requested modifications only when all data fields can be modified, as requested. If this cannot be done, reject the modifier using DLMS 870S with Status Code B2.

C4.7.23.2. Submitting Modifier Transactions to Storage Activities. When the DoD Components modify MROs, submit a modifier transaction (DLMS 940R) to the applicable storage activity. Prepare the DLMS 940R modifier transaction as a result of processing the requisition modification.

C4.7.23.2.1. Storage activities, upon receipt of MRO modifier transactions, will modify the original MRO whenever the modifier is received prior to the actual printing of the DD Form 1348-1A, "Issue Release/Receipt Document." This will be accomplished by matching the document numbers of modifier transactions with document numbers of MROs having been previously received, including a match of suffix codes.

C4.7.23.2.2. These modified transactions will be processed in the normal manner prescribed for MROs.

C4.7.23.2.3. When storage activities receive MRO modifier transactions for which they have no record of the original MRO, they will process the modifier transactions as new MROs.

C4.7.23.2.4. Storage activities will provide DLMS 945A with Status Code B2 or BK to advise sources of supply when requested modifications are or are not accomplished.
C4.7.23.3. **Referring Activity Processing.** When requisition modifications are referred to another source of supply, the referring activity will identify the activity to which the requisition was referred as well as their own activity in the transaction and retransmit. Processing points receiving such passed transactions will not automatically pass such transactions back to the processing point from which the transaction was received without obtaining the prior agreement of that activity.

C4.7.24. **Processing Single Line-Item Cancellation Requests.** Sources of supply, procurement, storage, and reporting activities will process single line-item cancellations, as prescribed herein.

C4.7.24.1. **Preventing Shipment of Unwanted Materiel.** Sources of supply, procurement, and storage, and reporting activities are responsible for exercising the fullest practical resourcefulness in preventing the issue and shipment of unwanted materiel. The practical considerations involved in processing cancellation requests include such factors as time, related packing and handling costs, the dollar value, and location of materiel for which cancellation is requested.

C4.7.24.2. **General Rules.** General rules for the disposition and diversion of materiel that has been shipped are as follows:

C4.7.24.2.1. Sources of supply are responsible for providing diversion and/or disposition instructions for all items under their control destined for OCONUS that have progressed to the point where procurement actions cannot be terminated or shipment into the DTS has occurred. When OCONUS shipments have been lifted from CONUS terminals, the responsibility for diversion or disposition is that of the consignee, the appropriate theater commander, or the DoD Component.

C4.7.24.2.2. Sources of supply may request diversion or disposition instructions from the DoD Component contact points designated on the Defense Logistics Management Standards Website for both nonstocked and non-NSN items. However, sources of supply may, based on their stock position, divert materiel to depot stock.

C4.7.24.2.3. The DoD Components may predetermine and designate alternate consignees so that the DoDAAC of these activities may be inserted in later supply and/or transportation transactions. These predetermined destinations will be based on considerations as stated above, and may vary by NSN, FSC, or Federal Supply Group (FSG).

C4.7.24.2.4. When OCONUS shipments cannot be diverted or held for disposition, storage, and procurement, activities will advise sources of supply when elements of the DTS were unable to accomplish the desired shipment diversion or hold. The source of supply will provide a DLMS 856S to all eligible recipients of status. These transactions will contain a date, as provided by the clearance authorities, on which the shipment was lifted from the terminal for delivery OCONUS.
C4.7.24.2.5. When diversion of OCONUS shipments is accomplished by the DTS, sources of supply will furnish a DLMS 870S with Status Code B6 to all authorized status organizations. The advice of actions taken by the DTS will be provided under DTR 4500.9-R.

C4.7.24.2.6. Sources of supply will automatically initiate cancellation action for unfilled quantities of materiel obligations or open requisitions upon deletion from the DoDAAD of a DoDAAC identified as requisitioner, ship-to, or bill-to activity. Applicable supply and shipment status will be furnished to authorized recipients and, in the event DAAS does not have a recorded DoDAAC, the status will be disposed of.

C4.7.24.2.7. Costs incurred in cancellations/diversion will be billed as provided in subparagraph C4.7.28.6.

C4.7.24.2.8. No attempt will be made to stop or divert shipments to CONUS (domestic) consignees once released for shipment, regardless of the mode of shipment.

C4.7.25. Reserved

C4.7.26. Reserved

C4.7.27. Source of Supply Processing of Single Line-Item Cancellation Requests. Process cancellation requests DLMS 869C, as follows:

C4.7.27.1. First, against backorders in the following order of assigned Status Codes: BB, BC, BD, BP21, BZ, and BV.

C4.7.27.2. Second, against unconfirmed shipments (Status Code BA).

C4.7.27.3. Third, confirmed OCONUS shipments DLMS 945A, when shipped (to surface/aerial POEs and SEAVAN assembly points) prior to ICP receipt of cancellation requests in less than 45 calendar days for surface mode and 10 calendar days for air mode.

C4.7.27.4. Fourth, against all other status.

C4.7.28. Processing Point Procedures. Processing points receiving passed follow-up transactions will not automatically pass such transactions back to the processing point from which the transaction was received without obtaining prior agreement of that activity.

C4.7.28.1. Initiating. Initiate/accomplish cancellation actions against the quantity in the cancellation request received.

---

21 Staggered implementation authorized. Refer to ADC 93A.
C4.7.28.2. **Editing.** Edit cancellations processed to preclude duplicate cancellations. As a minimum, this edit will compare quantity, document number, suffix, and preparation date. Discard duplicates. Process all other cancellations as received.

C4.7.28.3. **Processing.** Process cancellation requests, regardless of dollar value or quantity, to immediately cancel quantities for which MROs and purchase requests have not been submitted to the storage, reporting, or procurement activities.

C4.7.28.4. **Quantity Limits.** If the quantity in the cancellation request is equal to, or less than, the backorder quantity at the source of supply (Status Code BB, BC, or BD), effect cancellation immediately and send a DLMS 870S with Status Code BQ to all authorized status organizations. Since cancellation action cannot be effected immediately on requisitions in Status Code BV, send a DLMS 870S with Status Code B9 to all authorized status organizations.

C4.7.28.5. **Diversions.** When cancellation requests are against released shipments or direct vendor delivery with Status Code BV, the source of supply will consider diversion of the materiel to depot stock or to fill other demands/backorders, or contract termination, as appropriate. The foregoing also applies to nonstocked and non-NSN materiel at S/A option, when there is a foreseeable demand for the item.

C4.7.28.6. **Status.** In the event the above actions are taken, use a DLMS 870S with Status Code B4 to indicate that the organization identified in the canceled requisition may be billed as follows:

C4.7.28.6.1. Transportation costs for returning the materiel to storage and/or procurement termination costs when it is determined that termination is in the best interest of the Government.

C4.7.28.6.2. Specific instructions concerning materiel, transportation charges, and credit allowances are contained in the MILSBILLS procedures documented in DLM 4000.25, Volume 4, Finance.

C4.7.28.6.3. In addition to the above costs, when applicable, the source of supply will bill rebuilding costs and other expenses incurred in canceling SA requisitions under DoD 5105.38-M.

C4.7.28.6.4. Charge for transportation (such as terminal costs associated with stopping, holding, and returning materiel to depots or storage) and procurement termination costs incidental to actual diversion/cancellation of FMS requisitions under DoD 5105.38-M.

C4.7.28.7. **Reversals.** Demand data previously recorded will be reversed by the quantity of the cancellation request. The demand data must always be adjusted regardless of the outcome of processing the cancellation request.
C4.7.28.8. **Notification.** Provide notice of the success or failure of cancellation or diversion actions to all authorized status organizations under section C5.2. Use the supply or shipment status to provide this notice as follows:

C4.7.28.8.1. DLMS 870S with Status Code B4, B6, BQ, BR, or BS to indicate cancellations/diversions accomplished.

C4.7.28.8.2. DLMS 870S with Status Code B9 to indicate cancellation/diversion action being attempted.

C4.7.28.8.3. DLMS 856S with shipment status to indicate cancellation/diversion not accomplished.

C4.7.28.8.4. DLMS 870S with Status Code B8 to indicate cancellation not accomplished as a follow-up to the previously sent Status Code B9.

C4.7.28.8.5. DLMS 870S with Status Code BF to indicate no record of the transaction reference number for the cancellation request submitted.

C4.7.28.8.6. DLMS 870S with an appropriate B_, C_, or D_ series status code for those transactions showing a record of a previous cancellation or rejection.

C4.7.29. **Source of Supply Submission of Single Line-Item Cancellation/Diversion Requests to Procurement**

C4.7.29.1. **Using DLMS 869C.** Use a DLMS 869C to prepare cancellation requests. Cite the appropriate contract data when sending cancellation requests to procurement. Identification of the contract data or procurement/purchase request number (PRN) will be dependent upon whether a number is assigned to a contract and is known to the source of supply at the time of receipt of the cancellation request. When the PRN is used, indicate the DoDAAC of the consignee to which to divert the shipment. When the source of supply does not desire diversion, do not indicate a diversion address.

C4.7.29.2. **Required Information.** All requests for cancellation/diversion submitted to the procurement activity will contain the following minimum information:

C4.7.29.2.1. Notification that the transaction is a request for cancellation or diversion.

C4.7.29.2.2. Identification of the source of supply submitting the request.

C4.7.29.2.3. The stock or part number or description of the item involved.

C4.7.29.2.4. The quantity of the item to be canceled/diverted.
C4.7.29.2.5. The original requisition document number and the suffix code, if applicable.

C4.7.29.2.6. Identification of the ship-to and mark-for addresses, as contained in the applicable purchase request.

C4.7.29.2.7. All contract data, if known; otherwise, the PRN and date of the purchase request.

C4.7.29.2.8. Diversion or hold instructions to include coded and in-the-clear, ship-to, and mark-for addresses for shipment, if diversion is to be accomplished.

C4.7.29.3. Cancellation/Diversion Requests. Submit cancellation/diversion requests to procurement activities:

C4.7.29.3.1. Regardless of dollar value and/or quantity, when the purchase requests have been submitted but the contracts have not been awarded. This applies to items and/or quantities assigned Status Code BZ.

C4.7.29.3.2. For items and/or quantities on awarded contracts and/or purchase agreements and the dollar value of the cancellation/diversion action exceeds $200.

C4.7.29.4. Source of Supply Responsibilities. Sources of supply will decide whether to suspend or continue the cancellation, diversion, or hold actions. Decisions to continue cancellations or diversions will be provided to procurement activities by cancellation request documents prepared in the manual format and containing the notation: SOURCE OF SUPPLY DECISION FOR CANCELLATION OR DIVERSION. Sources of supply will advise the ILCO of contractual agreements that will result in cost conditions if cancellations, diversions, or holding are accomplished. ILCOs will decide whether the cancellation, diversion, or hold actions will be suspended or continued. Decisions to continue cancellations or diversions will be sent to the source of supply by narrative message containing the notation: ILCO DECISION FOR CANCELLATION OR DIVERSION.

C4.7.29.5. Exceptions to Cancellation/Diversion Requests. Do not submit cancellation/diversion requests or requests for determination whether cancellation is in the best interest of the Government to procurement activities when:

C4.7.29.5.1. The dollar value of the request is less than $200.\footnote{As an exception for intra-Component use only, cancellation/diversion may be submitted to procurement regardless of dollar value when critical/short supply items are affected.}
C4.7.29.5.2. DD Form 250, “Material Inspection and Receiving Report,” shipment performance notice (SPN), vendor shipment notice, or equivalent is on record indicating:

C4.7.29.5.2.1. Shipments to CONUS consignees were released to carriers regardless of dollar value.

C4.7.29.5.2.2. Shipments to OCONUS consignees were previously released to carriers, and the number of days prescribed above have elapsed (10 calendar days’ air/45 calendar days’ surface).

C4.7.29.5.2.3. Shipment/delivery by air mail or parcel post. In this case, shipment status will be sent in response to cancellations received.

C4.7.29.6. Notice of Cancellation/Diversion Actions. Send notice of the success or failure of cancellation or diversion actions to authorized status organizations under the procedures of Chapter 5. Use supply and/or shipment status to provide this notice as follows:

C4.7.29.6.1. DLMS 870S with Status Code B4, B6, BQ, or BS applies to cancellations/diversions accomplished.

C4.7.29.6.2. DLMS 870S with Status Code B9 indicates cancellation/diversion action being attempted.

C4.7.29.6.3. DLMS 856S with shipment status indicates cancellation/diversion not accomplished.

C4.7.29.6.4. DLMS 870S with Status Code B8 indicates cancellation not accomplished when Status Code B9 previously sent.

C4.7.30. Procurement Activity Processing of Single Line-Item Cancellation and/or Diversion Requests to Procurement

C4.7.30.1. Processing Sequence. DLMS 869C and manual cancellation/diversion requests will be processed in PD sequence.

C4.7.30.2. Immediate Cancellation. Immediate cancellation action will be taken when contracts have not been awarded and/or firm orders have not been issued/placed.

C4.7.30.3. Procurement Activity Responsibilities. Procurement activities will advise the source of supply of contractual agreements that may result in unfavorable cost conditions if cancellation, diversion, or holding actions are accomplished. Sources of supply will decide whether the cancellation, diversion, or hold actions will be suspended or continued. Decisions to continue cancellation or diversion will be sent to procurement activities by cancellation request documents prepared in the manual
C4.7.30.4. Cost of Diversion. The cost of diversion or shipment hold actions will be sent to the source of supply for appropriate billing. Costs incurred in contract termination and diversion will also be sent to sources of supply to permit appropriate billing.

C4.7.30.5. Procurement Actions with Clearance Authorities. Procurement activities are required to initiate actions with clearance authorities to cause diversion of shipments at terminals. Procurement activities requiring diversion instructions, when a new consignee is not provided, will request these instructions from the source of supply by telephone or message.

C4.7.30.6. Actions Not in Government’s Best Interest. When the above cancellation/termination or diversion/hold actions would not be in the best interest of the Government, the source of supply will be advised and requested to give a decision by a specified date.

C4.7.30.7. Initiating Contract Actions. Actions to cancel, divert, or terminate contracts will be initiated within one working day from receipt of cancellation requests. These actions must be completed as fast as possible, but will not exceed five working days for PD 01-08 requests and 10 working days for PD 09-15 requests. When multiple cancellation requests are received on the same day, consideration will be given to the priority of the requests, OCONUS destination, the dollar value of the materiel, and the status of the contract involved.

C4.7.30.8. Source of Supply Notification. The procurement activity will advise the source of supply the attempted stop/diversion action has/has not been done by DTS within two working days of receiving the confirmation/denial notification from DTS.

C4.7.31. Source of Supply Processing of Cancellation Requests for MROs of Retail Assets

C4.7.31.1. Requirements. Source of supply cancellation requests, DLMS 940R, will be sent to reporting activities regardless of dollar value and quantity when Status Code BA is recorded, but shipment status has not been received. The source of supply will send DLMS 870S with Status Code B9 to all eligible recipients. If shipment status has been received, provide this status to all eligible recipients.

C4.7.31.2. Status Reporting. Sources of supply in receipt of responses to cancellation requests will send appropriate status to all eligible recipients.
C4.7.32. **Source of Supply Submission of Single Line-Item Cancellation and/or Diversion Requests to Storage Activities**

**C4.7.32.1. Requirements.** Source of supply cancellation requests or follow-ups on cancellation requests, DLMS 940R, will be sent to storage activities:

**C4.7.32.1.1.** Regardless of dollar value and quantity when Status Code BA is recorded, but an MRC has not been received; this applies to PD 01-15 requisitions/MROs for U.S. Forces, CONUS and OCONUS, and SA.

**C4.7.32.1.2.** When MRC is recorded on an OCONUS shipment released to a carrier for shipment to POE, less than 45 calendar days by surface mode or less than 10 calendar days by air mode, and the dollar value of the shipment exceeds $200.

**C4.7.32.2. Diversions.** DLMS 940R will identify the DoDAAC of the activity to which shipments will be diverted when shipment has already been released. When the source of supply does not desire or cannot provide diversion to a specific activity, do not indicate a diversion address. In the latter case, the source of supply will obtain and provide alternate destinations, if requested, by storage activities.

**C4.7.32.2.1. Attempted Diversions.** In the case of an attempted diversion, the source of supply will send DLMS 870S with Status Code B9 to authorized status organizations.

**C4.7.32.2.2. Exceptions.** Sources of supply will not send storage activities requests for cancellation/diversion when:

**C4.7.32.2.2.1.** In receipt of the MRC at the time of receipt of a cancellation request and the item requested for cancellation has a line-item value of less than $200 and is for an OCONUS shipment.

**C4.7.32.2.2.2.** Receipt of an MRC and OCONUS shipment has been done by parcel post, priority mail, or UPS.

**C4.7.32.2.2.3.** The MRC is recorded on an OCONUS shipment released to the carrier for shipment more than 45 calendar days by surface mode or 10 calendar days by air mode prior to receipt of the cancellation request.

**C4.7.32.2.2.4.** Receipt of the MRC and shipment to a CONUS activity was done prior to the receipt of the cancellation request.

**C4.7.32.2.3. Shipment Status Reporting.** In the instances described above, send DLMS 856S to authorized status organizations.
C4.7.33. **Storage Activity Processing of Single Line-Item Cancellation and/or Diversion Requests**

C4.7.33.1. **Processing Cancellations.** Process cancellations using DLMS 940R in the sequence prescribed in paragraphs C4.7.1.2, and C4.7.27.

C4.7.33.2. **Maintaining Records.** Maintain records to allow a determination whether line items shipped were in single-line or multi-line shipment units and the respective dollar value of each. This allows identification of shipment units susceptible to cancellation and determination whether cancellation actions should be continued under the following policies and procedures.

C4.7.33.3. **DoD Component Data Processing.** To the extent that processing capability is available, the DoD Components will develop and maintain data to:

C4.7.33.3.1. Allow identification of the depot work area to which shipment processing should have progressed. Work areas for consideration are shown in Table C4. T2.

**Table C4. T2. Depot Work Area Identification**

<table>
<thead>
<tr>
<th>COMPUTER</th>
<th>STORAGE</th>
<th>SHIPMENT PREPARATION</th>
<th>SHIPPING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mechanized processing of DLMS 940 - Materiel Releases and output of DD Forms 1348-1A and stop shipment notices</td>
<td>Bin Area Bulk Area</td>
<td>Preservation Packaging Packing Consolidation Parcel Post</td>
<td>Consolidation Air Freight Motor (Truck) Freight Rail Freight</td>
</tr>
</tbody>
</table>

C4.7.33.3.2. Include the maximum time experienced in processing DD Form 1348-1A or 1348-2, "Issue Release/Receipt Document with Address Label," shipments in each of the above work areas (within total time allowed by DoDM 4140.01 from receipt of MRO to release to transportation). Such data would provide a basis for determining the work areas where stop shipment action could be taken on receipt of a source of supply cancellation request to the storage activity. Also, consider the transaction priority as it affects processing time in hours versus days.

C4.7.33.4. **Routing.** The storage activity, upon receipt of a cancellation request DLMS 940R from the source of supply, will determine the appropriate work area(s) to which the stop shipment notices would be sent when cancellation of an in process DD Form 1348-1A shipment is required. Stop shipment notices will include pertinent line-item/transaction identification, priority, and information whether a single-or multi-line shipment unit, is involved. A separate stop shipment notice will be issued to the current work area and every other work area through which the shipment would later be processed.
C4.7.33.5. **Cancellation.** Do cancellation for all items/quantities for which a DD Form 1348-1A has not been released to storage work areas.

C4.7.33.6. **Release to Storage Work Area.** Attempt cancellation for all items/quantities for which a DD Form 1348-1A has been released to storage work areas and there is no record of transportation release to a carrier, unless:

- C4.7.33.6.1. The dollar value is less than $25 for a single line-item shipment unit.
- C4.7.33.6.2. The dollar value of a single line-item packed in a consolidated shipment unit is less than $200.

C4.7.33.7. **Source Notification.** The storage activity will advise the source of supply and, if applicable, all authorized status organizations of actions taken in response to cancellation requests. Send this notice as follows:

- C4.7.33.7.1. When the storage activity has no record of the MRO receipt, provide Status Code BF using a DLMS 945A.
- C4.7.33.7.2. When the items have not left the depot and cancellation action is accomplished, respond only to the source of supply with a DLMS 945A with Status Code BQ.
- C4.7.33.7.3. When cancellation is not attempted under the less than $25/$200 criteria, the storage activity will send the source of supply a DLMS 945A with Status Code B8.
- C4.7.33.7.4. When the items have been released to a carrier in shipments destined to a CONUS customer, take no action to stop/divert the materiel beyond the point of shipment. Send the source of supply a DLMS 945A with Status Code B8 (Transaction Type Code NJ in the WO6 segment) and pertinent shipping information in the applicable segments.
- C4.7.33.7.5. When the items have been released to a carrier in shipments destined for an OCONUS consignee, the storage activity will initiate actions under DTR 4500.9-R to stop or divert shipments within the DTS. Send Status Code B9 to the source of supply via a DLMS 945A.
- C4.7.33.7.6. The storage activity will not initiate action to stop or divert OCONUS shipments within DTS when:
  - C4.7.33.7.6.1. The items are consolidated in a multi-line shipment unit.
  - C4.7.33.7.6.2. The items were in OCONUS shipments released to carriers for shipment more than 45 calendar days by surface or more than 10 calendar days by air prior to receipt of the cancellation request.
C4.7.33.7.6.3. The items were shipped to OCONUS customers by priority mail, parcel post, or UPS.

C4.7.33.7.6.4. A single line-item shipment has a total dollar value of less than $200.

C4.7.33.7.6.5. The single line-item shipment unit has a total dollar value of less than $1,000 and was shipped in consolidation with other shipment units in a larger container, such as a CONEX and SEAVAN.

C4.7.33.8. Status Notification. Following receipt of confirmation that shipment stop or diversion action has been accomplished by DTS, the storage activity will provide Status Code B6 to the source of supply.

C4.7.33.9. Stop/Diversion Non-Initiated. When the storage activity does not initiate stop or diversion action with DTS because of one of the conditions identified above or, when notified that a requested stop or diversion action has not been done by DTS, the storage activity will send to the source of supply a DLMS 945A with Status Code B8 (Transaction Type Code NJ in the WO6 segment) and pertinent shipping information in the applicable segments.

C4.7.33.10. Notification Requests. Storage activities requiring diversion instructions when applicable information is not included in the cancellation request will request such instructions from the source of supply by telephone or message.

C4.7.33.11. Processing Time. Storage activities must complete the above actions in two working days for PDs 01-08 and five working days for PDs 09-15.

C4.7.33.12. Status of Stop/Diversion Request. The storage activity must advise the source of supply the attempted stop or diversion action has or has not been done by DTS within two working days of receiving the confirmation or denial notification from DTS.

C4.7.34. Reporting Activity Processing Cancellation Requests for Lateral Redistribution Orders (LRO) of Retail Assets

C4.7.34.1. Cancellation. Reporting activities will attempt cancellation to the maximum extent possible.

C4.7.34.2. No LRO Record. When the reporting activity has no record of the LRO receipt, send the source of supply a DLMS 945A with Status Code BF.

C4.7.34.3. Cancellation not Possible. When cancellation cannot be done, send the source of supply a DLMS 945A with Status Code B8.

C4.7.34.4. Successful Cancellation. When cancellation can be done, send the source of supply a DLMS 945A with Status Code BQ.
C4.7.34.5. **Diversion.** The reporting activity will not attempt diversion of materiel confirmed shipped.

C4.7.35. **Direct Vendor Delivery on Requisitions**

C4.7.35.1. **Supply Activity Interface.** In instances where requisitions are done by DVD, an interface is required between supply and purchasing operations. This interface will result in an interchange of specific information and documentation between sources of supply and procurement activities to ensure:

C4.7.35.1.1. Transmission of status to designated recipients in an orderly and timely fashion.

C4.7.35.1.2. Proper marking of shipment containers.

C4.7.35.1.3. Delivery of materiel using priorities or RDDs.

C4.7.35.2. **Purchase Requests.** Purchase requests must contain specific in-the-clear and coded data, as specified below, that must be perpetuated on procurement instruments and related transactions:

C4.7.35.2.1. The original requisition number, including suffixes when assigned.

C4.7.35.2.2. In-the-clear, ship-to address of the ultimate consignee and mark-for address, when applicable.

C4.7.35.2.3. Project code and project name, if applicable.

C4.7.35.2.4. Schedule of deliveries using RDDs or RADs, as applicable. List items on procurement requests in descending sequence of delivery or availability dates. (A separate requisition number is required for each delivery date, consignee, and priority.) This sequence will provide for listing items with earliest dates first and will result in the required schedule of deliveries.

C4.7.35.2.5. Identification and address of the organization to receive the notice or evidence of shipment made by contractors as required by Defense Federal Acquisition Regulation Supplement (DFARS) Appendix F.

C4.7.35.3. **DVD Requisitions.** Identify requisitions to be supplied by DVD sources separately from stock replenishment buys on purchase requests.

C4.8. **ARMY EXCHANGE REPARABLE PRICING PROCESS**

C4.8.1. The Army approach to the Exchange Pricing (EP) is a multi-system functionality implementation. EP employs a dual pricing system for reparable NSN items based upon standard price (latest acquisition cost plus recovery rate), EP (latest repair cost plus cost recovery rate), and a “buy one – return one” relationship with the
customer. That is, a qualified exchange pricing customer buys at the EP and pays a penalty if a reparable is not turned-in within a specified period of time from the issue date. This process is applicable to Army customers and Army-managed materiel only; other Services will continue to pay Standard Price and receive 65% credit exchange upon receipt of carcass by the Army PICA.

C4.8.2. Once an item of supply is identified for a national repair program and the NIIN has an established Exchange Price, all requisitions for the items will be priced at the Exchange Price if the customer is an authorized EP customer.

C4.8.3. When a requisition submitted to the Supply Support Activity (SSA) is processed by the Standard Army Retail Supply System (SARSS), SARSS will determine if both the customer DoDAAC is an EP customer, and the NIIN has an established EP indicator. As this transaction is processed through the Army supply system, middleware, Funds Control Module (including EP Tracking), DAAS, Commodity Control Supply System (CCSS), and Army Logistics Modernization Program (LMP), the EP indicator will be used to identify the transaction as EP related. All the legacy systems will continue processing the legacy 80 record position transactions; LMP will process DLMS transactions that are converted by Transaction Services.

C4.8.4. All related supply transactions prepared by Army will carry and perpetuate the EP Indicator. As a result of the EP implementation the following transactions are impacted: Requisition; Requisition Modifier; Requisition Follow-up; MRO; and Supply Status. The returns process will also process EP related transactions. The Materiel Receipt Transaction will be generated by SARSS for all returns of EP NIINs, and will include an EP Type of Credit indicator for unserviceable credit when applicable, as well as an EP conversion indicator to identify the need to provide credit according to the pre-EP credit policy, that lasts for 60 calendar days following the implementation of EP.

C4.8.5. If the return is in an un-repairable condition code or the item is not returned within the established timeframe (Delta Delay Days), the National Level systems (LMP, CCSS) will create an obligation adjustment based on the receipt from Middleware Funds Control Module of a Materiel Returns Supply Status (Delta Bill Trigger) Transaction. As a result of processing the delta bill trigger the national systems will create the logistics/interfund bill transaction with an EP Indicator and type bill code to identify the specific type of EP bill to the Army financial system.

C4.9. NAVY EXCHANGE REPARABLE PRICING PROCESS

C4.9.1. Navy uses a two-tier pricing system for selling Depot Level Reparable materiel to Navy customers. The Navy sells DLRs to other Services at full (standard) price and then provides carcass value credit when the carcass is returned. This is the same method the Air Force and Army use when selling reparable items to the Navy. The Standard Price is the price representing the full value of the DLR item, and is the price charged when a Not Ready for Issue (NRFI) unit (also referred to as a ‘Carcass’) is not turned in. The Net Price (also referred to as Exchange Price) is the price that represents the cost of repairing a DLR item, and is the price charged to customers when
a NRFI unit has been or will be turned in. Navy customers indicate on their requisitions whether or not a NRFI unit is available for turn-in via the Advice Code, and they are then charged Net or Standard Price accordingly.

C4.9.2. Requisitions received indicating that a carcass will be returned are tracked in the Navy’s Carcass Tracking System. This system monitors these requisitions and matches them with carcass returns as they occur. This system also generates follow-ups to customers who have not returned their carcasses as promised. Ultimately, the system triggers an additional charge to the customer, if the carcass is not returned. Navy uses the term Carcass Charge for this additional billing; it represents the difference between Standard Price and Net (Exchange) Price. This additional billing is also referred to as a Delta Bill. If the customer returns the carcass after receiving the Carcass (Delta) Bill, then the additional billing is reversed, resulting in a Carcass Charge Reversal (Credit Delta Bill). Navy customers may also return excess DLRs for credit. The credit can be Standard, Net, or Carcass value.

C4.9.3. Under MILSBILLS legacy 80 record position billing, the Navy ICPs use the Sales Price Condition Code to indicate to customers that a particular bill is either Net (Exchange) Price or Carcass (Delta) Price. Once operational, Navy’s Enterprise Resource Planning will replace the Navy ICP’s legacy MILSBILLS billing system with a DLMS based system. Since DLMS does not utilize a Sales Price Condition Code, Navy will use a combination of Stock Exchange Code and Type of Bill Code to indicate on the bill that the price charged is Standard, Net, or Carcass price. The DAAS will convert Navy DLMS bills back to MILSBILLS legacy 80 record position format for any Navy customers unable to accept DLMS formats.

C4.10. DEFENSE AUTOMATIC ADDRESSING SYSTEM EDIT OF INCOMING REQUISITIONS

C4.10.1. DAAS will edit all incoming requisitions and other DLMS transactions for data errors and validity under procedures in DLM 4000.25-4, “Defense Automatic Addressing System.”

C4.10.2. As a result of these edits, DAAS will correct data entries or reject transactions. In case of source of supply errors, the correct source of supply will be entered and the transaction rerouted, as appropriate.

C4.10.3. DAAS will reject all requisitions/ FedMall orders containing GY/GZ series AACs. DAAS will send DLMS 870S transactions with Status Code CX to advise all concerned of rejection of the requisition.

C4.10.4. DAAS will recognize the enhanced DLMS capability to discretely identify different DoDAACs as the requisitioner, ship-to, and bill-to activities as a DLMS enhancement.23

23 Refer to ADC 1009A.
C4.10.4.1. DAAS will perform validation to ensure that only FedMall generated requisitions contain the FedMall DoDAAC SC4210 as the bill-to DoDAAC. When shipment to an activity other than the requisitioner is required, the FedMall DoDAAC will be included as the bill-to activity in the DLMS transaction in association with Fund Code XP and Signal Code L. This construct is used to identify purchase/credit card as the method of payment. Requisitions using this construct outside FedMall will be rejected. DAAS will send a DLMS 870S transaction with Status Code CX to advise all concerned of the rejection.

C4.10.4.2. While maintaining a mixed DLMS/MILSTRIP Legacy environment, DAAS will perform validation to ensure DLMS requisitions discretely identifying the bill-to DoDAAC in conjunction with Signal Code C or L do not conflict with the bill-to activity identified in the Fund Code to Billed DoDAAC Conversion Table (refer to DLM 4000.25, Volume 4, Appendix 1.2). Inconsistent requisition content will be rejected. DAAS will send a DLMS 870S transaction with Status Code CX to advise all concerned of the rejection.

C4.10.5. DAAS will pass DLMS 511R part-numbered (DIC A02 and A0B) requisitions to the RIC present in the incoming transaction.

C4.10.6. DAAS will validate requisitions for invalid/expired OSD/JCS Category D project codes. DAAS will blank out the inappropriate project code and send DLMS 870S with Status Code BK to the customer.

C4.10.7. DAAS will validate F/AD I usage through the requisitioning process. Requisitions with an unauthorized priority designator will be downgraded. DAAS will send DLMS 870S with Status Code BK to the customer.

C4.10.8. DAAS will perform validation of requisitions (DLMS 511R, DLMS 511M, 517M, and DLMS 869F) for accuracy and reasonableness of the entry in the RDD field and its compatibility with the PD. DAAS will send a DLMS 870S with Status Code BK to advise the requisitioner of the resulting modification. For SA requisitions forwarded to the applicable ILCO, DAAS will not blank out customer input. DAAS will perform PD and RDD edits according to Table C4. T1.

C4.10.9. DAAS will identify non-appropriated instrumentalities and prime vendor contractors using non-contractor DoDAACs for billing and provide for billing under non-interfund procedures by changing the fund code for these requisitions to XP. A DoD Prime Vendor contractor is identified as a DoDAAC beginning with SD. A non-appropriated funded activity is identified as a DoDAAC beginning with FT or FF. DAAS will send a DLMS 870S with Status Code BK to the customer.

C4.10.10. DAAS will perform validation of requisitions for authorized ordering or billing DoDAACs. Reject requisitions when the requisitioning DoDAAC is not authorized to order, identified as follows: DoDAACs beginning with F followed by all numeric, FA, or FY. Reject requisitions when the DoDAAC may not be used for billing, identified as
DoDAACs beginning with FA or FY. DAAS will send a DLMS 870S transactions with Status Code CX to advise all concerned of the rejection of the requisition.

C4.10.11. Requisition Date Edit. DAAS will edit requisitions to reject any requisitions that are greater than one calendar year old, or are more than one day in the future. For all requisitions (DIC A01, A0B, A02, A0E, A05, A07, A04, A0D), where the requisition is not applicable to FMS/Grant Aid or Navy initial outfitting (document number Service Code N, R, or V, and Fund Codes equals: VO (Victor Oscar), V7 (Victor Seven), or LQ (Lima Quebec), QU (Quebec Uniform) or QZ (Quebec Zulu)), then:

C4.10.11.1. Reject requisitions that are more than one day in the future. If the document number ordinal date YDDD (rp 36-39) converted to CCYYDDD is greater than the current date plus 1 (CCYYDDD + 1), reject with Supply Status CD, and if less than or equal to the current date plus 1, allow to process.

C4.10.11.2. Reject requisitions that are greater than one-year-old. If the document number ordinal date YDDD (rp 36-39) converted to CCYYDDD is equal to or less than the current date minus 1 year (CCYYDDD - 1000), reject with Supply Status CD, and if greater than the current date minus 1 year (CCYYDDD - 1000), allow to process.

C4.10.12. DAAS and the source of supply will perform validation of requisitions, modifiers, and follow-ups that can be treated as requisitions for authorized ordering, bill-to, or ship-to DoDAACs according to the DoDAAC Authority Codes below (Table C4.T3.), and will reject requisitions that do not meet the DoDAAC authority code edits. DAAS or the source of supply will furnish Status Code CX to advise all concerned of the rejection of the requisition. If the transaction failing the edit is a modifier, then DAAS or the source of supply will reject with Status Code D7 (see Table C4.T5.).

<td>Process as zero (0)</td>
</tr>
</tbody>
</table>
| **Stock Number or Appropriate Item Identification** | 1. If blank, reject.  
2. If incorrect, research to determine if the stock number has changed (for example, FSC changed to match the NIIN). As a result of the review, take action as follows:  
a. If the stock number cannot be identified, reject with appropriate supply status.  
b. If the FSC is incompatible with the NIIN, check the FSC to determine if it matches a previously assigned FSC. If it matched, change the FSC to the current FSC, continue supply action, and furnish appropriate supply status. If it does not match, reject with appropriate supply status.  
c. If the stock number has changed (for example, FSC change), change the number to the new stock number and continue supply action. If the changed NSN is managed by another source of supply, initiate a passing order and furnish appropriate supply status.  
3. If manufacturer’s part number, compare to FLIS to determine if a stock number is assigned. If assigned, change the manufacturer’s part number to the stock number and continue supply action. If the NSN is managed by another source of supply, initiate a passing order and furnish appropriate supply status. |
| Unit of Issue | Enter correct unit of issue or reject. If rejected, enter correct unit of issue in supply status transaction. |
| Quantity | Reject. |
| Requisitioner | Discard if entry is blank or incorrect. If the DoDAAC fails the Authority Code edits in C4.10.11, then the transaction will be rejected with CX or D7 status as appropriate. |
| Date | Reject. Sources of supply may reject if other than FMS/Grant Aid or Navy initial outfitting, and the requisition date exceeds one calendar year from the transaction processing date (current date) or is more than one day in the future. |
| Serial | Reject. |

---

25 This edit does not apply to USN supply sources.  
26 Requirement to provide correct unit of issue when original unit of issue on the requisition could not be converted last reported as not implemented by USN and DLA (Subsistence). Refer to AMCL 162.  
27 Refer to ADC 427A. Edit is mandatory during DAAS processing and optional for DoD sources of supply.

33 Use of the RDD to fill subsistence items last reported as not implemented by DLA (Subsistence). Refer to AMCL 7.
34 Not applicable for intra-USAF requisitions
35 Refer to ADC 1065.
36 Use of RDP for conventional ammunition last reported as not implemented by USAF. Refer to AMCL 148.
C5. CHAPTER 5

STATUS REPORTING

C5.1. SUPPLY AND SHIPMENT STATUS - GENERAL

C5.1.1. Status Data. Status data is either supply status or shipment status. Sources of supply to include inventory control point (ICP)/integrated materiel manager (IMM) and shipping activities prepare status transactions using the applicable transaction described under paragraphs C5.1.2. and C5.1.4. Status documents from sources of supply will be forwarded to the Defense Automatic Addressing System (DAAS) for transmission to status recipients. Status data may be informational or require additional action by organizations based on the assigned status code. Status recipients include, but are not limited to, requisitioners, storage activities, control offices, and/or monitoring activities.

C5.1.1.1. Supply Status. Supply status informs organizations of action taken or being taken on materiel requisitioned but not shipped, shipment consignment instructions, or disposition instructions for materiel offered under the materiel returns program (MRP).

C5.1.1.2. Shipment Status. Shipment status informs organizations of the actual shipping dates (such as the date released to the carrier), the release criteria for shipments, or shipment delay notifications. It also provides for an interface with transportation and for shipment tracing by organizations under DTR 4500.9-R.

C5.1.1.3. Item Unique Identification.

5.1.1.3.1. Shipment Status for NSNs containing an IUID Indicator Yes (Y), indicating that DoD Item Unique Identification (IUID) Supply Policy is required, must contain the Unique Item Identifier (UII) and/or serial number for each item when available. See Section C5.1.4.5 for specific shipment status requirements for IUID.

C5.1.1.3.2. Capital Equipment Candidates. In support of Financial Improvement and Audit Readiness (FIAR) compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Submitters must prepare materiel release confirmation citing the applicable serial number(s) and include the UII when available.¹

C5.1.1.4. There are additional processing procedures over and above those contained in this chapter that must be applied for serially managed materiel requiring owner visibility at DLA Distribution Centers. The identity of the materiel and the additive procedures are in Chapter 30.

¹ Refer to ADC 1198
C5.1.2. **Transactions.** This chapter addresses procedures applicable to supply and shipment status. The Enterprise Business Standards Office Website provides DLMS electronic data interchange (EDI) transaction formats on the DLMS Implementation Convention (IC) page. The IC page also includes the corresponding MILSTRIP transaction formats by document identifier code (DIC). The corresponding MILSTRIP legacy 80 record position transaction functionality is identified for information purposes in a mixed DLSS/DLMS environment.

C5.1.2.1. Supply Status. Use the DLMS 870S Supply Status transaction to provide supply status.\(^2\)

C5.1.2.1.1. Response to Requisition Transaction is DLMS 870S with Status Report Code 4 – Response to Requisition. This transaction provides the functionality of MILSTRIP legacy DICs AE1, AE2, AE3, AE8, and AE9.

C5.1.2.1.2. Direct Vendor Delivery Supply Status Transaction is DLMS 870S with Status Report Code 5 – Notice of Response to Direct Vendor Delivery. Used when direct vendor delivery notification is provided as a separate transaction. This transaction provides the functionality of MILSTRIP legacy DICs AB1, AB2, AB3, and AB8.

C5.1.2.1.3. Response to a Supply Assistance Inquiry is DLMS 870S with Status Report Code 6 – Notice of Response to Supply Assistance.

C5.1.2.2. Shipment Status Transaction is the DLMS 856S Shipment Status with Transaction Type Code AS – Shipment Advice.\(^3\) This transaction provides the functionality of MILSTRIP legacy DICs AS1, AS2, AS3, AS8, and AU1, AU2, AU3, and AU8 for shipment status provided in response to cancellation requests.

C5.1.2.3. Requisition Inquiry/Supply Assistance Request. Use a DLMS 869A Requisition Inquiry/Supply Assistance Request transaction to send a requisition follow-up or supply assistance request for an open requisition or cancellation request.

C5.1.2.3.1. Shipment Tracing Request Transaction is DLMS 869A with Transaction Type Code 71 – Filing and Search Requests. This transaction provides the functionality of MILSTRIP legacy DIC AFT.

C5.1.2.3.2. Requisition Inquiry Transaction on previously submitted requisitions is DLMS 869A with Transaction Type Code AF –

---

\(^2\) Organizations furnishing Materiel Returns Program (MRP) supply status will use the DLMS 870M transaction. DLMS Volume 2, Chapter 11 addresses MRP procedures.

\(^3\) Organizations furnishing Materiel Returns Program (MRP) shipment status transactions will use the DLMS 856R transaction. DLMS Volume 2, Chapter 11 addresses MRP procedures.
Requisition Follow-Up. This transaction provides the functionality of MILSTRIP legacy DICs AF1 - AF5.

C5.1.2.3.3. Requisition Follow-Up for Improved Estimated Shipping Date Transaction is DLMS 869A with Transaction Type Code AF – Requisition Follow-Up and Product/Item Description (PID) 05, Code 2 to identify requisition follow-up requests for an improved estimated shipping date. This transaction provides the functionality of MILSTRIP legacy DIC AFC.

C5.1.2.3.4. Requisition Follow-Up for Initial Shipping Activity transaction is DLMS 869A with Transaction Type Code AF – Requisition Follow-Up and PID05, Code 1 to identify requisition follow-up requests for the DoDAAC of the initial transportation shipping activity. This transaction provides the functionality of MILSTRIP legacy DIC AFY.

C5.1.2.3.5. Request for Supply Assistance Transaction is DLMS 869A with Transaction Type Code AR – Supply Assistance. There is no equivalent legacy MILSTRIP transaction.

C5.1.2.4. Requisition and Cancellation Follow-Up when the source of supply has no record.

C5.1.2.4.1. Requisition Follow-Up (No Record). Use a DLMS 869F Requisition Follow-Up transaction with Transaction Type Code IN – Inquiry to send a requisition follow-up when the source of supply provides Status Code BF in response to a DLMS 869A. Status Code BF indicates that the source of supply has no record of the requisition. This transaction provides the functionality of MILSTRIP legacy DICs AT1, AT2, and AT3.

C5.1.2.4.2. Requisition Cancellation Follow-Up (No Record). Use a DLMS 869C Requisition Cancellation transaction with Transaction Type Code AC – Requisition Cancellation to send a requisition cancellation request follow-up when the source of supply provides Status Code BF in response to a DLMS 869C Cancellation Request. Status Code BF indicates that the source of supply has no record of the cancellation request. This transaction provides the functionality of MILSTRIP legacy DICs AK1, AK2, and AK3.

C5.1.3. Types of Supply Status

C5.1.3.1. Supply Status. Use a DLMS 870S transaction, Supply Status.

C5.1.3.1.1. Response to Requisition

4 The Request for DoDAAC of Initial Transportation Shipping Activity transaction is applicable in a mixed DLMS/MILS environment where a separate transaction is needed to provide the requested information. Under DLMS, the distribution depot identifies the shipping activity in the shipment status transaction, eliminating the need for a follow-up. Refer to ADC 223.
C5.1.3.1.1.1. Sources of supply (or management control activities (MCA)), processing GFM transactions, use the DLMS 870S with appropriate status codes to convey advice to organizations. It is used to convey notice of action taken or being taken on requisitions and requisition-related transactions; such as, retransmitted requisitions, cancellations, modifications, and requisition inquiries (follow-ups and/or requests for supply assistance). Organizations will identify additional status addressees in the original requisition and/or requisition-related transactions, as applicable. DAAS generates supply status in selected situations resulting from item identification edits but will indicate their RIC as the MESSAGE FROM address in the supply status.

C5.1.3.1.1.2. Reporting Status Decisions. Sources of supply or MCAs will respond to requisition(s) to advise activities of action taken (as indicated), alone or in combination, to any of the requests listed below. This includes status upon processing a requisition inquiry (follow-up and request for supply assistance) or a cancellation request, and rejection status when rejecting transactions.

C5.1.3.1.1.2.1. Backorder.

C5.1.3.1.1.2.2. Partial issue or partial other action.

C5.1.3.1.1.2.3. Materiel substitution.

C5.1.3.1.1.2.4 Unit of issue changes.

C5.1.3.1.1.2.5. Retransmitted (rerouted) requisitions.

C5.1.3.1.1.2.6. Cancellation, modification, or inquiry.

C5.1.3.1.1.2.7. Any circumstance that predicts that issue may not be made within the timeframes established for the assigned priority designator (PD).

C5.1.3.1.2. Response to Direct Vendor Delivery (DVD). Sources of supply will use the notice of response to DVD to advise organizations materiel is being supplied by DVD from procurement. The supply (procurement) source generates this notice for each requisition that is procured for DVD to a consignee. The DVD, DLMS 870S notice provides a cross-reference between the requisition document number and the contract information. Organizations may also use information in this notice to report nonreceipt of materiel using the appropriate discrepancy reporting process.

C5.1.3.1.3. Response to Supply Assistance. Sources of supply will use the notice of response to supply assistance to advise organizations of action taken to expedite the shipment of the requested materiel.

C5.1.3.1.4. Material Processing Center (MPC) Supply Status

C5.1.3.1.4.1. The MPC will provide Status Code NL to notify the Navy ship/customer that materiel has arrived at the MPC for sortation and temporary storage pending delivery to the customer.
C5.1.3.1.4.2. The MPC will provide Status Code NW to provide systematic notification materiel has been delivered from the MPC to the Navy ship/customer.

C5.1.3.1.5. Air Force Integrated Logistics Solution-Supply (ILS-S) (Retail Supply). Supply Status DLMS 870S will be used on an intra-Air Force basis to provide the latest status to the intended receiving activity. Additionally, supply status will be used to support the unique item tracking (UIT) program for positive inventory control (PIC) nuclear weapons related materiel (NWRM) by providing UII and/or serial numbers. For legacy items where the unique item identifiers (UIIs) have not been marked in accordance with item unique identification (IUID) policy, the serial number alone will be passed.

C5.1.3.1.5.1. DAAS will enable transmission of information copies of the ILS-S Supply Status to the NWRM PIC Fusion Module UIT Registry to ensure the PIC NWRM program has near real time access to UIIs and the associated serial numbers of NWRM item movements.

C5.1.3.1.5.2. DAAS will block transmission of ILS-S Supply Status to non-Air Force recipients where feasible.

C5.1.3.1.4.3. The receiving MPC will provide Status Code NY to provide systematic notification materiel has been transshipped from the receiving MPC to another destination MPC.

C5.1.3.2. Materiel Returns Supply Status. Organizations and sources of supply will use the DLMS 870M, Materiel Return Supply Status to convey advice to one another as notice of action taken or being taken on Offer of Materiel Reports (OMRs) and OMR-related transactions. Use the DLMS 870M to send status to the ICPs/IMMs. The ICPs/IMMs will use the DLMS 870M to provide status or disposition instructions for materiel to organizations, including disposition instructions related to discrepant materiel reported under Chapter 17. Follow Chapter 11 to determine the processing procedures for and the prescribed usage of this status.

C5.1.3.2.1. Unsolicited Report. Customer organizations will use the unsolicited report to provide status to the source of supply on open OMRs for unshipped materiel.

C5.1.3.2.2. Response to Materiel Returns. Sources of supply will use the DLMS 870M to provide informational status or disposition instructions to organizations for materiel reported under the MRP.

C5.1.4. Types of Shipment Status

C5.1.4.1. Preparation of Shipment Status. Shipment status will be provided by the shipping activity or the source of supply for direct vendor delivery (contractor direct) or in response to a requisition follow-up. The consolidation and containerization point (CCP) and other locations performing consolidation subsequent to issuance of
shipment status may also provide shipment status for the purpose of identifying passive RFID.\(^5\) Under DLMS, the shipment status will include enhanced data content and support item unique identification (UIID) and intransit visibility requirements as directed under DoD policy/procedures (DoDM 4140.01), when available and pending full DLMS implementation/modernization. In support of FIAR Compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Submitters must prepare shipment status citing the applicable serial number(s) and include the UII when available.\(^6\) Shipment status will be provided by the DoD shipping activity, the CCP, or by the source of supply using the DLMS 856S.

Maintenance activities (organic and commercial) will provide shipment notification to the receiving activity and other interested parties when materiel is shipped to the distribution depot, DLA Disposition Services Field Office, or other designated receiving activity per source of supply/inventory control point guidance. This may be accomplished using either the DLMS 856S Shipment Status, or the DLMS 856 Advance Shipment Notice (ASN), provided via Wide Area Work Flow-Receipt and Acceptance (WAWF-RA).\(^8\) The DLMS Shipment Status will include asset visibility content, such as UIID, and intransit visibility requirements, such as passive RFID and the TCN as directed under DoD policy/procedures (DoDM 4140.01). DLMS enhancements include, but are not limited to the following:

**C5.1.4.1.1.** Passive RFID for the shipment unit/case/pallet associated at the requisition document number level. The shipment status transaction may identify a hierarchy to clarify the relationship of passive tags within different shipment levels.

**C5.1.4.1.2.** For Unique Item Tracking (UIT) purposes, the UII (when available) and serial number will be added to the shipment status transaction. Serial number without the applicable UII may only be used during MILSTRIP/DLMS transition and pending implementation of UIID capability. Refer to Chapter 19 for UIT guidance.

**C5.1.4.1.3.** Under the DoD UIID Supply Policy, the UII and/or serial number (when available) must be added to the shipment status transaction. Serial number without the applicable UII may be used only during MILSTRIP/DLMS transition and pending implementation of UIID capability. Paragraph C5.1.4.5 contains specific procedures to identify the UII in shipment status transactions when the NSN(s) contains the UIID Indicator Y denoting that serialized item management is required. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available.

---

\(^5\) Refer to ADC 257, DLMS Shipment Status Generated by Consolidation and Containerization Point

\(^6\) Refer to ADC 1198

\(^7\) Direct vendor delivery shipment status using the 856S includes shipment status prepared by the DLA-sponsored Defense Planning and Management System (DPMS) application.

\(^8\) Business rules for use of the 856 for GFM or Property Transfer, including internal DoD transfers, are evolving. Refer to the Defense Procurement and Acquisition policy for UID. Specific applicability and interoperability issues to be resolved by the UID Program Office and DUSD(L&M)SCI.
C5.1.4.1.4. Both the TCN and a secondary transportation number, such as the small package carrier number, when this is applicable.9

C5.1.4.1.5. Identification of the carrier when other than United States Postal Service (USPS) by name and Standard Carrier Alpha Code (SCAC).10

C5.1.4.1.6. Identification of the initial DoD shipping activity (origin) by DoDAAC.11

C5.1.4.1.7. For OCONUS shipments made via the Defense Transportation System (DTS), GBL/CBL, parcel post, and small package carrier shipments, specific identification of the POE or CCP. The shipment status will specify air terminal, water terminal, or CCP by applicable qualifier code in the transaction. (During MILSTRIP/DLMS transition, DAAS may substitute a generic terminal qualifier for shipment status transactions converted from legacy 80 record position transactions where the type of facility is unknown.)12

C5.1.4.1.8. Under DLMS, the shipment status will perpetuate data content as applicable: project code, the special requirements code (legacy MILSTRIP required delivery date (RDD) coded entries, e.g. 999), and priority designator.13 Shipment status applicable to shipment of GFP, including requisitioned GFM and shipment of reparables to/from commercial maintenance, will perpetuate contract data from the MRO, to include the contract number authorizing GFP, and the call/order and CLIN when provided.

C5.1.4.1.9. The transportation priority will be included in all shipment status transactions as derived under DoDM 4140.01 guidance or other pertinent criteria.14

C5.1.4.1.10. The shipment status may include the unit price (required for Distribution Standard System (DSS)-generated shipment status; otherwise optional).15

C5.1.4.1.11. **Product Quality Deficiency Report (PQDR) Exhibit Tracking**

C5.1.4.1.11.1. When shipment status is prepared for shipment of a PQDR exhibit, the shipping activity will perpetuate the PQDR Report Control Number (RCN) from the MRO to the shipment status and designate a copy of the receipt

---

9 Refer to ADC 223, DLMS Shipment Status Enhancements: Secondary Transportation Number, Initial Shipping Activity, Carrier Identification, and POE, approved for phased and staggered implementation.
10 Ibid.
11 Ibid.
12 Ibid.
13 Refer to ADC 242, Shipment Status DS 856S: Priority Designator (PD), Transportation Priority, Project Code, Special Requirements Code, approved for phased and staggered implementation.
14 Ibid
15 Refer to ADC 242A, Inclusion of Unit Price on DLMS Shipment Status (DS 856S).
transaction for distribution to the Product Data Reporting and Evaluation Program-Automated Information System (PDREP-AIS).

C5.1.4.1.11.2. DAAS will recognize the inclusion of the PDREP-AIS DoDAAC in the shipment status and forward a copy of the shipment status for use in exhibit tracking.

C5.1.4.2. Shipment Status from the CCP or Other Locations Performing Consolidation. Shipment status will be provided by the CCP or other locations performing consolidation subsequent to the original issuance of shipment status, for the primary purpose of providing updated RFID information. This in turn supports intransit asset visibility and receipt processing. Other locations include distribution depots performing consolidation of local deliveries resulting in passive RFID updates.

C5.1.4.2.1. Preparation of the CCP/Consolidation Shipment Status

C5.1.4.2.1.1. The CCP/consolidation shipment status will be identified by a unique code in the transaction and will include the information as describe below.

C5.1.4.2.1.1.1. Ship-To-Activity. This activity will be explicitly identified.

C5.1.4.2.1.1.2. Lead TCN. This TCN may differ from that on the original shipment status.

C5.1.4.2.1.1.3. RFID Tag Value. When applicable, the transaction will contain multiple passive RFID tag values using a hierarchical structure. The original passive RFID will be repeated when it is available. Any additional tag values available will also be provided.

C5.1.4.2.1.1.4. Transaction Originator. This will identify the routing identifier code (RIC) of the ICP perpetuated from the original shipment status.

C5.1.4.2.1.1.5. Consolidation Activity. This will identify the DoDAAC of the location where the consolidation occurred, e.g. CCP or depot performing local delivery manifesting.

C5.1.4.2.1.1.6. Shipment Date. This will be the CCP/consolidation point shipment date.

C5.1.4.2.1.1.7. Mode of Shipment. This will be the mode shipped by the CCP/consolidation point.

C5.1.4.2.1.1.8. IUID Data. UUI and/or serial numbers (when available) must be included for NSNs with an IUID Indicator Y. Capital equipment candidates require serialization data visibility and therefore must cite the serial number
and include the UII when available. Requirements for including the UII in the CCP/Consolidation Shipment Status are provided in C5.1.4.5.

C5.1.4.2.1.2. Shipment status information content may be repeated from the original shipment status when this information is available, (e.g., when the original shipper was a co-located distribution depot). Where access to the original shipment status information is not available, the original data content will not be perpetuated and applicable data fields will not be populated.

C5.1.4.2.2. DAAS Distribution of CCP/Consolidation Shipment Status. DAAS will route the CCP/consolidation shipment status to the ship-to activity. Standard DAAS business rules for distribution of the shipment status to status recipients do not apply. In addition, DAAS will not distribute the CCP shipment status to Distribution Depot ship-to locations or Material Processing Center (MPC) locations supported by DSS.

C5.1.4.2.3. Use of the CCP/Consolidation Shipment Status by the Receiving Activity. The value of this transaction to the receiving activity is to support passive RFID-enabled receipt processing. DLMS applications not supporting passive RFID may disregard this status or choose to append the mode of shipment and the shipment date. New content on the CCP/consolidation shipment status should not be viewed as replacement values for a previously received shipment status matching on document number/suffix. Since there may not be a match on the previously identified TCN, the CCP/consolidation shipment status information will be handled in a way that does not impact quantity due or visibility of partial shipments that may not have been consolidated within the reconfigured shipment.

C5.1.4.3. Shipment Status for Local Delivery Manifested, Outbound MILSTRIP Shipments on Behalf of On-Base Customers, Re-warehousing actions/transshipments between Distribution Depots in support of ‘Home’ Industrial Activity and ‘Forward Support’ Industrial Activity site materiel requirements, and non-MILSTRIP Shipments (e.g., DD Form 1149) to Off-Base Customers, with Passive RFID. For shipments prepared by the transportation office that are local delivery manifested, material processing center (MPC) deliveries, outbound MILSTRIP shipments on behalf of on-base customers, re-warehousing actions between distribution depots, and outbound non-MILSTRIP shipments (e.g., DD Form 1149) to off-base customers, the shipment status will be prepared in accordance with paragraph C5.1.4.1 using a DLMS 856S, Shipment Status, to include identifying the passive RFID information and associating the tag data to the document number of the item(s) to be transshipped or cross-docked.

C5.1.4.3.1. For local delivery manifested shipments, MPC deliveries, and outbound MILSTRIP shipments for On-Base Customers, the DLMS 856S will contain the transaction status reason code (BSN07 = 091 Transship/Cross-dock Shipment Status (non-CCP)) to denote that the shipment status is being provided by a location performing transshipping/cross-docking subsequent to the original shipment. The RIC From will be the RIC of the activity executing the local delivery manifest. The remaining
data elements for a shipment status transaction will be ascertained from the pack list/shipping documentation accompanying the shipment. If the shipment already has a pRFID tag on it, no additional DLMS 856S is required; the existing pRFID tag will just need to be read and an XML Visibility transaction sent to DAAS recording the tag read event. If there is no document number either on the inbound data or on the pack list/shipping documentation, then do not generate the DLMS 856S for conveying the pRFID tag. This is to preclude a mismatch of data with the original DLMS 856S transmitted by the ICP, that will have a document number.

C5.1.4.3.2. For re-warehousing actions/transshipments between distribution depots in support of ‘Home’ Industrial Activity site and ‘Forward Support’ Industrial Activity site materiel requirements, a normal DLMS 856S will be generated and transmitted to DAAS. This transaction will carry the normal shipment status message data, along with the pRFID tag identification numbers and any extended transportation data (e.g., bill of lading number, commercial carrier tracking numbers). Since there will never be a materiel receipt acknowledgement (MRA) for these re-warehousing actions/transshipments between the Home and Forward Industrial Activities, a status reason code (BSN07=048 Industrial Activity Re-Warehousing/Transship Shipment Status) will be included so that DAAS can flag these DLMS 856S instances and prevent them from triggering the MRA Report.

C5.1.4.3.3. For outbound non-MILSTRIP shipments documented on a DD Form 1149, a DLMS 856S will be created. Table C5.T1 lists the minimum data elements that must be included in the shipment status message; sources of the data are the DD Form 1149 and pRFID tag information. Shipment status applicable to shipment of GFP will perpetuate all GFP contract data from the shipping documentation, to include the contract number authorizing GFP, and the call/order and CLIN when provided. For NSNs containing the UID Indicator Y, include the UIIs and/or serial number(s) for each item when available. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available.

C5.1.4.3.4. **DAAS Distribution of Shipment Status for Local Delivery**

*Manifested, Deliveries to MPC, Outbound MILSTRIP Shipments on Behalf of On-Base Customers, and non-MILSTRIP Shipments (e.g., DD Form 1149) to Off-Base Customers.* DAAS will route the shipment status to the ship-to activity. Standard DAAS business rules for distribution of the shipment status to status recipients do not apply.

C5.1.4.3.5. **DAAS Distribution of Shipment Status for Re-warehousing actions/transshipments between Distribution Depots in support of ‘Home’ Industrial Activity and ‘Forward Support’ Industrial Activity site materiel requirements.** DAAS will route the shipment status according to standard DAAS business rules for distribution of the shipment status to status recipients.

C5.1.4.3.6. **Receiving Activity Use of Shipment Status for Local Delivery**

*Manifested, Deliveries to MPC, Outbound MILSTRIP Shipments on Behalf of On-Base Customers.*
Customers, Re-warehousing actions/transshipments between Distribution Depots in support of "Home" Industrial Activity and "Forward Support" Industrial Activity site materiel requirements, and non-MILSTRIP Shipments (e.g., DD Form 1149) to Off-Base Customers. The value of this transaction to the receiving activity is to support passive RFID-enabled receipt processing. DLMS applications not supporting passive RFID may disregard this status or choose to append the mode of shipment and the shipment date. New content on the shipment status should not be viewed as replacement values for a previously received shipment status matching on document number/suffix.

C5.1.4.4. **Shipment Status Materiel Returns.** The DLMS 856R, Shipment Status Materiel Returns, will be used to prepare a shipment status and be submitted promptly to the ICP/IMM after materiel directed for return is released to the carrier. Refer to Chapter 11 for materiel returns program procedures. Shipment status for materiel returns will include the TCN, shipment date, mode of shipment, and quantity shipped. It will perpetuate data content from the DLMS 180M automatic return notification or the ICP/IMM DLMS 870M reply to the customer’s asset report and shipping information, as applicable, per guidance in the DLMS Supplements. The DLMS 856R shipment status will include asset visibility content and intransit visibility requirements as directed under DoD policy/procedures (DoD 5-11.1-R). DLMS enhancements include, but are not limited to, the following:

C5.1.4.4.1. Passive RFID for the shipment unit/case/pallet associated at the document number level. The shipment status transaction may identify a hierarchy to clarify the relationship of passive tags within different shipment levels.

C5.1.4.4.2. For UIT purposes, the IUID and/or serial number. Serial number without applicable IUID may be used during MILSTRIP/DLMS transition and pending implementation of IUID capability. Refer to Chapter 19 “Procedures For Serially Managed Materiel Requiring Owner Visibility”, for UIT guidance.

C5.1.4.4.3. Both the TCN and a secondary transportation number, such as the small package carrier number, when this is applicable.

C5.1.4.4.4. Identification of the carrier, when other than USPS, by SCAC.

C5.1.4.4.5. Specific identification of all parties associated with the materiel return. This includes the party to receive credit when different from the document number DoDAAC (previously carried in the MILSTRIP supplementary address) and all parties to receive status. Transition to use of specifically identified parties facilitates full DLMS implementation, by enabling identification of multiple different activities (e.g. submitter, ship-from, credit-to, status-to). Prior coordination for this DLMS enhanced capability is required.

C5.1.4.5. **Item Unique Identification Shipment Status**

C5.1.4.5.1. **UII and/or Serial Number on Shipment Transactions.** For NSNs that contain the IUID Indicator Y, storage activities (or initial shipping activity) will
provide the UII and/or serial number, on outbound shipment status using the DLMS 856S transaction. If the UII is not available provide the serial number if available. The long-term end state goal is to rely on the UII only. Table C5.T2 shows the decision matrix that applies to scenarios where the UII and/or serial number may not be available when the item is being shipped. The overriding vision is that, pending full transition to DoD IUID Supply Policy using the UII, processing of outgoing shipments does not stop due to lack of a viable UII and/or serial number when the NSN contains an IUID Indicator Y. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available.

</tbody>
</table>

Note: N (No) in the Release Shipment column indicates additional research is required by the shipping activity to identify a valid UII and/or serial number or to hand type the serial number data when required for UIT items.

C5.1.4.5.2. Applicability. The requirement applies to shipments originated by the storage activity in receipt of any of the following directions to pick, pack, and ship: Materiel Release Orders (MRO), Lateral Redistribution Orders (LRO), or Redistribution Orders (RDO). The scope includes materiel shipped under MILSTRIP business rules, as well as non-MILSTRIP shipments documented on a DD 1149, Requisition and Invoice/Shipping Document, when DLMS Shipment Status is provided.

C5.1.4.5.3. Issue Release/Receipt Document. Shipping activities will prepare the Issue Release/Receipt Document (IRRD), when applicable, in accordance with DLM 4000.25, Volume 2, Appendix 6.35 and 6.36, providing the UII(s) and/or serial number(s) of the items shipped using automated information technology (AIT).
C5.1.4.5.4. **Due In Record.** Receiving activities will use the UIIs and/or serial numbers in the shipment status to create or update the due-in record. This information will be used to verify the UIIs actually received. Receiving activities will follow the supply discrepancy reporting procedures to report mismatches as appropriate.

C5.1.4.5.5. **Scenarios for Including the UII in the Shipment Status.** Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available.

C5.1.4.5.5.1. **Shipment Status Subsequent to a Materiel Release Order.** Initial shipment status normally is prepared by the storage site on behalf of the materiel owner. When the material is shipped, the shipping activity will prepare and transmit a DLMS 856S with UII(s) and/or corresponding serial numbers, under DoD IUID Supply Policy requirements to DAAS. For this scenario and the others to follow, the Defense Automatic Addressing System (DAAS) will route the shipment status to the designated status recipients per standard MILSTRIP distribution rules and to any additional parties as identified in the transaction.

C5.1.4.5.5.2. **Shipment Status Subsequent to a Redistribution Order.** Initial shipment status is normally prepared by the storage site. When materiel is shipped, the shipping activity will prepare and transmit the 856S to the designated receiving activity including UII and/or corresponding serial numbers, under the requirements in DoD IUID Supply Policy.

C5.1.4.5.5.3. **Shipment Status Subsequent to a Direct Vendor Delivery.** The source of supply is responsible for providing shipment status for materiel shipped directly by the vendor to the customer. Under this scenario, the source of supply will NOT provide IUID content on the DLMS 856S. Instead, it is anticipated that the receiving activity will be fully DLMS compliant and will receive a copy of the Wide Area Workflow (WAWF) Advance Shipment Notice (856) containing the IUID data content. There is no requirement for redundant transmission of IUID data to the receiving activity.

C5.1.4.5.5.4. **Shipment Status Subsequent to a Lateral Redistribution Order with Distribution Code 2 or 3.** The LRO is a request by the manager to redistribute retail stock identified through retail level reporting or access to a retail asset visibility system.

C5.1.4.5.5.4.1. In response to the LRO, the shipping activity will prepare and transmit the 856S (DIC AS6) to the originator of the LRO. The shipping activity will include IUID content, Distribution Code 2 or 3, and identification of the ship-to activity.

C5.1.4.5.5.4.2. When the LRO shipment status (DLMS 856S (DIC AS6)) contains IUID content, DAAS mapping will be used to prepare a DLMS 856S
to perpetuate the IUID content to the ship-to activity. DAAS, at a minimum, will indicate the following:

- DIC AS1 if the ship-to activity is the requisitioner. If the ship-to activity is not the requisitioner, then indicate DIC AS2. The ship-to will be perpetuated from the DLMS 856S (DIC AS6).
- The RIC-To from the DLMS 856S (DIC AS6) becomes the RIC-From in the DLMS 856S (DIC AS1) (indicating that the shipment status is provided on behalf of the manager).
- Distribution Code 2 or 3
- UIIs and/or serial numbers
- Signal Code B used in the LRO will NOT be perpetuated.
- The Supplemental Data field will NOT be perpetuated.

C5.1.4.5.5.3. Upon receipt of the DLMS 856S (DIC AS6), the manager will then generate the shipment status 856S (DIC AS8), without UIIs and with the distribution code from the original requisition and send to DAAS, who will route it to status recipients under MILSTRIP distribution rules and to any additional parties as identified in the transaction.

C5.1.4.5.5.4.4. The customer supply system must ensure that the shipment status provided by the manager without UIIs does not overlay the LRO shipping activity's shipment status with UIIs. The Distribution Code 2 or 3 may be used to recognize the LRO shipping activity shipment status.

C5.1.4.5.5.5. Shipment Status Subsequent to a Disposal Release Order (DRO). In response to directed release of property to a DLA Disposition Services Field Office, the shipping activity will provide shipment status including UII and/or corresponding serial numbers, under the requirements in DoD IUID Supply Policy.

C5.1.4.5.5.6. Shipment Status in Response to a Follow-Up. The source of supply will follow current MILSTRIP procedures to prepare the shipment status transaction based on the Materiel Release Confirmation (DLMS 945A) under DoD IUID Supply Policy. Since the MRC does not contain IUID data, no UII/serial numbers will be in the source of supply shipment status transaction.

C5.1.4.5.5.7. Shipment Status Prepared by Consolidation and Containerization Point (CCP) or Other Locations Performing Consolidation. When the CCP or other location performing consolidation prepares the shipment status, it will include the UII and/or serial number based on DoD IUID Supply Policy. CCP eligibility will not be altered based on the requirement to include the IUID data.
C5.1.4.5.5.8. Shipment Status on Multiple Freight Pieces. For a shipment containing IUID content and shipped in multiple freight pieces, shippers are NOT authorized to execute the movement of the shipment using multiple freight piece procedures (e.g., citing the same TCN for all boxes). Those shipments must be “partialed” by using the 16th position of the TCN to uniquely identify each freight piece. A separate DLMS 856S Shipment Status will be transmitted for each document number – partial TCN pair, identifying the contents of each freight piece, to include pRFID tag(s) and UII(s) and/or serial numbers.

C5.1.4.5.5.9. Non-MILSTRIP Shipments Documented on a DD 1149. When the shipping activity is requested to ship material documented by a DD 1149, Requisition and Invoice/Shipping Document, see paragraph C5.1.4.3.3. for procedures associated with the construct of the DLMS 856S Shipment Status. To add the UII and/or serial number data, key aspects of the HL looping of the 856S are:

C5.1.4.5.9.1. The first HL loop is allocated to addressing and the second HL loop is allocated to the shipment. If there is pRFID at the carton level, it will be passed in the third HL loop, which will be a pack loop.

C5.1.4.5.9.2. To identify the UIIs and/or serial numbers, use separate HL item loops to identify the UII and/or serial number information. If there is pRFID at the item level, the pRFID tag information will be passed in a REF segment within the applicable item loop to which it applies. A separate HL item loop will be generated for each item. If there is a pack loop, then the item loop will identify the associated pack loop as its parent in the HL02; if there are no pack loops, then there will be no HL02.

C5.1.4.6. Shipment Status Message Changes/Updates. In the event a shipment does not get lifted as originally intended (e.g., shipment is left off the truck) and the shipment is re-booked, the activities (e.g., shippers, ICPs) that originate the DLMS 856S shipment status transaction will send an updated transaction with all of the changed transportation information. The shipment status update can also be used to convey updated passive RFID tagging information, if it changed from the original erroneous submission. Examples of changed transportation information includes transportation method code, SCAC, ship date, bill of lading information, and tracking information.

C5.1.4.6.1. Preparation of the Shipment Status Change/Update

C5.1.4.6.1.1. The shipment status change/update message will be identified by a unique code (BSN02 = RR) in the transaction to flag it as an updated shipment status message.

C5.1.4.6.1.2. It will convey a new Status Reason Code (BSN07 = A40) to advise the shipment status recipient that the updated shipment status transaction corrects erroneous content data (e.g., transportation data, pRFID data).
C5.1.4.6.1.3. It will repeat the shipment status information from the original shipment status message, in addition to any changes to the original information.

C5.1.4.6.1.4. It will convey updated passive RFID information if it has changed from the original erroneous submission. When applicable, the transaction will contain multiple passive RFID tag values using a hierarchical structure. The original passive RFID will be repeated when it is available. Any additional tag values available to the shipment status recipient will also be provided.

C5.1.4.6.1.5. It will convey changed transportation information (e.g., transportation method code, SCAC, ship date, bill of lading information, and tracking information).

C5.1.4.6.2. DAAS Distribution of Shipment Status Change/Update. DAAS will route the shipment status change/update to the shipment status recipient per standard business rules for distribution of the shipment status.

DAAS will not distribute the shipment status change/update to MILSTRIP legacy recipients.

C5.1.4.6.3. Use of the Shipment Status Change/Update by the Receiving Activity. The value of this transaction to the receiving activity is to provide corrected transportation data and to support passive RFID-enabled receipt processing. DLMS compliant systems’ receiving applications should handle the updated transactions as the official shipment status, since they carry the corrected data.

C5.1.5. Requesting Status

C5.1.5.1. Purpose. Use the DLMS 869F Requisition Follow-Up to request status on a previously submitted requisition.

C5.1.5.2. Organizations Receiving Status. To ensure sources of supply automatically provide status data to all organizations required to receive supply and/or shipment status, identify all additional organizations to receive status in the initial requisition or in requisition related transactions. To obtain status on previously submitted requisitions or cancellation requests, activities may submit follow-ups.

C5.1.5.3. Reports. The DoD Components will submit reports when requisition status reporting is required to designate status of a project. Obtain special reports, when required, from an eligible recipient of status identified in requisitions. Special reports are not required from the inter-DoD Component sources of supply.

C5.1.5.4. Status Code CA. When Status Code CA is received in response to a follow-up request and no record of the previous Status Code CA and the reasons for rejection can be located, authorized status recipients may inquire off line, such as via mail, message, or telephone, to the source of supply to obtain reasons for rejection.
C5.1.6. Status Recording. Organizations will promptly record all status information received (automatically and/or in response to requisition inquiries) to applicable due-in records and/or requisition history (status) files, and, in the case of the DLA Disposition Services, the disposal suspense file. Status recipients will use supply status data to establish or update the due-in record to monitor for materiel receipts under Chapter 13. In addition, status recipients will:

C5.1.6.1. Give particular attention to the supply status transaction date to ensure that records/files are updated in the proper chronological order/date sequence.

C5.1.6.2. Review the DLMS 870S received for any additional action required by the status code if any.

C5.1.6.2.1. If supply status identifies a processing delay due to storage site denial to the source of supply’s materiel release order (Status Code BD with Management Code R), the customer/customer’s system will update/clear the local record for the suffix and quantity identified (so that later status on a next available suffix is not misinterpreted as duplicative/exceeding the quantity ordered, potentially triggering cancellation). Estimated shipping dates will not be provided with BD status when associated with storage activity denial as indicated by Management Code R. Further supply action to satisfy the denied quantity will be identified on later supply status transactions under the next available suffix code. Use of Status Code BD with Management Code R allows the customer’s system to better track status and recognize the correct quantity in process.

C5.1.6.2.2. If a requisition has been rejected with a rejection status code, and the materiel is still required, the requirement will be submitted as a new requisition with a new document number and a current transaction date.

C5.1.6.3. Treat shipment status received as notice shipment has been made and that additional follow up will only result in receipt of another shipment status document.

C5.1.6.4. Anticipate receipt of materiel within prescribed Uniform Materiel Movement and Issue Priority System (UMMIPS) timeframe for the assigned PD, or the RDD cited in the requisition, upon receipt of supply status without an estimated shipping date (ESD).

C5.1.6.5. Evaluate status already received prior to submitting requisition inquires to follow up for additional status.

C5.1.6.6. Ensure appropriate status is sent to other activities requiring status when the only status recipient is the activity identified by a distribution code.

C5.1.7. Sending Status - General

C5.1.7.1. Requirements. Sources of supply will automatically send a DLMS 870S when processing requisitions, redistribution orders (RDOs), cancellations,
modifications, and requisition inquiries (follow-ups and requests for supply assistance). MCAs will send reject status for requisitions they process. Sources of supply will maintain and send current supply status as provided below. For these purposes, MCAs and sources of supply will maintain accessible requisition history records for a minimum of 6 months after completing a shipment of materiel or canceling a requisition, to provide for timely status responses. MCAs will maintain requisition history records until contract termination.

C5.1.7.2. Associated Transaction Status. Sources of supply initiated requisition status will include all status transactions (supply and shipment) generated during source of supply processing that are not produced in response to requisition inquiries or cancellation requests.

C5.1.7.3. Normal Requisitioning Processing. The sources of supply will provide supply status based on normal requisition processing, including additional supply status due to changes in requisition processing, such as, cancellation actions, modifications, item substitutions, DVD actions, changes in ESDs (when retransmitting requisitions to another source of supply), and requisition inquires (follow-ups and requests for supply assistance). In addition, supply sources will send:

C5.1.7.3.1. A DLMS 870S with Status Code BB (citing the scheduled ESD for release of materiel from stock to the customer) when backordering a requisition against a due-in to stock. The source of supply will always send additional Status Code BB to organizations with a revised ESD when adjusting shipping dates.

C5.1.7.3.2. A DLMS 870S with Status Code BZ with an ESD after deciding to process the requirement as a DVD shipment. Sources of supply will give Status Code BV after effecting contracts or procurement actions and establishing an agreed to contract shipping date. Status Code BV must contain contract shipping date and also the contract data that provides organizations with a cross-reference to the original requisition. At a minimum, contract data will include the contract number, call/order number, notification of destination/origin acceptance, allowable quantity variances, and identification of the contractor by CAGE. The contract required shipping date will be discretely identified and may be equal to the estimated shipment date. Additional contract data may be included as available.\(^\text{16}\)

C5.1.7.3.3. A DLMS 870S with additional Status Code BV with a revised ESD to organizations when adjusting contract shipping dates on items scheduled for DVD.

C5.1.7.4. Manual Requests. The source of supply may reject a requisition, or initiate a manual off-line request to obtain additional information, when the requisition contains insufficient information to continue processing. Use the STATUS TO organization identified in the requisition as the action addressee on all requests for additional information. Treat other organizations identified in the requisition, not

\(^{16}\) Refer to ADC 465, Contract Data for 870S_BV Status
designated as STATUS TO organizations, as information addressees on requests for additional information. When an inquiry for additional information is made, the source of supply will send a DLMS 870S with Status Code BD, to all designated STATUS TO organizations. Sources of supply will suspend further action on requisitions awaiting additional information until a response is received or until 30 calendar days from date of inquiry, whichever occurs first. Upon receipt of requested information, the source of supply will continue normal processing. If the organization does not provide needed information within 30 calendar days, the source of supply will reject the requisition using a DLMS 870S with Status Code D3.

C5.1.7.5. **Status Frequency.** For each reinstated requisition, retransmitted (rerouted) requisition, requisition modifier, and Materiel Release Order (MRO) processed, sources of supply will automatically send supply and/or shipment status, as appropriate.

C5.1.7.5.1. **Shipment Status to DAAS.** Sources of supply will transmit shipment status to DAAS for all source of supply requisitions to include a DLMS 856S for all DVDs, as required. Upon receipt of shipment status, DAAS will convert the shipment status to the appropriate type of status and make distribution. Except for cancellation and rejections, DAAS will send status to designated status recipients as identified by a significant media and status code (DoD or Component level), a significant distribution code and to any activity identified by RIC as a party to receive status. Sources of supply will give shipment status for exception ship-to addresses. As of April 1, 2014, the inclusion of a country code not valid with the current Geopolitical Entities, Names, and Codes (GENC) Standard will result in the transaction being rejected by DAAS using the DLMS 824R Reject Advice citing Reject Advice Code AU.

C5.1.7.5.1.1. **Material Processing Center (MPC) Shipment Status.** DAAS will also provide a copy of shipment status for materiel to be delivered to any customer supported by a MPC operated by DLA Distribution at the co-located DLA Distribution Center receiving site. In order to accomplish this, DAAS will maintain a table of DoDAACs associated with a particular copy of DSS as identified by DLA Distribution that the copy of DSS MPC supports. DLA Distribution, in coordination with the Service, will provide updates to DAAS as needed. When DAAS processes the DLMS 856S/AS8 and the ship-to DoDAAC begins with N, R, V, Z, M, or as otherwise identified, DAAS will match the ship-to DoDAAC to the MPC table. When an appropriate DSS DoDAAC for MPC support is identified, shipment status will be forwarded to the DSS for establishment of pre-positioned materiel receipt (due-in) record at the applicable MPC.

C5.1.7.5.1.2. MPCs receiving shipment status are located at the distribution center locations identified in Table C5.T3.

C5.1.7.5.1.3. The MPC will use the ship-to DoDAAC, mark-for-party project code, special requirements code, and transportation priority or priority designator from the due-in record or the shipment documentation to sort materiel for delivery per the Navy customer direction.

C5.1.7.5.2. Status of Unconfirmed Materiel Release Orders. Sources of supply will send DLMS 856S transactions to DAAS in accordance with C5.1.7.5.1. DAAS will send this status to the ship-to activity. If DAAS cannot determine the ship-to activity, DAAS will return the transaction to the ICP for handling. DAAS will route the pseudo shipment status transaction for SA requisitions to the applicable DoD Component International Logistics Control Office (ILCO).

C5.1.7.6. Turn-In Document Status. For each shipment on a defense turn-in document (DTID), the shipping activity will provide a DLMS 945A, Materiel Release Advice, or a DLMS 856S with appropriate in-transit control coding as specified under Chapter 16 for materiel being shipped to the DLA Disposition Services. If pricing information is not available, enter an estimated unit price.
C5.1.7.7. **Requisition/Reinstatement for Backorder.** When a requisition or reinstatement of a requisition is to be backordered against due-in to stock, sources of supply will furnish exception supply status. Sources of supply will send Status Code BB and the ESD for release of materiel from stock to the customer. Sources of supply will send Status Code BB to the customer with the revised ESD when shipping dates are adjusted.

C5.1.7.8. **Exception Status.** Sources of supply will send a DLMS 870S Exception Supply Status when the intent to process for DVD is known. This exception status will contain Status Code BZ and the ESD. When contracts or procurement actions have been effected and an agreed to contract shipping date is established, sources of supply will send additional Status Code BV indicating the contract shipping date.

C5.1.7.9. **Contract Shipping Date Adjustment.** When contract shipping dates are adjusted on items scheduled for DVD, the source of supply will provide a DLMS 870S with Status Code BV to indicate the revised shipping date. Sources of supply use the DVD notice DLMS 870S to notify organizations of materiel being supplied by DVD. This notice provides a cross-reference between the document number and contract data. When delivery dates are established for DVD shipments, the source of supply will provide the DVD notice in addition to supply status.

C5.1.7.10. **Indicating Processing Delay.** Sources of supply will furnish supply status indicating a processing delay when an MRO is denied by the storage activity. Use Status Code BD and denial Management Code R citing the MRO denied quantity and suffix. Further supply action to satisfy the denied quantity is anticipated to occur on a later suffix code.

C5.1.7.11. **Mandatory Status Reporting.** The use of supply and shipment status is mandatory for all source of supply initiated requisition statuses. Supply source initiated requisition status includes all statuses generated during source of supply processing not produced in response to follow-ups or cancellation requests. Use of supply and shipment status in response to cancellation requests is optional when supply status distribution rules require multiple recipients of status. Upon receipt of a DLMS 856S, DAAS will convert the request to the appropriate response transactions and make distribution to all eligible status recipients.

C5.1.7.12. **Preparation of Status**

C5.1.7.12.1. **Late Delivery.** All supply status transactions, indicating materiel will be released for shipment later than the standard delivery date (SDD) or RDD/required delivery period (RDP) must contain an ESD. Such supply status is applicable to materiel obligations including procurement for DVD. Conversely, the source of supply will reject requisitions that contain Advice Code 2C, 2J, 2T, or 2W with

---

19 Authorized for use on an intra-Army basis (ADC 191) and later expanded to inter-Service/Agency use (ADC 312). Not implemented by DLA and other Components.
Status Code CB when items are not available for immediate release or cannot be supplied by the SDD/RDD/RDP, with a DLMS 870S.

C5.1.7.12.2. **Estimated Shipment.** ESDs are also mandatory entries for those transactions reporting adjusted ESDs and any circumstance that predicts that issue may not be made within the timeframes established for the PD. Storage facilities in receipt of requisition inquiries on requirements that are in the process of being filled will use supply status to provide ESDs to the requesting source of supply. Status transactions providing advice of such events as changes in stock numbers, unit of issue changes, rejections, and shipments will not contain an ESD.

C5.1.7.12.3. **Rejecting Requisitions.** Sources of supply will use a DLMS 870S with status codes in the C and D series when rejecting requisitions and RDOs.

C5.1.7.12.4. **Processing Point Response.** Processing points provide a DLMS 856S in response to receipt of a DLMS 869F, Requisition Follow-up, containing the DoDAAC of the initial (origin) transportation activity. If the processing point is unable to provide the DoDAAC information to the requesting activity, the follow-up transaction will be rejected with Status Code DY.

C5.1.7.12.5. **Requisition Inquiry.** Status furnished by a DLMS 870S in response to a DLMS 869A, Requisition Inquiry, will contain the most current information available regarding the status of the requisition. Supply status in response to a requisition inquiry will contain a changed/new ESD, when applicable, and a transaction date that corresponds to the date of the reply. A DLMS 856S in response to a requisition inquiry will contain the shipping data for the materiel shipped.

C5.1.7.12.6. **Narrative Explanation.** Status Code CA and TD are the only status conditions to which the source of supply will provide a narrative explanation (in a free-form format) identifying the reason for rejection.

C5.1.7.12.7. **Abbreviated Messages.** The DoD Components may opt to use abbreviated status to activities.

C5.1.7.12.8. **Cancellation Request.** A DLMS 870S with Status Code BF sent in response to cancellation requests, with a document number not matching source of supply records, prevents source of supply processing of later transactions for this same document number. When providing Status Code BF in response to a cancellation request, also provide Status Code BF in response to all other transactions received containing the same transaction reference number. Sources of supply will retain accessible history records of Status Code BF generated from processing no-record cancellation requests following the generation of Status Code BF in accordance with DoD 5015.02, DoD Records Management Program.

C5.1.7.12.9. **Materiel Returns Status.** Use Chapter 11 procedures for providing materiel returns supply status transactions resulting from processing OMRs and OMR-related transactions.
C5.1.7.12.10. **Free Issue.** Requisitions that fail free issue validation will be rejected with Status Code CM; a new funded requisition may be submitted if the materiel is still required. Requisitions that fail free issue validation after materiel release (post-post requisitions/issue) may be handled as funded requirements. In this case, the source of supply will furnish Status Code DT alerting eligible status recipients that the post-post requirement is not authorized for free issue and to adjust fund obligation records as materiel will be billed to the requisitioner.

C5.1.7.12.10.1. Where a post-post requisition contains a free issue Signal Code D or M and free issue is not authorized, the signal code will be modified to the applicable billable signal code. Where the original requisition identified a valid fund code, it will be used for billing; otherwise, the fund code will be modified to indicate non-interfund billing (Fund Code XP):

C5.1.7.12.10.1.1. Signal Code D will be replaced with Signal Code A to show the correct shipping activity. (Both D and A ship-to the requisitioner as identified in the document number of original submission.)

C5.1.7.12.10.1.2. Signal Code M will be replaced with Signal Code J to show the correct shipping activity. (Both M and J ship-to the supplementary address identified in the original submission.)

C5.1.7.12.10.2. Since post-post orders are already shipped and cannot be split, if part of the quantity ordered is not eligible for free issue, the entire order will be denied free issue.

C5.1.7.12.11. **Expedited/Replacement Shipment Subsequent to Validated Supply Discrepancy Report.** When reshipment is required (e.g. due to shortage, non-receipt, wrong item, or comparable discrepancy/deficiency), the reshipment will be processed using the original document number and the next available suffix code. At a minimum, the SoS will provide supply status indicating the estimated shipment date for the reshipment.20

C5.1.7.13. **Time Standards for Providing Status Transactions.** When required, sources of supply will dispatch applicable status on requisitions, retransmitted requisitions, reinstated requisitions, and responses to requisition inquiries within the times prescribed below:

C5.1.7.13.1. **Supply Status**

C5.1.7.13.1.1. Two calendar days from receipt of PD 01-08 transactions.

C5.1.7.13.1.2. Five calendar days from receipt of PD 09-15 transactions.

---

20 Refer to ADC 1091, SDRs Requesting Expedited or Replacement Shipment.
C5.1.7.13.1.3. Twenty-four hours after release of MOV requests.

C5.1.7.13.2. Shipment Status

C5.1.7.13.2.1. Twenty-four hours after shipment (or release to carrier) for PD 01-03 transactions.

C5.1.7.13.2.2. Forty-eight hours after shipment for PD 04-08 transactions.

C5.1.7.13.2.3. Three working days after shipment for PD 09-15 transactions.

C5.1.7.13.2.4. Twenty-four hours from receipt of PD 01-03 requisition inquiries.

C5.1.7.13.2.5. Forty-eight hours from receipt of PD 04-08 requisition inquiries.

C5.1.7.13.2.6. Three working days from receipt of PD 09-15 requisition inquiries.

C5.1.8. Distribution of Status

C5.1.8.1. Requisition Cancellations. Sources of supply will automatically send supply and/or shipment status in response to requisition cancellations, including mass and universal cancellations. In addition to status sent to organizations, DAAS will send shipment status to storage/procurement activities and/or the source of supply (when DVD actions with Status Code BV are applicable) on all affected shipments entering the DTS during mass or universal cancellation situations. Sources of supply will send the status of cancellation actions within five calendar days of receipt of the requisition cancellations. Sources of supply will revise this status as further actions are taken on the cancellation request.

C5.1.8.2. Procedures. Sources of supply will address supply and shipment status sent in response to requisition cancellations as follows:

C5.1.8.2.1. When there is no record of the requisition cancellation, address the status transaction to the requisitioner.

C5.1.8.2.2. When there is a record of the requisition cancellation, address the status transaction to the organization(s) identified in the cancellation request, including any additional status organizations.
C6. CHAPTER 6

PHYSICAL INVENTORY CONTROL

C6.1. GENERAL

C6.1.1. Purpose.

C6.1.1.1. This chapter provides procedures, performance objectives, and reporting requirements for maintaining accurate records of the physical inventory, conducting physical inventory counts, and reconciling record variance for materiel within the supply system of the Department of Defense.

C6.1.1.2. There are additional processing procedures over and above those contained in this chapter that must be applied for items identified as serially managed materiel requiring owner visibility at DLA Distribution Centers. The identity of the materiel and the additive procedures are in Chapter 30.

C6.1.2. Transactions. This chapter addresses the procedures applicable to physical inventory control functions using the Defense Logistics Management Standards (DLMS) 846P, 846R, and 888I. The corresponding Military Standard Transaction Reporting and Accounting Procedures (MILSTRAP) legacy transaction functionality is identified for information purposes in a mixed Defense Logistics Standard System (DLSS)/DLMS environment. Other formats such as Extensible Markup Language (XML) are also available. See the Defense Logistics Management Standards Program Office Website DLMS IC page for available formats.

C6.1.2.1. DLMS 846P, Physical Inventory Request/Transaction History Request. Physical Inventory Request/Transaction History Request transaction functions of DLMS 846P is identified by the Accredited Standards Committee (ASC) X12 beginning segment (1/BIA/20) Report Type Code (BIA02).

C6.1.2.1.1. Physical Inventory Request Transaction is DLMS 846P identified by Report Type Code TC – Physical Inventory Request. The owner/manager uses this transaction to initiate, follow up on, or cancel a physical inventory. The storage activity uses it to initiate or cancel a physical inventory. This transaction provides MILSTRAP legacy DIC DJA functionality, except as noted below for Report Type Code DD.

C6.1.2.1.2. Response to Physical Inventory Request Transaction is DLMS 846P identified by Report Type Code DD – Distributor Inventory Report. This is used by the storage activity to respond to a Physical Inventory Request Transaction from the owner/manager when the response does not include asset balances. Use as a response relates to use with physical inventory transaction Management Code R, S, or Y. This transaction provides MILSTRAP legacy DIC DJA functionality when DJA is used as a response to indicate no record of stock number or no record of ownership;
physical inventory in workload bank or in process; or response to follow-up when inventory already complete (Management Codes R, S, and Y respectively).

C6.1.2.1.3. Transaction History Request Transaction is DLMS 846P identified by Report Type Code TF – Transaction History Request. Owner/Manager uses this to request transaction history from the storage activity. This transaction provides MILSTRAP legacy DIC DZJ functionality.

C6.1.2.1.4. Response to Transaction History Request Transaction (No History Available) is DLMS 846P identified by Report Type Code AD – Agent/Distributor Inventory Report. Storage activities use this to respond to Transaction History Request when no history is available. This transaction provides MILSTRAP legacy DIC DZK functionality when DZK record position 30-43 is 8-filled or 9-filled.)

C6.1.2.1.5. End of Day Transaction Count Transaction is DLMS 846P identified by Report Type Code B1 – Batch Report. This transaction is sent by the storage activity to the owner/manager to advise the owner/manager of the number of accountable (balance affecting) transactions that were forwarded during the daily course of business. This transaction provides MILSTRAP legacy DIC DZM functionality.

C6.1.2.2. DLMS 846R, Location Reconciliation. Location Reconciliation transaction functions of DLMS 846R is identified by the ASC X12 beginning segment (1/BIA/20) Report Type Code (BIA02).

C6.1.2.2.1. Location Reconciliation Request Transaction is DLMS 846R identified by Report Type Code LC – Location Inventory Report. The storage activity sends this to the owner/manager to reconcile storage activity and owner/manager records. This transaction provides MILSTRAP legacy DIC DZH functionality.

C6.1.2.2.2. Location Reconciliation Notification Transaction is DLMS 846R identified by Report Type Code X4 – Summary Report. The storage activity sends this to the owner/manager to advise of the number of Location Reconciliation Request transactions being forwarded. This transaction provides MILSTRAP legacy DIC DZN functionality.

C6.1.2.2.3. Location Reconciliation History Notification Transaction is DLMS 846R identified by Report Type Code ZZ – Mutually Defined. [An ASC X12 data maintenance was approved in version 5030 for DLMS 846R Report Type Code LN-Location Reconciliation History Notification.] The storage activity sends this to the owner/manager to advise of the number of transaction history transactions are being forwarded. This transaction provides MILSTRAP legacy DIC DZP functionality.

C6.1.2.3. DLMS 888I Storage Item Correction Transaction. Storage Item Data Correction/Change transaction function of DLMS 888I is identified by the ASC X12 beginning segment (1/BGN/15) Transaction Type Code (BGN07) A1 – Storage Item Data Change. The owner/manager sends this transaction to a storage activity to
change elements of data pertaining to an item of supply. This transaction provides MILSTRAP legacy DIC DZB functionality.

C6.1.3. **Applicability.** Basic elements of the physical inventory program prescribed by this chapter apply to the DoD Components, and establish:

C6.1.3.1. Uniform procedures on existing DoD policy for maintaining accurate records, conducting physical inventories and location surveys/reconciliations, researching inventory discrepancies and causes for adjustments, performance assessments, and for quality control of work processes prescribed by the DoD Physical Inventory Control Program (PICP).

C6.1.3.2. Management control of all DoD wholesale supply system materiel to include:

C6.1.3.2.1. principal items,
C6.1.3.2.2. packaged petroleum, oil, and lubricants,
C6.1.3.2.3. secondary items regardless of whether assets are purchased with stock fund or procurement appropriations,
C6.1.3.2.4. ammunition,
C6.1.3.2.5. forms and publications, and
C6.1.3.2.6. subsistence.

C6.1.3.3. Management data and performance standards necessary to measure the effectiveness of physical inventory control in the DoD supply system.

C6.1.4. **Exclusions**

C6.1.4.1. These procedures are not applicable to bulk petroleum; complete ships, aircraft, ballistic missiles, nuclear weapons, and space vehicles; assets located at contractor-owned and/or contractor-operated facilities that are not maintained on the DoD wholesale property accountability records; Industrial Plant Equipment reportable to the Defense Industrial Plant Equipment Center; National Security Agency/Central Security Service assets; and National Defense Stockpile assets. Loaned and in-transit materiel will be accounted for in accordance with Chapter 13 and the DoD Component procedures.

C6.1.4.2. Physical inventory control procedures for bulk petroleum are contained in DoD 4140.25-M, “DoD Management of Bulk Petroleum Products, Natural Gas, and Coal.”.

C6.1.4.3. Nuclear weapons for which the Department of Defense has custodial responsibility.
C6.2. **POLICY.** DoD policy is contained in DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures”.

C6.2.1. **Purpose.** The purpose of the DoD physical inventory control process is to:

C6.2.1.1. Ensure materiel accountability is properly executed within the Department of Defense;

C6.2.1.2. Ensure that accurate property accountability records for the physical inventory are maintained in support of customer requirements and readiness by performing physical inventories and location surveys/reconciliations;

C6.2.1.3. Identify and help resolve problems in supply system work processes affecting property accountability records by performing quality control of the work processes; and

C6.2.1.4. Identify repetitive processing errors and maintain accurate records for supply system transactions generated within the supply system by researching and reconciling property accountability record imbalances and potential discrepancies.

C6.2.2. **Philosophy And Guiding Policy**

C6.2.2.1. Inventory systems will support perpetual inventories where current item record balances are maintained by posting all balance affecting events such as the recording receipts, shipments, inventory adjustments and changes to condition, ownership, or location as they occur. If a system can’t currently support perpetual balances, efforts will be made to bring the system into compliance.

C6.2.2.2. The dynamic nature of the physical inventory control function and the cost of counting and reconciling records require that the approach be more selective than the “100 percent wall-to-wall total item count” concept. Available inventory resources will be directed toward potential and actual discrepancies, controlled inventory items, and weapon system critical items for which maximum returns are derived from applied resources.

C6.2.2.3. A fundamental requirement of inventory integrity is to ensure that the inventory data on inventory control points (ICPs) and storage activities systems is the same, thus becoming, in effect, a single item inventory record.

C6.2.2.4. Storage activities will make use of any one or a combination of the following three inventory counting approaches, as appropriate to the physical inventory item policy requirements, storage facility physical constraints, physical inventory support system capabilities, types of items, and inventory accuracy conditions.

C6.2.2.4.1. Cycle counting, where a portion of the inventory is counted either daily, weekly, or monthly until the entire inventory has been counted within the time period specified. If a system can’t support perpetual balances, the cycle counting approach will not be selected.
C6.2.2.4.2. Statistical sample counts that are statistically significant and representative of the total inventory item population are an efficient approach to quickly determine the accuracy of the inventory with minimal operational disruption. When statistical sample counts are allowed and the resultant count is within required tolerances, the inventory is considered complete. If the statistical count is outside the allowed accuracy tolerance, then the entire results of the statistical sampling must be voided. This requires scheduling another physical inventory via another sample count, cycle count, or wall-to-wall count as appropriate to the accuracy conditions determined by the first sample count. If another sample count is used, it will not be the same sample or a sub-set of the same sample selected earlier.

C6.2.2.4.3. Wall-to-wall inventories, where the entire count is made at a point in time and they are conducted only when:

C6.2.2.4.3.1. It is essential to strike a point in time balance for inventory;

C6.2.2.4.3.2. The storage and inventory density are small enough that there is no detrimental impact to supply support operations; or

C6.2.2.4.3.3. When safety and security of assets and access to such assets (such as munitions and explosives) are generally more restrictive and controlled.

C6.2.2.5. All physical counts will be blind counts; that is, personnel conducting physical counts will have no prior knowledge or access to the on-hand quantity balance in the inventory records. In those rare instances where segregation of duty controls cannot guarantee blind counts, other local effective risk mitigation techniques will be applied such as increased supervision and two member count teams.

C6.2.2.6. Personnel performing physical counts will be provided tools to perform the count including the part number, description, condition, location, number of requisite counts, etc., to ensure the correct item and location and count guidance is provided to inventory personnel conducting the inventories. The count the record will not be provided to the counters.

C6.2.2.7. The implementing procedures for the DoD Components are to:

C6.2.2.7.1. Provide management priority and resources for the execution of PICP functions. Managers will by direct or indirect supervision ensure that physical inventory teams are identified, properly staffed, trained, have the necessary instructions, tools, problem resolution assistance, and that duties are segregated to ensure accurate and timely physical counts, research, and records balance corrections.

C6.2.2.7.2. Ensure that assets are protected against waste, loss, negligence, unauthorized use, misappropriation, and compromise in the case of controlled inventory item materiel.
C.6.2.2.7.3. Ensure that sufficient emphasis is placed on materiel accountability and inventory accuracy to promote improved performance of individuals directly responsible for the care, security, and management of DoD supply system materiel, as well as those responsible for making reports on the status of that inventory.

C.6.2.2.7.4. Ensure that duties such as receiving, posting transactions to records, and issuing are divided among the work force so that no single individual can adversely affect the accuracy and integrity of the inventory. Although multi-skilled personnel may conduct physical counts, the inventory organization must enter counts, apply in-float controls, and conduct pre-adjustment research. When adequate segregation of duties is not practical or cost-effective, other local risk mitigating controls will be put in place to the maximum extent possible, such as increased supervision and two man count teams.

C.6.2.2.7.5. Conduct functional reviews of the PICP to ensure compliance with DoD and Component policy and procedures and establish physical inventory control as a mandatory element to be addressed in the annual internal management control assessments required by DoD Instruction 5010.40, “Managers' Internal Control Program (MICP) Procedures”.

C.6.2.2.7.6. Ensure that training is provided to supply system personnel who perform functions affecting physical inventory control and that training courses are updated to teach current DoD policies, procedures, and performance goals. Training will ensure familiarity of physical inventory staff with the items to facilitate item recognition and unit of measure peculiarities, the required count processes, research methods/tools available, and the count recording and records correction processes.

C.6.2.2.7.7. Separate dedicated physical count teams will be established providing a knowledgeable and well trained work force to conduct physical inventory counts. An increased level of supervision is required for the less experience count team members. The exception to the forgoing is those isolated cases where the size of the storage activity is such that separate count personnel would be inefficient.

C.6.2.2.7.8. Performance goals will be established within Government or Contractor personnel performance standards and evaluations for those individuals performing and managing physical inventory program functions on Department of Defense materiel. Feedback mechanisms for all personnel involved in the physical inventory function will be established to compare and report actual results against standards and corrective plans of action will be put in place when the performance does not meet the standard.

C6.2.3. Security of Materiel. Security is the first line of defense for physical inventory control; therefore, DoD Components will pay special attention to safeguarding of inventory items. This will include analysis of loss rates through inventories, financial liability investigation of property loss reports (DD Form 200), and criminal incident reports, to establish whether repetitive losses indicate criminal or negligent activity.
Physical security procedures for supply system materiel are contained in DoD 5200.08-R, “Physical Security Program.”

**C6.2.4. Asset Management.** Inventory Control Points (ICPs) and storage activities will collaborate to ensure that inventory data in their respective systems is the same, thus becoming, in effect, a single item inventory record. At minimum, the total item property record will include materiel that is due-in, in transit, in organic maintenance facilities, in a contractor’s custody, on loan, on-hand in distribution centers, reported on-hand at retail activities, and for reported assets in the custody of users. The record or record set will identify the quantity, condition, and value of the item assets for each organizational entity having physical custody of these assets.

**C6.2.5. Maintaining Property Accountability/Responsibility.** The property accountability responsibility for total item property record segments may be delegated to, but not shared by, one or more organizational entities. However, asset balance information for a particular segment (such as the storage activity balance for an item) will be shared; duplicative records will not be maintained.

**C6.2.5.1. Storage Activity Responsibility.** The storage activity maintains the property accountability record for all materiel in storage and is responsible, at minimum, for materiel custody, care, receipt, storage, and issue. Storage activities are also responsible for safeguarding and re-warehousing materiel; physical inventory and research; location survey/reconciliation; quality control checks; supply discrepancy report initiation, research and resolution. In the event of potential financial liability, the storage activity is responsible for investigating and assessing financial liability for loss, damage, and destruction of Government property; and appropriate actions necessary to ensure that the physical on-hand quantity and the total item property record quantity are in agreement. Storage activities will maintain the available-for-issue balance (also known as the Owner Balance). Available-for-issue balance refers to the materiel on-hand balance minus any materiel allocated to fulfill pending materiel release order(s).

**C6.2.5.2. Owning Department of Defense Component.** The owning DoD Component will either assume or assign the accountability for materiel not in the physical custody of a storage activity (e.g., materiel inducted for organic repair, test assembly/disassembly, conversion, modification, or reclamation; materiel in a contractor’s hands (in accordance with provisions of the Federal Acquisition Regulation), in transit materiel, on-loan materiel).

**C6.2.5.3. Integrated Materiel Manager Responsibility.** The Integrated Materiel Manager is responsible for initiating and directing the conduct of physical inventories; providing discrepancy research and reports; resolving discrepancies, investigating, and assessing liability for loss, damage, and destruction of Government property; and taking appropriate actions necessary to ensure that the on-hand quantity and the total item property record quantity are in agreement for all DoD materiel that is not in the physical custody of DoD activities.
C6.2.5.4. **US Air Force (USAF) Contractor Inventory Control Point (CICP) Responsibilities**

C6.2.5.4.1. The term USAF CICP represents a contractor assigned the primary responsibility of materiel management for a group of items either for a particular Military Service or for the Department of Defense as a whole. In addition to integrated materiel management/inventory control point (ICP) functions, a USAF CICP may perform other logistics functions to support a particular Military Service or for a particular end item (e.g., centralized computation of retail requirements levels and engineering tasks associated with weapon system components).

C6.2.5.4.2. For the purpose of DLMS logistics procedures, the term USAF CICP also identifies Contractor Operated and Maintained Base Supply (COMBS) contractors whose support includes supply of aircraft; engine and support equipment components, materiel, and consumables; as well as off-aircraft repair, overhaul, and replenishment. COMBS contractors are responsible for having inventory on hand to perform off-aircraft maintenance and the repair of turned-in parts. COMBS contractors perform both wholesale and retail functions.

C6.2.5.4.3. The USAF Government Furnished Property Accountability (GFP-A) program provides visibility and control of contractor-managed, Air Force-owned property through implementing and integrating Air Force logistics standards with private sector logistic processes to improve the accuracy and accountability of USAF financial statements. This program establishes and maintains accountable inventory records for USAF GFP-A that accurately reflect current quantity, status, location, condition and authorizing contracts. The USAF GFP-A program also establish an audit trail to update and track end-to-end logistics and financial transactions.

C6.2.5.4.4. USAF CICPs, will use inventory management systems to provide the transactions received from their trading partners, to the Air Force accountable property system of record (APSR) via Defense Automated Addressing System (DAAS). USAF CICP must report to the USAF GFP APSR in DLMS format. DPAS will be a mirror image of the USAF CICP inventory management systems.

C6.2.5.4.5. At the end of each day, all balance affecting transactions must undergo the EOD/reconciliation process. When reconciling with the USAF GFP-A APSR, follow the EOD/reconciliation process described in C6.2.6. The reconciliation must include the inventory balance in the warehouse, and the intransit balance. For DLMS transaction exchange purposes, the USAF CICP will follow the responsibilities/procedures of the storage activity in their communications with the USAF APSR. The term “Intransit Balance” represents the total quantity of confirmed shipments without a matching receipt acknowledgement excluding property issued for local disposal, internal USAF CICP deliveries, and customer pick-up. Confirmed shipment is based upon receipt/processing of the materiel/disposal release confirmation (MRC/DRC). The USAF GFP-A CICP excludes local disposal, internal CICP deliveries, and customer pick-up from the intransit-balance because the USAF APSR decrements the owner balance after issued. Using Mode of Shipment X (bearer walk-
through/customer pickup) in the MRC identifies the exclusions to the “Intransit Balance. The materiel receipt acknowledgement (MRA)/turn-in receipt acknowledge (TRA) received from the customer constitute the receipt acknowledgment. The intransit balance is a cumulative calculation and is not restricted to activity occurring during the day/month being reconciled.

C6.2.6. **End of the Day Processing.** Use the following end of the day processing procedures as follows:

C6.2.6.1. **Owner/Manager and Storage Activity Responsibilities.** Owners/managers and storage activities will ensure that the inventory data on owners/manager and storage activities systems is the same, thus becoming, in effect, a single item inventory record. Owner/managers and storage activities will achieve a single item inventory record by reconciling all balance affecting transactions to ensure a full match between the owner/manager and the storage activity.

C6.2.6.2. **Storage Activity will:**

C6.2.6.2.1. Transmit the End of Day Transaction Count to advise the owner/manager of the number of balance affecting transactions sent during the daily course of business.

C6.2.6.2.2. Submit daily closing balance to each affected owner/manager using a Location Reconciliation Request Transaction for End of Day Processing (End of Day Processing is identified in DLMS 846R BIA06 Action Code Z; MILSTRAP legacy DIC DZH by Type of Location Reconciliation Request Code 1 in record position 7). The storage activity will transmit all EOD balances (including those transactions that result in a zero balance or no physical inventory adjustment required (e.g., DLMS 947I, Inventory Adjustment (Increase (Physical Inventory), with zero quantity, or Status Adjustment Reason Code AA (MILSTRAP legacy DIC D8A)).

C6.2.6.2.3. Provide any historical records as requested by the Owner/Manager in an effort to resolve any potential inventory record mismatches between the storage activity and the owner. Include historical DLMS 940R with Reconcile Historical Records Indicator (1/W0507/0200=W1) and 945A with Reconcile Historical Records Indicator (1/W0612/0200=W1) transactions in response to the DLMS 846P Transaction History Request.

C6.2.6.2.4. Storage activities will prepare a Location Reconciliation Request Transaction by line-item (stock number (NSN or Local stock number) + supply condition code (SCC)), and type of pack.

C6.2.6.3. **U.S. Air Force GFP-A CICP will:**

C6.2.6.3.1. Follow the responsibilities/procedures of the storage activity in accordance with section C6.2.6, for the purpose of DLMS transaction exchange with the APSR.
C6.2.6.3.2. Include the Materiel Release Advice Count to the EOD Transaction Count transaction (DLMS 846P with BIA02 B1) provided to the USAF GFP-A APSR for reconciliation with the USAF CICP inventory balance records. The Materiel Release Advice Count represents the number of MRC and DRC transactions (DLMS 945A) received by the USAF CICP during the day or month being reconciled. The USAF CICP will transmit the sum total of MRC and DRC transactions combined into a single value.

C6.2.6.3.3. Include the Receipt Acknowledgment Count to the EOD Transaction Count transaction (DLMS 846P with BIA02 B1) provided to the USAF GFP-A APSR for reconciliation with the USAF CICP records. The Receipt Acknowledgment Count represents the number of MRA and TRA (DLMS 527R) transactions received by the USAF CICP during the day or month being reconciled. The USAF CICP will transmit the sum total of MRA and TRA transactions combined into a single value.

C6.2.6.3.4. Transmit the USAF GFP Intransit Balance Location Reconciliation Request Transaction (DLMS 846R with BIA02 Code LC) provided to the USAF GFP-A APSR for reconciliation with the USAF CICP records. The term “Intransit Balance” represents the total quantity of confirmed shipments without a matching MRA or TRA excluding property issued for local disposal, internal USAF CICP deliveries, and customer pick-up. Confirmed shipment is based upon receipt/processing of the shipment confirmation (MRC/DRC). For property issued under these exclusions, the USAF GFP-A APSR will not retain an owner property record; therefore, tracking intransit is not required. The use of Mode of Shipment X in the MRC will identify the exclusions to the intransit balance. The MRA/TRA received from the customer or DLA Disposition Services Field Office constitutes the receipt acknowledgment. The intransit balance is a cumulative calculation and is not restricted to activity occurring during the day or month being reconciled.

C6.2.6.3.5. Reconcile Materiel Release Advice Counts (DLMS 945A MRC/DRC) and Receipt Acknowledgment Counts as part of the EOD processing.

C6.2.6.3.6. Conduct a full end of month reconciliation between the USAF GFP-A CICP and the USAF APSR. The monthly reconciliation will consist of a systematic reconciliation of all item record transactions and balances following the same procedural steps as the EOD/reconciliation process documented under C6.2.6 and may not require physical inventory. The reconciliation will include all item records with or without any transactional activity during the course of the month. The USAF CICP will still need to perform at least one annual reconciliation in accordance with DLM 4000.25, Volume 2, Chapter 6 Physical Inventory Controls.

C6.2.6.3.7. Request Air Force program office approval, if required by contract, prior to performing an inventory adjustment due to a mismatch between the USAF GFP-A APSR and the USAF CICP for unresolved mismatched quantities. The USAF CICP will send a DLMS 947I to USAF GFP-A APSR to adjust the balance in USAF GFP-A APSR, if required. The mismatched quantity (gains and losses) will be
adjusted with Inventory Adjustment Increase/Decrease (Accounting Error) (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B).

C6.2.6.4. **Reconciliation of Serially-Managed Items**

C6.2.6.4.1. In addition to the responsibilities described under paragraph C6.2.6, storage activities and owners/managers will include the UII/serial number when reconciling records to ensure proper accountability of serially-managed items. For mismatches between system records, the storage activity will collaborate with the owner/manager to ensure proper research and resolution.

C6.2.6.4.2. The combination of UII and serial number increases the accuracy of inventory records across the DOD. When a serially managed item lacks a UII, there is a potential for duplicate serial numbers. A duplicate serial number may surface as a result of the record reconciliation. For mismatches due to a duplicate serial number, the owner is responsible for taking the necessary steps to resolve the discrepancy.

C6.2.6.5. Owners/Managers will:

6.2.6.5.1. Compare records with the transactions received via the location reconciliation request to identify mismatches.

6.2.6.5.2. Perform a systemic research within seven working days from receipt of the initial Location Reconciliation Request transaction. The systematic research will include all imbalances to ensure consideration of in-float transactions, delayed/suspended transactions, and duplicate transactions.

6.2.6.5.3. Request from the storage activity all transaction history necessary to perform systematic research and resolve any mismatches. The owner will request historical information via a Transaction History Request.

6.2.6.5.4. Update the affected record on-hand balance with the storage activity’s closing on-hand balance for unresolved mismatched quantities. The mismatched quantity (gains and losses) will be adjusted with Inventory Adjustment Increase/Decrease (Accounting Error) (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B). Owner/managers will refer to section C6.6 for guidance on research of potential or actual Inventory Adjustments.

6.2.6.5.5. Request assistance from the storage activity to isolate causes of record imbalances to maintain transaction level integrity. The storage activity assistance should focus on data transmission (e.g., lost transactions). Owners/managers will input Physical Inventory Transaction History Request to the storage activity for data transmission (e.g. lost transactions).
C6.2.6.6. Preparing End of Day Accountable Transaction Count. The storage activity will report a single End of Day Transaction Count to provide the end of day transaction counts for the following transaction types.

C6.2.6.6.1. Receipts (DLMS 527R with 1/BR02 Transaction Type Code D4; MILSTRAP legacy DIC D4_/D6_).

C6.2.6.6.2. Issues (DLMS 867I; MILSTRAP legacy DIC D7_).

C6.2.6.6.3. Inventory Adjustment-Increases (DLMS 947I with 2/W1916 Inventory Transaction Type Code AJ; MILSTRAP legacy DIC D8_).

C6.2.6.6.4. Inventory Adjustment-Decreases (DLMS 947I with 2/W1916 Inventory Transaction Type Code AD; MILSTRAP legacy DIC D9_).

C6.2.6.6.5. Inventory Adjustment-Dual (DLMS 947I with 2/W1916 Inventory Transaction Type Code DU; MILSTRAP legacy DIC DA_).

C6.2.6.6.6. For intra-Navy use only; Navy also provides an end of day transaction count for Asset Status Reports (DLMS 846I).

C6.2.6.6.7. For U.S. Air Force CICP only. Materiel Release Advice (DLMS 945A with 1/W0611 Transaction Type Code NJ and NM; MILSTRIP legacy DIC AR_). The Air Force CICP must combine the total sum of MRC and the total sum of DRC into a single value.

C6.2.6.6.8. For U.S. Air Force CICP only. Receipt Acknowledgement (DLMS 527R with BIA02 code of TH and CJ, respectively). The Air Force CICP must combine the total sum of MRA and the total sum of TRA into a single value.

C6.2.7. Reconciling Total Item Property Records with Financial Records. Owning DoD Components will reconcile total item property records and financial records as prescribed by DoD 7000.14-R, “Department of Defense Financial Management Regulations (FMR)” to ensure compatibility of the total inventory value reflected by these records and associated reports.

C6.2.8. Item Management/Control. DoD materiel is managed and controlled by stock number, and SCC, and by type of pack; therefore, physical inventories will be conducted and the results reported to owners/managers by stock number and SCC, and by type of pack.

C6.2.9. Storage Activity Record Keeping. Storage activities will maintain quantitative balance records for all on-hand materiel regardless of ownership. Storage activities will maintain transaction histories to support the balance records. Maintenance of these records will provide the capability to detect theft or diversion of materiel and improve the ability to determine the cause of inventory variances for corrective action.
C6.2.10. **Inventory Prioritization.** DoD Components will select and prioritize items for inventory for which they are accountable as follows:

C6.2.10.1. **Inventory Sampling**

C6.2.10.1.1. **Annual Record Accuracy Statistical Sample.** A stratified, hierarchal inventory sample will be accomplished at least once annually for the purpose of validating the accuracy of the accountable records. The results of this sample report on the percent of records that match the physical count exactly or are within the allowed tolerance. The annual record accuracy statistical sample provides a barometer of performance and improvement opportunities for local storage activity managers. The results of the sample will be reported in accordance with the item categorizations stratification and tolerances cited in paragraph C6.2.12.5. When the physical count of an item is completed, the physical count and record quantity are compared; if the two are within the specified tolerance for Categories B and C the accuracy of that record is considered correct, if the tolerance is exceeded the record is counted as inaccurate. Items in Categories A and D have a zero tolerance; therefore, any difference between the physical count and the record quantity is counted as an inaccurate record.

C6.2.10.1.2. **Annual Chief Financial Officer’s (CFO) Statistical Sample Inventory.** The Chief Financial Officer’s Act (CFOA) of 1990 requires that the Department of Defense, the Military Services, and Defense Agencies submit financial statements to the Congress. One of the financial statement elements is the dollar value of on-hand supply inventory. The purpose of the Annual CFO Statistical Sample Inventory is to enable the Components to estimate the dollar value of the non-fuel portion of the DoD on-hand inventory held in storage for annual financial statement reporting. The Components will conduct a stratified, hierarchal statistical sample inventory for the purpose of accurately estimating the true dollar value of their respective on-hand supply inventories. The initial implementation will be for materiel in Defense Logistics Agency (DLA) storage sites managed by the Distribution Standard System (DSS), regardless of the materiel’s ownership. The requirement to conduct the CFO Annual Statistical Sample Physical Inventory may be expanded to include inventories beyond that maintained by DSS. The following are the guidelines to conduct and report the results of the annual CFO Inventory sample.

C6.2.10.1.2.1. **Annual CFO Statistical Sample Inventory Schedule.** The annual CFO statistical sample inventory will be scheduled as close to the end of the fiscal year as possible allowing sufficient lead time to conduct the sample inventory, perform analyses, and report results to support the end of fiscal year financial reports.

C6.2.10.1.2.2. DoD CFO Annual Statistical Sample Inventory Plan Guidelines.

C6.2.10.1.2.2.1. The items in storage will be stratified into dollar value categories to minimize the number of items requiring inventory while yielding results with the confidence level and precision required below. The dollar value
stratifications used for sample will be included in the CFO Inventory Value Sample Plan for that year.

C6.2.10.1.2.2. Every item stored, regardless of owner/manager, within the extended dollar value strata identified in the DoD CFO Annual Statistical Sample Inventory Plan for that year will have an equal probability of being selected in the sample and inventoried.

C6.2.10.1.2.2.3. The sample results will have a 95 percent confidence level and a level of precision within + (plus) or – (minus) 2.5 percent.

C6.2.10.1.2.2.4. DoD CFO Annual Statistical Sample Inventory Plan. DLA will distribute the results of the DoD CFO Annual Statistical Sample Inventory Plan to each applicable centralized Service point of contact.

C6.2.10.1.2.2.5. DoD CFO Statistical Sample Inventory Results. The Components will use the results of the CFO Inventory Sample to valuate materiel under their respective ownership and report those values to the DoD Chief Financial Officer for use in the preparation of their respective financial statement reporting. Note that the results of the CFO Inventory Sample will include all adjustments and documentation that supports the physical completion of the inventory process.

C6.2.10.1.3. Annual complete (100 percent) physical inventories can be performed as an alternative to statistical sampling.

C6.2.10.2. Items Designated for Complete Inventories. Complete inventories will be performed as follows:

C6.2.10.2.1. Controlled Inventory Items. The following controlled inventory items (identified in DoD 4100.39-M, "Federal Logistics Information System (FLIS) Procedures Manual") require complete physical inventory and do not qualify for use of a random statistical sampling approach:

C6.2.10.2.1.1. Top secret.

C6.2.10.2.1.2. Narcotics, drug abuse items, and alcohol.

C6.2.10.2.1.3. Category I non-nuclear missiles and rockets (semiannually in accordance with DoDM 5100.76, “Physical Security of Sensitive Conventional Arms, Ammunition and Explosives”).

C6.2.10.2.1.4. Precious metals.

C6.2.10.2.1.5. Small arms.

C6.2.10.2.1.6. Radioactive items.
C6.2.10.2.1.7. Inert nuclear ordnance materiel.

C6.2.10.2.1.8. Other items that may be designated by the Office of the Secretary of Defense (OSD) or the DoD Component.

C6.2.10.2.2. Ammunition or Subsistence. If ammunition or subsistence is subjected to complete inventory, physical inventory and location survey may be conducted concurrently.

C6.2.10.2.3. Random Statistical Sampling for Controlled Inventory Items Not Subject to Annual Complete Physical Inventory. Controlled inventory items not subject to annual complete physical inventory must be subjected to annual random statistical sampling. Acceptable statistical sampling techniques are widely prescribed and may be used so long as every item included in the population has an equal probability of being selected in the sample. At minimum, the statistical sampling technique must provide reasonable assurance that the property accountability records are accurate with a 95 percent level of confidence, accuracy level of 95 percent, and a maximum margin of error of two percent. If the sample inventory results do not satisfy the above criteria, complete physical inventory of the population from which the sample was selected will be performed.

C6.2.10.3. Items Not Designated for Complete Inventories. Inventories for items not designated for complete inventory under subparagraph C6.2.10.2. will be performed as a result of:

C6.2.10.3.1. Total or partial materiel release denials (spot inventory--see subparagraph C6.3.4.1. and Type of Physical Inventory/Transaction History Code E);

C6.2.10.3.2. Location reconciliation variances;

C6.2.10.3.3. Location survey errors;

C6.2.10.3.4. Owner/manager request (special inventory)

C6.2.11. Potential Discrepancies. Potential discrepancies between the actual physical count of materiel and the property accountability record on hand balance will be researched and resolved in accordance with Table C6.T3. by:

C6.2.11.1. Correctly posting supply transactions (e.g., receipts, issues, adjustments) discovered during the research process that were previously incorrect or unposted resulting in the record imbalance; and/or

C6.2.11.2. Posting an inventory adjustment to correct the record imbalance.
C6.2.12. **Accuracy and Performance Goals.** The acceptable DoD accuracy and performance goals are as follows:

C6.2.12.1. **Materiel Denial Goal:** Not greater than one percent.

C6.2.12.2. **Receipt Processing Performance Goal:** 90 percent stored and posted within receipt time standards (see Chapter 13).

C6.2.12.3. **Record Reconciliation Program Goal:**

C6.2.12.3.1. **Location Survey Accuracy:**

C6.2.12.3.1.1. General Supplies: 97 percent.

C6.2.12.3.1.2. Ammunition: 98 percent.

C6.2.12.3.2. **Location Reconciliation Accuracy:**

C6.2.12.3.2.1. General Supplies: 97 percent.

C6.2.12.3.2.2. Ammunition: 98 percent.

C6.2.12.4. **Ammunition Property Accountability Record Accuracy Goal:** 95 percent.

C6.2.12.5. **General Supplies Record Accuracy Goals.** DoD Components must send record accuracy goal information to ODASD (SCI) within 30 calendar days after the end of each fiscal year. For the purposes of this report, Categories B and C in Table C6.T1. are optional. The collection of data may occur throughout the year. See Table C6.T1.

C6.3. PHYSICAL INVENTORY PROCEDURES

C6.3.1. Inventory Program Accomplishment. Storage activities will monitor program accomplishment throughout the fiscal year to ensure that the requirements of paragraph C6.2.10. are met.

C6.3.2. Pre-Inventory Planning. The potential for count inaccuracies will be reduced by conducting pre-inventory planning to include:

C6.3.2.1. Actions to ensure location integrity by correcting such situations as unbinned/loose materiel; questionable identity of materiel in location; and single locations containing multiple SCCs or stock numbers, inadequately labeled shelf-life items (date of manufacture/assembly/inspection/test, as appropriate); and/or materiel lots stored in a single location.

C6.3.2.2. Document cleanup to ensure to the extent possible that receipts, adjustments, transaction reversals, and other transactions are posted to the property accountability record and that in-process receipts are stored in location prior to the established physical inventory cutoff date.

C6.3.3. Scheduled Inventories

<sup>1</sup> Applicable Units of Issue: AT, AY, BF, BK, CD, CF, CZ, DZ, FY, FT, FV, GP, GR, HD, KT, LB, MR, OZ, OT, PG, PR, SE, SF, SO, SP, SY, TD, TE, TF, TN, TO, TS, MC, MX, YD
C6.3.3.1. **Item Characteristics.** Storage activities will initiate all scheduled inventories based on item characteristics, specifically the controlled inventory item code and any other category codes designated by the DoD Components that require physical inventory not less than once each fiscal year, with a Physical Inventory Request Transaction using Type of Physical Inventory/Transaction History Code G.

C6.3.3.2. **Selection and Prioritization Model.** Storage activities will initiate all scheduled inventories based on selection and prioritization model criteria with a Physical Inventory Request Transaction using Type of Physical Inventory/Transaction History Code I.

C6.3.3.3. **Random Statistical Sample Inventories**

C6.3.3.3.1. Storage activities will initiate the scheduled random statistical sample inventory to meet the Department’s requirements to validate the accuracy of the supply records with a Physical Inventory Request Transaction using Type of Physical Inventory/Transaction History Code N.

C6.3.3.3.2. Owners may initiate a scheduled random statistical sample inventory of line items owned to determine the overall accuracy of their records with a Physical Inventory Request Transaction using Type of Physical Inventory/Transaction History Code L.

C6.3.3.3.3. Storage activities may also initiate a scheduled random statistical sample inventory of line items in storage to determine the overall accuracy of their records with a Physical Inventory Request Transaction using Type of Physical Inventory/Transaction History Code P.

C6.3.3.3.4. Storage activities will initiate the scheduled annual stratified random statistical sample inventory to meet the Department’s requirements to conduct the Annual CFO Statistical Sample Inventory identified in paragraph C6.2.10.1.2. with a Physical Inventory Request Transaction using Type Physical Inventory/Transaction History Code L.

C6.3.4. **Unscheduled Inventories**

C6.3.4.1. **Special Inventory.** Owners will initiate special inventories using a Physical Inventory Request Transaction. If an inventory has not been taken within the past 90 calendar days, cite Type of Physical Inventory/Transaction History Code D or J in the transaction. If an inventory has been taken within the past 90 calendar days, an effort will be made to construct a transaction history and from it determine what the item balance should be or what discrepancy may have caused an imbalance. Only when these efforts fail to produce satisfactory results will special inventories be performed. In this case, cite Type of Physical Inventory/Transaction History Code H in the Physical Inventory Request Transaction. The procedure for restricting special inventories may be waived when the Inventory Manager has recorded backorders for the item.
C6.3.4.2. **Spot Inventory**

C6.3.4.2.1. Storage activities will initiate spot inventories as a result of total or partial materiel denial on classified and sensitive items regardless of value, pilferable items when the value of the variance is greater than $100, and for noncontrolled items variances greater than $5,000. These requests will cite Type of Physical Inventory/Transaction History Code E.

C6.3.4.2.2. Storage activities will accommodate all requests for spot inventories.

C6.3.4.2.3. Storage activities systemically initiate special inventories for a specific SCC as a result of quantity mismatches between the quantity-by-location and owner balance records using Type Physical Inventory/Transaction History Code Z.2

C6.3.4.2.4. **On-Hand Balance Mismatch Between Locator and Property Accountability Record.** Storage activities may initiate unscheduled inventories as a result of on-hand balance mismatches between the locator and property accountability records with a Physical Inventory Request Transaction using Type of Physical Inventory/Transaction History Code M.

C6.3.4.2.5. Storage activities will initiate special Inventories (for all SCCs) in support of inventory accuracy improvement initiatives, using Type Physical Inventory/Transaction History C.3

C6.3.5. **Canceling Inventories**

C6.3.5.1. **General.** When conditions exist which preclude accurate completion of an inventory that has been established, the inventory will be canceled by the storage activity or the owner/manager. Conditions that may require cancellation include, but are not limited to, catalog changes, rewarehousing of materiel under inventory, insufficient resources, insufficient time to meet established inventory timeframes to notify other affected owners/managers, and acts of God.

C6.3.5.2. **Owner/Manager Cancellation.** When an owner/manager cancels an inventory, the owner/manager will notify all affected storage activities using a Physical Inventory Request citing Management Code N.

C6.3.5.3. **Storage Activity Cancellation.** When a storage activity cancels an inventory, or when an owner/manager requests cancellation of an inventory, the storage activity will notify the requesting owner/manager using a Physical Inventory Request Transaction citing Management Code N. When a canceled inventory is required to meet annual inventory schedule requirements, the storage activity must reschedule it within the current fiscal year. When a spot inventory (Type Physical

---

2 Refer to ADC 415 available at the DLMS ADC 400-499 page.

3 Ibid
Inventory/Transaction History Code E) is canceled, it must be rescheduled within 15 calendar days.

C6.3.6. Conducting, Recording, and Reporting the Inventory

C6.3.6.1. General. Physical inventory procedures at storage activities will provide the required asset-to-record accuracy with positive control of materiel and documentation that are in-float (e.g. including materiel release orders, receipts, condition transfers, catalog, and other data changes).

C6.3.6.2. To increase auditability of physical inventory requests, serially managed items will include a unique document number. The document number will help relate a physical inventory request with the appropriate response. The owner will provide a document number in the Physical Inventory Request. The storage activity will perform the necessary physical research as described in Chapter 6 Physical Inventory Control. The physical inventory response will carry the same document number provided by the owner. These procedures are required for UIT programs and recommended for all other commodities. For DLA internal controls only, the storage activity may include a second document number as necessary in the response to a physical inventory request.

C6.3.6.3. In-Float Document Control. The storage activity may reduce the volume of in-float accountable documents during the period required for an item count by suspending the issue of low priority materiel release transactions from items undergoing inventory. However, materiel will be released for items undergoing inventory when such release is necessary to meet the order/ship timeframes prescribed by DoDM 4140.01, to include the recognition of the required delivery date. The storage activity may also reduce the volume of in-float accountable documents by deferring routine SCC changes, providing that it complies with Chapter 7 control requirements.

C6.3.6.4. Physical Inventory Timeframe. Storage activities will complete physical inventories and transmit the appropriate Inventory Adjustment (Physical Inventory) Transactions (DLMS 947I with Quantity or Status Adjustment Reason Code AA; MILSTRAP DIC D8A/D9A) to the owner/manager within 30 calendar days subsequent to the physical inventory cutoff date (PICD) for scheduled inventories and within 15 calendar days after the PICD for unscheduled inventories.

C6.3.6.5. Post Count Validation and Pre-adjustment Research. The storage activity will compare the adjusted count with the balance kept by the storage activity to determine the potential variance and initiate post count validation and pre-adjustment research as required under section C6.4. Immediately upon completion of post count validation and pre-adjustment research, the storage activity will record the count and date of last inventory on the storage activity quantitative balance record.

C6.3.6.6. Zero Quantity Adjustments. When no adjustment is required, the storage activity will update the storage activity record with the date of last inventory and send an Inventory Adjustment Increase (Physical Inventory) transaction (DLMS 947I
with Quantity or Status Adjustment Reason Code AA; MILSTRAP legacy DIC D8A) with zero quantity for each line item to the owner/manager to indicate completion of the inventory. The owner/manager will update the date of last inventory using the adjustment transaction date.

C6.3.6.7. **Prorating Adjustment for Commingled Assets.** When the storage activity record reflects more than one owner for commingled materiel, the storage activity will apply all gains and losses to the wholesale manager. The storage activity will prorate any losses that cannot be applied to the wholesale manager among all owners having balances. Storage activities will not consider foreign owner balances in the prorating process. Foreign owner and Special Defense Acquisition Fund balances will not be altered unless they are the only remaining balances for reporting a loss. Resolution of these losses will be in accordance with DoD Security Assistance Program policy.

C6.3.6.8. **Processing Physical Inventory Adjustments.** The storage activity will process Inventory Adjustment (Physical Inventory) transactions (DLMS 947I with Quantity or Status Adjustment Reason Code AA; MILSTRAP legacy DIC D8A/D9A) by line-item and type of pack for subsistence, to update the storage activity quantitative balance record and each owner/manager record.

C6.3.7. **Reconciling Manual Records for Controlled Items.** When manual records are maintained for control of assets in secured storage, the storage activity, will at minimum reconcile these records at the time of inventory with the corresponding storage activity records and physical materiel counts.

C6.3.8. **Unscheduled Physical Inventory Follow-up**

C6.3.8.1. **Owner/manager Follow-up on Physical Inventory Request.** When the owner/manager has requested an unscheduled inventory and no adjustment or completion transaction has been received within 40 calendar days of the date of the request, the owner/manager will initiate a follow-up using a Physical Inventory Request Transaction, citing Management Code X and duplicate the remaining data from the Physical Inventory Request Transaction that established the inventory.

C6.3.8.2. **Storage Activity Response to Follow-Up on Physical Inventory Request.** The storage activity will respond to the owner/manager follow-up within five calendar days by providing the appropriate adjustment, completion, or cancellation transaction. If an adjustment or completion transaction was previously sent and a follow-up is received, the storage activity will reply by sending a Response to Physical Inventory Request Transaction with Management Code Y to the owner/manager. The storage activity will also send DLMS 947I showing the actual physical inventory adjustment, and identified as submission of historical information by 1/W1506/020, Code W1. (Storage activities operating under MILSTRAP send MILSTRAP legacy DIC DZK Transaction History Transmittal for the physical inventory adjustment.)
C6.3.8.3. **No Record of Physical Inventory Request.** If the storage activity does not have a record of the owner/manager original Physical Inventory Request Transaction, the storage activity will process the Physical Inventory Request Transaction with Management Code X as an original Physical Inventory Request Transaction.

C6.4.1. **Policy.** DoD Components will ensure that potential or actual Inventory Adjustments (Physical Inventory), (DLMS 947I with Quantity or Status Adjustment Reason Code AA; D8A/D9A), are researched in accordance with the value of the adjustment and type of item. The DoD criteria for this research are set forth in Table C6.T3, and will be used as the basis for selective research for supply system materiel. A reduction of the volume of erroneous adjustments can only be achieved by conducting specified degrees of research before posting the adjustment transaction. More stringent research requirements may be imposed by DoD Components based upon the limits of available resources and upon specific asset control problems. However, in no case will adjustments be processed against items without required pre-adjustment research having been performed (see Table C6.T3.).

C6.4.2. **Objectives.** Analysis of inventory adjustments is vital to:

C6.4.2.1. Identify failures in the control systems so improvements can be made.

C6.4.2.2. Reduce similar discrepancies in the future.

C6.4.2.3. Ensure that the proper adjustment was made.

C6.4.2.4. Evaluate indicators of trends or system problems for corrective action.

C6.4.2.5. Detect negligence, abuse, or theft of materiel. Known or suspected negligence, abuse, or theft will be researched in accordance with DoD 7000.14-R and Table C6.T3.

C6.4.3. **Timeliness of Research.** Timely completion of the research of potential or actual Inventory Adjustments (Accounting Error) is essential. Delay increases the complexities of adequate research and reduces the probability of conclusive findings.

C6.4.3.1. **Pre-adjustment Research.** Storage activity pre-adjustment research must be completed and the physical inventory adjustment/completion action posted to the owner/manager record within 30 calendar days from the PICD for scheduled inventories and 15 calendar days from the PICD for unscheduled inventories.
C6.4.3.2. **Mandatory Causative Research.** The storage activity must complete mandatory causative research within 45 calendar days from the date the adjustment transaction was posted. If sample causative research is used as allowed by Table C6.T3., Minimum Research Requirements, the sample causative research must be completed within 45 calendar days from the date the sample causative research listing is created.

C6.4.4. **Transaction History.** For intra-Component (or inter-Component, based on agreement of the involved DoD Components) reconciliation, the owner/manager may request transaction history for analyzing inventory discrepancies.

C6.4.4.1. **Transaction History Request.** The owner/manager will request the history using a Transaction History Request Transaction citing the appropriate Type Physical Inventory/Transaction History Code. Transaction history will consist of all transactions affecting the balance for the requested timeframe.

C6.4.4.2. **Transaction History Data.** The storage activity will send transaction history data by submitting the affected transactions identified as a historical submission with beginning segment Action Code W1. DLMS transactions subject to historical submission are: receipt, issue, materiel release order, materiel release advice, and inventory adjustment (DLMS 527R, DLMS 867I, DLMS 940R, DLMS 945A, and DLMS 947I, respectively). When no history is available for the selected timeframe, submit a Response to Transaction History Request (No History Available) Transaction with Type of Physical Inventory/Transaction History Code 8 or 9. (Storage activities still operating under MILSTRAP will send legacy DIC DZK Transaction History Transmittal for all transactions affecting the balance for the requested timeframe).

C6.4.5. **Error Classification Coding for Physical Inventory Adjustments.** Causes of potential/actual inventory adjustments are determined by research. Causes will be classified, analyzed, and evaluated so action may be taken to correct situations that are causing the errors. Inventory Adjustment (Physical Inventory) Error Classification Codes will be entered in Inventory Adjustment (Physical Inventory) Transactions (DLMS 947I with Quantity or Status Adjustment Reason Code AA; MILSTRAP legacy DIC D8A/D9A)\(^4\). For analysis and evaluation, physical inventory adjustment error conditions will be associated with the operation in which they occurred (e.g., receiving, issues) and classified by type within each operation. For reporting purposes, each operation and each error type have been identified by an alphabetic or numeric code in the Error Classification Code. The error classification system is structured to provide the DoD Components the latitude to amplify the DoD defined error classifications; however, the DoD Components will summarize internally defined error classifications to the appropriate DoD classification for all reports provided to higher authorities, auditors, etc.

\(^4\) The owner/manager may use Error Classification Codes in Inventory Adjustment (Accounting Error) Transactions (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B) pending establishment of single shared asset balances (see paragraphs C6.2.2. and C6.2.4.).
C6.4.6. **Error Classification Feedback and Correction**

C6.4.6.1. **Causative History Summary.** Storage activities will send a quarterly summary of the causative research results for each individual national item identification number (NIIN) to the Inventory Owners (or the service International Logistics Control activity in the case of Foreign Military Sales (FMS)-owned materiel). The summary information will be provided for all adjustments of extended dollar value greater than $16K and any adjustment of an item with a Controlled Inventory Item Code (CIIC) that is Classified, Sensitive or Pilferable. At minimum, the provided summary will include, for each NIIN: SCC, Inventory Adjustment Transaction (DLMS 947I or MILSTRAP legacy DIC D8_/D9_), quantity adjusted, routing identifier code (RIC) of the storage activity making the adjustment, error classification code, controlled inventory item code, date created, date completed, and total adjusted dollar value.

C6.4.6.2. **Error Correction**

C6.4.6.2.1. **Storage Activity Commanders.** Commanders at the storage activities will use this information to identify and correct recurring errors in their operations (e.g., through established storage activity training programs, quality control checks, and other actions as required).

C6.4.6.2.2. **Inventory Owners.** Inventory owners will use this information as a means to gain insight into the adjustments and subsequent actions taken to resolve the error and to evaluate whether changes in procurement practices, cataloging data, or other actions may be taken to prevent potential distribution errors. A single point of contact will be designated at the owner level to request information from DLA.

C6.4.7. **Controlled Inventory Item Accounting Adjustments.** Unresolved physical inventory adjustments for all classified and sensitive items regardless of value, and for pilferable items when the adjustment is in excess of $2,500, as prescribed by DoD 7000.14-R, will be referred to security officials of the storage activity at which the adjustment occurred to determine whether there is culpability or when fraud, waste, or abuse is suspected (see Table C6.T3).

C6.4.8. **Materiel Release Denials.** Chapter 4 prescribes DoD standard document formats, data codes, and criteria for the preparation and processing of materiel release denial at storage activities and by owners/managers.

C6.4.8.1. Upon initiation of a materiel release denial citing Management Code 1, 2, 3 (applies to subsistence only), or 4 (applies to subsistence and ammunition only), storage activities will:

C6.4.8.1.1. Reverse the issue, adjust the storage activity record on-hand quantitative balance to zero, and send an inventory adjustment decrease transaction (DLMS 947I with Quantity or Status Adjustment Reason Code AA; MILSTRAP legacy DIC D9A) for the adjusted quantity to the owner/manager attempting to issue the materiel, citing denial Management Code 1, 2, 3, or 4, and send an
inventory adjustment decrease to any other owners affected by the denial loss, citing denial Management Code Q.

C6.4.8.1.2. Initiate a spot inventory as required under subparagraph C6.3.4.2.

C6.4.8.2. If an inventory can be accomplished without delaying the processing of the Materiel Release Order beyond the prescribed Uniform Materiel Movement and Issue Priority (UMMIPS) timeframes (see DoDM 4140.01), it may be conducted prior to processing a denial transaction.

C6.5. REVERSAL OF INVENTORY ADJUSTMENTS (PHYSICAL INVENTORY)-DOCUMENT IDENTIFIER CODE D8A/D9A. Storage activity reversal of Inventory Adjustment (Physical Inventory) Transactions (DLMS 947I with Quantity or Status Adjustment Reason Code AA; MILSTRAP legacy DIC D8A/D9A) is a required capability, which must be implemented with proper controls and supported by proper documentation. At a minimum, procedures for reversing adjustments will contain the following control features:

C6.5.1. Posted/Unposted Source Documents. Regardless of age, reversals required to correct inventory records when posting previously unposted or incorrectly posted supply transactions (e.g., receipts, issues), are limited to those transactions that can be properly documented to reference the specific transaction document number(s) that will be processed to offset the reversal.

C6.5.2. Inventory Adjustment Corrections. Reversals required to correct physical inventory adjustments that were made based on incorrect/incomplete information are limited to two years from the date of the original adjustment unless the requirements of paragraph C6.5.1. are met. All reversals must be properly documented.

C6.5.3. Limitations. Reversals will not be processed solely on the basis of a previous offsetting physical inventory adjustment.

C6.5.4. Performance Assessment. Reversals after causative research allow for the proper posting of the correct supply transactions and audit trails. The number of inventory adjustments and related monetary values will be separated and identified as follows.5

C6.5.4.1. Absolute adjustment rates will include all gain and loss reversals from reporting and prior quarters’ adjustment transactions.

C6.5.4.2. Initial adjustment rates will not include gain and loss reversals from reporting or prior quarters’ adjustments:

5 Refer to ADC 415 available at the DLMS ADC 400-499 page.
C6.6. RESEARCH OF POTENTIAL OR ACTUAL INVENTORY ADJUSTMENTS (ACCOUNTING ERRORS) – (DLMS 947I with Quantity or Status Adjustment Reason Code AB) - Document Identifier Code D8B/D9B

C6.6.1. Policy. DoD Components will ensure that potential or actual Inventory Adjustments (Accounting Errors), DLMS 947I with Quantity or Status Adjustment Reason Code AB; D8B/D9B, are researched in accordance with the value of the adjustment and type of item. The DoD criteria for this research are set forth in Table C6.T3. and will be used as the basis for selective research for supply system materiel. More stringent research requirements may be imposed by DoD Components based upon the limits of available resources and upon specific asset control problems. Though physical inventory adjustments are based on physical counts, accounting adjustments are based on the reconciliation of inventory records as part of End-of-Day or Location Reconciliation business processes. When differences exist between the 'systems', an accounting adjustment (gain/loss) (DLMS 947I with Quantity or Status Adjustment Reason Code AB; DIC D8B/D9B) will be created to adjust the owner/manager's total item property record inventory balance to agree with the storage activity's closing end of day balance. As such, the causes of accounting adjustments are driven by the handling of 'transaction data' versus the physical handling of materiel. Therefore, research requirements will focus on events/processes that cause the databases (between the storage activity and total item property record) to be out of sync. DoD Components will research transaction histories and violation files to locate 'missing' supply transactions, clear exceptions, process the appropriate 'supply' transaction, and reverse the accounting adjustment to resolve the original mismatch condition.

C6.6.1.1. When subsequent research finds that the accounting adjustment was caused by an unposted, duplicate, or otherwise improperly posted transaction, a reversal of the accounting adjustment and (as appropriate) the incorrectly posted 'supply' transaction is required. The owner/manager will ensure that proper audit trails are maintained to reflect the posting of the correct supply transaction.

C6.6.1.2. Owners/managers will request assistance from the storage activity to isolate supply transaction processing errors and focus on data transmission and validation of system logic to resolve causes of database mismatches.

C6.6.2. Objectives. Analysis of Inventory Adjustments (Accounting Errors) is vital to:

C6.6.2.1. Identify failures in the control systems so improvements can be made.

C6.6.2.2. Reduce similar discrepancies in the future.

C6.6.2.3. Ensure that the proper adjustment was made.

---

6 Refer to ADC 414 available at the DLMS ADC 400-499 page.
C6.6.2.4. Evaluate indicators of trends or system problems for corrective action.

C6.6.3. Timeliness of Research. Timely completion of the research of potential or actual Inventory Adjustments (Accounting Error) is essential. Delay increases the complexities of adequate research and reduces the probability of conclusive findings.

C6.6.3.1. Mandatory Causative Research. The owners/managers must complete mandatory causative research within 45 calendar days from the date the adjustment transaction was posted.

C6.6.3.2. Sample Causative Research. If sample causative research is used as allowed by Table C6.T3., Minimum Research Requirements, owners/managers must complete the sample causative research within 45 calendar days from the date the sample causative research listing is created.

C6.6.4. Inventory Adjustment (Accounting Error) Error Classification Coding. Causes of potential/actual Inventory Adjustments (Accounting Error) are determined by research. Causes will be classified, analyzed, and evaluated so action may be taken to correct situations that are causing the errors. For analysis and evaluation, error conditions will be identified and classified by type. For reporting purposes, each error type is identified by an alphabetic or numeric code as shown in Volume 2, Appendix 2.16. The error classification system is structured to provide the DoD Components the latitude to amplify the DoD defined error classifications; however, DoD Components will summarize internally defined error classifications to the appropriate DoD classification for all reports provided to higher authorities, auditors, etc.

C6.6.5. Error Classification Feedback and Correction

C6.6.5.1. Causative History Summary. Owners/managers will prepare a quarterly summary of causative research results for Inventory Adjustments (Accounting Error) (DIC D8B/D9B) and provide feedback to the appropriate owners/managers officials.

C6.6.5.2. Error Correction. Inventory Owners will use this information as a means to gain insight into the inventory accounting adjustments and subsequent actions taken to resolve the error and to evaluate whether changes in supply transaction ‘edits’, cataloging data, or other actions may be taken to prevent potential inventory accounting errors. A single point of contact will be designated at the owner level to request information from DLA.

C6.6.6. Controlled Inventory Item Accounting Adjustments. Unresolved Inventory Adjustments (Accounting Error) for all classified and sensitive items regardless of value, and for pilferable items when the adjustment is in excess of $2,500 as prescribed by

---

7 The owner/manager may use Error Classification Codes in Inventory Adjustment (Accounting Error) Transactions (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B) pending establishment of single shared asset balances (see paragraphs C6.2.2. and C6.2.4.).
DoD 7000.14-R, will be referred to security officials of the storage activity at which the adjustment occurred to determine whether there is culpability or when fraud, waste, or abuse is suspected (see Table C6.T3.).

C6.7. REVERSAL OF INVENTORY ADJUSTMENT (ACCOUNTING ERRORS) TRANSACTIONS. Reversal of DLMS_947I with Quantity or Status Adjustment Reason Code AB; DIC D8B/D9B inventory accounting adjustments is a required capability that must be implemented with proper controls and supported by proper documentation. (From Volume 3, Appendix 3, Introduction, Paragraph AP3.3.2, “When reversal or cancellation of the original transaction is required, enter a reversal indicator in record position 25.”) At minimum, procedures for reversing adjustments will contain the following control features:

C6.7.1. Posted/Unposted Source Documents. Regardless of age, reversals required to correct inventory accounting records when posting previously unposted or incorrectly posted supply transactions (e.g., receipts, issues), regardless of age, are limited to transactions that can be properly documented to reference the specific transaction document number(s) that will be processed to offset the reversal.

C6.7.2. Inventory Accounting Adjustment Corrections. Reversals required to correct inventory accounting adjustments that were made based on incorrect/incomplete information are limited to two years from the date of the original adjustment unless the requirements of paragraph C6.5.1. are met. All reversals must be properly documented.

C6.7.3. Limitations. Reversals will not be processed solely on the basis of a previous offsetting inventory accounting adjustment.

C6.7.4. Performance Assessment. Reversals against transactions processed within the adjustment period will be separated and identified as follows:

C6.7.4.1. Gross inventory accounting adjustment during the current period,

C6.7.4.2. Reversal of prior quarters' inventory accounting adjustment transactions,

C6.7.4.3. Reversal of current quarters' inventory accounting adjustment transactions, and

C6.7.4.4. Total value of net inventory accounting adjustments during the current period (i.e., value of net gains added to value of net losses).

C6.8. RECORD RECONCILIATION PROGRAM. Each DoD Component will implement a record reconciliation program that will consist of both a location survey and a location reconciliation.\(^8\) The DoD acceptable accuracy goals are provided in subparagraph

\(^8\) The location reconciliation process will not be required with the establishment of single shared-asset balances (see paragraphs C6.2.2. and C6.2.4.).
C6.2.12.3. The DoD Components may impose more stringent standards internally. The record reconciliation program is subject to the quality control checks delineated in section C6.10. Errors will be subject to validation and research before they are counted as errors. The DoD Components will collect and analyze all Type III errors (see subparagraphs C6.8.1.2.3. and C6.8.2.2.3.) by element.

C6.8.1. Location Survey

C6.8.1.1. Location survey requires a physical verification, other than actual count, between assets and recorded location data to ensure that all assets are properly recorded. When a discrepancy is identified during the location survey program (Type I or Type II error (see subparagraphs C6.8.1.9.1. and C6.8.1.9.2.)), the storage activity will conduct prompt research and assess the need for a special inventory Physical Inventory Request Transaction with Type of Physical Inventory/Transaction History Code K). In some instances, location survey and physical inventory will occur simultaneously for ammunition and subsistence.

C6.8.1.2. Timing. Location survey will be accomplished at each storage activity not less than once each fiscal year, by (1) performing complete location survey of all locations; (2) using a statistical sampling methodology that ensures all locations are included in the population and have a probability of selection; or (3) a combination of complete and statistical sampling.

C6.8.1.3. Storage locations that have undergone a qualifying physical inventory action within the previous 12 months, with the exception of controlled item(s), may be considered to have satisfied the annual location survey requirements stated in paragraph C6.8.1.2. A qualifying inventory action is one where the storage activity performs a successful physical verification of the item(s) between the physical asset(s) and the recorded location data. The storage activity has the option to perform a second location survey as necessary but it is not required for the purpose of the annual location survey. These procedures do not overwrite current guidance and procedures for any discrepancies found at the location.

C6.8.1.3.1. Storage activities will perform complete location survey on all controlled items (classified, sensitive, pilferable, radioactive, etc.) and do not qualify for use of a random statistical sampling approach.

C6.8.1.3.2. Locations not surveyed as a result of a qualifying inventory activity or as described in C6.8.1.2 will be part of the population needed for statistical sampling in order to satisfy the annual location survey requirement defined in this chapter.

C6.8.1.4. Rewarehousing. A location survey will take place in both the gaining and losing storage areas following the completion of rewarehousing projects. A location survey conducted due to rewarehousing projects may be considered to have satisfied the annual survey requirement for the area surveyed.
C6.8.1.5. **Comparison of Storage Locations with Locator Records.** The proper sequence for operating a location survey requires comparing assets in storage locations with locator records. This sequence of operation is important to detect assets in unrecorded locations.

C6.8.1.6. **Lots/Segments.** An objective is to identify items to location survey lots or segments. Lots/segments will be of a manageable size (number of items) to permit location survey in minimum time, to ensure maximum uninterrupted service to customers, and to obtain the greatest degree of accuracy from the location survey.

C6.8.1.7. **Items within Lot/Segment.** Items within a lot/segment that have been subject to a complete item inventory will satisfy the annual survey requirement when the entire lot/segment is located in a clearly designated, conterminous warehouse space. These inventoried lots/segments may be excluded from the complete survey for the fiscal year in which they were counted. Sites that perform complete physical inventories including empty locations have satisfied the location survey requirement. These sites will not be required to collect location survey metrics.

C6.8.1.8. **Permanent Item Locations.** When permanent locations are reserved for items, unoccupied recorded locations will be identified and/or verified during the location survey.

C6.8.1.9. **Accuracy Measurement.** To measure the accuracy of the results of the location survey, discrepancies will be classified in one of the three categories listed below. Only one error per stock number per location is charged when locator delete, locator establish, or locator record correction is required for the same location. When the stock number and actual assets differ, the discrepancy will be classified as a locator establish action only.

C6.8.1.9.1. **Locator Record Deleted.** The removal or change of a locator record when there is a recorded location but there are no physical assets—unless the location is being held open for new receipts. (Type I location survey error.)

C6.8.1.9.2. **Locator Error Established.** The recording of locations when assets are physically found in storage and no locator records exist, or when the recorded stock number disagrees with the materiel in the location. (Type II location survey error.)

C6.8.1.9.3. **Locator Record Corrected.** Changes to the locator record when physical materiel characteristics differ from any of the following data elements (Type III location survey error):

C6.8.1.9.3.1. Unit of issue.

C6.8.1.9.3.2. SCC.
C6.8.1.9.3.3. Controlled inventory item code (see DoD 4100.39-M, Volume 10, Table 61). Verification of the code will consist of ensuring that assets are stored in areas providing the degree of security commensurate with the assigned code.

C6.8.1.9.3.4. Type of pack code (for subsistence only). (See Volume 2, Chapter 4.)

C6.8.1.9.3.5. Lot number, serial number, or unique item identifier (for ammunition only).

C6.8.1.9.3.6. Completeness and accuracy of magazine data card (for ammunition only).

C6.8.1.9.3.7. Special Inventory. To ensure accuracy of property accountability records, special inventories will be performed when assets are found in an erroneous or unrecorded location, or when there are mismatches in the unit of issue that may result in a quantity variance.

C6.8.2. Location Reconciliation.9

C6.8.2.1. Requirements. Location reconciliation requires a match between storage activity records and owner/manager records in order to identify and to correct situations when there is: (1) an owner/manager record with no corresponding storage activity record, (2) a storage activity record with no corresponding owner/manager record, (3) common elements of data that do not match, and/or (4) quantity discrepancies. Mismatches will be researched and special inventories conducted when required to effect corrective action.

C6.8.2.2. Accuracy Measurement. To measure the accuracy of the results of the location reconciliation program, discrepancies will be classified in one of the four categories listed below (report only one error per location reconciliation error).

C6.8.2.2.1. Owner/manager record shows balance for storage activity; no Location Reconciliation Request Transaction received. (Type I location reconciliation error.)

C6.8.2.2.2. Location Reconciliation Request Transaction received from storage activity; no corresponding owner/manager record (Type II location reconciliation error.)

C6.8.2.2.3. Mismatch of any of the following data elements (Type III location reconciliation error):

C6.8.2.2.3.1. Unit of issue.

9 The location reconciliation process will not be required with the establishment of single shared-asset balances (see paragraphs C6.2.2 and C6.2.4).
C6.8.2.2.3.2. Ownership/manager identifier.

C6.8.2.2.3.3. Controlled inventory item code (see DoD 4100.39-M, Volume 10, Table 61).

C6.8.2.2.3.4. Type of pack code (subsistence only).

C6.8.2.2.3.5. Shelf-life code.

C6.8.2.2.4. Quantity Discrepancy (Type IV Reconciliation Error).

C6.8.2.3. Guidance. The DoD Components will perform location reconciliation in accordance with the following guidance:

C6.8.2.3.1. Annual Location Reconciliation. Owners/managers and storage activities will:

C6.8.2.3.1.1. Reconcile all records at least once every year but prior to the Chief Financial Officer inventories in September.

C6.8.2.3.1.2. Perform annual reconciliations as required by subparagraph C6.8.2.3.3.

C6.8.2.3.2. Location Reconciliation Request. Storage activities will prepare Location Reconciliation Request Transactions by line-item and by type of pack, for each stock number regardless of the balance (including zero balances). For annual location reconciliation request, storage activities will cite DLMS 846R, Action Code 24 or, for MILSTRAP legacy DIC DZH, Type of Location Reconciliation Request Code 2. Storage activities will send the request to the owner/manager. Storage activities preparing MILSTRAP legacy DIC DZH requests will ensure that consecutive transaction numbers by RIC are assigned to the location reconciliation requests for control purposes.

C6.8.2.3.3. Location Reconciliation Schedule. All owner/manager and storage activity records (active and inactive records, including zero balances) will be reconciled not less than once each fiscal year. Storage activities and Components may negotiate agreements for conducting annual location reconciliation any time during the fiscal year. When no such agreement exists, location reconciliation requests will be prepared on the second Tuesday of the month indicated in the schedule in Table C6.T2.

Table C6.T2. Location Reconciliation Preparation Schedule When No Other Schedule Agreement Exists

<table>
<thead>
<tr>

<tr>
<td>Army</td>
<td>January</td>
</tr>
<tr>
<td>Navy</td>
<td>March</td>
</tr>
</tbody>
</table>
C6.8.2.3.4. **Control of Location Reconciliation.** Storage activities and owners/managers will establish the following provisions for controlling location reconciliation:

C6.8.2.3.4.1. **Location Reconciliation Notification.** Storage activities will advise intended recipients (owners/managers) of the number of transactions being forwarded, and cut-off date, using Location Reconciliation Notification Transaction.

C6.8.2.3.4.2. **Location Reconciliation Transaction History**

C6.8.2.3.4.2.1. **Location Reconciliation History Notification Transaction.** When transaction history is required with Location Reconciliation, the storage activity will advise intended recipients (owners/managers) of the number of historical transactions being sent, and the cutoff date, using Location Reconciliation History Notification Transactions.

C6.8.2.3.4.2.2. **Transaction History to Support Location Reconciliation.** For transaction history associated with annual reconciliation, the owner/manager may cite Type of Physical Inventory/Transaction History Code Y in the Transaction History Request Transaction. Transactions subject to transaction history submission are receipt (DLMS 527R with 1/BR02/20/Code D4; MILSTRAP legacy DIC D4_/D6), issue (DLMS 867I; DIC D7_), materiel release (DLMS 940R, MILSTRIP legacy DIC A5_), materiel release advice (DLMS 945A, MILSTRIP DIC AR_), and inventory adjustments (DLMS 947I; MILSTRIP legacy DIC D8_/D9_). The transaction history code may be included in the transaction history submission. DLA owner/managers will use code Y for automatic submission of history requests for the Annual (Total) Reconciliation, and code W for automatic submissions of transaction history requests for their weekly process. The storage activity perpetuates the type of physical inventory/transaction history code in the transaction history submissions.

C6.8.2.3.4.3. **Owners/managers will use the Location Reconciliation Notification and Location Reconciliation History Notification Transactions to determine receipt of all Location Reconciliation and historical transactions. Where the number of transactions to be sent does not match what was actually received, the owner/managers may reject the Location Reconciliation Notification and/or Location Reconciliation History Notification transactions using Reject Advice Transaction (DLMS 824R; MILSTRAP legacy DIC DZG), with Reject Advice Code AY.**

C6.8.2.3.5. **Processing Location Reconciliation Request.** In processing Location Reconciliation Request Transactions, owners/managers will match the
requests to the owner/manager records. When a mismatch is programmatically unresolved, Inventory Adjustment (Accounting Error) Transaction (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B) will be processed to adjust the owner/manager records. All Type I, II, III, and IV mismatches meeting the criteria for causative research (see Table C6.T3.) will be resolved as follows:

C6.8.2.3.5.1. Research of owner/manager active and historical records.

C6.8.2.3.5.2. Research of storage activity active/historical record using Transaction History Request Transaction with Type of Physical Inventory/Transaction History Code X.

C6.8.2.3.5.3. Request physical inventory using Physical Inventory Request Transaction with Type of Physical Inventory/Transaction History Code J.

C6.8.2.3.5.4. If the above actions fail to resolve the mismatch, the Inventory Adjustment (Accounting Error) Transaction (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B) will remain on the owner/manager records.

C6.8.2.3.6. Exceptions. A physical inventory is not required under the following conditions, except when the mismatch involves classified or sensitive items (regardless of dollar value), or pilferable items (when the extended dollar value of the variance is greater than $100).

C6.8.2.3.6.1. The owner/manager record may be adjusted without special inventory when the extended value of the variance is $5,000 or less and 10 percent or less of the beginning value of the variant owner/manager record for Type IV errors (see subparagraph C6.8.2.2.4.).

C6.8.2.3.6.2. The owner/manager record may be adjusted without special inventory when the extended value of the variance is $5,000 or less for Type I and Type II errors (see subparagraphs C6.8.2.2.1. and C6.8.2.2.2.).

C6.8.2.3.7. Discrepancies. When a discrepancy is identified during the location reconciliation, send the following transactions, as appropriate, to the submitting activity:

C6.8.2.3.7.1. DLMS 824R (MILSTRAP legacy DIC DZG) – Reject Advice Transaction, as prescribed in Volume 1, Chapter 6.

C6.8.2.3.7.2. DLMS 888I Storage Item Data Correction/Change Transaction as prescribed in this chapter. Storage activities will use the Storage Item Data Correction/Change Transaction to update stock records, item locator records, and bin tags.
C6.9. RETENTION OF ACCOUNTABLE DOCUMENTATION. DoD requires that all Components meet audit requirements following the processing of documents and data and completion of the research efforts. Owners and storage activities will maintain records and supporting documentation in accordance with DoDI 5015.02 and DoD 7000.14-R, Financial Management Regulation, Volume 1 Chapter 9. The following business rules apply to storage activities and owners when retaining records for audit purposes:

C6.9.1. Source Documents. Retain original source documents or facsimiles in a readily accessible format. Source documents include only accountability change documents such as receipts, issues, shipments, transfers, SCC changes, and inventory and financial adjustments. Keep source documents providing evidence of shipment to FMS recipients in accordance with DoDI 5015.02.

C6.9.2. Transaction History. Retain registers, records, files, tapes, and data in a format useful for audit trail purposes. Automated inventory control systems facilitate the output of transaction histories that indicate the date the last physical inventory was conducted for each item.

C6.9.3. Adjustment Research. Retain backup documentation that directly pertains to individual cases of physical inventory adjustment research efforts in a readily accessible format (to include physical inventory and accounting error adjustments).

C6.9.4. Annual Statistical Inventory. Retain annual statistical sample inventory line-item detail data in a readily accessible format.

C6.10. QUALITY CONTROL

C6.10.1. Goals and Objectives. DoD Components will establish a quality control program at each owner/manager and storage activity. Portions of the program can be accomplished during ongoing practices within inventory processes. Quality control results will assist management in identifying those human, procedural, or system errors that adversely affect record accuracy and in achieving better control over physical materiel and warehousing practices. Within the scope of this quality control program, work processes directly related to the control of physical materiel will be monitored for attained quality levels and performance evaluated on improvements, not numerical goals. Accordingly, all quality control programs will include reviews to assess the accuracy/quality of the following work processes:

C6.10.1.1. Warehousing Practices. This includes checks of storage practices, stock rotation, shelf-life management, identification of in-store materiel, mixed stock, location accuracy and rewarehousing projects.

C6.10.1.2. Receiving Practices. This includes checks of documentation, materiel identity, quantity, and SCC; checks for processing timeliness; and verification of daily input data to the location system.
C6.10.1.3. **Issuing Practices.** This includes checks of legibility of issue documents; accuracy of stock selection as to identity, quantity, unit of issue, shelf life, SCC, and type of pack (subsistence only); marking of outgoing shipments; and release to carriers.

C6.10.1.4. **Validity of Automated Date.** This includes checks of receipt, issue, and adjustment transaction data entries against input documentation.

C6.10.1.5. **Inventory Practices.** This includes checks of inventory counts, location surveys, location reconciliation corrective actions, causative research, and adjustments at both the owner/manager and storage activity.

C6.10.1.6. **Catalog Practices.** This includes checks of catalog change processing, accuracy, and timeliness, using the affected recorded locations as the universe.

C6.10.1.7. **Locator File Updates.** This includes checking the accuracy of changes to the locator file (e.g., all additions, deletions, and changes of unit of issue, SCC, shelf life).

C6.10.1.8. **Supply Discrepancy Report Processing.** This includes checks for processing timeliness and the accuracy of the SDR initiation, follow up and reply, investigation research including identification and correction of supply errors, adjustment of accountable and financial records, and preparation of Financial Liability Investigation of Property Loss Report (DD Form 200).

C6.10.1.9. **Logistics Reassignment Processing.** This includes checks to determine whether the logistic reassignment actions were completed (e.g., Losing Item Manager (LIM)/Gaining Item Manager (GIM) records were changed to reflect decapitalization/transfer, LIM directed the storage activity to change the decapitalized/transfered assets to GIM ownership, the storage activity effected and advised the LIM of the change, and the LIM initiated action to resolve any quantity variances.

C6.10.1.10. **Suspended Asset Processing.** This includes checks of the timeliness in reclassifying suspended (SCCs J, K, L, Q, R, and X) materiel.

C6.10.2. **Assignment of Responsibility.** Whenever possible, quality control checks of these work processes will include identification of the individual performing the tasks. This will facilitate the placement of responsibility for appraising and improving quality with each manager within the chain of command.

C6.10.3. **Command Emphasis.** Continued command management emphasis and performance review are essential for the success of the quality control program. Command managers must ensure effective organizational interrelationships among the functional element concerned with the PICP such as: comptroller, data systems, transportation, warehousing, maintenance, quality control, and supply management.
The quality control program will include provisions for initiation of corrective action when acceptable quality levels are not met.

C6.11. PHYSICAL INVENTORY CONTROL PROGRAM PERFORMANCE ASSESSMENT. Each DoD Component will collect and maintain performance standards and management data prescribed in paragraphs C6.11.1. and C6.11.2. for all materiel for which the Component maintains the property accountability record. This includes all DoD wholesale supply system assets of principal and secondary items, including package fuels, less all materiel exclusions listed in DoDM 4140.01. When required to report this information to higher authorities Report Control Symbol (RCS): DD-AT&L 935 applies. DD Form 2338-1 (“Inventory Control Effectiveness Report - Ammunition”) and DD Form 2338-2 (“Inventory Control Effectiveness Report - General Supplies”) are available for intra-Component use when required by the DoD Component.

C6.11.1. General Supplies Performance Standards and Data

C6.11.1.1. General Supplies Inventory Adjustment Report Data -- Part I. Parentheses with each paragraph number refer to data shown on the Inventory Control Effectiveness (ICE) Report (RCS DD-AT&L 935).

C6.11.1.1.1. (Line 1.) Number of Physical Inventories and Variance Rate.

C6.11.1.1.1.1. (Line 1.A.) Number of Inventories Completed. The total number of line items inventoried (scheduled and unscheduled). Each SCC for a stock number at each storage activity is a line item.

C6.11.1.1.1.2. (Line 1.B.) Number of Inventories with Adjustments. The total number of line items inventoried (scheduled and unscheduled) that had an inventory variance.

C6.11.1.1.1.3. (Line 1.C.) Inventory Variance Rate. Reflects the percentage of the line items inventoried that had an inventory variance. Compute this figure by dividing the lines with an Inventory Variance by the total line items inventoried and multiplying by 100. ((1B/1A) x 100).

C6.11.1.1.1.4. (Line 1.D.) Number of Inventory Adjustments Equal to or Greater Than (≥) Causative Research Criteria. The total number of line items inventoried (scheduled and unscheduled) that had an inventory variance (overage or shortage equal to or greater than Causative Research threshold) (dollar value of the variance is ≥ $16,000 for uncontrolled item, $2500 for a pilferable item and all adjustments of sensitive/classified items).

10 Refer to ADC 415 available at the DLMS ADC 400-499 page.
11 Book-to-Book Adjustments are not included in section 1.
C6.11.1.1.5. (Line 1.E.) **Causative Research Variance Rate.**
The percentage of the total number of line items inventoried (scheduled and unscheduled) that had an inventory variance that met the Causative Research threshold. Compute this figure by dividing the lines that meet Causative Research Criteria by the total line items inventoried and multiplying by 100. \(((1D/1A) \times 100)\).

C6.11.1.1.2. (Line 2.) **Number of Adjustments\textsuperscript{12}**

C6.11.1.1.2.1. (Line 2.A.) **Number of Adjustment Gains (D8A).**
The total number of inventory gain adjustments.

C6.11.1.1.2.2. (Line 2.B.) **Number of Adjustment Losses (D9A).**
The total number of inventory loss adjustments.

C6.11.1.1.2.3. (Line 2.C.) **Number of Gain Reversals (D8A Reversal).**
The total number of gain reversals of inventory adjustments (from reporting and prior quarters).

C6.11.1.1.2.4. (Line 2.D.) **Number of Loss Reversals (D9A Reversal).**
The total number of loss reversals of inventory adjustments (from reporting and prior quarters).

C6.11.1.1.2.5. (Line 2.E.) **Total Number of Inventory Adjustments.**
The total number of inventory gain or loss adjustments including the number of gain and loss reversals (from reporting and prior quarters) processed during the report period. \((2A + 2B + 2C + 2D)\).

C6.11.1.1.2.6. (Line 2.F.) **Number of Issues and Receipts (Transactions).**
The total number of Issues and Receipts posted during the report period.

C6.11.1.1.2.7. (Line 2.G.) **Number of Adjustments, Gains, and Losses including Book-to-Book Adjustments.**
The total number of Adjustments, Gains, and Losses including Book-to-Book adjustments posted during the reported period.

C6.11.1.1.2.8. (Line 2.H.) **Transaction Adjustment Rate.**
The total number of Adjustments, Gains, and Losses including Book-to-Book adjustments posted during the reported period, compared to the total number of Issues and Receipts posted during the report period. Compute this figure by dividing the total number of Adjustments, Gains, and Losses including Book-to-Book adjustments by the total number of Issues and Receipts. \((2G/2F)\).

C6.11.1.1.3. (Line 3) **Monetary Value of Adjustments\textsuperscript{13}**

\textsuperscript{12} Book-to-Book Adjustments are included in section 2.

\textsuperscript{13} Book-to-Book Adjustments are included in section 3.
C6.11.1.3.1. (Line 3.A.) **Value of Adjustment Gains (D8A).** Monetary value of gain adjustments excluding the monetary value of gain reversals processed during the report period.

C6.11.1.3.2. (Line 3.B.) **Value of Adjustment Losses (D9A).** Monetary value of loss adjustments excluding the monetary value of loss reversals processed during the report period.

C6.11.1.3.3. (Line 3.C.) **Value of Gain Reversals (D8A).** The total monetary value of gain reversals processed during the reporting period.

C6.11.1.3.4. (Line 3.D.) **Value of Loss Reversals (D9A).** The total monetary value of loss reversals processed during the reporting period.

C6.11.1.3.5. (Line 3.E.) **Total Value of Inventory Adjustments.** Monetary value of gains and losses resulting from inventory adjustments including the monetary value of gain and loss reversals (from reporting and prior quarters) processed during the report period (3A+3B+3C+3D).

C6.11.1.4. (Line 4) **Adjustment Rates**

C6.11.1.4.1. (Line 4.A.) **Average Value of Materiel in Storage.** The average value of on-hand assets as reflected on the storage activity's owner/manager property accountability records for the 12 months prior to the report cutoff date (i.e., current quarter plus three quarters).

C6.11.1.4.2. (Line 4.B.) **Record Value of Items Inventoried.** The extended value prior to inventory adjustments being posted during the reporting period.

C6.11.1.4.3. (Line 4.C.) **Absolute Adjustment Rate for Materiel in Storage.** Divide the value of the total number of inventory adjustments (including reversals) by the average value of materiel in storage. \((3E/4A) \times 100\).

C6.11.1.4.4. (Line 4.D.) **Absolute Adjustment Rate for Items Inventoried.** Divide the value of the total number of inventory adjustments (including reversals) by the record value of items inventoried. \((3E/4B) \times 100\).

C6.11.1.4.5. (Line 4.E.) **Initial Adjustment Rate as Percentage of Inventory In Storage.** Divide the value of the total number of inventory adjustments (without reversals) by the average value of materiel in storage \((3A + 3B) / 4A \times 100\).

C6.11.1.4.6. (Line 4.F) **Initial Adjustment Rate as Percentage of Items Inventoried.** Divide the value of the total number of inventory adjustments (without reversals) by the record value of items inventoried. \((3A + 3B) / 4B \times 100\).

---

14 Book-to-Book Adjustments are included in section 4.
C6.11.1.5. Denial Rates

C6.11.1.5.1. (Line 5.A.) Lines Directed for Shipment. The total number of line items directed for shipment (A5_ Materiel Release Order (MRO), A4_ referral order, and A2_ redistribution order).

C6.11.1.5.2. (Line 5.B.) Total Materiel Release Order Denials. The total materiel denials (sum of total and partial denials and warehouse refusals). Include denial transactions classified by denial Management Codes 1, 2, 3, (subsistence only) 4, and 5 (see Appendix AP2.6) in the total.

C6.11.1.5.3. (Line 5.C) Materiel Denial Rate. Compute this figure by dividing the total denials by the line items directed for shipment and multiplying by 100. \( \frac{5B}{5A} \times 100 \).

C6.11.1.2. General Supplies - Accuracy and Performance Data -- Part II. Each DoD Component will collect and maintain visibility of the following performance data for collective analysis of accuracy trends and corrective actions required.

C6.11.1.2.1. Receipt Processing. The accuracy rate is computed by dividing the total number of receipts (all types, e.g., new procurements, redistributions, returns from maintenance) posted and stored to the property accountability record on time by total number of receipts and multiplying by 100 during the reporting period. The Components may separately measure receipt processing timeframes by the type of receipt (e.g., D4_, D6A, D6Ks) based upon business processes and negotiated agreements.

C6.11.1.2.2. Location Survey. The accuracy rate is computed by dividing the locations with discrepancies (Types 1 and 2) by the total locations surveyed (during the reporting period), multiplying by 100, and subtracting the result from 100 percent.

C6.11.1.2.3. Location Reconciliation. This performance figure represents the total number of reconciled location records (i.e. sum of line items on the Inventory Manager’s record and line items that were not on the Inventory Manager’s record but were on the storage activities’ records) during a specified reporting period. The accuracy rate is computed by dividing the number of discrepancies (as defined in paragraph C7.6.2.2.) by the number of reconciled records, multiplying by 100, and subtracting the result from 100 percent.

C6.11.1.2.4. Record Accuracy. This performance element represents the results of Type Physical Inventory/Transaction History Code N Sample Inventories. The sampling model incorporates a hierarchical approach where the total population of items is included and a single sample is randomly selected. Each selected line item (NSN/SCC) is placed in only one of the four categories by determining whether it meets a category’s criteria, in sequential order. Table C7.T1. provides General Supplies Record Accuracy categories, goals and tolerances.
C6.11.2. Ammunition Performance Standards and Data. (The information in this section corresponds to information shown on DD Form 2338-1.)

C6.11.2.1. Performance - Part I

C6.11.2.1.1. Materiel Denials. DoD Components will identify denials separately for low risk and high-risk items.

C6.11.2.1.1.1. (Line 1.A.) Lines Directed for Shipment. The total number of line items directed for shipment (MROs, referral orders, redistribution orders (DLMS 940R Material Release)).

C6.11.2.1.1.2. (Line 1.B.) Total Materiel Denials. The total materiel denials (sum of total and partial denials, and warehouse refusals DLMS 945A, Materiel Release Advice). Include denial transactions classified by denial Management Codes 1, 2, 5, 6, and 7 in the total.

C6.11.2.1.1.3. (Line 1.C.) Material Denial Rate. Compute this figure by dividing total denials by the line items directed for shipment and multiplying by 100. \((1B / 1A) \times 100\) The DoD performance goal for the materiel release denial rate is not greater than 1 percent.

C6.11.2.1.2. Receipt Processing Performance.

C6.11.2.1.2.1. (Line 2.A.) Receipts Posted and Stored. The total number of line item receipts posted and stored to the total item property record.

C6.11.2.1.2.2. (Line 2.B.) Receipts Posted and Stored on Time. The total number of line item receipts that were effectively posted and stored within the timeframes. Both storing and posting actions are considered complete when the item is in the storage location, or available for issue, and the quantity is posted to the total item property record.

C6.11.2.1.2.3. (Line 2.C.) On Time Receipt Rate. Compute this figure by dividing the total number of receipts posted and stored on time by the total number of receipts and multiplying by 100. \((2B / 2A) \times 100\) The DoD performance goal for posting and storing receipts on time is 90 percent.

C6.11.2.1.3. Record Reconciliation Program. Shows the results of the location survey (ratio of accurate storage activity locator records to storage activity locations surveyed) and the location reconciliation\(^\text{15}\).

C6.11.2.1.3.1. (Line 3.A.) Locations Surveyed. The number of storage activity locations surveyed.

\(^{15}\) The location reconciliation process will not be required with the establishment of a single shared asset balances (see paragraphs C6.2.2. and C6.2.4.).
C6.11.2.1.3.2. (Line 3.B.) **Survey Errors.** The total number of location discrepancies as defined in subparagraph C6.8.1.8. Report only one error per stock number per location.

C6.11.2.1.3.3. (Line 3.C.) **Survey Accuracy.** Compute this figure by dividing the locations with discrepancies by the total locations surveyed multiplying by 100, and subtracting the result from 100 percent, \((100 - ((3B / 3A) \times 100))\). The DoD goal for location survey accuracy is 98 percent.

C6.11.2.1.3.4. (Line 3.D.) **Locations Reconciled.** The total number of location records reconciled (i.e., the sum of line items on the owner's/Inventory Manager's record and line items not on the Inventory Manager's record but were on the storage activities' records).

C6.11.2.1.3.5. (Line 3.E.) **Reconciliation Errors.** The total number of discrepant location records as defined in subparagraph C6.8.2.2. Count one error per location reconciliation request (line item) or unmatched Inventory Manager's record.

C6.11.2.1.3.6. (Line 3.F.) **Reconciliation Accuracy.** Compute this figure by dividing the number of discrepancies by the number of records reconciled, multiplying by 100, and subtracting the result from 100 percent, \((100 - ((3E / 3D) \times 100))\). The DoD goal for location reconciliation is 98 percent.

C6.11.2.2. **Physical Inventory Adjustments – Part II**

C6.11.2.2.1. **Physical Inventories**

C6.11.2.2.1.1. (Line 1.A.) **Number of Scheduled and Unscheduled Inventories Completed.** The total number of line-items inventoried (scheduled and unscheduled). Each SCC for a stock number at each storage activity is a line item.

C6.11.2.2.1.2. (Line 1.B.) **Number of Inventories with Variances.** The total number of line items inventoried (scheduled and unscheduled) that had an inventory variance.

C6.11.2.2.1.3. (Line 1.C.) **Inventory Record Accuracy.** Reflects the percent of lines inventoried without an inventory variance. Compute this figure by dividing the lines with an inventory variance by the total lines inventoried and multiplying by 100, and subtracting the result from 100 percent, \((100 - ((1B / 1A) \times 100))\). The DoD inventory record accuracy goal for ammunition is 95 percent.

C6.11.2.2.2. **Number of Inventory Adjustments from Other Than Physical Inventories.**

---

16 Performance data maintained by owner/Inventory Manager regardless where material is stored.

17 The end of day process and location reconciliation process will not be required with the establishment of single shared asset balances (see paragraphs C6.2.2 and C6.2.4).
C6.11.2.2.2.1. (Line 2.A.) **Number of Location Reconciliation Adjustments.** The number of location reconciliation adjustments (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B).

C6.11.2.2.2.2. (Line 2.B.) **Number of End of the Day Processing Adjustments.** The number of end of the day processing adjustments (DLMS 947I with Quantity or Status Adjustment Reason Code AB; MILSTRAP legacy DIC D8B/D9B).

C6.11.2.2.2.3. (Line 2.C.) **Total.** Absolute total of adjustments from other than physical inventories, (2A + 2B).

C6.11.2.2.3. (Line 3.) **Total Inventory Adjustments.** The sum of number of inventories with variances and the number of adjustments from other than physical inventories.

C6.11.2.2.4. **Number of Reversals of Inventory Adjustments.**

C6.11.2.2.4.1. (Line 4.A.) **Number of Gain Reversals.** The number of gain reversals of inventory adjustments.

C6.11.2.2.4.2. (Line 4.B.) **Number of Loss Reversals.** The number of loss reversals of inventory adjustments.

C6.11.2.2.4.3. (Line 4.C.) **Total.** Absolute total of inventory reversals (gains and losses).

C6.11.2.2.5. **Monetary Value.**

C6.11.2.2.5.1. (Line 5.A.) **Average Value of Inventory.** The average value of on-hand assets as reflected on financial records for the 12 months prior to the report cutoff date (i.e., current quarter plus last three quarters).

C6.11.2.2.5.2. (Line 5.B.) **Record Value of Items Inventoried.** The extended value prior to actual inventory of line-items inventoried (scheduled and unscheduled) during the reporting period.

C6.11.2.2.5.3. **Value of Inventory Adjustments**

C6.11.2.2.5.3.1. **Physical Inventory Adjustments:**

C6.11.2.2.5.3.1.1. (Line 5.C.(1)(A)) **Gains.** Monetary value of gains resulting from inventory less the monetary value of gain reversals (from current and prior quarters) processed during the report period.

C6.11.2.2.5.3.1.2. (Line 5.C.(1)(B)) **Losses.** Monetary value of losses resulting from inventory less the monetary value of loss reversals (from current and prior quarters) processed during the report period.
C6.11.2.2.5.3.1.3.  (Line 5.C.(1)(C))  **Gross Adjustments.**
Computed as lines (5C(1)(A) + 5C(1)(B)).

C6.11.2.2.5.3.2.  **Reversals—Current Quarter**

C6.11.2.2.5.3.2.1.  (Line 5.C.(1)(A))  **Gains.** The total monetary value of decreases to the record balances as a result of reversing gain adjustments processed during the reporting period. Compute the Fiscal Year (FY) to Date value for reversal of current quarter gains by adding the quarter ending value for reversal of current quarter gains to the prior quarter FY to Date value of reversal of current quarter gains.

C6.11.2.2.5.3.2.2.  (Line 5.C.(1)(B))  **Losses.** The total monetary value of increases to the record balances as a result of reversing loss adjustments processed during the reporting period. Compute the FY to Date value for reversal of current quarter losses by adding the quarter ending value for reversal of current quarter losses to the prior quarter FY to Date value for reversal of current quarter losses.

C6.11.2.2.5.3.2.3.  (Line 5.C.(1)(C))  **Total.** Absolute total of reversals of current quarter gains and losses. Computed as lines (5C(2)(A) + 5C(2)(B)).

C6.11.2.2.5.3.3.  **Reversals—Prior Quarters**

C6.11.2.2.5.3.3.1.  (Line 5.C.(2)(A))  **Gains.** The total monetary value of decreases to record balances as a result of reversing gain adjustments reported in prior quarters. Compute the FY to Date value for reversal of prior quarters gains by adding the quarter ending value of reversal of current quarter gains to the prior quarter gains.

C6.11.2.2.5.3.3.2.  (Line 5.C.(2)(B))  **Losses.** The total monetary value of increases to record balances as a result of reversing loss adjustments reported in prior quarters. Compute the FY to Date value for reversal of prior quarters’ losses to the prior quarter FY to Date value for reversal of prior quarters’ losses.

C6.11.2.2.5.3.3.3.  (Line 5.C.(3)(C))  **Total.** Absolute total of reversals of prior quarter gains and losses. Computed as (5C(3)(A) + 5C(3)(B)).

C6.11.2.2.5.3.4.  (Line 5.C.(4))  **Total Reversals.** The total of reversals of current quarter and prior quarter gains and losses. Computed as (5C(2)(C) + 5C(3)(C)).

C6.11.2.2.5.3.5.  (Line 5.C.(5))  **Total Record Imbalances.** The total of gross adjustments and total reversals. Computed as (5C(1)(C) + 5C(4)).

C6.11.2.2.6.  **Gross Adjustments As a Percent of.**
C6.11.2.6.1. (Line 6.A.) **Average Value of Inventory.** Divide the total value of gross adjustments by the average value of inventory and multiply by 100. \(\frac{(5C)(1)(C)}{5A} \times 100\).  

C6.11.2.6.2. (Line 6.B.) **Value of Items Inventoried.** Divide the total value of gross adjustments by the record value of items inventoried and multiply by 100. \(\frac{(5C)(1)(C)}{5B} \times 100\).  

C6.11.2.7. **Total Record Imbalances As a Percent of:**  

C6.11.2.7.1. (Line 7.A.) **Average Value of Inventory.** Divide the value of the total record imbalances by the average value of inventory. \(\frac{(5C)(5)}{5A} \times 100\).  

C6.11.2.7.2. (Line 7.B.) **Value of Items Inventoried.** Divide the total value of gross adjustments by the record value of items inventoried and multiply by 100. \(\frac{(5C)(5)}{5B} \times 100\).  

C6.11.2.8. **Monetary Value of Location Reconciliation.**  

C6.11.2.8.1. (Line 8.A.) **Value of Line Items Reconciled.** The extended value of line-items reconciled during the reporting period.  

C6.11.2.8.2. (Line 8.B.) **Gains.** The monetary value of gains resulting from reconciliation during the period.  

C6.11.2.8.3. (Line 8.C.) **Losses.** The monetary value of losses resulting from reconciliation during the period.  

C6.11.2.8.4. (Line 8.D.) **Total.** Absolute total of location reconciliation gains and losses. \(8B + 8C\).  

C6.11.2.9. **Monetary Value of End of the Day Processing.**  

C6.11.2.9.1. (Line 9.A.) **Gains.** The value of gains resulting from end of the day processing.  

C6.11.2.9.2. (Line 9.B.) **Losses.** The value of losses resulting from end of the day processing.  

C6.11.2.9.3. (Line 9.C.) **Total.** Absolute total of end of the day processing gains and losses. \(9A + 9B\).
Table C6.T3. **Minimum Research Requirements for Potential or Actual Physical Inventory Adjustments**

C6.12. **STORAGE ITEM DATA CORRECTION/CHANGE NOTIFICATION**

C6.12.1. This section provides standard procedures required by ICPs to provide for the correction and/or updating of storage activity records when:

C6.12.1.1. Reported transactions indicate that the ICP and storage activity records are inconsistent.

C6.12.1.2. A catalog/stock list change is processed against an ICP record that affects stock control data maintained at the storage activities.

C6.12.2. **Inventory Control Point Action.** ICPs use the Storage Item Data Correction/Change Transaction to provide storage activities with data record changes on supply items. The ICP enters the “correction/change code for storage item records” in the

\(^{18}\) Sample causative research in lieu of complete causative research for pilferable and CIIC 7 item discrepancies with a value from $.01 to $2,500 may be accomplished to serve as a deterrent to fraud, waste, or abuse and to identify systemic inventory and security problems. Causative research will be conducted on all adjustments (gains and losses) of classified and sensitive items regardless of dollar value of item or extended dollar value of adjustment. Causative research will be conducted on all adjustments (gains and losses) of pilferable items, and CIIC 7 items, with an extended value greater than $2,500, and all adjustments with an extended value of greater than $16,000 or greater than 25 percent unit variance and greater than $5,000.
C6.12.3. **Storage Activity Action.** Storage activities will use the Storage Item Data Correction/Change Transaction to update stock records, item locator records, and bin tags.

C6.13. **CAPITAL EQUIPMENT CANDIDATES**

C6.13.1. **General.** This section addresses additional procedures applicable to capital equipment candidates.

C6.13.1.1. **Capital Equipment Candidates.** In support of Financial Improvement and Audit Readiness (FIAR) Compliance for accountability and management of capital equipment, items identified as capital equipment candidates require management and visibility by both the owner and storage activity by serial number (and unique item identifier (UII) if available). Owners will, within their AISs, have constant knowledge of the physical location (DoDAAC/RIC level) of each instance of an item uniquely identified by its serial number (and UII if available). The owner of the item will maintain records of which storage activity has a particular instance of an item identified by its serial number (and UII if available). This requires record keeping by the owner and storage activity and the constant exchange of all balance affecting transactions between them to ensure that the records of both reflect the correct NSN, storage location, owner, supply condition code and serial number (and UII if available). Storage activities will maintain locator records by NSN, owner, supply condition code and serial number (and UII if available). Owners will maintain records on their Accountable Property System of Record (APSR) by NSN, storage activity (DoDAAC/RIC level), SCC, and serial number (and UII if available).

C6.13.1.2. **Capital equipment candidate items are items having the following characteristics; (1) have a FLIS IUID Indicator (Y); (2) are within Classes of Supply II, VII, and VIII; and (3) have a current Unit Price recorded in the FLIS of at least $100,000. Not all capital equipment candidate items will ultimately be reported on financial accountability statements.

C6.13.2. **Conduct of Physical Inventories.** The transaction history request, response to transaction history request when no history is available, physical inventory request, response to physical inventory request and end of day transaction count will not contain serial numbers or UIIs. However, when the owner initiates a physical inventory request for a capital equipment candidate item to assist in resolving discrepancies where the only difference between the owner records and the storage activity records is the serial number (or UII if available), the physical inventory request will contain Type of Physical Inventory Code B. Owners will initiate a physical inventory when a mismatched condition on serial number (and UII when available) is identified between its records and transactions received. The owner will first request a physical

---

19 Refer to ADCs 1198 and 1198A.
inventory of all owners be conducted by the storage activity that sent the transaction generating the mismatched condition. If the initial physical inventory is unable to resolve the mismatched condition the owner may need to coordinate requests for physical inventories with DLA Distribution to conduct inventories of all owners at all other storage activities storing that NSN.

C6.13.2.1. Owner/manager processing a materiel release confirmation from a storage activity where the owner does not have a matching record of the serial number (and UII if available) or the owner/manager records have that serial number (and UII if available) located at other than the storage activity reporting the release/issue of the item. Either of these conditions may necessitate a complete inventory be taken at all storage locations for all owners and supply condition codes.

C6.13.2.2. Owner/manager processing receipts, issues, or inventory adjustments from storage activities where there is a mismatch on serial number (and UII if available) between the owner records and storage activity transactions reporting which serial number (and UII if available) may at a minimum necessitate an inventory and research to resolve the discrepancy.

C6.13.2.3. Owner/managers processing location reconciliation history transactions resulting from End-of Day processing or an owner initiated location reconciliation request where there is a mismatch on serial number (and UII if available) between the owner records and the storage activity transactions. The history transactions for capital equipment candidate items will perpetuate the serial numbers (and UIIs if available) that were included on the original transactions.

C6.13.2.4. To increase auditability of physical inventory requests, serially managed items will include a unique document number. The document number will help relate a physical inventory request with the appropriate response. The owner will provide a document number in the Physical Inventory Request. The storage activity will perform the necessary physical research as described in Chapter 6 Physical Inventory Control. The physical inventory response will carry the same document number provided by the owner. These procedures are required for UIT programs and recommended for all other commodities.

C6.13.3. Location Survey

C6.13.3.1. Location survey requires a physical verification, other than actual count, between assets and recorded location data to ensure that all assets are properly recorded.

C6.13.3.2. Due to the nature of capital equipment candidate items, these items are frequently in individual storage locations within the storage activity. The storage activity may, for items of this nature, include the serial number (and UII if available) verification as part of the location survey. When a discrepancy is identified during the location survey program (Type I or Type II error (see paragraphs C6.8.1.2.1.)
and C6.8.1.2.2.), the storage activity will conduct prompt research and assess the need for a special inventory Physical Inventory Request Transaction with Type of Physical Inventory/Transaction History Code K).

C6.13.4. **Reconciliation of Serially-Managed Items.**

**C6.13.4.1.** Storage activities will prepare location reconciliation requests by line item. For capital equipment candidates, the line item = NSN + SCC + serial number + U11 (when available).

**C6.13.4.2.** In addition to the responsibilities described under paragraph C6.2.6, storage activities and owners/managers will include the U11/serial number when reconciling records to ensure proper accountability of serially-managed items. For mismatches between system records, the storage activity will collaborate with the owner/manager to ensure proper research and resolution.

**C6.13.4.3.** The combination of U11 and serial number increases the accuracy of inventory records across the DOD. When a serially managed item lacks a U11, there is a potential for duplicate serial numbers. A duplicate serial number may surface as a result of the record reconciliation. For mismatches due to a duplicate serial number, the owner is responsible for taking the necessary steps to resolve the discrepancy.

**C6.13.5. Inventory Adjustments under Capital Equipment.** The inventory adjustment function encompasses increases, decreases, or dual adjustments. The C6.4 procedures for processing and reporting of Inventory Adjustments (Physical Inventory) are applicable with the following additions:

**C6.13.5.1.** Capital equipment items inventory adjustment (gain, loss, or dual) transactions will include the serial number/U11 when adding, removing, or correcting a serial number/U11.

**C6.13.5.2.** Capital equipment items when a discrepancy exists solely on mismatched serial number and/or U11, the storage activity will transmit a DLMS 947I Inventory Adjustment, Inventory Transaction Type Code DU (Inventory Adjustment Dual), Quantity or Status Adjustment Reason Code AQ (Inventory Adjustment (U11 and/or serial number mismatch)) to correct the serial number/U11 in question. The storage activity will collaborate with the materiel owner(s) to research inventory adjustments due to serial number/U11 discrepancies resulting in a mismatch (Quantity or Status Adjustment Reason Code AQ). Two inventory adjustment transactions are required to correct the mandatory serial number/U11 and to update the SCC.

**C6.13.5.2.1.** The storage activity will prepare a separate dual inventory adjustment transaction for each item to identify the original “from” and corrected “to” IUID values. Only one item will be identified in each dual inventory adjustment.
C6.13.5.2.2. A dual inventory adjustment transaction will be required to cite the impacted serial number(s)/UII(s) to update the suspended item(s) from the suspended SCC to the appropriate SCC.

C6.13.5.3. Capital equipment candidate items where a discrepancy exists solely on missing serial number/UII requires a dual inventory adjustment transaction. The storage activity will transmit a DLMS 947I Inventory Adjustment, Inventory Transaction Type Code DU (Inventory Adjustment Dual), Quantity or Status Adjustment Reason Code AM (Missing Unique Item Identifier (UII)/Serial Number) to add the serial number/UII in question to the existing records. The storage activity may add multiple missing serial number/UII for the same item using a single transaction. The storage activity response will contain all related serial numbers/UIIs. Two inventory adjustment transactions are required to identify the mandatory serial number and, when available, the associated UII, and to update the SCC.

C6.13.5.3.1. The storage activity will prepare a dual inventory adjustment transaction to identify missing IUID values for each applicable item. Multiple items may be identified in each dual inventory adjustment transaction.

C6.13.5.3.2. A dual inventory adjustment transaction will be required to cite the impacted serial number(s)/UII(s) to update the suspended item(s) from the suspended SCC to the appropriate SCC.

C6.13.5.4. In response to a Physical Inventory Request, the storage activity will transmit to the owner a DLMS 947I Inventory Adjustment with zero quantity, Quantity or Status Adjustment Reason Code AA (Physical Count) by line item indicating the completion of the inventory. Inventory adjustment transactions with Quantity or Status Adjustment Reason Code AA and zero quantity must include all serial number/UII(s) associated to the NSN, Condition Code, and Owner from the initial request. The storage activity will send all gain, loss, or dual adjustment transactions prior to sending the final inventory adjustment transaction (Reason Code AA, zero quantity) containing all serial numbers/UIIs. The owner will process all inventory adjustments prior to processing the final inventory adjustment.

C6.13.5.5. Owner/managers processing location reconciliation history transactions resulting from End-of Day processing or an owner initiated location reconciliation request where there is a mismatch on serial number/UII between the owner records and the transactions received from the storage activity. The history transactions will perpetuate the serial numbers/UIIs included in the original transactions.
C6.13.6. Research of Potential or Actual Inventory Adjustments (UIN and/or serial number mismatch) (DLMS 947I with Quantity or Status Adjustment Reason Code AQ).

C6.13.6.1. DoD Components will ensure that potential or actual inventory adjustments for capital equipment candidate items that result in an inventory adjustment are reported with Quantity or Status Adjustment Reason Code AQ and are researched in accordance with the procedures paragraph C6.4.

C6.13.6.2. Due to the value of capital equipment candidate items, discrepancies will always require the most demanding research requirements set forth in Table C6.T3.
C7. CHAPTER 7
INVENTORY ADJUSTMENTS

C7.1. GENERAL

C7.1.1. Purpose

C7.1.1.1. Adjustment/Change Procedures. This chapter provides procedures relating to the following types of adjustment and change actions:

C7.1.1.1.1. Adjustments caused by catalog change actions.
C7.1.1.1.2. Reidentification of improperly identified materiel.
C7.1.1.1.3. Offsetting adjustments to purpose and condition codes.
C7.1.1.1.4. Discrepancies disclosed by physical inventory.
C7.1.1.1.5. Discrepancies disclosed by physical inventory due to unique item identifier (UII) and/or serial number mismatch. \(^1\)
C7.1.1.1.6. Ownership gains and losses applicable to the Single Manager for Conventional Ammunition (SMCA).

C7.1.1.2. This chapter also provides procedures relating to the Asset Reclassification transaction

C7.1.1.3. There are additional processing procedures over and above those contained in this chapter that must be applied for items identified as serially managed materiel requiring owner visibility at DLA Distribution Centers. The identity of the materiel and the additive procedures are in Chapter 30.

C7.1.2. Transactions. This chapter addresses the procedures applicable to the inventory adjustment function using the DLMS 947I, and the asset reclassification function using the DLMS 846A. DLMS 947I has corresponding Military Standard Transaction and Accountability Procedures (MILSTRAP) legacy transactions. The DLMS 846A is a DLMS enhancement with no corresponding MILSTRAP transaction.

C7.1.2.1. Inventory Adjustment. The inventory adjustment function is identified by the DLMS 947I, Accredited Standards Committee (ASC) X12 beginning segment (1/W1505/0200) Transaction Type Code NU – Inventory Adjustment. The Defense Logistics Standard System (DLSS) MILSTRAP legacy 80 record position transaction functionality identified by document identifier codes (DIC) is included for information purposes in a mixed DLMS/DLSS environment. Other formats, such as extensible

\(^1\) Refer to ADC 1198.
markup language (XML) are also available. See the Defense Logistics Management Standards Website for available formats on the DLMS IC page.

C7.1.2.1.1. The inventory adjustment function encompasses increases, decreases, or dual adjustments. This relates to MILSTRAP legacy DICs D8_ (increase), D9_ (decrease), or DAC/DAD/DAS (dual adjustment), respectively.

C7.1.2.1.2. Inventory adjustments are further broken down by the DLMS 947I, ASC X12 warehouse adjustment item detail segment (2/W1901/0200) Quantity or Status Adjustment Reason Code. The quantity or status adjustment reason codes correlate to the 3rd position of MILSTRAP legacy DICs D8_/D9_ or DAC/DAC/DAS as identified in Table C7.T1:

Table C7.T1. DLSS DIC/DLMS Quantity Or Status Adjustment Reason Code Correlation

<table>
<thead>

C7.1.2.2. **Asset Reclassification.** The Asset Reclassification transaction is a DLMS enhancement and there is no corresponding MILSTRAP transaction or function. A DLMS 846A Asset Reclassification is used for the following transaction functions identified by DLMS 846A ASC X12 beginning segment (1/BIA02/020) Report Type Codes:

**C7.1.2.2.1. Asset Reclassification Request Transactions.** Asset reclassification transactions are identified by Report Type Code TE. Owners use this function for asset reclassification request transactions and asset reclassification follow-up transactions. The types of asset reclassification requests, as well as the asset reclassification request follow-up transaction, are further delineated by a variety of 1/BIA06/020 action codes.

**C7.1.2.2.2. Asset Reclassification Denial Transaction.** The Asset Reclassification Denial transaction is identified by Report Type Code TD. Storage activities generate this transaction. Asset reclassification request denial codes identify the reason a request was denied. Asset Reclassification Response Denial transactions (Action Code DE), must also cite the Asset Reclassification Denial Code at either 2/LQ01/260/ARD or 2/LQ01/376/ARD, as appropriate. (No reasons for denial have been identified for asset reclassification requests associated with SCC reclassification.)

**C7.1.2.2.3. Asset Reclassification Extension Request Transaction.** The asset reclassification extension request transaction is identified by Report Type Code AR. Storage activities generate this transaction.

**C7.1.2.2.4. Asset Reclassification Extension Response Transaction.** The asset reclassification extension response transaction is identified by Report Type Code AX. Owners generate this transaction.

C7.1.3. **Adjustment Actions.** DLMS provides two methods for effecting adjustments–single or dual actions.

---

3 Refer to ADC 1198.
C7.1.3.1. **Single Adjustment.** The single adjustment method accommodates processing techniques that use individual increase or decrease adjustment actions against the accountable and owner records.

C7.1.3.1.1. **Increase.** Identify single increase adjustments by using DLMS 947I ASC X12 warehouse adjustment item detail segment (2/W1916/0200) Inventory Transaction Type Code AJ – ‘Inventory Adjustment’ (legacy DIC D8__).

C7.1.3.1.2. **Decrease.** Identify single decrease adjustments by using DLMS 947I ASC X12 warehouse adjustment item detail segment (2/W1916/0200) Inventory Transaction Type code AD – ‘Inventory Adjustment – Decrease’ (legacy DIC D9__).

C7.1.3.2. **Dual Adjustment.** The dual adjustment method provides for offsetting adjustments to condition or purpose code in a single adjustment transaction. Identify dual inventory adjustments by using DLMS 947I ASX X12 warehouse adjustment item detail segment (2/W1916/0200) Inventory Transaction Type Code DU – ‘Inventory Adjustment – Dual’ (legacy DIC DAC, DAD, or DAS).

C7.1.3.3. **Single Transaction Prescribed.** When the DoD Component practice prescribes the use of single adjustments internally for condition or purpose transfer, make provisions to accept and process dual adjustments from other DoD Components for condition or purpose transfer.

C7.1.4. **Ownership/Purpose Code Changes.** Changes between ownership codes, from purpose code to ownership code, or from ownership code to purpose code, will not be made by an adjustment action. Process appropriate issue and receipt transactions to make the necessary accounting actions. An exception to this rule is the use of dual or single inventory adjustment transactions to accomplish ownership gain/loss under the SMCA concept (C7.3.).

C7.1.5. **Project Code Changes.** Accomplish changes in project or distribution codes maintained on the owner record by using individual increase or decrease materiel adjustment transactions with the appropriate quantity or status adjustment reason code (other than Quantity or Status Adjustment Reason Code AA (Physical Inventory) (legacy DIC D8A/D9A)).

C7.1.6. **Clerical/Automated Accounting Errors.** Submit inventory adjustments resulting from clerical or automated information system errors that cannot be corrected by reversing the original transaction or from reconciliation between the storage activity and the owner using an Inventory Adjustment transaction with Quantity or Status Adjustment Reason Code AB (Accounting Error) (legacy DIC D8B/D9B).

C7.1.7. **Nonspecific Inventory Adjustments.** Use the Inventory Adjustment transaction with Quantity or Status Adjustment Reason Code AH (Other), to accomplish an adjustment increase or decrease when a quantity or status adjustment reason code is not otherwise provided. (The DoD Components will maintain detailed backup information as to use and requirement for the transaction.)
C7.1.8. Specific Inventory Adjustments. The Inventory Adjustment transaction with Quantity or Status Adjustment Reason Code AJ (Survey) will be used to report inventory adjustments resulting from shrinkage, theft, contamination, deterioration, and expired shelf-life. Losses resulting from major disasters, fire, enemy action, acts of God, etc., will be identified by Quantity or Status Adjustment Report Code AI (Disaster).

C7.2. CHANGES IN SUPPLY CONDITION OF MATERIEL

C7.2.1. Supply Condition Reclassification of Assets in Storage

C7.2.1.1. Reporting Classification Variance to Owners. When inspection of stocks on hand reveals that a SCC reclassification is required, storage activities will report the variance to the owner within 3 calendar days using a dual Inventory Adjustment Transaction for SCC change (Inventory Adjustment with Quantity or Status Adjustment Reason Code AC (Condition Change) or legacy DIC DAC) for the affected condition codes.

C7.2.1.2. Changing Suspect Stock to SCC J. When immediate reclassification of suspect stocks is beyond current capabilities, transfer the materiel to SCC J using a dual inventory adjustment for SCC change (Inventory Adjustment with Quantity or Status Adjustment Reason Code AC (Condition Change) or legacy DIC DAC) for the affected condition codes.

C7.2.1.2.1. Reclassification Timeframe for SCC J. With the exception of explosive and inert ammunition, complete the materiel reclassification of materiel reported in SCC J within 80 calendar days after reporting the change to the owner. Owner/managers will provide timely disposition instructions for materiel in a suspended condition to promote rapid reclassification of materiel (with a maximum of 50 days for provision of owner/manager disposition instructions and 30 days for storage activity reclassification). Complete the reclassification of explosive and inert ammunition within 270 calendar days after reporting the change.

C7.2.1.2.2. Reporting Completion of Reclassification. When the reclassification is complete, report the change to the owner using dual Inventory Adjustment Transaction for SCC change (Quantity or Status Adjustment Reason Code AC (Condition Change) or legacy DIC DAC. Use the same document number used to report the materiel in SCC J.

C7.2.2. Reclassification of SCC Q (Suspended) Product Quality Deficiency Related Materiel

C7.2.2.1. Storage Activities will report discrepant receipts in SCC Q as prescribed by Chapter 13, receipt procedures. When directed by the owner, storage activities will also transfer stored, including suspended, materiel to SCC Q and report the action using a dual inventory adjustment transaction following C7.2.1.1.

C7.2.2.2. When inspection or technical/engineering analysis of materiel confirms a product quality deficiency, possibilities for other use of the materiel within the
Department of Defense, as well as public health/safety and national security interests, must be considered. Owners will determine if further use of the item can be made within the Department of Defense.

C7.2.2.3. When inspection of technical/engineering analysis of materiel indicates that litigation action is required, the owner will direct transfer of the materiel to SCC L.

C7.2.2.4. If the deficiency does not prohibit further DoD use (i.e., the defect is minor or the item meets specifications for another national stock number (NSN)), owners will direct storage activities to re-identify and/or transfer the suspended SCC Q materiel to the appropriate condition. Storage activities will, within 3 calendar days from receipt of the ICP direction, reclassify the SCC Q materiel to the appropriate condition. Report completion of this action with an Inventory Adjustment transaction, using the same document number originally used to report the materiel in SCC Q (i.e., the document number of the original receipt or inventory adjustment transaction). For re-identifications, storage activities will follow the procedure in C7.7.

C7.2.2.5. If the deficiency prohibits further DoD use, the materiel will remain in SCC Q and owners will direct transfer of the materiel to the DLA Disposition Services Field Offices following Chapter 16 procedures. Improperly documented, unauthorized source, defective, non-repairable, and time-expired Aviation CSI/FSCAP materiel that is not mutilated by the holding activity will be directed to the DLA Disposition Services Field Office in SCC Q with Management Code S. All such materiel will be mutilated. When turning such Aviation CSI/FSCAP materiel in to a DLA Disposition Services Field Office, the turn-in document must clearly note that the part is defective, non-repairable, time-expired, or otherwise deficient and that mutilation is required.

C7.2.3. Reclassification of SCC L Receipts

C7.2.3.1. Storage Activity Reporting. Storage activities will report discrepant receipts from procurement and materiel held pending resolution of a transportation discrepancy in SCC L as prescribed by Chapter 13. When directed by the owner (C7.2.8.), storage activities will also transfer materiel to SCC L and report the action using a dual adjustment transaction following the procedures in C7.2.1.

C7.2.3.2. Materiel Owner Responsibilities. Owners are responsible for monitoring materiel suspended in SCC L and directing change of the materiel to its correct condition when litigation or other action to resolve the discrepancy is completed using an Asset Reclassification Request transaction in accordance with C7.2.6. If inspection or technical/engineering analysis confirms that a product quality deficiency prohibits further use of the materiel within the Department of Defense, the owner will direct transfer of the materiel to SCC Q.

C7.2.3.3. Reclassification Procedures. When directed by the owner, storage activities will, within 3 calendar days from receipt of an asset reclassification request, reclassify the suspended materiel to its correct SCC. Report completion of action with an
Inventory Adjustment – Dual (SCC Change) using the same document number originally used to record the materiel in SCC L (i.e., the document number of the original receipt or inventory adjustment transaction). See C7.2.8. for storage activity asset reclassification denial procedures when requested reclassification action cannot be done.

C7.2.4. Reclassification of SCC K and SCC R Receipts

C7.2.4.1. Suspension of Materiel. Under Chapter 13, Materiel Receipt processing procedures, storage activities may suspend materiel in SCC K upon receipt for SCC determination. Storage activities may also receive materiel identified as SCC R (suspended) from reclamation activities that lack the capability to determine the materiel condition.

C7.2.4.2. Storage Activity Actions. Storage activities will reclassify these suspended receipts to their correct condition within the timeframes prescribed in the following paragraphs. When materiel has been reclassified to its correct condition, the storage activity will send an Inventory Adjustment Transaction – Dual for SCC change (Quantity or Status Adjustment Reason Code AC (Condition Change) (legacy DIC DAC)) to the owner using the same document number cited in the original receipt transaction.

C7.2.4.2.1. Reclassification Timeframe for SCC K Suspended (Returns). With the exception of ammunition, complete the reclassification of materiel reported in SCC K within 80 calendar days after reporting the discrepant receipt via SDR. Owner/managers will provide timely disposition instructions for materiel in a suspended condition to promote rapid reclassification of materiel (with a maximum of 50 days for provision of owner/manager disposition instructions and 30 days for storage activity reclassification). Reclassify explosive and inert ammunition within 45 calendar days after reporting the receipt.

C7.2.4.2.2. Reclassification Timeframe for SCC R Suspended (Reclaimed Items, Awaiting Condition Determination). When materiel identified as SCC R is received from reclamation activities, reclassify the materiel within 180 calendar days after reporting the receipt or prior to induction into maintenance facilities for repair/modification, whichever is sooner.

C7.2.4.2.2.1. No Asset Test Capability. When the capability to test/check SCC R assets for actual condition does not exist, the materiel may be forwarded to a maintenance facility for condition determination.

C7.2.4.2.2.2. Property Accountability Records. The actual condition of assets must be recorded on the owner record before the assets may be included in a scheduled maintenance program.
C7.2.5. Reclassification of SCC X

C7.2.5.1. Storage Activity Reporting. Storage activities will report receipts in SCC X as prescribed by Chapter 13, Receipt Procedures. When directed by the owner, storage activities will reclassify stored, including suspended, materiel to SCC X and report the action using a dual inventory adjustment transaction following C7.2.1.1.

C7.2.5.2. Owner Responsibility

C7.2.5.2.1. Owners are responsible for reviewing materiel in SCC X on a semi-annual basis to ensure continued efforts on the development of a repair process by the technical/engineering/maintenance analysis team. The owner will direct reclassification to the appropriate condition upon a determination that repair will not be pursued.

C7.2.5.2.2. The owner must exercise caution in directing issue of materiel stored in SCC X to ensure materiel is issued in the appropriate condition when required.

C7.2.5.2.2.1. SCC X materiel will not be issued to the end user/customer.

C7.2.5.2.2.2. The owner must request reclassification to the appropriate condition prior to disposal action.

C7.2.5.2.2.3. Materiel may be issued to repair in SCC X only when the repair activity is operated by the same Service as the owner. Otherwise, materiel must be reclassified to the appropriate condition prior to issue.

C7.2.5.3. Reclassification Procedures

C7.2.5.3.1. SCC X materiel will not be reclassified by the storage activity except as directed by the owner. When directed by the owner, storage activities will, within 30 calendar days from receipt of an asset reclassification request, reclassify the suspended materiel to its correct SCC. The storage activity will report completion of reclassification action with an Inventory Adjustment – Dual (SCC Change).

C7.2.5.3.2. Pending implementation of the DLMS transaction enhancement (DLMS 846A Reclassification) to request supply condition code reclassification, the owner will request reclassification via email to provide an audit record. The storage activity will confirm receipt of the email, thus establishing a beginning date for the reclassification time standard.

C7.2.6. Automatic Disposal of Reclassified Stock. When materiel is reclassified to SCC H, storage activities may also, based on criteria promulgated by the DoD Components, automatically turn condemned and expired shelf-life materiel in to DLA Disposition Services or take other authorized automatic disposal action. Advise the

---

4 Refer to ADC 1159, New Supply condition Code X, Suspended (Repair Decision Delayed)
owner of such simultaneous reclassification and automatic disposal action by entering Management Code M (materiel condemned–excludes expired shelf-life materiel) or Management Code T (materiel condemned–expired shelf-life materiel) in the inventory adjustment transaction. Refer to C13.2.8.2.10.1. for exclusions from automatic disposal.

C7.2.7. Exceptions to Prescribed Timeframes for SCC Reclassification – Request for Reclassification Extension

C7.2.7.1. Requesting Extensions to a Suspense. When additional time is needed to reclassify materiel held in SCC J, K, or R, because of large quantities, lack of facilities, nonavailability of personnel and/or test equipment, or other circumstances considered justified by the storage activity commander, the storage activity will forward a DLMS 846A Asset Reclassification Extension Request to the owner.

C7.2.7.1.1. Approval of Extension Requests. When appropriate, the owner will use the Asset Reclassification Extension Response to approve the extension request, notify the storage activity, and establish a suspense to ensure that classification action is taken within the agreed upon timeframe.

C7.2.7.1.2. Disapproval of Extension Requests. If the owner does not approve the request for extension, they will send an Asset Reclassification Extension Response to the storage activity disapproving the request. The storage activity will make every effort to comply with the established timeframe.

C7.2.7.2. Reclassification. Owners may submit Asset Reclassification Request Transactions in accordance with C7.2.8. to request hastened reclassification of SCC J, K, and R assets whenever it is deemed necessary based on their stock position and overall management responsibility.

C7.2.8. Monitoring Assets Recorded in Suspended SCCs

C7.2.8.1. SCC J, K, and R. Owners will review records for all materiel suspended in SCC J, K, and R at least monthly and ensure that storage activities accomplish reclassification actions within prescribed timeframes.

C7.2.8.2. SCC L. Although there is no prescribed timeframe for transferring suspended materiel from SCC L, owners will review all records for materiel suspended in SCC L at least quarterly and will take necessary action to ensure expeditious litigation/negotiation with contractors or common carriers.

C7.2.8.3. SCC Q. Although there is no prescribed timeframe for transferring suspended materiel from SCC Q, supply sources will review all records for materiel suspended in SCC Q at least monthly. Supply sources will take necessary action to ensure expeditious inspection or technical/engineering analysis of suspect assets and prompt transfer of assets, under C7.2.2., based on the inspection results.
C7.2.8.4. **SCC X.** Although there is no prescribed timeframe for transferring suspended materiel from SCC X, owners will review all records for materiel suspended in SCC X at least semi-annually to ensure expeditious development of a repair process.

C7.2.9. **Asset Reclassification Request, Follow-up and Response Associated with Request for SCC Reclassification**

C7.2.9.1. **Asset Reclassification Request, Follow-up and Denial Transaction Procedures.** This section prescribes standard procedures for use of Asset Reclassification Request, Follow-up, and Denial transactions. Procedures for using Asset Reclassification Extension Request and Asset Reclassification Extension Response transactions are addressed in C7.2.6.

C7.2.9.2. **Owner Responsibilities.** As discussed in C7.2.7, owners are responsible for monitoring assets in suspended SCCs. Owners use the Asset Reclassification Transaction to request that the storage activity effects reclassification of assets in suspended SCCs. Reasons for sending an DLMS 846A, Asset Reclassification request to the storage activity for SCC reclassification are:

C7.2.9.2.1. **Expedite SCC Reclassification.** Owner/manager requirement for storage activity to expedite SCC reclassification action. Only the current SCC is identified in the transaction. (Identified by DLMS 846A, ASC X12 beginning segment (1/BIA06/20) Action Code 23.)

C7.2.9.2.2. **Resolution of SCC Suspension.** Owner/manager resolution of a suspension (e.g., completion of litigation or technical inspection). Both the ‘from’ and ‘to’ SCCs are identified in the transaction. (Identified by DLMS 846A, ASC X12 beginning segment (1/BIA06/20), Action Code 62.)

C7.2.9.2.3. **SCC Reclassification Timeframe Expired.** Owner/manager uses when the storage activity is responsible for the SCC reclassification action, the timeframe has expired, and the owner did not receive a corresponding adjustment, reclassification denial, or request for an extension transaction from the storage activity. Only the current SCC is identified in the transaction. (Identified by DLMS 846A, ASC X12 beginning segment (1/BIA06/20), Action Code 86.)

C7.2.9.3. **Storage Activity Actions.** In response to an Asset Reclassification Request Transaction, the storage activity will take action to reclassify the materiel in the timeframe specified and provide an Inventory Adjustment Transaction to the owner. If the storage activity is not able to effect the reclassification action, the storage activity will submit an Asset Reclassification Denial Transaction citing the appropriate Asset Reclassification Denial Code to explain the reason for the denial. If the reclassification action cannot be accomplished in the timeframe specified, the storage activity will submit an Asset Reclassification Extension Request in accordance with C7.2.6.

C7.2.9.4. **Owner Use of Asset Reclassification Follow-up.** Owners send the Asset Reclassification Follow-up Transaction to the storage activity to obtain status of a previously submitted asset reclassification request when the owner did not receive a
corresponding Inventory Adjustment or Asset Reclassification Denial Transaction. In response to a follow-up, when the corresponding inventory adjustment was previously provided, the storage activity will resubmit the inventory adjustment transaction with Advice Code 3P indicating it is a duplicate of a previously submitted transaction sent in response to the follow-up. Caution must be used by recipient to assure the transaction is not processed twice.

C7.3. OWNERSHIP GAINS AND LOSSES

C7.3.1. Change of Ownership. Based on unique requirements of the SMCA and the DoD Components authorized by DoD Directive 5160.65, “Single Manager for Conventional Ammunition”, August 1, 2008, separate Inventory Adjustment (Ownership Transfer) transactions have been developed to permit:

C7.3.1.1. Keeping integrity of the document number from the requisitioner’s original demand throughout total processing, when payback actions are necessary.

C7.3.1.2. Online recording and reconciliation of materiel debit and credit balances of the SMCA and affected DoD Components.

C7.3.1.3. The DoD Components to have an audit trail when their inventory/financial records are affected.

C7.3.2. Payback of SMCA Items- Dual Inventory Adjustment (Ownership Transfer). The Inventory Adjustment – Dual (Ownership Transfer) transaction (Quantity or Status Adjustment Reason Code AG; legacy DIC DAS) is designed for use as a dual adjustment limited to effecting paybacks of SMCA items from one owning Service to another Service, in accordance with DoD policy and inter-Service agreements. The SMCA will initiate an Inventory Adjustment – Dual (Ownership Transfer) for processing internal adjustments to custodial/accountable records and for notification of SMCA storage activities. Under legacy MILSTRAP, the use of the M modifier with ammunition, to express thousands when the quantity exceeds 99,999, is an optional feature that can be applied intra-Service and, by agreement, inter-Service.

C7.3.3. Payback of SMCA Items- Single Inventory Adjustment (Ownership Transfer). The Inventory Adjustment – single (Ownership Transfer) transactions (Quantity or Status Adjustment Reason Code AG; legacy DIC D8S and D9S) are designed for use as a single adjustment transaction limited to effecting paybacks of SMCAs for conventional ammunition items from one owning Service to another Service, in accordance with DoD policy and inter-Service agreements. The SMCA will initiate the transactions for updating internal custodial/accountable records and for notification to affected Military Services of actions to be accomplished. Under legacy MILSTRAP, the use of the M modifier with ammunition to express thousands when the quantity exceeds 99,999, is an optional feature that can be applied intra-Service and, by agreement, inter-Service.

C7.4. PURPOSE TRANSFERS. Based on authorized programs, materiel may be reserved for specific purposes and kept on inventory control records until requisitioned.
To accomplish transfer of assets between purpose codes, the Inventory Adjustment transactions for purpose code (single or dual), will be processed against the property accountability records. The Inventory Adjustment transaction with Quantity or Status Adjustment Reason Code AD applies (legacy MILSTRAP D8D and D9D, or DAD).

C7.5. PHYSICAL INVENTORY GAINS AND LOSSES. Procedures concerned with inventory adjustments due to physical inventory losses or gains are contained in Chapter 6.

C7.6. INVENTORY GAINS AND LOSSES DUE TO UNIQUE ITEM IDENTIFIER AND/OR SERIAL NUMBER MISMATCH. Procedures concerned with inventory adjustments due to UII and/or serial number mismatch losses or gains are contained in Chapter 6.5

C7.7. REIDENTIFICATION OF STOCK, STOCK NUMBER CHANGES, AND UNIT OF ISSUE CHANGES

C7.7.1. Reidentification of Stock

C7.7.1.1. When inspection shows an item in stock has been misidentified, storage activities will send an inventory adjustment to the owner. The transaction will contain the misidentified stock number, the quantity misidentified (Quantity or Status Adjustment Reason Code AE (Reidentification)), and Suffix Code A.

C7.7.1.2. When one new stock number is picked up due to reidentification, the inventory adjustment will contain the same document number as the original transaction, identified stock number, quantity of the identified stock number using (Quantity or Status Adjustment Reason Code AE (Reidentification)), and Suffix Code B.

C7.7.1.3. When more than one new stock number is picked up due to reidentification, an additional inventory adjustment for each newly identified stock number will be prepared and sent. The additional inventory adjustment transaction(s) will be prepared in the same manner as the second transaction except that the suffix codes will progress to C, D, etc., as each transaction is prepared. The suffix codes in the second and ensuing transactions will serve to correlate the transactions to the misidentified stock number.

C7.7.1.4. The owner/manager and storage activity will process an inventory adjustment against their inventory control records to cause the decrease under the incorrectly identified stock number and increase(s) against the correct stock number(s).

C7.7.2. Stock Number and/or Unit of Issue Changes

C7.7.2.1. When only a stock number change occurs, the owner/IMM prepares and processes an inventory adjustment containing the old and new stock numbers.

5 Refer to ADC 1198

C7-13

CHAPTER 7
(Quantity or Status Adjustment Reason Code AF (Stock Number Change)) and the associated inventory adjustment increase and decrease.

C7.7.2.2. When only a unit of issue change occurs, the owner/IMM prepares and processes an inventory adjustment containing the old and new units of issue (Quantity or Status Adjustment Reason Code AN (Unit of Issue Change)) and the associated inventory adjustment increase and decrease.

C7.7.2.3. When a simultaneous stock number and unit of issue change occurs, the owner/IMM prepares and processes an inventory adjustment containing the old and new stock numbers and units of issue (Quantity or Status Adjustment Reason Code AF and AN), and the associated inventory adjustment increase and decrease.

C7.7.2.4. In legacy systems, a dual adjustment requires two separate transactions (D9K and D8K) using the same document number. To perform the actions in C7.7.2., the owner/IMM prepares a D9K with Suffix A containing the old data elements, followed by a D8K with Suffix B containing the new data elements.

C7.8. CONDITION CHANGES FOR ITEMS BEING REPORTED/TURNED IN TO DLA DISPOSITION SERVICES

C7.8.1. When materiel is not identified by an NSN and is actually scrap, the DoD Components may prescribe that it be classified in SCC S for turn in to a DLA Disposition Services Field Office. Otherwise, only materiel recorded on property accountability records in SCC A through H and SCC Q will be reported or turned in to the DLA Disposition Services Field Office.

C7.8.2. When excess, serviceable or unserviceable materiel is classified in SCC J, K, L, M, N, P, R or X, the DoD Components must initiate action to reclassify the materiel to an acceptable SCC (A through H, Q, or S) before preparing the turn-in documentation. Section C7.2 contains the materiel reclassification procedures.

C7.8.3. Activities not reporting or turning in materiel to a DLA Disposition Services Field Office in an appropriate SCC will risk having the materiel rejected/returned by the DLA Disposition Services Field Office for proper classification.

C7.8.4. DLA Disposition Services Field Offices will use the disposal condition codes to accurately describe the physical condition of the materiel based on its inspection at time of receipt. DLA Disposition Services Field Offices will record both supply and the disposal condition codes, and will show both codes as management data for DLA Disposition Services program screening and review. Within the DLA Disposition Services Field Office process, Disposal Condition Code S is assigned for "property with no value except for its basic materiel content." Consequently, Disposal Condition Code S may be assigned by DLA Disposition Services Field Offices to materiel with or without NSN identification.
C8. CHAPTER 8

MATERIEL OBLIGATION VALIDATION

C8.1. SUPPORT OF UNITED STATES FORCES

C8.1.1. General

C8.1.1.1. Purpose. This chapter prescribes policies and procedures for the validation by organizations of the continuing need for over age requisitioned requirements and for the reconciliation of source of supply materiel/obligation records with the due-in records of requisitioning activities. The materiel obligation validation (MOV) process is twofold: (1) validation of need; and (2) reconciliation of records.

C8.1.1.2. Materiel Obligation Definition. A materiel obligation is that unfilled portion of a requisition (for a stocked or nonstocked item) that is not immediately available for issue but is recorded as a commitment for future issue, either by direct vendor delivery (DVD) or backordered from stock. This includes both NSN and non-NSN items. MOV pertains to those requisitioned items assigned Status Code BB, BC, BD, BP\(^1\) BV, or BZ. DVD requisitions assigned Status Code BV or BZ are excluded from the automatic MOV cancellation process; however, organizations must submit requisition cancellations for materiel no longer required. See Chapter 4 for the requisition cancellation procedures.

C8.1.1.3. Transactions. The Enterprise Business Standards Office (EBSO) Website contains DLMS electronic data interchange (EDI) transaction formats on the DLMS implementation Convention (IC) page. The IC page includes the corresponding MILSTRIP legacy 80 record position transaction formats, identified by document identifier code (DIC). The MILSTRAP legacy transaction functionality is identified for information purposes in a mixed Defense Logistics Standard Systems (DLSS)/DLMS environment.

C8.1.1.4. Use of the DLMS 517M. Sources of supply use the DLMS 517M, Materiel Obligation Validation, to generate MOV requests to organizations for a comparison and validation of the continued requirement of outstanding requisitions held as materiel obligations by the source of supply with those carried as due-in by the organization.

C8.1.1.4.1. Materiel Obligation Validation Request is DLMS 517M with Transaction Type Code AN – Material Obligation Inquiry. The original request will not contain an action code. This transaction provides the functionality of MILSTRIP legacy DICs AN1, AN2, AN3, AN4, and AN5.

---

\(^1\) Status Code BP may be deferred for inclusion under logistics system modernization.
C8.1.1.4.2. Materiel Obligation Validation Request Control is DLMS 517M with Transaction Type Code AN – Material Obligation Inquiry with BR07=X7 – Batch Sequence Number (legacy batch control number), and BR10=XM – Issuer Number (number of individual detail transactions). This transaction provides the functionality of MILSTRIP legacy DIC AN9. Note: Modernized systems may not require exchange of batch control numbers.

C8.1.1.4.3. Materiel Obligation Validation Request Control Follow-Up is DLMS 517M with Transaction Type Code AN – Material Obligation Inquiry and Action Code T – Status Query. This transaction provides the functionality of MILSTRIP legacy DIC ANZ.

C8.1.1.4.4. Notification of Customer Non-Response to Materiel Obligation Validation (DVD) is DLMS 517M with Transaction Type Code AN – Material Obligation Inquiry and Action Code A3 – Not Certified. This transaction provides the functionality of MILSTRIP legacy DICs AV1, AV2, and AV3.

C8.1.1.5. MOV Response. Organizations use the DLMS 517M, to generate MOV responses to advise the source of supply: (1) to hold a materiel obligation until supplied, or (2) to cancel all or a portion of a materiel obligation.

C8.1.1.5.1. Materiel Obligation Validation Receipt Confirmation is DLMS 517M with Transaction Type Code AP – Material Obligation Advice and Action Code V – Respond. This transaction provides the functionality of MILSTRIP legacy DIC AP9.

C8.1.1.5.2. Notice of Nonreceipt of Total Batch of MOV Documents, MILSTRIP Legacy DIC APX does not have a DLMS equivalent.

C8.1.1.5.3. Materiel Obligation Validation Response is DLMS 517M with Transaction Type Code AP – Material Obligation Advice. This transaction provides the functionality of MILSTRIP legacy DICs AP1, AP2, AP3, AP4, AP5, and AP8.

C8.1.1.5.5. Materiel Obligation Validation Reinstatement is DLMS 517M with Transaction Type Code AW – Material Obligation Reinstatement. This transaction provides the functionality of MILSTRIP DIC APR.

C8.1.1.6. MOV Notification.

C8.1.1.6.1. Sources of supply must provide an MOV notification of nonresponse to organizations for each nonresponse to an MOV cycle for requisitions assigned Status Code BZ. The organization must conduct an item-by-item review and respond with a requisition cancellation if the materiel is not required.

C8.1.1.6.2. Materiel Obligation Validation Notification of Nonresponse is DLMS 517M with Transaction Type Code AN – Material Obligation
Inquiry and Action Code RU – Return (backordered materiel in pre-award (BZ) status.

C8.1.1.7. Source of Supply Definition. A source of supply is defined as the DoD Component organization that maintains materiel obligation records, and includes, but is not limited to, those organizations commonly referred to as inventory control points (ICP), integrated materiel managers (IMM), requisition processing points, stock control activities (SCA), and stock points.

C8.1.1.8. Organization Definition. An organization is defined as a requisitioner, control office, and/or monitoring activity having the responsibility to validate and/or reconcile materiel obligation records between the requisitioning activity and the source of supply requesting the validation.

C8.1.2. Materiel Obligation Reinstatement Request. This is a request by an organization to reinstate requisition(s) previously canceled due to that organization’s nonresponse to an MOV request. Use the DLMS 517M, to reinstate previously canceled requisition(s). Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event to include SLOA mandated standard financial information system (SFIS) elements.² The DLMS requisition reinstatement transaction supports inclusion of SLOA required elements. Pending full implementation of SLOA, DAAS will facilitate interoperability by updating selected SLOA data fields based upon the requisitioner’s Service/Agency and Fund Code. If discrete values for the SLOA data elements in the transaction do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction, reject with the DLMS 870S Supply Status citing Status Code CF. If invalid/missing fund code for Signal Code A, B, C, J, K, or L, reject with the DLMS 870S/DIC AE9 Supply Status citing Status Code CF.³

C8.1.3. Exclusions

C8.1.3.1. FMS transactions are excluded from these procedures; however, the DoD Components should reconcile FMS materiel obligation records at the source of supply with those of the organizations required to maintain FMS case control. MOV procedures for Grant Aid (GA) transactions are in C8.2.

C8.1.3.2. Civilian Component activities are excluded unless covered by inter-Component agreements.

C8.1.4. Materiel Obligation Age Criteria

C8.1.4.1. Timeframe. Materiel obligations are over age and subject to these procedures when PD 01-08 requisitions have aged 30 calendar days past the

² Refer to ADC 1043/ADC1043A.
³ Refer to ADC 1043E.
requisition date or PD 09-l5 requisitions have aged 75 calendar days past the requisition date.

C8.1.4.2. Special Validations. Sources of supply may order special validations without regard to the age of the materiel obligations involved.

C8.1.4.3. Long Production Lead Time. These procedures also apply to long production lead time items since requirements for such items may also change as a result of unit/force movements, deactivation, and other population changes; however, only item managers may elect to establish longer intervals for the validation of long production lead time items.

C8.1.5. Schedule for Cyclic Validation of Materiel Obligations

C8.1.5.1. Annual Schedule. The annual schedule of cyclic validations in support of U.S. Forces and the prescribed MOV response times is shown in Table C8.T1.

Table C8.T1. Materiel Obligation Validation Cyclic Validations Schedule

<table>

C8.1.5.2. Response Not Within Scheduled Timeframe. Deployed units, afloat units, and CONUS/OCONUS locations that are unable to acknowledge receipt, or respond by the prescribed date, may request DAAS to temporarily provide responses to MOV requests. Use a DLMS 517M, with Transaction Type Code AP and Action Code 9 to notify the DAAS of the organizations authorized for the MOV exemption. The theater/fleet commander or major command must approve the MOV exemption request by message to DAAS. The exemption request is only authorized for the current MOV cycle. DAAS will not generate MOV responses for any later MOV cycle unless a separate exemption request approval is received.

C8.1.5.3. Quarterly Reporting. Each DoD Component must provide a quarterly consolidated report to the Deputy Assistant Secretary of Defense for Logistics (DASD(Logistics)) using the Appendix 1 format. Submit this report within 30 calendar days after the close of each MOV cycle. This report is assigned Report Control Symbol (RCS) DD-A&S-1064. The source of supply will review the history file, prior to preparing the report, for those transactions in which the quantity response was different from the quantity requested. This review will determine if the quantity
difference resulted from a shipment, a cancellation, or if the requisitioner actually requested cancellation of the obligation. Only cancellations actually requested by the requisitioner using the MOV response are included in the MOV report. Do not report a difference in quantity resulting from any other cause and/or process.

C8.1.5.4. **Special IMM Requests.** The IMM may initiate a special validation request. For example, the IMM may need to validate requirements for high dollar value, critical items, or for those NSNs that have the largest number of materiel obligations on record or account for certain percentages of the total materiel obligations. These special validations should be selective in approach and may be made regardless of whether the materiel obligations were previously validated. The IMM may determine and define critical items as those essential items that are in short supply or expected to be in short supply for an extended period.

C8.1.5.5. **Determination of Recipient of Validation Requests.** MOV requests will be transmitted to the activities determined under the following rules:

C8.1.5.5.1. The activity designated by the Media and Status (M&S) unless covered by the exceptions listed below.

C8.1.5.5.2. When the M&S is 0, transmit to the activity designated by an alphabetic character or numeric 6, 7, or 8 in the distribution code.

C8.1.5.5.3. When distribution code contains a numeric other than 5, 6, 7, or 8, or is blank, and M&S is 0, transmit requests to the requisitioner.

C8.1.5.5.4. When Distribution Code 5 is identified, transmit requests to DLA (DoDAAC SL4701) regardless of M&S.4

C8.1.5.5.5. When the M&S is F, G, P, or Z, transmit requests to the requisitioner.

C8.1.6. **Preparation of Special Validation Requests**

C8.1.6.1. **Purpose.** Use the DLMS 517M, to request a special MOV at times other than the normal MOV cycles indicated in Table C8.T1. Organizations will validate the special MOV and use a DLMS 517M in response to the special MOV request.

C8.1.6.2. **Document Number.** The MOV request must identify the document number of the demand that is held as a materiel obligation, the unfilled quantity, and a response due date that is always 15 calendar days from the date of the MOV request.

C8.1.6.3. **Urgent Requests.** Due to the urgency of demands for critical items, IMMs may determine that supply of current demands should be accomplished from due-

---

4 Refer to ADC 369. Deferred implementation is authorized.
in stocks, against which there are materiel obligations of lesser or equal priorities. In these instances, the IMMs will initiate a special MOV request.

C8.1.7. **Performance of the Validation and Reconciliation**

C8.1.7.1. **Mandatory Request.** The recipient of validation requests (either scheduled or special) must conduct an item-by-item review with the user to determine the continued need for each item, the quantity involved, and the priority designator (PD) of the requirement. Routine responses that all materiel obligations are still required are to be avoided. Such cursory reviews do not improve supply support. Items that are identified in the requests, but are not contained on the records of the recipient of the request, will also be sent to the user for validation. Items that are contained on the records of recipients of the validation requests and meet the over age criteria, but are not covered by a request, will be validated with the user.

C8.1.7.2. **Recipient Response.** The recipient of validation requests will match the items recorded as materiel obligations at the source of supply with the records of unfilled demands to determine and take action to bring the two records into agreement.

C8.1.7.3. **Status Request.** Organizations may request status of any outstanding items, having met the age criteria, and not included with the scheduled validation requests. When such status is desired, the requisitioning activity will submit a DLMS 869A, Requisition Inquiry/Supply Assistance, or DLMS 869F, Requisition Follow-Up, to the source of supply. (See Chapter 4 for the requisition inquiry procedures.)

C8.1.8. **Responses to Materiel Obligation Requests**

C8.1.8.1. **Purpose.** Use a DLMS 517M, to respond to special MOV requests. MOV responses will contain the document number of the demand as contained in the MOV request, the quantity required for continuation as a materiel obligation, and the suffix, if applicable. The MOV responses will advise the source of supply whether materiel obligations should be canceled or the requirements still exist (and the item should be continued as a materiel obligation). Respond to the special MOV requests in time to meet the requested MOV response due date.

C8.1.8.2. **Response to Requests for MOV.** Upon completing the validation/reconciliation process, organizations must send an MOV response for each MOV request to the source of supply that submitted the MOV request. Submit the MOV response by the MOV response due date cited in the MOV request. Use the MOV response to advise the source of supply of the quantity still required for supply action. If total cancellation is desired, do not include the quantity segment in the MOV response.

C8.1.8.3. **Revised Delivery Date.** Whenever a requirement is to be retained as a materiel obligation and the PD/required delivery date (RDD)/required delivery period (RDP) changes due to reassessment of requirements, submit a DLMS 511M, Requisition Modification, to indicate the revised PD/RDD/RDP. (See Chapter 4 for the requisition modifier procedures.)
C8.1.8.4. **DAAS Initiated Responses**

C8.1.8.4.1. **Exempted Activities.** DAAS uses a DLMS 517M, to provide MOV responses for authorized activities exempted from participating in an MOV cycle.

C8.1.8.4.2. **DAAS Response.** DAAS provides appropriate MOV responses to the respective source of supply for each MOV exemption received. DAAS will send the MOV response no earlier than seven calendar days after receipt of the MOV exemption, but no later than the last day of the cycle.

C8.1.8.4.3. **MOV History File.** DAAS uses the MOV history file to generate appropriate MOV responses for the activity(ies) identified in the MOV exemption.

C8.1.8.5. **Receipt of Confirmed Cancellations.** Organizations in receipt of confirmed cancellations may request reinstatement of their canceled requisitions for a period not to exceed 60 calendar days after the BS cancellation transaction date. Use a DLMS 517M, to request the reinstatement of canceled requisitions and indicate the quantity required. The reinstated quantity may be equal to or less than, the canceled quantity canceled. The reinstated quantity will not exceed the canceled quantity. DAAS will revalidate fund codes for Signal Code A, B, C, J, K, or L, and provide rejections back to the sender with the DLMS 870S/DIC AE9 Supply Status citing Status Code CF.  

C8.1.9. **Source of Supply Cancellation of Materiel Obligations**

C8.1.9.1. **Procedures to Stop Cancellation Actions.** Sources of supply must use Chapter 4 procedures to stop storage and transportation actions when accomplishing cancellations resulting from the MOV program.

C8.1.9.2. **Cancellation Criteria.** Sources of supply will cancel materiel obligations when an organization has not responded to the scheduled MOV request by the MOV response due date, except for requisitions in Status Code BV or BZ. Requisitions being filled by DVD (Status Codes BV and BZ) are excluded from automatic cancellation of the MOV process. When a response to an MOV request has not been received by the response cutoff date for a requisition in BZ status, the source of supply will send a DLMS 517M, Transaction Type Code AP, and Action Code 9 to the validating organization. The organization must validate the requirement or respond with a requisition cancellation if the materiel is not required. See Chapter 4 for the requisition cancellation procedures.

C8.1.9.3. **Cancellation Upon Request.** Sources of supply will cancel materiel obligations upon receipt of requisition cancellation requests. When there is no record of the item as a materiel obligation, match the MOV response with the requisition history file (RHF) to determine the item’s status. If the item is being processed, take action to stop the flow of the unneeded materiel. All sources of supply will try to meet the DoD objective of taking all possible action to prevent shipment from the storage activity, port

---

5 Refer to ADC 1043E
of embarkation, or vendor (in the instance of purchase actions). Based on action taken, sources of supply will provide requisitioning organizations with appropriate supply or shipment status.

C8.1.9.4. **Cancellation Status.** Sources of supply will send a DLMS 870S, Supply Status, with Status Code BR or BS to the organizations for which MOV requests were submitted for each item canceled as a result of the validation actions.

C8.1.9.5. **Verification from Requisitioner.** Sources of supply may contact requisitioning organizations to determine desired actions applicable to erroneous response transactions, if time permits. Should time not permit the source of supply to contact the requisitioning activities, the items concerned with the erroneous transactions, will be retained as a materiel obligation until clarification is obtained.

C8.1.9.6. **Response.** The DoD Component of the organization initiating a cancellation request, or failing to respond to MOV requests, will be charged with (1) transportation costs for returning the materiel to the storage activity, and (2) procurement and termination costs when it is determined that termination is in the best interest of the Government. Specific instructions concerning materiel transportation charges and credit allowances are in DoD 7000.14-R, “Department of Defense Financial Management Regulations (FMRS),” Volume 11B.

C8.1.10. **Source of Supply Materiel Obligation Reinstatement**

C8.1.10.1. **Timeframe.** Sources of supply will reinstate action on requisition(s) when organizations submit MOV reinstatement requests within 60 calendar days of requisition cancellation citing Status Code BS. Reinstate the requisition for the quantity equal to or less than the original canceled quantity. If the quantity is greater than the quantity canceled by the Status Code BS, only reinstate the quantity in the BS status. Reject the quantity exceeding the BS quantity. Use Status Code BS to prepare the MOV reinstatement request to ensure identification of the correct suffix.

C8.1.10.2. **Source of Supply Codes.** Sources of supply will use Status Code DK, DL, and DM to reject MOV reinstatement requests received over 60 calendar days after the BS status transaction date, or when there is no record of the BS status, or when the MOV reinstatement request is for a quantity greater than the canceled quantity.

C8.2. **GRANT AID**

C8.2.1. **General.** This section prescribes policies and procedures for the validation of ICP materiel obligation records with the records of the DoD Component ILCO maintaining Security Assistance Organization (SAO) program control and for the validation of the continuing need at the GA country level for over age demands. The purpose is twofold: (1) the reconciliation of records and (2) the validation of need.
C8.2.2. **Annual Validation Schedule.** The annual schedule of cyclic validation in support of GA materiel obligations is shown in Table C8.T2.

Table C8.T2. **Cyclic Schedule for MOV in Support of Grant Aid**

<table>
<thead>
<tr>
<th>CYCLE NUMBER</th>
<th>SOURCE OF SUPPLY CUTOFF TO PREPARE AND FORWARD VALIDATION REQUESTS</th>
<th>MAXIMUM ENDING DATE BY WHICH REQUISITIONER RESPONSES ARE DUE BACK TO SOURCE OF SUPPLY</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>31 January</td>
<td>31 May</td>
</tr>
<tr>
<td>2</td>
<td>31 July</td>
<td>30 November</td>
</tr>
</tbody>
</table>

C8.2.3. **Aged Materiel Obligation Requests.** Sources of supply will provide the ILCO with MOV requests applicable to aged materiel obligations for GA requirements. MOV requests will be sent to the ILCO by the sources of supply using schedules for validating aged GA materiel obligations established by the Assistant Secretary of Defense (Logistics & Materiel Readiness)(ASD(L&MR)].

C8.2.4. **Materiel Obligation Definition.** Materiel obligations are defined as that portion of the requisitioned quantity that is not immediately available for issue to the requisitioner and/or is recorded as a commitment for future issue of stocked items. This includes commitments for DVDs. The source of supply will produce MOV requests from their records of materiel obligations for which the requisition document number dates are aged to 180 calendar days or more at the time of the established validation cutoff. Materiel obligations selected for validation, meeting the 180-day age criterion, will be those assigned Status Code BB, BC, BD, or BV. The quantities identified in the MOV requests reflect the unfilled quantities only of items maintained as materiel obligations at the sources of supply. Use the DLMS 517M, to prepare MOV requests.

C8.2.5. **Source of Supply Request Timeframe.** Sources of supply will send scheduled MOV requests not later than 10 calendar days after the established cutoff date.

C8.2.6. **Accomplishing MOV by the Army and Air Force ILCOs**

C8.2.6.1. **Item/Request Matching.** The ILCO receiving MOV requests will match the items indicated as being on record at the source of supply with its records of unfilled demands and provide the MOV requests to SAOs that represent quantities/items as follows:

C8.2.6.1.1. In the MOV requests received from the source of supply, (the ILCO will not attempt to adjust quantity differences between the ILCO record and the source of supply record.)

C8.2.6.1.2. On the ILCO record, having reached the validation age criterion and not included with MOV requests furnished by the source of supply. The ILCO will adjust its records based upon the MOV responses received from SAOs.
C8.2.6.2. Program Originator Codes. The DoD Components may elect to have their ILCOs identify the program originator code in MOV requests transmitted to SAOs for validation. The identification of this code enables the SAO to determine the specific section to which to direct the MOV requests. In these instances, the codes shown in Table C8.T3 apply. (Do not include these codes in MOV responses that are sent to the source of supply.)

<table>
<thead>
<tr>
<th>CODE</th>
<th>PROGRAM ORIGINATOR</th>
</tr>
</thead>
<tbody>
<tr>

<td>SAO (Army)</td>
</tr>
<tr>
<td>P</td>
<td>SAO (Navy)</td>
</tr>
<tr>
<td>D</td>
<td>SAO (Air Force)</td>
</tr>
<tr>
<td>K</td>
<td>SAO (Marine Corps)</td>
</tr>
</tbody>
</table>

C8.2.6.3. Transmitting Requests. Transmit the MOV requests to the appropriate SAO not later than 45 calendar days after the scheduled cutoff date. The time between the cutoff date and the 45 calendar days for transmitting the MOV requests to SAOs allows:

C8.2.6.3.1. Transmission of the MOV requests from the source of supply to the ILCO.

C8.2.6.3.2. ILCO establishment of suspense records of the source of supply request quantities and preparation of MOV requests for transmission to the SAOs. SAOs will provide MOV response to the ILCO within 90 calendar days after the cutoff date for the validation cycle.

C8.2.7. Accomplishing MOV by the Navy ILCO

C8.2.7.1. Item/Record Matching. The Navy ILCO (NAVILCO) will match the items indicated as being on record at the source of supply with its records of unfilled demands and effect a file reconciliation. NAVILCO will send MOV responses for each MOV request received to the source of supply that submitted the validation request. The source of supply will use the MOV response to determine whether the items should be canceled or requirements still exist and the items should be continued as materiel obligations.

C8.2.7.2. Response Timeframe. Send MOV responses to validation requests to sources of supply by 15 March for the first cycle and 15 September for the second cycle. Indicate the quantity still required in the MOV response. If total cancellation is desired, do not include the quantity segment in the MOV response.

C8.2.7.3. Inquiries. Submit a requisition inquiry, DLMS 869A or DLMS 869F, as appropriate, for items outstanding on NAVILCO records for which no MOV
reconciliation request was received from the source of supply. See Chapter 4 for the requisition inquiry procedures.

C8.2.8. NAVILCO Initiation of Reconciliation and/or Validation with SAOs

C8.2.8.1. Annual Request Submission. Annually, on 16 September, the NAVILCO will prepare MOV reconciliation requests that represent unfilled requisitions with dates of 31 July or earlier.

C8.2.8.2. Program Identification. NAVILCO will identify the program originator code in the MOV reconciliation requests sent to SAOs for validation. SAO will use this code to determine the specific section to which to direct the requests. In these instances, the codes in Table C8.T3. apply.

C8.2.8.3. MOV Transmission. NAVICP will send the MOV reconciliation requests to the appropriate SAO not later than 26 September and indicate 31 October as the response due date.

C8.2.9. Validation of Requirements by the SA Organizations

C8.2.9.1. Verifying Existing Requirements. SAOs receiving MOV requests will determine whether requirements for the items and quantities still exist. SAOs will also determine whether requirements exist for items/quantities, having reached the age criteria and not included with the MOV requests. Once validation is completed, SAOs will adjust their records to show the country’s needs for the items/quantities.

C8.2.9.2. Item Status Request. SAO will request status of any items that are outstanding, have met the age criteria, and are not included in the MOV requests. When such status is required, SAO will submit a requisition inquiry, DLMS 869A, to the appropriate ILCO. See Chapter 4 for the requisition inquiry procedures.

C8.2.9.3. Response for Each Reconciliation Request. SAO will provide an MOV response for each MOV reconciliation request, as appropriate, to indicate the remaining quantity of each item is still required. The SAO will send MOV responses to the appropriate ILCO. For the U.S. Army Security Assistance Command and the Air Force Security Assistance Center, send these responses to arrive no later than the date specified in the transmittal, which is 35 calendar days prior to the response due date contained in the requests. For NAVILCO, these responses must be received no later than 31 October.

C8.2.10. Response to MOV Requests by the Army and Air Force ILCOs

C8.2.10.1. Record Adjustment. Upon receipt of the responses from SAOs, the ILCO will adjust its records to agree with the country’s requirements indicated by the MOV responses. The ILCO will then send MOV responses for each MOV request received from the source of supply that submitted the validation requests. The source of supply will use the MOV response to determine whether the items should be canceled or requirements still exist and the items should be continued as materiel.
obligations. Provide MOV responses to the source of supply by the response due date indicated in the MOV requests. Response due date is established as the 125th calendar day following the cutoff date for validation. MOV requests must indicate the cutoff date.

C8.2.10.2. Quantity Remaining Required. ILCO will indicate the quantity still required in the MOV response. If total cancellation is desired, do not include the quantity segment in the MOV response.

C8.2.10.3. Outstanding Items. ILCO will submit a requisition inquiry, DLMS 869A or DLMS 869F, as appropriate, for items outstanding on the ILCO records, indicated as required by SAO, and for which no MOV request was received from the source of supply. See Chapter 4 for the requisition inquiry procedures.

C8.2.11. NAVILCO Action on SAO Responses

C8.2.11.1. Record Adjustment. Upon receipt of the responses from SAOs, the NAVILCO will adjust its records to agree with country requirements as indicated by the MOV responses. NAVILCO will send requisition cancellations to the source of supply on those unshipped lines for which the SAO indicated a reduced quantity requirement. NAVILCO will initiate action to resolve the unreconciled lines for which the SAO indicated a requirement. NAVILCO will send the appropriate supply and shipment status to SAOs.

C8.2.11.2. Requisition Cancellation. By 30 November, NAVILCO will prepare and send a requisition cancellation to the last known source processing the corresponding requisition. See Chapter 4 for the requisition cancellation procedures.

C8.2.11.3. Record of Confirmed Cancellations. NAVILCO will keep a record of confirmed cancellations received in response to requisition cancellations submitted as a result of reduced quantity requirements indicated by SAOs.

C8.2.11.4. Quantity Reduction Reconciliation. NAVILCO will prepare a report of the number of lines reconciled with the SAO, the number and value of SAO requested quantity reductions, and the number and value of confirmations received as of 31 December. NAVILCO will send two copies of this report to the appropriate Service headquarters for review and submission to Office of the Assistant Secretary of Defense.

C8.2.12. ILCO Cancellation of Materiel Obligations

C8.2.12.1. Source of Supply Action. The source of supply will cancel materiel obligation items upon receipt of requisition cancellations or the indication of need for lesser quantities from the ILCO. (When there is no record of the item at time of receipt of the MOV responses, the MOV response will be matched with the RHF to determine the latest status of the item or action taken to accomplish cancellation action. The source of supply will send the ILCO supply or shipment status as appropriate.) In the event procurement, rebuild, or other expense has been incurred and must be billed
to GA for an individual item being canceled, the supplying DoD Component will take action under DoD 5105.38-M, Part II, Chapter H.

C8.2.12.2. Validation of Cancellations. The source of supply will send the ILCO, for which validation requests were submitted, Status Code BR for each item and/or quantity canceled as a result of the validation actions. ILCO should not consider any quantity as canceled before receiving the confirming Status Code BR.

C8.2.12.3. When no Response has been Received. The source of supply will not automatically cancel items for which materiel obligations were established when no MOV response has been received relative to specific items submitted for validation.
C9. CHAPTER 9

LOGISTICS REASSIGNMENT

C9.1. GENERAL

C9.1.1. Purpose. This chapter provides procedures designed to ensure successful Logistics Reassignment (LR) of both consumable and nonconsumable items, provide adequate management control of items in a transitional situation, and ensure uninterrupted supply support of items during the transition period.

C9.1.2. Transactions. This chapter addresses the procedures to the following Accredited Standards Committee (ASC) X12 transaction functions identified by their beginning segment and report type code. Other DLMS formats, such as XML, are also available. See the Defense Logistics Management Standards Program Office Website for available formats on the DLMS IC page. The corresponding MILSTRAP legacy 80 record position transaction functionality is identified for information purposes in a mixed DLSS/DLMS environment.

C9.1.2.1. LR Management Data Transaction is identified by the DLMS 536L ASC X12 beginning segment (1/BR02/020) Transaction Type Code LR – Logistics Reassignment. This transaction provides the functionality of MILSTRAP legacy document identifier codes (DIC) DLS, DLT, DLU, DLV, DLW, and DLX.

C9.1.2.2. LR Transfer/Decapitalization Transaction is identified by the DLMS 846D ASC X12 beginning segment (1/BIA/020) Report Type Code TL – Logistics Transfer Advice. This transaction provides MILSTRAP legacy DIC DEE/DEF functionality.

C9.1.2.3. LR Transfer/Decapitalization Inquiry Transaction identified by the DLMS 846D ASC X12 beginning segment (1/BIA/020) Report Type Code TK – Logistics Transfer Inquiry. This transaction provides MILSTRAP legacy DIC DLA functionality.

C9.1.2.4. LR Storage Information Order Transaction is identified by the DLMS 846S ASC X12 beginning segment (1/BIA/020) Report Type Code PK – Storage Information Inquiry. This transaction provides MILSTRAP legacy DIC DZC functionality.

C9.1.2.5. LR Storage Information Reply Transaction is identified by the DLMS 846S ASC X12 beginning segment (1/BIA/020) Report Type Code TQ – Storage Information Advice. This transaction provides MILSTRAP legacy DIC DZD functionality.

C9.1.3. LR Process. To ease understanding of these procedures, the LR process has been divided into three periods of time based upon the effective transfer date (ETD). These periods are identified as pre-ETD, ETD, and post-ETD. The pre-ETD period commences on the date the GIM assignment/ETD is sent to the GIM/LIM and
C9.1.3. The LIM will use an LR Management Data Transaction to provide the GIM with general management information, backorder and demand data, on hand data, due-in data, contract history data, and product quality deficiency report (PQDR) history data for consumable assets being logistically reassigned.

C9.1.3.2. The LIM will use an LR Transfer/Decapitalization Transaction to notify the GIM of the transfer and decapitalization quantities for the item being logistically reassigned. The GIM will use an LR Transfer/Decapitalization Inquiry Transaction to inquire about LR transfer/decapitalization quantities when none was received.

C9.1.3.3. The LIM will send an LR Storage Information Order Transaction to the storage activity to notify them to transfer ownership of wholesale stocks to the GIM and of the quantity which the LIM is retaining. Storage activities will send an LR Storage Information Reply Transaction to the LIM to notify the LIM of the quantities the storage activity actually transferred to GIM ownership and those retained in LIM ownership.

C9.3. REQUIREMENTS

C9.3.1. General. The LIM, GIM, and storage activities will accomplish the actions required by this manual to reassign asset accountability to the GIM in a timely manner to ensure uninterrupted supply support. Resolution of problems affecting supply operation requires direct communication, coordination, and assistance.

C9.3.2. GIM. The GIM will accept, as of the ETD, those items and book balances submitted by the LIM. (The following policy covering transfer of assets for LR is implemented from DoD 4140.26 and AMC-R 700-99 et al., respectively.) The LIM will transfer all on-hand wholesale balances, in place, except:

C9.3.2.1. Assets committed to the support of special projects, programs, and/or plans including the International Logistics Program (ILP), (e.g., staged
shipments, packaged shipments). On hand wholesale assets in support of the ILP will not be transferred to the GIM nor will any ongoing procurement action in support of the ILP be terminated.

C9.3.2.2. Consumable assets in SCCs F, H, J, K, L, M, P, Q, R, and S. (See DoD 4140.26 for complete criteria.

C9.3.2.3. Nonconsumable assets in SCCs G, H, J, K, L, M, P, Q and X. SCCs H, P and X materiel will never be decapitalized. (See AMC-R 700-99 et al., for complete criteria.)

C9.3.3. LIM. On an expedited basis the LIM will decapitalize to the GIM wholesale assets, other than the SCCs shown above, generated during the first year following ETD. The LIM will report assets generated after 1 year of ETD under Chapter 11, (Materiel Returns Program Procedures). Except for decapitalization of procurement receipts, the GIM will reject assets decapitalized more than 1 year after the ETD using Reject Advice Code AW.

C9.4. PRE-EFFECTIVE TRANSFER DATE ACTIONS

C9.4.1. General

C9.4.1.1. The LIM procurement office will provide the GIM with contractual status on contracts either retained by the LIM or assigned to the Defense Contract Management Agency (DCMA) for contract administration. Contract status includes, but is not limited to, delivery status, acceleration of delivery, follow-up status requests, contract warranty provisions, and executing appropriate modifications to basic contracts.

C9.4.1.2. For nonconsumable items, the LIM will give the GIM listings of all purchase requests (procurement actions that have not reached the award stage) throughout the pre-ETD period. The GIM will, within 15 calendar days following receipt of the purchase request listing from the LIM, annotate required changes, and return one copy to the LIM. For consumable items, the LIM will send listings of all purchase requests to the GIM 45 calendar days prior to the ETD in the format established by DoD 4140.26.

C9.4.1.3. The LIM will reclassify consumable assets, in SCCs Q and R, to the appropriate SCC before the LIM sends the GIM an updated LR Management Data Transaction.

C9.4.1.4. For assets in SCC H, the LIM will either forward the assets to DLA Disposition Services or reclassify the item to their true condition as authorized by Chapter 7.

C9.4.1.5. For assets in SCC X, the LIM will reclassify the assets as appropriate for LR or for transfer to DLA Disposition Services.
C9.4.2. One hundred and fifty calendar days prior to ETD, or upon notification if less than 150 calendar days, the LIM will take the following actions:

C9.4.2.1. Advise the GIM of assets being held for litigation.

C9.4.2.2. Perform physical inventories under Chapter 6 procedures, as stated in DoD 4140.26-M for consumable items, and AMC-R 700-99 et al., for nonconsumable items, as follows:

C9.4.2.2.1. For consumables, inventory stock on hand for wholesale assets designated as classified or sensitive.

C9.4.2.2.2. For nonconsumables, inventory on-hand wholesale assets.

C9.4.3. One hundred and twenty calendar days prior to ETD, or upon notification if less than 120 calendar days, for consumable items being transferred, the LIM will send the GIM an LR Management Data Transaction containing backorder and demand data, on-hand data, due-in data, and contract history data. Do not provide PQDR history data at this time.

C9.4.4. Sixty calendar days prior to ETD the LIM will process excess reports received for LR items for which disposition action is appropriate, in accordance with Chapter 11 procedures.

C9.4.5. Forty-Five Calendar Days Prior to ETD

C9.4.5.1. By mutual agreement between the GIM and the LIM, the LIM will initiate action to amend existing LR item contracts/purchase orders not reassigned to the GIM to provide for diversion of stock by quantities into storage activities of the GIM. The GIM will send addresses of the shipping destinations to the LIM, as appropriate. The LIM will retain the due-in.

C9.4.5.2. For consumable items, the LIM will send listings of all purchase requests in accordance with DoD 4140.26. The GIM will, within 15 calendar days following receipt of the purchase request listing from the LIM, annotate required changes and return one copy to the LIM.

C9.4.6. Thirty Calendar Days Prior to ETD. The LIM will take the following actions:

C9.4.6.1. Furnish the GIM a war materiel requirement (WMR) data listing sorted by NSN and the DoD Component (and routing identifier code (RIC)) within the DoD Component when the requirements have been allocated), major to minor, showing the current computed data.

C.9.4.6.1.1. Include the quantity and value of the forecasted reparable return data, if applicable; quantity and value of Balance War Reserves (Other War Materiel Requirement (OWMR); Other War Reserve Materiel Requirement (OWRMR);
OWRMR, Protectable (OWRMRP); Pre-Positioned War Reserve Materiel Requirement (PWRMR); PWRMR, Protectable (PWRMRP)); dollar value subtotals for FSC, RIC if allocated, and the DoD Component; and grand total dollar value.

C9.4.6.1.2. Additionally, send the DLMS 830W, War Materiel Requirements, to the GIM to show original input from which the WMR computed data was generated. The GIM will process the DLMS 830W to recompute the WMR data as described in Chapter 3.

C9.4.6.2. For consumable items, send the GIM an updated LR Management Data Transaction containing backorder and demand data, on-hand data, due-in data, and contract history data. Do not provide PQDR history data at this time. Send the GIM the latest status of assets being held for litigation action.

C9.5. EFFECTIVE TRANSFER DATE PERIOD ACTIONS. The LIM will do the following at ETD:

C9.5.1. Send an LR Storage Information Order Transaction to the storage activities as a notification that wholesale stocks stored are now under GIM ownership.

C9.5.2. Process inventory adjustments to decrease the inventory control record using DLMS 947I.

C9.5.3. Prepare and send to the GIM LR Transfer/Decapitalization Transaction by SCC and location. Telephone communication between the GIM and LIM is authorized to resolve transactions that reject from the validation process. To preclude inquiries when there are no on-hand assets available for transfer, the LIM will send a LR Transfer/Decapitalization Transaction to the GIM for a zero quantity as either a transfer or a decapitalization, based on the following:

C9.5.3.1. LR transfers are used for permanent transfers, without reimbursement of cost, of inventory within the same fund division (the LIM has a transfer-out and the GIM has a corresponding transfer-in).

C9.5.3.2. LR decapitalization transactions are used for permanent transfers, without reimbursement of cost, of inventory between different fund divisions, or chartered subdivisions within the fund (the LIM has a decapitalization and the GIM has a corresponding capitalization).

C9.5.4. Give memorandum due-in information to the GIM and *pre-positioned materiel receipt (PMR)* to the storage activity in accordance with Chapter 12. *Quantities will show what is available for transfer.*

C9.5.5. Send the GIM storage activity a DLMS 527D ARI (*PMR*) for each due-in from procurement on which the destination has changed to the GIM. In addition, send the LIM storage activity a reversal DLMS 527D ARI (*PMR*) to delete the *PMR*.
C9.5.6. Transfer funded backorders to the GIM in accordance with DoD 4140.26. Transfer the funded backorders using referral/passing orders in accordance with MILSTRIP procedures.

C9.5.7. For consumable items, send the LR Management Data Transaction containing PQDR history data. Send data for completed PQDRs only and include all PQDRs completed up to 3 years prior to the ETD. Do not provide backorder and demand data, on-hand data, due-in data, or contract history data at this time.

C9.5.8. For items with SPR, prepare and send a DLMS 870L, Order Status Report (SPR Status), to the forecasting activity as outlined in Chapter 2.

C9.5.9. Advise the GIM of the latest data available on assets being held for litigation action.

C9.6. POST-EFFECTIVE TRANSFER DATE ACTIONS

C9.6.1. Storage Activity Action. The storage activity will prepare an LR Storage Information Reply Transaction within 5 working days of receipt of an LR Storage Information Order Transaction advising the LIM of the quantity transferred to GIM ownership. If the storage activity does not receive an LR Storage Information Order Transaction, the storage activity will prepare and send the LIM an LR Storage Information Reply Transaction showing each balance by SCC.

C9.6.2. GIM Actions

C9.6.2.1. Inventory Adjustment. Convert valid LR Transfer/Decapitalization Transactions received from the LIM to inventory adjustments using DLMS 947I, to establish or increase inventory balances. (This action is not required upon receipt of an LR transfer/decapitalization with a zero quantity.) The GIM may automatically reject invalid LR transfer/decapitalization transactions. Telephone communication between the GIM and LIM is authorized to resolve LR transfer/decapitalization transactions that reject from the validation process.

C9.6.2.2. Memorandum Due-In Transactions. Process valid DLMS 527D memorandum due-in transactions, received from the LIM in accordance with Chapter 12.

C9.6.2.3. Transaction Rejections. If in receipt of an LR Transfer/Decapitalization Transaction or DLMS 527D memorandum due-in for an item not involved in an LR, reject the incorrectly reported transactions back to the initiator using DLMS 824R, Reject Advice, citing Reject Advice Code AY.

C9.6.2.4. Reconsignment Instructions. When appropriate, give reconsignment instructions to the LIM for items due-in from undelivered contracts of the LIM. Report receipts from these contracts following the ETD in accordance with Chapter 13.
C9.6.2.5. **LR Transfer/Decapitalization Reversals.** Accept and process reversals of LR Transfer/Decapitalization Transactions, adjust their management and financial records, and discontinue processing any other transactions against the LR assets until the GIM processes new LR Transfer/Decapitalization Transactions from the LIM.

C9.6.3. **LIM Actions**

C9.6.3.1. **Updating Due-Ins.** The LIM will update the memorandum due-in and PMR in accordance with Chapter 13, as necessary, to include the following actions:

   C9.6.3.1.1. Changing the destination of undelivered purchases upon request of the GIM.

   C9.6.3.1.2. Awarding an unawarded purchase request.

C9.6.3.2. **Litigation Procedures.** The LIM will enter litigation proceedings on all items in SCC L which are either on hand at ETD or later received by either the GIM or LIM on LIM negotiated contracts. The LIM will notify the GIM of actions being taken to resolve the litigation actions.

C9.6.3.3. **Condition Change.** When an item previously transferred to the GIM is restored to an issuable condition, or when inspection of stock on hand reveals a change in condition of the materiel, the GIM will be notified of the condition transfer using a DLMS 947I.

C9.6.3.4. **Preparation of Storage Information.** The LIM’s storage activity will send a LR Storage Information Reply Transaction within 5 working days of the ETD advising the LIM of the quantity transferred to GIM ownership. If the LIM’s storage activity does not receive a LR Storage Information Order Transaction, the storage activity will send the LIM a LR Storage Information Reply Transaction showing each balance by SCC.

C9.6.3.5. **LIM Processing of a LR Storage Information Reply.** Upon receipt of the LR Storage Information Reply Transaction, the LIM will review the quantity. When the transfer quantity in the reply is greater than the transfer quantity shown in the order, the LIM will transfer/decapitalize the additional quantity to the GIM on a new LR Transfer/Decapitalization Transaction. When the transfer quantity in the reply is less than the transfer quantity in the order, the LIM will:

   C9.6.3.5.1. Within 24 hours of receipt of the reply, initiate action to reverse the LR Transfer/Decapitalization Transaction, previously submitted for that location and SCC.

   C9.6.3.5.2. Conduct research, and/or request a special inventory when deemed appropriate.
C9.6.3.5.3. Determine whether the quantity reported by the storage activity is correct (based on the best data available after research/inventory). If research shows the quantity reported was not correct the LIM will process a reversal, or LR Transfer/Decapitalization Transaction and a LR Storage Information Order Transaction containing new document numbers with the revised quantity.

C9.6.3.5.3.1. Complete these actions within 30 calendar days after the ETD to prevent a long time lag between the ETD and corrective action. If extenuating circumstances prevent a LIM from accomplishing this task within 30 calendar days, notify the GIM of the problem and expected date when the problem should be resolved (not to exceed 60 calendar days past the ETD).

C9.6.3.5.3.2. If a LR Storage Information Reply Transaction contains a transferable quantity on an item the LIM provided a LR Transfer/Decapitalization Transaction with a zero balance, the LIM will send a new LR Storage Information Order Transaction to the storage activity, and a new LR Transfer/Decapitalization Transaction to the GIM showing the appropriate quantity, SCC, and location; in this situation, the LIM will not prepare a LR Transfer/Decapitalization Transaction reversal.

C9.6.3.6. Ninety Calendar Days after ETD. For consumable items, the LIM will send the GIM an updated LR Management Data Transaction containing contract history and PQDR history data. Give data for PQDRs completed between the ETD and the ETD plus 90 calendar days only. Do not give backorder and demand, on hand, or due-in data at this time.

C9.6.3.7. One Hundred and Eighty Calendar Days after ETD. For consumable items, the LIM will send the GIM an updated LR Management Data Transaction with PQDR history data. Give data for PQDRs completed between the ETD plus 90 calendar days and the ETD plus 180 calendar days only. Do not give backorder and demand, on hand, due-in, or contract history data at this time.

C9.6.3.8. Two-Hundred and Seventy Calendar Days after ETD. For consumable items, the LIM will send the GIM an updated LR Management Data Transaction containing contract history and PQDR history data. Give data for PQDRs completed between the ETD plus 180 calendar days and the ETD plus 270 calendar days only. Do not give backorder and demand, on-hand, or due-in data at this time.

C9.7. RECEIPT PROCESSING AFTER EFFECTIVE TRANSFER DATE. Storage activities will process receipts after the ETD in accordance with Chapter 13.

C9.7.1. Receipts from Procurement

C9.7.1.1. Upon receipt of assets from procurement by either the GIM or LIM storage activity, send a DLMS 527R Receipt Transaction to the LIM.
C9.7.1.2. Procurement receipts received after 1 year past the ETD will be processed by the LIM and GIM in the same manner that procurement receipts would be processed when received during the ETD to 1 year period.

C9.7.1.3. When the LIM receives a receipt transaction from the storage activity for an item that was logistically reassigned, the LIM will:

C9.7.1.3.1. Process the receipt to reduce the due-in record, record the assets on the LIM owner record.

C9.7.1.3.2. Decrease the LIM owner record using a DLMS 947I, Inventory Adjustment Transaction, in accordance with Chapter 7.

C9.7.1.3.3. Send a DLMS 527R, Memorandum Receipt Transaction, to the GIM.

C9.7.1.3.4. Send a LR Transfer/Decapitalization Transaction, in accordance with C9.5, and include transaction number or procurement instrument identifier (PIID) (and related data: Contract line item number (CLIN), exhibit line item number (ELIN), and when procurement is authorized under a PIID call/order number (F in 9th position), provide the value in the PIID field) from the associated receipt transaction to establish an audit trail between the receipt and its following transfer/decapitalization.

C9.7.1.3.5. Send a LR Storage Information Order Transaction to the storage activity in accordance with C9.5.

C9.7.1.3.6. Process receipts for which litigation is required in accordance with Chapter 13.

C9.7.1.4. If no DLMS 527D ARI (PMR) is recorded, the storage activity will report materiel received from procurement sources in accordance with Chapter 13.

C9.7.1.5. The GIM will:

C9.7.1.5.1. Use a LR Transfer/Decapitalization Transaction to record the assets on the GIM owner record and to reduce the memorandum due-in record in accordance with Chapter 13.

C9.7.1.5.2. If a LR Transfer/Decapitalization Transaction is received for an item not involved in an LR, the GIM will reject the transaction back to the initiator using DLMS 824R citing Reject Advice Code AY.

C9.7.1.5.3. If assets from procurement are received for which there are no PMRs at the receiving storage activity, the receiving activity will report the receipt to the cognizant IMM. If the GIM does not have a recorded due-in and the item was recently involved in an LR, the GIM should research/contact the LIM to determine proper reporting of the receipt to maintain accountability accuracy. If the procurement
receipt is incorrectly reported to the LIM (and the LIM did not initiate the procurement action), the LIM should reject the receipt back to the originator with a DLMS 824R citing Reject Advice Code AB.

C9.7.2. Receipts From Other Than Procurement

C9.7.2.1. The LIM’s storage activity, upon receipt of assets from other than procurement, will send DLMS 527R receipt to the LIM.

C9.7.2.2. The LIM will:

C9.7.2.2.1. Process the storage activity initiated receipt to reduce the due-in record and record assets on the LIM inventory record for the quantity received.

C9.7.2.2.2. Decrease the inventory control record using DLMS 947I.

C9.7.2.2.3. Send DLMS 527R, Memorandum Receipt Transaction, to the GIM.

C9.7.2.2.4. Send a LR Transfer/Decapitalization Transaction to the GIM.

C9.7.2.3. The GIM will process the D527R, Memorandum Receipt Transaction, to reduce the memorandum due-in record and will use the LR Transfer/Decapitalization Transaction to record assets on their inventory record for the quantity received.

C9.7.2.4. If no PMR is recorded, the storage activity will report materiel received from nonprocurement sources following Chapter 13.

C9.8. INQUIRY FOR LOGISTICS REASSIGNMENT ASSET DATA AND RESPONSE

C9.8.1. LR Transfer/Decapitalization Inquiry. The GIM will send an inquiry to the LIM, using a LR Transfer/Decapitalization Inquiry Transaction, for all assets logistically reassigned for which they received no LR Transfer/Decapitalization Transaction.

C9.8.2. LIM Response. The LIM will send the necessary LR Transfer/Decapitalization Transaction or a duplicate thereof.

C9.9. LOGISTICS REASSIGNMENT DUE-IN VALIDATION. See Chapter 12, Due-In Inquiry and Due-In Reconciliation procedures.
C10. CHAPTER 10

MATERIEL RECEIPT ACKNOWLEDGEMENT

C10.1. PURPOSE

C10.1.1. This chapter provides the procedures for a DoD automated, closed-loop system to provide accountability and monitor receipt of shipments of DoD and General Services Administration (GSA) wholesale stocks and DLA Disposition Services stocks issued from on-hand assets or procured for direct vendor delivery (DVD). These procedures interface with logistics response time (LRT) for measuring receipt take-up time by requisitioners and with Chapter 5, for providing 100 percent shipment status on stock issues, including DVDs.

C10.1.2. These procedures provide for the control of due-in records below the wholesale level and the interface among the transportation, quality, supply, and financial operations/systems below the wholesale level and between the supply and purchasing operations/systems at the wholesale level to provide proper control over in transit assets and document receipt in the payment files.

C10.1.3. MRA Business Rules. Appendix 12 identifies the detailed business rules for generating the MRA Report. Appendix 12 also includes an MRA Decision Tree diagram to provide graphic representation of the MRA business rules to capture shipments out of wholesale assets that qualify for MRA Reporting.

C10.1.4. Transactions. This chapter addresses the procedures applicable to the following transactions with their functions identified by their beginning segment transaction type code. The DLMS implementation conventions (IC) are available on the DLMS IC page of the Enterprise Business Standards Office Website. The corresponding MILSTRAP legacy 80 record position transaction functionality is identified for information purposes in a mixed DLSS/DLMS environment.

C10.1.4.1. Materiel Receipt Acknowledgement (MRA) Transaction is DLMS 527R with beginning segment (1BR02/020) Transaction Type Code TH – Receipt Acknowledgement Advice. This transaction provides MILSTRAP legacy DIC DRA functionality.

C10.1.4.2. MRA Response to Follow-up Transaction is DLMS 527R with Transaction Type Code TH–Receipt Acknowledgement Advice, used in conjunction with 1/BR06/20 Action Code V–Respond. This transaction provides MILSTRAP legacy DIC DRB functionality.

C10.1.4.3. Follow-up for Delinquent MRA Transaction is DLMS 527R with Transaction Type Code TG – Receipt Acknowledgement Inquiry. This transaction provides MILSTRAP legacy DIC DRF functionality.
C10.2. APPLICABILITY.

C10.2.1. These procedures apply to shipments of DoD wholesale stocks and DLA Disposition Services stocks and, in part, to shipments of GSA wholesale stocks—whether pushed or pulled, delivered or picked up, issued from on hand assets or procured for DVD from commercial sources.

C10.2.2. These procedures therefore, apply to:

C10.2.2.1. All DoD wholesale inventory control points (ICP) and the DLA Disposition Services (for the purposes of MRA, DLA Disposition Services is the DoD ICP for shipments from Disposition Services).

C10.2.2.2. Recipients of DoD and GSA wholesale stocks and DLA Disposition Services stocks—including DoD intermediate/retail level and end-use activities; contractors which receive Government furnished material, and defined under DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures,” February 10, 2014; DoD ICPs which requisition materiel from GSA, DLA Disposition Services, or other DoD ICPs; and DoD maintenance facilities which receive items for maintenance when the maintenance activity accountable officer assumes property accountability for the inducted items—hereafter called reporting activities.

C10.2.2.3. Implementation of the materiel receipt acknowledgment concept is optional for intra-Component shipments of retail stock. However, DoD Components which choose to implement the concept for such shipments will prescribe use of these procedures.

C10.3. EXCLUSIONS.¹ These procedures are not applicable to the following:

C10.3.1. Commodities excluded from requisitioning, except that receipt of requisitioned forms and publications will be acknowledged.

C10.3.2. Shipments to foreign military sales and grant aid customers except when the shipment concerns an unconfirmed materiel release order (MRO) as described in Chapter 4 (Processing Follow-Ups). FMS documents beginning with B, D, I, P, K and T.

C10.3.3. Inter-Component lateral redistributions of retail stock not directed by the wholesale ICP.²

¹ Known MRA gaps include shipments associated with DLA Industrial Prime Vendor (IPV), and DLA Tailored Vendor Relationships (TVR) such as Medical Prime Vendor; Subsistence Prime Vendor; Maintenance Repair and Operations program; and Kentucky Logistics Operation Center (KyLOC). The MRA process requires a MILSTRIP Shipment Status transaction; there is no shipment status in these processes. These processes are not excluded from MRA (except Fresh fruits and vegetables (FF&V)), and are identified as known process gaps that DLA is working to close. Another possible MRA gap exists for immediate issue scenarios (e.g., bearer walk-through or “over the counter” issues) where shipment status/materiel release confirmation is provided and an MRA would typically be expected. DLA will submit a proposed DLMS change to document this as a valid MRA exclusion. (ADC 1088)
C10.3.4. Shipments to state, civil, or federal agency activities. Special Program DoDAACs are identified by numeric character in the first position followed by an alpha character in the second position. These identify entities that are neither DoD or other Federal entities and that are associated with a special program. Among other purposes, special programs include programs authorized by Congress for state and local entities to purchase materiel from Federal sources. The existing Defense Automatic Addressing System (DAAS) logic for extracting the LMARS database includes the exclusion of Special Program DoDAACs (ADC 1088).

C10.3.5. Receipts into DoD wholesale stock controlled under Chapter 13, including relocations/shipments to contractors, commercial or industrial activities which are receipt reported to the owning ICP, when the owing ICP also issued the materiel. However, when ICPs requisition materiel from another ICP or the DLA Disposition Services, and the receipt is reported under Chapter 13, the requisitioning ICP will acknowledge the receipt (ADC 1087).

C10.3.6. Shipment status (DLMS 870S/Legacy AS3) with Distribution Code 9 (DLA Distribution Services). Shipments to DLA Disposition Services that are covered under the procedures for in-transit control of shipments to DLA Disposition Services Field Offices.

C10.3.7. Shipments of fresh fruit and vegetables (FF&V). FF&V transactions are received by DAAS in a monthly data feed from DLA Troop Support and do not have shipment data.

C10.3.8. Shipments to Army/Air Force Exchange Service DoDAACs HX1_, HX2_, HX3_, and HX4_).

C10.3.9. DoDAAC indicating activity is GSA or FEDSTRIP.

C10.3.10. Exclude intra-Component shipments when the issuing wholesale ICP does not generate a Follow-up for Delinquent MRA transaction within the required delinquent MRA Follow-up time limit. The rationale is that if the issuing wholesale ICP business process requires that the intra-Component reporting activity provide a Receipt transaction back to the issuing wholesale ICP, then it falls under the MRA exclusions

---

2 This is not a true “exclusion” from MRA because the MRA is only required for release of wholesale assets. When DAAS gets the passing order that has a RIC-TO of a non-wholesale ICP, they will flag the document number as not eligible for LMARS/MRA, but still be available for WEBVLIPS as history. Any subsequent transactions that come in under that document number (regardless of data content and indication of a wholesale ICP) automatically gets that flag. This is similar to what DAAS does for the requisition alert process. The one underlying assumption to this solution is that the passing order (DIC A3_) will be present so that the flag can be set at the document number level. This is a safe assumption, since ADC 1062 states that GCSS-A will not release the requisition image until they receive the passing order routed by DAAS. Note the DAAS check on the shipment status is just the presence of a shipment status for the document number that clears the first part of the MRA decision Tree. DAAS feels this will eliminate a concern with LMARS picking up the transaction as a byproduct when the bill comes out of the wholesale ICP system (LMP) after the post-post issue is passed to that system (For Army GCSS-A to LMP). (ADC 1088)
and the issuing ICP would not generate a Follow-up for Delinquent MRA transaction. For the purpose of this exclusion logic, DAAS will use the MRA Follow-up timeframe plus one day. Under existing MRA Report logic, lookup will be done at the end of the month (ADC 1087).

C10.4. COMMUNICATIONS

C10.4.1. Reporting activities will direct MRAs to the managing ICP using guidance in C10.4.2. If operating under MILSTRAP legacy transactions, refer to the instructions in DLMS Volume 2, Appendix 10 for the legacy DRA/DRB transactions. DAAS will pass the MRA to the designated ICP and provide images to other designated activities based upon DoD Component rules.

C10.4.2 Reporting activities will direct the MRA to the managing ICP using one of the following (listed in order of preference):

C10.4.2.1. The organization that directed the materiel shipment as shown on DLMS 856S, Shipment Status.

C10.4.2.2. The last known source of supply that authorized follow-up action as shown on DLMS 870S, Supply Status.

C10.4.2.3. The source of supply to which the DLMS 511R, Requisition, was submitted.

C10.4.3. ICPs will send all MRA follow-ups to the DAAS for transmission. The DAAS will route MRA follow-ups for U.S. forces to the “ship-to” activity identified in the 856S Shipment Status. The DAAS will route MRA follow-ups for security assistance requisitions to the applicable Service International Logistics Control Office (ILCO) based upon the Service Code in the Document Number and distribution code.

C10.5. RESPONSIBILITIES

C10.5.1. Reporting activities and ICPs will meet the time limits stated throughout this chapter and summarized in Table C10.T1, MRA Submission Timeframe, and Table C10.T2, MRA Follow-up Timeframe for ICPs and Disposition Services.

C10.5.2. Reporting activities excluding International Logistics Control Offices (ILCOs) will:

C10.5.2.1. Establish supply due-in records for all requisitions (pulled or pushed) being supplied from wholesale stock. It is not required to establish a due-in record when shipment status is received after the materiel has been received.

C10.5.2.2. Update (or establish, when no previous record of the due-in/materiel receipt exists) due-in records and estimated delivery dates, based on supply...
and shipment status received. Establish due-in record estimated delivery dates which equal the MRA prescribed timeframes in Table C10.T1.

C10.5.2.3. Post receipts from wholesale stock to a stock record/property, or equivalent, account and acknowledge materiel receipt under these procedures.

C10.5.2.4. Whenever materiel is taken into U.S. Government custody at final destination, whether it has been accepted or not, ensure the receipt is posted to the stock record/property, or equivalent, account. Establish any needed interface among the transportation, quality, and supply operations/processes to meet this requirement.

C10.5.2.5. Monitor due-in records and report nonreceipt under these procedures when materiel is not received within the prescribed timeframes in Table C10.T1. DLMS requires that 100 percent shipment status be sent to all reporting activities so they can meet this requirement.

C10.5.2.6. Coordinate with the financial operation/function before clearing a due-in record by any action other than materiel receipt. Maintain an auditable record of all due-in records so cleared.

C10.5.2.7. Establish an interface with financial accounting operations/processes to maintain proper financial accounting control for in-transit assets, as prescribed by DoD 7000.14-R, “DoD Financial Management Regulations”.

C10.5.3. ILCO reporting activities will screen history records for valid shipment status or coordinate with freight forwarders/customers to determine shipment status/receipt data, for unconfirmed MROs and send an MRA Advice Transaction within the prescribed timeframes in Table C10.T1.

C10.5.4. ICPs will:

C10.5.4.1. Have a closed-loop system to monitor materiel receipt on all shipments of wholesale stock to DoD activities.

C10.5.4.2. Control MRA data based on quantity within document number. When the MRA does not match a shipped record, use the data only for quality control/management evaluation purposes. Do not reject MRAs to the submitter.

C10.5.4.3. Keep an accessible record of requisitions, by document number and suffix code shipped, until materiel receipt is confirmed, nonreceipt is reported for the quantity shipped, or failure to acknowledge is included in management evaluation reports.

C10.5.4.4. Establish an interface between the supply and disbursing functions/operations to provide receipt acknowledgment data for all DVDs for documentation of payment files.
C10.5.4.5. Consider MRA data in the supply discrepancy report (SDR) validation process.

C10.5.5. **DoD Components.**

C10.5.5.1. Will establish the internal interface among the logistics, financial, and contracting operations/systems necessary to accomplish the requirements of this chapter. When operations are geographically removed from each other, DoD Components may prescribe use of intra-DoD Component transactions to accomplish the required interface.

C10.5.5.2. May, for intra-DoD Component shipments, elect to have their shipping activity or container consolidation point create an MRA and send it with the shipment for completion and submission by the reporting activity.

C10.5.5.3. May prescribe, where appropriate, that intermediate levels of supply (i.e., organizations that are not the ultimate materiel recipient but maintain due-in records for referred user requisitions) post receipts to their due-in records and acknowledge materiel receipt for the user.

C10.5.5. May record MRA data in requisition history and use to close unconfirmed MROs.

C10.5.6. GSA will not use the MRA to monitor materiel receipt but will use the data to interface with the discrepancy reporting process. Therefore, GSA will not follow-up to reporting activities to request an MRA.

C10.5.7. Components may prescribe additional internal follow-up requirements to those identified in this chapter.

C10.6. **PREPARING AND SENDING MATERIEL RECEIPT ACKNOWLEDGEMENT**

C10.6.1. Reporting activities will meet the time limits identified in this chapter. These requirements and timeframes are independent from prescribed shipment tracing and discrepancy reporting requirements and timeframes to which the receiving facility must also adhere. MRA reporting timeframes are summarized below:
Table C10.T1. Materiel Receipt Acknowledgement Submission Time Limits

<table>
<thead>
<tr>
<th>ACTION</th>
<th>TIME LIMIT[^3]</th>
</tr>
</thead>
<tbody>
<tr>
<td>U.S. Forces send MRA</td>
<td>* 5 Business days from date materiel received and:</td>
</tr>
<tr>
<td></td>
<td>□ 12 calendar days from the DLMS 856S date shipped (date released to carrier) field entry (CONUS destination) for nonreceipt;</td>
</tr>
<tr>
<td></td>
<td>□ 29 calendar days from the DLMS 856S date shipped (date released to carrier) field entry (OCONUS destination) for nonreceipt for Transportation Category 1 and 2;</td>
</tr>
<tr>
<td></td>
<td>or</td>
</tr>
<tr>
<td></td>
<td>□ 76 calendar days from the DLMS 856S date shipped (date released to carrier) field entry (OCONUS destination) for nonreceipt for Transportation Category 3.</td>

<tr>
<td>ILCOs Send MRA</td>
<td>*120 calendar days from the DS 856S (Pseudo Shipment Status for Unconfirmed Materiel Release Orders) date shipped (date released to carrier) field entry for security assistance shipments.</td>
</tr>
<tr>
<td>Send MRA in Reply to Follow-up</td>
<td>*10 calendar days from transaction preparation date in the MRA Follow-up.</td>
</tr>
<tr>
<td>* Means take the action before the time limit is reached.</td>
<td></td>
</tr>
<tr>
<td>□ Means take the action when the time limit is reached.</td>
<td></td>
</tr>
</tbody>
</table>

C10.6.2. Reporting activities will submit an MRA when a materiel receipt is posted to the retail stock record, stock record account, property account, or equivalent record. Also, submit an MRA when due-in dates are reached and materiel has not been received. Send an MRA to the ICP:

C10.6.2.1. Within 5 business days of materiel receipt.

C10.6.2.2. For nonreceipt of materiel with a CONUS destination, within 12 calendar days from date shipped (date released to carrier) cited in DLMS 856S, Shipment Status.

C10.6.2.3. 29 calendar days from the date shipped (date released to carrier) when a Transportation Category 1 or 2 shipment to an OCONUS activity has not been received.

[^3]: Refer to ADC 1114.
C10.6.2.4. For nonreceipt of materiel (Transportation Category 3) with an OCONUS destination, within 76 calendar days from the date shipped (date released to carrier) cited in DLMS 856S.

C10.6.3. ILCOs in receipt of DLMS 856S pseudo shipment status will screen history records for valid shipment status. If valid shipment status is not available, ILCOs may coordinate with freight forwarders/customers to determine shipment status/receipt data. Submit an MRA to reflect the shipment status, receipt data, or nonreceipt within 120 calendar days from the pseudo shipment status release date.

C10.6.4. MRA For Materiel Provided to Contractors as Government Furnished Materiel and for MRA Associated with Contractor Furnished Materiel Obtained from Government Supply Sources. This business process is applicable when contractors are authorized to receive specific items and quantities of GFM or contractor furnished materiel (CFM) (also known as contractor acquired property (CAP)) from Government sources of supply. Materiel may be issued to the contractor based upon a contract schedule/Bill of Material (BOM) or issued in response to a requisition made by the contractor or a responsible Government representative. Under DLMS, MRA of GFM/CFM requires identification of the DoD contract number and call/order number, when applicable, which authorized the provision of GFM/CFM to establish accountability to the authorizing DoD contract. This contract number is required in addition to the controlling document number for the MRA transaction.

C10.6.5. MRA for Tailored Vendor Relationship. DLA, in conjunction with the DoD Components and vendors, has implemented tailored vendor relationship (TVR). TVR is a business process where there is a direct relationship between the customer and the vendor. Under TVR, customers place orders directly with the Prime Vendor, outside the routine supply requisitioning process/systems, using various communication channels such as EDI, phone, fax, email, or via the prime vendor's ordering system. DLA EBS receives copies of transactions in order to maintain line item accountability. MRA of TVR shipments require use of the contract number, call, and line item numbers to uniquely identify lines. This data is necessary because TVR orders can have multiple lines for the same document number and suffix code. DLA receives MRAs for TVR from Defense Medical Logistics Standard Support (DMLSS), Theater Enterprise-Wide Logistics System (TEWLS), EMALL, or customer systems.

C10.6.6. When a shipped line item (requisition document number and suffix code) is consigned as a split or partial shipment, send an MRA, for the shipment segments as they are received. The split or partial shipment codes are part of the transportation control number (TCN) structure in accordance with DTR 4500.9-R, DoD Transportation Regulation”. Accordingly, reporting activities will include the TCN in the MRA transaction when it is available. If the total quantity for the shipped line item is not received by the due-in date, report the missing quantity, citing Discrepancy Indicator Code F, in accordance with the guidance in the MRA transaction.

C10.6.7. To acknowledge receipt of a discrepant/deficient shipment, submit an MRA, except as noted below, with the appropriate discrepancy indicator code. With the
exception of the receipt of multiple stock numbers, use a single MRA transaction to acknowledge the receipt showing both non-discrepant and discrepant quantities. Note that MRA requirements and timeframes are independent from prescribed shipment tracing and discrepancy/deficiency reporting requirements and timeframes to which the receiving facility must also adhere.

C10.6.7.1. If the document number cannot be identified, post the receipt using a local document number. Do not submit an MRA.

C10.6.7.2. If stock number/part number cannot be identified, do not include the stock/part number in the MRA and enter Discrepancy Indicator Code A.

C10.6.7.3. For total or partial nonreceipt (Discrepancy Indicator Code F):

C10.6.7.3.1. Enter the quantity not received and Discrepancy Indicator Code F.

C10.6.7.3.2. If materiel is received subsequent to submitting an MRA Reply with Discrepancy Indicator Code F, submit a new MRA reflecting the new/additional quantity received following the MRA procedures in C10.6.8.1.5

C10.6.7.4. Except for shortage and partial or total nonreceipt, covered in C10.6.7.3, enter Discrepancy Indicator Code X in the MRA if the discrepancy does not meet discrepancy reporting criteria.

C10.6.7.5. When the discrepancy causes the receipt to be posted using more than one transaction (e.g., multiple supply condition codes or multiple stock numbers are received), send an MRA for each transaction posted. If needed, also send an MRA for any quantity not received.

C10.6.7.6. If materiel is received after submitting an MRA Reply with Discrepancy Indicator Code B (No Record of Requisition), submit an MRA following the MRA procedures in C10.6.1.

C10.6.7.7. The MRA report is created at the end of each month to reflect the MRA transactions as received/not received in the preceding month. Receipt of an MRA citing Discrepancy Code B or F updates the Logistics Metrics Analysis Reporting System (LMARS) reports to reflect the current status of MRA transactions received. The MRA Reports are created monthly and reflect the MRA data at the end of each month and will not be adjusted retroactively when an MRA is submitted following receipt of materiel after an MRA citing Discrepancy Indicator Code B or F is received.6

---

4 This is an enhancement that the Components never implemented as part of the looping structure capability.
5 Refer to ADC 1114.
6 Ibid.
C10.7. FOLLOW-UPS FOR DELINQUENT MATERIEL RECEIPT

ACKNOWLEDGEMENT

C10.7.1. When materiel shipment is confirmed or when the requisition involves an unconfirmed MRO as described in Chapter 4, the ICP will monitor for receipt of MRA(s). For U.S. Forces’ shipments to CONUS activities, ICPs must receive MRA for the total quantity shipped within 12 calendar days from the date released to carrier cited in the DLMS 945A, Materiel Release Advice, or DLMS 856S. For U.S. Forces shipments to OCONUS activities, ICPs must receive MRA within 29 calendar days from the date released to carrier for Transportation Category 1 and 2, 76 calendar days from the date released to carrier for Transportation Category 3, or within 135 calendar days from the DLMS 856S shipment status release date for security assistance requisitions. Otherwise, the ICP will send an MRA Follow-up Transaction for the delinquent MRA to (See Table C10.T2):

C10.7.1.1. The organization that the materiel was shipped to, for U.S. Forces.

C10.7.1.2. The applicable ILCO, for SA requisitions.

C10.7.1.3. The MRA Follow-up timeframes are based upon the existing Time Definite Delivery (TDD) Standards and take into account the wide variation in TDD timeframes based on the Combatant Commands/Regions and the allowed receipt take-up timeframe.

C10.7.1.4. The follow-up time limits for a delinquent MRA are 17 calendar days from the date shipped (date released to carrier) field entry in the MRC or DLMS 856S Pseudo Shipment Status for CONUS, 34 calendar days for OCONUS destinations with Transportation Category 1 and 2, and 81 calendar days for OCONUS destinations with Transportation Category 3. (See Table C10.T2).

C10.7.1.5. Summary of MRA Follow-Up Time Limits. Reporting activities will meet the time limits identified in this chapter. These requirements and timeframes are independent from prescribed shipment tracing and discrepancy reporting requirements and timeframes to which the receiving facility must also adhere. MRA follow-up time limits are summarized in Table C10.T2.
Table C10.T2.  Materiel Receipt Acknowledgement Follow-Up Time Limits for ICPs and DLA Disposition Services

<table>
<thead>
<tr>
<th>ACTION</th>
<th>TIME LIMIT(^7)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Follow-Up for Delinquent MRA</td>
<td>- 17 calendar days from the date shipped (date released to carrier) field entry in the Materiel Release Confirmation (MRC) or Pseudo Shipment Status (DLMS 856S/MILSTRIP legacy DIC ASH) for U.S. Forces shipments (CONUS destination).</td>
</tr>
<tr>
<td></td>
<td>- 34 calendar days from the date shipped (date released to carrier) field entry in the MRC or DLMS 856S Pseudo Shipment Status for U.S. Forces shipments (OCONUS destination) for Transportation Category 1 and 2.</td>
</tr>
<tr>
<td></td>
<td>- 81 calendar days from the date shipped (date released to carrier) field entry in the MRC or Pseudo Shipment Status (for U.S. Forces shipments (OCONUS destination) for Transportation Category 3.</td>
</tr>
<tr>

<td>- 135 calendar days from the date shipped (date released to carrier) field entry in the Pseudo Shipment Status for security assistance shipments.</td>
</tr>
</tbody>
</table>

\(^7\) Means take the action when the time limit is reached.

C10.7.2. To answer the follow-up, the reporting activity will prepare a MRA following paragraph C10.6. Send the MRA to the ICP within 10 calendar days from the transaction preparation date cited in the follow-up.

C10.7.3. In the event that materiel has not been received because a Navy ship has not yet had the opportunity to physically pick it up (it is awaiting pick up at a Navy Local Logistics Support Center or the Material Processing Center), the Navy ship reporting activity will respond with a MRA Follow-up Transaction containing Discrepancy Indicator Code G. This will signal the ICP to keep the record open and continue to monitor for receipt of MRA(s), and send another MRA Inquiry Transaction after another 45 calendar days have elapsed (which may be responded to with an additional MRA Response to Inquiry Transaction with Discrepancy Indicator Code G if the ship is unable to pick up their materiel from the Navy Local Logistics Support Center or the Material Processing Center). The Navy ship reporting activity may send up to six MRA transactions in response to follow-up, using MRA Response to Inquiry Transaction with Discrepancy Indicator Code G. The Navy ship reporting activity will send an MRA, using DLMS 527R MRA Response to Inquiry Transaction, without the Discrepancy Indicator Code G, once the materiel is received (e.g., picked-up or otherwise delivered directly to the ship), which may include the use of other discrepancy codes as appropriate. If a reply is not received within 45 calendar days from the sixth MRA

\(^7\) Refer to ADC 1114.
Response to Inquiry Transaction with Discrepancy Indicator Code G, the ICP will include the delinquency information in the management evaluation report (C10.10). Also, if the requisition involves an unconfirmed MRO (see Chapter 4, (Processing Follow-Ups)), then the ICP will resolve the record as described in Chapter 4 for Force Closed Materiel Release Confirmation).

C10.7.4. When Component research into a Follow-up For Delinquent MRA identifies that materiel is still in transit, the reporting activity will respond with a MRA Response to Inquiry transaction containing Discrepancy Indicator Code H in record position 63. This will signal the ICP to keep the record open and continue to monitor for receipt of MRA(s), and send another Follow-up For Delinquent MRA transaction after another 45 calendar days have elapsed.\(^8\) If a reply is not received within 45 calendar days from the sixth MRA Response to Inquiry transaction with Discrepancy Indicator Code G, the ICP will include the delinquency information in the management evaluation report (C6.10). Navy afloat units should use Discrepancy Indicator Code H if they determine the materiel is still in transit and not at an MPC.\(^9\)

C10.7.5. Except as noted in C10.7.3., if a reply is not received within 30 calendar days from the MRA inquiry preparation date, the ICP will include the delinquency information in the MRA Management Information Report. Also, if the requisition involves an unconfirmed MRO, then the ICP will resolve the record as described in the procedures in Chapter 4 (Force-Closed Materiel Release Confirmations).

C10.8. CORRECTING OR CANCELING MATERIEL RECEIPT ACKNOWLEDGEMENT

C10.8.1 MRA Errors

C10.8.1. Identification of Erroneous Information. Activities which acknowledge a materiel receipt in error will not correct the MRA. However, to ensure validation of any SDR for the shipment, the reporting activity must identify the erroneous MRA information in the SDR remarks (SF364, “Report of Discrepancy”) or in the DLMS 842A/W, SDR Follow-up, Correction, Cancellation, & Reconsideration Request note/special instruction segment. MRAs with an invalid quantity field or blank unit of issue will be processed and corrected as addressed in C10.8.1.2.

C10.8.1.2 Syntax Errors in Mixed DLMS/DLSS Environment. MRAs submitted in legacy DIC DRA/DRB format, with an invalid quantity or blank unit of issue, cannot be processed by DLMS trading partners due to syntax errors. Accordingly, when DAAS must convert DIC DRA/DRB to a DLMS 527R MRA transaction for a DLMS trading partner, and the DRA/DRB contained an invalid quantity or blank unit of issue, DAAS will reject the transaction using narrative message rejects as follows:

C10.8.1.2.1 Invalid Quantity Syntax Error. (Quantity field is blank or contains alphas or special characters):

---

\(^8\) Refer to ADC 1114.

\(^9\) Ibid.
C10.8.1.2.1.1 DAAS will reject MRA transactions (DICs DRA/DRB) received with an invalid quantity field (record position 25-29) to the reporting activity with a narrative message reject stating: Correct and resubmit. The quantity in record position 25-29 is invalid.

C10.8.1.2.1.2. Reporting activities which acknowledged receipt using an invalid quantity are to correct and resubmit the MRA upon receipt of the narrative message reject.

C10.8.1.2.2. Blank Unit of Issue Syntax Error

C10.8.1.2.2.1. DAAS will reject legacy MRA transactions (DICs DRA/DRB) received with a blank unit of issue (record position 23-24) to the reporting activity with a narrative message reject stating: Unit of Issue contains blanks or special characters.

C10.8.1.2.2.2. Reporting activities which acknowledged receipt using a blank unit of issue are to correct and resubmit the MRA upon receipt of the narrative message reject.

C10.8.2. Error Documentation. When the ICP receives an MRA that does not match a shipment record, or contains errors, the ICP will document the error in the management evaluation report or quality control data, as applicable.

C10.9. QUALITY CONTROL

C10.9.1. To comply with the requirements of Chapter 6, ICPs and reporting activities will include the evaluation of internal MRA processing in their quality control programs. The following work processes will be included: accuracy of MRA initiation of follow-up, submission timeliness, and investigative research to determine and correct processing errors.

C10.9.2. Command managers will assign to specific organizations the responsibility for directing and monitoring corrective action. The purpose of the program is to assist management in identifying those human, procedural, or system errors adversely affecting the MRA process or indicating potential deficiencies in the control over in-transit assets.

C10.9.3. Command managers must ensure effective organizational interrelationships among the functional operations/processes concerned with MRA, such as: supply, procurement, financial, inventory management, transportation, quality assurance, and storage.

C10.10. MANAGEMENT EVALUATION

C10.10.1. The DoD Components will establish a management evaluation program which monitors and evaluates MRA submission to ensure compliance with MRA
requirements. Execute timely processing and perform response rate analyses to identify non-responsive activities and initiate corrective actions.

C10.10.2. The program will provide for:

C10.10.2.1. Review of the MRA Management Information report (Report Control Symbol DD-AT&L(AR)1419 applies). DAAS will prepare the report and provide access by electronic means. The report content is determined by the Supply Process Review Committee. Each Supply Process Review Committee representative is responsible for analysis of the report to identify potential deficiencies in their Service or Agency MRA operations or procedures contributing to breakdowns in internal controls for in-transit wholesale stock. Supply Process Review Committee representatives are responsible for initiating corrective action with delinquent and non-reporting activities.

C10.10.2.2. The MRA Management information report will include as a minimum:

C10.10.2.2.1. General MRA Management Report Criteria. Documentation of nonresponses for a reporting period to include: the number of qualifying shipments made to an activity (by “ship to” DoDAAC); the number of MRA responses received from that activity; the number of nonresponses. The following sections identify a common report description, how to do additional analysis of the data, and the types of breakdown to be available for MRA responses/non-responses for several different categories and whether detail by individual DoDAAC is available.

C10.10.2.2.2. Capability for Additional MRA Report Analysis.

C10.10.2.2.2.1. Most of the MRA reports contain a “Save” link above the report title. Clicking the “Save” link launches the applicable MRA report content in a spreadsheet format for additional analysis.

C10.10.2.2.2.2. The MRA reports contain an option from the MRA Report Detail page (after selecting a DoDAAC) to download the entire list of document numbers with associated requisition/initial supply transaction data to an Excel file for additional research.\(^\text{10}\)

C10.10.2.2.2.3. Three MRA Reports (MRA 02 Direct Vendor Delivery, MRA 36 Stock Shipment, and MRA 37 DVD and Stock Reports) contain an option to download the entire list of document numbers for the missing MRA data shown on the Detail Reports page. Clicking the “Save Component Missing MRA Data” link will generate a list of Component options to download file for the missing MRA data and will combine the data for CONUS and OCONUS.\(^\text{11}\)

\(^{10}\) ADC 1086.
\(^{11}\) Refer to ADC 1330 Revise MRA Download Reports to Include a Component Summary Option.
C10.10.2.2.4. The following data elements are included in the downloadable files:

- Header with Report Month or Date Run (depending on type of report)
  - Source of Supply RIC included on the header for MRA38 (Source of Supply MRA Stock Summary), MRA39 (Source of Supply MRA DVD Summary) and MRA40 (Source of Supply Stock and DVD Summary)
- CONUS / OCONUS Indicator (MRA02, MRA36 and MRA37)
- Shipment Date
- Document Number
- Suffix
- Supplementary Address\textsuperscript{12}
- Ship-To DoDAAC
- Signal Code\textsuperscript{13}
- Bill-To DoDAAC
- Priority
- NSN
- Shipped Quantity
- Unit of Issue
- Unit Price (U/P)
- Total Cost
- Initial Transaction DLMS/MILS, (e.g., requisition or initial supply transaction if no requisition is available per MRA Business Rules/Decision Tree)\textsuperscript{14}
- Communication Routing Identifier (COMMRI) of the system from which the requisition or initial supply transaction originated
- COMMRI associated with the Document Number DoDAAC, (e.g., could be a requisitioner/requiring/other activity)
- COMMRI where the Follow-up for Delinquent MRA transaction was transmitted

C10.10.2.2.3. Common Text for Report Descriptions. In general, for each report category, the count of qualified shipments requiring an MRA is matched against MRAs received/not received within the allotted timeframe and a percentage is computed. The reports shows results for Shipments Requiring MRA and MRA Not Received. Some of the reports include a column for MRA Received. Where the report is broken out by Service, click on the Service line hyper link to show the specific report

\textsuperscript{12} This enhancement perpetuates legacy “MILS” data requirements due to the DAAS Micro Automated Routing System (DMARS) which performs transaction level services, such as, validation, editing, routing, imaging, and exception processing, using the 80 record position legacy format.

\textsuperscript{13} Ibid.

\textsuperscript{14} This is the transaction that results in the inclusion in the MRA Report per the MRA Business Rules/Decision Tree (ADC 1088 , Reference 3.d.).
category MRA Service/Agency Detail Report showing all DoDAACs making up the totals within each Service. The detail report shows results for shipments requiring an MRA and MRA received. Some of the detail reports include a column for MRA received. Selecting a DoDAAC from the detail report will show all document numbers associated with that DoDAAC total. Clicking on an individual document number will launch WEBVLIPS for further analysis of the selected document number. Differences from this standard report description are noted in the following descriptions of each specific MRA report type:

C10.10.2.2.3.1. MRA Service/Agency Summary. This summary shows shipments for DoD Components/Participating Agencies and all categories by area of the ship-to-DoDAAC and customer. Detail report is available. Summary and Detail Reports include an extra column for MRA received.

C10.10.2.2.3.2. Direct Vendor Delivery (DVD) (Non Stock) MRA Summary. shows DVD (Non Stock) shipments for DoD Components/Participating Agencies and all categories by Area and Customer. Detail report is available.

C10.10.2.2.3.3. Stock Shipment Summary, MRA Not Received. shows Stock Shipments by area of the ship-to-DoDAAC and DoD Components/Participating Agencies. Detail report is available.

C10.10.2.2.3.4. Direct Vendor Delivery (DVD) and Stock Shipment Summary, MRA Not Received. This summary shows DVD and Stock Shipments for all DoD Components/Participating Agencies and all categories by Ship-to DoDAAC. Detail report is available.

C10.10.2.2.3.5. MRA Report by Source of Supply (Wholesale ICP). This report shows MRAs from the perspective of the wholesale ICP to review how well the Services acknowledge receipt of the materiel the ICP shipped out of wholesale assets for a given Service/Agency. Detail report is available.

C10.10.2.2.4. Specific Category Reports. The MRA Management Information report provides the capability to access information by specific categories for ammunition, contractor, and Army Total Package Fielding. For these specific category reports, the detail report reflects the same layout as the summary report:

C10.10.2.2.4.1. Ammunition Percent of Delinquents Summary. This summary shows shipments for ammunition by area of the ship-to-DoDAAC and DoD Component/Agency. The report shows results for Shipments Requiring an MRA, where an MRA was received within the allotted timeframe and where an MRA was not received within the allotted timeframe. Only the percentage of qualified shipments that received an MRA is shown.

C10.10.2.2.4.2. Contractor Percent of Delinquents Summary. This summary shows contractor shipments by area of the ship-to-DoDAAC and DoD Component/Agency. Detail report is available. The report shows results for Shipments...
Requiring an MRA, where an MRA was received within the allotted timeframe and where an MRA was not received within the allotted timeframe. Only the percentage of qualified shipments that received an MRA is shown.

C10.10.2.2.4.3. Army Total Package Fielding (TPF), Percent of Delinquents Summary. This summary shows Army TPF shipments by area of the ship-to-DoDAAC. The report shows results for Shipments Requiring an MRA, where an MRA was received within the allotted timeframe and where an MRA was not received within the allotted timeframe. Only the percentage of qualified shipments that received an MRA is shown.

C10.10.2.2.4.4. Percent of Delinquents General Summary. This summary shows general shipments by area of the ship-to-DoDAAC and DoD Component. The report shows results for Shipments Requiring an MRA, where an MRA was received within the allotted timeframe and where an MRA was not received within the allotted timeframe. Only the percentage of qualified shipments that received an MRA is shown. The report excludes the categories for Ammunition, Contractor, and Army Total Package Fielding.

C10.10.3. ICPs will keep accessible records of shipments and MRA transactions to support the reporting requirements.
C11. CHAPTER 11

MATERIEL RETURNS, REDISTRIBUTION OF ASSETS,
DIRECTED DISCREPANT/DEFICIENT MATERIEL
RETURNS, AND RETROGRADE RETURNS

C11.1. GENERAL

C11.1.1. Purpose. This chapter provides procedures for the interchange of information between the owning organization and the integrated materiel manager (IMM) on the reporting and redistribution of assets, establishes the necessary controls to ensure timely processing of related transactions and provides for the automatic return of materiel under specified conditions. These procedures include the following:

C11.1.1.1. Inventory control point (ICP)/IMM directed lateral redistribution of retail assets identified by an inter- or intra-Component asset visibility system.

C11.1.1.2. Special procedures for returns to DLA from selected sites in support of base realignment and closure (BRAC) retail supply, storage and distribution (SS&D)/inventory management and stock positioning (IMSP) and national inventory management strategy (NIMS).

C11.1.1.3. Automatic return of materiel under specified conditions

C11.1.1.4. There are additional processing procedures over and above those contained in this chapter that must be applied for items identified as serially managed materiel requiring owner visibility at DLA Distribution Centers. The identity of the materiel and the additive procedures are in Chapter 30.

C11.1.2. TRANSACTIONS. The Enterprise Business Standards Office (EBSO) Website contains DLMS electronic data interchange (EDI) transaction formats on the DLMS implementation Convention (IC) page. The IC page also includes the corresponding MILSTRIP transaction formats, identified by document identifier code (DIC). The corresponding MILSTRIP/MILSTRAP legacy 80 record position transaction functionality is identified for information purposes in a mixed DLSS/DLMS environment.

C11.1.2.1. Materiel Returns Program Reporting. Use the DLMS 180M transaction with Transaction Type Code FT. The DLMS 180M provides the functionality of several FT_ series legacy MILSTRIP transactions. The action code specifies the type of transaction
C11.1.2.1.1. Automatic Returns Notification to customer or maintenance activity is DLMS 180M with Action Code RF – Return to Shippers Facility. This transaction provides the functionality of MILSTRIP legacy DIC FTA.

C11.1.2.1.2. Cancellation of Customer Asset Report is DLMS 180M with Action Code C – Cancelled. This transaction provides the functionality of MILSTRIP legacy DIC FTC.

C11.1.2.1.3. The Customer Asset Report (available stock number assets) is DLMS 180M Transaction Type Code FT – Material Returns and baseline item data (2/BLI01/10 Code FS – NSN. This transaction provides the functionality of MILSTRIP legacy DIC FTE.

C11.1.2.1.4. The Customer Asset Report (available part-numbered Items) is DLMS 180M Transaction Type Code FT – Material Returns and baseline item data (2/BLI01/10 Code MG (Part Number) and 2/BLI08/10 Code ZB – Commercial and Government Entity (CAGE)). This transaction provides the functionality of MILSTRIP legacy DIC FTG.

C11.1.2.1.5. Customer Follow-Up for ICP/IMM Reply to Customer Asset Report is DLMS 180M with Action Code T – Status Query. This transaction provides the functionality of MILSTRIP DIC FTF.

C11.1.2.1.6. Customer Follow-Up for ICP/IMM Materiel Receipt Status is DLMS 180M with Action Code RS – Report Status. This transaction provides the functionality of MILSTRIP DIC FTT.

C11.1.2.2. Shipment Status Materiel Returns. Use a DLMS 856R with the applicable Transaction Type Code. The Action Code further specifies the type of materiel returns shipment status.

C11.1.2.2.1. Shipment Status is DLMS 856R with Transaction Type Code FT – Material Returns. This transaction provides the functionality of MILSTRIP legacy DIC FTM.

C11.1.2.2.2. Retrograde shipments for return or repair which fall outside the scope of the MILSTRIP Materiel Returns Program. Use DLMS 856R with Action Code RD. There is no MILSTRIP legacy DIC equivalent.

C11.1.2.3. Materiel Returns Supply Status. Use a DLMS 870M with the applicable Status Report Code to provide status on customer asset reports.

C11.1.2.3.1. Customer Status to ICP/IMM indicating estimated date of shipment is DLMS 870M with Status Report Code 3 – Unsolicited Report. This transaction provides the functionality of MILSTRIP legacy DIC FTL.

C11.1.2.3.2. ICP/IMM Follow-Up for materiel authorized to be returned is DLMS 870M with Status Report Code7 – Response to Material Returns
and 2/LQ01/145 Code 0 citing FT6). This transaction provides the functionality of MILSTRIP legacy DIC FT6.

C11.1.2.3.3. ICP/IMM Delay in Disposition Instructions is DLMS 870M with Status Report Code 7 – Response to Materiel Returns and 2/ISR01/210 Code HQ to indicate the delayed date. This transaction provides the functionality of MILSTRIP legacy DIC FTD.

C11.1.2.3.4. The Customer Status to ICP/IMM with the estimated date of shipment is DLMS 870M with Status Report Code 3 and 2/ISR01/210 Code PS to provide the estimated shipping date. This transaction provides the functionality of MILSTRIP legacy DIC FTL.

C11.1.2.3.5. The DAAS Customer Asset Report Status is DLMS 870M with Status Report Code 7 – Response to Material Returns and 1/N101/50 Code GP). This transaction provides the functionality of MILSTRIP legacy DIC FTQ.

C11.1.2.3.6. The ICP/IMM Reply to Customer Asset Report is DLMS 870M Status Report Code 7 – Response to Material Returns and 2/LQ01/145 Code 0 citing FTR. This transaction provides the functionality of MILSTRIP legacy DIC FTR.

C11.1.2.3.7. The ICP/IMM Materiel Receipt Status is DLMS 870M with Status Report Code 7 Response to Material Returns and 2/LQ01/145 Code 0 citing FTZ. This transaction provides the functionality of MILSTRIP legacy DIC FTZ.

C11.1.2.4. **Materiel Returns Due-In and Credit and Asset Status Transactions**

C11.1.2.4.1. Due-In Other than Procurement Instrument Source (Returns from other DoD Activity) is DLMS 527D with Transaction Type Code DA – Due-In. This transaction provides the functionality of MILSTRAP legacy DIC DFB.

C11.1.2.4.2. Pre-Positioned Materiel Receipt Other than Procurement Instrument Source (Returns from other DoD Activity) is DLMS 527D with Transaction Type Code DE – Advance Receipt). This transaction provides the functionality of MILSTRAP legacy DIC DWB.

C11.1.2.4.3 Credit for Excess Materiel Return (Reversal) is DLMS 810L with Transaction Type Code PP – Prepaid Invoice (DoD interfund bill) and 2/LQ01/311 Code 0 citing FD1. This transaction provides the functionality of MILSBILLS legacy DIC FD1.

C11.1.2.4.4. Credit for Excess Materiel Return (No Charge) is identified by DLMS 810L with Transaction Type Code PP – Prepaid Invoice (DoD
interfund bill) and 2/LQ01/310 Code 0 citing FD2. This transaction provides the functionality of MILSBILLS legacy DIC FD2.

C11.1.2.4.5. Accessorial and Other Miscellaneous Billings (Credit) is DLMS 810L with Transaction Type Code PP – Prepaid Invoice (DoD interfund bill) and 3/SAC02/040 Code F650. This transaction provides the functionality of MILSBILLS legacy DIC FN2.

C11.1.2.4.6. Billing for Transportation (Credit) is DLMS 810L with Transaction Type Code PP – Prepaid Invoice (DoD interfund bill) and 3/SAC02/040 Code I260. This transaction provides the functionality of MILSBILLS legacy DIC FQ2.

C11.1.2.4.7. Follow-up for Materiel Returns Program (MRP) Credit is DLMS 812R with Transaction Handling Code T – Adjustment Request, 1/BCD05/020 Code C – Credit, 1/BCD11/020 Code 45 – Follow-up), and 1/LQ01/156 Code 0 with FTP. This transaction provides the functionality of MILSBILLS legacy DIC FTP.

C11.1.2.4.8. Request for Adjustment of Non-Fuel Billing is DLMS 812R with Transaction Handling Code T – Adjustment Request, 1/BCD11/020 Code 00 - Original), and 1/LQ01/156 Code 0 with FAE. This transaction provides the functionality of MILSBILLS legacy DIC FAE.

C11.1.2.4.9. Reply to Follow-up for Materiel Returns Program Credit is DLMS 812L with Transaction Handling Code B – Debit/Credit Advice No Remittance Detail, 1/BCD05/020 Code C – Credit, and 1/BCD11/020 Code 45 – Follow-up). This transaction provides the functionality of MILSBILLS legacy DIC FTB.

C11.1.2.4.10. Asset Status Reporting Request (from ICP to Base, Post, Camp and Station) is DLMS 846I with Report Type Code TI – Asset Status Inquiry. This transaction provides the functionality of MILSTRAP legacy DIC DZE.

C11.1.2.4.11. Asset Status Reporting (Base, Post, Camp and Station Level Use) Transaction is DLMS 846I with by Report Type Code TJ – Asset Status Advice. This transaction provides the functionality of MILSTRAP legacy DIC DZF.

C11.1.2.4.12. Reject Advice Transaction is DLMS 824R Transaction Type Code ZT – Report of Rejection or Return of Work Candidate. There is no MILSTRIP legacy DIC equivalent transaction.

C11.1.2.5. Lateral Redistributions

C11.1.2.5.1. Supply Status is DLMS 870S with Status Report Code 4 – Response to Requisition. This transaction provides the functionality of MILSTRIP legacy DICs AE1, AE2, AE3, AE8, AE9, AEA, AEB, AED, and AEE.

C11.1.2.5.3. Follow-Up by ICP/IMM to Storage or Reporting Activity is DLMS 940R with Transaction Type Code NB – Materiel Release Inquiry). This transaction provides the functionality of MILSTRIP legacy DIC AF6.

C11.1.2.5.4. Supply Status to ICP/IMM from Storage or Reporting Activity is DLMS 945A with Transaction Type Code NL – Material Release Denial. This transaction provides the functionality of MILSTRIP legacy DIC AE6.

C11.1.2.5.5. LRO Shipment Status is DLMS 856S with Transaction Type Code AS – Shipment Advice and Status Reason Code IV2 – Material Shipped Between Intermediate Points. This transaction provides the functionality of MILSTRIP legacy DIC AS6.

C11.1.2.6. Inter-Service Lateral Redistribution of Retail Assets by Inter-Service Agreement. Passing Order Transaction is DLMS 511R with Transaction Type Code BM – Requisition Passing Order. This transaction provides the functionality of MILSTRIP legacy DIC A3_.

C11.1.2.7. Returns to DLA from Industrial Sites under Base Realignment and Closure, Supply, Storage and Distribution and National Inventory Management Strategy Site Customers

C11.1.2.7.1. Pre-Positioned Materiel Receipt Other than Procurement Instrument Source (Returns from Other DoD Activity) is DLMS 527D with Transaction Type Code DE – Advance Receipt and 2/LIN01/010 Code J. This transaction provides the functionality of MILSTRAP legacy DIC DWB_.

C11.1.2.7.2. The Materiel Receipt – Other Than Procurement Instrument Source (Returns from Other DoD Activities) is DLMS 527R with Transaction Type Code D4 – Receipt and 2/LIN01/010 Code J). This transaction provides the functionality of MILSTRAP legacy DIC D6A and D6B.

C11.1.2.7.3. Billing for Issue from Stock (Credit) is DLMS 810L with Transaction Type Code PP – Prepaid Invoice and 2/LQ01/310 Code 0 – FA2. This transaction provides the functionality of MILSBILLS legacy DIC FA2.

C11.1.2.8. Directed and Retrograde Returns

C11.1.2.8.1. Pre-Positioned Materiel Receipt Other than Procurement Instrument Source (Directed and Retrograde Returns from other DoD Activity) is DLMS 527D with Transaction Type Code DE – Advance Receipt). This transaction provides the functionality of MILSTRAP legacy DIC DWB.
C11.1.2.8.2. Directed and Retrograde Returns are DLMS 856R with Action Code RD – Returns Detail. The Return Type Code is identified in 2/LQ01/3500 Code KYL. There is no MILSTRIP legacy DIC equivalent for this transaction due to serial number and unique identification identifier requirements.

C11.1.3. Reporting Policy. Policy regarding the reporting of assets, the transfer of assets, the lateral redistribution of assets, and the use of assets as an alternative to procurement (also known as the procurement offset portion of total asset visibility (TAV)), is contained in DoDM 4140.01, "DoD Supply Chain Materiel Management Procedures," February 10, 2014.

C11.1.4. Use of Defense Automatic Addressing System. All transactions used to offer, return, or redistribute materiel and any follow-on transactions transmitted by electronic means must always be routed through the Defense Automatic Addressing System (DAAS).

C11.1.5. Financial Credit Policies and Procedures. Credit for materiel returns is granted on the basis of need, direction to return, and subsequent receipt and classification by the consignee. These credits may or may not include materiel credit; however, credit for all directed returns will include credit for packing, crating, handling, and transportation. Policy for granting credit is covered under DoDM 4140.01. Procedures for the timeframes and transactions for providing credit for materiel returns, lateral redistributions, and materiel provided for the procurement offset portion of TAV are contained in the MILSBBILLS procedures identified in DLM 4000.25, Volume 4, Finance. MILSBBILLS also covers credit procedures for packing, crating, handling and transportation (PCH&T). In addition, MILSBBILLS provides and transaction formats for DLMS 812R, Adjustment Request (Follow-Up for Materiel Returns Program Credit) (MILSBBILLS legacy DIC FTP), and Reply to Follow-up for Materiel Returns Program credit (MILSBBILLS legacy DIC FTB).

C11.1.6. Responsibility for Costs Incurred for Returned Materiel. U.S. Government activities returning materiel are cautioned that the returning activity may be held responsible for costs incurred by the receiving activity when discrepancies are reported using Supply Discrepancy Reporting (SDR) procedures (Chapter 17). This includes returns made in violation of prescribed materiel returns procedures, returns exhibiting packaging discrepancies, and returns of reparable items unaccompanied by required technical data. Recoupment action by the ICP against the initiator may include all cost reimbursable actions performed by the receiving activity (e.g., repackaging, marking, and disposal).

1 DLA is required to request approval of new procedures supporting BRAC/NIMS allowing full materiel credit for returns regardless of asset position with no credit for packing, crating, handling and transportation (PCH&T).
C11.2. APPLICABILITY AND SCOPE. The provisions of this chapter are applicable as follows:

C11.2.1. To all activities offering or returning materiel to the DoD Component ICP/IMM.

C11.2.2. To activities receiving and processing lateral redistribution orders of retail assets.

C11.2.3. To the processing of Grant Aid. Policy regarding utilization and redistribution of Grant Aid materiel is contained in DSCA 5105.38-M, "Security Assistance Management Manual, (SAMM)" Chapter 11.

C11.2.4. To the processing of non-consumable items.

C11.2.5. To Base Realignment and Closure; Supply, Storage and Distribution; Inventory Management and Stock Positioning; and National Inventory Management Strategy

   C11.2.5.1. Background. Under NIMS, DLA's consumable item supply chain management extends from the wholesale level to the point of consumption, replacing the Service-managed retail inventory level. Subsequent to the 2005 BRAC decision, retail SS&D functions and associated infrastructure supporting Military Service selected industrial sites transfers to DLA. As a result, selected industrial and NIMS sites can no longer maintain retail stock balances; once the customer has determined it has no use for the materiel, it is returned to DLA.

   C11.2.5.2. A variation of the MRP is used for processing materiel returns to DLA from selected sites in support of the BRAC SS&D/IMSP and NIMS. Standard MRP transactions (e.g., DLMS 180M, Material Returns Reporting (MILSTRIP Customer Asset Reports (Document Identifier Code (DIC) FTE)), DLMS 870M, Material Returns Supply Status (MILSTRIP Reply to Customer Asset Report (DIC FTR) and ICP/IMM Materiel Receipt Status (DIC FTZ)), do not apply; only those logistics transactions specified in the detailed procedures under paragraph C11.18. are used. Under the NIMS/BRAC returns program, DLA accepts returned DLA-managed materiel back into DLA ownership regardless of the current stock asset position. Based upon specified business rules, DLA provides zero, partial, or full credit for the materiel to the customer. No credit for packaging, crating, handling, or transportation is provided.

   C11.2.5.3. Unlike MRP, under the BRAC SS&D/NIMS return procedures it is the returning DoD Component’s responsibility to provide a Prepositioned Materiel Receipt (PMR) transaction to the applicable storage activity if that activity is a collocated DLA storage activity using the Distribution Standard System (DSS). The only transaction exchange with DLA prior to financial processing is the DLMS receipt transaction (DLMS 527R, Receipt, Inquiry, Response and Materiel Receipt Acknowledgement (MILSTRIP Materiel Receipt – Other Than Procurement Instrument Source (DIC D6B)), which is reported by the storage activity to the DLA ICP.
C11.3. **EXCLUSIONS.** The following categories are excluded from these procedures:

C11.3.1. Customer asset reports identified by part numbers exceeding a field length of 15 in the stock or part number field are excluded from DAAS processing of DLMS 180M for customer asset report transactions. Other customer asset reports for items not identified by a national stock number (NSN) (e.g., locally assigned stock numbers) are excluded from these procedures on an inter-DoD Component basis.

C11.3.2. Perishable subsistence items, with the exception of perishable subsistence returns (other than fresh fruit and vegetables (FF&V)) from Navy mobile logistics support fleet ships in the Pacific area.

C11.3.3. Industrial plant equipment (IPE) identified only by a plant equipment code/manufacturer’s part number. These items will be reported to DLA Aviation on DD Form 1342, “DoD Property Record.”

C11.3.4. Class V (W) ground (surface) ammunition.

C11.3.5. Lumber products.

C11.3.6. Items under Defense Threat Reduction Agency (DTRA) management; such as Federal Supply Group 11 and all Department of Energy (DoE) special design and quality controlled items (identified by contractor and Government entity (CAGE) 87991 in the Federal Logistics Information System (FLIS) master item file) and all DoD items designed specifically for use on or with special weapons (identified by CAGE 57991, 67991, or 77991 in the FLIS master item file). (These items will be processed under DoE-DNA TP 100-1, et al.)

C11.3.8. Items under General Services Administration (GSA) management. These items will be redistributed internally per Service guidance; alternatively, the items will be disposed under normal excess/surplus/donation procedures.

C11.4. **REPORTING CRITERIA FOR CUSTOMER ASSET REPORTS**

C11.4.1. Determination of Reporting Requirements. Reporting of assets will be determined by the existing retention and reporting policy under DoDM 4140.01. This includes the reporting policy for the procurement offset portion of TAV as described in DoDM 4140.01. In response to the Asset Status/Transaction Reporting Request (DLMS 846I, Asset Status Inquiry/Report), submit Customer Asset Reports (DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM)/Customer Asset Report) using appropriate project codes identified in paragraph C11.5.4.

C11.4.2. Reporting Activity Actions. The reporting activity will forward customer asset reports to the ICP/IMM. Forward all part-numbered Customer Asset Reports (DLMS 180M) directly to DAAS for possible conversion to an NSN using information in
the FLIS files. Customer Asset Reports (DLMS 180M) transmitted by electronic means must always be routed through DAAS.

C11.5. PREPARATION OF CUSTOMER ASSET REPORTS

C11.5.1. Customer Asset Reports. Use DLMS 180M to offer or report materiel that is no longer needed.

C11.5.2. Reports of Serviceable Items. Reports of serviceable non-consumable item materiel support code (NIMSC) 5 items from secondary inventory control activity (SICA) reporting activities to the appropriate DoD Component SICA will be submitted under the DoD Component implementing instructions. Quantities that are not required by the SICA will be forwarded to the primary inventory control activity (PICA) using DLMS 180M. If appropriate, the SICA will provide DS 870M, Materiel Returns Supply Status (ICP/IMM Status to Customer) delay status to the materiel holder for the quantity referred to the PICA under section C11.11.5. The expected reply date of the DLMS 870M, if used, will be 35 calendar days after the date the report was forwarded to the PICA. The PICA will provide disposition instructions to the SICA. The SICA, in turn, will provide disposition instructions to the reporting activity under the DoD Component implementing instructions.

C11.5.3. NIMSC 5 Stocks Exceeding Retention Limit. When the SICA has NIMSC 5 serviceable stocks that exceed the retention limit, the SICA will prepare DLMS 180M, Materiel Returns Reporting, to report available assets to ICP/IMM using the guidelines above, but with the SICA’s own document number.

C11.5.4. Use of Project Codes. The DoD Components will use one of the following project codes for the procurement offset portion of TAV of their Customer Asset Report (DLMS 180M):

C11.5.4.1. RBB for consumables,

C11.5.4.2. 3AG for reparables, or

C11.5.4.3. 3AU for DLA Disposition Service Field Office assets.

C11.6. CANCELLATION OF CUSTOMER ASSET REPORTS

C11.6.1. Use of DLMS 180M. Use DLMS 180M to prepare cancellation of asset reports, in total or partial quantities, and submit to the ICP/IMM under the following conditions:

C11.6.1.1. When a determination is made that materiel is not available in the quantity reported on the asset report.

C11.6.1.2. Upon determination that materiel directed for return will not be returned.
C11.6.2. **Timely and Accurate Cancellations.** The need for timely and accurate cancellation actions under the above conditions is emphasized to avoid unnecessary follow-up actions and to ensure that ICP/IMM records or expected returns reflect proper quantities.

C11.7. **PROCESSING REPLIES TO CUSTOMER ASSET REPORTS**

C11.7.1. **Reporting Activity Processing.** DLMS 870M is used by the ICP/IMM to respond to all customer asset reports and can be used (intra-Army only) to notify customers of the amount of credit granted and/or reversed for materiel received. The reporting activity will process the DLMS 870M, reply using the appropriate status code and take the following actions:

C11.7.1.1. Use paragraph C11.6. to submit a cancellation, DLMS 180M, when it is determined that the materiel directed for return will not be returned.

C11.7.1.2. Reporting activities returning materiel under MRP will prepare and submit a DLMS 856R, Shipment Status Materiel Returns, with Unique Item Identifier (UII) and/or corresponding serial number(s) for NSNs containing an item unique identifier (IUID) Indicator Yes (Y), indicating that DoD IUID Supply Policy compliance is required, after materiel directed for return is released to the carrier. The exception to the forgoing in support of Financial Improvement and Audit Readiness (FIAR) compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Submitters must prepare shipment status materiel returns citing the applicable serial number(s) and include the UII when available. Prepare a separate DLMS 856R for each shipment. Exercise care to ensure that appropriate data content, including suffix of the individual DLMS 870M, Reply to Customer Asset Report (MILSTRIP Legacy DIC FTR), is perpetuated in the DLMS 856R. The DLMS 856R will be sent to the ICP/IMM and the designated return-to activity. The ICP/IMM is not required to store UIIs except for capital equipment candidates that require serialization data visibility.3

C11.7.2. **Response to Transaction Receipt.** When DLMS 870M is transmitted to the SICA, the SICA will forward disposition instructions to the materiel holder under the DoD Component implementing instructions. The materiel holder will provide advice to the SICA regarding shipment or cancellation as appropriate, under the DoD Component implementing instructions, and the SICA will provide DLMS 856R, or DLMS 180M cancellation, to the PICA. If the SICA receives DLMS 870M ICP/IMM Follow-Up from the PICA and has no record of shipment, the SICA will follow up to the materiel holder and submit an interim DLMS 870M supply status to the PICA containing a future estimated shipping date (ESD) to preserve PICA’s due-in record pending a firm reply to the DLMS 870M follow-up.

---

2 ADC 1071, Implementation of DoD Item Unique Identification (IUID) Supply Policy in Version 4030 DLMS 856R Shipment Status Materiel Returns
3 Refer to ADC 1198
C11.7.3. Replies to DLMS 180M Customer Asset Reports. DLMS 870M replies to Customer Asset Reports (DLMS 180M) containing Project Code RBB, 3AG, or 3AU denoting the procurement offset portion of TAV and Status Code TC require reevaluation prior to disposal since these assets may not be above an activity’s retention limit. Assets required and offered using either Project Code RBB or 3AG will always be directed for return with credit; however, assets required and offered using Project Code 3AU will only be directed for return without credit.

C11.8. FOLLOW-UPS ON REPORTED ASSETS

C11.8.1. Reporting Activity Follow-Ups. Reporting activity follow-ups consist of three types:

C11.8.1.1. Follow-Up for ICP/IMM Reply to Asset Report (DLMS 180M). This type of follow-up will be used to obtain intelligence regarding status of the original asset report (DLMS 180M (Report of Available Assets to ICP/IMM)). DLMS 180M follow-up to ICP/IMM will be submitted no earlier than 30 calendar days from date of submission of DLMS 180M (Report of Available Assets to ICP/IMM), and will contain the same data as shown in the DLMS 180M (Report of Available Assets to ICP/IMM). If DLMS 870M (Disposition Instructions Delay Status) has been received, DLMS 180M Follow-Up will be submitted at the expiration of the expected reply date and DLMS 870M (From ICP/IMM) has not been received.

C11.8.1.2. Follow-up for ICP/IMM Materiel Receipt Status (DLMS 180M). This type follow-up will be used when materiel to be returned has been shipped as directed by a reply to asset report (From ICP/IMM)(DLMS 870M) but an ICP/IMM Materiel Receipt Status (DLMS 870M) has not been received. DLMS 180M, follow-up for ICP/IMM Materiel Receipt Status), will be submitted no earlier than 70 calendar days for continental U.S. (CONUS) or 130 calendar days for outside-the-continental U.S. (OCONUS) after shipment. The data for the DLMS 180M, follow-up will be the same as shown in the DLMS 856R, with the exception that no UIIs and/or serial numbers will be perpetuated.

C11.8.1.3. Follow-Up for Credit (DLMS 812R, Adjustment Request) Follow-Up for Materiel Returns Program Credit. This type of follow-up will be used when materiel to be returned has been shipped and credit allowance was indicated by ICP/IMM Materiel Receipt Status (DLMS 870M) but no credit billing has been received. This follow-up will be prepared in accordance with MILSBILLS procedures.

C11.8.2. Follow-Ups to ICP/IMM. Follow-ups will be submitted to the ICP/IMM to whom the original asset report (DLMS 180M) was submitted, except when information has been received in DLMS 870M (DAAS Customer Asset Report Information Status) status document that DAAS has rerouted the asset report to the correct ICP/IMM. In this case, the follow-up will be submitted to the activity identified in the DS 870M DAAS Customer Asset Report Information status document received from DAAS.
C11.8.3. ICP/IMM Follow-Ups on Directed Returns (DLMS 870M). Upon receipt of DLMS 870M, ICP/IMM Follow-Up, from the ICP/IMM, the reporting activity will review records to determine whether a DLMS 870M, Reply to Customer Excess Report, has been received. If there is no record of having received DLMS 870M reply to the customer excess report, the 870M ICP/IMM Follow-Up transaction will be converted to DLMS 870M, Reply to Customer Excess Report, and processed. If shipment has not occurred, DLMS 870M, Materiel Returns Program Supply Status, citing the ESD will be submitted. If records indicate that shipment has occurred, the transportation activity will be queried to ensure that the materiel has been shipped. If the materiel has been shipped, a new DLMS 856R, will be prepared and submitted identifying the quantity shipped to include UIIs and/or corresponding serial numbers for NSNs containing an IUID Indicator Y, indicating that DoD IUID Supply Policy compliance is required. The DLMS 856R will be sent to the ICP/IMM and the designated receiving activity. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available. If materiel has not been shipped, determine when the shipment will be made and follow the above procedures. When less than the total quantity contained in the original DLMS 870M is to be shipped, the reporting activity will respond to the DLMS 870M, ICP/IMM Follow-Up, with DLMS 870M, Materiel Returns Supply Status, for the quantity to be shipped and DLMS 180M for the quantity that will not be shipped. If any of the shipment has already occurred, the reporting activity will respond to DLMS 870M (ICP/IMM Follow-up), with DLMS 856R for the quantity that has been shipped, to include UIIs and/or corresponding serial numbers for NSNs containing an IUID Indicator Y, indicating that DoD IUID Supply Policy compliance is required. The DLMS 856R indicating partial shipment will be sent to the ICP/IMM and the designated receiving activity. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available. A DLMS 870M supply status and/or DLMS 180M cancellation will be sent to the ICP/IMM for the remaining portions of the originally reported quantity, as appropriate.

C11.9. AUTOMATIC RETURNS

C11.9.1. Items Designated by a Supply Source for Automatic Return. Reporting activities use DLMS 180M Automatic Return Notification (Action Code RF) is used for items designated by a source of supply for automatic return. Supply sources will notify reporting activities of the location to which items so designated are to be shipped. The returning activity will prepare and submit the DLMS 856R (MILSTRIP Legacy DIC FTM) with UII(s) and/or corresponding serial numbers for NSNs containing an IUID Indicator Y, indicating that DoD IUID Supply Policy compliance is required. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available. Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event to include SLOA mandated standard financial information system (SFIS) elements.4 The DLMS Automatic Return Notification supports inclusion of SLOA required elements. Pending full implementation of SLOA, Defense Automatic Addressing System (DAAS)

4 Refer to ADC 1043/ ADC 1043A.
will facilitate interoperability by updating selected SLOA data fields based upon the returning activity’s Service/Agency and Fund Code. If discrete values for the SLOA data elements in the transaction do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction, reject with the DLMS 870M Materiel Returns Supply Status citing Status Code CF. If invalid/missing fund code for Signal Code A, B, C, J, K, or L, reject with the DLMS 870M/DIC FTQ Materiel Returns Supply Status citing Status Code CF.\(^5\)

C11.9.2.1. All NIMSC 5 unserviceable (SCC E or F) items are designated for automatic return on an inter-DoD Component basis.

C11.9.2.2. PICAs will notify SICAs of the NSN and the storage organization to which such items are to be shipped. PICAs will also notify the receiving storage activity of the NSN of such items to be returned. The SICAs will perpetuate this information and the PICA RIC to the materiel holder/SICA activities using intra-DoD Component procedures. The materiel holder will prepare and submit the DLMS 856R with UII(s) and/or corresponding serial numbers for NSNs containing an IUID Indicator Y, indicating that DoD IUID Supply Policy compliance is required. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available. The materiel holder will send the DLMS 856R to the SICA and the designated return-to activity, with a copy to the PICA when directed by the SICA. The PICA will be identified as the Party to Receive Status in the DLMS 856R. The PICA and SICA are not required to store the UIIs and/or serial numbers.

C11.9.2.3. If there is no DoD Component SICA for the items identified for automatic return by a PICA (e.g., Coast Guard), the PICA will provide the information to the appropriate DoD Component designated activity. The materiel holder will prepare and submit the DLMS 856R with UII(s) and/or corresponding serial numbers for NSNs containing an IUID Indicator Y, indicating that DoD IUID Supply Policy compliance is required. Capital equipment candidates require serialization data visibility and therefore must cite the serial number and include the UII when available. The materiel holder will send the DLMS 856R to the PICA and the designated return-to activity.

C11.9.2.4. For SICA-approved returns, the SICA will provide disposition instructions to the materiel holder under normal intra-Service implementing instructions. The materiel holder will prepare and submit the DLMS 856R with UII(s) and/or corresponding serial numbers for NSNs containing an IUID Indicator Y, indicating that DoD IUID Supply Policy compliance is required. The materiel holder will send the DLMS 856R to the SICA and the designated return-to activity. The SICA is not required

\(^5\) Refer to ADC 1043E.
to store the UIIs and/or serial numbers\textsuperscript{6}, with the exception of capital equipment candidates require serialization data visibility.\textsuperscript{7}

\textbf{C11.9.3. Automatic Return of Unserviceable Items.} When an unserviceable NIMSC 5 item is automatically returned or a replacement item will be requisitioned, DLMS 180M and later documentation will include Project Code 3AL. If a replacement for the unserviceable NIMSC 5 automatic return item will not be requisitioned (e.g., the returned item exceeds the returning activity’s authorization or requirement), DLMS 180M Automatic Return Notification and related documentation will not contain Project Code 3AL. The DLMS 180M to the PICA will contain the data elements specified for DLMS 180M Automatic Returns Notification Implementation Convention. After generation of the Automatic Return Notification, processing will occur as though there has been a DLMS 180M (Report of Available Assets to ICP/IMM) report and a DLMS 870M (From ICP/IMM), reply, along with other provisions of this chapter, excluding DLMS 180M (For Reply to Asset Report) and DLMS 870M (ICP/IMM Status to Customer).

\textbf{C11.9.4. Automatic Return of Unserviceable Items under Inter-Service Maintenance Agreement.} All unserviceable (SCC F) items requiring removal and return to the owner during maintenance performed under an inter-Service agreement, including DMISA, are designated for automatic return on an inter-Service basis. The owner/principal will designate the applicable storage activity for the return shipment. The maintenance activity/repair agent will notify the owner/principal of the return using the DLMS 180M Automatic Returns Notification (Action Code RF). Include Project Code 3HX in the return notification when requisitioning a replacement part and expecting credit for return of the unserviceable asset. The maintenance activity must provide the Automatic Return Notification prior to the physical return of the unserviceable materiel. Maintenance activities will submit the Automatic Return Notification two days prior to physical return whenever feasible; a minimum of twenty-four hours is required. This delay is necessary because the maintenance and storage activities are normally located in close proximity and it is vital that the owner/principal have sufficient time to furnish a Prepositioned Materiel Receipt (PMR) to the storage activity before the materiel arrives. Subsequent to generation of the Automatic Returns Notification, processing will occur as described for Project Code 3AL.\textsuperscript{8}

\textbf{C11.9.5. Restrictions.} No other inter-DoD Component use of DLMS 180M Automatic Return Notification is currently authorized.

\textbf{C11.9.6. Internal DoD Component Use.} The DoD Components may use DLMS 180M Automatic Return Notification internally for intra-DoD Component programs that do not conflict with other provisions of this manual.

\textsuperscript{6} ADC 1071, Implementation of DoD Item Unique Identification (IUID) Supply Policy in Version 4030 DLMS 856R Shipment Status Materiel Returns.

\textsuperscript{7} Refer to ADC 1198

\textsuperscript{8} Refer to ADC 1256. Staggered implementation authorized by December 2019.
C11.9.7. **Source of Supply Processing of Automatic Return Notification.** Upon receipt of DLMS 180M Automatic Return Notification, the SICA will establish a due-in and generate a PMR transaction to the receiving activity for the quantity in the DLMS 180M Automatic Return Notification transaction. The SICA will prepare the due-in and the PMR transaction under Chapter 12 procedures. Note: For unserviceable NIMSC 5 items, the SICA will send a DLMS 180M Automatic Return Notification, with data elements specified in C11.9.3, to the PICA. The PICA will establish the due-in and send the PMR transaction to the receiving depot.

C11.9.8. **OWNER/PRINCIPAL PROCESSING OF AUTOMATIC RETURN NOTIFICATION.** Immediately upon receipt of an Automatic Return Notification transaction from a maintenance activity/repair agent under an inter-Service agreement, including DMISA, the owner/principal will establish a due-in and generate a PMR transaction to the receiving activity for the quantity and SCC in the Automatic Return Notification transaction. The owner/principal will prepare the due-in and PMR transaction under MILSTRAP. Upon receipt of unserviceable returns for credit (Project Code 3HX), the owner/principal will provide credit under MILSBILLS procedures.”

C11.10. **DEFENSE AUTOMATIC ADDRESSING SYSTEM.** DAAS will do the following:

C11.10.1. **Route Using the RIC To.** DLMS 870M, Materiel Returns Supply Status; DLMS 856R, Materiel Returns Shipment Status; DLMS 812R, Adjustment Request (Follow-Up for Materiel Returns Program Credit); DLMS 180M, (Follow-Up for ICP/IMM Materiel Receipt Status); and DLMS 180M, Automatic Return Notification, will be passed to the activity represented by the RIC To.

C11.10.2. **Route Using the M&S Code.** DLMS 812L, Reply to Follow-Up for Credit Status; DLMS 870M, ICP/IMM Status Advising of Delay; DLMS 870M DAAS Customer Asset Report Status; DLMS 870M ICP/IMM Reply to Customer Asset Report; DLMS 870M, ICP/IMM Advice of Receipt or Non-Receipt of Materiel; and DLMS 870M, ICP/IMM Follow-Up, will be passed using the M&S code.

C11.10.3. **Route Using the RIC To when M&S Code is 9.** DLMS 180M, Cancellation; DLMS 180M, Customer Asset Report; and DLMS 180M, Customer Follow-Up to ICP/IMM, will be passed to the RIC To if the M&S code is 9.

C11.10.4. **Perform NSN/NIIIN Validation when M&S Code is not 9.** For DLMS 180M, Cancellation; DLMS 180M, Customer Asset Report; and DLMS 180M, Customer Follow-Up to ICP/IMM, DAAS will perform NSN/national item identification number (NIIN) validation and source of supply edit as follows:

- **C11.10.4.1. Correct NSN and Managed by ICP/IMM.** If the NSN is correct and managed by the ICP/IMM identified by the RIC To, Advice Code 3T will be entered in the advice segment and the document will be transmitted to that ICP/IMM.

- **C11.10.4.2. Correct NSN but Not Managed by ICP/IMM.** If the NSN is correct, but is not managed by the ICP/IMM identified in the RIC To, the correct ICP/IMM RIC will be entered, along with Advice Code 3T, and the transaction
transmitted to the correct ICP/IMM. DAAS will send the reporting activity a DLMS 870M, Materiel Returns Supply Status with Status Code TZ.

C11.10.4.3. Incorrect Federal Supply Classification. If the Federal supply classification (FSC)/NIIN/NSN validation indicates that the FSC is incorrect, the FSC will be changed and the RIC of the ICP/IMM will be changed where applicable. Advice Code 3T will be entered and the transaction transmitted to the managing ICP/IMM. DAAS will send the reporting activity a DLMS 870M, Materiel Returns Supply Status, with Status Code TZ.

C11.10.4.4. Routing Cannot be Accomplished. If routing to an ICP/IMM cannot be done by DAAS, the document will be passed to the activity identified by the RIC To.

C11.10.5. Validation by Signal Code. DAAS will validate DLMS180M, Materiel Returns Reporting (Automatic Return Notification From Customer to Supply Source), (Customer Asset Report (Report of Available Assets to ICP/IMM)), and (Customer Follow-Up to ICP/IMM (For Reply to Asset Report)), transactions for valid ship-from and credit-to addresses as designated by the signal code. If DAAS cannot identify the ship-from or credit-to address, the transactions will be rejected to the originating activity using DLMS 870M, Materiel Return Supply Status, with Status Code SK.

C11.10.6. Editing Part-Numbered Asset Reports. DLA will not accept DLMS180M, Materiel Returns Reporting, part-numbered asset reports. DAAS will reject all such reports with Status Code T9. DAAS will pass all part-numbered asset reports to the RIC present in the incoming transaction. The DoD Components may reject (Status Code T9) part-numbered assets not acceptable or recognized under internal procedures. Non-mechanical part-numbered transactions will not be processed by DAAS, but will be rejected for processing under intra-DoD Component procedures.

C11.10.7. Edit Rejects Containing Status Code SC. DAAS will edit DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), rejects containing Status Code SC or SD for correct ICP/IMM and FSC as follows:

C11.10.7.1. Correct NSN and ICP/IMM. If the NSN is correct and belongs to the rejecting ICP/IMM, the DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), will be converted to DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), with Advice Code 3T and sent to the ICP/IMM.

C11.10.7.2. Correct NSN But Wrong ICP/IMM. If the NSN is correct but not managed by the ICP/IMM, the DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), will be converted to DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), with Advice Code 3T and sent to the correct ICP/IMM. DAAS will send the reporting activity a DLMS 870M, DAAS Customer Excess Report Information Status, with Status Code TZ.

C11.10.7.3. Incorrect Federal Supply Classification. If the FSC is incorrect, DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), will be converted to
DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), with the correct FSC, with Advice Code 3T, and the document returned to the rejecting ICP/IMM or transmitted to the correct ICP/IMM. DAAS will send the reporting activity a DLMS 870M, DAAS Customer Excess Report Information Status, with Status Code TZ.

C11.10.7.4. Inactivated DLA/GSA/Navy Item in DAAS. If a DLA/GSA/Navy IMM has coded the item inactivated in DAAS records and a DLA, GSA, or Navy activity originated the reject document, DAAS will change the status code to TC and forward the DLMS 870M, Materiel Returns Supply Status from ICP/IMM to the reporting activity.

C11.10.8. Country Code Edit. DAAS will validate the DLMS 856R to ensure the country code is a valid value of the Geopolitical Entities, Names, and Codes (GENC) Standard. If not valid, the transaction will be rejected by DAAS using the DLMS 824R Reject Advice citing Reject Advice Code AU.  

C11.11. INVENTORY CONTROL POINT/INTEGRATED MATERIEL MANAGER PROCESSING OF CUSTOMER ASSET REPORTS

C11.11.1. Disposition Determination. ICP/IMM will process asset reports to determine disposition. Asset reports containing project codes assigned for specific returns program purposes (such as rollbacks and automatic returns) will be processed under the assigned controls. Assets required and offered using either Project Code RBB or 3AG will always be directed for return with credit; however, assets required and offered using Project Code 3AU will only be directed for return without credit.

C11.11.1.1. Response Timeframe. DLMS 870M, Materiel Returns Supply Status (From ICP/IMM) will be prepared to respond to asset reports no later than 30 calendar days from date of receipt of the DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM) transaction.

C11.11.1.2. Response After 30 Calendar Days. If a DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), cannot be provided within 30 calendar days, send DLMS 870M, Delay Status, with Status Code TR and enter an expected reply date when final disposition instructions are expected to be provided.

C11.11.1.3. Suffix Codes. Suffixes will be used to identify partial actions.

C11.11.2. Materiel Required. If it is determined that the materiel is required, forward DLMS 870M, Materiel Returns Supply Status (From ICP/IMM) citing Status Code TA, TB, TH, or TJ to the reporting activity. The ICP/IMM will establish a due-in for the quantity of materiel to be returned and generate DLMS 527D, PMR, transaction to the receiving depot.

C11.11.2.1. Shipment Time Allowed. Time allowed for shipment and return of materiel is 120 (CONUS) and 180 (OCONUS) days, and the counting starts with the day of posting of DLMS 856R, or the estimated shipping date cited in DLMS 870M. The

9 Refer to ADC 1075.
due-in estimated delivery date (EDD) will be updated upon receipt of a DLMS 856R or DLMS 870M Status to equal the time allowed for shipment and return of materiel.

C11.11.2.2. Materiel Not Received Within 120 or 180 Calendar Days. If the materiel is not received by the due-in EDD, or 30 days have elapsed since the transmission of DLMS 870M, ICP/IMM Follow-Up, without receiving a response, the ICP/IMM will take action to cancel the due-in and delete DLMS 527D transaction. DLMS 527D will also be canceled when DLMS 180M, Materiel Returns Reporting, is received from the customer activity. The EDD required for the due-in will be 120 calendar days (CONUS) and 180 calendar days (OCONUS) from the processing date of DLMS 870M Materiel Returns Supply Status (From ICP/IMM). The due-in estimated delivery date will be updated upon receipt of DLMS 870M, Materiel Returns Supply Status, or DLMS 856R, Shipment Status Materiel Returns (Customer Status to ICP/IMM).

C11.11.2.3. Cancellation of Due-In Not Precluding Other Requirements. Action taken to cancel the due-in and delete DLMS 527D, Due-in Advance Receipt, transaction does not preclude requirements prescribed in other DoD manuals and joint regulations to initiate tracer action and file discrepancy reports such as a Transportation Discrepancy Report (TDR) or Supply Discrepancy Report (SDR) on shipments not received, but for which shipment status has been received.

C11.11.3. Entering Priority Designators in DLMS. Enter priority designators (PD) in DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), documents as follows:

C11.11.3.1. PD 03. PD 03 will be used in the return of critical items and approved intensive management items (including serviceable local stocks).

C11.11.3.2. PD 06. PD 06 will be used in the return of materiel identified by the materiel manager as qualified for automatic return to the DoD distribution system.

C11.11.3.3. PD 13. PD 13 will be used in the routine return of materiel not covered above (except surplus and scrap) such as the return of local stocks to sources of supply.

C11.11.4. Non-processable Customer Asset Reports. DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), received by the ICP/IMM that cannot be processed will be rejected to the reporting activity using DLMS 870M, Materiel Return Supply Status (From ICP/IMM), status with the appropriate S_ series reject status code.

C11.11.5. Customer Asset Reports for Items Requiring Screening/Review. DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), received for items requiring extended screening/review will be suspended. The reporting activity will be sent a DLMS 870M, Materiel Returns Supply Status (ICP/IMM Status to Customer), with Status Code TR containing an estimated date of reply in the ESD field.
C11.11.6. **FSC Change Required.** If the determination has been made that an FSC change is required on a customer asset report (DLMS 180M, Materiel Returns Reporting), the correct FSC will be entered, the RIC To of the ICP/IMM will be changed, where applicable, and the DLMS 180M, Customer Asset Report, will be forwarded to the responsible ICP/IMM for processing. The reporting activity will be sent a DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), containing Status Code T7. The RIC of the forwarding ICP/IMM will be entered in the RIC field of the ICP/IMM representing the last known holder and will be entered as the RIC of the activity preparing the document.

C11.12. **INVENTORY CONTROL POINT/INTEGRATED MATERIEL MANAGER MATERIEL RECEIPT STATUS**

C11.12.1. **Notification of Receipt/Nonreceipt.** The ICP/IMM will prepare DLMS 870M, Materiel Returns Supply Status, to provide reporting activities with notification of materiel receipt or non-receipt on returns. DLMS 870M Materiel Returns Supply Status will be provided upon processing of the receipt for other than suspended condition materiel, or upon processing of inventory adjustment action moving assets from suspended condition to correct condition, or not less than 30 calendar days after DLMS 870M, Materiel Returns Supply Status (ICP/IMM Follow-Up), when no receipt or DLMS 856R, Shipment Status Materiel Returns, has been processed. Multiple DLMS 870M, Materiel Returns Supply Status, documents will be provided when a single shipment is received in more than one materiel condition. Use status codes in the DLMS 870M as follows:

C11.12.1.1. **Status Code TN.** Enter Status Code TN when credit is granted for the condition and quantity of materiel received.

C11.12.1.2. **Status Code TM.** Enter Status Code TM when reduced or no credit is allowed because the condition of materiel received is less than that authorized for return.

C11.12.1.3. **Status Code TL.** Enter Status Code TL when the materiel received is other than authorized for return and no credit is allowed.

C11.12.1.4. **Status Code TP.** Enter Status Code TP when the materiel is not received within prescribed timeframes, follow-up action has been unsuccessful, and the credit authorization is canceled.

C11.12.1.5. **Status Code TQ.** Enter Status Code TQ when the materiel has been received for an authorized non-creditable return.

C11.12.2. **Multiple DLMS 870Ms Required.** DLMS 870M, Materiel Returns Supply Status, will always show the document number, including suffix code, contained in the DLMS 180M, Materiel Returns Reporting, or DLMS 870M, Materiel Returns Supply Status (From ICP/IMM). When multiple DLMS 870M, Materiel Returns Supply Status, transactions are required for materiel received in different conditions, each DLMS 870M
produced will retain the document number and suffix of the DLMS 180M, Materiel Returns Reporting/DLMS 870M, Materiel Returns Supply Status (From ICP/IMM).

C11.13. PREPARATION AND PROCESSING OF SHIPMENT STATUS

C11.13.1. Preparation of Shipment Status. Shipment status provides information and normally requires no subsequent documentation. For NSNs containing an IUID Indicator Y, UII(s) and/or corresponding serial numbers must be included in the DLMS 856R, indicating that DoD IUID Supply Policy compliance is required. The exception to the forgoing in support of FIAR compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Submitters must prepare shipment status materiel return citing the applicable serial number(s) and include the UII when available. The DLMS 856R will be provided by the materiel holder and sent to both the ICP/IMM and the return-to activity.

C11.13.1.2. If the controlling document number for the return is the same as the customer’s original requisition for the item, a unique transportation control number (TCN), not derived from the original document number, must be created.

C11.13.1.3. Shipments containing IUID data content (e.g., UIIs and/or serial numbers) and requiring more than one freight piece to execute the movement must have a unique TCN assigned to each freight piece by using a partial indicator in the 16th position of the TCN. Multiple freight piece shipments using the same TCN for all related freight pieces are not authorized when IUID content is required or when capital equipment candidates that require serialization data visibility where the serial number is mandatory and UII is provided when available.

C11.13.2. ICPs/IMMs will receive shipment status transactions and update appropriate ICP/IMM records. Shipment status with UII(s) and/or corresponding serial numbers under DoD IUID Supply Policy requirements, will be received by ICP/IMM, but they are not expected to store and track by UII, with the exception of management of capital equipment candidates that require serialization data visibility. The shipment date indicated in DLMS 856R, Shipment Status Materiel Returns, is available to ICPs/IMMs to verify in-transit status and provide information on expected receipts. DLMS 856R received for items not under control of the ICP/IMM will be rejected to the reporting activity using DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), with reject Status Code SC. DLMS 856Rs that do not pass data field validity checks will be rejected to the reporting activity using DLMS 870M, with the appropriated S_ series status code.

C11.13.3. Shipment Advice. In the event that the ICP/IMM requires an advice of shipment to support related supply decisions and a DLMS 856R, Shipment Status Materiel Returns, has not been received, an ICP/IMM follow-up (DLMS 870M, Materiel Returns Supply Status) will be prepared and forwarded to the reporting activity. DLMS

---

11 Refer to ADC 1198
870M will not be generated until at least five calendar days have elapsed from the transmission of DLMS 870M (from ICP/IMM) for PD 03 or 50 calendar days for PD 13 and no DLMS 856R, Shipment Status Materiel Returns, or receipt has been posted. DLMS 870M with Status Code T3 may be generated upon expiration of the due-in timeframe when DLMS 856R has been received, but receipt has not been posted. The ICP/IMM is authorized to follow up without regard to the established timeframe when the need arises to satisfy PD 01-08 requirements.

C11.14. PROCESSING FOLLOW-UPS FROM REPORTING ACTIVITIES

C11.14.1. Types. Follow-ups submitted by reporting activities consist of three types:

C11.14.1.2. Follow-up for ICP/IMM Materiel Receipt Status (DLMS 180M, Materiel Returns Reporting (Follow-Up for ICP/IMM Materiel Receipt Status)).

C11.14.1.3. Follow-up for credit (DLMS 812R, Adjustment Request (Follow-Up for Materiel Returns Program Credit)).

C11.14.2. Determining Whether Original DLMS 180M was Received. On receipt of DLMS 180M, Materiel Returns Reporting (For Reply to Asset Report), the ICP/IMM will determine whether there is a record indicating that the original DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), was received.

C11.14.2.1. Record Established. If a record is established and DLMS 870M, Materiel Returns Supply Status (ICP/IMM Status to Customer), indicating delayed response was sent to the customer, a duplicate DLMS 870M will be provided. If a record is established and a DLMS 870M was not provided, one of the following actions will be initiated:

C11.14.2.1.1. In Process. If DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), transaction is in process, DLMS 870M, Materiel Returns Supply Status (ICP/IMM’s Status to Customer), will be sent to the customer with Status Code TR indicating the DLMS 180M is in process and DLMS 870M will be provided at a later date.

C11.14.2.1.2. Rejection. If DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), was rejected by the ICP/IMM as invalid, DLMS 180M will produce DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), to the reporting activity with the same status code used in the original DLMS 870M.

C11.14.2.2. No Record of Receipt. If no record of receipt exists for DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), the ICP will process the DLMS 180M as a new DLMS 180M and provide DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), as appropriate, to the reporting activity.
C11.14.3. Receipt of DS 180M, Follow-Up for ICP/IMM Materiel Receipt Status. On receipt of a DLMS 180M, Materiel Returns Reporting, ICP/IMM will review records and take action as follows:

C11.14.3.1. Received Materiel. If the records indicate that the materiel has been received and classified, transmit a DLMS 870M, Materiel Returns Supply Status, to the customer.

C11.14.3.2. Received Materiel Not Classified. If records indicate that the materiel has been received but not classified, the ICP/IMM will provide DLMS 870M, Materiel Returns Supply Status (From ICP/IMM) with Status Code TT to the customer.

C11.14.3.3. Materiel Not Located. If records indicate that the materiel has not been received, and if the materiel is not located after investigation, the reporting activity will be sent DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), with Status Code TU.

C11.14.5. Items Not Under Cognizance of the ICP/IMM. DLMS 180M, Materiel Returns Reporting (For Reply to Asset Report), received for items not under awareness of the ICP/IMM will be rejected to the reporting activity using DLMS 870M, Materiel Returns Supply Status (From ICP/IMM), with Status Code SC. DLMS 180M, Follow-up for ICP/IMM Reply to Customer Asset Report, that does not pass data field validity edits will be rejected to the reporting activity using DLMS 870M Status with the appropriate reject status code.

C11.15. CANCELLATION OF CUSTOMER ASSET REPORTS

C11.15.1. Reducing Quantity in All Applicable Cancellation Requests. Upon receipt of a customer cancellation (DLMS 180M, Materiel Returns Reporting), ICP/IMM will cancel or reduce the quantity in all applicable documents affected by DLMS 180M, including the decision to return, due-in record, PMR, and credit suspense, if applicable.

C11.15.2. Materiel Not Received by Due-In Estimate. The ICP/IMM will initiate cancellation (DLMS 870M, Materiel Returns Supply Status) action when materiel is not received by the due-in EDD or when materiel is not received and no response has been received within 30 calendar days after its DLMS 870M, ICP/IMM Follow-Up. ICP/IMM will also initiate cancellation when DLMS 856R, Shipment Status Materiel Returns, is not received within 120 calendar days (CONUS) or 180 calendar days (OCONUS) after receipt of DLMS 870M, Materiel Returns Supply Status.

C11.15.3. Cancellations Initiated by ICP/IMM. Cancellations started by the ICP/IMM or in response to DLMS 180M, Materiel Returns Reporting, will be done as follows:
C11.15.3.1. **Creditable Returns.** For creditable returns, notification of cancellation to the reporting activity will be made using DLMS 870M, Materiel Returns Supply Status, with Status Code TP.

C11.15.3.2. **Non-creditable Returns.** For non-creditable returns, notification of cancellation to the reporting activity will be made using DLMS 870M, Materiel Returns Supply Status, with Status Code TV.

C11.15.4. **Receipt of Shipment Status.** When DLMS 856R has been received, but material has not been received within the timeframe allotted under C11.11.2.1., action to cancel the due-in and PMR will be accomplished under Chapter 12 procedures.

C11.16. **INVENTORY CONTROL POINT/INTEGRATED MATERIEL MANAGER PROCESSING OF DLMS 180M CUSTOMER ASSET REPORTS, CANCELLATIONS, AND FOLLOW-UPS WHEN THE SUPPLY SOURCE HAS CHANGED**

C11.16.1. **Advice Code 3T.** Upon receipt of DLMS 180M, Materiel Returns Reporting, Cancellation of Customer Asset Report, or Customer Follow-Up to ICP/IMM (For Reply to Asset Report), transaction from DAAS with Advice Code 3T when the SOS has been changed, the losing ICP/IMM will arrange to change the FLIS and DAAS SOS files.

C11.16.2. **Losing Supply Source.** The losing ICP/IMM will prepare and transmit through DAAS DLMS 180M, Materiel Returns Reporting (Report of Available Assets to ICP/IMM), Cancellation of Customer Asset Report, and/or Customer Follow-Up to ICP/IMM (For Reply to Asset Report), transactions containing Advice Code 3U to the gaining SOS.

C11.16.3. **DAAS Action.** DAAS will pass DLMS 180M transactions, above, to the gaining SOS.

C11.17. **INVENTORY CONTROL POINT/INTEGRATED MATERIEL MANAGER LATERAL REDISTRIBUTION OF RETAIL ASSETS**

C11.17.1. **Purpose.** This paragraph outlines procedures for filling back orders by generating lateral redistribution orders for retail materiel that has been identified through an inter- or intra-DoD Component retail asset visibility system. Additionally, ICPs/IMMs may use these procedures to direct lateral redistribution when the total cost of such action is lower or when the wholesale level does not have stock available to meet a requisition’s required response time.

C11.17.2. **Backorder Supplied by Lateral Redistribution.** If a backorder is to be supplied by lateral redistribution of materiel identified by an inter- or intra-DoD Component retail asset visibility system, the lateral redistribution order (LRO) will contain appropriate data from the requisition, DLMS 940R, (Referral Order (For Domestic Shipment/With NSN/North Atlantic Treaty Organization (NATO) Stock Number)) in the document identifier, the RIC of the reporting activity, Distribution Code 2 for consumable materiel or Distribution Code 3 for reparable materiel, and the RIC of
the receiving ICP/IMM. The LRO will be forwarded through DAAS to the reporting activity. DLMS 945A, Materiel Release Advice (to ICP/IMM From Storage Activity) with Status Code BA will be provided to eligible status recipients.

C11.17.3. Reporting Activity Actions. The reporting activity will:

C11.17.3.1. Process the Lateral Redistribution Order on a Fill/Kill basis. Provide Status Code BA using DLMS 945A, Materiel Release Advice (to ICP From Storage Activity), for the quantity being filled and/or Status Code CB status for the quantity not being filled (killed) to the receiving activity, and include Distribution Code 2 or 3.

C11.17.3.2. Supply Substitutions. Substitutions are allowed if the requiring/activity/requisitioning activity and the supplying/holding activity are the same DoD Component. Do not substitute if the requiring/requisitioning activity and the supplying/holding activity are different DoD Components.

C11.17.3.3. Ensure Shipment. Ensure materiel is shipped, using DD Form 1348-1A, to the activity identified in the LRO as the “ship-to” addressee. When the materiel is shipped, send DLMS 856S, Shipment Status (To ICP/IMM From Reporting Activities for LRO Shipments of Retail Assets), to the activity identified as the receiving activity in the LRO. The DLMS 856S must include the DoDAAC and fund code of the activity to which the credit for the materiel and reimbursement for the packing, crating, handling, and transportation (PCH&T) costs is to be provided; and Signal Code B and Distribution Code 2 or 3. Conformance with SLOA/accounting classification requires any initiation of a financial business event to include SLOA mandated standard financial information system (SFIS) elements.\textsuperscript{12} The DLMS shipment status for ICP/IMM-directed lateral redistribution supports inclusion of SLOA required elements. Pending full implementation of SLOA, DAAS will facilitate interoperability by updating selected SLOA data fields based upon the reporting activity’s Service/Agency and Fund Code. If discrete values for the SLOA data elements in the transaction do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction, reject with the DLMS 824R Reject Advice citing Reject Advice Code BU. Retail activities will use Uniform Materiel Movement and Issue Priority System (UMMIPS) time standards for processing LROs directed by the ICP/IMM. If invalid/missing fund code for Signal Code A, B, C, J, K, or L, reject with the DLMS 824R Reject Advice citing Reject Advice Code BU.\textsuperscript{13}

C11.17.3.4. Establish Internal Records. Establish internal records to receive credit for the materiel and reimbursement for PCH&T costs and not generate billing instructions.

\textsuperscript{12} Refer to ADC 1043/ ADC 1043A.
\textsuperscript{13} Refer to ADC 1043E.
C11.17.4. **Inventory Manager Actions.** ICP/IMM will:

C11.17.4.1. **Update Estimated Ship Dates.** Use DLMS 945A, Materiel Release Advice (To ICP From Storage Activity), with Status Code BA and Distribution Code 2 or 3 to update ESDs.

C11.17.4.2. **Generate Follow-Ups.** Generate DLMS 940R, Materiel Release (From ICP/IMM to Reporting Activity or Storage Activity), follow-ups with Distribution Code 2 or 3 to the reporting activity as follows:

C11.17.4.2.1. When the initial Status Code BA or CB is not received on LROs within 10 calendar days.

C11.17.4.2.2. Upon receipt of Supply Status Code BA without an ESD and 10 calendar days have elapsed since the transaction date of the DLMS 945A, Materiel Release Advice (To ICP From Storage Activity), Supply Status Code BA.

C11.17.4.2.3. Upon Receipt of Supply Status Code BA with an ESD and the ESD has expired.

C11.17.4.2.4. When no response is received to the previous follow-up and 10 calendar days have elapsed. Continue to follow up until status is received, backorder is re-established, or final disposition.

C11.17.4.3. **Provide Reinstatement and Status Notification.** Reinstat the requisition and send appropriate status to eligible status recipients upon receipt of DLMS 945A, Materiel Release Advice (To ICP From Storage Activity)/Status Code CB with Distribution Code 2 or 3.

C11.17.4.4. **Generate Billing.** Upon receipt of DLMS 856S, Shipment Status (To ICP/IMM from reporting activities for LRO shipments of retail assets), with Distribution Code 2 or 3, generate billing transactions to the requisitioner and provide crediting transactions for the materiel and PCH&T under the procedures of MILSBILLS procedures, to the credit-to activity identified in DLMS 856S, Shipment Status. In addition, ICP/IMM will send DLMS 856S, Shipment Status (To DAAS From Service/Agency for Distribution), shipment status transaction to DAAS.

C11.17.4.5. **Create Customer Supply/Status Transactions.** When creating customer supply and status transactions as a result of processing DLMS 945A, Materiel Release Advice or DLMS 856S, Shipment Status Materiel Returns, transactions with Distribution Code 2 or 3, always use the distribution code that was in the original requisition.
C11.18. INTER-SERVICE LATERAL REDISTRIBUTION OF RETAIL ASSETS BY INTER-SERVICE AGREEMENT\textsuperscript{14}

C11.18.1. Inter-Service redistribution will not occur before wholesale-level requisitioning, except within theater at Combatant Commander direction or as authorized by inter-Service agreement for lateral support of high priority mission readiness requirements where stock is available within the area of responsibility.

C11.18.2. Prior to initiating MILSTRIP procedures for non-ICP/IMM-directed inter-Service lateral redistribution, the requiring Service must establish a support agreement with the retail/tactical level supply source and employ agreed upon asset visibility tools to ensure that materiel is available. High priority mission readiness requirements (PD 01-03 and Special Requirements Code N) may be submitted using a passing order requisition (DLMS 511R/DIC A3_ with Transaction Type code BM) identifying the retail source supply as the RIC-To. These transactions will bypass DAAS routing logic to the wholesale SoS. By alternative, the requiring Service may choose to skip the initiating requisition passing order transaction and request materiel in person as bearer walk-thru.

C11.18.3. Services supporting inter-Service lateral redistribution will ensure that only high priority mission readiness requisitions originated by pre-approved trading partners within the area of responsibility are honored. All such requisition passing orders will be processed on a fill or kill basis (Advice Code 2C or 2J). These requisitions are not subject to modification or follow-up; standard cancellation procedures apply. Transactional supply status will be provided regardless of initiating method (transaction or walk-thru). Upon receipt of BA status, the materiel will be available for pick-up by the requiring customer. Standard shipment status will be provided.

C11.18.4 The Service supply source has responsibility for preparation of Interfund billing and any required internal transactions associated with this method of lateral supply support.

C11.19. RETURNS TO DLA FROM INDUSTRIAL SITES UNDER BASE REALIGNMENT AND CLOSURE SUPPLY, STORAGE AND DISTRIBUTION AND NATIONAL INVENTORY MANAGEMENT STRATEGY SITE CUSTOMERS

C11.19.1. Industrial Sites Procedures

C11.19.1.1. The return of DLA-managed material will be accomplished without processing the standard MRP program transactions. The individual maintenance customer will determine when it has no immediate requirement for the materiel and will initiate the return process. The materiel will be physically returned to the DLA storage activity with the applicable documentation. The returning activity will provide a DLMS 527D, Due-In/Advance Receipt/Due Verification (MILSTRAP PMR (DIC DW_)), transaction to the storage activity identifying the DoD Component activity

\textsuperscript{14} Refer to ADC 1062. Initial implementation applicable to Global Combat Supply System-Army (GCSS-Army) and authorized trading partners. Phased implementation for shipment status is authorized.
to which the receipt will be reported. Upon notification of receipt by the storage activity by a DLMS 527R (MILSTRAP Materiel Receipt - Other Than Procurement Instrument Source (DIC D6A)), the Military Service activity will determine whether there is a need for the materiel by another maintenance user (backorder). If so, an issue document will be forwarded to the storage activity for action. If not, a materiel release order (MRO) will be initiated, directing shipment-in-place (citing the ship-to/supplemental address of the storage activity), authorizing a change of ownership to DLA. The receipt of the returned materiel from the Military Service ownership to DLA will be accomplished with a DLMS 527R Receipt (MILSTRAP DIC D6B).

C11.19.1.2. Upon notification of receipt, the DLA ICP will determine whether a corresponding sale to Service maintenance (identified by DoDAAC series/internal customer group) has occurred for the same materiel and condition code within a 60 day time frame. If there is a matching sale, the customer will receive credit equal to the original sale. The Service's financial system will be notified of a credit via a DLMS 810L, Logistics Bill (MILSBILLS Billing for Issue from Stock (Credit) (DIC FA2)).

C11.19.1.3. If no sale has occurred or the condition code differs from that on the original sale, DLA will provide credit based upon stock position. If the return quantity exceeds that of previous sales, credit will be provided equal to the original sale quantity and credit on the remaining quantity will be based upon stock position. DLA ICP business rules for determining whether to provide credit/credit amount are equivalent to the MRP program and policy contained in DoDM 4140.01. The Service's financial system will be notified of a credit via a DLMS 810L (MILSBILLS DIC FA2).

C11.19.2. National Inventory Management Strategy Procedures. Materiel returns from a NIMS site customer will be processed as per C11.19.1.1. through C11.19.1.3. including use of the PMR, receipt to the Military Service, followed by the MRO directing shipment-in-place triggering receipt to the DLA ICP. The DLA ICP will process the receipt and determine whether a sale has occurred for the same materiel, condition code, and customer within a 60 day time frame reflecting the exact same document number as the receipt (return) document. If there is an exact matching sale, the customer will receive credit equal to the original sale. Credit for any quantity returned over the original amount, in a different condition code from the original sale, or unmatched is subject to DLA ICP business rules equivalent to the MRP for determining whether to provide credit/credit amount.

C11.20. DIRECTED DISCREPANT/DEFICIENT MATERIEL RETURNS AND RETROGRADE RETURNS

C11.20.1. General Requirements. The DoD supply chain may require the return of supply items for a variety of reasons beyond the usual excesses turned in for credit under the materiel returns program (MRP) described earlier in this chapter. These can include the exchange of depot level repairable (DLR) Class IX repair parts as required by Military Services’ Exchange Pricing programs, the retrograde of forward-positioned retail stock back to a home location, and discrepant/deficient materiel returns directed by SDRs, Product Quality Deficiency Reports (PQDRs), or TDRs. In some cases,
logistics business rules require that the return use the same document number as the related order/sale. While this reuse may be appropriate for some materiel held at the customer’s location, it is not feasible for all situations. When the materiel is already located in a DLA Distribution Center and no physical shipment is required to return the materiel to the original owner/manager, the current owner must not reuse (or suffix) the original document number for the Prepositioned Materiel Receipt (PMR) and Materiel Release Order (MRO) directing the return. The responsible action activity must assign an alternative document number when materiel is located in a DLA Distribution Center and the current owner must use a ship-in-place MRO to direct the return or when the submitters system prohibits reuse of document numbers. Returning activities may ask for an alternative document number if the action activity does not provide one. When using a new document number for the directed return of discrepant/deficient materiel, the responsible activity and the returning activity must retain an audit trail linking the old and new document number/suffix. The PMR, Materiel Returns Shipment Status, and Receipt provide transactional visibility of the original and new document numbers. The directed return must identify the return-to location by DoDAAC or CAGE (used for contractors when no DoDAAC is assigned). Clear text addresses may be included in addition to the DoDAAC and must be included for returns directed to a contractor identified by a CAGE only. The use of a combination of enhanced return transactions and the addition of specific indicators to other transactions allows for the specific reporting of the transactions without confusion about the nature of the return and enable enhanced in-transit visibility (ITV) of these returns. The procedures also support recent process improvement initiatives related to requirements for directed returns.

C11.20.2. Associated Transactions. There are three DLMS transactions that contain specific content that support the procedures for retrograde and directed discrepant/deficient returns. They are the DLMS 527D, Pre-Positioned Materiel Receipt, DLMS 856R, Materiel Returns Shipment Status, and DLMS 842A/R Standard Supply Discrepancy Report Reply. A fourth transaction, the DLMS 842P, Product Quality Deficiency Report (PQDR), is pending implementation.\(^{15}\)

C11.20.2.1. A Pre-Positioned Materiel Receipt, DLMS 527D/MILSTRAP DW\_, is required for all returns to a DLA Distribution Center/Storage Activity. This requirement is applicable to DLMS-capable applications and MILSTRAP legacy applications. Detailed procedures associated with the PMR are listed in paragraph C11.20.3.

C11.20.2.2. A Materiel Returns Shipment Status, DLMS 856R with enhanced data content, is required from DLMS-capable customers to report directed returns to both the storage activity and the ICP/Integrated Materiel Manager (IMM) (or other Component designated activity). Detailed procedures associated with the materiel returns shipment status are listed in paragraph of C11.20.3.

C11.20.2.3. The materiel returns shipment status will include passive radio frequency identification (pRFID) when applicable. Under DoD IUID Supply Policy, the

\(^{15}\) Refer to ADC 1007 series.
DLMS materiel returns shipment status identifying capital equipment or NSNs containing an IUID Indicator Y in FLIS, must include serial numbers and the corresponding UIIs (when UII is available).

C11.20.2.4. Capital Equipment Candidates. In support of FIAR compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Submitters must process directed returns for SDR, PQDR TDR and retrograde returns citing the applicable serial number(s) and include the UII when available.16

C11.20.3. Detailed Procedures. The following paragraphs contain detailed procedures for return of supply items related to discrepant/deficient materiel as directed by an SDR, PQDR, or TDR response. This section also addresses retrograde of forward-positioned retail stock back to a home location.

C11.20.3.1. Supply Discrepancy Report

C11.20.3.1.1. When directing return of discrepant materiel, the SDR reply will include the suspense date by which the customer will return the materiel to the designated location. Expedited time standards under DoD or DoD Component policy will be applied to wrong item/misdirected/misidentified classified/sensitive item returns. ICP/IMs may also apply expedited time standards to overage returns for backordered materiel not available within another customer’s required delivery date. The activity directing the return will identify the return-to/ship-to location by DoDAAC or CAGE as described in paragraph C11.20.1.

C11.20.3.1.2. The organization responsible for the SDR reply will take action to establish a due-in and generate a PMR transaction to the receiving activity. The PMR will include the return quantity and the appropriate supply condition code. Action to establish the due-in and create the PMR transaction will be accomplished under MILSTRAP/DLMS. The PMR will perpetuate the document number associated with the SDR, normally the document number of the original shipment, or the alternative document number assigned by the activity directing the return as described in paragraph C11.20.1. The DLMS PMR will include a Return Type Code indicating the reason for return for which the PMR is established and will perpetuate the DoD WebSDR control number associated with the SDR.

C11.20.3.1.3. The PMR Due-in EDD indicating the time allowed for shipment and return of discrepant materiel will be based upon the date of the SDR reply directing the return. The EDD will be calculated based upon the date of the initial SDR reply directing return. (This may be a reply from the storage activity when action activity responsibility has been delegated by the ICP/IM.) The EDD is a “not to exceed” time standard established for system processing and does not necessarily equal the number of days identified in the SDR reply. The return-by date may be dictated by policy or by

16 Refer to ADC 1198.
need. PMR time standards are shown in Table C11.T1., PMR Due-In Estimated Delivery Date for SDRs.

Table C11.T1. Pre-Positioned Materiel Receipt Due-In Estimated Delivery Date for Supply Discrepancy Reports

</tr>
</tbody>
</table>

C11.20.3.1.4. The returning activity will prepare the DLMS 856R, materiel returns shipment status citing the Return Type Code, identifying the reason for return for which the materiel returns shipment status is provided. If the controlling document number for the directed return is the same as the customer’s requisition, a unique transportation control number (TCN) (not derived from the original document number) will be identified. The shipment status will perpetuate the DoD WebSDR control number (required where electronic interface is available to facilitate inclusion of this data content). The materiel returns shipment status will include pRFID, and for NSNs containing an IUID Indicator Y, UII(s) and/or corresponding serial numbers must be included in the DLMS 856R, indicating that DoD IUID Supply Policy compliance is required. Shipment returns containing IUID data content (e.g., UIIs and/or serial numbers or for capital equipment candidates serial number and UII if available) and requiring more than one freight piece to execute the movement must have a unique TCN assigned to each freight piece by using a partial indicator in the 16th position of the TCN. Multiple freight piece shipments using the same TCN for all related freight pieces are not authorized when IUID content is required. The shipment status will be directed to the ICP/IMM (or other organization that directed the return). With the exception of capital equipment candidates that require serialization data visibility, the ICP/IMM (or other organization directing the return) is not required to store the UIIs and/or serial numbers. The shipment status will also be directed to the return-to activity when identified by DoDAAC. DAAS will transmit to DLMS capable activities as identified.

C11.20.3.1.5. Upon receipt of materiel returns shipment status, the ICP/IMM will recalculate the EDD to equal the original time allowed for shipment and return of materiel (i.e., reset the EDD using the date of the shipment status as the starting date, comparable to MILSTRIP MRP EDD procedures) and provide a replacement PMR to the receiving location. This action will ensure that both records have the same EDD date.

C11-30 CHAPTER 11
C11.20.3.1.6. The ICP/IMM and the International Logistics Control Office (ILCO) will monitor for directed returns. Follow-up action is required where classified/sensitive materiel has not been returned by the EDD. The ICP/IMM will use automated research tools to determine status where applicable: query for materiel returns shipment status in WEB Visual Logistics Information Processing System (WEBVLIPS), transportation shipment status in Integrated Data Environment (IDE)-Global Transportation Network (GTN) Convergence (IGC), and Report of Shipment (REPSHIP) in Intelligent Road/Rail Information Server (IRRIS). Offline communication with the shipper may be necessary to determine the status of the materiel. The ICP will verify that proper discrepancy procedures are followed for materiel reported as in-transit and not received. If shipment was delayed an updated EDD will be identified and disseminated.

C11.20.3.1.7. For nonclassified/sensitive returns, in the event that the ICP/IMM requires advice of shipment to support related supply decisions and neither the materiel nor shipment status has been received, the ICP/IMM may follow-up with the customer. Follow-up for nonclassified/sensitive returns is optional except when return shipment status was provided and materiel was not received. If the nonclassified/sensitive returns are not received by the EDD and no transportation shipment status in IGC exists and no materiel returns shipment status was provided or the customer is non-responsive to ICP/IMM follow-up, the ICP/IMM will initiate cancellation of the due-in/PMR and take appropriate financial action (e.g., reversal of credit previously provided or billing for materiel not returned). If the EDD was reset based upon shipment status and the materiel is not received by the new EDD, the ICP/IMM will follow-up with the shipper to determine the status of the return. The ICP will verify that proper discrepancy procedures are followed for materiel reported as in-transit and not received.

C11.20.3.2. Product Quality Discrepancy Report

C11.20.3.2.1. When directing return of deficient materiel/exhibits to storage activities, the PQDR reply will include the date by which the customer will return the materiel to the designated location. The responsible activity may apply an expedited time standard to Type I PQDRs or as appropriate. The ICP/IMM will identify the return-to location will be identified by DoDAAC or CAGE/clear text as described in paragraph C11.20.1.

C11.20.3.2.2. When directing return of deficient materiel/PQDR exhibit, the ICP/IMM will establish a due-in and generate a PMR transaction to the receiving activity for the materiel return/exhibit quantity using SCC Q. Action to establish the due-in and create the PMR transaction will be accomplished under MILSTRAP/DLMS by the activity directing the return. The PMR will perpetuate the document number associated with the PQDR, normally the document number of the original shipment or the alternative document number assigned by the activity directing the return as described in paragraph C11.20.1. If the submitter does not have the original shipment document
number available, a constructed document number will be employed for the PMR, the return shipment, and future financial actions. The DLMS PMR will include the Return Type Code indicating the reason for the PMR as return of quality deficient materiel and will perpetuate the PQDR report control number (RCN).

C11.20.3.2.3. The PMR due-in EDD indicating the time allowed for shipment and return of deficient materiel will be based upon the date of the PQDR reply directing the return. The EDD is a “not to exceed” time standard established for system processing and does not necessarily correlate to the PQDR reply return-by date which may be dictated by other criteria. See Table C11.T2., PMR Estimated Delivery Date Days for Product Quality Deficiency Reports, to establish the EDD.

Table C11.T2. Pre-Positioned Materiel Receipt Estimated Delivery Date Days for Product Quality Deficiency Reports

<table>
<thead>
<tr>
<th>EDD</th>

</tr>
<tr>
<td>195 calendar days</td>
<td>Security Assistance returns</td>
</tr>
</tbody>
</table>

C11.20.3.2.4. The returning activity will prepare DLMS 856R, materiel returns shipment status citing the Return Type Code indicating the reason for the directed return is the same as the customer’s requisition, a unique TCN (not derived from the original document number) will be identified. The materiel returns shipment status will perpetuate the PQDR RCN. The materiel returns shipment status will include pRFID, and for NSNs containing an IUID Indicator Y, UII(s) and/or corresponding serial numbers must be included in the DLMS 856R, indicating that DoD IUID Supply Policy compliance is required. Shipment returns containing IUID data content (e.g., UIIs and/or serial numbers or for capital equipment candidates requiring serial numbers and UIIs if available) and requiring more than one freight piece to execute the movement must have a unique TCN assigned to each freight piece by using a partial indicator in the 16th position of the TCN. Multiple freight piece shipments using the same TCN for all related freight pieces are not authorized when IUID content is required. The shipment status will be directed to the ICP/IMM (or other organization that directed the return). With the exception of capital equipment candidates that require serialization data visibility, the ICP/IMM (or other organization directing the return) is not required to store the UIIs and/or serial numbers. The shipment status will also be directed to the return-to activity when identified by DoDAAC. DAAS will transmit to DLMS capable activities as identified.
C11.20.3.2.5. Upon receipt of materiel returns shipment status, the ICP/IMM will recalculate the EDD to equal the original time allowed for shipment and return of materiel (i.e., reset the EDD using the date of the shipment status as the starting date, comparable to MILSTRIP MRP EDD procedures) and provide a replacement PMR to the receiving location. This action ensures that both records have the same EDD.

C11.20.3.2.6. The ICP/IMM and the ILCO will monitor for directed returns. Follow-up with customers is required where materiel/PQDR exhibit has not been returned by the EDD. The ICP/IMM will use automated research tools to determine status where applicable: query for materiel returns shipment status in WEBVLIPS, transportation shipment status in IGC, and REPSHIP in IRRIS. The ICP will verify that proper discrepancy procedures are followed for materiel reported as in-transit and not received. The originator of the PMR will cancel the PMR if circumstances have changed and materiel will not be returned as directed. The PMR will be cancelled and a new PMR established if the originally planned receiving location is changed.

C11.20.3.3. Transportation Discrepancy Report

C11.20.3.3.1. When directing return of materiel associated with a TDR, the TDR reply will include the date by which the reporting activity will return the materiel to the designated location. The responsible activity may apply an expedited time standard as appropriate. The activity directing the return will identify return-to location identified by DoDAAC or CAGE/clear text as described in paragraph C11.20.1.

C11.20.3.3.2. When directing return of discrepant materiel, the ICP/IMM responsible for the TDR reply will take action to establish a due-in and generate a PMR transaction to the receiving activity for the quantity in the TDR reply. Action to establish the due-in and create the PMR transaction will be accomplished under MILSTRAP/DLMS. The PMR will perpetuate the return document number associated with the document number of the original shipment or as assigned by the ICP/IMM as described in paragraph C11.20.1. The DLMS PMR will include a Return Type Code indicating the reason for the PMR as return of transportation-related discrepant materiel and will perpetuate the control number associated with the TDR.

C11.20.3.3.3. The PMR due-in EDD indicating the time allowed for shipment and return of deficient materiel will be based upon the date of the TDR response directing the return. The EDD is a “not to exceed” time standard established for system processing and does not necessarily correlate to the TDR reply return-by date, which may be dictated by other criteria. See Table C11.T3., Due-In Estimated Delivery Date for Transportation Discrepancy Report, to establish the EDD.
Table C11.T3. **Due-In Estimated Delivery Date for Transportation Discrepancy Report**

<table>

</tr>
<tr>
<td>195 calendar days</td>
<td>Security Assistance returns</td>
</tr>
</tbody>
</table>

C11.20.3.3.4. The returning activity will prepare DLMS 856R materiel returns shipment status citing a Return Type Code indicating the reason for the shipment status is applicable to a TDR directed return. If the controlling document number for the directed return is the same as the original shipment, a unique TCN (not derived from the original document number) will be identified. The materiel returns shipment status will perpetuate the TDR control number. The materiel returns shipment status will include pRFID, and for NSNs containing an IUID Indicator Y, Ull(s) and/or corresponding serial numbers must be included in the DLMS 856R, indicating that DoD IUID Supply Policy compliance is required. Shipment returns containing IUID data content (e.g., UIIs and/or serial numbers or capital equipment candidates requiring serial numbers and UIIs if available) and requiring more than one freight piece to execute the movement must have a unique TCN assigned to each freight piece by using a partial indicator in the 16th position of the TCN. Multiple freight piece shipments using the same TCN for all related freight pieces are not authorized when IUID content is required. The shipment status will be directed to the ICP/IMM (or other organization that directed the return). With the exception of capital equipment candidates that require serialization data visibility, the ICP/IMM (or other organization directing the return) is not required to store the UIIs and/or serial numbers. The shipment status will also be directed to the return-to activity. DAAS will transmit to DLMS capable activities as identified.

C11.20.3.3.5. Upon receipt of materiel returns shipment status, the ICP/IMM will recalculate the EDD to equal the original time allowed for shipment and return of materiel (i.e., reset the EDD using the date of the shipment status as the starting date, comparable to MILSTRIP MRP EDD procedures) and provide a replacement PMR to the receiving location. This action will ensure that both records have the same EDD date.

C11.20.3.3.6. The ICP/IMM and ILCO will monitor for receipt. Follow-up with customers is required where materiel has not been returned by the EDD. The ICP/IMM will use automated research tools to determine status where applicable: query for materiel returns shipment status in WEBVLIPS, transportation shipment status in IGC, and REPSHIP in IRRIS. The ICP will verify that proper discrepancy procedures are followed for materiel reported as in-transit and not received. The originator of the PMR will cancel the PMR if circumstances have changed and materiel will not be
returned as directed. The PMR will be cancelled and a new PMR established if the originally planned receiving location is changed.

C11.20.3.4. Retrograde Returns. These procedures apply to returns for which materiel returns shipment status (DLMS 856R/DIC FTM) is not provided under the above MILSTRIP Materiel Returns Program.

C11.20.3.4.1. When directing return of materiel (for return, replacement, or other reason), the ICP/IMM will include the date by which the reporting activity will return the materiel to the designated location and the applicable PD. The return-to location will be identified by DoDAAC or CAGE. Clear text addresses may be included to facilitate the return since not all customers have ready access to an authoritative source for address information. Retrograde returns that are not subject to ICP/IMM direction will be returned in accordance with DoD Component procedures.

C11.20.3.4.2. When directing return of materiel the ICP/IMM will establish a due-in and generate a PMR transaction to the receiving activity for the applicable quantity. Action to establish the due-in and create the PMR transaction will be accomplished under MILSTRAP/DLMS. Where the returning activity self-initiates the return, the returning activity will be responsible for preparation of the PMR. The PMR will perpetuate the return document number. The DLMS PMR will include a Return Type Code indicating the reason for the PMR as return of materiel for repair (including exchange price returns)/retrograde movement.

C11.20.3.4.3. The PMR EDD indicating the time allowed for shipment and return of deficient materiel will be based upon the date of the directed return or generation of PMR where the return is initiated by the returning activity. The EDD is a “not to exceed” time standard established for system processing and does not necessarily correlate to the reply return-by date when applicable since that date may be dictated by other criteria. See Table C11.T4., PMR EDD Time Standard for Retrograde Returns, to establish the EDD.

Table C11.T4. Pre-Positioned Materiel Receipt Estimated Delivery Date Time Standard for Retrograde Returns

<table>

</table>

C11.20.3.4.4. The returning activity will prepare DLMS 856R materiel returns shipment status citing a Return Type Code indicating the reason for the shipment status is applicable to return/retrograde movement. The materiel returns shipment status will perpetuate the associated document number. A unique TCN (not derived from the original document number) will be identified. A customer reference
number may be included when applicable to identify the original requisition document number. The materiel returns shipment status will include pRFID, and for NSNs containing an IUID Indicator Y, UII(s) and/or corresponding serial numbers must be included in the DLMS 856R, indicating that DoD IUID Supply Policy compliance is required. Shipment returns containing IUID data content (e.g., UIIs and/or serial numbers or capital equipment candidates requiring serial numbers and UIIs if available) and requiring more than one freight piece to execute the movement must have a unique TCN assigned to each freight piece by using a partial indicator in the 16th position of the TCN. Multiple freight piece shipments using the same TCN for all related freight pieces are not authorized when IUID content is required. The shipment status will be directed to the ICP/IMM (or other organization that directed the return). With the exception of capital equipment candidates that require serialization data visibility, the ICP/IMM (or other organization directing the return) is not required to store the UIIs and/or serial numbers. The shipment status will also be directed to the return-to activity when identified by DoDAAC. DAAS will transmit to DLMS capable activities as identified.

C11.20.3.4.5. Upon receipt of materiel returns shipment status, the ICP/IMM will recalculate the EDD to equal the original time allowed for shipment and return of materiel (i.e., reset the EDD using the date of the shipment status as the starting date, comparable to MILSTRIP MRP EDD procedures) and provide a replacement PMR to the receiving location. This action ensures that both records have the same EDD date.

C11.20.3.4.6. The ICP/IMM will monitor for receipt. Follow-up with the returning activity is required where materiel has not been returned by the EDD. The ICP/IMM will use automated research tools to determine status where applicable: query for materiel returns shipment status in WEBVLIPS, transportation shipment status in IGC, and REPSHIP in IRRIS. The ICP will verify that proper discrepancy procedures are followed for materiel reported as in-transit and not received. The originator of the PMR will cancel the PMR if circumstances have changed and materiel will not be returned as directed. The PMR will be cancelled and a new PMR established if the originally planned receiving location is changed.
C12. CHAPTER 12

DUE-IN AND PRE-POSITIONED MATERIEL RECEIPT

C12.1. GENERAL

C12.1.1. Standard Procedures. This chapter prescribes standard procedures for sending information about incoming materiel between wholesale managers and storage activities and between owner/managers and maintenance activities, and between losing inventory managers (LIM) and gaining inventory managers (GIM). The procedures require timely establishment of due-in information for all anticipated receipts of materiel, and requires that managers provide receiving storage activities with information for anticipated receipts.

C12.1.2. Control of Due-In Records for Materiel Receipt Acknowledgement. The control of due-in records below the wholesale level to accommodate the DoD closed-loop materiel receipt acknowledgment (MRA) process is addressed in Chapter 10.

C12.1.3. Consignment of Materiel to Storage Activities. Documentation covering consignment of materiel to storage activities is prescribed in the DoD Component publications. These documents are used, together with information developed by inspection and classification procedures, as source data for documenting transactions in terms of this manual. The distribution of disbursement, procurement, and transportation documentation by storage activities is also governed by existing publications and is, therefore, not a consideration here.

C12.1.4. Transactions. This chapter addresses the procedures applicable to the following Accredited Standards Committee (ASC) X12 transaction functions identified by their beginning segment and transaction type code. Other DLMS formats, such as extensible markup language (XML), are also available. See the Defense Logistics Management Standards Website for available formats on the DLMS IC page. The corresponding MILSTRAp legacy 80 record position functionality is identified for information purposes in a mixed DLSS/DLMS environment.

C12.1.4.1. Due-in Transaction is identified by the DLMS 527D ASC X12 beginning segment (1/BR02/020) Transaction Type Code DA – Due-in. This transaction provides MILSTRAp legacy DIC DD_/DF_ functionality.

C12.1.4.2. Advance Receipt Information Transaction identified by the DLMS 527D ASC X12 beginning segment (1/BRO2/020) Transaction Type Code DE – Advance Receipt. This transaction provides MILSTRAp legacy DIC DU_/DW_ functionality.

C12.1.4.3. Delinquent Due-in Inquiry Transaction is identified by the DLMS 527D ASC X12 beginning segment (1/BR02/020) Transaction Type Code TJ –
Delinquent Due-in Inquiry. This transaction provides MILSTRAP legacy DIC DLC functionality.

C12.1.4.4. Delinquent Due-in Advice Transaction is identified by the DLMS 527D ASC X12 beginning segment 91/BRO2/020) Transaction Type Code TI – Delinquent Due-in Advice. This transaction provides MILSTRAP legacy DIC DLD functionality.

C12.1.4.5. Due-in Reconciliation Inquiry Transaction is identified by the DLMS 527D ASC X12 beginning segment (1/BRO2/020) Transaction Type Code LC – Due-in Reconciliation Inquiry. This transaction provides MILSTRAP legacy DIC DLE functionality.

C12.1.4.6. Due-in Reconciliation Advice Transaction is identified by the DLMS 527D ASC X12 beginning segment (1/BRO2/020) Transaction Type Code TK – Due-in Reconciliation Advice. This transaction provides MILSTRAP legacy DIC DLF functionality.

C12.1.5. Use of DLMS 527D. Use the DLMS 527D functionality as follows:

C12.1.5.1. Owners/integrated material managers (IMM) use to establish pre-positioned materiel receipt (PMR) at the storage activity. Prepositioned materiel receipt (PMR) was previously known as advanced receipt information (ARI).

C12.1.5.2. GIMs use for due-in reconciliation and to inquire about delinquent due-in transactions

C12.1.5.3. LIMs use to provide the GIM with memorandum due-in information, to respond to GIM due-in reconciliations and inquiries, and to provide the GIM revised due-in estimated delivery dates (EDD) as changes occur.

C12.2. CONTROL OF MATERIEL DUE-IN

C12.2.1. Establishing Due-In Records. IMM will establish due-in records for all anticipated receipts of materiel to maintain property accountability or visibility of materiel due-in to inventory, as required under Chapter 6.

C12.2.2. Keep Current Status. IMM shall keep due-in records in a current status. Use revised delivery schedules, notification of shipment or delayed shipment, repair schedules and repair schedule changes, contracts and contract changes, customer and manager cancellations, materiel receipts, and completion of shipment tracer/discrepancy reporting actions to establish, revise, and delete due-in records and maintain appropriate delivery dates. Refer to Chapter 11, C11.20. for specific content and estimated delivery date requirements for PMR associated with directed discrepant/deficient materiel returns and retrograde returns.

C12.2.3. Audit Trail. IMM will establish an audit trail when deleting or reversing due-in quantities. All due-in deletions and reversals will interface with the financial
system. Due-in deletions and reversals are prohibited without advance coordination between the supply and financial functions, and with the procurement function for dues-in from procurement instrument sources, unless the supply, financial, and procurement systems are fully integrated. When deleting or reversing due-in quantities, managers will initiate action to correct the receiving storage activity’s PMR file under C12.3.3.

C12.2.4. **Supply and Financial Interface.** The DoD Components will establish the necessary interface between supply and financial operations/functions to account for materiel in-transit as required under DoD 7000.14-R, “Department of Defense Financial Management Regulation”.

C12.2.5. **In-Transit Due-In Procedures.** IMMs will monitor due-in records and inquire to storage activities for information on in-transit dues-in under the procedures in Chapter 13.

C12.2.6. **Product Quality Deficiency Materiel.** When IMMs direct materiel for return based on a reported product quality deficiency, they will prescribe use of Supply Condition Code (SCC) Q in the disposition instructions to the returning activity. IMMs will establish and monitor due-ins for all returns of potential/confirmed product quality deficiency related materiel, citing the document number included in the report. Provide PMRs for the returns to receiving storage activities, under C12.3, citing the due-in document number and SCC.

C12.2.7. **Product Quality Deficiency Report (PQDR) Exhibit Tracking.** When establishing a PMR for a PQDR exhibit, the activity directing the return must include the PQDR Report Control Number (RCN) to facilitate exhibit tracking. When the receipt is processed, the receiving activity will perpetuate the PQDR RCN from the PMR to the receipt transaction.

C12.3. **PROVIDING THE STORAGE ACTIVITY WITH PRE-POSITIONED MATERIEL RECEIPT**

C12.3.1. **Due-In Information Requirements.** Owners/managers will provide maintenance and storage activities with due-in information for scheduled materiel receipts by providing them with PMR transactions. For due-ins from procurement instrument sources, IMMs will include applicable contract information and packaging data, to facilitate the receiving process and reduce the need for hard copy contracts at the receiving activity. As part of the contract information, the IMM will include indicators identifying whether the contract required unique identification (UID) or passive Radio Frequency Identification (pRFID). If the owner/manager fails to generate a PMR for DLMS 527D receipt, the distribution center will submit a Supply Discrepancy Report to the owner/manager.

C12.3.2. **Storage Activity Requirements.** Storage activities receiving DLMS 527D will keep them in an PMR file pending receipt of the materiel or the receipt of updates to

---

1 DLA DSS will implement these new procedures IAW Approved DLMS Change (ADC) 172 in January 2007, enabling DSS to use the indicator when the IMM provides it in the 527D PMR transaction.
the PMR from the IMM. Storage activities may use the PMR contract information and packaging data to facilitate the receiving process.

C12.3.2.1. **Passive RFID.** PMR notice that a shipment contractually requires passive RFID will allow preplanning so that the incoming shipment may be directed for offloading at the RFID reader location and provides a basis for submission of a Supply Discrepancy Report (SDR) in accordance with SDR procedures should the vendor fail to employ the required RFID.

C12.3.2.1.1. Upon request of the IMM, Defense Automatic Addressing System (DAAS) is authorized to support DLMS implementation of this process by inserting the pRFID indicator in the PMR as the transaction processes through the DAAS. IMMs will provide specific criteria for use by the DAAS to prevent improper assignment of the indicator. This DAAS procedure is an interim “work-around” pending IMM implementation of integrated logistics and contract administration processes so that the contractual requirement for pRFID can be programmatically identified and positioned in the PMR transaction.²

C12.3.2.1.2. DAAS will maintain a table containing criteria to be used in determination of applicable PMRs. Criteria may specify excluded contract numbers, excluded commodities (by FSG or FSC), Service/Agency originating the PMR, specific characters within the contract number, and location of the storage activity (e.g. CONUS).

C12.3.2.2. **Item Unique Identification.** PMR notice that a shipment contractually requires item unique identification (IUID) provides a basis for submission of supply discrepancy reports (SDR) in accordance with SDR procedures, should the vendor fail to employ the required IUID.

C12.3.3. **PMR.** IMMs will send PMR transactions and PMR transaction reversals as due-in records are revised so that receiving storage activities can maintain the records to show status equivalent to IMM due-in records. IMMs will send PMR reversals to the storage activities when deleting due-in records. IMMs will also send PMR reversals when revising due-in records (e.g., dates, quantities, destinations) and simultaneously send replacement PMR transactions showing revised due-in record data.

C12.3.4. **Optional National Inventory Management Strategy (NIMS) Advanced Receipt Notification.** Under the NIMS concept of operation, the IMM may own materiel for managed NSNs down to the retail level. Such arrangements will be based on agreements between participating DoD Components. Replenishment of IMM owned retail will be accomplished under a push scenario. When assets are available to push, PMR will be sent to the NIMS site using standard PMR procedures. Optionally, the DoD Component agreements may authorize the use of PMR for the IMM to notify the NIMS.

² Refer to ADC 297, DAAS Passive Radio Frequency Identification (pRFID)-Required Exclusion Table for DLMS 527D PMR/Prepositioned Materiel Receipt (PMR). At the time of implementation, DLA is the only participating Component.
site that materiel to support their replenishment requirement is delayed. In this instance, PMR will contain the quantity not available for push replenishment, the Delay Notification Code BD and an estimated shipping date. If at the time push replenishment is required, only a partial quantity is available, then two PMR transactions will be generated; one for the quantity pushed and one for quantity delayed. These transactions will have different document numbers and the delayed one will have the BD Delay Notification Code. Later, if only a partial amount of the quantity previously delayed becomes available to push, two PMR transactions will be generated. The one for the quantity pushed will maintain the document number of the original delayed notification with the “BD” indicator eliminated. The PMR for the quantity still delayed must be assigned a new document number and a BD Delay Notification Code. If the total quantity is initially delayed and later the total quantity is shipped, PMR must have the same document number throughout the process. The IMM will update/replace the PMR delayed notification anytime either the replenishment quantity or the estimated shipping date changes. New delayed notification must maintain the same document number unless a partial push occurs. Replacement delayed notification under the same or new document number will not require the reversal of the previous PMR transaction. Reversal logic for PMR transactions indicating that a push shipment has been initiated will follow the requirement in C12.3.3.

C12.3.5. PMR for Materiel Returns under NIMS and Base Realignment and Closure (BRAC) Retail Supply, Storage and Distribution (SS&D)/Inventory Management and Stock Positioning (IMSP). The PMR is used in a variation of the materiel returns program for processing DLA-managed materiel returns to DLA from selected sites in support of the BRAC SS&D/IMSP and NIMS. The returning activity will be responsible for submission of an PMR to the storage site identifying the Military Service activity to which the receipt will be reported for these returns of DLA-managed items. Because the Military Service sites will no longer retain retail stock balances under these programs, DLA will assume ownership of all materials regardless of asset position. Upon notification of receipt of returned materiel by the storage activity via a Receipt Transaction (DLMS 527R Receipt with 2/LIN01/10 Code I; MILSTRAP DIC D6A), the Military Service activity will determine if there is a need for the material by another maintenance user (backorder). If so, an issue document will be forwarded to the storage activity for action. If not, a materiel release order will be initiated, directing shipment-in-place (citing the ship-to/supplemental address of the storage activity), authorizing a change of ownership to DLA. The receipt of the returned materiel from the Military Service ownership to DLA will be accomplished with a receipt (DLMS 527R Receipt with 2/LIN01/10 Code J; MILSTRAP DIC D6B).

C12.4. LOAN MATERIEL

C12.4.1. Use appropriate adjustment and/or receipt/due-in transactions to show the on-hand/due-in and later receipts. Show materiel on loan on owner records in the appropriate purpose code (as prescribed by the DoD Component procedures) or as a nonprocurement source due-in citing Reason for Materiel Receipt/Return Code H depending on the method/system applied.
C12.4.2. Owners/IMMs may use PMR transactions to provide advance notification to activities scheduled to receive returned loaned materiel. See DLMS Volume 2, Chapter 13 paragraph C13.2.10. Loaned Materiel for additional details.

C12.5. LOGISTICS REASSIGNMENT MEMORANDUM DUE-IN AND PREPOSITIONED MATERIEL RECEIPT

C12.5.1. Memorandum Due-In. The LIM will send a memorandum due-in information transactions as of the effective transfer date (ETD) to the GIM, for both awarded contracts and unawarded purchase requests. Quantities will show only what is available for transfer. The GIM will process valid memorandum due-in transactions to establish memorandum due-in records. If the GIM receives a memorandum due-in transaction for an item not involved in a logistics reassignment, the GIM will reject the transaction back to the initiator using DLMS 824R, Reject Advice, citing Reject Advice Code AY.

C12.5.2. Destination Change. Under DoD 4140.26, “Defense Integrated Materiel Management for Consumable Items”, Volume 4, “Logistics Reassignment” Change 1, December 14, 2017, the LIM will take action to change the destination of undelivered purchases upon request of the GIM. Upon changing the quantity due-in/destination, the LIM will prepare and send a memorandum due-in reversal and a new memorandum due-in to the GIM. Additionally, when an award is made for an unawarded purchase request, the LIM will prepare and send a memorandum due-in reversal and a new memorandum due-in transaction to the GIM and a PMR transaction to the applicable storage activity.

C12.6. LOGISTICS REASSIGNMENT DUE-IN VALIDATION

C12.6.1. Due-In Inquiry

C12.6.1.1. Inquiry for Due-In with Expired EDD. The GIM will initiate a DLMS 527D due-in inquiry when the EDD for delivery of materiel is delinquent by more than 30 calendar days. Compute the delinquent date from the memorandum due-in that the LIM provided on the ETD. The GIM will also initiate DLMS 527D when a revised due-in date later becomes delinquent by 30 calendar days.

C12.6.1.2. Inquiry for Due-In with Invalid EDD. The GIM will initiate DLMS 527D due-in inquiry 30 calendar days after the ETD when the memorandum due-in, the LIM provided on the ETD, contains an invalid EDD (e.g., for materiel pending procurement/contract action by the LIM). The GIM will initiate a second inquiry 60 calendar days after the ETD for all dues-in with invalid EDDs. If the LIM does not reply to the second inquiry, the GIM must intervene off-line. The GIM will include all due-ins with invalid EDDs 90 calendar days after the ETD in the reconciliation. Based on the response, the GIM will determine if additional inquiry/reconciliation action is required.
C12.6.2. Delinquent Due-In Advice

C12.6.2.1. The LIM will provide the GIM with due-in information in response to an inquiry using a delinquent due-in advice transaction citing the appropriate asset transfer status code.

C12.6.2.2. Revision of Estimates. To preclude the need for due-in inquiry transactions by the GIM, the LIM will provide revised EDDs as changes occur using a delinquent due-in transaction with Asset Transfer Status Code AF.

C12.6.3. Due-In Reconciliation

C12.6.3.1. Due-In Verification. The DoD Components will use the due-in reconciliation process to verify that the GIM is in receipt of all procurement/contract award data for assets due-in and the most current EDDs available. This process will also ensure that all items still pending procurement/contract award on the ETD are still valid.

C12.6.3.2. Due-In Reconciliation. The GIM will initiate a due-in reconciliation inquiry for reconciliation of dues-in for logistically reassigned materiel 90 calendar days after the ETD and semiannually thereafter for all materiel that has not been received. The GIM will include all items with materiel still due in to the LIM, regardless of the presence of a current EDD, in the reconciliation request.

C12.6.3.3. Due-In Reconciliation Response. The LIM will respond to due-in reconciliation requests using a due-in reconciliation advice containing the appropriate asset transfer status code. The LIM will ensure that due-in information for all items still pending procurement/contract action, pending delivery, or in litigation is readily available to respond to the reconciliation request.
C13. CHAPTER 13

MATERIEL RECEIPT

C13.1. GENERAL

C13.1.1. Purpose. This chapter prescribes standard procedures for processing materiel receipt information between storage activities and between losing inventory managers (LIM) and gaining inventory managers (GIM). The procedures require expeditious showing of assets in the property accountability records and related financial accounts. Documentation covering consignment of materiel to storage activities is prescribed in other DoD and DoD Component regulations. These documents are used, together with information developed by inspection and classification procedures, as source data for documenting transactions in terms of this manual. The distribution of disbursement, procurement, and transportation documentation by storage activities is also governed by existing regulations and is, therefore, not a consideration here.

C13.1.2. There are additional processing procedures over and above those contained in this chapter that must be applied for items identified as serially managed materiel requiring owner visibility at DLA Distribution Centers. The identity of the materiel and the additive procedures are in Chapter 30.

C13.1.3. Transactions. This chapter addresses the procedures applicable to the following Accredited Standards Committee (ASC) X12 transaction functions identified by their beginning segment transaction type code. Other DLMS formats, such as XML, are also available. See the Defense Logistics Management Standards (DLMS) Program Office Website for available formats on the DLMS IC page. The corresponding MILSTRAP legacy 80 record position transaction is identified for information purposes in a mixed DLSS/DLMS environment.

C13.1.3.1. Receipt Transaction is identified by the DLMS 527R ASC X12 beginning segment (1/BR02/020) Transaction Type Code D4 – Receipt. This transaction provides MILSTRAP legacy DIC D4_(Procurement Instrument Source)/D6_(Other Than Procurement Instrument Source) functionality.

C13.1.3.2. Receipt Inquiry Transaction is identified by the DLMS 527R ASC X12 beginning segment (1/BR02/020) Transaction Type Code IN – Inquiry. This transaction provides MILSTRAP legacy DIC DXA/DXB functionality.

C13.1.3.3. Response to Inquiry Transaction is identified by the DLMS 527R ASC X12 beginning segment (1/BR02/020) Transaction Type Code DG – Response. This transaction provides MILSTRAP legacy DIC DXC/DXD functionality.

C13.1.5. Use of DLMS 527R for Receipt. DLMS 527R will be used by receiving activities to report both receipts and historical receipt information to owners and other management control activities.

C13.1.6. Capital Equipment Candidate Receipts. In support of Financial Improvement and Audit Readiness (FIAR) compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. Submitters must prepare receipts for capital equipment candidate items to include the serial numbers (and UIIs if available). The DSS storage activity will send the receipt transaction to the owner and include the serialized data for the owner records. The owner will update the IUID registry using existing IUID registry procedures.

C13.2. MATERIEL RECEIPT PROCESSING

C13.2.1. Receiving Activity Actions. Receiving activities will report receipts of materiel using a Materiel Receipt transaction and:

C13.2.1.1. Post receipts to the total item property record by changing or adding to data in the pre-positioned materiel receipt (PMR) file established under Chapter 12, Due-In And Pre-Positioned Materiel Receipt procedures, or by extracting data from the consignment documentation. For capital equipment candidates, receiving activities will maintain the serial numbers (and UIIs if available) on their records.

C13.2.1.2. For discrepant shipments, follow the guidelines provided in C13.2.8.

C13.2.2. Reversal of Incorrect Receipt Transactions. Receiving activities may use the Receipt Transaction to reverse incorrect Receipt Transactions. Include the reason for reversal code as applicable. Refer to Chapter 17 SDR procedures for use of the SDR reply to request receipt reversal by the receiving activity when the wrong owner does not have systemic support to reject a receipt reported to the wrong owner. ¹

C13.2.3. Rejection of Receipt Reported to Wrong Owner. If a receipt is erroneously reported to the wrong owner (e.g., due to missing or unmatched PMR), the recipient of the receipt transaction should reject the receipt back to the initiator using DLMS 824R Reject Advice with Reject Advice Code AB (Rejected. Submitted to incorrect manager). If known, include the correct manager to facilitate reprocessing of the receipt. Do not reject receipts reported to the owner

¹ Refer to ADC 1273.
designated by PMR or to the pre-designated Service owner for unauthorized return of consumable items.²

C13.2.4. Central Procurement Receipts. Receipts from procurement can originate from central procurement or local procurement actions. Authorized procurement delivery documents should accompany each shipment as prescribed in the Federal Acquisition Regulation (FAR).

C13.2.5. Materiel Receipt Inspection Procedures. When shipments of materiel received from procurement instrument sources require inspection and/or acceptance at destination, receiving storage activities must do the inspection and/or acceptance and the in check operations as concurrent actions. Receiving activities will:

C13.2.5.1. Inspect shelf-life materiel for appropriate condition and type of shelf-life code in accordance with applicable DoD Component procedures based on DoDM 4140.27, “DoD Shelf-Life Management Program”, July 6, 2016.

C13.2.5.1.1. Mark materiel, as appropriate, for shelf-life code and supply condition code (SCC) upon receipt.

C13.2.5.1.2. Package markings must be in accordance with MIL-STD-129.

C13.2.5.2. Based on inspection, prepare a Materiel Receipt Transaction indicating the date inspected and the actual condition(s), by quantity, of the materiel received. Wholesale owners will make this date available to the office responsible for contractor payment for use in determining if an interest penalty applies.

C13.2.6. Army Medical Materiel Agreement Receipts. DLA, in coordination with Defense Medical Logistics Standard Support (DMLSS) and Theater Enterprise-Wide Logistics System (TEWLS), has implemented the Army Medical Materiel Agreement (AMMA). Under the AMMA program, DLA funds are used by the Army to purchase via DMLSS/TEWLS. The DLA Enterprise Business System (EBS) receives a Receipt Transaction from DMLSS/TEWLS to receipt purchased items into stock for inventory accountability. DLA owns the materiel until items are issued at the retail level and inventory is decremented in DLA’s EBS.

C13.2.6.1. Purchase card receipts from AMMA sites must contain a purchase card account number and purchase card call number in order to uniquely identify transactions. A vendor reference number should also be included which is the Customer Automation and Reporting Environment invoice number. This value will help with issue resolution and reconciliation.

² Ibid.
C13.2.7. **Time Standards for Processing Receipts**

C13.2.7.1. **Purpose.** The Department of Defense measures wholesale receipt processing performance in terms of the goal to process receipts and show them with minimal delay on both the accountable and owner records. Wholesale receipt processing performance is measured in two overlapping segments:

C13.2.7.1.1. The first segment is the time period between the date materiel is turned over by the carrier to the designated receiving activity and the date of posting the receipt to the total item property records (both accountable and owner records).

C13.2.7.1.2. The second segment is the time period between the date materiel is turned over by the carrier to the designated receiving activity and the date stored. Materiel is considered to be stored when it reaches the first location (either temporary or permanent) where actual storage control exists through locator data and the materiel can be issued without delay in response to materiel release documentation.

C13.2.7.2. **Processing Standards.** Performance standards for processing receipts through these time segments are as follows:

C13.2.7.2.1. **Segment One.** Materiel receipt must be posted to the accountable and the owner record no later than 5 business days from date materiel is received.

C13.2.7.2.2. **Segment Two:**

C13.2.7.2.2.1. Receipt from new procurement will be receipted and stored within 7 calendar days from the date materiel is turned over by the carrier.

C13.2.7.2.2.2. All other receipts, to include receipts from redistribution, will be receipted and stored within 10 calendar days from the date materiel is turned over by the carrier.

C13.2.7.3. Making asset records visible from the point of inspection and acceptance must be accomplished within 24 hours of recording receipts (holidays and weekends excepted). (This applies to receipts from a procurement source when required inspection and acceptance are not performed at origin.) The accounting and finance office will be notified of the item receipt within the 24-hour period.

C13.2.7.4. **Wholesale Receipt Effectiveness.** Report wholesale receipt processing effectiveness as prescribed by Chapter 6, C6.11.1.2.1. The acceptable DoD performance goals for receipt processing are: 90 percent posted within the time standard, 90 percent stored within the time standard. When computing the overall performance against the time standard, include Receipt Transactions frustrated for a long period of time prior to posting, storing, or reporting.
C13.2.8. Control of Receipt Requirements. Receiving storage activities will comply with the following requirements:

C13.2.8.1. Establish Procedures. Establish receipt control procedures for posting information relating to the status of materiel in the storing cycle. The cycle begins when the carrier offers materiel to the receiving activity for custody and control. Receiving activities will record the carrier's date offered when different than the date the carrier released the materiel. The DoD Components should use the carrier's date offered to measure carrier performance.

C13.2.8.2. Actions after Materiel Receipt. Do the following actions after the materiel has been physically received but prior to or concurrent with movement to storage:

C13.2.8.2.1. Establish a transaction suspense record to record the materiel as an in-process receipt.

C13.2.8.2.2. Prepare and send a Receipt Transaction to the owner within 24-hours (holidays and weekends excepted) from the point of inspection and/or acceptance.

C13.2.8.3. Using In-Process Receipts to Satisfy Requirement. When the on-hand balance of the stock record (physically stored) is not enough to fill materiel release orders, use in-process receipts to fully or partially satisfy the requirement. When in-process receipts are recorded, fill priority 01-08 requirements from these receipts. Defer filling of priority 09-15 requirements from in-process receipts until proof of storage is recorded.

C13.2.8.4. Expediting Materiel Storage. Periodically refer to the in-process receipt suspense file to hasten storage of materiel delayed beyond authorized receipt processing timeframes and to hasten storing of materiel for issues deferred pending storage.

C13.2.8.5. Clearing Suspense Record. After receiving proof of storage, clear the suspense record, update the storage locator record, and release any deferred issues.

C13.2.8.6. Updating Storage Activity Record. As an additional aid in control of receipts, ensure that appropriate storage activity records (e.g., stock locator) show the date of the last receipt of an item and the storage information (i.e., date of storage or some other code indicating that storage has been reported).

C13.2.9. Discrepant/Deficient Receipts

C13.2.9.1. Discrepant/Deficient Reports. In addition to processing and reporting materiel receipts, receiving storage activities will submit reports for all discrepant/deficient receipts in accordance with the procedures and forms prescribed by the following:
C13.2.9.1.1. Chapter 17 of this manual, Supply Discrepancy Reporting procedures.

C13.2.9.1.2. DTR 4500.9-R, "Defense Transportation Regulation," Part II, Cargo Movement.

C13.2.9.1.3. Joint Regulation DLAR 4155.24/AR 702-7/SECNAVINST 4855.5/AFR 74-6, "Reporting of Product Quality Deficiencies Report Program."

C13.2.9.1.4. Joint Regulation DLAR 4155.3/AR 30-12/NAVSUPINST 4355.2/AFR 74-5/MCO 10110.21, "Inspection of Subsistence Supplies and Services."

C13.2.9.1.5. Other DoD and joint or intra-DoD Component regulations governing discrepancies/deficiencies not covered by the above.

C13.2.9.2. Exceptions. Neither the dollar value nor the timeframes for submitting discrepancy/deficiency reports apply for reporting the materiel receipt to the owner. The receipt reporting timeframes are prescribed by C13.2.7. The procedures for reporting receipt of discrepant/deficient shipments to the owner are prescribed by C13.2.9.3.

C13.2.9.3. Processing Discrepant/Deficient Receipts

C13.2.9.3.1. Discrepancy Determination. Upon receipt of all incoming materiel shipments, from procurement instrument and non-procurement instrument sources, receiving activities will research all available documentation and item markings (i.e., transaction or contract number, national stock number (NSN), or other, item identification number, PMR file, quantity, condition, inspection/acceptance requirements, etc.) to determine the receipt data. Using this data, receiving activities will determine if a discrepancy/deficiency (hereafter referred to as discrepancy or discrepant) exists and will identify its nature. For capital equipment candidate items, missing serial number(s) and mismatches on serial number (and UII) will be considered discrepancies. DLA Distribution will perform a kind, count, and condition (KCC) inspection during receipt to determine materiel condition and completeness and identify any discrepancies that may exist. KCC inspection is applicable to materiel received for storage at the DLA Distribution Center. "Kind" includes an inspection of the bare item verifying the part number against the assigned NSN, or a verification that the documentation corresponds with the identification label in accordance with MIL-STD-129 marking requirements.

C13.2.9.3.1.1. DLA Distribution Centers do not perform bare item part number verification for new procurement except when the materiel is identified as nuclear weapons related materiel (NWRM) or controlled (classified, sensitive, pilferable,

---

3 Refer to ADC 1198 and ADC 1198A.
4 Refer to ADC 1269.
and radioactive) or if directed by a systemic alert notification to verify a bare item part number.

C13.2.9.3.1.2. For all other receipts, DLA Distribution Centers will perform bare item part number verification unless specified under MIL STD 130 that no bare item marking exists.

C13.2.9.3.2. Unusual Circumstances. If unusual circumstances prevent normal receipt reporting of discrepant shipments, the receiving activity will communicate with the manager or Contract Administration Office (CAO)/Purchasing Office (PO) to determine how to submit the discrepancy report and report the receipt. When the owner delays receipt reporting, the receiving activity must control the receipt by physically segregating and monitoring the status of the materiel until they report the receipt, or the owner directs other disposition (e.g., reshipment, return to shipper, etc.). This paragraph applies only when circumstances exist that prevents normal receipt reporting. For non-procurement receipts with no PMR, see C13.2.8.2.10.11.

C13.2.9.3.3. Discrepancy Report Determination. Not all discrepant receipts require submission of discrepancy reports. Receiving activities will follow the procedures in C13.2.8.1. to determine whether a discrepancy report must be submitted. Use Receipt Transactions Management Codes R, S, and U to identify discrepant receipts that require submission of a discrepancy report. The purpose of the discrepant receipt management codes is to notify the owner in advance that a receipt was discrepant and that a discrepancy report is being submitted to give additional information relating to the reported item. Never process Receipt Transactions with Management Codes R, S, or U for a discrepant quantity when submission of a discrepancy report is not required. Use Management Codes S and U only for procurement instrument source receipts to identify vendor caused misdirected shipments and contract over shipments. Separate codes apply to these discrepancies, which occur more frequently and are more easily resolved than others, so owners can initiate immediate corrective action before the formal report of discrepancy is received.

C13.2.9.3.4. Receipts Lacking Documentation. When materiel arrives without accompanying documentation, or with inadequate documentation to process the receipt, receiving activities will use one of the following data sources to develop materiel Receipt Transactions:

C13.2.9.3.4.1. PMR files

C13.2.9.3.4.2. Authorized procurement delivery documents and vendor packing lists.

C13.2.9.3.4.3. Advance copies of DD Forms 1348-1A or 1348-2, or DD Form 1149, "Requisition and Invoice/Shipping Document."

C13.2.9.3.4.4. Transportation and fiscal records.

C13.2.9.3.4.5. Container markings.

C13.2.9.3.4.7. Federal Logistics Information System (FLIS) or WebFLIS data.

C13.2.9.3.4.8. The IUID Registry for serially managed assets.

C13.2.9.3.4.9. Advice provided by the owner, the shipper, or the U.S. Customs Inspector's Office upon request of the receiving activity if receipt documentation cannot otherwise be developed.

C13.2.9.3.5. Discrepant Receipt Posting. Normally when receiving activities keep a discrepant receipt in U.S. Government custody, whether or not it is U.S. Government-owned, they will post the receipt to the total item property record, store the materiel, and update the locator record, and hold the materiel pending receipt of disposition from the owner.

C13.2.9.3.6. Receipts from Outside the Normal Distribution System. When storage activities report receipts outside the normal distribution system for the NSN, the owner will record the receipt so assets are issued from that site first. Owners will make disposition of such materiel as quickly as possible. If the materiel is not issuable, the owner will direct repair induction, reclassification, relocation, or disposal using the appropriate DLMS transaction.

C13.2.9.3.7. Discrepant Receipt - Procurement Instrument Source - General

C13.2.9.3.7.1. Protective Measures. Procurement discrepancies imposing a health/safety hazard, classified risk, etc., may require separate and/or secure storage. When these situations exist, receiving activities will take protective measures in accordance with established DoD or DoD Component procedures.

C13.2.9.3.7.2. Receiving Activity Inspection. When acceptance is accomplished at a point other than destination, receiving activities may not re-inspect supplies at destination for acceptance purposes. However, receiving activities will examine such supplies at destination for identity, damage in transit, quantity, condition (including proper packing/packaging and labeling) and, for subsistence materiel, date packed and expiration date. The U.S. Government's right to litigate a discrepant receipt is not affected by the point of acceptance. Consequently, receiving activities will report discrepancies detected during the destination examination in accordance with the regulations cited in C13.2.9.1.

C13.2.9.3.7.3. Shipping Procurement Instrument Source Receipts to DLA Disposition Services. Shipment of procurement instrument source receipts directly to DLA Disposition Services is not authorized unless unusual circumstances (e.g., health or safety hazard, etc.) exist and separate/secure storage facilities are not available. When unusual circumstances require the receiving activity to ship materiel
directly to the DLA Disposition Services activity (or take other disposal actions as prescribed by the DoD Components), the receiving activity will first report the receipt using a Receipt Transaction citing SCC L and Management Code R. (Navigate to LOGDRMS and enter “management code”).

The disposal action will then be reported using a dual Inventory Adjustment Transaction, DLMS 947I citing SCC H and Management Code M or T.

C13.2.9.3.8. Reporting Discrepant Receipts from Procurement Instrument Source. Receiving activities will follow these procedures to report receipt of discrepant shipments from procurement instrument sources. Unless otherwise allowed by these procedures, report discrepant shipments from a procurement instrument source to the owner with a Receipt Transaction, citing SCC L for the discrepant quantity. With the exception of the receipt of incorrect items, use a single transaction to report the receipt showing both non-discrepant and discrepant quantities exclusive; multiple discrepancy conditions may exist for a single Receipt Transaction:

C13.2.9.3.8.1. Condition of Materiel. Report the actual discrepant quantity in SCC L.

C13.2.9.3.8.2. Documentation. Absence of the shipping documentation should not prevent receipt processing and reporting or later issue of the materiel. Research in accordance with C13.2.8.2.4., to report the receipt. The discrepancy reporting requirements in C13.2.8.1 still apply.

C13.2.9.3.8.3. Misdirected Shipments (improperly addressed by the procurement instrument source). Contact the owner to ensure compliance with the procurement requirements (i.e., inspection, acceptance, etc.). Report the total quantity in the actual condition received (normally SCC A) with a Receipt Transaction citing Management Code S. Upon receipt of the Receipt Transaction, and prior to posting the receipt as available for issue, owners will initiate immediate action to resolve the discrepancy. If the owner or CAO/PO directs reshipment/return of a reported receipt without issuing materiel release documentation, the receiving activity will submit a reversal of the previously submitted Materiel Receipt Transaction.

C13.2.9.3.8.4. Overage/Duplicate Shipment. Research the PMR file, receipt, and contract documentation to determine the discrepant quantity. Report confirmed duplicate shipments as discrepant with a Receipt Transaction citing SCC L. When overages are valued above the contract variance clause, or above the excess delivery clause (after considering any allowable variance), report the overage above the allowable variance as discrepant with a Receipt Transaction citing SCC L and Management Code U. Owners will initiate immediate action to resolve the discrepancy upon receipt of the Receipt Transaction. Overages within the allowable variance or within the excess delivery clause (after considering any allowable variance) are not discrepant. Report the total quantity in the applicable condition, and do not cite a management code for that quantity.
C13.2.9.3.8.5. **Packaging Discrepancy.** Report the total discrepant quantity as a SCC L receipt. The owner and/or the CAO/PO will determine whether litigation is required. If litigation is not required the owner will initiate a DLMS 846A, Asset Reclassification Transaction, to request the transfer of the suspended assets to the appropriate condition.

C13.2.9.3.8.6. **Shortages/Nonreceipt of Materiel.** Research the PMR file, receipt, and contract documentation to determine the discrepant quantity. For shortages, report the total quantity in the condition received. Except for shortages attributed to transportation discrepancies, the receipt is discrepant only if the shortage exceeds the allowable contract variance. When the receipt is discrepant, cite the management code in the Receipt Transaction. Non-receipts are addressed under C13.3.

C13.2.9.3.8.7. **Item Technical Data Marking (includes nameplates, logbooks, operating handbooks, special instructions, etc.).** Report the discrepant quantity citing SCC L, and identify and describe the specific technical data discrepancy in the SDR or DLMS 842A/W, Standard SDR, Follow-up, Correction, Cancellation, & Reconsideration Request. If the owner determines the assets can be issued, the owner will initiate a DLMS 846A to transfer the suspended assets to the appropriate condition.

C13.2.9.3.8.8. **Wrong Item.** Report any assets in the shipment that are the correct item in the applicable condition and do not cite the discrepant receipt management code for that quantity. Report the total quantity of the incorrect item received in the Receipt Transaction citing SCC L using a separate Receipt Transaction. If the majority of the assets are the incorrect item, the receiving activity may report the total quantity in SCC L based on internal DoD Component procedure.

C13.2.9.3.8.9. **Product Quality Deficiency.** It is normally preferable to keep custody of the materiel, whether or not it has been accepted. Report the deficient quantity citing SCC Q in the Receipt Transaction. The owner or CAO/PO will determine if litigation or informal action with the procurement instrument source should be initiated. The owner will take action to transfer the assets.

C13.2.9.3.8.10. **Transportation Discrepancy.** When materiel is accepted by the Transportation Officer, process and report the Receipt Transaction in accordance with procedures cited above for the type of discrepancy that exists (e.g., condition of materiel for damage, etc.).

C13.2.9.3.8.11. **Receipts Not Due-In (no PMR file exists).** When a PMR is not available, the receiving activity will report the receipt using documentation, packaging, and other information, as available. DLA Distribution Centers will prepare an SDR to report the lack of a PMR to the manager (as the only discrepancy or in

5 SCC Q not implemented by Navy. Navy implementation deferred to their Enterprise Resource Planning system modernization initiative.
combination with other identified discrepancies). The distribution center will identify the
SDR as informational or otherwise indicate requested action.

C13.2.9.3.8.11.1. **Receipt Processing.** Except for receipt of
logistically reassigned items, see guidance in this section for processing receipts of
misdirected shipments and overages/duplicate shipments, for which a PMR file is not
normally available.

C13.2.9.3.8.11.2. **Logistically Reassigned Items.** For
logistically reassigned items, research all available documentation and item markings to
determine proper routing of the receipt. If unable to determine the correct routing,
contact the integrated materiel manager (IMM) who will direct the appropriate routing of
the receipt. If the IMM (e.g., the GIM) does not have a recorded due-in, did not initiate
the procurement action and/or has a record of a memorandum due-in, and the item was
involved in an LR, the GIM should instruct the storage activity to report the receipt to the
LIM.

C13.2.9.3.8.12. **Discrepancies in IUID Data.** Report discrepancies
involving IUID under DoD IUID supply policy, including but not limited to DoD Unique
Item Tracking (UIT) programs, or as contractually required. IUID discrepancies may be
related to the packaging label, including automated information technology (AIT)
readable content; the item marking, including AIT readable marks; supply
documentation; the due-in record; and/or a mismatch between the item and any of
these. Discrepancies identified during receipt of new procurement materiel must be
reported prior to acceptance (if not accepted at origin). Discrepant materiel may be
placed in a suspended condition pending resolution. Discrepancies that resulted in
incorrect information within the IUID registry must be reported and corrective action
taken.

C13.2.9.2.8.13. **Capital Equipment Candidate Item Serial Number
(and UII if available).** Report discrepancies on serial number (and UII if available) using
the procedures contained in Chapter 17.

C13.2.9.3.8.14. **Other Discrepancies.** Receipt reporting will
depend upon the type of discrepancy involved. When unusual circumstances exist, the
receiving activity may need to get guidance from the appropriate authority before
reporting the receipt or submitting the discrepancy report. See C13.2.8.2. for storage
and accountability requirements.

C13.2.9.3.9. **Discrepant Receipt – Other than Procurement Instrument
Source – General**

C13.2.9.3.9.1. **Identifying the NSN.** When a receipt cannot be
identified to an NSN, the receiving activity will attempt to identify the NSN or usage by
following the procedures in C13.2.8.2.1., and report the receipt to the owner.

C13.2.9.3.9.1.1. **Value Under $100.** If the NSN cannot be
identified and the estimated value of the item is under $100, receiving activities will not
report the receipt to an owner. Ship the materiel directly to DLA Disposition Services using a local document number. Keep an accessible record of the transaction document and its backup in accordance with DoDI 5015.02, DoD Records Management Program.

C13.2.9.3.9.1.2. Value Over $100. If the NSN cannot be identified and the estimated value of the item is $100 or more, the receiving activity will contact the manager of like-items to determine disposition. If GSA is the manager of like items, process in accordance with the procedures for receipts not due-in. If the manager of like-items can identify the NSN, the manager will direct the receiving activity to submit the receipt and SDR to the owner. If the IMM of like-items cannot identify the NSN, the IMM will give disposition instructions to the reporting activity. These instructions will include an item identification number (part number, etc.) for reporting the receipt and submitting the SDR. If the owner directs shipment to DLA Disposition Services, the owner will keep an accessible record of the transaction and its backup in accordance with DoDI 5015.02, DoD Records Management Program.

C13.2.9.3.9.2. Discrepancy Reporting. Unless otherwise allowed by these procedures, receiving activities will report receipts of discrepant shipments from a non-procurement instrument source to the owner. For discrepant quantities, cite the SCC that most accurately describes the condition of the materiel in the Receipt Transaction. Classify and report the materiel using SCC K when the actual condition cannot be determined. Include Management Code R when a discrepancy report is required unless prescribed otherwise in this chapter.

C13.2.9.3.10. Reporting Discrepant Receipts - Other than Procurement Instrument Source. Receiving activities will follow these procedures to report receipt of discrepant shipments from non-procurement instrument source. With the exception of the receipt of wrong items, use a single Receipt Transaction to report the receipt showing both non-discrepant and discrepant quantities in their appropriate SCC. The following discrepancy categories are not mutually exclusive; multiple discrepancy conditions may exist for a single receipt:

C13.2.9.3.10.1. Condition of Materiel

C13.2.9.3.10.1.1. No PMR File Exists. When a PMR is not available, the receiving activity will report the receipt using documentation, packaging, and other information, as available. DLA Distribution Centers will prepare an SDR to report the lack of a PMR to the manager (as the only discrepancy or in combination with other identified discrepancies). The distribution center will identify the SDR as informational or otherwise indicate requested action. When inspection of inter-DoD Component receipts reveals materiel to be SCC H and no PMR file exists, automatically ship discrepant materiel valued at less than $500 per item direct to the DLA Disposition Services activity except as specified in these procedures, or take other automatic disposal action based on criteria issued by the DoD Components. This includes expired Type I shelf-life materiel which has passed the expiration date regardless of value. When taking automatic disposal action, cite SCC H and Management Code M or T in
the Receipt Transaction, in addition to the discrepant receipt management code, for the discrepant quantity. To establish an audit trail when materiel is condemned upon receipt and shipped directly to DLA Disposition Services, cite the disposal turn-in document number in the Receipt Transaction in addition to the original document number.

C13.2.9.3.10.1.1.1. GSA-Managed materiel and Non-Army Managed (NAMI) (Routing Identifier Code (RIC) AJ2) owned materiel will not be subject to the dollar value threshold for disposal eligibility, but will be subject to all other automatic disposal screening criteria.

C13.2.9.3.10.1.1.2. Materiel identified to an obsolete DLA manager (RIC S9C, S9E, S9G, S9I or S9T) in FLIS is subject to automatic disposal at DLA Distribution Centers. Disposal of materiel will be subject to the existing exemption criteria stated in C13.2.9.2.10.1.1.3. When automatic disposal action applies, the receipt will cite SCC H and Management Code M (excludes shelf-life materiel) or Management Code T (expired shelf-life materiel). DLA Distribution will suppress transmission of outbound transactions associated with receipt and disposal action with the exception of Shipment Status and SDR transactions. The SDR will be prepared in accordance with SDR procedures for unscheduled receipts (no PMR) in Chapter 17.

C13.2.9.3.10.1.1.3. Automatic disposal does not apply to the following:

C13.2.9.3.10.1.1.3.1. Materiel that is identified as requiring DEMIL or containing radioactive, classified, or NWRM properties will not be subject to automatic disposal. This includes:

- DEMIL Codes: B, C, D, E, F, G, or P
- CIIC: A-H, K, L, O, Q, R, S, T, 5, 6, 8, 9
- Radioactive Water Type Cargo Codes: A and 4

C13.2.9.3.10.1.1.3.2. Materiel owned by U.S. Army Aviation and Missile Command (AMCOM) (RIC B17), will not be subject to automatic disposal.

C13.2.9.3.10.1.1.3.3. Unidentified materiel will not be subject to automatic disposal. Follow procedures in paragraph C13.2.8.2.9.1.

C13.2.9.3.10.1.1.3.4. FMS materiel will not be subject to automatic disposal. Follow procedures in paragraph C13.2.8.2.9.1.

C13.2.9.3.10.1.1.3.5. Materiel owned by USAF will not be subject to automatic disposal except for non-AF managed material located at a DLA Distribution Center not co-located with a USAF depot maintenance site.
C13.2.9.3.10.1.1.4. Upon receipt, or subsequent storage activity determination, that materiel is in SCC H, where the above criteria prohibit automatic disposal, an SDR is prepared clarifying why automatic disposal is not possible and requesting specific disposition instructions. Where applicable the SDR remarks will inform the action activity that the materiel cannot be shipped to the local DLA Disposition Services Field Office and must be sent to an approved DEMIL/destruction center via MILSTRIP DIC A5J generated by the owner/manager.

C13.2.9.3.10.1.2. Discrepancy Reporting. Report discrepant quantities other than those mentioned above citing the applicable SCC in the receipt, or SCC K when the condition cannot be determined.

C13.2.9.3.10.2. Documentation. Absence of the shipping documentation should not preclude receipt processing and reporting or later issue of the materiel. Research in accordance with C13.2.8.2.4. to report the receipt. Discrepancy reporting requirements still apply.

C13.2.9.3.10.3. Misdirected Shipments (improperly addressed by the supply activity). Report misdirected shipments as receipts to the cognizant IMM. The IMM will make disposition using DLMS 940R, Materiel Release.

C13.2.9.3.10.4. Overage. Report the total quantity received in the applicable condition.

C13.2.9.3.10.5. Packaging Discrepancy. Report the total quantity received in the applicable condition and schedule the discrepant quantity for preservation/packaging/marking/labeling in accordance with the DoD Component criteria.

C13.2.9.3.10.6. Shortages/Nonreceipt of Materiel. For shortages, report the total quantity received in the applicable condition. The owner will initiate any necessary financial adjustment action. Non-receipts are addressed under C13.3.

C13.2.9.3.10.7. Item Technical Data Marking (includes nameplates, logbooks, operating handbooks, special instructions, etc.). Report the discrepant quantity using a receipt citing SCC D. Identify and describe the specific technical data discrepancy in the SDR for owner evaluation. If the owner determines the asset can be issued, the owner will initiate action to transfer the asset to the appropriate condition using DLMS 846A.

C13.2.9.3.10.8. Wrong Item. Report receipt of the total quantity of the incorrect item in the applicable condition citing the NSN of the incorrect item received and the discrepant receipt management code for the quantity. If both correct and incorrect items are received in the same shipment, submit a separate Receipt Transaction for the correct item.

C13.2.9.3.10.9. Product Quality Deficiency. An SCC Q entered in a PMR file shows that the receipt is related to a reported product quality deficiency.
Report receipt of this materiel in SCC Q and do not cite a management code. Based on the results of the inspection or technical/engineering analysis, owners will direct the appropriate materiel disposition.

C13.2.9.3.10.9.1. Additionally, when the receipt is applicable to a Product Quality Deficiency Report (PQDR) exhibit, include the PQDR Report Control Number (RCN) and designate a copy of the receipt transaction for distribution to the Product Data Reporting and Evaluation Program-Automated Information System (PDREP-AIS). SCC Q is applicable to exhibits returned for evaluation and returned subsequent to testing.

C13.2.9.3.10.9.2. DAAS will recognize the inclusion of the PDREP-AIS DoDAAC in the receipt transaction and forward a copy of the transaction for use in exhibit tracking.

C13.2.9.3.10.10. Transportation Discrepancy. When the Transportation Officer turns the materiel over, report the receipt in accordance with the procedures cited above for the type of discrepancy which exists (e.g., condition of materiel for damage etc.).

C13.2.9.3.10.11. Receipts Not Due-In (no PMR file)

C13.2.9.3.10.11.1. GSA-Managed Items. GSA does not authorize return of assets to DoD storage activities. Receipts of GSA assets without a corresponding due-in are, therefore, DoD-owned assets. The DoD Components are responsible for providing DLA with an organization to which the DLA storage activity can record these assets. The DoD Components will establish internal procedures for processing the receipts from the depot for these assets for subsequent issue-or release for DLA Disposition Services. The DoD Components will identify an owner RIC to be used when the DLA storage activity processes a Receipt transaction for the DoD Components’ unauthorized return of GSA-managed assets. In the absence of guidance from the DoD Components for reporting receipt of unauthorized return of GSA assets to their DoD Component, DLA storage activities will receipt the assets for local use by the depot. If the materiel cannot be used locally it is sent to disposal. This procedure ensures the assets are recorded on a DoD record. The Navy, Marine Corps, and Air Force have directed implementation of this procedure as follows:

C13.2.9.3.10.11.1.1. Report Navy-returned GSA-managed items to Navy RIC NRP. An SDR will be provided to the Navy owner for information.

C13.2.9.3.10.11.1.2. Report Marine Corps-returned GSA-managed items to Marine Corps RIC MPB. An SDR will be provided Marine Corps owner for information.
C13.2.9.3.10.11.1.3. Report Air Force-returned GSA-managed items to Air Force RIC FHZ. An SDR will be provided to the Air Force owner for information.

C13.2.9.3.10.11.2. ***DoD-Managed Reparable Items.*** Report the Receipt Transaction to the manager of the DoD Component that is returning the item. Do not include a discrepant receipt management code in the transaction. For materiel shipped between wholesale storage activities, report the receipt citing Reason for Materiel Receipt/Return Code N. IMMs receiving transactions reporting returns not-due-in of phase II reparables, for which they are not the IMM, will follow the materiel returns program procedures to report/ship the materiel as prescribed by the IMM.

C13.2.9.3.10.11.3. ***DoD-Managed Consumable Items.*** Report receipt to the IMM of the Service that is returning the item in the applicable condition and do not include a discrepant receipt management code in the transaction. However, the DoD Components may prescribe reporting to their own item manager for returns from their own Component activities. The Navy and Marine Corps have directed implementation of this procedure as follows:

6 Refer to ADC 1102/1102A.

C13.2.9.3.10.11.3.1. Navy-returned consumable items must be reported to the Navy using RIC NRP regardless of the item manager. An SDR will be provided to the Navy owner for information.

C13.2.9.3.10.11.3.2. Marine Corps-returned consumable items must be reported to RIC MPB regardless of the item manager. An SDR will be provided to the Marine Corps owner for information.

C13.2.9.3.10.11.3.3. Air Force-returned consumable items must be reported to RIC FHZ regardless of the item manager. An SDR will be provided to the Air Force owner for information.

C13.2.9.3.10.12. ***Discrepancies in IUID Data.*** Report discrepancies involving IUID under DoD IUID supply policy, including but not limited to DoD UIT programs, or as contractually required. IUID discrepancies may be related to the packaging label, including AIT readable content; the item marking, including AIT readable marks; supply documentation; the due-in record; and/or a mismatch between the item and any of these. Discrepancies identified during receipt of new procurement materiel must be reported prior to acceptance (if not accepted at origin). Discrepant materiel may be placed in a suspended condition pending resolution. Discrepancies that resulted in incorrect information within the IUID registry must be reported and corrective action taken.

C13.2.9.3.10.13. ***Other Discrepancies.*** Receipt reporting will depend upon the type of discrepancy involved. When unusual circumstances exist, the
receiving activity may need to get guidance from the owner before reporting the receipt or submitting the discrepancy report.

C13.2.9.4. Resolution of Reported Receipt Discrepancies.

C13.2.9.4.1. Owner Accountability Records. Owners will maintain accurate materiel accountability records and audit trails for reported receipts with evidence of a supply discrepancy. Resolution of these discrepancies requires the establishment of interfaces among the materiel accountability, procurement, financial accounting, and discrepancy reporting systems.

C13.2.9.4.2. Owner Processing Discrepant Transactions. When discrepant receipts are reported, owners will process the transactions and complete the research required to resolve the discrepancy. When materiel received from a procurement instrument source will be kept in the wholesale inventory, coordinate with the CAO/PO for a contract modification that will recoup any administrative costs and any additional second destination transportation costs or onward shipment (redistribution) costs incurred by the U.S. Government as a result of the discrepancy. For all receipt discrepancies, ensure that procurement/supply due-in records and related financial accounts (including in-transit) are corrected to show any new receipt status and transmit updates to PMR to the storage activities involved, as required. Care must be taken to suppress PMR transaction output if the corresponding receipt has already been reported (e.g., for overages or misdirected shipments being kept where delivered).

C13.2.9.4.3. Owner Evaluation Data. Owners will develop management evaluation data for contract shortages/overages, wrong item, IUID mismatches, vendor caused misdirected shipments, and other discrepancies impacting cost or customer satisfaction, for use in identifying trends or indications of system problems and in initiating corrective action. When the same discrepancy is repeatedly reported on shipments from a given procurement instrument source, the owner, through the CAO/PO, will advise the source of the error and request action be taken to correct its repeated occurrence. When a procurement instrument source continues to commit the same error, initiate action to consider inclusion on the Awards Review List or other disciplinary action.

C13.2.10. Maintaining Accountability During Maintenance Actions

C13.2.10.1. Applicability.

C13.2.10.2 These procedures apply for returns to inventory including unused materiel, relocations of materiel for maintenance, and receipts from assembly, disassembly, reclamation, conversion, modification, repair and destructive or nondestructive test/evaluation consigned by the Department of Defense, other U.S. Government (non-DoD) agency, or commercial activities.
C13.2.10.3 These procedures exclude repair and return materiel owned below the wholesale distribution system; however, DoDM 4140.01 policy and, for commercial maintenance, the provisions of the FAR, apply.

C13.2.10.4 Accountability

C13.2.10.4.1. For organic maintenance, responsibility for maintaining the asset balance portion of the property accountability record for DoD-owned property being repaired resides with the activity having physical custody. Organic maintenance facilities will assume accountability of materiel upon receipt at the maintenance facility and while in its custody during maintenance actions.

C13.2.10.4.2. For Contractor maintenance, the owning DoD Component will maintain accountability for materiel in a contractor’s possession for repair. The contractor will have stewardship of the materiel in accordance with the requirements in Part 52.245-1 of the Federal Acquisition Regulation and associated clauses, terms, and conditions. The stewardship includes all government furnished property, including items furnished for repair, and remains until the repaired assets are returned to and received by the DoD Component.

C13.2.10.4.3. For both organic and contractor maintenance, the activity having physical custody will provide visibility and report changes to the on-hand balance to the materiel owner (the Principal for maintenance by DMISA).

C13.2.10.5 Requirements

C13.2.10.5.1. Dues-In and PMR. Owners (principals for maintenance by DMISA) will establish a DLMS 527D (Due-In) when materiel is being returned from field activities to wholesale storage activities or to commercial activities for maintenance. Also, send a DLMS 527D (PMR) to receiving Government storage activities. These actions will be done upon receipt of MRP transactions, or equivalent intra-service documents, reporting return of materiel. The DoD Components may delegate the PMR requirement to intermediate level or transshipment activities.

C13.2.10.5.2. Materiel Relocation. When owners direct relocation of materiel from a remote storage activity to the storage activity collocated with the maintenance activity, they will establish a DLMS 527D (Due-In) for the intransit materiel and send a DLMS 527D (PMR) to the receiving storage activity following Chapter 12.

C13.2.10.5.2.1. Receiving Storage Activity Reporting. Receiving storage activities will report receipt of reparable materiel based on the information contained in the PMR file. If an PMR file is not available, report the receipt in accordance with C13.2.9.2.7.10.1. for processing receipts not-due-in for reparable items.

C13.2.10.5.2.2. Inter-DoD Component Agreements. When materiel is scheduled for organic maintenance by DMISA or other inter-DoD Component
agreement, the agreement will specify that the storage activity will report returns from maintenance to the owner (Principal) as receipts under this chapter.

**C13.2.10.6. DoD Component Actions.** Each DoD Component will ensure that:

**C13.2.10.6.1. Owned Inventory Accounting.** Owned inventory in the hands of the Department of Defense, other Government (non-DoD), and commercial activities, is properly accounted for under the provisions of Chapters 6, 7, 13, and 14 of this volume and, for commercial maintenance, the provisions of the Federal Acquisition Regulation. This includes returns from field activities for repair and reissue as wholesale inventory. The DoD Components will prescribe use of any required internal codes to meet this requirement (Responsibility of the owner (Principal for maintenance by DMISA)).

**C13.2.10.6.2. Property Accountability Records.** Total item property records for materiel in the hands of maintenance activities are maintained and adjusted based on the quantity of materiel actually returned and will support the DoD 7000.14-R, “Department of Defense Financial Management Regulation”, accounting and reconciliation requirements (Responsibility of the owner (Principal for maintenance by DMISA)).

**C13.2.10.6.3. Commercial Maintenance Contracts.** Contracts for commercial maintenance require the commercial activity to report or acknowledge receipt and report shipment or condemnation of materiel to the contracting officer (Responsibility of the agent for maintenance by DMISA).

**C13.2.10.6.4. Procurement/Supply Interface.** Any needed interface between the procurement and supply operations/functions exists to ensure that changes in the inventory segment data (stock number, quantity, supply condition code) are sent to the owner (Responsibility of the agent for maintenance by DMISA). Arrangements may be made for commercial activities to report directly to the contracting officer and/or the owner using DLMS transactions. Reported data affecting inventory balances is recorded in the total item property record (Responsibility of the owner (Principal for maintenance by DMISA)).

**C13.2.10.7. Item Owner Actions.** Owners will establish due-in records for expected returns from commercial and Government maintenance activities and provide PMR to the storage activities to receive the materiel under Chapter 12. Storage activities will report receipts under this section.

**C13.2.10.8. Issue from Commercial Activity.** When materiel is issued to a customer directly from a DoD or commercial maintenance activity, ensure that appropriate supply transactions are processed to establish the property accountability and financial accounting audit trails, as well as visibility within the supply system used by the materiel owner.
C13.2.10.9. Condemned Materiel. When materiel is condemned by maintenance activities, ensure the condemnation action is recorded (issue to disposal) to adjust the DoD inventory and financial accounts. This includes automatic disposals (Management Code M).

C13.2.10. Reclaimed Items

C13.2.10.1. Identification of Serviceability. When reclamation activities do not have adequate facilities to test and classify the serviceability condition of reclaimed assets, activities will identify such assets as SCC R (Suspended Reclaimed Items Awaiting Condition Determination). When receiving storage activities determine that immediate classification of such SCC R assets is not possible, they will ensure assets are checked/tested and classified to actual condition within established parameters.

C13.2.10.2. Assigning Condition Code. When reclamation activities cite an actual SCC (i.e., other than R) for returned materiel, storage activities will cite that condition code when recording and reporting the receipt. However, if inspection upon receipt reveals that the condition assigned by the reclamation activity is incorrect, the storage activity will record and report the receipt citing the actual condition to which the item is classified or SCC K if the actual condition cannot be determined. Classify materiel reported in SCC K to the actual condition within established parameters.

C13.2.11. Loaned Materiel

C13.2.11.1. Materiel Inspection. Receiving activities will inspect loaned materiel upon receipt. Submit a Receipt Transaction in accordance with C13.2., citing Reason for Materiel Receipt/Return Code H, to provide information about the condition and quantity of the returned loaned materiel.

C13.2.11.2. Resolution of Loaned Materiel. The owner is responsible for final determination and resolution of returned U.S. Government property from loan. Establish controls to ensure the materiel is returned in an appropriate condition, i.e., as good as or better than the condition of the original loan issue. Take appropriate action to resolve any discrepancies and ensure reimbursement to the loaning activity.

C13.2.12. Logistics Reassignment Receipt Processing after Effective Transfer Date

C13.2.12.1. Procurement Instrument Processing. The storage activity will process procurement instrument source receipts for LR materiel received after 1 year past the effective transfer date (ETD), in the same manner that they process procurement instrument source receipts received during the ETD to 1-year period.

C13.2.12.2. Storage Activity Actions. For receipt of materiel that has been logistically reassigned, after the ETD, the receiving storage activity will perform the following:

C13.2.12.2.2. **Report Procurement Instrument Source Receipt.** Report procurement instrument source receipts for which there is no PMR file in accordance with the guidance in C13.2.9.3.4. for processing receipts not-due-in.

C13.2.12.2.3. **Report Non-procurement Instrument Receipt.** Report non-procurement instrument receipts for which there is no PMR file in accordance with the guidance in C13.2.9.3.4. for processing receipts not-due-in.

C13.2.12.3. **LIM Actions.** The LIM will do the following actions:

C13.2.12.3.1. **Process Storage Activity.** Process the storage activity initiated Receipt Transactions to reduce the due-in record and record assets on the LIM record for the quantity received.

C13.2.12.3.2. **Process Logistics Transfer Transaction.** Process the associated logistics transfer/decapitalization transaction, adjustment transaction, and LR storage ownership transfer transaction in accordance with Chapter 9.

C13.2.12.3.3. **Record Litigation Assets.** For materiel received for which litigation is required, record assets on the LIM owner record in SCC L and reduce the due-in record.

C13.2.12.3.3.1. At this time, no action will be taken by the LIM to remove or change the GIM's memorandum due-in.

C13.2.12.3.3.2. When litigation is completed and the materiel is reclassified to an issue condition, process the associated adjustment transaction and LR transfer/decapitalization transactions in accordance with Chapter 9.

C13.2.12.3.3.3. If materiel is returned to the contractor due to litigation proceedings notify the GIM in accordance with Chapter 9.

C13.2.12.3.3.4. The LIM must take appropriate action to reestablish a due-in, in accordance with Chapter 12 if the materiel being returned to the contractor for deficiency correction will eventually be returned to the LIM.

C13.2.12.4. **Reject Receipt as Appropriate.** If a procurement instrument source receipt for an LR item is incorrectly reported to the LIM or the GIM, and the LIM or GIM does not have a recorded due-in, did not initiate the procurement action, and/or has a record of a due-in or memorandum due-in and is able to determine the appropriate reporting for the receipt, the LIM or GIM should reject the receipt back to the initiator using DLMS 824R, Reject Advice, and citing Reject Advice Code AB (Navigate to LOGDRMS and enter advice code AB in the “Enter a Specific Data Code to Search for” text box, click “Search”).
C13.3. INQUIRY ON IN-TRANSIT DUE-INS

C13.3.1. Submission Timeframe. When a maximum of 45 calendar days has elapsed since the shipping date shown in shipment notification, and receipt of the total quantity has not been reported, the owner will submit a Receipt Inquiry Transaction for information on the in-transit quantities to the storage activities designated to receive the materiel. (Extension of the 45 calendar day timeframe is authorized when long in-transit times are involved.)

C13.3.2. Tracer Action. When the storage activity response shows that the materiel has not been received, initiate any shipment tracer and/or discrepancy reports required under the procedures cited in C13.2.9. Coordinate with the CAO/PO for in-transit contract receipts. Storage activities will submit shipment tracers and discrepancy reports for materiel not received as shown in the DoD Component implementing procedures or when directed to do so by the owner.

C13.4. STORAGE ACTIVITY RESPONSE TO INQUIRY ON MATERIEL RECEIPT

C13.4.1. Materiel Receipt Previously Processed. When materiel has been received, and a receipt was previously submitted, storage activities will submit a duplicate Receipt Transaction citing Advice Code 3P.

C13.4.2. Receipt in Process. When the storage activity has the receipt in process, storage activities will reply using the Response to Inquiry Transaction citing Advice Code 3K.

C13.4.3. No Receipt but Record of Due-In. When the storage activity has no receipt in process but there is a PMR file, the storage activity will reply using the Response to Inquiry Transaction citing Advice Code 3M.

C13.4.4. No Receipt and No Record of Due-in. When the storage activity has no receipt in process and no record of a PMR file, the storage activity will reply using the Response to Inquiry Transaction citing Advice Code 3N.

---

7 Refer to ADC 313. DoD components must provide Defense Logistics Management Standards Program Office with their Component implementation date for ADC 313.
C13.5. ARMY EXCHANGE PRICING PROCESS

C13.5.1. The Army approach to the Exchange Pricing (EP) interim approach is a multi-system functionality implementation. EP employs a dual pricing system for repairable NSN items based upon Standard Price (latest acquisition cost plus cost recovery rate) and Exchange Price (latest repair cost plus cost recovery rate) and a “buy one – return one” relationship with the customer. That is, a qualified exchange pricing customer buys at the Exchange Price and pays a penalty if a reparable is not turned-in within a specified period of time from the issue date. This process is applicable to the Army customers and Army-managed materiel only; other Services will continue to pay Standard Price and receive 65 percent credit exchange upon receipt of carcass by the Army primary inventory control activity (PICA).

C13.5.2. Once an item of supply is identified for a national repair program and the national item identification number (NIIN) has an established Exchange Price, all requisitions for the item will be priced at the Exchange Price if the customer is an authorized EP customer.

C13.5.3. When a requisition submitted to the Supply Support Activity (SSA) is processed by the Standard Army Retail Supply System (SARSS), SARSS will determine if both the customer DOD activity address code (DoDAAC) is an EP customer, and the NIIN has an established Exchange Price. If the customer is an EP customer the requisition will be updated to include the EP Indicator. As this transaction is processed through the Army supply system, middleware, Funds Control Module (including EP Tracking) DAAS, Commodity Control Supply System (CCSS), and Army Logistics Modernization Program (LMP), the EP Indicator will be used to identify the transaction as EP related. All the legacy systems will continue processing the MILS transactions, LMP will process DLMS transactions that are converted by the Defense Automatic Addressing System (DAAS).

C13.5.4. All related supply transactions prepared by the Army will carry and perpetuate the EP Indicator. As a result of the EP implementation the following transactions will be impacted, Requisition, Requisition Modifier, Requisition Follow-Up, Materiel Release Order and Supply Status. The returns process will also process EP related transactions. The Materiel Receipt transaction will be generated by SARSS for all returns of EP NIINs, and will include an EP Type of Credit indicator for Unserviceable credit when applicable, as well as an EP Conversion Indicator to identify the need to provide credit according the pre-EP credit policy, which will last for 60 calendar days following the implementation of Exchange Pricing.

C13.5.5. If the return is in an un-repairable condition code or the item is not returned within the established timeframe (Delta Delay Days), the national level systems (LMP, CCSS) will create an obligation adjustment based on the receipt from Middleware Funds Control Module of a materiel returns supply status (Delta Bill Trigger) transaction. As a result of processing the delta bill trigger the national systems will create the logistics/interfund bill transaction with an EP Indicator and Type Bill code to identify the specific type of Exchange Pricing bill to the Army financial systems.
C13.6. OPTIONAL INTRA-SERVICE USE OF RECEIPT FOR MATERIEL PROVIDED TO CONTRACTORS AS GOVERNMENT FURNISHED MATERIEL. Under the Government Furnished Materiel (GFM) business process contractors are authorized to receive specific items and quantities of GFM from Government supply sources. Materiel may be issued to the contractor based upon a contract schedule/bill of material (BOM) or issued in response to a requisition made by the contractor or a responsible Government representative. It is normally required that the contractor (or authorized Government representative) submit a materiel receipt acknowledgment (MRA) Transaction to the ICP under MRA procedures (refer to Chapter 10, C10.2.5.6). However, on an intra-Service basis, if the Service requires the contractor to send a Receipt Transaction to their issuing ICP rather than an MRA, the contractor must cite the DoD contract number which authorized the provision of GFM. This establishes GFM accountability to the contract. The GFM contract number, and call/order number, when applicable, is required in addition to the controlling document number for the Receipt Transaction. Under the MRA exclusions, MRA is not required for shipments to contractors, commercial, or industrial activities which are receipt reported to the owning ICP.
C14. CHAPTER 14

ISSUE, LOAN, DEMAND, AND SINGLE MANAGER FOR
CONVENTIONAL AMMUNITION FREEZE/UNFREEZE
ACTION

C14.1. GENERAL

C14.1.1. This chapter provides a standard procedure for processing Issue, Demand, and Single Manager for Conventional Ammunition (SMCA) Freeze/Unfreeze Action. This chapter also addresses the materiel loan process.

C14.1.2. Transactions. This chapter addresses the procedures applicable to the following Defense Logistics Management Standards (DLMS) transactions, identified by their Accredited Standards Committee (ASC) X12 beginning segment report type code. Other DLMS formats, such as extensible markup language (XML), are also available. See the DLMS Program Office Website for available formats on the DLMS IC page. The corresponding Military Standard Transaction Reporting and Accountability Procedures (MILSTRAP) legacy 80 record position transaction functionality is identified for information purposes in a mixed Defense Logistics Standard System (DLSS)/DLMS environment.

C14.1.2.1. Issue Transaction. Issue Transaction is DLMS 867I Issue, identified by ASC X12 beginning segment (1/BPT04/20) Report Type Code 01 – Product Transfer. This transaction provides MILSTRAP legacy Document Identifier Code (DIC) D7_ functionality. The Issue Transaction function is further broken down by the 2/PTD01/10 Product Transfer Type Code which provides the functionality of the third position or the MILSTRAP legacy DIC. Table C14.T1 shows the specific product transfer type code corresponding to the MILSTRAP legacy DICs.

**C14.1.2.2. Demand Transaction.** Demand Transaction is DLMS 867D Demand Reporting identified by beginning segment (1/BPT04/20) Report Type Code TO – Demand Report. This transaction provides MILSTRAP legacy DIC DHA functionality.

**C14.1.2.3. Single Manager for Conventional Ammunition Freeze/Unfreeze Action Transaction.** SMCA Freeze/Unfreeze Action Transaction is DLMS 846F SMCA Freeze/Unfreeze Action, identified by beginning segment (1/BIA02/20) Report Type Code ZB – Conventional Ammunition Suspension Report. This transaction provides MILSTRAP legacy DIC DA1/DA2 functionality.

**C14.2. ISSUE**

**C14.2.1. General**

**C14.2.1.1.** This section provides a standard procedure for processing Issue information to owner/inventory control point (ICP) for the purpose of:

**C14.2.1.1.1.** Updating the owner/ICP record.

**C14.2.1.1.2.** Recording the appropriate financial transaction. Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event to include SLOA mandated standard financial
The DLMS issue transaction supports inclusion of SLOA required elements. Pending full implementation of SLOA, DAAS will facilitate interoperability by updating selected SLOA data fields based upon the initiating activity’s Service/Agency and Fund Code. If discrete values for the SLOA data elements in the transaction do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction, reject with the DLMS 824R Reject Advice citing Reject Advice Code BU.

C14.2.1.1.3. Providing a basis for billing the customer.

C14.2.1.2. Processing points receiving requisitions, passing actions, follow-ups and cancellations, irrespective of format or method of transmission, will process such transactions in accordance with their respective internal procedures.

C14.2.1.3. Internal processing methods may vary due to automated capability and related procedures; however, the formats for output from processing point to requisitioner and between processing points will use the formats prescribed in this manual.

C14.2.1.4. Issue transactions are used to convey issue data to the ICP. Issue Transactions resulting from a backorder release are identified by Issue Transaction related Management Code M.

C14.2.1.5. Materiel from an Army Medical Materiel Agreement (AMMA) site may be issued using local catalog identification numbers.

C14.2.2. Maintaining Accountability During Maintenance Actions

C14.2.2.1. Applicability

C14.2.2.1.1 These procedures apply to issues from inventory for assembly, disassembly, reclamation, conversion, modification, repair, and destructive or nondestructive test/evaluation consigned by the Department of Defense, other Government (non-DoD) Agencies, and commercial activities.

C14.2.2.1.2. These procedures exclude repair and return of materiel owned below the wholesale distribution system. However, DoDM 4140.01 policy and, for commercial maintenance, the provisions of the FAR, apply.

C14.2.2.2. Accountability

C14.2.2.2.1. For organic maintenance, responsibility for maintaining the asset balance portion of the property accountability record for DoD-owned property being repaired resides with the activity having physical custody. Organic maintenance

1 Refer to ADC 1043/ADC 1043A
facilities will assume accountability of materiel upon receipt at the maintenance facility and while in its custody during maintenance actions.

C14.2.2.2.2. For Contractor maintenance, the owning DoD Component will maintain accountability for materiel in a contractor’s possession for repair. The contractor will have stewardship of the materiel in accordance with the requirements in Part 52.245-1 of the Federal Acquisition Regulation and associated clauses, terms, and conditions. The stewardship includes all government furnished property, including items furnished for repair, and remains until the repaired assets are returned to and received by the DoD Component.

C14.2.2.2.3. For both organic and contractor maintenance, the activity having physical custody will provide visibility and report changes to the on-hand balance to the materiel owner (the Principal for maintenance by DMISA).

C14.2.2.3. Requirements

C14.2.2.3.1. Collocated Storage Activity. When the maintenance activity is collocated with a DoD storage activity, owners will direct materiel into maintenance only from the collocated storage activity. When necessary, owners will relocate materiel from remote storage activities to the storage activity collocated with the maintenance activity using DLMS 940R, Materiel Release. The action will be posted to the property accountability record using either the Issue Transaction (Issue Relocation) or DLMS 945A, Materiel Release Advice.

C14.2.2.3.2. Organic Maintenance. The owner (Principal) will direct the issue of materiel to the maintenance activity from the co-located storage activity. Based on the repair schedule, the maintenance activity (Agent for maintenance by DMISA) may initiate induction to maintenance by requisitioning the unserviceable asset from the owner (Principal for maintenance by DMISA) under the provisions of DLM 4000.25, Volume 2, Chapter 4, paragraph C4.2.20.

C14.2.2.3.3. DoD Component Actions. Each DoD Component will ensure that:

C14.2.2.3.3.1. Owned inventory in the hands of the Department of Defense, other Government (non-DoD), and commercial activities is properly accounted for under the provisions of Volume 2, Chapter 6, Chapter 7, Chapter 12 and Chapter 13 of the DLMS Manual and, for commercial maintenance, the provisions of the Federal Acquisition Regulation. This includes returns from field activities for repair and reissue as wholesale inventory. The DoD Components will prescribe use of any required internal codes to meet this requirement. (Responsibility of the owner (Principal for maintenance by DMISA).)

C14.2.2.3.3.2. Total item property records for materiel in the hands of maintenance activities are maintained and adjusted based on the quantity of returned materiel and will support the DoD 7000.14-R “Department of Defense Financial
Management Regulation” accounting and reconciliation requirements. (Responsibility of the owner (Principal for maintenance by DMISA).)

C14.2.2.3.3. Contracts for commercial maintenance require the commercial activity to report or acknowledge receipt and report shipment or condemnation of materiel to the contracting officer. (Responsibility of the agent for maintenance by DMISA.)

C14.2.2.3.4. Any needed interface between the procurement and supply operations/functions exists to ensure that changes in inventory segment data (stock number, quantity, supply condition code) are sent to the owner. (Responsibility of the agent for maintenance by DMISA.) Arrangements may be made for commercial activities to report directly to the contracting officer and/or the owner using DLMS transactions.

C14.2.2.3.5. Reported data affecting inventory balances is recorded in the total item property record. (Responsibility of the owner (Principal for maintenance by DMISA).)

C14.2.3. Issue Supply Condition Code (SCC) Q Materiel to DLA Disposition Services Field Office. When an inspection or technical/engineering analysis reveals a product quality deficiency that prohibits further DoD use of the materiel, the ICP will direct the transfer of the materiel to the DLA Disposition Services Field Office in SCC Q. Disposal release orders and related issue transactions for this materiel must cite either Management Code O (alpha) to identify deficient materiel that does not require mutilation or Management Code S to identify deficient materiel that requires mutilation. DLA Disposition Services will perform mutilation in accordance with existing guidance for the national stock number (NSN)/type of materiel. The ICP should identify to DLA Disposition Services any unique instructions for disposal requiring specific methods or information regarding hazardous contents contained in the item.

C14.2.4. Issue Reversal

C14.2.4.1. Issue reversals are used to correct owner and storage activity inventory records due to erroneous input by the storage activity.

C14.2.4.2. By Component agreement, issue reversals are authorized as a method to adjust inventory balances as the result of a validated supply discrepancy report (SDR). The issue reversal transaction will serve as an auditable record of this action within storage activity and owner systems. When used for this purpose the storage activity must include the reason for reversal code in the issue reversal transaction to indicate a correlation with a supporting discrepancy report.
reversals used to adjust inventory records will systemically trigger a financial adjustment by the owner system, when applicable, for discrepant shipments including, but not limited to, shortage, wrong item, or incorrect condition. The issue for wrong item shipments will not be reversed until after the incorrect materiel has been returned to the storage activity (with exception by direction of the ICP to correct records where a wrong item received is not returned).  

C14.2.4.3. Navy use only. Storage activities will cite Reason for Reversal Code S in the issue reversal transaction when a cancellation request is issued for a materiel/disposal release order (MRO/DRO) and the item was not shipped. The reversal requirement stems from a timing issue. The MRO/DRO is in process, the storage activity property accountability record was decremented and the issue transaction was sent to the ICP to decrement to the owner balance. Subsequent to this action, but prior to the materiel being physically shipped and a materiel release confirmation being generated, the MRO/DRO issue action is cancelled and the materiel is returned to stock, if necessary. An issue reversal transaction is then required to increment the storage activity’s property accountability record and the ICP’s record to the original quantity.

C14.3. BACKORDER TRANSACTIONS. Backorder transactions are not considered essential to supply operations under DLMS (consensus reached by the DLMS Supply Process Review Committee (PRC)). Accordingly, there is no DLMS backorder transaction. Under legacy MILSTRAP, Backorder transactions may be used to report establishment or cancellation of a backorder to ICPs. MILSTRAP legacy Backorder transactions are identified by the DIC DG series transactions.

C14.4. DEMAND TRANSACTIONS. The Demand Transaction may be used between supported activities and ICPs to report the establishment or cancellation of supply system demands, or may be used by ICPs as a technique for recording and accumulating demands for NSN items resulting from processing DLMS requisitions, passing orders, or other forms of supply system demands.

C14.5. LOAN TRANSACTIONS

C14.5.1. When authority is given to loan Government-owned materiel, supporting documentation pertaining to the terms and conditions of the loan will be maintained in a manual jacket file. As a minimum, the file should contain appropriate records to provide information on the purpose of the loan/authorization; location(s) of the materiel; condition of materiel at time of loan; loan duration; quantity; and value of loaned materiel.

C14.5.2. If accountability is dropped, the Issue Transaction (Loan) will be used to loan materiel from depot inventory to authorized recipients. Some centralized systems

2 Refer to ADC 1160. Implementation delayed.
3 Backorder transactions were eliminated from DLMS by intent after coordination with the DoD Supply Process Review Committee (SPRC).
do not use Issue Transactions for the issue of loan materiel; however, the applied method should show the issue for audit and accountability purposes. For a decentralized system, the Issue Transaction, if created by other than the ICP, may be used.

C14.6. SINGLE MANAGER FOR CONVENTIONAL AMMUNITION FREEZE/UNFREEZE ACTIONS

C14.6.1. Processing of transactions, such as mismatched record reconciliation requests (DLMS 846R, Location Reconciliation Request) or materiel release denials (DLMS 945A, Materiel Release Advice), may require the SMCA to freeze and, when resolved, to unfreeze wholesale assets at a specific storage activity for a given stock or part number, ownership/purpose code, and SCC.

C14.6.2. When freeze or unfreeze actions are taken based on C14.6.1, the SMCA will provide the SMCA Freeze/Unfreeze Action Transaction to the owning DoD Component ICP for update of the ICP wholesale financial accountable records.
C15. CHAPTER 15

INSTALLATION CLOSURE PROCEDURES

C15.1. GENERAL

C15.1.1. Purpose. This chapter provides procedures and specifies timeframes for installation closures. They are intended to systematically curtail supply support, transfer mission-essential materiel, transfer materiel that is no longer required, and redirect mission-essential requisitions for or from activities affected by installation closures. Included are procedures for reporting all installation-owned property not to be transferred with the mission to new location(s).

C15.1.2. Transactions. This chapter addresses the procedures and applicable transactions relevant to installation closures. See the Defense Logistics Management Standards Program Office Website for available formats on the DLMS IC page. The corresponding MILSTRIP legacy 80 record position transaction functionality is also provided for ease of interpretation by DLMS users and to support those working in a legacy environment. In addition to the listed MILSTRIP legacy transactions, the DLMS formats may incorporate functionality to support Component-unique transactions as noted in the implementation convention.

C15.1.2.1. The Requisition Cancellation Transaction is identified by the DLMS 869C by beginning segment (1/BSI08/020 Code AC). This transaction provides the functionality of MILSTRIP legacy DIC AC1, AC2, AC3, AC4, AC5.

C15.1.2.2. The Request for Mass Cancellation of Requisitions Transaction is identified by the DLMS 869C by beginning segment (1/BSI08/020 Code AC and 1/BSI09/020 Code AW).¹ This transaction provides the functionality of the MILSTRIP Mass Cancellation Message (See Appendix 6.23). There is no MILSTRIP legacy DIC equivalent.

C15.1.2.3. The Request for Universal Cancellation of Requisitions Transaction is identified by the DLMS 869C by beginning segment (1/BSI08/020 Code AC and 1/BSI09/020 Code C).² This transaction provides the functionality of the MILSTRIP Universal Cancellation Message (See Appendix 6.23). There is no MILSTRIP legacy DIC equivalent.

C15.1.2.4. The Customer Asset Report (Stock Numbered Items) Transaction is identified by the DLMS 180M by beginning segment (1/BGN07/20

¹ Mass cancellation and follow-on transactions are DLMS enhancements. Refer to ADC 1132. Delayed implementation authorized.
² Universal cancellation and follow-on transactions are DLMS enhancements. Refer to ADC 1132. Delayed implementation authorized.
Code FT) and baseline item data (1/BL01/10 Code FS). This transaction provides the functionality of MILSTRIP legacy DIC FTE.

C15.1.2.5. The Reply to Customer Asset Report Transaction is identified by the DLMS 870M by beginning segment (1/BSR01/20 Code 7) and industry code (2/LQ01/145 Code 0 citing FTR). This transaction provides the functionality of MILSTRIP legacy DIC FTR.

C15.1.2.6. The Disposal Release Order (DRO) Transaction is identified by the DLMS 940R by beginning segment (1/W0506/0200 Code NE). This transaction provides the functionality of MILSTRIP legacy DIC A5J.

C15.2. APPLICABILITY AND SCOPE. These procedures and timeframes apply to all DoD installations, both Continental U.S. (CONUS) and Outside the Continental U.S. (OCONUS); DoD tenant and satellite activities; DoD inventory control points (ICP); and DoD integrated materiel managers (IMM) processing reports for materiel no longer required as a result of an installation closure.

C15.3. EXCLUSIONS. In addition to the exclusions cited in Chapter 11, the procedures in this chapter do not apply to the following:

C15.3.1. bulk petroleum;

C15.3.2. inter-departmental and intra-departmental purchasing operations;

C15.3.3. forms and publications;

C15.3.4. communications security (COMSEC) equipment, COMSEC aids (keying materiel), and all items including classified components, individual elements, and repair parts that are classified and designated "crypto", or that are normally handled through crypto channels;

C15.3.5. coal and coke;

C15.3.6. related personal property reportable to GSA as a part of a real estate package. Related personal property is classified as any property that is:

C15.3.6.1. an integral part of real property or is related to, designed for, or specially adapted to the functional or productive capacity of the real property and removal of this personal property would significantly diminish the economic value of the real property. Normally, common use items, including, but not limited to, general purpose furniture, utensils, office machines, office supplies, or general purpose vehicles are not considered to be related personal property;

C15.3.6.2. determined by GSA to be related to the real property;

C15.3.7. installed property (Class II Plant Property);
C15.3.8. real property.

C15.4. INSTALLATION CLOSING PROCEDURES

C15.4.1. Stratification of Inventory

C15.4.1.1. Installation Procedures. Do an inventory of all installation-owned property upon receipt of a confirmed closure date. The inventory will include, but not be limited to, nonconsumable items (recoverable/capitalized assets and assets on table of allowances) and consumable items (assets on working capital fund records). Each designated account must maintain its identity. Stratify the inventory applicable to each designated account into three classes of property:

C15.4.1.1.1. Mission-essential and is to be transferred to a new location with the mission.

C15.4.1.1.2. Not mission-essential but is required for local operations during the period prior to closure.

C15.4.1.1.3. Materiel that is no longer required for operational needs.

C15.4.1.2. Tenant and Satellite Activities. Each tenant and/or satellite activity having custody of installation-owned property must return that property to the installation. Accountable records must reflect the returns. Use procedures in subparagraph C15.4.1.1 to inventory and stratify tenant-owned and satellite-owned property.

C15.4.1.3. Working Capital Fund. Relocate the DoD Component managed working capital fund items with the mission, if mission-essential, or redistribute within the DoD Component working capital funds. Relocate IMM items with the mission, if mission-essential, or report to the IMM for disposition instructions.

C15.4.2. In-Process Requisitions

C15.4.2.1. Initial Requisition Review. Simultaneously with doing the inventory, do a review of the installation requisitions. Identify requisitions that will be:

C15.4.2.1.1. continued for shipment to the unit’s relocation site.

C15.4.2.1.2. continued for operational requirements until closure.

C15.4.2.1.3. canceled if materiel is no longer required for operational needs. Cancellations will be performed by single-line cancellation if time permits. See Chapter 4 for requisition cancellation procedures.

C15.4.2.2. Sixty-Day Review. Sixty calendar days prior to closure date, review all requisitions again for need. If required, identify requisitions for shipment to the relocation site. Use single-line requisition cancellation procedures to cancel
requisitions not required. When time is insufficient to effect single-line cancellations, use the mass or universal cancellation procedures under Chapter 27. Universal cancellation procedures do not provide for continuation of requisitions for shipment to a new location site.

C15.4.3. Disposition of Inventory

C15.4.3.1. Time-Phased Closing Schedule. The activity being closed will develop a time-phased schedule to transfer mission-essential property to the new mission location(s). The schedule will plan the movement of property at the earliest date without impairing mission capability prior to the transfer. Transfer mission-essential property to the new location(s) after transfer of the mission only in those circumstances where mission-essential items are required, up to and including the last day prior to mission transfer.

C15.4.3.2. Review of Non-Mission-Essential Items. In actions involving an installation closure, review and process all non-mission-essential items under the provisions of DoD Directive 5410.12, Economic Adjustment Assistance to Defense-Impacted Communities, July 5, 2006. Begin initial review of installation-owned items under the provision of DoD Directive 5410.12 immediately upon completion of the inventory, including items identified as no longer required and items identified as being necessary for operation of the installation prior to closure. Using these item lists as the basis, make preliminary identification of related personal property as defined by the DoD Directive 5410.12.

C15.4.3.3. Review of Host Country Agreements. In actions involving the closure of OCONUS installations, review and process all items that are not mission-essential and/or items that will not be transferred with the activity under agreements between the United States and the host country. Begin the review immediately upon completion of the inventory, including those items identified as necessary for installation operations prior to closure.

C15.4.3.4. Reporting Excess Materiel. Immediately upon completion of the inventory and, if time permits, not less than six months prior to the announced date of closure, report to the appropriate ICP/IMM under Chapter 11 Materiel Returns Program procedures all property identified as no longer needed by the installation and not included in the preliminary list of related personal property. Do not report excess property to GSA under Chapter 11 procedures; GSA managed materiel should be redistributed per Service guidance, or alternatively, revert to normal reutilization/transfer/donation processes.

C15.4.3.5. Stratification of Property for Installation Operations. Stratify all property that is not mission-essential, but is required to operate the installation for all or a portion of the time remaining until closure and is not included in the preliminary list of related personal property. Stratify items in date order when they will become excess to operational needs. Sixty calendar days prior to the date that each item becomes excess, report the items to the ICP/IMM under Chapter 11 procedures.
C15.4.3.6. Reporting Personal Property Items. Report items identified as related personal property (See C15.3.6.) to the ICP/IMM using the Customer Asset Report (DLMS 180M) and cite Project Code 3QQ. Project Code 3QQ informs the ICP/IMM that the item has been placed on the preliminary inventory of related personal property designated to be transferred to the local community at the time of installation closure. If there is a DoD requirement, delete the item(s) from the inventory of related personal property. Do not report related personal property to GSA under materiel returns program (MRP) procedures.

C15.4.3.7. Processing Excess Materiel. When items that have been reported to ICPs/IMMs as no longer needed under the above guidance and Chapter 11 procedures and for which the ICPs/IMMs have indicated a requirement, process those items using ICP/IMM materiel returns instructions.

C15.4.3.8. Excess Item Disposal. All items reported to the ICPs/IMMs as no longer needed, and for which the ICPs/IMMs provided a Reply to Customer Asset Report (DLMS 870M) citing Supply Status Code TC, plus items that are not reportable to ICPs/IMMs (e.g., locally purchased non-national stock number (NSN) items) will be disposed under DoD Component procedures. All items identified as related personal property (See C15.3.6.) and for which there is no DoD requirement, will remain with the installation.

C15.4.3.9. Inactive NSNs. Distribution centers having obsolete or inactive coded NSNs on record (items without an active item manager in FLIS) will locally prepare a DRO (DLMS 940R) citing Utilization Code M.

C15.5. PROCEDURES FOR THE INVENTORY CONTROL POINT/INTEGRATED MATERIEL MANAGER C15.5.1. ICPs/IMMs will process customer asset reports (DLMS 180M) for property received resulting from installation closure using Chapter 11 procedures. ICPs/IMMs will not direct the return of related personal property identified by Project Code 3QQ unless the item is required to meet an approved force acquisition objective and/or approved pre-positioned war reserve requirement. C15.5.2. When appropriate, ICPs/IMMs will direct disposal of materiel resulting from base realignment and closure (BRAC) under Chapter 16 procedures for directing materiel to DLA Disposition Services. The resulting DRO (DLMS 940R) will cite Utilization Code M.
C16.1. General

C16.1.1 Purpose. This chapter prescribes policies, procedures, and transactions relevant to DLA Disposition Services. These procedures establish guidelines for movement of materiel to DLA Disposition Services, handling and accounting for this materiel, and requisitioning DoD excess personal property from DLA Disposition Services. Basic procedures such as requisitioning, status, receipt and discrepancy reporting are documented in DLM 4000.25, Volume 2. This chapter augments those procedures with specific procedures related to DLA Disposition Services and managing DoD excess personal property.

C16.1.2. Transactions. This chapter includes the procedures applicable to the following DLMS transaction functions, which are not addressed in any other chapter. These transaction functions are DLMS enhancements with no corresponding legacy 80 record position transactions. The transaction functions are identified by their beginning segment transaction type code or report type code. See the Defense Logistics Management Standards (DLMS) Program Office Website for available formats on the DLMS IC page.

C16.1.2.1. Disposition Services Turn-In Receipt Acknowledgement (TRA) Transaction is DLMS 527R with beginning segment Transaction Type Code CJ – Confirmation (2/BR02/020 Code CJ).

C16.1.2.2. Disposition Category Update Transaction is DLMS 846C with beginning segment Report Type Code PC – Process Change Notice (1/BIA02/0200 Code PC)

C16.1.2.3. Disposition Category Update Response Transaction is DLMS 846C with beginning segment Report Type Code 09 – Progress Report (1/BIA02/0200 Code 09). Disposition Category Update Responses Transactions are further broken down by beginning segment Action Codes (1/BIA06/0200).

C16.1.2.3.1. Action Code 2 – Change (Update). DLA Disposition Services Field Office uses to notify the DLA Disposition Services ICP that the proposed Disposition Category Code DS – Disposal will be overturned with a Disposition Category Code S – Sales.

C16.1.2.3.2. Action Code CF – Confirm. DLA Disposition Services Field Office uses to confirm the Disposition Category Code DS – Disposal assigned to the DTID by the DLA Disposition Services ICP.
C16.1.2.3.3. Action Code DE – Deny. DLA Disposition Services Field Office uses to deny the Disposition Category Code DS – Disposal assigned to the DTID by the DLA Disposition Services ICP.

C16.1.2.4. Accumulation Number Update Transaction is DLMS 846C with beginning segment Report Type Code RA – Revision Announcement (1/BIA02/0200 Code RA). DLA Disposition Services ICP sends this transaction to the DLA Disposition Services Field Office to advise of a change in the disposition services accumulation number.

C16.2. REQUISITIONING DOD EXCESS PERSONAL PROPERTY FROM THE DISPOSITION SERVICES

C16.2.1. General

C16.2.1.1. Excess Property Requisition. DoD activities and, under certain circumstances, authorized Federal civil agencies, requisition excess personal property through the DLA Disposition Services or directly from a DLA Disposition Services Field Office. Activities will request, through an accountable supply officer, only that property authorized by parent headquarters or command and will not request quantities of property that exceed authorized retention quantities. The DoD Component will give DLA Disposition Services the Federal condition codes that are acceptable in relation to the supply condition code (SCC) being requisitioned. DLA Disposition Services maintains a standardized and centralized control and accounting system for all excess and surplus personal property located in DLA Disposition Services Field Offices, and provides visibility of such property through a variety of utilization screening procedures. (see DoD 4160.21-M, "Defense Materiel Disposition Manual," August 1997 for utilization policy and procedures.)

C16.2.1.2. Use of Defense Logistics Management Standards 511R. DoD activities will send requisitions using the Defense Logistics Management Standards (DLMS) 511R Requisition, for excess personal property to DLA Disposition Services. The requisition may be hand carried to DLA Disposition Services Field Offices for property previously selected, scheduled for pickup, or required as a result of screening at DLA Disposition Services Field Offices. Always cite the DoD activity address code (DoDAAC) of the DLA Disposition Services Field Office in requisitions hand carried to a DLA Disposition Services Field Office. Activities or units unable to send requisitions electronically may forward them directly to DLA Disposition Services by mail or by narrative message, but will consider this a nonstandard procedure and discontinue its use as soon as the ability to use an electronic method is realized.

C16.2.2. Submission of Requisitions to DLA Disposition Services

C16.2.2.1. General. When DLA Disposition Services is notified of a turn-in to a DLA Disposition Services Field Office, via a DLMS 527R Receipt transaction containing Disposition Category Code RU Reutilization (see C16.2.2.1.2) the disposal turn-in document (DTID) and/or property is considered eligible for requisitioning and
placed in a reutilization cycle that determines eligibility to requisition the item. There are four different continental United States (CONUS) screening periods within the reutilization/transfer/donation (RTD) formal screening cycle: DoD Formal and Special Programs (Screening Cycle Code = DOD), General Services Administration (Screening Cycle Code = GSA), Donation (Screening Cycle Code = DON), and a second RTD screening cycle for items eligible to RTD customers (Screening Cycle Code = RTD2). Outside continental United States (OCONUS) Screening Cycle Codes are FEPP (for Department of Defense, DoD Special Programs and federal Civil Agencies); FEPD (for Donation); and RTD2 for all others. DoD customers can requisition an item at any time during the cycle; however, non DoD agencies and groups only have access to the item once it reaches a certain day within that cycle.

C16.2.2.1.1. Reutilization/Transfer/Donation Property. All customers will have a valid DoDAAC in order to requisition DLA Disposition Services’ RTD property. Requisitions may be generated for DLA Disposition Services’ property via the DLA Disposition Services RTD Web, GSA Web, or from Service/Agency supply systems. However, RTD Web will be the single interface by which DLA Disposition Services receives requisitions. GSA Web and Service supply system orders will be routed by Transactions Services to RTD Web prior to DLA Disposition Services. Once processed by RTD Web, any additional information/data elements that are maintained within RTD to facilitate processing will be added to the requisition documents and transmitted to DLA Disposition Services.

C16.2.2.1.2. FMS Requisitions of Reutilization Property. All requisitions sent to DLA Disposition Services for property assigned Disposition Category Code RU are considered free-issue, except requisitions from foreign military sales (FMS) customers. DLA Disposition Services supports two types of FMS Customers, identified as FMS Sales Case Customers and FMS Grant Case Customers. Both customers generate packing, crating, and handling (PC&H) costs; however, FMS Sales Case Customers are charged additional costs determined from the acquisition value of the NSN and factoring in the depreciation value based on the condition code, multiplied by the quantity on the Materiel Release. The FMS charges are calculated in EBS, then transferred to DSS via DLMS 940R with the Present Market Value. Once DSS performs the good pick for the FMS requisition, DSS will send a DLMS 945A to EBS in addition to printing these charges on the bottom portion of the DD 1348-1A. The Present Market Value will identify FMS Costs and allow systems to convey this calculated value across multiple platforms for auditability. For FMS Sales Customers, this is the PC&H charges in addition to calculated sales charges. For FMS Grant Customers, the FMS Costs will identify only FMS PC&H charges. Passing this information will allow for proper financial accountability. Additionally, when the DD 1348-1A prints, the continuation sheet will include Foreign Military Sales Cost Information, printed as “FMS Costs”. The funds appropriation/funds cite will be perpetuated to the field office on the DLMS 940R Materiel Release Order (MRO) at the time the item is issued. Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event to include SLOA mandated standard financial information
system (SFIS) elements. The DLMS MRO transaction supports inclusion of SLOA required elements.

C16.2.2.1.3. DTID Number and Suffix Code on Requisitions. Service system generated requisitions for DLA Disposition Services' owned property are routed by Transaction Services to RTD Web and are not required to cite a DTID number, or DTID number and suffix, unless a specific property turn-in is being requested to fill the order. All customer requisitions originating via the RTD Web and GSA requisitions submitted to RTD Web are required to site a specific DTID number, or DTID number and suffix, as applicable. All requisitions forwarded from RTD Web to DLA Disposition Services for fulfillment, including Service system requisitions initially submitted without a DTID number, will cite a DTID number, or DTID number and suffix, as applicable.

C16.2.2.1.4. Want Lists. RTD Web customers are able to set up customized want lists within RTD Web. Want lists enable an automatic search of inventory and provide e-mail notification if the specific property becomes available. Customers will log in to RTD Web to initiate the requisition request, or generate a requisition from the Service supply system.

C16.2.2.2. Submission of Service System Generated Requisitions. RTD Web will provide a daily asset inventory file to Transaction Services to enable the Services to generate DLMS or legacy 80-record position format requisitions originating from their own supply systems based on the asset inventory file. Transaction Services has a documented agreement with each customer to provide the asset inventory file under the Integrated Data Environment (IDE) initiative. Military Service/Agency supply systems, external to the DLA Disposition Services RTD Web, may direct requisitions to DLA Disposition Services Routing Identifier Code (RIC) S9D without regard to specific DTID numbers contained within DLA Disposition Services' inventory. These requisitions will be forwarded by Transaction Services to the RTD Web for processing.

C16.2.2.3. RTD Web Generated Requisitions. Items that are within the reutilization cycles are reported daily by DLA Disposition Services via a property characteristic flat file to RTD Web when the Screening Cycle Code is either DOD or RTD2. This daily file to the RTD Web notifies the Web application of the available items. RTD Web maintains rules that determine eligibility to requisition specific items. For all requisitions prepared/generated within RTD Web, the document numbers will be constructed using the customer's DoDAAC, the current ordinal date, and a serial number. The serial number may begin with a specific letter value based upon the applicable business process as directed below.

C16.2.2.3.1. Submission of Requisitions for Items Identified to a Container. To facilitate RTD, DLA Disposition Services employs a containerization process whereby the DTID number or DTID number and suffix, of similar turned-in items is associated to a container and made visible to customers. Using this visibility, customers have the option of requisitioning either the whole container (through RTD

---

1 Refer to ADC 1043.
Web only) or specific items from within the container. A separate requisition identifying 
the disposition services container identification (ID) is sent for each item ordered by the 
customer. If the customer selects the entire container, a separate requisition is still 
generated for each item within the container. Where multiple document numbers are 
needed to support customers ordering containerized property, the RTD Web-generated 
document number will assign serial numbers beginning with utilization code R. The 
generation of a distinct document number for each item ordered allows the customer to 
have visibility and status relative to the processing of each requisition, maintains 
container synchronization, and facilitates inventory control. In addition to the disposition 
services container ID mentioned above, when the customer selects the entire container, 
each individual DLMS 511R Requisition (Transaction Type Code A0) will include an 
indicator (i.e., Container Issued in Full) to communicate that the whole container is 
being requisitioned and total of the DTID numbers within the container.

C16.2.2.3.2. Local Stock Number Requisitioning. Local stock number 
(LSN) requisitioning will be available only via RTD Web. All property marketed via RTD 
Web will be by DLA Disposition Services’ LSN or NSN. In cases where an item is 
available for requisitioning in less than the standard unit of issue, the resulting 
requisition transaction sent to DLA Disposition Services will include the ‘unit of use’ 
indicator to define the quantity and unit of measure as applicable to unit of use. The 
LSN will be identified as the primary identification and the NSN will be provided for 
cross reference.

C16.2.2.4. General Services Administration (GSA) Web Requisitioning. 
Items that are within the reutilization cycles are reported daily by DLA Disposition 
Services via a property characteristic flat file to the GSA Web when the Screening Cycle 
Code is GSA or DON for CONUS, and FEPP or FEPD for OCONUS. This daily file to 
GSA notifies the GSA Web of the available items. GSA Web maintains rules that 
determine who is eligible to requisition specific items. GSA customers are then able to 
requisition these items by generating a requisition. A daily batch file will be sent to 
Transaction Services. Legacy 80-record position requisitions will be converted by 
Transaction Services into DLMS 511R Requisition transactions and sent to RTD Web 
for processing. GSA will use the DTID number as the item control number which, along 
with a document number for each requisition, will be sent to RTD Web.

C16.2.2.5. Special Programs for Non-DoD/Non-Federal Agency 
Requisitioners. DLA Disposition Services provides support to federally authorized 
Special Programs, including organizations that are neither a Federal agency nor a DoD 
entity. Under policies set forth within the Department of Defense, these organizations 
are authorized to requisition materiel from DLA Disposition Services. Non-DoD and 
non-Federal programs requiring DoDAACs are controlled under unique series 
DoDAACs beginning with a numeric followed by alpha characters in the first two 
positions. See DLMS Volume 6, (C2.1.2.1.). Policy changes in the DoDM 4160.21 
identify that DoD Customers must have priority during the reutilization cycle over 
Special Programs Customers, and requisitions will no longer be obligated to Special 
Programs (to include FMS) during the DoD Customer Cycle. This results in DoD 
Special Program Customers having their requisitions held in EBS until day 14.
However, there are situations in support of customers or disaster relief efforts when Disposition Services will require immediate support for special programs; one example is customer support for FEMA. In order to support the Special Programs customers, the DLMS S11R Requisition will provide a Special Programs Hold Override Indicator, allowing these customers the ability to bypass the required hold period for these special circumstances.

C16.2.2.5.1. **DLA Disposition Services 2Y Series DoDAACs.** DLA Disposition Services’ Special Program DoDAACs will be reserved under the 2Y series. See DLMS Volume 2, Appendix 7, Service and Agency Codes). The 2Y Series DoDAACs will be populated with DoDAAC Authority Code 04, Authorized to Requisition DLA Disposition Services’ Materiel Only (see DLMS Volume 2, (C4.10.12, Table C4.T3) and the DoDAAC authority codes link in Volume 6 (C2.4.4.2, Table C2.T2). DLA Disposition Services will submit a letter to the DoD activity address directory (DoDAAD) Administrator (via the DLA DoDAAC central service points) designating the DLA DoDAAC monitor(s) responsible for establishing and maintaining the 2Y series DoDAACs.

C16.2.2.5.2. **DoDAAC Assignments.** DLA Disposition Services will ensure DoDAACs are only issued to authorized entities for authorized materiels for each special program. Initial DoDAAC assignments are as follows:

C16.2.2.5.2.1. **DoD Computers for Learning Program - 2YC.** Allows for the transfer of excess DoD computer hardware/information technology (IT equipment) to eligible elementary and secondary schools within the United States.

C16.2.2.5.2.2. **Veterans Industries - 2YD.** This vocational rehabilitation program, which provides temporary and permanent staffing for manufacturing, warehouse construction and office support, as well as outsourced support in assembly, packaging, sorting, grading, reclaiming, and recycling, is authorized to requisition excess property from DLA Disposition Services.

C16.2.2.5.2.3. **DoD Firefighter Program - 2YF.** Allows the transfer of excess property to firefighting agencies for use in fire protection and emergency service activities.

C16.2.2.5.2.4. **Law Enforcement Support - 2YT.** Allows the transfer of excess DoD property to Federal and State law enforcement agencies.

C16.2.2.5.2.5. **Civil Air Patrol - 2YX.** Allows the Civil Air Patrol (CAP), as the official auxiliary of the United States Air Force, to receive excess and Federal excess personal property (FEPP) without reimbursement.

C16.2.3. **Receipt of Requisitions by DLA Disposition Services.** Upon receipt of the requisition, DLA Disposition Services will select the requested item for issue or provide appropriate supply status if not available. If requested materiel is not available, DLA Disposition Services will keep the requisition on file for 60 calendar days and send a DLMS 870S Supply Status with Status Code B1 to the requisitioner. If all of the
requested materiel does not become available during the 60 calendar day period, DLA Disposition Services will cancel the remaining unfilled quantity and send a DLMS 870S with Status Code D1 to the requisitioner.

C16.2.4. Processing Requisitions by DLA Disposition Services and the RTD Website

C16.2.4.1. Materiel Release. The MRO (Transaction Type Code NA) will be used to direct the release of property from a DLA Disposition Services Field Office. The MRO will be sent from DLA Disposition Services to the field office when materiel is being issued as a result of sales, reutilization, transfer, or donation. The materiel release process will be accomplished at the DTID number or DTID number and suffix, level of detail. The rules in DLMS Volume 2, Chapter 4 apply to the MRO process; however, the transaction may contain the following additional data to support disposal processing as described below: DTID number, or DTID number and suffix, disposition services container ID, container issued in full indicator, minimum/maximum ship quantity, sales order reference number, complete container count, transportation mode or method, cancellation mandatory/optional flag, customer type, DEMIL code, DEMIL integrity code, and/or funds appropriation number. Upon shipment of the materiel for each MRO, the DLA Disposition Services Field Office will send the DLMS 856S Shipment Status (Type Transaction Code AS_) transaction to the customer. The transaction will contain the DTID number or DTID number and suffix of the original document number, and associated disposition services container ID.

C16.2.4.1.1. Disposal Turn in Document Number. The DTID number or DTID number and suffix will be passed to DLA Disposition Services Field Offices on every MRO sent to DLA Disposition Services Field Offices for a usable property. This will allow materiel to be released at a more detailed level of inventory.

C16.2.4.1.2. Customer Pick Up. Information contained in the MRO will indicate whether the materiel will be picked up by the customer or shipped. DoD Transportation Mode Code X will be used to indicate customer pick up; otherwise, the data element will be left blank.

C16.2.4.1.3. Minimum/Maximum Ship Quantity. These quantities will identify allowable over and under release quantities.

C16.2.4.1.4. Disposition Services Customer Type. This data element is used by the DLA Disposition Services Field Office to prioritize the workload of MROs. The codes used are: R (Reutilization) – DoD agencies and programs that are provided for by regulation; T (Transfer) - Customers that are Federal agencies that may receive property from other Federal agencies; D (Donation) - Customers that are non-profit organizations that work with the State Agencies for Surplus Property (SASPs) to withdraw DoD property; and S (Sales).

C16.2.4.1.5. Processing Requisitions Identified to a Container. When DLA Disposition Services receives a requisition with the container issued in full
C16.2.4.1.6. Demilitarization Code and Demilitarization Integrity Code. DLA Disposition Services passes these data elements to the DLA Disposition Services Field Offices in order to validate that property is still eligible for requisition by a particular customer prior to the physical release of property. Based upon frequency and timing of updates, the DEMIL and DEMIL integrity codes resident in DLA Disposition Services Field Office records may be more current than the data passed in the MRO by DLA Disposition Services. Therefore, if the DEMIL code sent on the MRO does not match the DLA Disposition Services field office record, the field office will hold the property for a period of time to allow DLA Disposition Services records to be updated, and send an MRO cancellation if necessary. Additionally, if the DEMIL Code is Q, the field office will also validate the DEMIL integrity codes prior to release. If, at the end of an established waiting period, DLA Disposition Services has not sent the MRO cancellation, the field office will resume processing.

C16.2.4.1.7. Local Stock Number/Unit of Use. The MRO will carry the unit of use LSN and the cross-reference NSN. The unit of use indicator will define the quantity and unit of measure as applicable to unit of use. See C16.6.9. for assignment and use of LSNs, including unit of use LSNs.

C16.2.4.1.8. Funds Appropriation Number. This number will be used on the MRO to calculate transportation costs that may be associated with certain orders that are shipped to RTD customers. For FMS orders, it is required by the Traffic Management Office (TMO) in order to correctly charge shipping costs.

C16.2.4.1.9. Materiel Release Orders in Support of Public Sales. In support of public sales, the DLMS 940R, MRO sent to DLA Disposition Services Field Offices to direct release of a sales order line item will contain an original document number (ODN), constructed using a valid DLA Disposition Services DoDAAC as the primary document number in the transaction. The DTID number or DTID number and suffix identifying the property will be carried as a secondary reference number. The sales order reference number will be passed in each transaction as secondary to the DTID number, except when the line item relates to a CV term sale, then the delivery order term sales contract number will be passed in addition to the DTID number.
will enable the field office to identify all associated MROs into a single pick order. The supplementary address will contain the valid DLA Disposition Services public sales DoDAAC, along with Signal Code K indicating ship to and bill to supplementary address. Public sales MROs will contain a DoD Transportation Mode Code of X to indicate customer pick up. Additionally, these MROs will contain the public customer’s first and last name as exception data, which will be used by field office personnel responsible for supervising customer removals to verify the correct customer is removing the property. Once property is removed, the field office will send a DLMS 945A Materiel Release Confirmation transaction, containing the associated ODN and DTID number or DTID number and suffix, to DLA Disposition Services.

C16.2.4.2. Materiel Release Order Denial. The DLA Disposition Services Field Office will send DLA Disposition Services the DLMS 945A, Materiel Release Order Denial (Transaction Type Code NK), with the appropriate management code, to communicate a denial for materiel when materiel no longer exists or when materiel has been damaged prior to customer pickup. This will include the use of denial Management Code Q for instances where there is enough on-hand materiel to fill the order, but not enough materiel on the DTID number or DTID number and suffix specified on the MRO.

C16.2.4.3. Materiel Release Confirmation. When confirming MROs, the DLA Disposition Services Field Office will provide the DLMS 945A, Materiel Release Confirmation (Transaction Type Code NJ) to the DLA Disposition Services following the prescribed rules in DLMS Volume 2, Chapter 4. However, in addition, this transaction will always contain the DTID number or DTID number and suffix or a unique control number (UCN) assigned by DLA Disposition Services during receipt and carried as a DTID number allowing release at a more detailed level of inventory.

C16.2.4.4. Follow-up for Materiel Release Order Status. The DLMS 940R, MRO Follow-Up (Transaction Type Code NB) will be used to communicate the follow-up request for status on open MROs. The DLA Disposition Services Field Office will provide MRO status using the DLMS 945A, Materiel Release Order Status (Transaction Type Code NL), as prescribed in DLMS Volume 2, Chapter 4.

C16.2.4.5. Requisition and Materiel Release Cancellation

C16.2.4.5.1. Customer Requisition Cancellations

C16.2.4.5.1.1. Customer Requisition Cancellations Based on RTD Preparation of the DLMS 869C (DIC AC_), Customer Cancellation Request. Service system customers and RTD Web customers have the option to cancel a submitted requisition prior to receiving the inventory from DLA Disposition Services.

C16.2.4.5.1.2. RTD and GSA Web Customer Cancellations. RTD and GSA Web customers may access the RTD or GSA Web application to view existing requisitions and choose to cancel. As a result, a separate DLMS 869C, Customer Cancellation Request, will be sent to DLA Disposition Services along with the DTID
number or DTID number and suffix for the item that is being cancelled. When the cancellation involves a unit of use LSN, the DLMS 869C will carry the unit of use LSN and the cross-reference NSN. The unit of use indicator will define the quantity and unit of measure as applicable to unit of use. See C16.6.9 for assignment and use of LSNs, including unit of use LSNs. DLA Disposition Services will use the DTID number or DTID number and suffix as well as the requisition document number and suffix when applicable, to identify and attempt to cancel the order. If no MRO has been generated, the DLA Disposition Services can cancel immediately and adjust available inventory accordingly. If an MRO has been generated to the DLA Disposition Services Field Office and is open, then DLA Disposition Services will attempt to cancel the MRO.

C16.2.4.5.1.3. Customer Submission of DLMS 869C Cancellations Subsequent to Transmission of DLMS Supply Status. In certain instances, the RTD Web will be required to generate document number suffix codes as needed to fill the requisitioned quantity using property associated with multiple DTID number or DTID number and suffixes (see C16.2.4.5.1.2.). Supply status will be provided under the requisitioned document number/suffix code combination citing the DTID number or DTID number and suffix value associated with each suffix. Therefore, customer cancellations submitted via the DLMS 869C from Service/Agency supply systems may be prepared using the document number and applicable suffix code from the supply status when applicable. Component supply systems may also cancel requisitions by document number and quantity alone, requiring the RTD Web to determine the appropriate suffix/DTID number or DTID number and suffix combinations to cancel. The RTD Web would then construct the individual DLMS 869C transactions and forward to DLA Disposition Services.

C16.2.4.5.2. MRO Cancellations Requiring an MRO Cancellation Request Transaction. The DLMS 940R, MRO Cancellation Request (Transaction Type Code ND) will be used to request cancellation of an MRO, and to follow-up on cancellation requests for which there has been no response. The MRO cancellation request can be triggered either by the customer’s submission of a DLMS 869C, Cancellation (Transaction Type Code AC) as described above, or systemically by DLA Disposition Services if required payment is not received or when an item property characteristics change affects the customer’s eligibility to receive the property, (e.g., DEMIL code change). The MRO cancellation request will contain the DTID number or DTID number and suffix of the materiel to be cancelled and may contain a Disposition Services Indicator for Cancellation Action Mandatory. Normally systemic cancellations requested by DLA Disposition Services will carry the mandatory cancellation indicator. The field office will reply to the MRO Cancellation Request with a DLMS 945A, Materiel Release Cancellation Advice (Transaction Type Code NR) or Materiel Release Status (Transaction Type Code NL). Upon receipt of the DLMS 945A, the DLA Disposition Services will adjust inventory as appropriate. For unit of use LSNs, the DLMS 945A will carry the unit of use LSN and the cross-reference NSN. The unit of use indicator will define the quantity and unit of measure as applicable to unit of use. See C16.6.9 for assignment and use of LSNs, including unit of use LSNs.
C16.2.4.5.3. Customer Requisition Cancellation without Submission of a DLMS 869C, Customer Cancellation Request (Transaction Type Code AC) or the Subsequent DLMS 940R, Materiel Release Order Cancellation Request (Transaction Type Code ND). DLA Disposition Services allows cancellation of submitted requisitions based upon the customer declining the ordered materiel available for pick up at the DLA Disposition Services Field Office. In these instances, the DLA Disposition Services Field Office will notify DLA Disposition Services of the cancellation by providing the DLMS 945A, Materiel Release Order Cancellation Confirmation (Transaction Type Code NR), that will contain DLMS Cancellation Reason Code YD (DLA Disposition Services Customer No-Show), YE (DLA Disposition Services Sales Customer Refused – Penalty May Apply), YF (DLA Disposition Services Sales Customer Refused – No Penalty), YG (DLA Disposition Services Sales Reutilization/Transfer/Donation (RTD) Customer Declined with Prior Notice), YH (DLA Disposition Services RTD Customer Refused Without Prior Notice), or YI (DLA Disposition Services Commercial Venture (CV) Rejected by CV Customer), as appropriate. Subsequently, DLA Disposition Services will communicate requisition status to their RTD Web in order to make the cancellation visible to the customer.

C16.2.4.5.4. Mass Cancellation Request. DLA Disposition Services will not process mass cancellation requests.

C16.2.4.6. Generation of Issue Release/Receipt Document (IRRD) (DD Form 1348-1A/1348-2 for Issues of DLA Disposition Services Owned Property by the DLA Disposition Services Field Office Subsequent to Receipt of the DLMS 940R, Materiel Release Order (Transaction Type Code NA). Shipments of DLA Disposition Services owned property will follow all instructions regarding the data requirement(s) contained in Chapter 29, Release and Receipt of Materiel, relative to the DD Form 1348-1A/1348-2 (and the continuation sheet, if required) including those instructions relative to items requiring serial number tracking and/or tracking under DoD Item Unique Identification (IUID) business rules (inclusive of barcodes). By exception, when materiel is sold to a CV contractor, the storage site has the option to suppress printing of the DD Form 1348-1A. When no IRRD is prepared, DLA Disposition Services will utilize the Workload Location List in lieu of the IRRD as the document transferring ownership from the Government to the CV contractor. The Workload Location List will identify all document numbers associated with the CV delivery order, materiel identification by NIIN, and applicable quantities. A copy of the Workload Location List will be retained by the field office. The CV contractor is responsible for picking up the property at the storage site.

C16.2.4.6.1 Issue Process. The DLA Disposition Services issue process will also include the use of printed data in Block 27 of the DD Form 1348-1A or 1348-2 (and the continuation sheet, if needed) to support issues of DLA Disposition Services owned property. The printed data will support the issue process by providing additional warehouse/shipping instructions and property information such as:
C16.2.4.6.1.1 Exception Shipping Addresses

C16.2.4.6.1.2 Special Shipping Instructions

C16.2.4.6.1.3 Fund Citations

C16.2.4.6.1.4 Foreign Military Sales Proceeds Information

C16.2.4.6.1.5 Type of Property Being Shipped

C16.2.4.6.2 Printed Data. The printed data will also provide information/instructions to the requisitioning customer regarding the property, such as instructions for return of unneeded property requiring demilitarization and/or reimbursement indicator instructions.

C16.2.4.6.3 Additional Printed Data. Additional data to be printed in Block 27, is not communicated to the DLA Disposition Services Field Office(s) via the DLMS 940R MRO, rather the field office system will have resident logic and data that allows this data to be derived based upon current information provided in the release transaction. Business rules and criteria for entering the instructions identified will be determined by DLA Disposition Services and loaded/maintained in tables within the field office’s distribution system.

C16.2.4.7 Military Service/Agency Supply System Generated Requisitions. Once the RTD Web receives Military Service/Agency supply system generated requisitions, if a DTID number or DTID number and suffix is not identified, the DLA Disposition Services’ inventory will be searched regardless of property location.

C16.2.4.7.1 Absence of a Cited DTID Number or DTID Number and Suffix. When a DTID number or DTID number and suffix is not cited on a requisition transaction, the RTD Web will determine the applicable DTID numbers or DTID number and suffixes necessary to fill the requisition, since DLA Disposition Services’ property is managed by LSN/NSN and DTID number or DTID number and suffix. Each LSN/NSN and DTID number combination will be associated with a separate transaction. Therefore, in instances where property is physically located in multiple locations, or multiple DTID numbers or DTID number and suffixes are required to satisfy the requisition quantity, the RTD Web will be required to generate separate requisitions to DLA Disposition Services including the customer-assigned document number and sequentially assigned suffixes as needed to fill the requested quantity.

C16.2.4.7.2 Identification of Partial Fill Action. When the above occurs, the first partial fill action will be identified by the original document number submitted by the customer and will cite Suffix Code A. For the open quantity remaining on the requisition, RTD Web will select the next available DTID number or DTID number and suffix and generate additional document number suffix codes as needed.
C16.2.4.7.3. Processing Status. RTD Web will provide processing status via the DLMS 870S Supply Status transactions for the original customer document number including any suffix codes assigned by RTD Web.

C16.2.4.8. RTD Web Requisitioning

C16.2.4.8.1. Prioritization Logic in RTD Web. When RTD Web receives the property characteristics file from DLA Disposition Services for items applicable to Screening Cycle Codes DOD or RTD2, these items will be visible on the web to all eligible customers. RTD Web uses prioritization logic to assign precedence to requisitions based on the type of customer requisitioning the item. The prioritization logic will be applied in a 24-hour cycle. As requisitions are generated in RTD Web, they are sent to DLA Disposition Services via Transaction Services. At the end of the 24-hour cycle, depending upon the timing of the request and the highest priority for the requisitioned item, RTD Web will determine which requisition(s) to fill. All other requisitions for the property/DTID number will be cancelled via notification from DLA Disposition Services to RTD Web. If the requisition originated from the RTD Web, RTD Web will cancel the requisition. When the user logs on, the cancellation(s) will be visible in their account. If the requisition originated from a Service/Agency supply system, RTD web will generate the DLMS 870S Supply Status with Status Code BQ to the Service’s supply system indicating cancellation.

C16.2.4.8.2. Prioritization. Prioritization will be applied to customers based on the following criteria:

- U.S. DoD Military Customers, Priority Designator (PD) 1-15 (based upon Force/Activity Designator (F/AD) and Urgency of Need Designator (UND)).
- Law Enforcement Support Office (LESO), PD 15
- Senior Reserve Officers Training Corps (SROTC), PD 12-15
- National Guard Units, PD 12-15
- Deploying National Guard Units, PD varies based upon DoDAAC and/or F/AD assignment.
- All Special Programs and walk-ins, PD 15
- Humanitarian Assistance Program (HAP), PD 15
- DoD or Service Museums, PD 15
- Computers for Learning (CFL), PD 15
- Morale, Welfare, Recreation Activities (MWRA), PD 15
- Military Affiliated Radio System (MARS), PD 15
- Civil Air Patrol (CAP), PD 15
- DoD Contractors, PD 15
- Foreign Military Sales (FMS), PD 15
C16.2.4.8.3. Exceptions to 24-Hour Processing Cycle. The two exceptions that can alter the 24-hour processing cycle are customer walk-in requisitions and FMS requisitions.

C16.2.4.8.3.1. Customer Walk-ins. Customers who walk-in to a DLA Disposition Services Field Office and wish to requisition property will do so via RTD Web. These requisitions will be identified on the DLMS 511R Requisition transaction sent to DLA Disposition Services by the entry of disposition services indicator and unique document number with serial number beginning with L. These walk-in requisitions will be processed immediately. DLA Disposition Services will verify any pending requisitions for this item by DTID number or DTID number and suffix and fill all, part, or none of the walk-in requisition quantity, based upon the presence or absence of higher priority orders.

C16.2.4.8.3.2. Foreign Military Sales Customers. DLA Disposition Services supports FMS customers by passing the FMS Case Number. The FMS Case Number for Disposition Services is the concatenation of three separate and discrete data elements comprising the Security Cooperation (SC) Customer Code, the SC Implementing Agency Code, and the SC Case Designator. EBSO has designed the DLMS transactions for consistent use of these three data elements across multiple domains. FMS customers with access to RTD Web have the option of freezing property by FMS Case number. The capability to freeze items is provided to facilitate the State Department approval process for FMS customer eligibility. During the approval process, the items are flagged as frozen both in DLA Disposition Services and at the field office, and are not advertised on the RTD Web to other customers. Using RTD Web, DLA Disposition Services Battle Creek HQ FMS Office will create reports of all items that are currently frozen and field offices will have the ability to print out a placard to place on the frozen items to insure walk-in customers know the item is not available. If an FMS freeze is in place, the property will not be available for screening for any other customer.

C16.2.4.8.3.2.1. During the FMS approval process performed by DLA Disposition Services Battle Creek HQ FMS Office, FMS Customers will require freezing inventory until the final approval of the FMS Case. This will be accomplished by RTD Web sending EBS the DLMS 511R requisition with the freeze code populated. Upon retrieval of the 511R from RTD Web to EBS, EBS will send DSS a DLMS 940S Materiel Staging Request to initiate freezing of the assets (Service Performed Code F with Event Identification F). The DLMS 940S must include the Security Cooperation (SC) Customer Code, SC Implementing Agency Code, and SC Case Designator. These three pieces of information will be concatenated to construct the FMS Case Number (formatted as XX-X-XXX). The field office will also provide the specific warehouse location for this materiel. Once DSS receives the DLMS 940S directing the freeze action, DSS will relocate the asset to a FMS freeze area. When this action is finalized, DSS will provide a DLMS 943A Warehouse Service Advice with confirmation and print a re-warehouse label that will include the FMS Case Number and FMS asset identification, and affix this to the property.
C16.2.4.8.3.2.2. It may be necessary to relocate frozen materiel from one field office to another. When this occurs, DLA Disposition Services will provide a DLMS 527D PMR to the new location including the freeze indicator and the FMS Case Number data elements. These will be perpetuated to the DLMS 527R Receipt.

C16.2.4.8.3.2.3. Once the FMS customer receives approval to acquire the item, RTD Web will send EBS a notification to release the freeze for requisition (“unfreeze for requisition” action) for the FMS assets (via direct feed from RTD to EBS). Concurrently, RTD Web sends a requisition for that property to EBS. EBS will source the property to the FMS customer sending DSS the DLMS 940R to release the particular asset including a freeze indicator so that the property for this case is allocated from the FMS frozen warehouse location in DSS.

C16.2.4.9. Providing Status to Customers

C16.2.4.9.1. Processing Status for Service/Agency and GSA Web Requisitions. For Service/Agency supply system generated requisitions and GSA Web submitted requisitions, RTD Web will provide processing status via the DLMS 870S Supply Status transaction, citing the applicable status code found in Appendix 7.16 on the DLMS Website. As supply status on these requisitions is updated, RTD Web will provide supply status updates to ensure customers have the most current information available on their requisitions.

C16.2.4.9.2. Requisition Visibility in RTD Web. For requisitions originated within RTD Web, customers will have the ability to view current status of all their submitted requisitions on their account at the RTD Web Website. No DLMS 870S Supply Status transaction will be generated for these requisitions.

C16.2.4.9.3. Shipment Status to Customer. Regardless of method of submission, when shipment occurs against a requisition, the DLA Disposition Services Field Office will generate a DLMS 856S Shipment Status to the customer.

C16.2.4.10. Post-Issue Tracking. DLA Disposition Services will use disposition services indicator(s) to identify post-issue tracking requirements on the DLMS 511R requisition provided by RTD Web to DLA Disposition Services. Rules regarding requirements for post-issue tracking will be maintained in RTD Web, which will send the appropriate post-issue tracking indicator to DLA Disposition Services to indicate which particular transaction requires post-issue tracking. If post-issue tracking is required, DLA Disposition Services will compile and store the requirement to facilitate future tracking. Record of the post-issue tracking requirement is maintained for the entire life of the item while being used by that particular customer. Post-issue tracking requirements are essential at time of disposal to ensure appropriate procedures have been followed, (e.g., DEMIL Certificate turned in with the item). Post-issue tracking categories are described below.
C16.2.4.10.1. Materiel Receipt Acknowledgement Required. This indicator will be applied to requisitions for DLA Disposition Services’ property falling outside standard MRA requirements under MILSTRAP/DLMS. DoD activities requisitioning from DLA Disposition Services are required to provide the DLMS 527R MRA (MILSTRAP legacy DRA functionality) under current procedures.²

C16.2.4.10.2. Demilitarization Certification Required. Providing DEMIL documentation confirms when demilitarization was performed on property. Before this item can be turned in or disposed of by the customer, proof will be provided to DLA Disposition Services.

C16.2.4.10.3. Mutilation Certification Required. Providing mutilation certification when the item is no longer needed prevents reuse or reconstruction if the item. Documentation must be received by DLA Disposition Services to verify that mutilation was completed.

C16.2.4.10.4. Certificate of Recycling. The customer will provide proof via documentation that the item was recycled when no longer needed.

C16.2.5. Processing Requisitions Identified to a Container. When DLA Disposition Services receives a requisition with the container issued in full indicator, the information will be used to insure all requisitions for that container are received and processed appropriately. MROs generated by the DLA Disposition Services for requisitioned items associated with a container will have the disposition services container ID identified on the DLMS 940R Materiel Release. In addition to the disposition services container ID, DLMS 940R Materiel Release transactions generated based on the customer ordering the entire container will contain a container issued in full indicator and the count of total DTID numbers within the container. This will allow DLA Disposition Services Field Offices to insure that an MRO for each item/DTID number or DTID number and suffix associated with a container is received and processed. Upon shipment of the materiel for each MRO, the DLA Disposition Services Field Offices will send the DLMS 856S Shipment Status transaction to the customer, containing DTID number or DTID number and suffix, original requisition number, and associated disposition services container ID.

C16.2.6. Defense Automatic Addressing System Editing. Defense Automatic Addressing System (DAAS) will edit requisitions to determine if the requisition is for excess personal property as follows:

C16.2.6.1. Utilization Code and SCC. If the requisition contains Utilization Code K, L, R, S or T and a (SCC), DAAS will route the requisition to DLA Disposition Services. If the requisition does not contain a SCC, but does contain a DTID number or DTID number and suffix, DAAS will route the requisition to DLA Disposition Services.

C16.2.6.2. No SCC or Disposal Turn In Document. If the requisition does not contain an SCC and does not contain a DTID number or DTID number and suffix, but is

² DLA Disposition Services must define the expanded requirements for materiel receipt acknowledgment by DLA Disposition Services’ non-DoD customers, via a future DLMS Change Proposal.
directed to the DLA Disposition Services, DAAS will reject the requisition back to the message originator with a clear-text message stating, INVALID FORMAT FOR DLA DISPOSITION SERVICES REQUISITION.

C16.2.6.3. Exceptions. If conditions in the previous two sections are false, DAAS will continue the requisition processing.

C16.2.6.4. Requisitions Directed to DLA Disposition Services. If the requisition is directed to DLA Disposition Services and there is an SCC that does not contain Utilization Code K, L, R, S, or T, DAAS will route the requisition to DLA Disposition Services.

C16.2.6.5. No SCC or Utilization Code. If the requisition does not contain an SCC or Utilization Code K, L, R, S, or T, but has a DTID number or DTID number and suffix, DAAS will route the requisition to DLA Disposition Services.

C16.2.6.6. No SCC, Utilization Code, or DTID. If the requisition does not contain an SCC, Utilization Code K, L, R, S, or T nor a DTID number, but does contain DLA Disposition Services DoDAAC SC4400, DAAS will reject the requisition back to the message originator with a clear-text message stating, INVALID FORMAT FOR DLA DISPOSITION SERVICES REQUISITION.

C16.2.6.7. Requisition Status. DAAS will provide a DLMS 870S, Supply Status, with Status Code BM to the requisitioner for validated excess personal property requisitions. DAAS will also process DLA Disposition Services requisitions with part numbers to obtain an NSN. DAAS will change a part number to an NSN, as appropriate, pass the requisition to DLA Disposition Services, and provide a DLMS 870S, with Status Code BG to the requisitioner. If an NSN is not found, DAAS will reject the requisition with a DLMS 870S.

C16.3. REQUISITIONING AND OTHER MATERIEL MOVEMENT OF CONVENTIONAL SMALL ARMS/LIGHT WEAPONS FROM DISPOSITION SERVICES

C16.3.1 Applicability. Refer to this manual’s Definitions and Terms for the definition of applicable small arms/light weapons (SA/LW).

C16.3.2. Federal Supply Classification. Conventional small arms generally fall into one of the following Federal supply classifications (FSC): 1005, 1010, 1015, 1025, 1040, 1055, 1090, and 1095; however, this list will not be considered all inclusive. DLA Disposition Services will treat any weapon meeting the general guidelines of a SA/LW accordingly, regardless of FSC.

C16.3.3. Small Arms/Light Weapons Requisitioning. Customer generated DLMS 511R Requisitions for SA/LW will be by NSN and quantity, and may specify a DTID number. Neither the customer requisition to DLA Disposition Services nor the resulting DLMS 940R MRO to the DLA Disposition Services Field Office will specify a serial number. However, any serial number of the weapon(s) selected for issue will be carried on the DLMS 140A, with Transaction Code S, Small Arms Shipment transaction (one
copy to the requisitioning activity and another copy to the DLA SA/LW registry. The serial numbers included in the shipment may also be included in the DLMS 945A Materiel Release Order Confirmation response from DLA Disposition Services Field Offices back to DLA Disposition Services for verification of the specific weapons issued and records update.

C16.3.4. Serial Number and Unique Item Identifier Reporting. Any SA/LW unique transactions (DLMS 140A/888A) required by the current business process will be generated separately.

C16.3.5. Redistribution or Disposal. When the DLA Disposition Services takes redistribution or disposal action, the resulting DLMS 940R redistribution order or disposal release order will pass the weapons serial number to the DLA Disposition Services Field Office directing specific weapons for release. This serial number will be included in the DLMS 945A Redistribution Order (RDO)/Disposal Release Order (DRO) Confirmation response from DLA Disposition Services Field Offices back to DLA Disposition Services for verification that the correct weapon was issued.

C16.4. SOURCE OF SUPPLY AND STORAGE ACTIVITY INTERFACE FOR DISPOSAL RELEASE ORDERS

C16.4.1. General. Sources of supply use the DLMS 940R Disposal Release Order (DRO) to direct and control issue of supply system stocks on their records to disposal. Sources of supply will send DROs to the storage site having custody of the stock and result in the preparation of DD Form 1348-1A (or DD Form 1348-2). If the item is classified in SCC Q and is being sent to a DLA Disposition Services Field Offices, the DRO will contain Management Code O (alpha) or S, as appropriate, to indicate if materiel is hazardous to public health and/or safety and whether mutilation³ is required. The retention quantity in the DRO will determine the quantity of materiel to be turned in to disposal by the storage site. The retention quantity cited in the DRO will be kept and all remaining stocks transferred to disposal, or, if the quantity on hand is less than the quantity indicated, the storage site will answer with DLMS 945A Disposal Release Denial with Status Code BY.

C16.4.1.1. DLMS 940R DROs directing the disposal of Product Quality Deficiency Report (PQDR) exhibits will include the PQDR report control number (RCN), if available.⁴

C16.4.1.2. RESERVED

³ Material requiring mutilation may not be consigned to DLA Disposition Services Field Offices unless the DoD Component of the activity directing the shipment has made prior official arrangements with the DLA Disposition Services. If mutilation is required, provide specific instructions to the DLA Disposition Services Field Offices by separate correspondence, citing the DTID number.

⁴ ADC 1169, DLA Distribution Center Denial Scenarios Associated with Product Quality Deficiency Report (PQDR) Exhibits
C16.4.2. Release Confirmation. A DLMS 945A Disposal Release Confirmation (DRC) gives advice from the storage activity to the activity that initiated the DRO of supply action taken. The storage site will send the DRC when quantity shipped is the same quantity, when quantity shipped is greater than requested, or when quantity shipped is less than the quantity requested in the DRO. The materiel owner will use the DRC to make adjustments to inventory records. A DRC will be prepared when materiel is picked up by the carrier for shipment to DLA Disposition Services Field Offices. The DRC will, if appropriate, contain an Intransit Control Indicator (Code 2I in the N9 segment) if the shipped materiel line item value is $800 or more or the item is recorded as pilferable/sensitive.\(^5\) The DLMS 856S Shipment Status provided by the storage activity to the DLA Disposition Services Field Office will perpetuate the Intransit Control Indicator.

C16.4.3. Release Follow-Up. The source of supply will use a DLMS 940R Disposal Release Inquiry to follow-up on storage facilities for unconfirmed DROs 10 calendar days after the date the DRO was created. If the DRO has been complied with, the storage facility will respond with a DRC (see C16.4.2). If the DRO has not been complied with and shipment is anticipated, the storage facility will send supply status, a DLMS 945A, with an estimated shipping date. If there is no record of the DRO, the storage facility will send a status message DLMS 945A with Status Code BF. If the DRO has been denied, the storage activity will send a DLMS 945A Disposal Release Denial with Status Code BY.

C16.4.4. Release Denial.

C16.4.4.1. The storage site will send a DLMS 945A Disposal Release Denial to the source of supply that prepared the DRO as a notification of no action taken. Sources of supply will use the DLMS 945A to adjust inventory records.

C16.4.4.2. Disposal Release Denials for Product Quality Deficiency Reports (PQDR) Exhibits.\(^6\)

C16.4.4.2.1. DLA storage activities will prepare the DLMS 945A Materiel Release Denial and send it to the source of supply for PQDR exhibits when the DRO containing the PQDR RCN does NOT match any of the RCNs on the storage activity RCN table at DRO allocation.

C16.4.4.2.2. When the DLMS 940R DRO contains the PQDR RCN and the RCN DOES match an RCN on the storage activity RCN table, but the RCN in the bin location is not the expected RCN for the DRO, the DLA storage activity will prepare a DLMS 945A Disposal Release Denial.

C16.4.5. Release Cancellation. Disposal release cancellations, a DLMS 940R, are prepared by sources of supply having initiated DROs and sent to storage sites when

---

\(^5\) DLMS enhancement for future implementation.

\(^6\) ADC 1169, DLA Distribution Center Denial Scenarios Associated with Product Quality Deficiency Report (PQDR) Exhibits
determined disposal actions should be stopped. Source of supply cancellation requests will be sent only when DROs are unconfirmed. Storage activities will respond to the cancellation request using a DLMS 945A Disposal Release Cancellation Advice with appropriate transaction type code, and RIC of the source of supply to which the transaction will be sent and the activity preparing the transaction.

C16.4.6. Release Cancellation Follow-Up. A DLMS 940R Disposal Release Cancellation Follow-up, may be sent by the source of supply to get latest status of a disposal release cancellation. The disposal release cancellation follow-up transaction will be in the same format as the original disposal release cancellation and will be processed by the storage site as a cancellation request if the original request was not received. If the original request was received and all required actions have been completed, the storage site will respond to the disposal release cancellation follow-up by duplicating previously submitted documentation, a DLMS 945A.

C16.4.7. Reporting Excess Quantity. The source of supply will send replies to excess reports, a DLMS 870M, to notify the reporting activity that the quantity reported is in excess to source of supply requirements and further action is authorized under appropriate DoD Component procedures. Refer to Chapter 11 Materiel Returns.

C16.4.8. Recycling Control Point. When materiel owners direct disposal of property held in the custody of DLA Distribution (using DSS) DLA Distribution will systemically screen in-coming Disposal Release Orders (DLMS 940R/A5J) to determine Recycling Control Point (RCP) eligibility. If the disposal item qualifies for RCP marketing, materiel is issued from the account of the original owner who directed disposal and a DLMS 856S/AS _ shipment confirmation is provided. Concurrently, a DLMS 527R Receipt (Transaction Type Code D4 with 2/LIN01/10 Code I (legacy DIC D6A functionality)) is posted to the RCP RIC S9W account. No DLMS 527R Disposition Services Turn-In Receipt Acknowledgement (TRA) transaction will be generated for materiel transferred to the RCP from a Distribution Center at the same location. Since there is no physical movement of the materiel when it is transferred to RCP ownership, it should not be considered intransit, but can be dropped immediately from the original owner’s property record. DLA Distribution will retain physical custody while materiel is offered for RTD and sales via the RCP process.

C16.4.9. Defense Automatic Addressing System Processing of Release Confirmations. DAAS will use data in a DLMS 945A, with Transaction Type Code NM in the WO6 segment, to create shipment status using a DLMS 856S. Upon completion of this process, DAAS will send the DRC to the appropriate organization(s) as indicated in the N1 segment and a DLMS 856S to DLA Disposition Services.

C16.5. DOCUMENTATION REQUIRED FOR SHIPMENTS TO DLA DISPOSITION SERVICES

C16.5.1. General Requirement
C16.5.1.1. Disposal Turn-in Document or Disposal Turn In Document and Suffix. Activities will direct/process all accountable materiel to disposal using a DTID. Some categories of non-accountable property may be transferred to a DLA Disposition Services Field Office without documentation. Guidance will be provided by the servicing DLA Disposition Services Field Office. Sources of supply will send a DTID (DD Form 1348-1A or DD Form 1348-2), (see Appendix 8.49 for data requirements) and documentation for in-transit control of property identified by an NSN or local stock number (excluding scrap [SCC S], waste, non-appropriated fund activity, and lost, abandoned, or unclaimed privately owned personal property) shipped or transferred to a DLA Disposition Services Field Office. Shipment/transfer of materiel to a DLA Disposition Services Field Office via DTID number requires authority for disposal, which will be indicated in the DTID by appropriate disposal authority code, along with the reason for disposal code. Ensure property is reported to the integrated material manager (IMM) prior to preparing the DTID, as required, per DoDM 4140.01, “DoD Supply Chain Materiel Management Procedures,” February 10, 2014. DTID and documentation will control the shipment from the time of release by a shipping activity until receipt of the property by DLA Disposition Services Field Office.

C16.5.1.2. Shipment Status. For shipments/transfers to DLA Disposition Services Field Offices, shipping activities will send a DLMS 856S, Shipment Status (Transaction Type Code AS), for each DTID number or DTID number and suffix regardless of dollar value. The DLMS 856S will contain Distribution Code 9 identifying DLA Disposition Services, the unit price of the materiel, the actual quantity shipped, and the date delivered to the carrier for shipment.

C16.5.1.2.1. Shipment Status Visibility/Transactions with Distribution Code 9. Transaction Services will route shipment status transactions with Distribution Code 9 to the DLA Disposition Services Field Office global record, making the shipment status information visible and available to all DLA Disposition Services Field Offices, as required. Transaction Services will edit the DLMS 856S Shipment Status for the following criteria before routing the transaction to the DLA Disposition Services Field Office global record:

C16.5.1.2.1.1. Invalid DoDAAC, Federal supply classification, or Quantity. Reject, to the generating activity, for invalid DoDAACs, FSC (FSC does not exist), and quantity of zero or blank. The rejected transaction will be returned to the generating activity with a narrative explanation of the reason for return and instructions not to resubmit.

C16.5.1.2.1.2. Edit Unit Price. If the transaction contains an LSN with a blank or zero-unit price, reject; if the transaction contains an NSN and blank or zero unit price, insert the Federal Logistics Information System (FLIS) price.

C16.5.1.2.2. Information Capture and Validation. The DLA Disposition Services Field Offices use the shipment status to electronically capture and validate information about incoming property from an activity that is shipping property to a DLA Disposition Services Field Office prior to physical receipt. Additionally, a subset of
shipment transactions meeting the Intransit Control System (ICS) criteria is used to initiate the DLA Disposition Services ICS tracking process.

C16.5.1.3. Fund Citation for Scrap Proceeds Reimbursement. For shipments involving the turn-in of scrap materiel to DLA Disposition Services Field Offices, the turn-in shipping activity will add the data element, ‘Scrap Reimbursement’, to the instructions in Block 27 (and its continuation page or in available white space on the paper that the form is printed, if needed) of the DD Form 1348-1A or DD 1348-2. The value in this field will be the fund citation for reimbursement of scrap proceeds minus disposition processing costs. For receipt of property, DLA Disposition Services will sign the DD Form 1348-1A, DD 1348-2 and provide a signed digital image of the turn-in document via eDOCS at https://edocs.documentservices.dla.mil/ to confirm receipt in the in-transit system.

C16.5.1.4. Receipt in Place Documentation Processing at the DLA Disposition Services Field Office. For receipt in place excess property where the DoD generator has provided a DLMS 856S Shipment Status (and DLMS 841W for Hazardous Waste), the Distribution Standard System (DSS) due-in report is authorized to be used by DLA Disposition Services without a hard copy DD Form 1348-1A or DD Form 1348-2 for receipt, so long as all required information for turn-in is included in the automated file.

C16.5.2. Requirements for Shipments of Hazardous Material and Hazardous Waste. The following guidance outlines basic documentation requirements for turn-in of Hazardous Material (HM), Hazardous Waste (HW), and other types of wastes (e.g., Polychlorinated Biphenyl (PCBs), Friable Asbestos, etc.). The turn-in activity will enter the bill-to fund code and bill-to DoDAAC (when other than the turn-in activity) for reimbursable actions associated with the disposal, (e.g., HW contractor costs), in the DD Form 1348-1A or DD Form 1348-2, in order to provide reimbursement to DLA Disposition Services. To ensure compliance with federal, state, DoD and host nation regulations, turn-in activities will obtain and become familiar with applicable Code of Federal Regulations (CFR), state regulations, DoD regulations, and Overseas Environmental Baseline Guidance Documents (OEBGD), or the Final Governing Standards (FGS) for the host nation. When initiated electronically the HM/HW turn-in will be directed using the DLMS 940R, Disposal Release Order (DRO). Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event to include SLOA mandated standard financial information system (SFIS) elements. The DLMS DRO transaction supports inclusion of SLOA required elements. Pending full implementation of SLOA, Transaction Services will facilitate interoperability by updating selected SLOA data fields based upon the initiator’s Service/Agency and Fund Code. If discrete values for the SLOA data elements in the transaction do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction, reject with the DLMS 824R Reject Advice citing Reject Advice Code BU. If invalid/missing fund code

---

7 Refer to ADC 1043/ADC 1043A.
for Signal Code A, B, C, J, K, or L, reject with the DLMS 824R Reject Advice citing Reject Advice Code BU.  

C16.5.2.1.  Shipment Status. The DLA Disposition Services Field Offices will use the DLMS 856W to electronically capture and validate information about inbound HM/HW property from a customer that is shipping property to a DLA Disposition Services field office prior to physical receipt. The information contained within the transaction is used by DLA Disposition Services Field Offices to schedule inbound shipments and to match the inbound shipment to a Hazardous Waste Profile Sheet (HWPS). In addition to data requirements for shipment status of non-hazardous materials, shipment status for HW/HM will add the following: DTID number or DTID number and suffix number, HWPS number, disposal authority code, disposition services indicator code, item nomenclature, SCC, special materiel identification code, materiel management aggregation code, and DEMIL code. This additional information will assist the DLA Disposition Services Field Offices with the receipt, inspection, and materiel identification of the HM/HW turn-ins. The DLMS 856S/legacy DIC AS3 should not be transmitted when the 856W is provided. See DLA Disposition Services Instruction 4160.14, “Operating Instructions for Disposition Management,” for appropriate code value lists.

C16.5.2.1.1.  HM/HW DTID Validation. DSS will validate the DTID content contained in the DLMS 856W to check for missing or invalid data elements. If the DTID contains one or more erroneous data elements, DSS will transmit a DLMS 824W containing the rejected DTID number and reject advice code to the generating activity. Generating activities will resubmit corrected DTID content in a new DLMS 841W citing the original DTID number. Table C16.T1. identifies the HM/HW DTID Reject Advice Codes.

The following codes are used in defining record formats:

- Mandatory (M)
- Optional (O)
- Alpha (A)
- Numeric (N)
- Alpha/Numeric (A/N)

C16.5.2.2. Hazardous Waste Profile Sheet (DLMS 841W Hazardous Material/Hazardous Waste Profile). The HWPS provides detailed information/analysis relative to the waste stream being turned in to the DLA Disposition Field Office. This information will be provided prior to receipt to allow for compatible storage arrangements and will facilitate DLA Disposition Services’ ability to plan, manage, schedule, and report on inbound shipments to maximize the efficiency of the receiving process.

C16.5.2.2.1. Required Documents for Hazardous Waste/Hazardous Material Turn-ins. Turn-in activities are required to provide an HWPS, DLA Disposition Services Form 1930, or backup documents indicating lab or manufacturer’s chemical analysis with the turn-in of each initial waste stream, and once a year thereafter. An HWPS is required with turn-ins of HW and used and/or opened HM that meets the definition of HW when discarded via disposal service contract. Used and/or opened HM is considered contaminated and may not be the same property described on a Safety Data Sheet (SDS). See DoD 4160.21-M, Chapter 10, Paragraph D. Generators will complete the HWPS by providing information based upon user’s knowledge or laboratory analysis of the waste. Supporting documentation, consisting of lab or manufacturer’s chemical analysis, description of waste production processes including
raw materials, end products, and other sources documenting how the waste was generated, may be required if user's knowledge does not identify or characterize the waste sufficiently or correctly. All supporting documentation should accompany the physical shipment. A DLMS 841W transaction can be used in lieu of a hard copy Form 1930 for HW received in place, however, hard copy Form 1930s will be required if HW is physically received at the Disposition Services Field Office or if a hard copy HWPS is required by Federal, State, or Local regulation.

C16.5.2.2.2. Initial Hazardous Waste Profile Sheet and Follow-on Turn-in Documents. After the initial turn-in of the waste, turn-ins of identical waste will not require a HWPS for one year; instead, generators will enter a DLA Disposition Services-assigned HWPS reference number in Block 27 (Clear Text Statement) of the DD Form 1348-1A, DTID. The turn-in activity will certify each HWPS annually by providing to DLA Disposition Services Field Office one of the following: a new, signed, and dated HWPS, an electronically transmitted HWPS for each waste turn-in that will be generated during the following year, or a letter listing the HWPS reference number(s) and the name of the corresponding waste stream for each profile which the generator wishes to remain active for another year. If the turn-in activity chooses to provide a letter, that letter will be signed and dated and include the following statement: "The undersigned certifies that the hazardous waste profiles listed in this letter have been carefully reviewed. Any changes to the processes generating these wastes have been considered. New regulations affecting hazardous waste identification and disposal have been applied. Neither the waste streams nor the identification of the waste streams has changed in a manner that would warrant a change in the data previously provided on these waste profiles.

C16.5.2.2.3. Overseas Hazardous Waste/Hazardous Material Shipment Requirements. For overseas shipments of HM/HW, the turn-in activity will include the host nation and International Maritime Dangerous Goods (IMDG) shipping description. The IMDG shipping description includes both the United Nations, and United States Department of Transportation (DOT) requirements and is virtually the same. Any place that a Proper Shipping Name (PSN), container information, state waste code, etc., are required, the respective country codes, container information, etc., will be filled in.

C16.5.2.2.4. Exemption of Hazardous Waste Profile Sheet Requirements. Laboratory chemicals are exempt from HWPS requirements, but will be processed according to DoD 4160.21-M, Chapter 10.

C16.5.2.2.5. Conversion of Department of Transportation Units of Issue to Standard X12 Units of Measure. The Department of Transportation (DoT) has its own unit of issue designations for HM/HW. In some cases, the level of granularity in X12 is not sufficient to uniquely identify the DoT Unit of Issue; in those cases, a composite set of measures from the X12 Data Elements MEA04 and MEA09 will be used to make the identification unique. See Table C16.T2. for the DoT-to-X12 Unit of Issue Conversion used in the DLMS 841W.
C16.5.2.3. **Safety Data Sheet Requirement**

C16.5.2.3.1. **Safety Data Sheet Hard Copy Requirement.** Turn-in activities will provide a hard copy SDS for hazardous material in the absence of a Hazardous Material Information Repository System (HMIRS) Number. If there is a valid SDS in HMIRS, then indicate the SDS five-digit alpha code from the HMIRS on the DTID (DD Form 1348-1A). This requirement applies to turn-ins of both used and unused HM, as well as opened or unopened HM. The SDS requirement does not apply to exclusions listed in 29 CFR 1910.1200(b)(6).

C16.5.2.3.2. **Hazardous Material Information/Documentation Requirements.** The SDS will match the specific manufacturer of the hazardous material and should include the manufacturer's name or contractor and Government entity (CAGE) code. In addition to an SDS, used and/or opened HM requires that the chemical name of any hazardous contaminants and the noun name of any non-hazardous contaminants will be identified on the DTID. This is required because used and/or opened HM may have become contaminated with constituents not reflected on the SDS. A HWPS may also be required for used/opened HM going directly to waste disposal contract.

C16.5.2.4. **Methods of Document Generation for Hazardous Waste/Hazardous Material Turn-ins.** There are three methods available for automated turn in of HM/HW: Generator Communication (GenComm), Electronic Turn-In Document (ETID), and direct interface via Transaction Services.
C16.5.2.4.1. Generator Communication Method\textsuperscript{9}. Use of the GenComm Server for automated turn-in of documentation to the DLA Disposition Services Field Office allows the military generator, using its HW disposal system, to electronically send email or upload the DTID, DD 1348-1A and the related HWPS. The GenComm server will transmit the HWPS and any correlating supply shipment status information to Transaction Services using the standard XML-schema. Transaction Services will convert the information into a DLMS 841W transaction and route to the appropriate DLA Disposition Services Field Office using a RIC plus suffix to site identification (ID) to valid RIC crosswalk table. This table will be maintained by DLA Disposition Services and provided to Transactions Services as required. Transaction Services will also generate the DLMS 856W HM/HW shipment status transaction from the information in the XML schema and send to the appropriate field office.

C16.5.2.4.2. Electronic Turn-In Document. Use of ETID for automated turn-in of documentation to the DLA Disposition Services Field Office allows those military generators lacking an automated system to login to ETID via the web and manually generate their DTID and HWPS documentation. ETID will have a direct interface with the DLA Disposition Services Field Office system, which will receive the information for processing of the HM/HW turn-in.

C16.5.2.4.3. Direct Communication with Transaction Services. Use of direct communications with Transaction Services for automated turn-in of documentation to DLA Disposition Services is the preferred method of communication. A Performance Based Agreement (PBA) with Transaction Services is required for a military generator’s system to connect with Transaction Services. The PBA should identify the military generator’s DoDAAC to be used in the DLMS 841W transaction, as well as confirmation of capability of producing the DLMS 856W, along with the DTID number and HWPS number and all other data required for HM/HW shipment status (see C16.5.2.1.).

C16.5.3. Receipt of Hazardous Material/Hazardous Waste and Processing Related Hazardous Waste Profile Sheet. Upon receipt by a DLA Disposition Services Field Office of the DLMS 841W HM/HW Profile Sheet from Transaction Services, the supporting system will parse the information into its database and store the individual HWPS records by HWPS reference number and DTID number. The DLA Disposition Services Field Office will validate HWPS records to check for missing or invalid data elements, and DSS will subsequently transmit a DLMS 824W to the generating activity to acknowledge acceptance or rejection of the HM/HW profile sheets. The DLMS 824W will contain a list of HWPS numbers processed successfully and HWPS numbers rejected. If one or more HM/HW profile sheets are rejected, the DLMS 824W will contain the rejected HWPS number and reject advice code. Generating activities will review the HWPS and correct the error(s), and then resubmit the corrected HM/HW profile sheet in a new DLMS 841W citing the original HWPS number. The DLA Disposition Services Field Office will maintain a history of changes for the HWPS.

\textsuperscript{9} Components must plan to discontinue use of this method of turn-in for HM/HW and convert to generating the DLMS 841W and DLMS 856W in their generating systems. Refer to ADC 1131.
When HM/HW is turned in to the DLA Disposition Services field office, the system will search for a DLMS 527D Pre-positioned Materiel Receipt (PMR) to facilitate automated check-in. In the absence of the PMR, a search for the matching DLMS 856W shipment status will be conducted. Once the matching record is found, the system will use the DTID number or DTID number and suffix, and the HWPS reference number from the shipment status to pull the matching HWPS for the shipment to be receipted. If no electronic records are on file for the DTID number or DTID number and suffix, and the HWPS, the DLA Disposition Services Field Office personnel will be manually prompted to enter the information into their system based on the hard copy documentation accompanying the shipment. Table C16.T3. identifies the HWPS Reject Advice Codes.

The following codes are used in defining record formats:

- Mandatory (M)
- Optional (O)
- Alpha (A)
- Numeric (N)
- Alpha/Numeric (A/N)

DATA BELOW THIS LINE ARE NOT REQUIRED, BUT IF ONE FIELD IS POPULATED, ALL DATA ARE REQUIRED. CAN HAVE MULTIPLE ITERATIONS BASED ON EPA NUMBER FOR HWPS.
C16.5.4. DAAS Processing of the DLMS 824W DTID and HWPS Validation Transaction. If the turn-in activity is not fully DLMS-compatible and cannot process the DLMS 824W, DAAS will transmit a DLMS 824R with Reject Advice Code DZ for 824W DTID rejection and HZ for 824W HWPS rejection to the DLA Disposition Services Field Office. In response to Reject Advice Codes DZ or HZ, the DLA Disposition Services Field Office will use alternative methods of communicating with the turn-in activity.10

C16.6. INTRANSIT CONTROL SYSTEMS PROCESSING OF SHIPMENTS TO DLA DISPOSITION SERVICES

C16.6.1. General

C16.6.1.1. ICS is an automated DoD process that provides a central capability to monitor and/or investigate discrepancies in shipments of materiel to DLA Disposition Services field offices that meet ICS rules. Property qualifying for ICS processing have a line item value over $800 or a pilferable/sensitive controlled inventory item code (CIIC) regardless of dollar value, and the property is being turned in to the field office. Pilferable CIICs are equal to: J, I, M, N, P, V, W, X, Y and Z. Sensitive CIICs are equal to: 1, 2, 3, 4, 5, 6, 8, Q, R, $.

C16.6.1.2. Electronic Turn-In Document Process. Use of ETID for automated turn-ins to the DLA Disposition Services Field Office allows those military generators lacking an automated system to log in to ETID via the web and manually generate their DTID number or DTID number and suffix. ETID will have a direct interface into the ICS global record and will enter property qualified for Intransit tracking into the ICS on the generators behalf. For identification purposes, ETID will construct the DTID number or DTID number and suffix, document number citing Utilization Code T in the first position of the serial number. This will facilitate routing of follow-ups through Transaction Services’ DAAS to the supply system of the DoDAAC of the generator and provide the capability to monitor shipments/transfers to DLA Distribution Services Field Offices. When follow-up notifications on in-transit property are required, in addition to the systemic follow-up generated by the field office, the ETID application will provide notification to the generating activity responsible for the property via email.

C16.6.2. Intransit Control System Suspense File. The ETID interface described above, shipment status transactions, hazardous material/hazardous waste shipment status transactions, or any receipts processed prior to shipment status meeting ICS criteria (see C16.6.1.1.), will initiate the ICS suspense file maintained as part of the DLA Disposition Services Field Office global record. This global record will be visible and available to all DLA Disposition Services Field Offices as required. At a minimum, the suspense file will contain the following data shown in Table C16.T4:

---

10 Refer to ADC 1214
Table C16.T4. Turn-In Processing Data Requirements

\textsuperscript{11} References to shipment status in this table include both DLMS 856S/MILSTRIP Legacy AS3 and DLMS 856W. Refer to ADC 1131.

C16.6.3. Intransit to DLA Disposition Services Field Office Report. ICS provides a capability for DLA Disposition Services to furnish management information to Service/Agency headquarters concerning the transfer of property to DLA Disposition Services Field Offices. DLA Disposition Services will provide a quarterly Intransit to DLA Disposition Services Field Office Report upon request. DLA Disposition Services will provide tailored special extract reports as requested (Appendix 6.33).

C16.6.4. Intransit Control System Tracking and Associated Actions

C16.6.4.1. DLA Disposition Services Field Office Processing against the Global Intransit Control System Suspense File

C16.6.4.1.1. Suspense File Comparison. When a receipt is processed at any of the DLA Disposition Services Field Offices, it will be compared with the suspense file. The receipt will open the ICS transaction suspense file if no previous shipment status created a suspense record and the receipt value is $800 or more, or the item is recorded as pilferable or sensitive. The suspense file will remain open for a
period of one year from the date it is initiated, unless closed by one of the actions below.

C16.6.4.1.2. Intransit Control System Follow-up Transactions. All follow-up transactions generated as a result of ICS processing will be sent through Transaction Services. The field office will prepare the DLMS 940R, Transaction Type Code NH (MILSTRIP DIC AFX/AFZ functionality) Disposal Shipment Confirmation Follow-up identifying the originating activity as DLA Disposition Services (RIC S9D). The follow-up will be directed to the RIC of the shipping activity. If the shipping activity RIC is not known, the DoDAAC identified in the document number may be used for transaction routing. The DoDAAC in the document number may be the shipping activity itself or the activity directing the disposal action; (e.g., inventory control point (ICP)/IMM). ICPs/IMMs receiving the follow-up will enter the shipping activity RIC as the intended recipient and resend the follow-up through Transaction Services, to the shipping activity to answer directly and to perform research in order to provide either the ICP/IMM or storage activity response.

C16.6.4.1.3. Research Guidance (Critical Flag). When the field office prepares the DLMS 940R follow-up, the transaction will include research guidance (critical flag) to aid the DoD Components to prioritize research and resolution of problems. The critical flag will identify turn-ins of sensitive items (1, 2, 3, 4, 5, 6, 7, 8, Q, R, or $), demilitarization required items (C, D, E, or F), and items identified to critical classes of supply (DoD 4160.21-M). The DLMS 940R follow-up will also include the DoDAAC of the field office that has received or is intended to receive the turn-in.

C16.6.4.1.4. Closure of Suspense Files. The suspense file will be closed if the receipt matches a shipment status transaction previously recorded in the suspense file. A match is based on DTID number and FSC.

C16.6.4.1.5. Internal Receipt Refusal. If the field office is unable to receive the property and must reject the property back to the generator, an internal Receipt Refusal transaction will be processed and matched to the record in ICS. If the internal transaction matches a shipment transaction previously recorded in the suspense file, the suspense file record will be closed.

C16.6.4.1.5.1. DLMS 940R Disposal Shipment Confirmation Follow-Up with Advice Code 36. If after 90 calendar days from the date of posting the receipt to the ICS there is no matching shipment status transaction and the extended value is $800 or more, or the item is recorded as pilferable or sensitive, the field office will forward the 940R Disposal Shipment Confirmation Follow-up transaction with Advice Code 36 (MILSTRIP DIC AFX functionality. No response is required and this notification closes the ICS suspense.

C16.6.4.1.5.2. DLMS 940R Disposal Shipment Confirmation Follow-up with Advice Code 37. If after 90 calendar days from the date of posting shipment status to the ICS there is no matching receipt transaction, the extended value is $800 or more, or the item is recorded as pilferable or sensitive, the field office will
forward the 940R Disposal Shipment Confirmation Follow-up transaction with Advice Code 37 (MILSTRIP DIC AFX functionality). The ICS remains open awaiting response.

C16.6.4.1.6. Second Follow-up. If the DLMS 870S Supply Status or the DLMS 945A (Type Transaction Code AZ) Disposal Shipment Confirmation transaction is not received within 30 calendar days of sending the DLMS 940R Disposal Shipment Confirmation Follow-up with Advice Code 37, the field office will send a second follow-up (MILSTRIP DIC AFZ functionality). The record will remain open for a period of 1 year from the date it was originated unless closed by a response to the 940R. When moved from the active suspense file, records will be placed on an accessible history file for an additional two years.

C16.6.4.1.7. Terminating In-Transit Control System Processing. Receipt of 870S Supply Status will direct further ICS processing as follows:

C16.6.4.1.7.1. DLMS 870S Supply Status with Status Code DE. Receipt of 870S Supply Status with Status Code DE will terminate ICS processing for the document number in question. Status Code DE indicates no shipment was made.

C16.6.4.1.7.2. DLMS 870S Supply Status with Status Code DF. Receipt of a DLMS 870S Supply Status with Status Code DF will terminate ICS processing and indicates property was removed from the storage area and cannot be located. Further research is being conducted within Service/Agency channels. The record will be removed from the active suspense file and placed in an accessible history file for two years.

C16.6.4.1.7.3. DLMS 870S Supply Status with Status Code DG. Receipt of a DLMS 870S Supply Status with Status Code DG indicates shipment is confirmed and a signed copy of the DTID number or DTID number and suffix, or a digitally signed email from ETID confirming disposition services receipt acknowledgement, is on file for the quantity shipped. This closes the record in ICS for the document number in question. DLA Disposition Services will use its own procedures to determine why notification of receipt of materiel was not sent by the field office. DLA Disposition Services will keep an accessible history file record for two years. Additionally, the DLA Disposition Services Field Office will provide a TRA transaction to the DoDAAC identified by the DTID (inclusive of ETID) when the field office reports the receipt to DLA Disposition Services.

C16.6.4.1.7.4. DLMS 870S Supply Status with Status Code DH. Receipt of a DLMS 870S Supply Status with Status Code DH indicates shipment is confirmed and a signed copy of the DTID or a digitally signed email from ETID confirming disposition services receipt acknowledgement is on file, however the quantity on the DTID is different than the quantity on the shipment status. Further research on the quantity discrepancy is being conducted within Service/Agency channels. This will close the record in ICS for the document number in question. DLA Disposition Services will keep an accessible history file record for two years. Additionally, the DLA Disposition Services Field Office will provide a TRA transaction to the DoDAAC
identified by the DTID (inclusive of ETID) when the field office reports the receipt to DLA Disposition Services.

C16.6.4.1.7.5. **DLMS 870S Supply Status with Status Code BF.** Receipt of a DLMS 870S Supply Status with Status Code BF indicates that the shipping activity has no record of the document number in question. This will close the record in ICS and removes the record from the active suspense file. DLA Disposition Services will place the record in an accessible history file for two years.

C16.6.4.1.8. **Receipt of a DLMS 945A, Disposal Shipment Confirmation, Type Transaction Code AZ.** When the DLMS 945A (Type Transaction Code AZ) Disposal Shipment Confirmation transaction is received, ICS processing for the document number in question is considered complete. Accessible history file records will contain NSNs, quantities, document numbers, dollar value of variances (if any), and the identity of applicable shipping activities and DLA Disposition Services Field Offices.

C16.6.4.1.9. **Shipping Activity Actions**

C16.6.4.1.9.1. **Documentation Review.** Supply organizations in receipt of the DLMS 940R Disposal Shipment Confirmation Follow-up will ensure that applicable shipping activities review either the signed documentation (DTID) or the TRA confirming disposition services receipt acknowledgement, investigate discrepancies, and provide timely responses within 30 working days of receipt of the inquiry. Disposal Shipment Confirmation Follow-ups with Advice Code 36 do not require a response.

C16.6.4.1.9.2. **Reserved.**

C16.6.4.1.9.3. **Quantity Received Verification.** Upon receipt of a disposal shipment confirmation follow-up, the shipping activity will verify the actual quantity shipped, and will respond with supply or shipment status as follows:

C16.6.4.1.9.4. **No Shipment Record/Status.** If there is no record of the shipment, nor of generating the shipment status, and no record of either a signed copy of the DTID, or the TRA, the DLMS 870S Supply Status with Status Code BF will be sent in response to the DLMS 940R Disposal Shipment Confirmation Follow-up.

C16.6.4.1.9.5. **Shipment Status Sent But No Record.** If it is determined that although shipment status had been sent, no shipment had been made or no record of shipment, other than the shipment status transaction can be located, the DLMS 870S Supply Status with Status Code DE will be sent in response to the DLMS 940R Disposal Shipment Confirmation Follow-up.

C16.6.4.1.9.6. **TRA/Signed DTID Receipt Not Available.** If either a TRA, a signed copy of the DTID number or DTID number and suffix receipt, is not available, but investigation indicates that property was removed from the storage area and cannot be located, the shipping activity will do additional research as determined by the DoD Component procedures, including, if necessary, referral to the appropriate
criminal investigative activity. The DLMS 870S Supply Status with Status Code DF will be sent in response to the DLMS 940R Disposal Shipment Confirmation Follow-up.

C16.6.4.1.9.7. No Shipping Activity Record. If the shipping activity has no record of generating a shipment status transaction, but has received either a TRA, or a signed copy of the DTID, a DLMS 945A Disposal Shipment Confirmation (Transaction Type Code AZ) (MILSTRIP DIC ASZ functionality) showing the quantity receipted for the DTID number or DTID number and suffix will be sent in response to the DLMS 940R Disposal Shipment Confirmation Follow-up.

C16.6.4.1.9.8. Use of Distribution Code 9. The DLMS 870S Supply Status and the DLMS 945A Disposal Shipment Confirmation transactions generated by the shipping activity in response to the DLMS 940R Disposal Shipment Confirmation Follow-up will contain Distribution Code 9 to enable Transaction Services to route copies of these transactions to the ICS Global Record.

C16.6.4.1.9.9. Extended Value Determination. The extended value of the shipment will be determined by document number, quality, and unit price.

C16.6.4.1.9.10. Shipment/Transfer Monitoring. ICS provides a means to monitor shipments/transfers to DLA Disposition Services Field Offices. This system also provides a capability for DLA Disposition Services to give information to the DoD Component concerning the shipment/transfer of property to DLA Disposition Services Field Offices.

C16.7. PROCESSING MATERIEL AND MAINTAINING ACCOUNTABILITY BY THE DLA DISPOSITION SERVICES AND THE DISPOSITION SERVICES FIELD OFFICES

C16.7.1 Materiel Acceptability. These procedures do not negate the authority of DLA Disposition Services Field Offices to refuse acceptance of accountability and physical receipt of certain types and classes of materiel as prescribed by DoD 4160.21-M. If materiel is not acceptable for these reasons, and the shipment is rejected/returned to the shipper, DLA Disposition Services Field Office will provide notice of rejection to DLA Disposition Services under existing procedures, thus purging the ICS file. Guidance on shipment notices and ICS processing is applicable only to useable items being shipped/transferred to DLA Disposition Services Field Office.

C16.7.1.1 Disposition Services Turn-in Receipt Acknowledgement. The DLA Disposition Services Field Office will send a TRA transaction to the DoDAAC in the original DTID number; do not send the TRA transaction to the DoDAAC of the UCN. If the turn-in was initiated via ETID, then send the TRA transaction to ETID, which in turn will generate a digitally signed email to the customer notifying them of the disposition services receipt acknowledgement in addition to the TRA transaction sent to the document number DoDAAC. This action provides confirmation to the generator that DLA Disposition Services processed a Receipt transaction to record DLA Disposition Services materiel accountability and ownership for the materiel turned in, and provides a linkage to audit trails retained by the field office. If the DTID (DD Form 1348-1A or DD
did not reflect a valid NSN or LSN (excluding scrap [SCC S], waste, non-appropriated fund activity, and lost, abandoned, or unclaimed privately owned personal property), the TRA transaction materiel identification (NSN/LSN/ MCN) data field will contain the invalid materiel identification provided on the DTID as the primary materiel identification (LIN02), and will include the materiel identification (valid NSN or Disposition Services LSN) that the field office assigned at receipt, as a secondary reference (LIN16) for an audit trail. The TRA will also include the original DTID number and suffix, date and time of the receipt, quantity received by the field office, and the DoDAAC and RIC of the from and to activity. The quantity received may be converted to unit of use when less than the full quantity associated with the DoD unit of issue.

C16.7.1.2. Document Retention. Audit capability is required for a period of time following the transmission of the TRA transaction or comparable digitally-signed email. The DLA Disposition Services Field Office and the DoDAAC receiving the TRA transaction must retain an electronic image of the complete TRA or comparable email, including the date and time, as part of the transaction/receiving/shipping history in accordance with DoDI 5015.02, DoD Records Management Program. The activity receiving the TRA or email may need to communicate the acknowledgement of receipt to the turn-in activity if different. Also, consistent with Chapter 6, paragraph 6.9 (Retention of Accountable Documentation) the DLA Disposition Services Field Office will still maintain scanned images of the DTID receipt documentation (DD-1348-1As) in EDOCS in accordance with DoDI 5015.02, and the DoD Components will have access to EDOCS, as needed.

C16.7.1.3 Notify Shipping Activity of Quantity Error. If an error exists because the quantity received is less than or greater than quantity entered on the DTID number or DTID number and suffix, DLA Disposition Services Field Offices will notify the shipping activity and submit a supply discrepancy report. See DoD 4160.21-M, Chapter 3; and Chapter 17.

C16.7.2. Maintaining Property Accountability. The accountable property record for inventory owned by the DLA Disposition Services will be maintained by the DLA Disposition Services Field Office system. DLA Disposition Services system will maintain the owner’s total item property record and financial accounting for DLA Disposition Services Owned property. End of day processing and an annual reconciliation will occur to ensure that the two inventory records are kept in sync at the DTID number or DTID number and suffix level.

C16.7.2.1. Maintaining Owner Compliance Table. The field office system will maintain an owner compliance table to ensure daily (end of day) and annual (total reconciliation) requirements are executed based on pre-established business rules in compliance with DLM 4000.25, DLMS Manual, Chapter 6. (Physical Inventory Control)

C16.7.2.2. Daily System Reconciliation. The DLA Disposition Services (owner) system and the DLA Disposition Field Office (storage activity) system will match all active records daily (i.e. DTID numbers or DTID number and suffixes that had any transaction affecting record balances) on-hand balances.
C16.7.2.2.1. **DLMS 846R Transaction for End-of-Day Processing.** The field office system (storage activity) will send the daily closing balance for each affected DTID number or DTID number and suffix using the DLMS 846R, Location Reconciliation Request transaction, Report Type Code LC and the type of reconciliation code for end of day processing. The DLMS 846R will contain the demilitarization code (DEMIL code) that corresponds to the stock number for that DTID number or DTID number and suffix. The DEMIL code will be included in the match of item data characteristics (unit of issue, condition code, CIIC, and DEMIL code) to ensure compatibility between storage activity and owner systems.

C16.7.2.2.2. **Additional Use of DLMS 846R.** The field office system (storage activity) will also send a DLMS 846R, Location Reconciliation Notification, Report Type Code X4, to advise DLA Disposition Services of the total number of daily DTID number or DTID number and suffix closing balance transactions (number of DLMS 846R, Report Type Code LC transactions) being forwarded and the associated cut-off date. Imbalances will be programmatically researched to assure consideration of in-float documents, delayed transactions, and duplicate transactions.

C16.7.2.3. **Annual Record Total Reconciliation.** All DLA Disposition Services owner and field office storage activity records (active and inactive, including zero balances) will be reconciled at least once each fiscal year (total reconciliation).

C16.7.2.3.1. **DLMS 846R Location Reconciliation by DTID or DTID and Suffix.** The field office will prepare location reconciliation requests by line item (DTID number or DTID number and suffix) for each DTID regardless of the balance (including zero balances), using the DLMS 846R, Location Reconciliation Request transaction, Report Type Code LC and the type of reconciliation code for annual location reconciliation. The location reconciliation request will contain the DEMIL code that corresponds to the stock number for that DTID. The DEMIL code will be included in the match of item data characteristics (unit of issue, condition code, CIIC, and DEMIL code) to ensure compatibility between storage activity and owner systems.

C16.7.2.3.2. **DTID or DTID and Suffix Closing Balance Transactions.** The field office (storage activity) system will also send a DLMS 846R, Location Reconciliation Notification, Report Type Code X4, to advise DLA Disposition Services of the number of annual DTID number or DTID number and suffix closing balance transactions (DLMS 846R Type Code LC transactions) being forwarded and the associated cut-off date. Imbalances will be programmatically researched to assure consideration of in-float documents, delayed transactions, and duplicate transactions.

C16.7.2.4 **Mismatches.** For any mismatches found, the DLA Disposition Services personnel will ensure that potential or actual inventory accounting adjustments are researched and corrected in accordance with the value of the adjustment and type of item involved. Emails will be sent to the appropriate Disposition Services Field Office personnel requesting assistance to isolate errors in data transmission.
C16.7.3. **Disposition Services Containerization Processing**

C16.7.3.1. **Identifying Items.** To enhance potential marketing, the DLA Disposition Services Field Office has the discretion to “containerize” items turned in by DTID number or DTID number and suffixes that can be reutilized/sold together. Rules regarding items that can be grouped in containers are governed by the DLA Disposition Services. For instance, items that share the same or similar item characteristics such as demilitarization (DEMIL) code or CIIC can be placed in the same container.

C16.7.3.1.1 **Use of DLA Disposition Services Container Identification Number.** When the decision is made to market items via containerization processing, the DLA Disposition Services Field Office will generate a disposition services containerIdentification (ID) number for the items identified by DTID number or DTID number and suffixes placed in the container. For each DTID number or DTID number and suffix coded receipt, the disposition services container ID number will also be identified in the DLMS 527R Receipt transaction (Transaction Type Code D4) generated by the field office to DLA Disposition Service, along with the disposition services complete container count and disposition services current container count.

C16.7.3.1.2 **Container Tracking.** DLA Disposition Services will track each DTID number or DTID number and suffix in the container. The disposition services container ID number and the DTID number will be sent to the RTD Web so the items can be marketed as part of the disposition services container.

C16.7.3.2. **Container Transfer.** In cases where items are eliminated or moved from one container to another based upon DEMIL code challenges, downgrade to scrap or re-marketing decisions, the DLA Disposition Services Field Office will generate the DLMS 846A, Asset Reclassification Response (Type Transaction Code TD) to DLA Disposition Services to maintain container synchronization and inventory accuracy. This container identification change process applies to NSNs, LSNs, and unit of use LSNs. When unit of use LSNs are involved, the DLMS 846A will also contain the cross reference NSN. The DLMS 846A will identify the controlling document number generated by the DLA Disposition Field Office, the DTID number or DTID number and suffix as a primary reference, the existing disposition services container ID number (FROM Container ID), as well as the new disposition services container ID number (TO Container ID). In the case of an item being removed from a container and not being placed in a new container, the TO disposition services container ID will not be cited in the transaction. Disposition services container ID changes always originate from the Field Office to the DLA Disposition Services. Accordingly, there is no corresponding asset reclassification request transaction for container ID changes.

C16.7.4. **Reclassification of Scrap**

C16.7.4.1. **Downgrade to Scrap.** The downgrade to scrap process is used by the DLA Disposition Services and its field offices when an item is no longer needed and the property has no commercial value other than for basic materiel content. Policy and
C16.7.4.1.1. **Downgrade Items Upon Receipt (at Time of Turn-in).** During the receiving process, if the DLA Disposition Services Field Office determines the item has only scrap value, the item may be downgraded to scrap upon receipt. The field office will assign a Disposition Services Scrap LSN to replace the existing NSN or LSN found on the original DTID number or DTID number and suffix generated by the customer. Simultaneous with sending the DLMS 527R Receipt (Transaction Type Code D4) to DLA Disposition Services, the field office receipt process will trigger a TRA to the DoDAAC in the DTID number reflecting the LSN actually received into DLA Disposition Services inventory as a secondary reference (LIN16), and the materiel identification from the DTID at LIN02. The TRA transaction provides confirmation that materiel was received and provides linkage to audit trails maintained by the field office.

C16.7.4.1.1.1. **Assignment of ‘Disposition Category’ for Items Downgraded Upon Receipt.** During the pre-receipt process, the field office will request a ‘Disposition Category’ from DLA Disposition Services (C16.7.8 - DLA Disposition Category Assignment and Associated Actions). Once the Disposition Category assignment response is provided, the field office will submit the receipt for scrap to the DLA Disposition Services, using the DLMS 527R Receipt (Transaction Type Code D4) using a Scrap LSN. The DLMS 527R Receipt for material downgraded to scrap at time of receipt will reflect the source of the materiel received/returned code, (e.g., J = Return to inventory from other DoD activity users), (see the reason for materiel receipt/return (MRR) code list in LOGDRMS).

C16.7.4.1.1.2. **Downgrade (Upon Receipt) of Entire Quantity on Disposal Turn In Document or Disposal Turn In Document and Suffix.** If the entire quantity on the DTID number or DTID number and suffix is being downgraded to scrap, the original DTID number or DTID number and suffix number will remain and the original NSN/LSN will be referenced in the Receipt for audit purposes, to link to the newly assigned Scrap LSN. If the DTID number or DTID number and suffix is a duplicate number, then a UCN will be generated for the downgrade to scrap.

C16.7.4.1.1.3. **Downgrade (Upon Receipt) of Partial Quantity on Disposal Turn In Document or Disposal Turn In Document and Suffix.** If only part of the DTID is being downgraded to scrap, then a UCN will be generated and the Receipt will contain the original DTID number or DTID number and suffix as a secondary reference number.

C16.7.4.1.2. **Downgrade Items After Turn-in (After Receipt).** Any time after receipt, DLA Disposition Services may notify the Disposition Services Field Office via a DLMS 846C, Disposition Status Update (Report Type Code PC), to change the disposition status of the DTID number or DTID number and suffix to DS (Disposal). When the field office receives a disposal recommendation, the disposition of the property at the field office is determined by pre-defined ultimate disposal process business rules.
C16.7.4.1.2.1. **Downgrade Items to Scrap (After Receipt).** If the business rule decision is to downgrade to scrap, the field office will send a DLMS 947I, Inventory Adjustment (Type Transaction Code NU) with Quantity or Status Adjustment Reason Code BS – Downgrade (Loss), and associated with the original DTID number or DTID number and suffix.

C16.7.4.1.2.2. **Creation of New Receipt for Items Downgraded to Scrap Subsequent to Initial Turn-in.** A new receipt is created for the scrap using the DLMS 527R Receipt with the source of Materiel Received/Returned Code W - Receipt as a result of DLA Disposition Services process to downgrade to scrap, subsequent to the initial receipt of materiel. A DLA Disposition Services scrap LSN will be assigned in compliance with the scrap classification listing for use in the new Receipt. A UCN will be assigned and associated with the original DTID number or DTID number and suffix to avoid duplication in DLA Disposition Services. This UCN will become the controlling document number in the DLMS 527R. The new receipt will contain the original DTID number or DTID number and suffix as a secondary reference number, and will reference the original materiel identification (NSN or LSN).

C16.7.4.1.2.3. **Materiel Downgraded to Scrap When Materiel Is Part of a Container.** If the materiel/DTID number or DTID number and suffix downgraded to scrap is part of a container, the field office will generate a DLMS 846A, Asset Reclassification Response (Report Type Code TD), to delete the DTID number or DTID number and suffix/container ID association in order to maintain container synchronization and inventory accuracy (see C16.7.3.2., Container Transfer).

C16.7.4.2. **Upgrade from Scrap.** The upgrade from scrap process is used by the DLA Disposition Services and its field offices when a business need exists to reclassify materiel previously receipted as scrap or downgraded to scrap after receipt to a useable NSN or useable LSN item. An upgrade from scrap can occur at any time subsequent to the initial receipt of scrap or downgraded materiel. Policy and authority for upgrading materiel from scrap can be found in DoD 4160.21-M.

C16.7.4.2.1. **Assignment of a UCN for Materiel Upgraded from Scrap.** Upgrading an item from scrap begins with the assignment of a UCN on the DLMS 527R Receipt transaction, where the eleventh character is assigned a value of ‘C’ to indicate it is related to an upgrade from scrap. The DLA Disposition Services Field Office will enter the scrap LSN that is being upgraded, as well as the warehouse location of the scrap pile for the specific LSN. Both the warehouse location (scrap pile) and LSN are necessary to identify the removal of scrap from the proper warehouse location to maintain inventory integrity of the remaining scrap pile. The field office will also identify the weight to be removed from the warehouse location (scrap pile), as well as the internal type turn-in for the item to be upgraded to in the DLA Disposition Services Field Office system (US – Useable, HM – Hazardous Material, or HW – Hazardous Waste).

C16.7.4.2.2. **Inventory Adjustment (Decrease) for Scrap LSN.** The field office will generate a DLMS 947I, Inventory Adjustment (Type Transaction Code NU) loss transaction with Quantity or Status Adjustment Reason Code BR to decrement the
relevant scrap pile for the designated weight of the scrap LSN to be upgraded. The DLMS 947I Quantity or Status Adjustment Reason Code BR will indicate an Inventory Adjustment Decrease (Upgrade from Scrap), Loss resulting from the upgrade from scrap subsequent to the initial receipt of materiel.

C16.7.4.2.3. Creation of New Receipt for Items Upgraded from Scrap. The field office will identify the useable NSN or useable LSN, to which the scrap is being upgraded, in addition to quantity and other data required for a regular non-scrap receipt. The upgrade from scrap process will not reference a specific scrap DTID or DTID and suffix, only the scrap LSN and the warehouse location of the scrap pile. Therefore, the DLMS 527R Receipt, with the source of Materiel Received/Returned Code V, will pass the new useable NSN or useable LSN, and will include the original scrap LSN as a secondary reference (LIN08-SW), for auditability purposes. The new receipt is created for the upgraded NSN or LSN, as a result of the DLA Disposition Services process authorized by DoD 4160.21-M, to upgrade materiel from scrap subsequent to the initial receipt of materiel.

C16.7.4.2.4. Adjustment Reason Codes and DLMS 947I Inventory Adjustment use for DLA Disposition Services. Inventory adjustments take place via DLMS 947I transaction which encompasses increases, decreases, or dual adjustments. This relates to MILSTRAP legacy DICs D8_ (increase), D9_ (decrease), or dual adjustment represented as DAC/DAD/DAS respectively. Inventory adjustments are further broken down by the DLMS 947I detail segment (2/W1901/0200) Quantity or Status Adjustment Reason Code. The quantity or status adjustment reason codes correlate to the 3rd position of the MILSTRAP legacy DICs D8_/D9_ or DAC/DAS as identified in Table C7.T1 in DLM 4000.25, Volume 2, Chapter 7. DLA Disposition Services will follow the Status Adjustment Reason codes and explanation identified under C7.T1, which have corresponding Legacy DICs associated for clarity until sunset of the legacy accountable property system of record.

C16.7.5. Relocation Between DLA Disposition Services Field Offices

C16.7.5.1. Use of DLMS 940R, DLMS 856S and DLMS 945A When Relocating Materiel Between Field Offices. In all instances when relocation of materiel between DLA Disposition Services Field Offices is necessary, the DLA Disposition Services will direct this action by using the DLMS 940R, Redistribution Order (RDO) (Transaction Type Code NI), and sending it to the shipping field office, except when the Disposal Category Code for the DTID number or DTID number and suffix is DS Disposal. In addition, an RDO may be created by the DLA Disposition Services Field Office for materiel meeting specific conditions with the intent of transferring the Disposal Turn-In Document (DTID) from the current Field Office where it was receipted to another Field Office (e.g., a Certified DEMIL Center (CDC) for demilitarization. The RDO transaction prepared by the Field Office is provided to DLA Disposition Services. The Field Office processing the RDO will always provide a DLMS 856S, Shipment Status (Transaction Type Code AS) and the DLMS 945A, Redistribution Order
C16.7.5.1.1. **RDO Denial.** If the shipping Field Office is unable to fully process the DLA Disposition Services RDO and determines that they need to continue processing the DTID in accordance with established business rules at the current site, then a DLMS 945A Materiel Release Denial (Transaction Type Code NK) citing Management Code N will be created and sent to EBS for processing against the original RDO.\(^{12}\)

C16.7.5.1.2. **RDO Cancellation.** For cancellation of a self-initiated RDO previously transmitted by the Field Office to DLA Disposition Services, the Field Office will generate a DLMS 945A, Materiel Release Order Cancellation Confirmation (Transaction Type Code NR) containing the DLMS Cancellation Reason Code YJ (DLA Disposition Services Field Office cancellation of Redistribution Order due to change in disposition instructions).

C16.7.5.2. **Prepositioned Materiel Receipt and Receipt for Relocations Between Field Offices.**

C16.7.5.2.1. **Prepositioned Materiel Receipt.** For all relocation actions between Field Offices, DLA Disposition Services will generate a DLMS 527D, PMR (Transaction Type Code DE), to the field office designated to receive the relocated materiel. The PMR will contain 2/LIN01/10 Code N (return to inventory of materiel relocated between storage activities without change in ownership (MILSTRAP DIC DWK functionality)). DLA Disposition Services will include the DTID number or DTID number and suffix in the PMR in order for DTID number or DTID number and suffix accountability to be maintained across multiple locations. The DTID number or DTID number and suffix value may be the original turn-in document number or may be a UCN assigned by the field office during receipt processing when the original DTID number or DTID number and suffix is not adequate to uniquely identify the property. Additionally, when an entire container is identified for transfer between field offices, the PMR will contain the disposition services container ID. Along with the Disposition Services Container ID, DLA Disposition Services will pass a Disposition Services Complete Container Count to indicate how many different DTID number, or DTID numbers and suffixes are within the container; this is how many different receipts are expected for a particular container.

C16.7.5.2.2. **Receipt.** Upon receipt of materiel relocated between field offices, the receiving field office will provide the DTID number or DTID number and suffix or UCN and, when applicable, the disposition services container ID provided in the PMR to DLA Disposition Services using a DLMS 527R, Receipt, (Transaction Type Code D4) identified by 2/LIN01/10 Code N, and sequentially assign the Disposition Services Current Container Count number for each DTID number or DTID number and suffix.

---

\(^{12}\) Deferred implementation authorized. Pending implementation, field offices may use RDO cancellation procedures per paragraph C16.6.5.1.2. in place of an RDO denial. Refer to ADC 1034B.
Suffix that is in the container. DLA Disposition Services Field Offices must comply with the Chapter 13 time standards for processing receipts.

C16.7.5.3. Relocation of Disposal Category Code DS (Disposal) Items Between DLA Disposition Services Field Offices

C16.7.5.3.1. Field Office Responsibility for DS Category Code on Turn-in Materiel. Turn-in materiel to a DLA Disposition Services Field Office under a DTID number or DTID number and suffix may be assigned Disposal Category Code of DS (Disposal) (see C16.7.8.). DLA Disposition Services Field Offices are responsible to manage the issue of property assigned Disposition Category Code DS and to update DLA Disposition Services’ owner record for all property managed by DLA Disposition Services Field Offices, to include disposal category property.

C16.7.5.3.2. Tracking Materiel Issues for Materiel Required to be Relocated Between Field Offices. The DLMS 945A, Materiel Release Confirmation, transaction citing Shipment Hold Code X will be used to track materiel issues between DLA Disposition Services Field Offices for disposal items required to be relocated to another DLA Disposition Services Field Office; (e.g., DEMIL Field Office). In these cases, the DLA Disposition Services Field Office shipping the materiel will send DLA Disposition Services the DLMS 945A Materiel Release Confirmation transaction citing Shipment Hold Code X for each DTID number or DTID number and suffix or Scrap (UCN) LSN quantity being relocated. DLA Disposition Services uses the Materiel Release Confirmation transaction to update the owner record and hold the quantity pending shipment.

C16.7.5.3.2.1. Additional Field Office Responsibilities for Relocation of DS Coded Materiel Requiring Redistribution. For these redistribution orders, the field office will create an internal DLMS 940R Redistribution Order (RDO) using a UCN constructed using the field office DoDAAC and current ordinal date, followed by a unique 4-digit serial number, (e.g., SY205411390001, SY205411390002, etc.). The field office will then decrement the owner balance, create and exit the DLMS 867I Issue, position the Redistribution Order for release, and once released, generate the DLMS 945A Materiel Release Confirmation to the owner and the DLMS 856S Shipment Status to the receiving field office using DAAS. The internal RDO will be used to allocate the DTID and quantity within DSS to support the site-to-site transfer. DSS will simultaneously send an outbound DLMS 945A Materiel Release Confirmation to EBS citing new Shipment Hold Code X. The shipment hold will ensure the inventory is not allocated to another process, or ordered while waiting to be shipped. Upon receipt of the materiel release confirmation citing Shipment Hold Code X, EBS will create an internal order and restrict the DTID quantity, making it unavailable to other orders/processes. The field office will perform the pick when it is ready to ship the materiel. DSS will trigger the transmission of the DLMS 945A without a shipment hold code to EBS upon actual shipment of the redistributed materiel, in addition to sending a DLMS 856S to the receiving office via Transaction Services. EBS will update the order status and DTID quantity to reflect the materiel as shipped, and update the inventory records as indicated by the DLMS 945A.
C16.7.5.3.2.2. **Citing Document Identifier Codes on Redistribution Orders.** The MILSTRIP DIC cited in the internal DLMS 940R will be A2_, Redistribution Release Order since the materiel is being shipped to another field office.

C16.7.5.3.2.3. **Requirement for Posting to the Defense Automatic Addressing System.** Since these transactions are internal to the field office, a copy will be passed to Transaction Services to be posted in the DAAS so that the complete issue, confirmation, and status history are maintained.

C16.7.5.3.3. RESERVED.

C16.7.5.3.4. **Documenting the On-hand Balance Record for Redistributions.** Upon receipt of the DLMS 945A Materiel Release Confirmation transaction citing Shipment Hold Code X, DLA Disposition Services will hold the on-hand balance record for the quantity submitted by the DLA Disposition Services Field Office and generate an internal RDO. For these redistributions no RDO (DLMS 940R, Type Transaction Code NI) will exit the DLA Disposition Services system.

C16.7.5.3.5. **Confirmation of Actual Shipment.** When the DLA Disposition Services Field Office actually ships the materiel held for redistribution, the field office will release another DLMS 945A Materiel Release Confirmation, citing all applicable carrier information, but with no shipment hold code.

C16.7.5.3.6. **Redistribution Orders Quantity.** The quantity on the DLMS 945A Materiel Release Confirmation transaction will be used by DLA Disposition Services to populate the RDO quantity field and will be reflected as in-transit until the DLMS 527R Receipt transaction is processed from the receiving DLA Disposition Services Field Office or the RDO is cancelled.

C16.7.5.3.7. **Partial Shipments, First Shipment Requirements.** If property that requires DEMIL needs to go to a different field office (DEMIL facility) and the size and/or weight limits the use of one conveyance, partial shipments may occur. The first partial shipment will include two document numbers - the RDO document number (i.e., the controlling document number) and the original DTID number or DTID number and suffix from the issuing/losing field office as a secondary reference number. This document number will be reported by the DLA Disposition Services Field Office on the DLMS 527R Receipt transaction submitted to DLA Disposition Services.

C16.7.5.3.8. **Partial Shipments, Second Shipment Requirements.** When the second partial shipment arrives at the DEMIL facility, the RDO document number cannot identify the receipt by itself due to the disposition services duplicate DTID number or DTID number and suffix business rule. Therefore, a UCN will be created by field office personnel to receipt the remainder of the property, causing three document numbers to be associated with the shipment/receipt transaction: (1) the original RDO document number serving as the primary document number for the new receipt, (2) the original DTID number or DTID number and suffix from the issuing/losing field office (secondary reference number), which is perpetuated from the RDO, and (3) the UCN
generated to prevent DTID number or DTID number and suffix re-use. These document numbers are all linked and all three will be reported on the DLMS 527R Receipt transaction submitted to DLA Disposition Services.

C16.7.6 DLA Disposition Services Public Sales

C16.7.6.1. Public Sales Contracts. Contracts for public sales are maintained at DLA Disposition Services. The DLMS 832N, Catalog Data Support transaction (Catalog Purpose Code SC) will be used to communicate sales contract catalog data to the field offices. This pre-positioned information will be used by the field office to facilitate the receipt process for turned-in property/DTIDs or DTIDs and suffixes initially assigned Disposition Category Code SL–Sales. A separate transaction will be used for each field office, since specific site data and materiel contract information is maintained at the line item level. A detail line is required for each combination of property, sales contract, and sales contract line item. Each transaction may contain one or more detail lines. The following detail level data is included, but not limited to: sales contract number, sales contract line item number, generic name/description, DLA Disposition Services Field Office, unit of measure, and the catalog transaction purpose code used to indicate whether the line item record will be added, changed, or deleted.

C16.7.6.2. Sales Category (SL) Sub-Category Scrap and Salvage Recycling (SR). DLA Disposition Services has partnerships with scrap sales contractors to manage the receipt, marketing, and sale of surplus scrap material generated by DoD installations. The scrap material is stored at DLA Disposition Services Field Offices by Scrap Classification (SCL) code. DLA Disposition Services will send a DLMS 832N to the DLA Disposition Services Field Offices when a new Scrap and Salvage Recycling contract is established. The DLMS 832N will convey contract and catalog information for Scrap and Salvage Recycling contracts, which the DLA Disposition Services Field Offices will use to generate an internal DLMS 940R Materiel Release Order to issue scrap material to the contractor. The DLA Disposition Services Field Office will subsequently send a “post-post” DLMS 511R (DLA Directed MRO) to DLA Disposition Services containing the applicable sales contract number and weight after the contractor has picked up the scrap material.

C16.7.6.3. Comparison of Customer Turn-in Property to Prepositioned Sales Contract Data. The DLA Disposition Services Field Office will match the property received from customer turn-in to the pre-positioned sales contract data. When a match is found, the sales contract number and associated sales contract line item number will be provided on the receipt transaction provided to DLA Disposition Services. See C16.7.8.3. - Disposition Category Code SL–Sales.

C16.7.6.4. WEB Auction for Public Sale of Excess Property. Subsequent to receipt, excess property eligible for public sale will be published to DLA Disposition Services web auctions, which are required to be accessible to the general public without any form of user registration. While published web auctions will be viewable by the general public, users will be restricted from submitting bids until a self-registration process is completed. The completion of the self-registration process will result in the
creation of a DLA Disposition Services business partner record, enabling the registered user to submit bids against published web auctions.

C16.7.6.4.1. **End Use Certificate.** Upon determination of an auction winner, the customer will be required to submit an end use certificate (EUC). The information on the EUC will be used to authenticate the customer’s self-registration credentials and verify eligibility to receive the auction property. Upon completion of the eligibility process, DLA Disposition Services will create a supporting internal sales order document.

C16.7.6.4.2. **Materiel Release Order for Public Sale Property.** Once the Defense Finance Accounting Service (DFAS) posts customer payment against the sales order, then DLMS 940R Materiel Release Orders will be generated by DLA Disposition Services to the DLA Disposition Services Field Office authorizing release of the materiel. The MRO transaction will serve as the indicator to DLA Disposition Services Field Office personnel responsible for managing property removals, that customer payment was received and removal is permitted. See C16.2.4.1.9. - Materiel Release Orders in Support of Public Sales.

C16.7.7. **Receipts of Turn-ins to DLA Disposition Services Field Offices.** For receipt of items that have been turned in, the field office will provide DLA Disposition Services a DLMS 527R Receipt (Transaction Type Code D4) with 2/LIN01/10 code I (MILSTRAP D6A functionality) or J (D6B functionality), as appropriate. The DTID number or DTID number and suffix, which represent specific property in the same condition turned in to a specific DLA Disposition Services Field Office, will be passed on all field office generated receipt transactions and provides the level of traceability DLA Disposition Services requires. Because property is often turned in used, simply representing property by materiel number (e.g., NSN or LSN) is insufficient and the DTID number or DTID number and suffix provides the capability to identify and track property at a more granular level of detail. For receipt of property, the field offices will sign the DD Form 1348-1A/1348-2 and provide a signed digital image of the turn-in document via eDOCs, to confirm receipt in ICS. Disposition Services Field Offices must comply with the Chapter 13 time standards for processing receipts. Simultaneous with the creation of the DLMS 527R Receipt to DLA Disposition Services, the field office will trigger a TRA to the DoDAAC in the DTID number. This action provides near time confirmation that DLA Disposition Services picked up materiel accountability and ownership for the materiel and provides a linkage to audit trails retained by the field office. If the DTID DoDAAC is the activity directing the disposal action (not the shipping activity), it is incumbent on that activity to coordinate as necessary with the shipping activity to acknowledge receipt of the TRA. The TRA will include both the DTID number and the UCN when applicable.

C16.7.7.1. **Assignment of Disposition Category Code.** When property identified to a DTID number or DTID number and suffix is turned in, it is assigned an initial disposition category at pre-receipt (i.e., physical examination of property), which is provided in the DLMS 527R Receipt to DLA Disposition Services (see C16.7.9.). This disposition category is used to determine how the property is to be processed
subsequent to receipt; (e.g. reutilization, disposal, etc). When the receipt transaction is received, DLA Disposition Services will confirm that the correct disposition category has been assigned using property characteristics provided in the DLMS 527R; (e.g. DEMIL Code, HM/HW indicator, etc.).

C16.7.7.2. DLMS 527R Required Data Elements. The DLMS 527R Receipt transaction includes the following data elements as applicable to support the disposition category code assignment process and to subsequently track other disposal processes: Bill to DoDAAC, DEMIL code, demilitarization integrity code, demilitarization performed code, disposition services accumulation number, disposition category code, disposition services container ID, disposition services complete container count, disposition services current container count, disposition services term sales code, disposition services indicator (e.g., Abandoned Property (AP) Indicator, Certificate Availability (CA) Indicator, Controlled Property Branch Verified as Not controlled (CPBV), DEMIL Instructions (DI) Indicator, HM Indicator, HW Indicator, or HWPS Indicator, Receipt-In-Place (RIP) Indicator, SA/LW Indicator, Wash Post (WP) Indicator), disposition services reimbursement code, disposition services UCN, DTID number or DTID number and suffix, DTID materiel description, hazardous material indicator code, Industrial Plant Equipment (IPE) report number, SDS Number, model number (used only in conjunction with IPE Report Number), Sales Contract Number, Sales Contract Line Item Number, Service LSN, year of manufacturer (used only in conjunction with IPE Report Number).

C16.7.7.3. Disposition Category Code SL–Sales. The DLA Disposition Services Office will return a Disposition Category Code SL to notify the field office that the item will be held for sale. When pre-existing sales contract data is available, DLA Disposition Services will pre-position contract data using the DLMS 832N transaction (see C16.7.6.) to facilitate receipt processing. At time of receipt, the field office receiver will match the property received from customer turn-in to the pre-positioned sales contract data. When a match is found, the sales contract number and associated sales contract line item number will be provided on the DLMS 527R Receipt transaction sent to DLA Disposition Services.

C16.7.7.4 Reversal of Incorrect Receipt Transactions for DLA Disposition Services. Receiving activities may use the DLMS 527R Receipt transaction (Legacy DIC D4_/D6_) to reverse incorrect receipt transactions. The Receipt reversal transaction will use reason for reversal codes identified in DLM 4000.25 Volume 2, Appendix 7.32, Reason for Reversal Code. For receipt reversals using Reason for Reversal Code D to identify SDR After Receipt, DLA Disposition Services Field Sites will first trigger the SDR using SDR Action Code 3C, followed by a SDR with Action Code of 3B. This will allow the discrepant materiel to remain in location and on record at the Disposition Services Field Office until the discrepant materiel has been picked up by the originating generating customer. The receipt reversal transaction will be the last step to the process. See C16.8.1 and C16.8.1.2 for additional information.

C16.7.7.5. Turn-in of Small Arms/Light Weapons. When SA/LW materiel is received, DLA Disposition Services DEMIL Center, Anniston, Alabama must identify the
SA/LW by a valid NSN or DoD SA/LW Registry assigned management control number (MCN), in addition to a separate serial number for each individual weapon.

C16.7.7.5.1 Verification and Passing of SA/LW Serial Numbers. During the pre-receipt process, the field office will sight verify the serial number(s) received. To report the receipt, the field office will include those serial numbers in the DLMS 527R Receipt transaction sent to DLA Disposition Services and also send a DLMS 140A, Transaction Code R, Receipt, to the DLA SA/LW registry and the generating activity’s SA/LW registry. Receipt reporting to DLA Disposition Services and SA/LW registry receipt reporting must be within applicable MILSTRAP/DLMS time standards. There is a “many-to-one” relationship between a weapon serial number and DTID number or DTID number and suffix; therefore, the weapon serial number will be looped on the DLMS 527R Receipt transaction. The DLMS 140A transaction has a “one-to-one” relationship for weapon serial numbers. The system produces two DLMS 140A transactions to each generating activity. For example, each DLMS 527R Receipt transaction for SA/LW will contain the DTID number or DTID number and suffix and a specific weapon serial number for each individual weapon (e.g., if ten weapons make up the DTID number or DTID number and suffix quantity, DLA Disposition Services will receive one Receipt transaction for that DTID number or DTID number and suffix, with ten unique serial numbers). Additionally, that same receipt transaction produces 20 DLMS 140A transactions (e.g., ten outbound to the DLA SA/LW registry and ten outbound to the generating activity).13

C16.7.7.5.2 Materiel Identification on Disposition Services Turn-In Receipt Acknowledgement (TRA). When the field office receives a SA/LW identified by a Service LSN or invalid materiel identification, the field office conducts research to determine the valid NSN. If the field office cannot identify a valid NSN for the weapon, the field office contacts the DoD SA/LW Registry to obtain an MCN in accordance with Chapter 18 procedures. The field office uses the valid NSN, or the DoD SA/LW Registry assigned MCN, as the primary materiel identification in the 527R Receipt transaction at 2/LIN02/LIN03/010. The field office receipt process will trigger a TRA transaction sent to the DoDAAC in the original DTID number. When the materiel identification in the Receipt transaction differs from that provided in the DTID, the TRA will reflect the DTID materiel identification as the primary identification (LIN02/LIN03) and the valid NSN, or DoD SA/LW Registry assigned MCN, actually received into DLA Disposition Services inventory as a secondary identification (LIN16/LIN17). Inclusion of both materiel identification numbers in the TRA transaction provides linkage to audit trails maintained by the field office. The TRA transaction will include the SA/LW serial number(s) reported in the corresponding 527R Receipt transaction.14

---

13 DLA has advised that use of the SA/LW serial number will not be implemented initially in the 527R Receipt transaction at the field offices. DLA must provide Enterprise Business Standards Office with their planned Distribution Standard System (DSS) implementation date when known.

14 DLA advised that the DLA Disposition Services Field Offices will not include the SA/LW serial number in the 527R TRA transaction as part of TRA initial implementation. DLA must provide DLMS Program Office their planned implementation date for including the SA/LW serial number in the TRA, when known.
C16.7.7.5.3. Partial Weapon Turn-in\textsuperscript{15}

C16.7.7.5.3.1. Turn-in activities must include a list of missing parts on the DTID (or an attached continuation page) or a signed statement certifying that the weapons have missing parts when transferring partial/incomplete weapons to DLA Disposition Services under the whole weapon NSN. If using a missing parts list and the shipment includes multiple weapons, associate each list of missing parts with the serial number of the whole weapon. Shipments of a partial weapon identified under the whole weapon NSN but lacking the required list of missing parts or equivalent certification are discrepant. DLA Disposition Services will hold rejected serialized weapons/weapon parts in a segregated location pending resolution of the SDR. If the DLA Disposition Services does not receive a reply to the SDR with the updated documentation or is otherwise unable to resolve the discrepancy within 25 days, DLA Disposition Services will return the partial weapons to the turn-in activity. If DLA Disposition Services cannot locate the turn-in activity, DLA Disposition Services will contact DoD Registry for resolution/disposition instructions or referral to the owning Service.

C16.7.7.5.3.2. DLA Disposition Services will NOT accept a turned in weapon subcomponent, such as the upper receiver, butt stock assembly, or barrel assembly, without its matching serialized receiver under its end item NSN. When identifying the serialized receiver on a weapon, the term “serialized receiver” refers to the receiver that displays or holds the serial number of a particular weapon. DLA Disposition Services will receipt the subcomponent under the applicable materiel identification for the subcomponent(s) and submit an informational SDR to the generator. DLA Disposition Services will send a Disposition Services Turn-In Receipt Acknowledgement transaction citing the turn-in materiel identification (for reconciliation by the turn-in activity) and the actual materiel identification used for the DLA Disposition Services receipt. It is the responsibility of the turn-in activity to correct the SA/LW Registry and IUID Registry as applicable. DLA Disposition Services will mutilate and/or destroy non-serialized weapon parts consistent with the demilitarization code requirements, local policies, laws, and regulations.

C16.7.7.6. Turn-in of Industrial Plant Equipment. During the pre-receipt process, the field office will verify the serial number received and include that serial number in the DLMS 527R Receipt transaction sent to DLA Disposition Services (one-to-one relationship between DTID number or DTID number and suffix and serial number for IPE).

C16.7.7.7. Disposition Services Indicator. The field office will assign a disposition services indicator in the DLMS 527R Receipt transaction to communicate unique property and/or materiel location information as follows:

C16.7.7.7.1. AP – Abandoned Property

C16.7.7.7.2. CA – Certificate Available to Document Property Condition

\textsuperscript{15} Refer to ADC 1175.
C16.7.7.3. CPBV – Controlled Property Branch Verified as Not Controlled

C16.7.7.4. DI – DEMIL Instructions Available at Time of Receipt

C16.7.7.5. HM – Hazardous Material

C16.7.7.6. HW – Hazardous Waste

C16.7.7.7. HWPS – Hazardous Waste Profile Sheet Available at Time of Turn-in

C16.7.7.8. RIP – Receipt-In-Place. Property not physically located at the field office. The generator retains custody and accountability (ownership) until property is ready for sale, reutilization, transfer and/or donation.

C16.7.7.9. SA/LW – Small Arms and Light Weapons

C16.7.7.10. WP – Wash Post. Property may have previously processed as RIP pending sale, reutilization, transfer, or donation. Once the customer is available to remove the property from generator’s location, the field office will send a DLMS 527R Receipt, with Disposition Services Indicator WP, and the appropriate Disposition Category Code of SL or RU. The receipt quantity will be added to the field office and DLA Disposition Services’ inventory records, then immediately dropped. The field office will use the WP indicator to generate an internal DLMS 940R MRO to drop the DTID number or DTID number and suffix (requisitioned quantity) from its inventory balance. Simultaneous with the creation of the DLMS 527R Receipt (Transaction Type Code D4), with Disposition Services Indicator WP to DLA Disposition Services, the field office will trigger a TRA transaction to the DoDAAC in the DTID number to provide notification that materiel has been receipted and DLA Disposition Services processed a Receipt transaction to pick up materiel accountability and ownership for the materiel. The TRA will be provided to the DoDAAC in the DTID.

C16.7.7.8. Hazardous Material Indicator Code, Demilitarization code, and Controlled Inventory Item Code. The Hazardous Materials Indicator Code, DEMIL Code and CIIC will be included on all DLMS 527R Receipt transactions generated from Recycling Control Points (RCP) for transfers to DLA Disposition Services (RIC S9W) and from DLA Disposition Services Field Offices for receipts of generator turn-ins to DLA Disposition Services (RIC S9D).

C16.7.7.9. Delivery Order Term Sales. The field office will identify property designated for resale under CV delivery order term sales contracts by including the disposition services term sales code in the receipt transaction. The disposition services term sales code is based on specific item characteristics. An example is rolling stock (wheeled items). The delivery order term sales code is a code set maintained by DLA Disposition Services. An internal DLA Disposition Services table is used to associate the delivery order term sales code with the applicable CV contract for sourcing materiel for release to the purchaser.
C16.7.7.10. Disposition Services Accumulation Number. The Disposition Services Accumulation Number is a unique number for the weekly time period assigned to all property entering the disposal system during that week. The number controls the multitude of disposal cycles Disposition Services uses to manage the ultimate disposition of property and ensures items receive full screening on the RTD web allowing all customers to have an appropriate time frame to view and requisition property. The original accumulation number is assigned automatically by the DLA Disposition Services Field Office and sent to DLA Disposition Services ICP via the DLMS 527R Receipt transaction.

C16.7.7.10.1. When the accumulation number becomes out of sync, DLA Disposition Services ICP (approved headquarters personnel only) will manually change the DTID’s accumulation number in DLA’s EBS. EBS automatically sends this change to the DLA Disposition Services Field Office using the DLMS 846C Accumulation Number Update transaction.

C16.7.7.10.2. The Accumulation Number Update transaction provides the field office with the new accumulation data. The updated fields include: date of accumulation number change, old accumulation number, and new accumulation number. The disposition category code is also passed. For Accumulation Number Update transactions, the disposition category value will always be RU as only items in RU Reutilization status need to be tracked by an accumulation number. The field office will use the RU value to trigger the correct processing of the transaction.

C16.7.8. Disposition Category Code Assignment and Associated Action. When generators turn-in materiel under a DTID number or DTID number and suffix to a DLA Disposition Services Field Office, the field office will send DLA Disposition Services a non-DLMS synchronous real-time transaction to request disposition category assignment. Depending upon the characteristics of the DTID number or DTID number and suffix property, DLA Disposition Services’ response will assign one of the following five Disposition Category Codes: Reject (RJ), Research (RS), Reutilization (RU), Sales (SL), or Disposal (DS). After the DLA Disposition Services Field Office receiver verifies the receipt disposition category assignment from DLA Disposition Services, the field office will send a DLMS 527R Receipt transaction with the appropriate disposition category code (see C16.7.8.1. and C16.7.8.2.). Simultaneous with the generation of the DLMS 527R Receipt transaction (Transaction Type Code D4) to DLA Disposition Services, the field office will trigger a TRA transaction to the DoDAAC in the DTID number. This action provides near time confirmation to the generator that DLA Disposition Services processed a Receipt transaction to pick up materiel accountability and ownership for the materiel and provides a linkage to audit trails retained by the field office.

C16.7.8.1. Assignment of Disposition Category Code. The Disposition Category Code assigned to a DTID number or DTID number and suffix determines how the property is processed subsequent to receipt; (e.g. reutilization, disposal, etc). In addition, the category will determine the field office stow process, and which activity will be responsible for the issue of DTID number or DTID number and suffix property. The
DLA Disposition Services will be responsible for issuing DTID number or DTID number and suffix records with Disposition Category Codes of RU or SL, except when the SL Disposition Category Sub-Category Code is CV (Commercial Venture), or SR (Scrap and Salvage Recycling). The Disposition Services Field Office will be responsible for issuing DTID number or DTID number and suffix records with a disposition category of Disposal (DS), or Sales (SL) with a Disposition Category Sub-Category Code CV or SR.

C16.7.8.1.1. **Warehouse Storage Location Update.** The DLA Disposition Services Field Office will send the DLMS 943A Warehouse Storage Location Update transaction to DLA Disposition Services to provide visibility of the warehouse storage location for DTID number and suffix records with a Disposition Category Code RU or SL. The Warehouse Storage Location Update transaction will be submitted subsequent to the reported 527R Receipt when materiel receipt is stowed in a warehouse storage location or RIP site and at the completion of re-warehousing actions for Disposition Category Code RU and SL items. For RIP, the transaction identifies the alternate property location data. This is structured as “APLD” plus the location DoDAAC (when available), and up to six characters after the DoDAAC further identifying the physical location of the item. In addition to the warehouse location, the Warehouse Storage Location Update will contain the property area code assigned based on the type of property stored in the warehouse location (e.g., DEMIL required, general property, controlled item, etc.) The property area code is internal to, and maintained by, DLA Disposition Services. There will not be a property area code assigned for RIP property. DLA Disposition Services will update the RTD Web with the warehouse storage location data to facilitate the screening process when the RTD specialist or customers request visual inspection (prior to requisitioning).

C16.7.8.1.2. **Incorrect RTD Web Warehouse Location.** Due to the timing between the RTD Web print out and the customer's visit to the DLA Disposition Services Field Office, if materiel is not found in the warehouse location shown on the RTD Web print out, field office personnel will query DSS to obtain the current warehouse location for DTID items to be examined.

C16.7.8.2. **DTID, or DTID and Suffix Property Issued by DLA Disposition Services Field Offices.** The DLA Disposition Services Field Office will issue DTID number or DTID number and suffix property based on the Disposition Category Code and additional data reflected in the DLMS 846C. For these issues, the field office will create an internal DLMS 940R (either Redistribution Order or Materiel Release Order, as appropriate). For materiel release to customers of Disposition Category Code DS materiel, or Disposition Category Code SL materiel with subcategory CV or SR, see C16.7.8.5. For relocation/redistribution ofDisposition Category Code DS materiel to another DLA Disposition Services Field Office, (see C16.7.5).

C16.7.8.3. **Validation/Change of Initial Disposition Category Code.** There are multiple situations when DLA Disposition Services and the DLA Disposition Services Field Office validate or change the disposition category code assigned to a DTID number or DTID number and suffix in the initial DLMS 527R Receipt transaction. The DLMS 846C Disposition Category Update transaction (Report Type Code PC–Update),
will be used by DLA Disposition Services for these communications. For instances where a response is warranted, the DLMS 846C, Disposition Category Update Response transaction (Report Type Code 09–Response), will be used by DLA Disposition Services Field Offices. A summary of when the DLMS 846C is used to validate/change initially assigned disposition category codes is as follows:

C16.7.8.3.1. Using 846C Disposition Category Update Transaction. Upon receiving the Receipt transaction from the field office, DLA Disposition Services will validate the disposition category code of the received DTID number or DTID number and suffix. If Disposition Category Code DS is assigned, and DLA Disposition Services agrees, a DLMS 846C Disposition Category Update transaction will be generated to the field office citing Disposition Category Code DS. This transaction will notify the field office that the item will be sent to ultimate disposal and will contain data required by the DLA Disposition Field Office to construct internal MROs or RDOs as required to issue the property. Upon receipt of the DLMS 846C Disposition Category Update transaction indicating ultimate disposal, the field office will generate a DLMS 846C Disposition Category Update Response to DLA Disposition Services confirming, changing, or denying the assigned DS Category Code. If confirmed, the field office will subsequently generate the DLMS 867I Issue transaction to DLA Disposition Services if the property is issued to another DLA Disposition Services Field Office (DEMIL or Controlled Property Center) (see C16.7.5.3.2.) or the DLMS 511R (post-post Directed MRO (DIC C0_)) if the property is issued to a disposal customer (see C16.7.8.5.).

C16.7.8.3.2. Update/Changes to a Controlled Property Rule. If DLA Disposition Services updates/changes a controlled property rule, the Disposition Category Code of the DTID numbers, or DTID numbers and suffixes affected by this change may be updated. This can occur prior to or during the RTD screening cycle. DLA disposition category codes can be changed among DS (Disposal), RU (Reutilization) or SL (Sales). If the property goes through the complete RTD cycle and is not requisitioned, it will be assigned Disposal Category Code DS or Disposition Category Code SL–Sales via generation of the DLMS 846C update transaction by DLA Disposition Services. This transaction will contain data required by the DLA Disposition Field Office to construct internal MROs. Items assigned a disposal category are processed as described above. Some DTID number or DTID number and suffix property assigned Disposition Category Code SL–Sales are further identified by a disposition sub-category code in the DLMS 846C as being eligible for CV contracts and are processed as described below.

C16.7.8.3.2.1. Sales Category Sub-Category Commercial Venture. DLA Disposition Services has a partnership with a commercial venture firm to sell DoD surplus property following the RTD screening cycle. DLA Disposition Services will identify property categorized for CV and send the DLMS 846C Disposition Category Update transaction to the field office to initiate processing. Upon receipt of the DLMS 846C indicating CV, the field office will generate the DLMS 846C Disposition Category Update Response transaction to DLA Disposition Services confirming or changing the assigned disposition category codes.
C16.7.8.3.2.1.1. Change of CV Code Due to Ineligibility. 
When the Controlled Property Verification Officer at the field office determines materiel is not CV eligible, the Disposition Category Update Response transaction will contain disposition category code DS instead of SL, as well as a disposition category change reject reason code, as published in DLA Disposition Services -I 4160.14, reflecting the data characteristic or reason the item will not be released to the CV contract. DLA Disposition Services will in turn send the update DLMS 846C to the field office. The reject reason code will cause the field office to remove the property from the CV holding area at the warehouse and allow the item to be processed through ultimate disposal.

C16.7.8.3.2.1.2. Use of DLMS 511R for Eligible CV Materiel. 
When the field office determines the materiel is CV eligible, the field office will send the DLMS 511R (post-post directed MRO) transaction to DLA Disposition Services for inventory issued to the CV customer (see C16.7.8.5.).

C16.7.8.3.2.1.3. Use of DLMS 945A Materiel Release Denial for Unauthorized CV Materiel. In limited situations, where a CV delivery order is released to the DLA Disposition Services Field Office listing DTIDs to issue/ship to a CV firm, and a subsequent mission essential RTD order is received for DTID(s) on that delivery order prior to shipment to the CV firm, a DLMS 945A Materiel Release Denial (MILSTRIP legacy DIC A6A/A6B/A61/A62) citing Denial Management Code W needs to be sent to DLA Disposition Services to remove the item from the delivery order and generate a systemic credit for that delivery order. Sales personnel at the DLA Disposition Services Field Offices will then have the ability to properly close-out a pick requirement for property that appears on the CV delivery order that does not qualify for issuing to CV and expedite the denial with a systematic credit to the CV firm.

C16.7.8.3.2.2. RESERVED

C16.7.8.4. Directed Release of Disposal and Sales DTID Number, or DTID Number and suffix, Property (Post-Post Action). DLA Disposition Services Field Offices will send the DLMS 511R, DLA-Directed MRO (DIC C0_) Type Transaction Code A0/Action Code J, to DLA Disposition Services after property has been issued. Upon receipt, DLA Disposition Services will drop its inventory balance. In this instance, no MRO is sent to the field office, as this 511R is for inventory reduction vice shipping (the materiel has already been delivered or picked up).

C16.7.8.4.1. Use of Internal DLMS 940R MRO. For these issues, the field office will create an internal DLMS 940R MRO using a unique document number constructed by using the field office DoDAAC and current ordinal date, followed by a unique 4-digit serial number, (e.g., SY205411390001, SY205411390002, etc). The field office will then decrement the owner balance, create and exit the DLMS 511R directed MRO, position the MRO for release, and once released, generate the DLMS 945A materiel release confirmation to the owner and DLMS 856S Shipment Status to the customer. Materiel release confirmations for both scrap and commercial venture property will use the transportation mode code for "Bearer, Walk-Thru (Customer Pickup of Materiel)" to indicate no physical shipment is involved.
C16.7.8.4.2. DIC for Internal MRO. The DIC cited in the internal DLMS 940R will be A5_, MRO since the property is being shipped or picked up by a customer.

C16.7.8.4.3. Updating DAAS on Internal MROs. Since these transactions are internal to the field office, a copy will be passed to Transaction Services to be posted in the DAAS so that the complete issue, confirmation, and status history are maintained.

C16.7.8.5. Post-post Requisitions. Post-post requisitions from the DLA Disposition Services Field Office will be identified by disposition category code and disposition sub-category code. A Disposition Category Code DS indicates the materiel has already been issued. As discussed above, Disposition Category Code SL (Sales) with the Disposition Sub-Category Code CV (Commercial Venture) indicates the property was issued to the commercial venture customer. Use of Disposition Category Code SL with Disposition Sub-Category Code SR indicates the property was issued to a scrap sales customer.

C16.7.8.6. Routing Identifier Code-To S9W or S9D on DLA Disposition Services Directed Materiel Release Orders. DLA Disposition Services specific DLMS 511R DLA-Directed MRO transactions will always display a RIC-To S9W or S9D. RIC-To S9W will be used to indicate property issued from a RCP; RIC-To S9D will be used to indicate property issued from a DLA Distribution Services Field Office.

C16.7.8.7. Disposition Category Code DS/Disposition Sub-Category Code. Upon receipt of these types of DLMS 511R transactions, DLA Disposition Services will determine the type of post-post order that should be generated based upon the disposition category code/disposition sub-category code. Disposition Category Code DS will indicate a DLA Disposition Services post-post disposal order.

C16.7.8.8. DLA Disposition Services Post-Post Scrap Sales Orders. The DLA Disposition Services Field Office will send DLMS 511R DLA Directed MRO (post-post requisitions) using Disposition Sub-Category Code SR to DLA Disposition Services each time scrap sales contractors remove property for a scrap UCN, DTID number or DTID number and suffix from a DLA Disposition Services Field Office. The DLMS 511R DLA Directed MRO will include the sales contract number and the quantity (by weight) of the scrap material removed. The addition of the sales contract number and weight allows DLA Disposition Services to identify the contract associated with the sale and support back-end billing. DLA Disposition Services will create a post-post sales order for each DLMS 511R DLA-Directed MRO transaction received from the Field Office. DLA Disposition Services will assign DTID number or DTID number and suffix, associated with the materiel on the post-post order based on First In-First Out (FIFO) order, limiting selection to DTID numbers with an available quantity on the DTID Table. DLA Disposition Services will first add a new record to the Sales Order DTID Table and include: DTID number or DTID number and suffix, post-post order number, quantity, date, and order type; and then update the inventory record by decreasing the available quantity for the DTID.
C16.7.8.9. DLA Disposition Services Post-Post CV Orders. The DLA Disposition Services Field Office will send DLMS 511R post-post requisitions using Disposition Sub-Category Code CV to DLA Disposition Services each time CV customers remove property for a commercial venture DTID number or DTID number and suffix, from a DLA Disposition Services Field Office. DLA Disposition Services will create a post-post order for each 511R DLA-Directed MRO transaction received from the field office and add a record to the Sales Order DTID Table to include: DTID number or DTID number and suffix, post-post order number, quantity, date, and order type; and then update the inventory record by decreasing the available quantity for the DTID.

C16.7.8.10. Billing for Materiel. The DLMS 511R transactions for scrap sales and commercial venture will indicate non-Interfund billing to the contractor (Fund Code XP) and the customer will be billed prior to removal of the materiel. The DoDAAC of the commercial or scrap venture firm will be identified as both the ordered-by and ship-to activity. For DLMS 511R transactions, the Signal Code M indicates there will be no billing. In addition, the DoDAAC of the disposal customer will be identified as both the ordered-by and ship-to activity. When a unit of use LSN is being issued, the DLMS 511R will carry both the unit of use LSN and the cross-reference NSN. The unit of use Indicator defines the quantity and unit of measure applicable to the Unit of Use.

C16.7.8.11. Disposal of SA/LW. For DLMS 511R directed MROs with Disposition Category Code DS involving the disposal of SA/LW, the serial number/unique item identifier (UII) will not be populated on the transaction. The serial number/UII will only be present on the 945A confirmation.

C16.7.9. Local Stock Numbers (LSN) and Unit of Use.

C16.7.9.1. Local Stock Numbers (LSN) and Unit of Use. There are several instances that an LSN will be used by the DLA Disposition Services Field Office and supported activities:

C16.7.9.1.1. Useable Local Stock Numbers (LSN). When materiel is turned in to the Disposition Services Field Office identified by an LSN assigned by the generator, and it cannot be further identified to an NSN, and is determined to be useable, a Disposition Services LSN will be assigned (if one does not already exist) and will be used as identification of the property throughout the disposition services process. Useable LSNs will be identified by valid FSC as part of the numbering convention, (e.g., 1035-DS-GUN-GT3M). The original LSN used by a generator to turn in materiel, will be included as a reference on the receipt and will serve as reference information for the item when it is marketed on the RTD website.

C16.7.9.1.2. Scrap LSN. Materiel downgraded to scrap during or subsequent to receipt will be assigned a Scrap LSN. Scrap LSNs will be identified by using a materiel group of SCR. All scrap LSNs will use this materiel group identification as well as containing a Scrap Classification Code (SCL). The SCL is a
three-character DLA Disposition Services code to identify different types of scrap and appears in positions 11-13 of the Scrap LSN, (e.g., SCRP-DS-000-A01A).

C16.7.9.1.3. Unit of Use. When the materiel turned in to the Disposition Services Field Office can be identified to a NSN but the quantity is less than the FLIS unit of use, the DLA Disposition Services Field Office will create a new LSN by replacing the first character of the NIIN, (e.g., 5965-R1-123-4567, with an "R"). DLA Disposition Services and field offices use of DLMS transactions, including the DLMS 945A Release Confirmation, will carry the unit of use LSN, the cross-reference NSN, and the unit of use indicator. When the unit of use Indicator is present in the transaction, the quantity and unit of measure values associated with this transaction are applicable to the unit of use. However, the property will be identified to its NSN for RTD. This form of LSN for unit of use will not be visible to the customer as its use will only be between DLA Disposition Services and their field offices.

C16.7.9.2. Catalog Data Support Transaction (DLMS 832N). DLA Disposition Services will be the source for all Disposition Services LSNs (useable and scrap LSNs) and will notify DLA Disposition Services Field Offices via a DLMS 832N, Catalog Data Support transaction when it creates, changes or deletes an LSN. The DLA Disposition Services will use the DLMS 832N to create or update their LSN records.

C16.7.9.3. Creation/Update of Unit of Use LSNs. The DLMS 832N will not be used between DLA Disposition Services and their field offices for creation or update of unit of use LSNs, rather both will maintain tables which contain agreed upon conversion factors for what will be the lowest possible assigned unit of measure for each valid Federal Logistics Information System (FLIS) unit of use. When receipts for Unit of Use LSN materiel are processed by DLA Disposition Services, internal logic will link the materiel back to the NSN.

C16.8. SUPPLY DISCREPANCY REPORTING. Supply discrepancy reports (SDRs) and associated responses will be reported via the Disposition Services Field Office system or DoD WebSDR, using the DLMS 842A/W, Standard Supply Discrepancy Report (SDR), Follow-up, Correction, Cancellation, & Reconsideration Request, for the initial SDR and the 842A/R, Standard Supply Discrepancy Report (SDR) Reply, for the reply. Discrepancies may be identified in shipments between the DLA Distribution Center and the DLA Disposition Services field office, between two DLA Disposition Services Field Offices, and between the field office and the generating customer, as well as between DLA Distribution Centers and customers for RCP directed shipments. The SDR may be reported by the receiving field office or by the receiving customer.

C16.8.1. Outgoing SDR. During the receiving process, if the DLA Disposition Services Field Office identifies a supply discrepancy, an SDR will be generated via the field office system using **using DLMS 842A/W transaction to the generating customer using Discrepancy Report Document Type Code D** in conjunction with the appropriate SDR Disposition Services **sub** type code to distinguish the source of discrepant shipment (generating activity turn-In = T, DLA Distribution Center = B, and
Redistribution between field offices = E, SDR Requested Action Type 3C.

Once the originating generator picks the non-accepted property, DLA Disposition Services will update the original SDR (Disposition Services SDR Sub Type Code T) with SDR Requested Action Code 3B. DLA Disposition Services Field Site will also annotate in the remarks section of the SDR the date the materiel was picked up by the generator. Using the SDR Requested Action Code 3B will close out the original SDR created with SDR Requested Action Code 3C. Failure of DLA Disposition Services to send the SDR Action Codes in this order will result in SDRs that remain open, adversely impacting metrics and possibly resulting in an audit.

C16.8.1.1. Discrepancy Codes. The Disposition Services Field Office will describe the type of discrepant condition, in most instances using unique discrepancy codes within their internal system. For external DoD processing, these unique codes trigger specific remarks for the outgoing SDR, but the code itself will not be perpetuated. Instead, the associated standard DoD discrepancy code value will be used for distribution of the SDR thus allowing the internal codes to remain available in the field office system for metrics and managements reports. Unique DLA Disposition Services discrepant conditions-, such as the turn-in of unauthorized property-or lack of specific documentation for hazardous material/hazardous waste may be identified by the applicable shipping, packaging, and storage discrepancy code.

C16.8.1.2. Action Codes. The DLA Disposition Services Field Office will indicate the applicable action taken or requested on the SDR. When the generator turns in property that cannot be accepted by the field office, the field office will prepare an SDR using SDR Requested Action Code 3C, indicating receiving activity not authorized to accept property (pick-up by original owner required) (Disposition Services use only). Once the originator picks the non-accepted property, DLA Disposition Services will update the original (Disposition Services SDR Sub Type Code T) (DLA Disposition Services receipts from generating turn–in), with SDR Requested Action Code 3B (Discrepancy reported for corrective action and trend analysis. No reply required). DLA Disposition Services Field Office will also annotate in the remarks section of the SDR the date the materiel was picked up by the originator. Using the SDR Requested Action Code of 3B will close out the original SDR created with Action Code 3C.

C16.8.1.3. Primary/Secondary Document Numbers. The outgoing SDR may require communication of two document numbers. The following rules apply:

C16.8.1.3.1. Property Turned in by Generating Activity. The value used for the DTID/Suffix by the customer will be the primary document number identified in the SDR. If a UCN was established by the field office upon receipt, it will not be perpetuated on the SDR.

C16.8.1.3.2. Property Shipped by the DLA Distribution Center to the DLA Disposition Services Field Office. The document number used to ship the property
will be the primary document number identified in the SDR. No secondary document number is applicable.

C16.8.1.3.3. Redistribution of Property Between Disposition Services Field Offices. The redistribution document number will be the primary document number identified in the SDR. The DTID used by DLA Disposition Services to track materiel will be perpetuated in the SDR and will be available to the receiving field office in both the DLMS 856S, Shipment Status and the DLMS 527D, PMR.

C16.8.2. RCP SDRs Prepared via DoD Web SDR. DLA Disposition Services RCP personnel will receive and process discrepancies for property shipped by the DLA Distribution Centers to various customers. RCP personnel will log in to WebSDR to create and submit SDRs on behalf of the customer using Document Type Code 7 and the related DLA Disposition Services SDR type code to distinguish customer type, as follows:

C16.8.2.1. D = DLA Disposition Services Donated Materiel. D Identifies discrepant property staged at the depot and released to a state agency customer.

C16.8.2.2. F = DLA Disposition Services Transferred Materiel. F Identifies discrepant property shipped to a non-DoD federal agency customer by a distribution center.

C16.8.2.3. O = Other DLA Disposition Services Shipment. O Identifies any other discrepant DLA Disposition Services Field Office property shipment not applicable for identification by any other designated Disposition Services Type Code.

C16.8.2.4. R = DLA Disposition Services Reutilization. R Identifies discrepant property shipped to a DoD customer by a distribution center (applicable to RCP receipt).

C16.8.2.5. S = DLA Disposition Services Sale. S Identifies discrepant property sold to a DLA Disposition Services sales contractor and shipped by a distribution center.

C16.8.3. Incoming Customer SDRs. SDRs addressed to DLA Disposition Services (RIC S9D) or RCP (RIC S9W) will be supported by conversion to email via DoD WebSDR. RCP SDRs will be processed in accordance with paragraph C16.8.2. The generic email address for S9D will be associated with all the DLA Disposition Services Field Offices for Document Type 7 SDR only, allowing customer generated SDRs to be forwarded to DLA Disposition Services. Replies will be created in DoD WebSDR. Incoming Customer SDRs will not be sent to the DLA Disposition Services ICP system.
C16.8.4. Distribution of Document Type Code D SDRs Generated During the Receiving Process at the DLA Disposition Services Field Office.

C16.8.4.1. Discrepant Turn-ins. SDRs resulting from discrepant turn-ins will be directed to the shipping activity DoDAAC (also known as the generator) identified on the turn-in document (DD 1348-1A, Block 2).

C16.8.4.2. SDRs with Type Code T. SDRs citing DLA Disposition Services SDR Type Code T will be sent directly to the activity responsible for the turn-in of property whenever possible. In order to ensure electronic notification to the generating activity, DLA Disposition Services will provide the generator’s email address to DoD WebSDR. This email address will be used by WebSDR for dissemination of the SDR.

C16.8.4.2.1. Generator Email Address. The Disposition Services Field Office system will establish a global table to store generator email addresses. The generator’s email address will be captured from automated turn-in web-based tools maintained by DLA Disposition Services. The field office system will map the generator email address as indicated by the DLMS 842A/W. DoD WebSDR will use this email address for distribution to the identified address in addition to any other applicable distribution business rules.

C16.8.4.2.2. DoD Component Distribution. The SDR will automatically be sent to SDR applications based upon the existing DoD WebSDR or the Military Service of the customer either by transaction or via the email address associated with the DoDAAC in WebSDR. DLA Disposition Services will monitor for SDRs that never reached the intended recipient when so notified by rejected SDR or failed SDR transmission and pursue manual off-line follow-up if needed.

C16.8.4.3. SDRs Citing the DLA Disposition Services SDR Type Code B or E. SDRs with Type Code = B or E will be directed to the shipping activity and no information copies required.

C16.8.5. Property Requiring Customer Pick-Up. When unauthorized or unacceptable property is turned in to the field office, property will be placed in a frustrated property research area and an SDR prepared with the Discrepancy Code Z7 and Action Code 3C to notify the generator to pick-up the property. If the field office received property where the owner is not known or if the generator fails to respond to the SDR within 55 days or fails to pick up the property, the property may be mutilated and/or destroyed, consistent with Demilitarization Code requirements, local policies, laws, and regulations. As appropriate based upon the security and classification requirements of specific property, DLA Disposition Services may contact the generator in advance of the 55 day SDR time standard (which is consistent with all host nation, Federal, State, and local laws and regulations including DoD disposal policies).
C17. CHAPTER 17

SUPPLY DISCREPANCY REPORTING

C17.1 GENERAL

C17.1.1 Purpose.

C17.1.1.1. This chapter establishes information requirements for reporting and processing of discrepancy reports under the supply discrepancy reporting (SDR) Program. The SDR is a tool used to report shipping or packaging discrepancies attributable to the responsibility of the shipper, (including U.S. Government sources and contractors/manufacturers/vendors) and to provide appropriate responses and resolution, including financial action when appropriate. The purpose of the SDR exchange is to determine the cause of such discrepancies, effect corrective action, and prevent recurrence.

C17.1.1.2. There are additional processing procedures that must be applied for items identified as serially managed materiel requiring owner visibility at DLA Distribution Centers. Refer to Chapter 30 for overview. See paragraph C17.3.8. for detailed SDR procedures.

C17.1.2. Component SDR Systems. The intent of the SDR program is to support reporting of discrepancies identified during receipt processing without requiring separate action by receiving or support personnel to manually re-enter receipt information for the creation of the SDR in a separate, stand-alone SDR system. To facilitate the preparation of complete and accurate SDRs, Components must design supply systems to report supply discrepancies as an integral and seamless part of the receiving process.

C17.1.3. Standard SDR Transactions. Under DLMS, the SDR will be considered a common logistics information exchange to be integrated with transaction processing through DAAS. The DoD approved standard for electronic transmission of SDR transactions is prescribed by the DLMS Implementation Convention (IC) using an ASC X12-compliant variable-length transaction format. Multiple DLMS ICs are provided to support different SDR related functions. The DLMS 842A/W, Standard SDR, will be employed for transactional exchange of initial reports and associated follow-on actions. The DLMS 842A/R, DoD SDR Reply, will be employed for transactional exchange of the SDR reply by the action point. The DLMS ICs for SDRs are available via the Implementation Convention/DLMS IC page of the Defense Logistics Management Standards Website.

C17.1.4. **DoD WebSDR.** The DoD WebSDR supports DLMS implementation via a DAAS-maintained application, that enables SDR transaction exchange; provides a web-based entry method to assist users who are not supported by a Component DLMS-compliant SDR application; and provides visibility of SDRs for research and trend analysis via management report/query capability. The term "DoD WebSDR" (or "WebSDR") refers to both the overall business process and supporting automation, including both direct web input and transaction exchange.

C17.1.4.1. The DoD WebSDR application automates the Standard Form (SF) 364 SDR paper form facilitating the DoD standard transactional exchange described above. It brings the SDR into an integrated transactional environment, supporting both direct input (under Component business rules) and transaction exchange originating within Component applications. The WebSDR system facilitates communication and interoperability between U.S. Military and Federal Agencies and the International Logistics Control Office (ILCO) on behalf of the Security Assistance customer. It controls routing of web submissions and logistics transactions according to business rules. It supports information exchange between the customer, the Inventory Control Point (ICP)/Integrated Material Manager (IMM), the shipper, and other interested parties. It encompasses new report submission, correction/modification, cancellation, follow-up, requests for reconsideration, and SDR replies (including interim responses, additional information requests, and resolution responses), in addition to the capture of report and response management statistics.

C17.1.4.2. DoD WebSDR will provide an automated process for tracking SDR response information. Data collected will enable the Department of Defense to identify trends, establish volume and dollar values of SDRs, bring management attention to problems with shipping activities as necessary, and improve the requisitioning and distribution process within logistics operations. This provides an effective means to report, resolve, and measure discrepancies related to pipeline performance. Ultimately, the goal is to incorporate SDR metrics into other logistics response measurements in support of perfect order fulfillment.

C17.1.4.3. The DoD WebSDR process reduces manual SDR form creation and eliminates dual entry where multiple Component systems are used. The DoD requirement is that paper submission of SDRs and non-DLMS compliant SDR applications will be phased out with migration to DLMS. By exception, until electronic reporting under DLMS is universally available, SDRs and associated responses may be reported via hard-copy SF 364, e-mail, through customer service help lines (e.g. the DLA Customer Interaction Center, dlacontactcenter@dla.mil 1-877-352-2255 (1-877-DLA-CALL)), or any other manner acceptable to the submitter and recipient. All manner of reporting must meet the criteria described in this publication.

C17.1.4.4. Access for DoD WebSDR input and management reports requires submission of a System Access Request (SAR) available from the DAAS home page. DoD WebSDR training is available on the Defense Logistics Management Standards Website.
C17.1.4.5. DoD Components with an established interface with DoD WebSDR will designate primary and alternate representatives for the Component SDR application to DAAS. These representatives will be notified via e-mail when transactions fail during WebSDR processing due to failure to meet minimum format/content requirements for processing. Components will provide name, telephone, and e-mail address to the DoD SDR System Administrator and DAAS WebSDR Program Manager.

C17.1.5. DLMS Process Review Committee (PRC). The DoD Component members of the SDR PRC (U.S. and Security Assistance) are identified on the SDR PRC webpage of the Defense Logistics Management Standards Website. The SDR PRC is responsible for the development, expansion, improvement, maintenance, and administration of supply discrepancy related procedures and SDR transaction processing under the DLMS.

C17.1.6. Applicability. These SDR procedures are applicable to the DoD Components, participating Federal Agencies, and other external organization elements as defined in Volume 1, Chapter 1. This includes shipments made from working capital funds (WCF) and non-WCF funded activities, Security Assistance shipments made under the International Logistics Program, and shipments received from commercial sources. By agreement, contractors receiving U.S. Government furnished property (GFP) under MILSTRIP procedures will comply with U.S. Government SDR procedures provided herein. Discrepancies related to GFP that do not meet minimum dollar value criteria in paragraph C17.3.2., may be reported for information only, as a means of notifying the shipper or ICP/IMM of the discrepant condition.

C17.1.7. Exclusions. The following types of discrepancies are excluded from the provisions of this publication:

C17.1.7.1. Discrepancies found while materiel is in storage. Two exceptions to this exclusion are: 1) short shipment and wrong item discrepancies discovered upon opening a sealed vendor pack may be reported by U.S. Government customers only, and 2) materiel in storage in a sealed vendor's pack that is later discovered to have been shipped with discrepancies relating to item unique identification (IUID) (serial number or unique item identification (UII)). These may be reported as SDRs and are not subject to submission timeframes. Refer to IUID discrepancies below.

C17.1.7.2. Discrepancies involving local deliveries to, or returns from, internal or satellite activities. This exclusion is not applicable to on-site DLA Distribution Center shipments.

C17.1.7.3. Discrepancies involving shipments of privately-owned vehicles.

C17.1.7.4. Transportation discrepancies covered by DTR 4500.9-R, Defense Transportation Regulation, Part II, Cargo Movement, Chapter 210, Transportation Discrepancy Report (TDR), except as specifically permitted under Security Assistance procedures in this chapter.
C17.1.7.5. Product quality deficiencies to the extent covered by Joint DLAR
4155.24/AR 702-7/SECNAVINST 4855.5B/AFR 74-6l, except as specifically permitted
under Security Assistance procedures in this chapter.

C17.1.7.6. Discrepancies involving personal property shipments.

C17.1.7.7. Billing discrepancies, except as specifically permitted under
Security Assistance procedures in this chapter. Price verifications and/or challenges
are not reportable on an SDR.

C17.1.8. Types of Discrepancies

C17.1.8.1. Supply Discrepancy. Supply discrepancy is a general term used
to describe any variation in goods received from data shown on any authorized shipping
document that is not the result of a transportation discrepancy or product quality
deficiency. Supply discrepancies include both shipping and packaging discrepancies.

C17.1.8.1.1. Shipping (Item) Discrepancy. A shipping discrepancy is
any variation in quantity or condition of goods received from what is shown on the
authorized shipping documents, to include incorrect or misdirected materiel, receipts of
cancelled requirements, and/or improper or inadequate technical or supply/shipping
documentation, that is not the result of a transportation error or product quality
deficiency. Discrepancies involving IUID are reportable under shipping discrepancy
criteria.

C17.1.8.1.2. Packaging Discrepancy. A packaging discrepancy is any
unsatisfactory condition due to improper or inadequate packaging (including
preservation, packing, marking, or utilization) that causes the item, shipment, or
package to become vulnerable to loss, delay, damage, or unnecessary expense to the
U. S. Government, such as excessive packing. Discrepancies involving passive radio
frequency identification (pRFID) are reportable under packaging discrepancy criteria. If
packaging discrepancies are applicable to hazardous materiel, a hazardous materiel
discrepancy code must be used; this code may be used in conjunction with other
packaging discrepancy codes to better identify the nature of the discrepancy.

C17.1.8.2. Transportation Discrepancy. A transportation discrepancy is any
variation in quantity or condition of materiel received from that shown in the piece count
by type of pack on the bill of lading or governing transportation document and other
deficiencies in transportation when discrepant materiel is not involved. These
discrepancies involve motor, air, water, rail, and small package commercial carriers
(excludes USPS shipments that are lost or damaged). Follow TDR policy found in the
Defense Transportation Regulation, Part II, Cargo Movement (DTR 4500.9-R). TDRs
are entered and distributed under the Electronic Transportation Acquisition (ETA)
system at https://eta.sddc.army.mil/.

C17.1.8.3. Product Quality Deficiency. A product quality deficiency is a
defective or non-conforming condition that limits or prohibits the item from fulfilling its
intended purpose. These include deficiencies in design, specification, materiel,
manufacturing, and workmanship. These are reportable on an SDR only by a Security Assistance customer. All others follow PQDR policy found in DLAR 4155.24/AR 702-7/SECNAVINST 4855.5B, AFR 74-6 Product Quality Deficiency Report Program. Quality deficiencies reported via SDR will be investigated within the ICP/IMM under procedures associated with Product Quality Deficiency Reports. PQDR resolution provided via SDR reply to the submitting ILCO will identify the associated PQDR record control number (RCN) as a cross-reference to the PQDR identification used by the ICP/IMM.

C17.1.8.4. **Billing Discrepancy.** Billing discrepancies are those discrepancies related to duplicate or multiple billing per individual shipment, or a single billing with no ship line, which are reportable to the ILCO on an SDR by Security Assistance customers only. Within U.S. Government channels, the billing discrepancy will be processed in accordance with MILSBILLS procedures in DLM 4000.25, Volume 4, Finance, Chapter 4. This means the ILCO will convert the discrepancy to the appropriate DLMS 812R, Request for Adjustment of Non-Fuel Billing, MILSBILLS DIC FAE with appropriate Billing Advice Code, accessible from the DLMS Website.

C17.1.8.5. **Financial Discrepancies.** Financial discrepancies are those discrepancies related to administrative and accessorial charges. The ILCO, ICP/IMM, or GSA will forward to Defense Finance & Accounting Service Indianapolis (DFAS-IN), Security Assistance Accounting Customer Accounting Branch for processing all financial discrepancies received directly from a Security Assistance purchaser. Responses to these will be returned to the ILCO. Only financial discrepancies related to Security Assistance purchases are reportable on an SDR.

C17.1.8.6. **Military Personal Property Shipments.** This category includes both shipping and packaging discrepancies associated with the movement/storage of household goods under the DoD Personal Property Shipment and Storage Program. Any discrepancies related to personal property shipment will be referred to Military Surface Deployment and Distribution Command (SDDC) Personal Property at: USARMY.Scott.SDDC.mbx.omb-for-pp-ops@mail.mil or USARMY.Scott.SDDC.mbx-omb-for-pp-quality@mail.mil.

C17.2. **POLICY**

C17.2.1. **Use of SDR.** The DoD Components will use the SDR to report shipping or packaging discrepancies attributable to the responsibility of the shipper (including contractors/manufacturers or vendors) and to provide appropriate responses. The purposes of this exchange are to determine the cause of such discrepancies, effect corrective action, and prevent recurrence.

C17.2.2. **Operations Security (OPSEC) Applicability.** Due to an identified OPSEC requirement, SDRs have been designated as controlled unclassified information (CUI) by the DLA Headquarters, and must be identified as “For Official Use Only (FOUO).” Handling and electronic transmission of SDRs must comply with DoD rules for this level of sensitive unclassified information, to include proper labeling and protection. DLA has
further directed encryption of all SDR e-mail transmissions. This requirement has been levied on the DoD WebSDR and impacts all participating DoD Components.

C17.2.2.1. In order to receive encrypted e-mail, individual and group e-mail accounts must have their associated e-mail certificate registered at DAAS. SDRs directed to e-mail accounts that do not have a registered certificate will be significantly abridged to display minimal information, thereby allowing the SDR to be transmitted in an unprotected environment.

C17.2.2.2. All action activities using e-mail SDRs must register their certificate, so that all information is available for SDR resolution. For low volume customers relying on e-mail SDRs, especially those supported by third party direct WebSDR input, registration is encouraged, but not required. These users will receive an abridged SDR reply that will provide disposition instructions and financial action, without the accompanying shipment detail.

C17.2.2.3. Unencrypted e-mails with minimal shipment information will include instructions for certificate registration and access to DoD WebSDR. Full WebSDR data content will be available to authorized users of DoD WebSDR. Refer to DAAS SDR processing for further details in the abridged SDR procedures and content.

C17.2.2.4. SDR management reports will be distributed only via e-mail if the corresponding certificate has been signed.

C17.2.3. Documentation Maintenance. The SF364 (or the electronic version DLMS 842A/W) and the action activity’s response (or electronic DLMS 842A/R) will be used to support adjustments to inventory and financial accounting records and will be maintained as required.

C17.2.4. Receivers of discrepant materiel will use the SDR to:

C17.2.4.1. Report shipping discrepancies, packaging discrepancies, and discrepancies or non-receipt of United States Postal Service (USPS) shipments.

C17.2.4.2. Modify, cancel, or follow-up on a previously submitted report.

C17.2.4.3. Request reconsideration of a response.

C17.2.4.4. Security Assistance submitters may use SDRs to contest the decision stated in a reconsideration response.

C17.2.4.5. Provide information copies of the report to interested parties.

C17.2.5. Responsible action activities as identified in this chapter will use SDRs to:

C17.2.5.1. Notify the report initiator of interim status or resolution of the SDR.
C17.2.5.2. Request additional information on incomplete submissions.

C17.2.5.3. Reroute/forward the SDR to the appropriate party.

C17.2.5.4. Forward recommendations to the source of supply or other designated activity for determination of financial resolution or materiel disposition.

C17.2.5.5. Provide information copies of the response to interested parties.

C17.2.6. Non-Receipt of Shipments. Non-receipts, shipped by traceable means such as Government or Commercial Bill of Lading, will not be reported using the SDR, unless the non-receipt is for other than a transportation discrepancy, or for damaged items shipped via modes other than USPS. SDRs will not be submitted for non-receipt of shipments made by traceable USPS registered, insured, or certified mail until appropriate tracer action has been completed. If tracer action results confirm non-receipt, then submit an SDR and include results of the tracer action. Customers without automated access to in transit visibility information should contact the ICP/storage activity to determine which shipments are traceable. (Not applicable to Security Assistance customers.)

C17.2.7. Interface with Other Materiel Management Functions. Under DLMS, discrepancy processing may be used to trigger other standard materiel management functions.

C17.2.7.1. IMMs will use the SDR response to establish a due-in record for return of discrepant materiel under Chapter 12 of this volume. ICPs/IMMs will use the prepositioned materiel receipt (PMR) to advise storage activities to which a return is directed using MILSTRAP procedures for the DLMS 527D, Due-In/Advance Receipt/Due Verification. Refer to paragraph C11.19. of this volume, for additional guidance.

C17.2.7.2. DLMS capable activities returning discrepant materiel will prepare shipment status for materiel returns using the DLMS 856R, Shipment Status Materiel Returns, under paragraph C11.19.

C17.2.8. Discrepancy Reports Relating to Interchangeability/Substitutability (I&S) or Quantity Unit Pack (QUP) Issues. Incorrect item SDRs will not be submitted for authorized substitution. The DoD Components and participating Agencies (e.g., GSA), will follow the policy of automatic shipment of an item, unless the requisition contains an appropriate requisition advice code in accordance with Chapter 4, limiting the request to a specific item. Therefore, incorrect item SDRs will not be submitted for authorized substitutions. Similarly, quantities may be adjusted to the quantity unit pack, unless restricted by the appropriate advice code in the customer requisition. Such adjustments resulting in quantity variance are not reportable as discrepant.

C17.2.9. Responsibility for Costs Incurred Due to Discrepancies in Returned Materiel. U.S. Government activities returning materiel are cautioned that the returning activity may be held responsible for costs incurred by the receiving activity when
discrepancies are reported and validated in accordance with this publication. This includes returns made in violation of prescribed procedures, returns exhibiting packaging discrepancies, and returns of reparable items unaccompanied by required technical data. Recoupment action by the ICP against the initiator may include all cost reimbursable actions performed by the receiving activity such as repackaging, marking, and disposal.

C17.2.10. Multiple Requisitions. Multiple requisitions received under a consolidated shipment cannot be combined for discrepancy reporting purposes. Individual SDRs must be submitted for each discrepant requisition received in the shipment. An exception to this is authorized for consolidation and containerization points (CCP)/transshippers. Refer to guidance for CCP/transshipper-originated SDRs below. When both item discrepancies and packaging discrepancies are noted on the same shipment, both types of discrepancy will be included on the same report.

C17.3. PROCEDURES

C17.3.1. Original Submission of SDR

C17.3.1.1. Discrepancy Identification. The receiving activity, or transshipment activity noting packaging or documentation deficiencies on shipments in transit, will prepare an SDR when one or more of the conditions described under reporting criteria exist.

C17.3.1.1.1. Pending improved processing techniques, it is required that DLMS SDRs identify the type of SDR using the Discrepancy Report Document Type Code (Appendix 7.28). Within the context of SDR processing, this data element is known as the SDR Document Type Code. This is a one position code used to describe the type of discrepant report and the type of shipment involved, (e.g., depot shipment to the customer = Type 7; direct vendor shipment to the customer = Type 6).

C17.3.1.1.2. Identify the discrepancy using the Shipping, Packaging, and Storage Discrepancy Code (Appendix 7.28). Within the context of SDRs this data element is known as the SDR Discrepancy Code. Use up to three different codes to describe the discrepancy on SDRs. (Distribution Center-originated SDRs and their equivalents prepared via WebSDR may only use two discrepancy codes). Packaging discrepancies must be identified by four-character packaging discrepancy codes and applicable remarks.² If no code exists to adequately describe a shipping/item discrepancy, select Code Z1 and use a clear-text description. The goal of the initial SDR submission is to provide as much relevant information as possible to the action activity, including clarifying remarks to supplement discrepancy codes, so that they can take timely action to correct the problem and provide a timely response and disposition to the customer.

C17.3.1.2. Shipment Information. SDRs must contain a document number. Identify the original requisition document number when known; otherwise a constructed

---

² Applicable for new submissions after September 1, 2013. Refer to ADC 1059.
document number is required. DoD requisitioners reporting discrepant shipments may only use a constructed document number for selected discrepancies as discussed below. A constructed document number identifying the receiving distribution center is required for depot receipts reported electronically, including new procurement receipts. A constructed document number may also be prepared by a transshipper based upon the CCP or port DoDAAC. Additional information, such as transportation numbers (TCN, bill of lading number, etc.) may be provided in accordance with the DLMS IC. Procurement information must be provided for wholesale level procurement source receipt discrepancies (SDR Document Type 9 or P). Procurement information will include the procurement instrument identifier (PIID) (this term is inclusive of the PIID call/order), contract line item number (CLIN), and vendor shipment number.\(^3\) When a PIID call/order number (F or M in 9th position) is used, provide the value in the PIID field. When reporting new procurement receipts, the distribution center will cite a “pseudo shipment number,” equivalent to that cited on the receipt, when the actual vendor shipment number is not available from shipping documentation. The pseudo shipment number will be constructed to identify the receiving depot and a constant 01 (that is, the serial number will not be incremented; therefore, the pseudo shipment number will not be unique). In order to systematically identify pseudo shipment numbers the third position must be numeric (vendor assigned shipments use a three digit alpha prefix to identify the vendor). For example, pseudo shipment numbers prepared by Distribution Center San Joaquin, California (DDJC), will be reported as DD1JC01. Action activities must have the capability to update procurement information via the SDR reply when not populated by the submitter or EDA input on procurement source receipt discrepancies involving direct vendor/contractor delivery to the customer (SDR Document Type 6).

C17.3.1.3. Requested Action

C17.3.1.3.1. The SDR originator must indicate what action has been taken concerning the discrepant materiel and/or the desired response from the responsible action activity. Identify the action code using the SDR Requested Action Code (Appendix 7.28). Within the context of SDR processing, this data element is known as the Action Code. If no code exists to adequately describe the action taken or requested disposition, select Code 1Z and use a clear-text description.

C17.3.1.3.2. When an SDR is submitted using Action Code 1H, “No Action Required, Information Only,” the SDR must be processed to verify the discrepancy does not require further action. SDRs with Action Code 3B, “Discrepancy Reported for Corrective Action and Trend Analysis. No Reply Required.” must be reviewed to determine the appropriate corrective action to prevent recurrence. A reply transaction from the action activity is not required, for Action Codes 1H or 3B, but when provided, it will be accepted by the customer application. Systematically, this may be interpreted to mean that customer applications may auto-close these SDRs, but must allow them to re-open automatically to process a reply transaction if one is provided.

\(^3\) Use the legacy PIIN pending transition to the PIID. When using the PIIN, include the four-position call/order number. Refer to ADC 1161A.
non-significant reply (e.g. indicating acknowledgement of the SDR), may be dropped or posted, but will not require further attention.

C17.3.1.4. Shipping Documentation. Retain shipping and associated documentation in a readily accessible format to provide a copy if requested. Do not mail hard-copy documentation if data is otherwise accessible to the responsible action activity. Where relevant to the discrepancy, shipping documentation may be provided electronically as an SDR attachment. Shipping activities should retain documents and transaction history records in accordance with DoDI 5015.02, DoD Records Management Program.

C17.3.2. Reporting Criteria

C17.3.2.1. U.S. Forces and participating non-Security Assistance fall under the reporting criteria based upon dollar value and/or condition as follows:

C17.3.2.1.1. GSA and DLA Directed Shipments Dollar Value Criteria. Optionally, recipients of DLA and GSA directed shipments may submit an SDR for all types of shipments regardless of dollar value. Otherwise, report discrepant shipments when they meet the conditions and value criteria cited in the paragraphs below.

C17.3.2.1.2. Contractor/Manufacturer or Vendor Shipments. Report discrepant shipments from contractors/manufactures or vendors that meet conditions cited under reporting criteria regardless of dollar value. DLA Distribution Centers will perform kind, count, and condition (KCC) inspection during receipt to determine if any discrepancies exist in accordance with MILSTRAP (refer to C13.2.8.3. Processing Discrepant/Deficient Receipts).

C17.3.2.2. DoD action activities will recognize the ILCO's determination whether SDRs fall within submission time standards and dollar limitation contained in the United States of America Department of State Letter of Offer and Acceptance controlling the case, or any other sales agreement with a Security Assistance purchaser. Once accepted by the ILCO and forwarded to the responsible action activity, further evaluation for time standard and dollar criteria is not appropriate.

C17.3.2.3. Condition of Materiel

C17.3.2.3.1. Condition Misrepresented. Report when the condition of an item valued in excess of $100 per line-item is found to be other than shown on the shipping document, or, in the case of subsistence, on supporting inspection/test certificates or records. Use the hazardous materiel discrepancy code when applicable.

C17.3.2.3.1.1. For UIT program items, SDRs indicating a receipt in other than the original condition shipped will include UII and serial number (when available) for the discrepant quantity received. When all items are discrepant, no UII
and/or serial number is required for IUID materiel as this information is already known to the relevant parties.4

C17.3.2.3.1.2. For Capital equipment candidate items, SDRs indicating a receipt in other than the original condition shipped will include UII and serial number (when available) for the discrepant quantity received. When all items are discrepant, no UII and/or serial number is required for IUID materiel as this information is already known to the relevant parties.

C17.3.2.3.2. Hazardous Materiel. Report discrepant receipt of hazardous materiel under the appropriate H-series discrepancy code. Use in place of the C-series codes for condition/shelf-life discrepancies when a hazardous item is received in a condition other than shown on the supply document or on the supporting inspection/test certificate. Report receipt of hazardous item requiring repair and lack of a safety data sheet (SDS) in Hazardous Material Information Resource System (HMIRS). Also use to report receipt of a non-radioactive item classified as radioactive, or non-hazardous item classified as hazardous.

C17.3.2.3.3. Missing Part. Report materiel received for repair that has been cannibalized of nonexpendable parts or components (including cannibalization of nonexpendable basic issue item (BII) or nonexpendable supply system responsibility item (SSRI) without the authorization of the inventory manager when the total value of the missing item(s) is in excess of $100). Expendable BII and SSRI are not subject to these procedures.

C17.3.2.3.4. Expired Shelf Life. Report receipt of materiel for which the shelf life either has expired (Type I non-extendible item) or the inspect/test date has lapsed (Type II extendible item), regardless of dollar value. Use the hazardous materiel discrepancy code when applicable.

C17.3.2.3.4.1. For Type I DoD and GSA managed items: submit an SDR.

C17.3.2.3.4.2. For Type II DoD-managed items: prior to submitting an SDR, access the DoD Shelf-Life Extension System (SLES) through the DoD Shelf-Life Program Website or through the shelf life program secure site if you have a .mil address.

C17.3.2.3.4.2.1. Type II items requiring laboratory test: query the DoD Quality Status Listing (QSL) to determine if the specified Type II item is listed as having passed the required laboratory testing and has been extended. Items that are listed on the QSL as passed may be extended and remarked accordingly if the item has been stored in accordance with its storage standard. For items not on the QSL, prior to submitting an SDR, contact the DLA call center at 1-877-DLA-CALL if the shipment originated from a DLA storage activity.

---

4 Refer to ADC 1198.
C17.3.2.3.4.2.2. Type II items requiring visual inspection: query the Materiel Quality Control Storage Standards for the specified Type II item, perform visual inspection in accordance with the item's storage standard, and extend and remark if the item has been stored in accordance with its storage standard. If the item fails the visual inspection, dispose of as required by local procedures.

C17.3.2.3.4.3. For Type II GSA-managed shelf-life-items: prior to submitting an SDR, contact the GSA Shelf-Life Hotline at 1-209-547-8634 to determine if the inspect/test date has been extended.

C17.3.2.4. Canceled Requisitions. An SDR is required when materiel received is valued in excess of $100 per line-item for canceled requisitions. Confirmation of the cancellation must be on file. The submitter should request disposition instructions for unwanted materiel. Exception: an SDR must be submitted when controlled inventory items are received on previously canceled requisitions regardless of dollar value.

C17.3.2.5. Documentation. Report when documentation is missing, incomplete, or improperly prepared regardless of dollar value.

C17.3.2.5.1 Receiving activities must report documentation discrepancies that impact timely receipt processing. Typically, this includes missing, incomplete, or improperly prepared supply documents such as the Issue Release/Receipt Document (DD Form 1348-1A). For shipments from a procurement source, documentation discrepancies apply to the Receiving Report/Material Inspection and Receiving Report (MIRR) (DD 250 or equivalent). Shipments to DLA Disposition Services will be reported for a missing, incomplete, or improperly prepared Hazardous Waste Profile Sheet or Hazardous Waste Manifest. Transshippers will report other types of missing or improper shipment documentation to include Special Handling Data/Certification (DD Form 1387-2), Transportation Control and Movement Document (TCMD) (DD Form 1384), and the Shipper's Declaration for Dangerous Goods.

C17.3.2.5.2. Sources of supply will prioritize resolution of SDRs submitted by DLA Distribution Centers citing Discrepancy Code D4. The objective is to preclude delays in reclassifying materiel suspended due to lack of a Quality Assurance Representative (QAR) signature in Invoicing, Receipt, Acceptance, and Property Transfer (iRAPT). When no other discrepancies have been identified, the source of supply will direct the distribution center to prepare an inventory adjustment to bring the materiel into fully serviceable condition upon posting of the QAR signature.\(^5\) Note that QAR signature is not required for receipt processing when Certificate of Conformance (CoC) or Alternate Release Procedures (ARP) are authorized. Use system edits to block inappropriate suspension of materiel and submission of SDRs when these procedures are applicable.\(^6\)

---

\(^5\) Refer to ADC 1066.
\(^6\) Refer to ADC 1202.
C17.3.2.6. **Overage/Shortage, Nonreceipt, or Duplicate Discrepancies**

C17.3.2.6.1. **Overage/Shortage.** An item overage or shortage discrepancy occurs when the quantity received is greater or less than that shown on the shipping document. This type of variance is not evident on delivery but is discovered when the article of freight, as described on the transportation document, is opened and the contents are checked. Report DoD shipper overages or shortages valued in excess of $100 per line item, except for controlled inventory items, that are reported regardless of dollar value. Customers may use a clear text description to indicate that erroneous or conflicting Materiel Receipt Acknowledgement information was previously submitted.

C17.3.2.6.2. **Concealed Overage/Shortage.** U.S. Government customers must report overages or shortages discovered while opening a sealed vendor pack regardless of dollar value or shipper. These reports must contain, if available, the PIID from the packaging, the lot number, and original document number. A constructed document number must be provided when the original number is not known. When using a constructed document number in an SDR coordinate with the applicable Component finance office. Use the credit-to/bill-to DoDAAC as the basis for constructing the document number, follow MILSBILLS procedures citing Code U in the first position of the constructed document number serial number (DLMS Utilization Code U), and include fund code to ensure that credit/billing is appropriate. Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event (e.g., credit or debit) to include SLOA mandated standard financial information system (SFIS) elements. 7 The DLMS SDR transaction supports inclusion of SLOA required elements.

C17.3.2.6.3. **Quantity Variances.** Quantity variances on receipts from procurement authorized by the terms of the contract are not reportable as discrepant.

C17.3.2.6.4. **Quantity Unit Pack (QUP) Variances.** Report quantity variance due to incompatibility of unit of issue (U/I) between documentation and materiel received. Automatic adjustment for unit pack is allowable by policy, unless the requisition contains an appropriate advice code, in accordance with Chapter 4, restricting the quantity.

C17.3.2.6.5. **Exceptions to Reporting Overage/Shortage.** For U.S. Government customers, this does not include transportation discrepancies as follows:

C17.3.2.6.5.1. Overages or shortages of boxes, packages, or loose articles of freight in a commercial/Government-owned/leased shipping container (commonly called SEAVAN), Military SEAVAN (MILVAN), a Military Sealift Command SEAVAN (MSCVAN or MILVAN), roll-on/roll-off (RORO) trailer, or CONEX.

---

7 Refer to ADC 1043.
C17.3.2.6.5.2. Overages or shortages of freight (packaged or loose), upon delivery by a carrier, found to be in excess of the quantity of articles recorded on the bill of lading or transportation document covering the shipment.

C17.3.2.6.5.3. Average Net Weight Lotting System. DLA’s subsistence commodity will use the average net weight lotting system when shipping perishable specification freeze and chill items. Actual weight received may differ from actual weight requisitioned or shown on the supply documentation. Do not submit a discrepancy report if the number of cases/containers received agrees with the number shown on supply documentation, and actual weight received is within weight range variation.

C17.3.2.6.6. Total Nonreceipts

C17.3.2.6.6.1. Report non-receipt of items shipped via traceable means, (e.g., GBL or CBL, registered, insured, certified USPS, or small package carrier shipments), regardless of dollar value only when it has been determined that non-receipt is not the result of a transportation discrepancy. In all cases, U.S. Government customers must have received supply/shipment status and employed materiel follow-up procedures. It is strongly recommended that the customer check for requisition status on Web Visual Logistics Information Processing system (WebVLIPS), for proof of shipment data on DLA Distribution Standard System (DSS) Materiel Release Order (MRO) Tracker or on the Integrated Data Environment/Global Transportation Network (IGC/IDE), or use the DoD WebSDR hyperlink to WebVLIPS to check requisition status before creating an SDR for total non-receipt. This may preclude the need for an SDR or may enable the action activity to resolve the problem more quickly.

C17.3.2.6.6.2. Security Assistance customers reporting non-receipt are required to provide documentation from the freight forwarder indicating that no materiel has been received on the requisition and transportation control numbers that apply. The ILCO will deny and return as incomplete any SDRs that do not have the documentation attached.

C17.3.2.6.6.3. An SDR is required when items valued in excess of $100 dollars per line-item, reported shipped by non-traceable USPS (i.e., not shipped registered, insured, certified mail) are not received or are received in a damaged condition.

C17.3.2.6.7. Duplicate Shipments. Report duplicate shipments regardless of dollar value.

C17.3.2.6.8. SDRs for Air Force Maintenance Denials Under BRAC Supply, Storage and Distribution (SS&D) Agreement. SDRs resulting from distribution center denial of an Air Force-directed release order for inventory previously requisitioned from DLA and receipted into Air Force ownership as the result of a “wash” (issue/receipt in-place), will be reported to the depot for initial action. This is an automatic SDR generation triggered by a warehouse refusal citing Denial Management
C17-15 CHAPTER 17

C17.3.2.7. Misdirected Materiel. Report when materiel, regardless of dollar value, is improperly addressed and shipped to the wrong activity. The document number assigned to the SDR will be the document number from the shipping documentation of the misdirected shipment received. (If the customer requisitioned materiel that was not received, it must be reported on a separate SDR for total non-receipt using the document number for the requisitioned materiel.) Misdirected shipments received by Security Assistance customers identify the location of the discrepant materiel and the country reporting the receipt (which may differ from the intended customer). All customers (U.S. and Security Assistance) are required to report misdirected controlled inventory, arms, arms parts, and explosives within 24 hours of discovery. (Properly addressed materiel incorrectly shipped to the wrong activity while under U.S. Government-controlled transportation is reportable as a transportation discrepancy.)

C17.3.2.8. Packaging Discrepancies

C17.3.2.8.1. Improper Packaging. Report any unsatisfactory condition resulting from improper packaging that causes the item, shipment, or package to be vulnerable to any loss, delay, or damage according to the specific conditions cited. Unless otherwise indicated, the minimum dollar value reporting criteria is when the estimated/actual cost of correction exceeds $100; or the value of the item, shipment, or package is $2500 or over, regardless of the estimated or actual cost to correct the packaging discrepancy. This may include loss or damage to the item, shipment, or package except when a report is otherwise required by DTR 4500.9-R, Defense Transportation Regulation, Part II, Cargo Movement. Where encoded information on the SDR is not sufficient, the submitter is strongly encouraged to provide photographs and detailed descriptions of how the materiel was packaged, as well as the actual damages incurred to the materiel (when applicable). When requesting disposition instructions, the submitter should also include the estimated or actual cost of correction of packaging on the initial SDR. Repackaging costs may include total costs to complete packing, packaging, preservation, palletization and/or marking (materiel and labor) as appropriate for the situation. The submitter must include the actual cost of corrective action when using the SDR to document repackaging cost on an SDR provided for reimbursement after corrective action has occurred. Repackaging prior to receipt of disposition instructions from the action activity is only authorized by exception. DLA
Distribution Centers are pre-authorized to correct packaging discrepancies by the owning Component based upon a coordinated stock readiness agreement specifying the applicable dollar threshold. Customer receiving activities may need to take immediate corrective action when operationally necessary (clarify reason in SDR remarks and provide supporting documentation). If the estimate provided on the initial SDR submission differs from the actual cost, the submitter should provide a correction to their SDR submission to alert the item manager for a corrected reimbursement amount. If there is a substantial difference between the estimated and actual repackaging cost, the item manager will review documentation to ensure the claim is valid and may request clarification for the difference. The source of supply will provide credit to customers in accordance with MILSBILLS procedures in DLM 4000.25, Volume 4, Finance.

C17.3.2.8.2. Packaging Discrepancies Noted at DLA Distribution Centers. To ensure proper visibility and traceability of preservation, packaging, packing and marking (PPP&M) costs, DLA Distribution Centers must include estimated costs for repackaging, including the discrete cost for labor and repackaging materiels.

C17.3.2.8.2.1. For DLA-managed materiel only, if the materiel received by the DLA Distribution Center has a PMR on file, no item discrepancies are noted, is a secondary item, and the cost to correct the discrepant packaging is less than $300, the DLA Distribution Center may perform the corrective action without authorization from the owner/manager based upon prior agreement. The SDR will be provided to the owner/manager for information only using Action Code 1H. For DLA-managed clothing and textile commodities, the authorized threshold is $500.

C17.3.2.8.2.2. For all other Components, if the materiel has a packaging discrepancy, no item discrepancies are noted, is a secondary item, and the cost to correct the discrepant packaging is less than $300, the DLA Distribution Center may perform the corrective action without authorization based upon prior agreement regardless of whether a PMR was provided. The SDR will be provided to the owner/manager for information only.

C17.3.2.8.3. Mission or Life Endangering. Report packaging discrepancies, regardless of dollar value, resulting in damaged materiel that may endanger life, impair combat or deployment operations, or affect other materiel. Report immediately to the shipping activity, contracting office, or control point by the quickest communication medium to enable the shipper to take immediate corrective action. Submit an SDR within 24 hours of the initial report.

C17.3.2.8.4. Hazardous Materiel (Includes Ammunition and Explosives). Report any packaging discrepancy, regardless of dollar value, if a potentially hazardous condition could result or if damage or an unsatisfactory condition has occurred involving any hazardous materiel. This includes improper identification markings of items and packaging and/or unitized loads. Use hazardous materiel discrepancy codes when applicable.
C17.3.2.8.5. **Excessive Packaging.** Report excessive packaging by contractors that result in additional costs to the U.S. Government, regardless of dollar value.

C17.3.2.8.6. **Improper Packing.** Report any type of inadequate or improper packing to include incorrect blocking or bracing, oversized or incorrect container, and inadequate closure, resulting in an unsatisfactory condition or damage. Report when materiel is not packed in required reusable container regardless of dollar value.

C17.3.2.8.7. **Delay or Additional Costs.** Report packaging discrepancies resulting in delay or additional packaging costs at aerial or water terminals or at consolidation and containerization points. The activity responsible for operating the terminal or port of embarkation/debarkation will be responsible for the preparation and submission of an SDR on discrepancies noted on shipments moving through the activity. These SDRs will be prepared using Discrepancy Document Type Code W.

C17.3.2.8.8. **Improper Packaging of Customer Returned Materiel.** Distribution Centers will send an SDR to the materiel owner for packaging discrepancies related to customer returned materiel or inter-depot transferred materiel. The materiel owner is responsible for funding packaging costs associated with preparing materiel for storage and reissue. Packaging discrepancies occurring in materiel returns are subject to recoupment action at the discretion of the materiel owner. If the packaging is so bad that the item must be disposed, the shipper may be required to reimburse the receiver for any packing required to effect the shipment and the cost of turn in to DLA Disposition Services. The distribution center will always include the estimate of the costs of repackaging or disposal on the initial SDR submission, in the remarks section and complete the appropriate data element entries for electronic submission.

C17.3.2.8.9. **Wood Packaging Materiel (WPM).** Report WPM that is not consistent with the international standards for the regulation of WPM transiting international boarders and Department of Agriculture regulation governing importation of regulated WPM. Compliant WPM must display certification marking as prescribed in reference. Use discrepancy code P215 and provide remarks as applicable. Also see guidance for CCP-originated SDRs below.

C17.3.2.8.10. **Repetitive Packaging Discrepancies.** Include Discrepancy Code Z2, Repetitive Discrepancy, with the other specific packaging discrepancy code(s) to report repetitive packaging discrepancies that impose a significant burden on receiving or transshipment activities. Total costs to correct packaging will be included in the SDR. For FMS SDRs reporting repetitive packaging discrepancies, each individual SDR must comply with the Security Assistance dollar thresholds for SDR submission. The SDR submission cannot be based upon the dollar value of the accumulated discrepancies.
C17.3.2.8.11. **Improper Preservation.** Report any type of inadequate or improper preservation or physical protection resulting in an unsatisfactory condition or damage. Report improper preservation of any materiel identified as being electrostatic/electromagnetic (ES/EM) sensitive, regardless of the dollar value.

C17.3.2.8.12. **Improper Marking.** Prepare an SDR to report any omitted, incomplete, illegible, or misplaced markings. Report improper identification of containers, or items that require opening the container, or result in improper storage of the materiel, regardless of cost. Improper marking includes discrepancies related to passive radio frequency identification (pRFID) tags as follows:

- **C17.3.2.8.12.1.** Report all missing, damaged, or unreadable pRFID tags when such tags are required by contract provisions, DoD policy, or specified by prior shipment notice/status reflecting pRFID content. Report duplication of tag identification associated with a previously processed receipt.

- **C17.3.2.8.12.2.** SDRs may be used to report a tag read formatted for DoD use, but which does relate to an advance shipment notification containing pRFID content when such advance shipment notification is required by contract provisions or DoD policy.

C17.3.2.8.13. **Improper Unitization.** Report improper unitization that includes inadequate wrapping/strapping or lack of unitization, where appropriate, resulting in an unsatisfactory condition or damage. Report multiple consignees in a single consignee consolidation container as improper unitization.

C17.3.2.8.14. **Latent Packaging Discrepancies.** Prepare a late SDR for materiel found in storage with latent preservation and packaging discrepancies. Confine these reports to stocks that constitute a problem resulting from a particular specification, preservation, or packaging method. Reports relative to packaging discrepancies found in storage will be annotated "not incident to shipment."

C17.3.2.9. **Receipt Notification SDRs for Quality-Related Issues Identified During Distribution Center Receipt.** Three-position Q-series discrepancy codes have been developed to accommodate materiel owners/managers with special programs requiring immediate visibility and notification of quality deficient (or potentially deficient) materiel received at the distribution center. These codes are applicable for reporting to ICP/IMMs via the SDR process, based upon special inspection requests by the materiel manager. These reports are contingent upon pre-existing receipt restriction requirements that identify the National Stock Number (NSN) and/or other screening criteria and specific actions the materiel managers expects the distribution center to perform. Some of the specific programs that require reporting of quality-related concerns for receipts, including new procurement and customer returns, are: items identified as customer return improvement initiative (CRII) items, critical safety items (CSI), items that failed under use, and items requiring First Article Testing. Additionally, receipt of PQDR exhibits will be reported to the owner or manager using the applicable three-position Q-series discrepancy code. For PQDR exhibits, report the receipt and
SDR to the same organization (based upon the PMR, when available). Report suspended materiel in the appropriate supply condition code (SCC) under DLMS/MILSTRAP procedures, to include PQDR exhibit receipts in SCC Q and CSI in SCC L for procurement source receipts or SCC K for non-procurement source receipts. For other than PQDR exhibits or first article testing, provide the SDR to the manager with a distribution copy to the owner, if different. Disposition instructions for these SDRs will be provided by the manager (a response from the owner prior to the manager response will be considered premature and will result in a status update from the distribution center indicating that the SDR is still pending manager response (Reply Code 522)). The manager will provide an interim response if the SDR will remain open for an extended period pending investigation. If resolution of the SDR requires the materiel to be returned to the manager, the manager will request that the owner direct ownership transfer using “ship-to-self/shipment in-place” procedures and provide document number(s) applicable to the original requisition (or a constructed document number) for reimbursement. Interim Reply Code 523 applies. The manager will provide a PMR to the distribution center to ensure proper processing of the receipt resulting from the shipment in-place and to allow the manager to monitor for the directed return. The owner will provide an SDR reply with applicable document number(s) for credit and confirm materiel release order for ownership transfer at the current location. Interim Reply Code 524 applies. In this situation, the SDR will remain open until the manager has provided disposition instructions for the discrepant materiel and the distribution center has completed this action. At this point, the distribution center will provide a completion notice to the manager with an information copy to the original owner.

C17.3.2.10. Technical Data. Report item technical information, (e.g., name plate, operating handbook, logbook, precautionary markings, warranty data, engineering drawings and associated lists, specifications, standards process sheets, manuals, technical reports, catalog item identifications, and related information) that are missing, illegible, incomplete and/or incorrect regardless of dollar value. When reparables are returned and the appropriate historical information/documentation, operator/maintenance logbooks, engine oil analysis, etc., as required by Government regulations, and/or technical manuals are not included, the receiving activity will submit an SDR regardless of dollar value. Any additional costs incurred by the repairing depot/arsenal because of the missing data will be charged to the originating activity. The submitter will ensure that the specific description of what documentation is missing is included in the remarks section.

C17.3.2.11. Incorrect Item

C17.3.2.11.1. Report incorrect or misidentified materiel or unacceptable substitutes regardless of dollar value. However, unless the requisition contains an appropriate advice code in accordance with Chapter 4, limiting the request to a specific item, automatic shipment of an interchangeable or substitute item is allowed by policy. See Interchangeability & Substitutability (I&S) guidance. Report wrong item receipts of controlled inventory, arms, arms parts, and explosives within 24 hours.
C17.3.2.11.2. Incorrect item discrepancies discovered while opening a sealed vendor pack will be reported regardless of dollar value or shipper. These reports must contain the PIID from the packaging and, if available, the lot number and the original document number. A constructed document number will be provided when the original number is not known. When using a constructed document number in an SDR coordinate with the applicable Component finance office. Use the credit-to/bill-to DoDAAC as the basis for constructing the document number, follow MILSBILLS procedures citing Code U in the first position of the constructed document number serial number (DLMS Utilization Code U), and include fund code to ensure that credit/billing is appropriate. Conformance with standard line of accounting (SLOA)/accounting classification requires any initiation of a financial business event (e.g., credit or debit) to include SLOA mandated standard financial information system (SFIS) elements. The DLMS SDR transaction supports inclusion of SLOA required elements. Include identity of the incorrect item received in the discrepancy report.

C17.3.2.11.3. Where two separately managed items are involved in a wrong item SDR, (e.g., a DLA-managed item was ordered and a Military Service-managed item was received due to shipper error), the SDR initiator will forward the report to the shipping depot or manager of the item ordered, in accordance with Component rules. It is the responsibility of the SDR action activity (receiver of the SDR) to ensure full and appropriate resolution by coordinating with the other involved ICP/IMM or transferring the SDR (manually), so that the initiator receives all applicable and appropriate response information from the responsible party. This may be interpreted to mean two separate SDR replies, or a single coordinated response identifying financial resolution from the Component that sourced the order, and materiel disposition instructions provided by the owner of the materiel shipped.

C17.3.2.11.4. Report part number discrepancies when the part number marking appears to be inconsistent with the specified NSN. This includes when the part number received is not associated with the applicable NSN or when the part number cannot be matched to Federal Logistics Information System (FLIS) catalog data/FEDLOG. The SDR must include the part number and manufacturer’s Commercial and Government Entity (CAGE) Code for the item received. Part discrepancies will be submitted directly to the item manager.

C17.3.2.11.5. DoD WebSDR requires identification of the incorrect item received using discrete data elements (refer to the DLMS IC 842A/W). If multiple incorrect items are received under the same document number, use the appropriate discrepancy code for mixed stock and identify the first (highest quantity or controlled item) and use the remarks text to explain the mixed content shipment.

C17.3.2.12. Repetitive or Other Discrepancies. U.S. receiving activities will report repetitive discrepancies, regardless of dollar value. For FMS SDRs reporting repetitive discrepancies, each individual SDR must comply with the Security Assistance dollar thresholds for SDR submission. The SDR submission cannot be based upon the

---

8 Refer to ADC 1043.
C17.3.3. SDRs Resulting from Redistribution Orders (RDOs). The following procedures are applicable to DLA Distribution Centers and may be applied to other storage activities as directed by the responsible Service/Agency. Only the current DLA Distribution Center can update the owner, manager, or source of supply field. Submitters must cancel and resubmit their SDR if they need to update this field. When a storage activity receives a shipment based upon a redistribution order and the materiel is short, over, wrong, quality deficient, or otherwise discrepant the receiving activity will:

C17.3.3.1. RDO Shortage. Prepare the SDR to report shortage and use Action Code 1D (materiel still required). The shipping activity will receive the action copy; the ICP will receive an information copy. The shipping activity receiving the SDR will treat it as a priority and conduct inventories as appropriate. If the inventory confirms an over balance, the shipping activity will respond using Disposition/Status (Reply) Code 123 (materiel will be reissued at no charge) citing inventory conducted and verified shipment error. If the inventory confirms correct balance or the balance is short, the shipping activity will reply with Disposition/Status (Reply) Code 126 (materiel not available for reshipment) or 701 (SDR rejected) citing inventory conducted and no overage was discovered; no materiel will be shipped, OR, inventory conducted and shortage was identified; loss adjustment recorded on depot accountable record, no materiel will be shipped.

C17.3.3.2. RDO Overage. Prepare the SDR to report overage using Action Code 1B (materiel being retained). The shipping activity will receive the action copy; the ICP will receive an information copy. The depot receiving the SDR will treat it as a priority and conduct inventories as appropriate. If the inventory confirms an over-shipment error, the shipping activity will respond with Disposition/Status (Reply) Code 137, annotating that inventories were conducted and balances were adjusted to show correct on hand balance. If inventory confirms no over-shipment was made, the shipping activity will respond with Disposition/Status (Reply) Code 701 (SDR rejected), citing inventory conducted and on-hand balances are correct.

C17.3.3.3. RDO Wrong Item. Prepare the SDR to report receipt of wrong item using Action Code 1D (materiel still required). The shipping activity will receive the action copy; the ICP will receive an information copy. The shipping activity receiving the SDR will treat it as a priority and conduct inventories on both the wrong item that was shipped and the correct item that was not shipped. No DLA Distribution Center will request or authorize return or movement of wrong materiel received as an RDO; the ICP/IMM will make all materiel movement decisions. If the inventory confirms an overage of the correct NSN, the shipping depot will respond using Disposition/Status (Reply) Code 123 (materiel will be reissued at no charge), citing inventory conducted and shipment error confirmed; materiel will be shipped to correct shipment error. If the inventory fails to confirm an overage of the correct NSN, but an inventory of the wrong
NSN reveals a shortage, the shipping activity will reply using Disposition/Status (Reply) Code 126 (materiel not available for shipment), citing inventories conducted on both NSNs confirm shipment error; accountable record corrected; no materiel will be shipped. Report wrong item receipts of controlled inventory, arms, arms parts, and explosives within 24 hours.

C17.3.3.4. RDO Quality-Related Issues. Prepare an SDR when quality-related issues are noted upon receipt, or when materiel received on the RDO must be suspended prior to stow. The action copy will be sent to the item manager using Action Code 1A (disposition instructions requested). An information copy will be prepared for the materiel owner directing the redistribution if different from the item manager. The action activity will respond to the receiving activity with disposition instructions, to include condition code change requirements where appropriate. Refer to quality-related issues in paragraph C17.3.2.9.

C17.3.3.5. Packaging, Documentation, and Other Discrepancies. Prepare the SDR to report the discrepancy using Action Code 3B (discrepancy reported for corrective action and trend analysis) where the receiving activity is able to process the receipt, there is no impact to the shipping activity inventory records, and no disposition/resolution is required from the item manager. Include repackaging costs when applicable. U.S. Forces should include supporting documentation for repackaging when available. All others are required to provide documentation for repackaging costs, (i.e., an invoice). Follow standard SDR distribution rules. The storage activity receiving the SDR will review the SDR for corrective action for future shipments and record the SDR trend analysis. No response is required for Action Code 3B SDRs.

C17.3.4. Materiel Returns

C17.3.4.1. Discrepancy Greater Than $100. Continental United States (CONUS) and Outside Continental United States (OCONUS) activities receiving materiel returns (excess or redistributed materiel, or reparable materiel, including returns from FMS customers) will submit an SDR for discrepancies specified above regardless of condition when the dollar value is equal to or greater than $100 per line-item. Discrepancies pertaining to controlled inventory items will be reported by SDR regardless of dollar value or condition.

C17.3.4.2. Unauthorized Returns (no PMR/incomplete or missing documentation/no identified owner). Refer to paragraph C17.3.6. Distribution Center Receipt with no Due In/Prepositioned Materiel Receipt. Discrepancy reports for distribution center receipts of unauthorized materiel returns with insufficient information to determine the appropriate owner will be routed under MILSTRAP for receipt reporting:

C17.3.4.2.1. Depot Level Reparable Items. Report discrepant receipt SDR to the owner/manager. Commercial maintenance activities will return reparables

---

9 Refer to ADC 110/1102A.
on a controlling contract number and may include a significant secondary document number. Storage activities will report discrepant receipts on Document Type 9 or P, as applicable, and identify the Return (Repaired/Overhauled/Other Commercial Return) Code R to distinguish commercial returns from repair, non-destructive test/evaluation, assembly, disassembly, reclamation, and conversion/modification from new procurement receipts. For commercial returns, the SDR must include contract information comparable to new procurement: PIID (or PIID call/order) with contract line/subline item number and contractor-assigned shipment number when available. DoD WebSDR will populate the shipper’s CAGE and the Contract Administration Office (CAO) DoDAAC when available from EDA. ¹⁰

C17.3.4.2.2. Consumable Items. Report discrepant receipt SDR to the applicable item manager except:

C17.3.4.2.2.1. Navy-returned consumable items must be reported to the Navy using RIC NRP regardless of the item manager. An SDR will be provided to the Navy owner for information only.

C17.3.4.2.2.2. Marine Corps-returned consumable items must be reported to RIC MPB regardless of the item manager. An SDR will be provided to the Marine Corps owner for information only.

C17.3.4.2.2.3. Air Force-returned consumable items must be reported to RIC FHZ regardless of the item manager. An SDR will be provided to the Air Force owner for information only.

C17.3.4.3. Exception for Returns Between U.S. Activities. When the materiel return shipments are classified as unserviceable and uneconomically reparable upon receipt, the receiving activity will report to the shipping activity. The report will include materiel return document number, quantity, and an explanation of condition classification.

C17.3.4.4. Reimbursable Costs for Discrepant/Unauthorized Returns. Under MILSBILLS and MILSTRIP procedures DoD activities returning materiel in violation of prescribed procedures may be held accountable for recoupment of all reimbursable costs including disposal. Recoupment action may be initiated by the DLA Distribution or, upon subsequent identification of the applicable manager, by the manager.

C17.3.4.5. Supplemental Information for Suspended Returns. SDRs applicable to returned materiel in a suspended condition will include supplemental information as follows: contract reference (required entry; indicate “NONE” if no contract reference is available), and original packaging indicator (required yes/no entry).

¹⁰ Refer to ADC 1268.
C17.3.5. Discrepancies Resulting from Lateral Redistribution Orders (LROs) on Total Asset Visibility (TAV) Shipments. Coordination with the Military Service shipping activity is recommended prior to ICP resolution of the SDR.

C17.3.5.1. All SDRs submitted for DLA directed LROs where the item is managed by DLA, owned by Army’s Non-Army Managed Items (NAMI) Group, Supply Directorate (Routing Identifier Code (RIC) AJ2), and shipped from an Army CONUS site, must be sent to NAMI for investigation, with an information copy to DLA (RIC SMS). This is normally accomplished via exception routing rules within DoD WebSDR. SDRs meeting these criteria will be assigned Document Type V. Any SDRs received directly by DLA will be forwarded to NAMI (RIC AJ2) via SDR forwarding reply citing Reply Code 504. NAMI will research the discrepancy and forward recommended disposition to DLA for final action. The NAMI action activity will provide recommended disposition to DLA within 25 calendar days using an SDR forwarding reply citing Reply Code 307. After 25 calendar days have elapsed and NAMI recommended resolution has not been received, DLA will follow-up for recommended disposition.

C17.3.5.2. Upon receipt of recommended disposition, DLA will review and provide final decision to the customer, along with an information copy to NAMI. DLA will be responsible for reversing credit to the TAV shipping activity, issuing credit to the requisitioner, and deleting activities from the TAV process due to poor performance, in coordination with NAMI.

C17.3.5.3. If Army shipped the wrong item or an overage, NAMI will be responsible to provide the customer with disposition instructions and/or directions for returning the item back to Army. If the item is to be retained by the customer, NAMI will be responsible for financial actions as appropriate. DLA will not reimburse the shipper for wrong item or over shipments of Army issues relative to TAV.

C17.3.6. Distribution Center Receipt with no Due In/Prepositioned Materiel Receipt (PMR). DLA Distribution Centers will report receipt of unscheduled materiel from new procurement and non-procurement sources to the owner or manager, as applicable, regardless of condition of materiel, as a discrepancy. When a PMR is not available, the receiving activity will report the receipt using documentation, packaging, and other information, as available. DLA Distribution Centers will prepare an SDR to report the missing/unmatched of a PMR to the owner/manager as the only discrepancy or in combination with other identified discrepancies. The distribution center will identify the SDR as informational or otherwise indicate requested action. If the distribution center erroneously reported the receipt to the wrong owner due to missing/unmatched PMR, the wrong owner will use the SDR reply process to reject the SDR (using Reply Codes 901). If the wrong owner is unable to reject the receipt transaction systemically, the wrong owner will also request that the distribution center reverse the receipt (using Reply Codes 612). If known, the wrong owner should identify the correct owner in the receipt rejection or SDR reply to facilitate reprocessing of the receipt. These procedures
do not authorize rejection/reversal of receipts reported to the owner designated by PMR or the pre-designated Service owner for unauthorized return of consumable items.\textsuperscript{11}

C17.3.6.1. New procurement materiel with other applicable discrepancies, (e.g., missing receiving report/DD Form 250, improper packaging), will be placed in Supply Condition Code (SCC) L pending resolution.

C17.3.6.2. If other than new procurement, the SDR should show receipt in SCC K when the actual condition cannot be determined. Materiel returned with other identified discrepancies, (e.g., without associated technical data), will also be reported as indicated under the appropriate discrepancy category. Returns of excess materiel that are not ICP/IMM directed are subject to recoupment of costs associated with disposal or repackaging costs incurred by the distribution Center. If the receiving activity identifies no other discrepancies requiring disposition instructions and is able to process the receipt to the owner the SDR will cite Action Code 3B for corrective action and trend analysis. The distribution center will direct the action copy of the SDR to the owner or manager and a distribution copy to the returning activity (based on the DoDAAC in the document number or shipping documentation.)

C17.3.6.3. Unscheduled receipts of materiel subject to MILSTRAP automatic disposal is reported via SDR for trend analysis and corrective action (Action Code 3B) with a distribution copy to the returning activity. SDRs associated with DLA obsolete materiel (materiel managed under obsolete RICs beginning with S9) must cite Discrepancy Code Z1 (see remarks), Z3 (no PMR), and any other relevant discrepancy code. SDR remarks will state, “Unauthorized return; materiel processed under DLA automatic disposal procedures for obsolete materiel. No further action required.”

C17.3.7. DLA Disposition Services Discrepancies

C17.3.7.1. Dollar Value Greater Than $100. Receiving activities will submit an SDR for discrepancies specified above in shipments to and from DLA Disposition Services Field Offices when the dollar value is greater than $100 per line item.

C17.3.7.2. Exception. Activities will submit a discrepancy for overages and shortages in shipments of controlled inventory items regardless of dollar value.

C17.3.7.3. DLA Disposition Services and DLA Disposition Field Office SDR Procedures. During the receiving process, if the DLA Disposition Services Field Office identifies a supply discrepancy, an outgoing SDR will be generated consistent with Chapter 16.

C17.3.8. Discrepancies in Item Unique Identification (IUID) Data.\textsuperscript{12}

C17.3.8.1. Report supply-related discrepancies involving IUID under DoD IUID Supply policy, including but not limited to Unique Item Tracking (UIT) programs,

\textsuperscript{11} Refer to ADC 1273.
\textsuperscript{12} Refer to ADC 1030.
capital equipment candidates, or as contractually required. Pending full transition to DoD IUID Supply policy using the UII, SDRs identifying discrepancies in unique identification will be prepared citing both UII and/or corresponding serial number, when both are available. Until UII is implemented as the primary identifier under full IUID implementation across the Department of Defense, the human readable serial number is mandatory in the SDR for discrepancy scenarios identified in this chapter, as is the UII when available. The intent is to capture both serial number and UII, however not all items are marked and the UII cannot be considered a mandatory element at this time. That is the context in which the term “serial number/UII” is used in this chapter.13

Applicability under DoD IUID Supply Policy is identified by NSNs with IUID Indicator Yes (Y). For missing or mismatched unique item identification of items that are DoD serially-managed/tracked, use the applicable U-series discrepancy code (see Table C17.T1.). Report missing or mismatched materiel identification unrelated to IUID (e.g. missing or mismatched part number or NSN) using the applicable packaging (labeling/markings), documentation, technical data, or wrong item discrepancy code(s). Report quality-related deficiencies involving IUID, (e.g., improperly constructed unique item identifier within the 2D data matrix), using Product Quality Deficiency Report (PQDR) procedures under DLA Regulation 4155.24, et al.

C17.3.8.2. In order to facilitate reporting of discrepancies, particularly those involving discrepancies where inclusion of the serial number/UII is required/desirable, the SDR submission process should be integrated with the receiving process, allowing receipt data to be captured once and reused. IUID discrepancies may be related to the packaging label, including automated information technology (AIT) readable content; the item marking, including AIT readable marks; supply documentation; the due-in record; and/or a mismatch between the item and any of these. When reporting an IUID missing or mismatch (including shortage, overage, and incorrect item) the serial number/UII may be specifically identified as applicable to items received or not received using the IUID Received/Not Received Indicator. If the SDR does not include the indicator, the UII and/or serial number will be interpreted as applicable to the materiel received. Pending integrated capability to support IUID reporting in SDRs, attachment files may be uploaded/transmitted to DoD WebSDR to identify UIIs and/or serial numbers UIIs.14

C17.3.8.3. Discrepancies involving missing or mismatched unique identification identified during receipt of new procurement materiel (including direct vendor delivery (DVD)) must be reported prior to acceptance. Receipt new procurement materiel requiring IUID or serial number tracking in a suspended condition pending resolution.

C17.3.8.4. Pending full transition to DoD IUID Supply Policy procedures, only report missing serial number/UII in DLMS shipment status transactions (Discrepancy

---

13 Refer to ADC 1244.
14 Discrete data entries (rather than attachment files) for serial number/UII identification are required under ADC 1244 beginning December 2018.
C17.3.8.5. The materiel owner is responsible for IUID Registry updates associated with discrepancies for mismatched IUID information.

C17.3.8.6. In support of Financial Improvement and Audit Readiness (FIAR) compliance for accountability and management of capital equipment, capital equipment candidates require serialization data visibility. The materiel owner also requires serialization data visibility for UIT program items at DLA Distribution Centers. Thus, capital equipment candidates and UIT program items received at DLA Distribution Centers without a serial number will not only require an SDR, but will stop the equipment in the supply chain until a serial number is identified and the materiel is marked. If the distribution center cannot determine the serial number using the associated shipment notice and marks/labels on the item or packaging, the distribution center will report the receipt in a suspended condition) and submit the SDR to the owner citing the Discrepancy Code U13 and other applicable discrepancy code(s) with clarifying remarks. The materiel owner is responsible for determining the appropriate serial number and providing disposition for marking the item. SDR Reply Codes 603 (remark and return to stock) and 611 (Reidentify unique identification (UII/serial number) and return to stock) apply. Upon positive resolution of the missing or mismatched serial number/UII scenario, separate dual inventory adjustment transactions are required to update the serial number/UII and update the SCC of the suspended item to the appropriate SCC.

C17.3.8.7. SDRs prepared for a mismatch with no discrepancy in quantity or stock number received will include the serial number/UII identifying the mismatch. That is, identify the serial number/UII for item(s) received that do not correspond to the shipment status, as well as the serial number/UII for the expected item(s) NOT received. Serial number is mandatory for capital equipment candidates and UIT program items. Cite the IUID discrepancy code.

C17.3.8.8. SDRs prepared for a shortage of items identified by IUID Indicator Y will include the serial number/UII for the item(s) NOT received based upon comparison with the shipment status (when available) or shipping documentation. Serial number is mandatory for capital equipment candidates and UIT program items. Cite the applicable discrepancy code for the shortage and the IUID discrepancy code.

C17.3.8.9. SDRs prepared for an overage of items identified by IUID Indicator Y will include the serial number/UII for the extra item(s) received based upon comparison with the shipment status (when available) or shipping documentation. Serial number is mandatory for capital equipment candidates and UIT program items. Cite the applicable discrepancy code for the overage and the IUID discrepancy code.

15 Refer to ADC 1198/ADC 1198A
16 Refer to ADC 1244.
C17.3.8.10. SDRs prepared for receipt of an incorrect item where the item received is identified by an NSN with a IUID Indicator Y will include the serial number/UII for the wrong item. Serial number is mandatory for capital equipment candidates and UIT program items. Cite the applicable discrepancy code for the incorrect item receipt and the IUID discrepancy code.

C17.3.8.11. SDRs prepared for receipt of a condition discrepancy (i.e., the materiel condition is misrepresented or otherwise deviates from the original condition on the shipping document or the prepositioned materiel receipt) where the item received is a capital equipment candidate or UIT program item will include the serial number/UII for the discrepant item. Serial number is mandatory for capital equipment candidates and UIT program items. Cite the applicable discrepancy code for the condition discrepancy and the IUID discrepancy code.

C17.3.8.12. SDRs reporting non-compliant serial number will be reported using Discrepancy Code U14 (Serial number convention invalid). This code is distinguished from other similar U-series discrepancy codes in that this code specifically informs the owner that a serially managed item was received with an invalid serial number convention – the serial number maximum field length may not exceed 30 characters and may only include alpha numeric (A-Z, 0-9), dashes and forward slashes. Spaces are not allowed. The receiving activity must annotate the non-compliant serial number in the SDR comments field since the DLMS 842A/W SDR transaction will not allow for an invalid serial number convention to be transmitted in the transaction.

C17.3.8.13. Table C17.T1 provides a decision matrix for the principal scenarios when an SDR is required based on missing or mismatched IUID data during receipt processing.
Table C17.T1. SDR Decision Matrix: Discrepant IUID Data

Table C17.T2 identifies selected discrepancy scenarios for UIT program items that DoD WebSDR will edit for missing serial number on the SDR submission. Rejection criteria is for specific discrepancy codes as shown and is applicable regardless of originator or action activity. This does not preclude the inclusion of serial numbers for other discrepancies involving UIT program items.

Table C17.T2. UIT Program Mandatory Serial Number by Discrepancy Code

18 SDR Action Codes are selected by the submitter based upon the desired response to the SDR. Codes identified in Table C17.T1 are:
   1A Disposition instructions for discrepant materiel requested; financial action not applicable.
   2A Disposition of materiel and financial adjustment (credit) requested.
   3B Discrepancy reported for corrective action and trend analysis; no reply required.
19 Refer to ADC 1244

C17.3.9. Transshipper Prepared SDRs. CCPs will prepare an SDR to report packaging discrepancies as described below.

C17.3.9.1. Supply Discrepancies Requiring Transshipper Reporting. SDRs will be prepared for supply discrepancies related to hazardous shipments and non-compliant wood packaging material (WPM). Refer to the D5-series for common transportation documentation discrepancies. Refer to P2-series and P3-series for packaging (including WPM) and labeling (including Military Shipping Label (MSL)) discrepancies. Select the most specific discrepancy code available and use SDR remarks to further clarify the nature of the problem.

C17.3.9.2. CCP SDRs for Non-Compliant WPM. CCPs will notify ICPs that their OCONUS WPM shipment is not in compliance with DoD 4140.65-M, “Compliance For Defense Packaging: Phytosanitary Requirements for Wood Packaging Material”.

---

20 Refer to ADC 317A. Note: Discrepancy Code H6, Shipper’s Declaration for Dangerous Goods is re-assigned to the D series code list in DLMS Volume 2, Appendix 7.28.
(WPM),” and ISPM 15 requirements. The expiration of the DoD Pest Free mark and the requirement to use the International Plant Protection Convention (IPPC) stamp to indicate WPM compliance brings the requirement to remediate all noncompliant WPM destined for OCONUS. WPM shipments can be remediated by repackaging or by use of a heat chamber. SDRs will be prepared for noncompliant shipments received by the CCPs. Noncompliant shipments will not be held for disposition. Shipments on noncompliant pallets will immediately be re-palletized onto compliant wood pallets. Boxes, crates, etc. will be sent to a remediation area through use of DSS packing, packaging, preservation & marking (PPP&M) process, and placed in a Hold Status W until remediation is completed. SDRs will be generated for both pallet replacements and box/crate rebuilds. The SDR will normally cite SDR Action Code 3B, Discrepancy Reported for Corrective Action and Trend Analysis. No reply is required. This type of SDR does not require a response from the source of supply or other designated activity; but is provided so that the source of supply may take appropriate action with the Component shipper or vendor and track trends and associated repackaging costs. The SDR will be auto-closed in the DSS, based on the P215 discrepancy code (indicating noncompliant WPM), and will not be reopened. The point of contact (POC) may be contacted if SDR was sent to the wrong supply source. Labor and material to remediate will be charged to a CCP Cost Code. If a frustrated shipment requires an expedited SDR reply to the CCP, use of Action Code 3A, Transshipper (Aerial/Water port or CCP) Requests Expedited Response; Shipment Frustrated, is authorized.

C17.3.9.3. Aerial or Water Port Prepared SDRs. The port (identified by DoDAAC) will prepare an SDR to report packaging or documentation discrepancies as described above. If the corrective action can be taken immediately, (e.g., as a result of off-line communication with the shipping activity,) and the port is not awaiting the action activity response, the SDR will cite Action Code 3B, Discrepancy Reported for Corrective Action and Trend Analysis. No reply is required. If the shipment is frustrated awaiting action activity response, the SDR will cite Action Code 3A, Transshipper (Aerial/Water port or CCP) Requests Expedited Response; Shipment Frustrated. The submitter will use the remarks block to clarify desired actions and shipment information where specific data fields in the SDR are not sufficient.

C17.3.9.4. Expected Data Content for Transshipper SDRs. These SDRs will be identified by Discrepancy Document Type Code W and will include the number and type of discrepant pieces. The transportation control number (TCN) will be the primary reference number for operational processes. If the shipment is received at the CCP without a TCN, one will be assigned in accordance with the DTR. SDRs prepared at the shipment level may include multiple items, or there may not be due-in or documentation available. Because a document number is mandatory within DoD WebSDR, the CCP or other transshipment activity may need to generate a document number based upon the submitter’s DoDAAC if multiple documents are included or the original document number is unavailable. Action activities will not reject Transshipper SDRs for unmatched document numbers without researching by TCN and other identifying shipment information. Multiple document numbers, when available, will be recorded in the SDR remarks. Materiel identification may be identified as “UNKNOWN” or “MIXED” (multi-pack or other consolidation of different items). When this occurs, quantity and U/I
will be left blank. Identification of hazardous materiel shipments is mandatory using the hazardous materiel indictor (Yes/No). When possible, the shipper will be perpetuated from the due-in notification (e.g. DLMS (US TRANSCOM-maintained) 856A) or shipping documentation. The owner/manager (source of supply) will be identified as the ICP/IMM that directed the shipment when applicable.

C17.3.10. SDR Distribution. This section addresses those organizations that must be identified on the SDR as initial action recipient or as receiver of information copies. Such determination is based upon the type or origin of the shipment involved, the DoD Component that directed shipment, and the type of discrepancy. Applicable action activities include ICP, ILCOs, DLA CCPs, and DLA Distribution Centers. For items requiring special handling and/or reporting, such as controlled inventory items, the responsible action activity must ensure additional distribution of the report as required. The submitter will provide a copy of the Serious Incident Report, or other Component-required report, regarding controlled inventory items believed to be stolen, lost, or unaccounted for. Do not mail hard copy documents when access to an electronic SDR application and associated supply information is available. Where electronic attachment capability is not available, users should supplement their original SDR submission via WebSDR correction process attachment functionality to upload information not readily available to the action activity and photographic/pictorial evidence of the discrepancy.

C17.3.10.1. Security Assistance Shipments. All Security Assistance SDRs will be sent directly to the applicable ILCO for initial screening and processing. SDRs may be submitted to the ILCO via SF 364, Report of Discrepancy, or authorized electronic/automated formats. The ILCO will forward the SDR electronically to the appropriate action activity. Security Assistance SDRs bypassing the ILCO will not be accepted by DoD and participating Agency action activities.

C17.3.10.2. SDR Distribution for Shipment (Item) Discrepancies

C17.3.10.2.1. DoD Originated Shipments. Customers will normally direct SDRs to the DoD shipping activity with exceptions and specific business rules as follows.

C17.3.10.2.1.1. Army Directed Shipments

C17.3.10.2.1.1.1. Army Managed Items (AMI) and Non-Army Managed Items (NAMI) Shipments. Direct initial action to the source of supply. The only valid Army action activity/source of supply RICs are AKZ, A12, A35, AJ2, AP5, B14, B16, B17, B46, B64, and B69. Additionally, SDRs may be addressed to the Army Program Managers for total package fielding (TPF) using RICs AER, AEL, AFK, AEV, AF8, AEU, AEW, AFL, AF9, AFC, and BAM. WebSDR will pass SDRs addressed to these activities transactionally to the Army’s Logistics Modernization Program (LMP). WebSDR will provide an information copy to DLA Distribution Centers when the shipping activity is identified.21 These information copies will be used for

---

21 Refer to ADC 1102, implementation delayed.
metrics and correction of inventory records where applicable; DLA Distribution Centers are not authorized to respond to the submitter via SDR reply. Army users are advised not to submit SDRs to single stock fund (SSF) site RICs or to Army shipping depot RICs via DoD WebSDR. There are currently no WebSDR interfaces to support SSF sites or Army shipping depots. The Army action activity can be determined from the shipping documentation (e.g., the RIC in record position 67-69 of the DD 1348-1A), or as part of a NIIN/NSN or Part Number search in WebFLIS. Note that the FLIS source of supply will not apply if the requisition was filled by AJ2, Non-Army Manager Item (NAMI) source of supply. Services ammunition users may send SDRs to B14 for ammunition commodity discrepancies or directly to those Army ammunition storage depots listed below.

C17.3.10.2.1.1.2. Army Ammunition Storage Activity Shipments. WebSDR will pass SDRs addressed to the following Army ammunition storage activities transactionally to Army LMP: Anniston Munitions Center (BAD), Pine Bluff Arsenal (BA9), Hawthorne Army Depot (BD2), Letterkenny Munitions Center (BKD), Crane Army Depot (BB2), McAlester Army Depot (BC2), Tooele Army Depot (BTD), and Blue Grass Army Depot (B47). The Army will ensure visibility of these SDRs to Army ammunition storage depots that manage Army, Service common, and Service unique ammunition stock.

C17.3.10.2.1.1.3. Global Combat Supply System-Army (GCSS-Army) Inter-Service Lateral Redistribution of Retail Assets By Inter-Service Agreement. The Army requires that these SDRs be processed by the AMI or NAMI ICP regardless of the FLIS-designated manager or the Army Supply Support Activity (SSA) providing lateral support. Any SDRs directed to the SSA will be transmitted to the default Army e-mail account pending a system interface with DoD WebSDR or alternative guidance. The Army will ensure that these SDRs will be forwarded to the appropriate Army action activity and coordinated with the LMP for financial resolution when applicable.

C17.3.10.2.1.2. Total nonreceipt SDRs

C17.3.10.2.1.2.1. Total Nonreceipt of Security Assistance Shipments from DLA Distribution Centers. ILCOs will forward SDRs directly to the DoD shipping depot regardless of implementing Component. Where the shipping depot is unknown, forward to the ICP/IMM.

C17.3.10.2.1.2.2. Total Nonreceipt of Materiel Shipped via DLA CCP.\(^{22}\)

C17.3.10.2.1.2.2.1. Customers should direct SDRs to the CCP for research. Include proof of delivery (POD) to the CCP when available. If the SDR bypasses the CCP, the source of supply will forward the SDR to the CCP for research using Reply Code 504 including POD if not provided on the initial submission.

\(^{22}\) Refer to ADC 1241.
C17.3.10.2.1.2.2.2. The CCP will reply to the customer with status of the shipment if no further action is needed. WebSDR will provide a copy of the SDR to the source of supply. If the CCP cannot provide status or if POD is not available, the CCP will annotate the SDR reply to the submitter with this information and forward to the source of supply for further research using the appropriate 300-series forwarding reply code.

C17.3.10.2.1.2.2.3. After CCP response, the source of supply will review CCP findings and conduct additional research as needed (e.g. using Integrated Development Environment/Global Transportation Network Convergence (IGC) or contacting the vendor, if necessary). As a result, the source of supply may return the SDR to the CCP for further research including the POD (if not previously attached). Alternatively, the source of supply may provide credit based upon customer-reported nonreceipt and other findings. By exception to standard procedures, GSA policy does not authorize credit when proof of delivery to the CCP is available.

C17.3.10.2.1.3. Defense Logistics Agency (DLA) Directed Shipments. Initial action to the DoD shipping activity. Where the shipping activity is not known, forward the SDR to the ICP/IMM. WebSDR will provide an information copy to the ICP when identified on the SDR and when the SDR response is provided by the shipping activity. The ICP will provide additional response to the submitter with final resolution and providing financial action when applicable. For contact information for DLA action activities refer to the DLA Customer Handbook. For assistance contact the Customer Support - Virtual Contact Center at 1-877-352-2255 (1-877-DLA-CALL) or DSN 661-7766 or e-mail: dlacontactcenter@dla.mil; or the DLA Distribution Customer Support Team at DDC.ISDR@dla.mil.

C17.3.10.2.1.4. GSA Directed Shipments

C17.3.10.2.1.4.1. GSA shipped from a GSA Supply Distribution Facility. Initial action to GSA (GSA National Customer Service Center).

C17.3.10.2.1.4.2. GSA shipped from a DLA Distribution Center. Initial action to the shipping activity. DoD WebSDR will provide a copy to GSA.

C17.3.10.2.1.4.3. Purchases made by DoD Activities from Federal Supply Schedules or GSA Open-End Contracts. The customer may coordinate off-line with the supplier for resolution. Identify GSA to receive the SDR under the following conditions:

- repetitive discrepancies,
- cases of dispute that cannot be resolved between the ordering office and the supplier, or
- product quality deficient materiel in Security Assistance shipments where GSA has provided inspection at source.
C17.3.10.2.1.5. All Other DoD Component or Participating Agency Directed Shipments. Initial action to the DoD shipping activity. Where the shipping activity is not known, forward to the ICP/IMM. WebSDR will provide an information copy to the ICP, when identified, and/or the SDR response is provided by the shipping activity.

C17.3.10.2.2. DoD Central Procurement and Direct Vendor Delivery. For materiel procured centrally by a DoD Component ICP, distribution will be as follows irrespective of the point of inspection and acceptance.

C17.3.10.2.2.1. Initial action to the procuring ICP for internal distribution to the contracting officer or designated personnel.

C17.3.10.2.2.2. Copy to office administering the contract/purchase order, if different from the purchasing office, except as otherwise prescribed for purchases made from federal supply schedules or GSA open-end contracts below. If not identified on the SDR, the initial action activity may forward as appropriate. When the Defense Contract Management Agency (DCMA) is identified as the Contract Administration Office (CAO), DoD WebSDR will provide an information copy of the initial submission and subsequent SDR transactions to DCMA.23

C17.3.10.3. Materiel Returns

C17.3.10.3.1. Use PMR or shipping documentation to identify the owner, otherwise, initial action to manager’s ICP.

C17.3.10.3.2. Copy to shipping activity.

C17.3.10.4. Shipments to DLA Disposition Services

C17.3.10.4.1. Initial action to the turn-in activity, as identified on the defense turn-in document (DTID) (DD 1348-1A, Block 2). The SDR will be sent directly to the generator’s e-mail address when available as the result of an electronic turn-in (DLA Disposition Services ETID). If ETID e-mail address is not available, WebSDR distribution will be to the turn-in activity SDR monitor or Component-sponsored SDR application.

C17.3.10.4.2. If distribution via ETID e-mail address, a WebSDR generated copy will also be provided to the turn-in activity SDR monitor or Component-sponsored SDR application.

C17.3.10.4.3. Partial Weapon Turn-in.24 When SA/LW materiel is received, DLA Disposition Services DEMIL Center, Anniston, Alabama must identify the

---

23 Refer to ADC 1052.
24 Refer to ADC 1175.
SA/LW by a valid NSN or DoD SA/LW Registry assigned management control number (MCN), in addition to a separate serial number for each individual weapon.

C17.3.10.4.3.1. Shipments of a partial weapon identified under the whole weapon NSN but lacking the required list of missing parts or a signed statement certifying that the weapons have missing parts are discrepant using Discrepancy Code D301. DLA Disposition Services will send an SDR to the turn-in activity and attempt to contact the turn-in activity off-line. DLA Disposition Services will hold rejected serialized weapons/weapon parts in a segregated location pending resolution of the SDR. If the DLA Disposition Services does not receive a reply to the SDR with the updated documentation or is otherwise unable to resolve the discrepancy within 25 days, DLA Disposition Services will return the partial weapons to the turn-in activity. If DLA Disposition Services cannot locate the turn-in activity, DLA Disposition Services will contact DoD Registry for resolution/disposition instructions or referral to the owning Service.

C17.3.10.4.3.2. If the SDR is resolved via off-line communication, the DLA Disposition Services will update the SDR via the correction process to change the action code to indicate an informational SDR (Action Code 3B), and document the resolution in the SDR remarks. This will allow all parties involved to recognize that no further action is needed on the SDR. The SDR will close automatically within the Distribution Standard System after these updates are processed.

C17.3.10.4.3.3. A turned in weapon subcomponent, such as the upper receiver, butt stock assembly, barrel assembly, etc., without its matching serialized receiver will NOT be accepted under its end item NSN under any circumstances. When identifying the serialized receiver on a weapon, the term “serialized receiver” refers to the receiver that displays or holds the serial number of a particular weapon. DLA Disposition Services will receipt the subcomponent under the applicable materiel identification for the subcomponent(s) and submit an SDR to the turn-in activity for corrective action (Action Code 3B) indicating both an item identification error and an IUID mismatch. The SDR will alert the turn-in activity to correct serialized item tracking registries as needed. It is the responsibility of the turn-in activity to correct the SA/LW Registry and IUID Registry as applicable. DLA Disposition Services will mutilate and/or destroy non-serialized weapon parts consistent with the demilitarization code requirements, local policies, laws, and regulations. The SDR will close automatically within the Distribution Standard System with no further action.

C17.3.10.5. Shipments from DLA Disposition Services. Initial action to the Disposition Services Field Office or Recycling Control Point (RCP) as applicable. If not known, SDRs may be directed to DLA Disposition Services (RIC S9D).

C17.3.10.6. Local Purchase. Follow DoD Component guidance. A copy will be furnished the Government inspector when inspection is at origin. DoD WebSDR does not support SDRs applicable to local purchase discrepancies.
C17.3.10.7. **Industrial Plant Equipment Shipments.** DLA, will review all SDRs from the initiator, make further distribution as necessary, request appropriate action from the consignor, and provide the initiator with replies from the consignor and other closeout action.

C17.3.10.8. **SDR Distribution for Packaging Discrepancies**

C17.3.10.8.1. **Contractor/Vendor Shipments**

C17.3.10.8.1.1. Initial action to the ICP.

C17.3.10.8.1.2. Copy to Contract Administration Office (CAO). For direct vendor delivery discrepancies, the ICP must ensure the contract information is included in the SDR reply if not provided by the submitter. Based upon entry of the PIID or PIID call/order for procurement source shipments, DoD WebSDR will retrieve the CAO DoDAAC from the EDA System contract files and update the SDR accordingly.25 When the contract is administered by the Service or Agency issuing the contract, the ICP is responsible for insuring the CAO has access to the SDR information. When DCMA is identified as the CAO, DoD WebSDR will provide an information copy of the initial submission and subsequent SDR transactions to DCMA. 26

C17.3.10.8.1.3. Copy to Administrative Contracting Office (ACO). The initial action activity will furnish a copy of the SDR to the ACO (or otherwise provide visibility), if a different organizational entity is involved.

C17.3.10.8.1.4. Copy to Procuring Contracting Office (PCO). The initial action activity will furnish a copy of the SDR to the PCO (or otherwise provide visibility), if a different organizational entity is involved.

C17.3.10.8.1.5. Copy to Component Packaging Monitor. SDRs for Air Force ICP-directed shipments will be provided to the designated Air Force ICP packaging monitor by DoD WebSDR under Component-unique routing rules.

C17.3.10.8.2. **DoD Originated Shipments**

C17.3.10.8.2.1. Initial action as indicated above for DoD originated shipments.

C17.3.10.8.2.2. Information copy to be provided systemically by DoD WebSDR per Component guidance. SDRs for Air Force ICP directed shipments will be provided to the designated Air Force ICP packaging monitor.

---

25 Refer to ADC 1268.
26 Refer to ADC 1052.
C17.3.10.10. The Exchange (formerly Army and Air Force Exchange Service (AAFES)). SDRs may be routed to the Exchange via DoD WebSDR to the source of supply RIC.

C17.3.11. Follow-Up on Original SDR

C17.3.11.1. Submitter Responsibility. When the action activity does not respond to an SDR within the prescribed timeframe specified in this chapter, the submitting activity must provide an SDR follow-up. Follow-ups must be directed to the last identified action activity when the original SDR was forwarded by the original recipient. Cite the SDR report number of the original report. For transactional exchange, include the WebSDR-assigned control number when known. Follow-up transactions should include all data that was in the previous SDR submission. POC information for the follow-up and the follow-up date are required. A narrative entry is required to provide clarification for the follow-up. The submitter or DoD WebSDR must forward the follow-up to the current action activity when SDR history indicates a or updated action activity has been identified (such as based upon prior Reply Code 504, 526, 527 or a 300-series reply code).

C17.3.11.1.1 SDR submitters may follow-up on SDRs sent to DLA Distribution Centers after 31 days from the submission date have elapsed. This will not ensure full resolution of the SDR, but will help identify a communication problem before the entire SDR response period has elapsed (i.e. depot and source of supply processing time).

C17.3.11.1.2. Routine SDR follow-ups (e.g. not applicable to controlled inventory items) must be submitted no sooner than 55 days from the original submission date when no response has been provided.

C17.3.11.1.3. Submitters must follow up to the current action activity after receipt of an interim reply but no further response within 55 days of the initial reply.

C17.3.11.1.4. Prior to submitting a second follow-up, the submitting activity should first attempt to ascertain the status of the SDR using the DoD WebSDR query function. If there is no record of an action activity reply, a second follow-up may be submitted or the submitting activity may contact the action activity off-line. The originator may contact DLA Distribution for distribution center shipments (direct e-mail to: DDC.ISDR@dla.mil) or the source of supply for all other shipments to request assistance. Off line communication with the action activity is recommended because electronic processing errors may have impeded timely response to the SDR and later follow-up could encounter similar issues.

C17.3.11.1.5. At 31 day intervals, the submitting activity may prepare two additional follow-ups. If the action activity has not provided a functionally significant reply after three follow-ups, DoD WebSDR will block transmission of a fourth follow-up and request that the submitter contact the action activity directly.
C17.3.11.1.6. In response to interim Reply Code 520 indicating suspected Counterfeit Materiel/Unauthorized Product Substitution (CM/UPS) materiel may be suspended for an extended period, the storage activity will limit systemic follow-up requests to once every 12 months. There will be no limit on the follow-ups allowed.

C17.3.11.1.7. In response to interim Reply Code 521 indicating suspected product quality deficient materiel may be suspended for an extended period of time, the storage activity will not follow-up for response until 120 days have elapsed, and then subsequent follow-ups should be sent every 60 days. No more than three response/follow-up transactions per SDR will be allowed.

C17.3.11.1.8. By exception, DLA Disposition Services will not generate SDR follow-ups for turn-in of partial weapons lacking the required list of missing parts or a signed statement certifying that the weapons have missing parts. Turn-in activities are required to respond to the SDR within 25 days. Additionally, DLA Disposition Services will attempt to contact the turn-in activity off-line, and if it has not resolved the issue within 25 days, DLA Disposition Services will return the serialized weapons/weapon parts or contact the DoD Registry Logistics Data Analysis Center (LDAC) for resolution/disposition instructions or referral to the owning Service. LDAC may contact others to include item managers as deemed necessary to provide resolution.

C17.3.11.2. Action Activity Procedures.27 Action activities must respond to submitter follow-ups in a timely manner. Action activities are encouraged to be responsive to submitter follow-ups in a positive way whenever possible. Rejection should be reserved for unduly late follow-ups where the elapsed time impedes proper research. Follow-ups on open SDRs submitted prior to completion of the authorized response time or after a significant delay may be rejected using the assigned reject reply code. The preferable response to follow-ups submitted after the SDR has been closed is retransmission of the original response.

C17.3.11.2.1. Upon receipt of the follow-up, the action activity will ensure that a response with disposition or interim status is provided within 30 calendar days.

C17.3.11.2.2. Action activities may reject premature follow-ups using SDR Reply Code 933.

C17.3.11.2.3. Action activities may reject late submission of follow-ups on unresolved non-FMS SDRs using SDR Reply Code 715 no sooner than 200 days have elapsed since the date of shipment if the action activity has no prior record of the SDR, or no sooner than 100 days from the date of the last transaction recorded by the action activity (e.g. an information copy of the SDR or an interim reply).

---

27 Refer to ADC 1066.
C17.3.11.2.4. The applicable ILCO is responsible for rejecting FMS SDR follow-ups considered outside acceptable time standards.

C17.3.12. Responsible Action Activity Response to an SDR

C17.3.12.1. Procedures

C17.3.12.1.1. Processing. Responsible action activities will process all discrepancy reports under the policies and procedures set forth in this publication and the DoD Component implementing regulations. Responsible action activities include all activities required to take action on a reported discrepancy. Action activities will consider the associated MRA during validation of SDRs. Conflicting information will be investigated as appropriate.

C17.3.12.1.2. Replies. Action activities will reply to SDRs by submission of a DLMS 842A/R to WebSDR or via direct WebSDR input. SDR replies will indicate the appropriate disposition, (e.g., acknowledgement of the report, disposition of the materiel, validation of the report with authorization of financial adjustment, and/or instructions for repackaging, repair or other types of corrective action). SDR replies must contain the appropriate discrepancy code consistent with all information provided by the customer. The action activity may need to update the discrepancy codes used by the customer to assign the appropriate discrepancy code for the scenario described in the SDR remarks. The action activity will identify the disposition/status using the appropriate Reply Code (Appendix 7.28). Action activities may include the applicable Cause Code (CN/CP/CS) in the SDR to provide better visibility of the underlying reason for the SDR; cause codes are required for SDR (Document Type Code 6/9/P/W) associated with contractor/vendor noncompliance. Upon subsequent determination that contractor/vendor noncompliance is not applicable, (e.g., in response to a contractor challenge), the item manager must provide a new SDR reply containing Reply Code 151 (prior response is superseded) and no cause code (or a replacement cause code not associated with the contractor noncompliance).²⁸ Action activities will ensure that inappropriate reply codes are blocked from use when responding to transshipper SDRs (Document Type Code W).²⁹ The action activity must complete shipment information applicable to direct vendor deliveries, new procurement, etc., where incomplete or inaccurate on the original report. This includes identification of the vendor (by CAGE), PIID, and identifying shipment numbers. When procurement information is populated by EDA interface, it will not be overridden by subsequent entries. DLMS compliant applications must also ensure that direct vendor delivery shipments are identified by Document Type Code 6 on the SDR reply, regardless of what the customer originally designated. However, this can only be accomplished by the source of supply when the source of supply is the designated action activity. If the SDR was misrouted to a DLA Distribution Center under the wrong document type code, the action activity must reject it and advise the submitter to resubmit with the correct information.

²⁸ Refer to ADC 1181A.
²⁹ Refer to Approved DLMS Change 317B, Action Activity Replies to Transshipper-Prepared SDRs
information. Reply transactions must be used to fulfill these requirements even where the submitter used an action code indicating that an SDR reply was not required.

C17.3.12.1.2.1. Interim Replies. Interim replies may be used to inform the submitter that an SDR has been forwarded to another organization for investigation or resolution. Responsible activities must provide an interim reply where a final reply cannot be provided within the established timeframes. Failure to meet the established timeframes must be caused by reasons outside the control of the ICP/IMM. Such interim replies will identify any other action activities involved and, when feasible, indicate when additional status will be provided. Identify the interim disposition/status using the appropriate reply code. Interim reply codes in the 300 or 500 series are typically used to designate an interim reply involving forwarding to another organization (Appendix 7.28). The storage activity will provide an interim reply when recommending credit be provided by the source of supply based upon a validated discrepancy. For this purpose, the storage activity will cite Reply Code 525 and forward the SDR using the applicable 300-series applicable to the source of supply for processing of MILSBILLS financial adjustments under Volume 4, Chapter 4. When the storage activity forwards an SDR to the source of supply for action using a 300-series interim reply code, the SDR transaction must be formatted to identify the source of supply RIC as the action activity. WebSDR will provide notification of forwarding action to the SDR initiator. This “forwarding” process and associated format will allow the reply transaction, including the initial responder’s reply remarks, to be transmitted to the new action activity. WebSDR will recognize the new action activity for reports and Web responder role access. If no coding exists to specifically identify the reasons for the delay, select Reply Code 137 and provide a clear-text explanation.

C17.3.12.1.2.1.1. Storage Activity/Initial Action Activity Forwarding to the Owner/Manager. When the SDR is directed to the shipping activity (e.g., DLA Distribution Center) or other authorized initial action activity (e.g., the NAMI program office for SDRs subsequent to inter-Component lateral redistribution) for initial investigation, the specific discrepancy or Component-directed procedures may require that the SDR be forwarded to the owner/manager for final resolution. These SDRs are forwarded using the applicable 300-series forwarding reply code.

C17.3.12.1.2.1.1.1. The SDR reply transmitted by the initial action activity using a 300-series reply code is interpreted as an interim reply and may include the results of investigation and the recommended financial resolution and disposition. It is responsibility of the owner/manager to which the SDR was forwarded to provide the final response. The final response may differ from that provided on the interim response.

C17.3.12.1.2.1.1.2. A unique formatting rule is required for 300-series forwarding replies requiring the owner/manager to which the SDR is being forwarded to be identified as the RIC-To (rather than the DoDAAC of the SDR submitter normally used as the “transaction-to” activity in the SDR reply). The RIC-To must match the owner/manager data field unless a specific exception to this rule is authorized. WebSDR will forward the SDR to the designated owner/manager for action
and a copy will be provided to the SDR submitter. WebSDR will populate the owner/manager RIC as the Transfer-To RIC in the copy of the SDR reply sent to the submitter to specifically identify the activity to which action has been transferred. When used by a storage activity, the submitter’s SDR application must be updated to reflect the new action activity while retaining the SDR in an open status.

C17.3.12.1.2.1.2. For suspected CM/UPS, the ICP/IMM may use interim Reply Code 520 (SDR materiel undergoing test/evaluation) to indicate that materiel may be suspended for an extended period of time. Upon receiving the Reply Code 520, the storage activity will limit systemic follow-up requests to once every 12 months. There will be no limit on the follow-ups allowed. Once the investigation is complete, final disposition will be provided by the ICP/IMM to the storage activity.

C17.3.12.1.2.1.3. For suspended materiel resulting in processing of a PQDR, the ICP may use interim Reply Code 521 (SDR resolution pending PQDR review) to indicate that materiel may be suspended for an extended period of time. Upon receiving the Reply Code 521, the storage activity will not follow-up for response until 120 days have elapsed, and then subsequent follow-ups should be sent every 60 days. No more than three response/follow-up transactions per SDR will be allowed. A fourth transmission of Reply Code 521 or associated follow-up will result in systemic rejection and will require manual attention.

C17.3.12.1.2.1.4. Source of Supply Returning SDR Disposition Instructions to Storage Activity/Initial Action Activity after Storage Activity Response.30

C17.3.12.1.2.1.4.1. Following initial action activity reply/forwarding and closure of the SDR by the initial activity system, the source of supply for the shipment may need to return the SDR to the storage activity/initial action activity to reopen the SDR and perform directed disposition instructions. To accomplish this, the SDR reply must identify the storage activity/initial action activity as the Transfer-To party and the appropriate interim reply code: Reply Code 526 (Credit authorized; storage activity issue reversal requested) or Reply Code 527 (SDR returned to storage activity/initial action activity for additional action (see remarks)). WebSDR will recognize this construct and make distribution to the SDR submitter and the identified action activity (or reject inappropriately forwarded SDRs with Reply Code 945).

C17.3.12.1.2.1.4.2. The storage activity/initial action activity system must reopen the SDR upon receipt of the incoming reply. Storage activity/initial action activity personnel will review the requested disposition and respond as appropriate within 25 days. If the storage activity/initial action activity is able to complete the requested action, that activity will provide a new reply to the customer citing applicable reply codes including Reply Code 151 (Replacement/revised

---

30 Refer to ADC 1217.
disposition/status; prior response is superseded). WebSDR will distribute the reply to the SDR submitter and to the source of supply based upon inclusion of the source of supply in the owner/manager/source of supply field. If the storage activity/initial action activity is unable to complete the requested deposition for issue reversal, it may forward the SDR to the source of supply for action using Reply Code 530 (Storage activity unable to perform requested issue reversal) and the appropriate 300-series forwarding reply code. If the storage activity/initial action activity is otherwise unable to complete the requested disposition, the 300-series forwarding reply applies. The source of supply should contact DLA Distribution if it does not receive a response to the returned SDR within 30 days.

C17.3.12.1.2.1.5. Item Manager Forwarding to Defense Contract Management Agency (DCMA). SDRs may only be forwarded to DCMA for action when the contract indicates that DCMA is responsible for inspection or acceptance. SDRs lacking this evidence of the discrepancy will make it difficult for DCMA to support a claim of vendor noncompliance. Therefore, if the SDR submitter did not provide evidential matter substantiating the discrepancy at time of creation, the item manager will reply to the SDR submitter and request additional information using Reply Code 104. The item manager will annotate in SDR remarks requesting photographs or documentation supporting the discrepancy reported. DLA Distribution Centers will reply to the request for evidence of the discrepancy using a Status Update with Reply Code 321. Customers (or others lacking status update functionality) must provide an SDR Correction in response to the request. SDR submitters may upload attachments via SDR if their SDR system does not provide attachment functionality. DCMA is required to reply to SDRs forward for action (Reply Code 501) within 25 days. If DCMA is unable to conclude their investigation within 25 days, DCMA will generate an interim response (e.g., citing Reply Code 503 or 515) indicating the expected timeframe for closure.

C17.3.12.1.2.1.6. DCMA Response to the Item Manager. DCMA will include the findings of their investigation in the remarks; additional information may be included using the SDR attachment functionality. These findings may include but are not limited to: validation of reported discrepancy, cause of deficiency, responsibility of deficiency, and corrective action taken to prevent reoccurrence of deficiency. DCMA will forward the SDR to the responsible item manager (original action activity) using the 300-series forwarding reply code. DCMA must provide the appropriate disposition reply in conjunction with the 300-series forwarding reply code regardless of whether or not contractor noncompliance is determined. The 300-series forwarding reply code dictates the structure of the reply transaction requiring the action activity identified as the item manager and will trigger the appropriate transfer of action in WebSDR and the receiving Component item manager system. If the item manager incorrectly forwards the SDR to DCMA for action, DCMA will return (forward) the SDR to the item manager with the appropriate 300-series reply code and clarifying remarks, (e.g., "Forwarding to DCMA for action not

---

31 Current processing uses a single multi-purpose field. Upon implementation of ADC 1126, separate discrete data fields will identify the owner, manager, and source of supply.
authorized; DCMA not responsible for inspection or acceptance.”) The item manager will provide the final reply as appropriate.

C17.3.12.1.2.2. Status Updates. Status updates (Transaction Set Purpose Set Code SU) are a unique form of reply prepared by the activity that submitted the SDR in response to the action activity. This type of transaction goes directly to the identified recipient without being copied to other parties, except to specifically identified copy recipients identified in the transaction. It is used by the storage activity to provide a status update to the ICP/IMM, often in response to an interim reply requesting clarification of the discrepancy. Using the status update format the SDR may engage in a two-way communication with the action activity. The status update may not be used to modify originally reported SDR data elements. The status update may also be used to send research findings/recommendations to the ICP/IMM (Army directed shipments only).

C17.3.12.1.2.2.1. When the SDR is routed to the ICP as the action activity rather than the shipping depot under Army SDR routing rules, it may subsequently be transferred (Transaction Set Purpose Set Code 47) to the shipping activity as a secondary action activity. The shipping activity will use the status update to provide results of storage activity research and a recommended disposition. The status update is not copied to the SDR submitting activity by DoD WebSDR, as would be applicable when using a standard reply format (Transaction Set Purpose Set Code 11).

C17.3.12.1.2.2.2. For interim replies requesting additional clarification (Reply Code 104), the submitting activity is encouraged to respond immediately, but no later than 31 day from issuance of the request. In a transactional response to the request for additional information, the submitting activity must provide a status update (Transaction Set Purpose Set Code SU) using Reply Code 321 to notify the action activity that the requested information is being provided or the submitter may provide clarification via off-line communication. No more than three request/response transactions per SDR will be allowed. A fourth transmission of Reply Code 104 or 321 will result in systemic rejection and will require manual attention.

C17.3.12.1.2.2.3. When the ICP/IMM has directed reclassification of materiel by Reply Code 608 the storage activity will perform the requested action and provide status update with Reply Code 320 (Reclassification of materiel complete). Reply Code 608 may not be used in conjunction with other reply codes. When using Reply Code 608, the action activity must provide final disposition separately by a subsequent SDR reply after the reclassification action is reported as complete. No more than three request/response per SDR will be allowed. A fourth transmission of Reply Code 608 or 320 will result in systemic rejection and will require manual attention. (Note that action activities may use Reply Code 609 to request

---

32 Refer to ADC 1044A Clarification of Business Rules associated with SDR Replies for Status Update and Completion Notification.
reclassification of materiel in combination with other disposition instructions identified via additional reply code(s) and remarks.)

C17.3.12.1.2.3. **Replacement or corrected replies.** The action activity may identify a replacement or corrected reply using Disposition Status Code 151 to indicate that the previous reply is superseded. This code may be used when a closed or completed SDR (meaning a response was already provided by the action activity) is reopened or reconsidered as a result of a formal submitter request for reconsideration; as a result of new findings during action activity review/investigation; or as a result of a mistake requiring a corrected reply.

C17.3.12.1.2.4. **Denials.** SDRs not meeting the reporting criteria or timeframes specified in this chapter or not including sufficient justification, may be considered for information only, or denied, as appropriate. DoD ICP/IMM action activities are encouraged to accept late submissions lacking justification for trend analysis/corrective action; with associated financial credit provided at the discretion of the action activity. The responsible activity will use the SDR response and cite the appropriate disposition/status (reply) code.

C17.3.12.1.2.5. **Completion Notification.** A completion notification, identified by Transaction Set Purpose Code CN in the SDR reply, will be used by the storage activity to communicate with the ICP/IMM that final action has been taken on an SDR requiring a materiel disposition action. This is equivalent to indicating that the storage activity has closed the SDR. The receiving SDR system may close the SDR as well or keep it open for additional actions. Submission of a completion notice is appropriate for all SDRs prepared by the storage activity, with the exception of those clearly identified as being provided for information only and requiring no action activity reply (SDR Action Codes 1H or 3B only). The completion notice may not be used to modify originally reported SDR data elements. It will be provided in the following specific situations and will be available for additional use as needed.

C17.3.12.1.2.5.1. The storage activity will use a completion notification to inform the ICP/IMM that all action is complete using Reply Code 410.

C17.3.12.1.2.5.2. Under selected scenarios, the storage activity may provide a completion notice without a response from the owner/manager when the SDR is automatically closed immediately after transmission. SDR Action Codes 1B (Materiel being retained) and 1G Reshipment not required; item to be re-requisitioned apply. A completion notice will be provided using Reply Code 410.

C17.3.12.1.2.5.3. The storage activity will prepare a completion notification to notify the ICP/IMM that the SDR has been closed due to zero balance on record. This will not result in an investigation as it is generally the result of processing a release order during the interim period after the SDR was prepared and

---

33 Refer to ADC 222.
34 Refer to ADC 1044A Clarification of Business Rules associated with SDR Replies for Status Update and Completion Notification.
prior to execution of the disposition instructions. The ICP may close the SDR due to the materiel no longer being available. If SDR is a Document Type 9, then the ICP must take further action to locate new procurement materiel.

C17.3.12.1.2.5.4. If a completion notice is inadvertently transmitted, the SDR may be reopened by submission of a correction citing Discrepancy Code Z6 as the first discrepancy code in the transaction. The correction must contain the WebSDR control number originally assigned to the SDR. This will allow the action activity to reopen the original record. Do not submit a new SDR (Transaction Set Purpose Code 00) in this situation as this SDR will be considered a duplicate SDR and will be rejected. A subsequent completion notice may be provided when appropriate.

C17.3.12.1.2.5.5. The storage activity will use a completion notification to inform the ICP/IMM that materiel disposition could not be completed due to zero balance at storage location using Reply Code 412 and clarifying remarks. The ICP may close the SDR due to the materiel no longer being available. If the SDR is a Document Type 9, the ICP must take further action to locate the new procurement materiel.

C17.3.12.1.3. DoD ICP/IMM, Shipping Depot, or GSA Actions. The ICP/IMM or shipping depot will:

C17.3.12.1.3.1. Review all SDRs received for processing and determine proper course of action based on available supply records and the results of investigation. This includes SDRs which the customer has reported as requiring no action (Action Code 1H or 3B).

C17.3.12.1.3.2. Provide the SDR response to include disposition instructions as needed to the customer or the ILCO for Security Assistance SDRs. The responsible activity will provide point of contact information for each SDR response.

C17.3.12.1.3.3. Based upon validated SDRs, the storage activity may reverse the original issue or adjust inventory balances, as applicable. Prior coordination with the ICP/IMM is required for use of issue reversals as a means of correcting records and providing credit to the billed party. The ICP/IMM is responsible for providing a PMR to the distribution center when the SDR reply (prepared by the source of supply or distribution center) directs return of discrepant materiel. Based upon validated SDRs, the ICP/IMM may request that DFAS or integrated financial process authorize adjustment/credit in accordance with MILSBILLS procedures in DLM 4000.25, Volume 4, Military Standard Billing System – Finance. Failure to comply with instructions to return discrepant materiel will result in billing for materiel received.

C17.3.12.1.3.3.1. The storage activity may recommend credit/debit via interim reply forwarded to the source of supply (must include applicable 300-series reply code). The storage activity response will be based upon research to include review of inventory records and physical inventory, as appropriate. WebSDR will provide an information copy of the storage activity reply to the SDR submitter.
C17.3.12.1.3.2. Upon receipt of a storage activity recommendation, the source of supply will conduct further research (supply and financial records) and provide a final reply to the SDR submitter indicating credit/debit is authorized or denied, as appropriate.

C17.3.12.1.3.4. Fulfill customer requests for expedited or replacement shipment (e.g., due to shortage, non-receipt, wrong item, or comparable discrepancy) when feasible and assets are available.\(^\text{35}\)

C17.3.12.1.3.4.1. Source of supply procedures must ensure replacement shipments do not incur double billing. Therefore, credit will be provided for the original shipment when applicable. Security Assistance customers will not be explicitly excluded from receiving a replacement shipment. The source of supply will reprocess the customers’ requirements using the original document number suffixed to ensure separate billing and unique TCN assignment. Source of supply processing must trigger relevant supply and shipment status. Expedited Transportation Handling Signal 777 in response to a non-Security Assistance customer request for expedited shipment may be assigned when the original special requirements code (legacy required delivery date (RDD) field is blank or all numeric (other than 444, 555, or 777) or the RDD from the original requisition is less than 8 days from the current date. Inclusion of the Expedited Transportation Signal 777 will normally cause the shipment to move by premium (air) transportation. Shipments identifying Expedited Transportation Signal 777 are subject to air clearance processing whereby the air clearance authority may consult with the requisitioner to determine if the additional expense associated with air transportation is justified and potentially direct shipment movement by a surface mode.

C17.3.12.1.3.4.2. If reshipment cannot be accomplished, respond with Reply Code 126 (Stock not available or will not be reshipped in response to SDR) and up to two additional reply codes, as applicable. Customers will be required to re-requisition materiel that is still required.

C17.3.12.1.3.5. Provide signed evidence of shipment to the ILCO for Security Assistance SDR for non-receipt of materiel. If this documentation cannot be provided, appropriate credit is required.

C17.3.12.1.3.6. Provide documentation to the ILCO that is matched to the quantity shipped for Security Assistance SDRs for concealed shortages. Examples of such documentation are those containing size, total weight, and cube accepted by the carrier. Credit is denied if the documentation, in conjunction with the unit weight, supports shipment of the total quantity billed. Otherwise, appropriate credit for the differences is required.

C17.3.12.1.4. Disposition of Materiel. Use the SDR response as an action reply for those discrepant conditions requiring disposition instructions to the

\(^{35}\) Refer to ADC 1091, SDRs Requesting Expedited or Replacement Shipment.
reporting activity, (e.g., overages, damages (USPS), deficient materiel (Security Assistance), or erroneous or misdirected materiel).

C17.3.12.1.4.1. Customer Returns. In many cases, logistics business rules require that the return shipment use the same document number as the related order/sale. While this reuse may be appropriate for some materiel held at the customer’s location, it is not feasible for all situations. When the materiel is already located in a DLA Distribution Center and no physical shipment is required to return the materiel to the original owner/manager, the current owner must not reuse (or suffix) the original document number for the Prepositioned Materiel Receipt (PMR) and Materiel Release Order (MRO) directing the return. The responsible action activity must assign an alternative document number when materiel is located in a DLA Distribution Center and the current owner must use a ship-in-place materiel release order to direct the return. Additionally, submitters must use the reconsideration request to ask for an alternative document number due to system constraints prohibiting reuse of the original shipment document number. When using a new document number for the directed return of discrepant/deficient materiel, the owner/manager and the returning activity must retain an audit trail linking the old and new document number/suffix (both document numbers will be included in the PMR, Materiel Returns Shipment Status, and Receipt transactions). The SDR reply will include the date by which the customer is requested to return the materiel to the designated location. The ICP will require expedited return where appropriate, such as FMS classified/sensitive item returns, and overage returns for back-ordered materiel not available within another customer’s required delivery date. Identify the return-to location by DoDAAC or CAGE (use for contractors when no DoDAAC is assigned). Clear text addresses may be included in addition to the DoDAAC and must be included in the SDR Reply remarks text for returns directed to the contractor identified by a CAGE only. The source of supply will provide reimbursement for packing, crating, handling, and transportation for directed returns under MILSBILLS procedures in DLM 4000.25, Volume 4, Finance, procedures. Use of the Defense Transportation System (DTS) for the return movement is encouraged except where use of a designated commercial carrier is more cost effective/efficient or transportation cost will be borne by another party (e.g., a vendor for return of nonconforming materiel). As an alternative to providing transportation reimbursement, the responsible action activity may provide the transportation account code (TAC) chargeable for the transportation services or direct use of a commercial carrier by providing the paying activity’s carriers account number or a pre-paid return shipping label. In those cases where an exhibit of the discrepant materiel is directed for return, the activity requesting this action will pay for exhibit shipment costs. Action activities will either furnish DD Form 1348-1A for materiel to be returned or provide comparable information to accomplish the return. A copy of the SDR and the shipment document will be included with returned materiel and annotated as an “SDR RETURN.” When discrepant materiel is directed for return to a contractor, a hard-copy SDR including disposition instructions will be included with the shipment. No statement

36 Include return-to location, suspense date, return document number/suffix, and (when applicable) carrier tracking number in the SDR Reply remarks text pending full implementation of discrete transaction data fields. Refer to ADC 1249.
adversely affecting the Government's claim will be shown on any documentation returned to the contractor. For non-Security Assistance customers, materiel not returned as directed within 90 calendar days (if CONUS) or 120 days (if OCONUS) of the SDR reply will be billed.

C17.3.12.1.4.2. DLA Distribution Center Returns and Transfers to DLA Disposition Services. SDR disposition instructions to DLA disposition centers may direct disposal or shipment of discrepant/deficient materiel to another location (e.g., return to a vendor) using the appropriate SDR reply code. This type of SDR disposition must be provided concurrent to transmission of the DLMS 940R Materiel Release Order in accordance with MILSTRIP procedures in DLM Volume 2 for clear audit history for inventory reporting. The DLMS MRO supports discrete identification of the carrier and the carrier account number to allow systemic recognition of this information and ensure the appropriate party is charged for the transportation of the nonconforming materiel.\(^{37}\)

C17.3.12.1.4.3. Corrective Action for Packaging Discrepancies. Responsible activities will immediately investigate reported discrepancies and take action to prevent their recurrence. An indication of what corrective action will normally be included in the SDR reply. An information copy will be sent to the appropriate Component packaging monitor. For shipments of ammunition, explosives, or other hazardous materiel, the DoD or GSA responsible activities must provide reports of corrective action in all cases. Wherever possible, use the reply code and SDR remarks to show the corrective action. A corrective action statement may be recorded on a separate document if additional space is required. Statements of corrective action will also be sent when requested by the SDR initiator or upon special request of the Component packaging monitor. For contractor originated shipments, investigating activities will send an information copy of the results of their investigation to the responsible procurement activity or commodity command. Reports of corrective action must not be delayed pending final determination of the contracting officer when reimbursement is warranted. Report final actions when completed. When a Contract Administration Office (CAO) investigating activity finds corrective or preventive action is outside the scope of contract administration and requires action by the procuring activity, the SDR and investigation report will be forwarded to the procuring activity for action, with information copies to the appropriate Component packaging monitor and the initiator.

C17.3.12.1.4.4. Packaging Discrepancies Noted at a Distribution Center. The ICP will annotate the SDR to indicate that distribution center repackaging is approved or not approved. If the ICP authorizes corrective action, the SDR will also show the appropriate funding/authorization document, (e.g., job order number, Military Interdepartmental Purchase Request (MIPR) number, or SF 1080), to which the distribution center may charge the corrective action costs. After completing corrective action, the distribution center will annotate the actual cost of the work performed, note the date completed, and forward a copy to the ICP for close-out.

\(^{37}\) Refer to ADC 1164
C17.3.12.1.4.5. Corrective Action for Non-Compliant WPM. Action activities in receipt of SDRs reporting WPM non-compliance under generic packaging discrepancy codes must reassign the discrepancy code to P215 on their responses. This supports mandatory tracking and trend analysis using automated SDR applications. In the event the shipment becomes frustrated, the action activity will provide instructions for corrective action in order to bring the shipment into conformance or otherwise direct remedial action. Corrective actions and options will be based upon the circumstances of the quarantined/frustrated shipment, value and priority of the shipment, access to the shipment by DoD personnel, and location of the consignee. Alternatives include:

C17.3.12.1.4.5.1. Inspection, certification, and marking of compliant WPM,

C17.3.12.1.4.5.2. Replacement of the WPM,

C17.3.12.1.4.5.3. Consignee pick-up of the materiel only, or

C17.3.12.1.4.5.4. Return to origin or designated location.

C17.3.12.1.4.5.5. Repacking and disposal costs associated with non-compliant WPM receipts that will be the responsibility of the owner of the stock directing shipment (i.e. last identified shipper or item manager). Photographic evidence may be requested to substantiate a claim for the recoupment of funds expended in bringing the shipment into compliance. Where applicable, the reporting activity may submit an SF 1080, “Voucher for Transfers between Appropriations and/or Funds.”

C17.3.13. Time Standards

C17.3.13.1. Submitting SDRs and SDR Responses. This section provides standard timeframes for submission of SDRs and SDR responses.

C17.3.13.1.1 Timeframes for SDR Submission by Non-Security Assistance Customers. An SDR will be submitted by receiving activities and/or transshipment activities as soon as possible, but not later than the time standards listed below. SDRs not meeting the reporting criteria or timeframes specified in this guidance that do not present sufficient justification will be processed for information only. Routine time standards, special rules, and exceptions are:

C17.3.13.1.1.1 CONUS Destinations: 60 calendar days from date of shipment.

C17.3.13.1.1.2. Overseas Destinations: 120 calendar days from the date of shipment

C17.3.13.1.1.3. Discrepant Controlled Inventory Items, Arms, Arms Parts, Ammunition, and Explosives. Report discrepancies within 24 hours of discovery for shortage, overage, wrong item, misdirected shipments. This includes stock number
materiel with a catalogued controlled inventory item code (CIIC) indicating the item is identified as classified or sensitive. In addition, pilferable codes associated with arms and ammunition are also included (codes N and P) in this category.

C17.3.13.1.1.4. **Exceptions:**

C17.3.13.1.1.4.1. Time limits do not apply to short shipment and wrong item discrepancies discovered upon opening a sealed vendor pack.

C17.3.13.1.1.4.2. Time limits do not apply to those IUID discrepancies that must be reported to ensure the IUID registry and/or owner records are properly maintained.

C17.3.13.1.1.4.3. Time limits for reporting discrepancies relating to contractor warranties are prescribed in individual warranty clauses and/or contracts. Those time limits override other time limits specified in this chapter.

C17.3.13.1.1.5. **Late Submission.** When circumstances prevent compliance with the above time standards, (e.g., response to a tracer action reveals a supposed transportation discrepancy to be a shipping/packaging discrepancy), the reasons for delay will be provided in a brief clear-text explanation. If appropriate, the responsible activities will honor the discrepancy report. Reporting activities are required to send SDRs to report a shipping or packaging discrepancy even after the above submission time standard has elapsed. If lacking justification, action activities will process for use in reporting metrics and corrective action, if appropriate. The source of supply will not be responsible for financial resolution on late submission SDRs unless shipment history is available and the circumstances warrant such action.

C17.3.13.2. **Time Standards for SDR Response.** Responsible action activities will reply to all SDRs received within the following time standards. Interim responses will be provided when extenuating circumstances necessitate additional processing time.

C17.3.13.2.1. Discrepant materiel classified SECRET or above, or nuclear weapon related materiel (NWRM) (shortage/overage/wrong item/mismatched IUID/misdirected): The action activity must respond to the discrepancy report within 24 hours and must take appropriate corrective actions to preclude additional recurrences of the discrepancy. When the discrepancy requires further research for resolution, the action activity must provide an interim response within 24 hours indicating that the SDR is being given appropriate attention and will be followed by a comprehensive response within 15 business days (inclusive of sequential processing by multiple action activities when necessary).

C17.3.13.2.2. Discrepant controlled inventory items other than those classified SECRET, or above or NWRM, arms, arms parts, and explosive and inert ammunition (shortage/overage/wrong item/mismatched IUID/misdirected): Total response time, to include sequential processing by multiple action activities when necessary, will not exceed 25 calendar days.
C17.3.13.2.3. Wrong item receipts identified as controlled/sensitive or above and NWRM and unidentified items will be returned to the designated location within 30 calendar days of the SDR reply. Sources of supply will monitor for the return and follow-up with the SDR submitter if materiel is not returned.

C17.3.13.2.4. Expedited processing is required for transshipper prepared SDRs requiring positive action from the action activity (e.g., preparation of SDS or verification of label/markings information. Where forward movement of the shipment is delayed pending a response as indicated by Action Code 3A, the response time will not exceed 5 calendar days.

C17.3.13.2.5. SDRs for materiel identified in Supply Condition Code (SCC) K, Suspended (Returns): Action activities will coordinate with the receiving depot, as needed, and provide a SDR reply within 50 days directing reclassification within the MILSTRAP time standard.

C17.3.13.2.6. Distribution centers will respond to SDRs submitted directly to the shipping activity within 25 calendar days. Responses from distribution centers may be confirmed or superseded/corrected by a later response when Component business rules require sequential processing by the source of supply and the finance center.

C17.3.13.2.7. ICP/IMMs will respond to SDRs submitted directly to the source of supply within 50 calendar days. Where sequential process by distribution center and ICP/IMM are required, total processing time will not exceed 50 calendar days.

C17.3.13.2.8. Action activities receiving SDRs inappropriately will make every effort to forward to the correct action activity within 5 calendar days. Customers should be aware that misrouting of SDRs may extend total processing time beyond the authorized 50 calendar day processing time.

C17.3.13.2.9. Turn-in activities receiving SDRs from DLA Disposition Services for turn-in of partial weapons lacking the required list of missing parts or a signed statement certifying that the weapons have missing parts will respond to the SDR within 25 days. DLA Disposition Services will attempt to contact the turn-in activity off-line, but there will be no SDR follow-up.

C17.3.13.2.10. DCMA will respond to SDRs forwarded for action within 25 calendar days.  

C17.3.13.3. Transfers of IMM Responsibilities

C17.3.13.3.1. Logistics Reassignment.

38 Refer to ADC 1181A.
C17.3.13.3.1.1. Under the logistics reassignment procedures, IMM responsibility for an item may have been transferred to another DoD Component after the date of shipment. In these instances, a single discrepancy reported on a requisition line-item may require action and/or reply from two different DoD Components (e.g., shipper's ICP/IMM and gaining item manager (GIM)). For example, on receipt of an incorrect item, one DoD Component could be responsible for the investigation (shipping activity) and the initiation of a billing adjustment (shipper's ICP/IMM) for the item billed (but not received), and the GIM would be responsible for providing disposition instructions for the erroneous materiel.

C17.3.13.3.1.2. SDRs applicable to storage activity procurement source receipts after logistics reassignment where the LIM issued the contract will be reported to the LIM based upon the PMR. The LIM is responsible for negotiation with the contractor for resolution of the discrepancy. If no PMR was provided, the SDR may be reported to the item manager (the GIM). If the GIM had no due-in for this materiel, the SDR will be rejected with Reply Code 901 (submitted to wrong source of supply) and remarks text directing resubmission to the LIM, or forwarded (via Reply Code 504) to the LIM for action.

C17.3.13.3.2. Response Coordination. It is not the responsibility of the SDR initiator to forward copies of the SDR to all parties involved. Instead, it is the responsibility of the LIM to coordinate with the GIM for an appropriate response/disposition to the submitter. The LIM may provide an interim response citing financial resolution and including Reply Code 506 (indicating the SDR is forwarded to the GIM for disposition of materiel) and the appropriate 300-series forwarding reply code. The transaction must identify the GIM as the RIC-To in accordance with formatting rules for this type of forwarding. WebSDR will use this value to populate the Transfer-To activity in the forwarded transaction, which will be provided to the customer and to the GIM. Additionally, the presence of Reply Code 506 will trigger WebSDR to provide an information copy of the SDR to the GIM. The LIM must maintain the SDR in an open status until the GIM has provided a disposition response.

C17.3.14. Contested Decisions for Non-Security Assistance Related Discrepancies. When the SDR originator does not concur with a reply/disposition received in response to an SDR, they will forward the SDR indicating a contested decision. Requests for reconsideration pertaining to distribution center shipments will be forwarded to the shipping depot; all others will be forwarded to the source of supply. Requests for reconsideration must be submitted within 45 calendar days from date of action activity response. Cite the SDR report number of the original report. For transactional exchange, SDR applications will include the WebSDR-assigned control number when known. Requests for reconsideration transactions require all data that was in the previous SDR submission. In addition, a narrative entry is required to provide justification for reconsideration. POC information for the new submission and submission date is required. An SDR must be in a closed status before a request for reconsideration can be submitted (this means the action activity reply to the SDR must be recorded within the applicable Component application). The designated recipient of the request for reconsideration will review all data relating to the problem and provide a
response to the reporting activity with information to all concerned parties within 45 calendar days. When the shipping depot is unable to respond to the contested SDR, the depot will forward the SDR to the source of supply for resolution (when the SDR is forwarded, the 45 calendar days for processing and evaluation will begin when the SDR is received by the source of supply). The resulting decision will be final.

C17.3.15. Correction and Modification/Update of Original Report. When the originator needs to modify discrepancy information or requested action concerning a previously submitted SDR, a new transmission of the SDR may be used. Indicate that the SDR is a modification or correction and forward to all parties who received the original submission. Cite the nonconformance report number of the original report. SDR applications will include the WebSDR-assigned control number when known. SDR applications will include revised content and the original unchanged discrepancy information from the original report using the DLMS 842A/W. POC information applicable to the revised SDR is required. A brief narrative description of the revision must be included. Significant errors, such as an incorrect requisition document number suffix or owner/manager identification on storage activity-submitted SDRs, must be corrected by canceling the original SDR and submitting a new report.

C17.3.16. Cancellation of an Original Report.

C17.3.16.1. When an SDR originator discovers a previously reported SDR is not valid or appropriate for any reason and should be withdrawn, a new SDR cancellation must be prepared to cancel the original. Forward to all parties that received the original submission. Cite the original report number. SDR applications will include the WebSDR-assigned control number when known. POC information applicable to the cancelled SDR is required. A brief narrative description of the reason for cancellation must be included.

C17.3.16.2. If an SDR is inadvertently cancelled, it may be reopened by submission of a correction citing Discrepancy Code Z6 as the first discrepancy code in the transaction. The cancellation must contain the WebSDR control number originally assigned to the SDR. This will allow the action activity to reopen the original record and retain the relationship between that SDR and the newly submitted content. Do not submit a new SDR (Transaction Set Purpose Code 00) in this situation as this SDR will be considered a duplicate SDR and will be rejected.

C17.3.17. Historical SDR Purpose and Procedures. During the design for WebSDR, Components using internal SDR systems identified a need for a business process that would allow SDRs to be worked internal to the Component or internal to the Component’s SDR application without providing standard transaction/e-mail outputs from WebSDR. Historical SDRs (identified by Transaction Set Purpose Code 49) were established for this purpose. Historical SDRs are currently employed by one system: the Product Data Reporting and Evaluation Program (PDREP). For PDREP-generated SDRs, the use of historical SDRs allows WebSDR to have a full record of the SDR history for query and management report preparation without impacting the internal PDREP procedures. Without this process, there would be duplicate dissemination of
SDRs or, conversely, gaps within the WebSDR database. PDREP system design must ensure a new original is provided to WebSDR if, subsequent to initial submission, it is determined that the SDR must be transmitted to an external action activity.

C17.3.18. **Follow-up on Credit Adjustments on SDRs.** When an action activity has indicated that a credit adjustment has been authorized, reimbursement is normally provided to the fund code/line of accounting and bill-to address cited on the original requisition. When concerned about an apparent non-receipt of credit and 60 calendar days has elapsed, the SDR submitter should consult the bill-to finance office for verification. When non-receipt of credit is confirmed, the financial office will submit a request for billing adjustment as prescribed by MILSBILLS procedures in DLM 4000.25, Volume 4, Finance.

C17.3.19. **Materiel Receipt Acknowledgement (MRA).** ICPs will monitor for discrepancies reported on MRAs (DLMS 527R) to ensure identified discrepancies have been properly reported.

C17.3.20. **Defense Automatic Addressing System (DAAS) SDR Processing**

C17.3.20.1. **Under DLMS, SDRs are integrated with standard logistics transaction processing through DAAS.** DLMS transaction formats are available in ASC X12 EDI or EDI-based XML. Guidance for transaction content is provided in DLMS ICs available on the DLMS IC page. DoD WebSDR will perform the following actions:

C17.3.20.1.1. **Pass/route SDR transactions.** The following special rules apply:

C17.3.20.1.1.1. **Generate and route an SDR reply citing Reply Code 103, Discrepancy Report Receipt Acknowledgement** each new SDR submission to the submitting system based upon agreement with the submitting Service/Agency. The timing of the acknowledgement reply is dependent upon the original SDR and any associated attachments posting to the WebSDR database. When the transaction identifies that attachments are being provided and the attachments are not received/accepted, the record will post in WebSDR without the attachments in approximately 16 hours (64 processing cycles) after receipt and the acknowledgement will be transmitted. When this happens, the submitting system point of contact will also receive an error message e-mail from WebSDR that attachments never linked up. A correction may be used to attempt posting of the corrections. The WebSDR transaction receipt acknowledgement will be used by the submitting system to append the WebSDR-assigned control number to the internal system record for the specified SDR so that subsequent updates transmitted to WebSDR will be linked to the correct original SDR. The submitting system must recognize the limited purpose of these SDR replies provided by WebSDR to prevent inadvertent update of the SDR action activity to RIC SGA (DAAS).39

---

39 Refer to ADC 1026.
C17.3.20.1.1.2. Generate and route an information copy of each SDR reporting packaging discrepancies associated with Air Force-directed shipments to the Air Force packaging monitoring office.

C17.3.20.1.1.3. Route the action copy of SDRs reporting distribution center receipt of PQDR exhibits (Discrepancy Code Q11) to the materiel owner by agreement with DLA. For Air Force owners, this process will use an electronic (e-mail-based) interface with the Air Force processing system for product quality deficiencies.

C17.3.20.1.1.4. Provide special e-mail routing of the action or distribution copy of transshipper prepared SDRs upon Component request.

C17.3.20.1.1.5. Return unroutable transshipper prepared SDRs to the submitter for continued processing off-line.\(^{40}\)

C17.3.20.1.1.6. DoD WebSDR will route submitter transactions for follow-up to the current action activity when SDR history indicates a new or updated action activity has been identified (such as based upon prior Reply Code 504, 526/527 or a 300-series reply code). WebSDR will disseminate other transaction types based upon the identified action activity (current action activity after Reply Code 504 forwarding) and SDR distribution rules.

C17.3.20.1.2. Edit SDR transactions in accordance with business rules specified below. Additionally, DoD WebSDR will edit SDRs to improve data consistency and the appropriateness of data content as follows:

C17.3.20.1.2.1. The owner/manager may not be identified by a routing identifier associated with a Distribution Center or a CCP.

C17.3.20.1.2.2. The shipping activity may not be identified by the RIC associated with an inventory control point or item manager. Additionally, WebSDR users may not identify RIC SD9 (DLA Vendor Shipment Module) as the shipper.

C17.3.20.1.2.3. Inappropriate entries will be overlaid with the correct value, if available, from DAAS history.\(^{41}\)

C17.3.20.1.2.4. SDRs directed to obsolete DLA supply center RICs will be redirected to DLA Enterprise Business System.

C17.3.20.1.2.5. SDRs that contain a PIID will be edited to ensure that the shipper is populated correctly. DoD WebSDR will match the PIID against the Electronic Document Access (EDA) System contract files to identify the

---

\(^{40}\) Refer to ADC 317, Revised Business Rules for Transshipper-Prepared Supply Discrepancy Reports. Implementation delayed.

\(^{41}\) Refer to ADC 425, Revised SDR Codes and Procedures, including Incorrect Part Number Discrepancy Codes and DoD WebSDR Data Edits and Forwarding Enhancement.
vendor/contractor CAGE code and the applicable CAO DoDAAC. If a match is found, these values from the EDA contract information will update in the SDR record. WebSDR will override user input with EDA values if different. In addition, WebSDR will retrieve the base contract number from an EDA response to a PIID call/order number search. WebSDR will retain the base contract number for use in management reports and user queries.\(^{42}\)

C17.3.20.1.2.6. If discrete values for the SLOA data elements in the transaction (new SDRs, correction, follow-up, and request for reconsideration) do not match data elements from the SFIS Fund Code to Fund Account Conversion Table for the Fund Code in the transaction, reject with the DLMS 842A/R SDR Reply citing Reply Code 943.

C17.3.20.1.2.7. If the SDRs contain a constructed document number, check if fund code is invalid/missing. If fund code is invalid/missing, reject with the DLMS 842A/R SDR Reply citing Reply Code 943.\(^{43}\)

C17.3.20.1.2.8. Edit new submission SDRs (transactions and direct input) to ensure the requirement for mandatory inclusion of serial number for UIT program items is met. Reject SDRs identifying a discrepant condition, shortage, overage, or IUID data mismatch with no identified serial number using Reply Code 946. Refer to Table C17.T.2 for applicable discrepancy codes.

C17.3.20.1.2.9. Edit new submission SDRs (transactions and direct input) to enforce the serial number convention that the serial number maximum field length may not exceed 30 characters and may only include alpha numeric (A-Z, 0-9), dashes and forward slashes. Spaces are not allowed. Reject SDRs with serial numbers not meeting this convention using new Reply Code 947 (Transaction Rejected. Invalid serial number length or convention.

C17.3.20.1.3. Convert SDRs for e-mail distribution where SDR transactions are not feasible due to lack of an established SDR application interface.

C17.3.20.1.3.1. Upon determination that an e-mail (vice transaction) is to be prepared for a specific SDR communication, DAAS will check to determine if the appropriate e-mail certificate has been registered. If registered, the SDR e-mail transmission will be encrypted as FOUO. The e-mail SDR will contain all associated SDR content as well as clear text addresses and code explanations to facilitate interpretation. If not registered, an abridged content SDR report, confirmation, distribution copy, or reply, as appropriate, will be prepared. The e-mail sent to the user will also provide information on how to access WebSDR and instructions on registering the e-mail certificate.

\(^{42}\) Refer to ADC 1168.
\(^{43}\) Refer to ADC 1043E.
C17.3.20.1.3.1.1. Abridged SDR. The abridged unencrypted version of the SDR e-mail will include the following data content. Coded information will not include the corresponding clear-text explanation. The submitter and action activities will not be identified by clear-text addresses.

- DoD Web SDR Report Control Number
- Additional System SDR Control Number
- Customer-Assigned Control Number
- Document Number/Suffix
- PIID
- Transportation Control Number
- Date of Preparation
- Document Type Code
- DLA Disposition Services SDR Type Code
- Discrepancy Code(s)
- Action Code
-Submitter (Activity From)
- SDR Point of Contact
  - Name
  - Commercial Phone or DSN
  - E-mail
- Attachment/Off-line Flag

C17.3.20.1.3.1.2. Abridged SDR Reply. The abridged unencrypted version of the SDR Reply e-mail will include the following data content. Coded information will not include the corresponding clear-text explanation with the exception of the Reply Disposition Code which must include text for understanding. The submitter and action activities will not be identified by clear-text addresses.

- DoD WebSDR Report Control Number
- Additional System SDR Control Number(s)
- Original Reference Number
- Document Number/Suffix
- PIID
- Transportation Control Number
- Reply Date
- Document Type Code
- DLA Disposition Services SDR Type Code
- Reply Code(s)
- Action Activity (Activity From)Submitter (Activity To)
• Comments/Remarks
• Reply POC
  o Name
  o Commercial Phone or DSN
  o E-Mail
• Attachment/Off-line Flag

C17.3.20.1.3.1.3. Organizations that are not supported by an SDR application for transactional reference will provide to DAAS an e-mail address to be linked with their DoDAAC/RIC for e-mail distribution.

C17.3.20.1.3.1.4. Each DoD Component will designate to the DoD SDR System Administrator a specific e-mail account or point of contact to receive unroutable SDRs for manual attention. This is required to ensure operational support where no SDR application or e-mail address has been identified for an SDR recipient, or an attempted e-mail distribution has failed due to an invalid address.

C17.3.20.1.4. Maintain historical records of SDRs and associated transactions.

C17.3.20.1.5. Provide access to SDR information via Web Visual Logistics Information Processing System (WEBVLIPS).

C17.3.20.1.6. Provide ad-hoc queries and management reports.

C17.3.20.1.6.1. WebSDR provides visibility of all transactions associated with the WebSDR-assigned control number via query by producing a composite view of the SDR. The composite view provides a “snapshot” of the SDR history by displaying header information followed by an abbreviated view of each individual associated transaction in date sequence (with most recent at the top). The composite view includes both valid and rejected transactions. Users are able to drill down to a detail view of any of the individual transaction records by selecting the applicable link.

C17.3.20.1.6.2. Management reports are restricted by SAR roles and responsibilities. After initial approval, users must contact the DAAS WebSDR help desk for assistance to obtain the appropriate settings for required visibility.

C17.3.20.1.6.3. Authorized users have the ability to tailor management reports to meet desired criteria by using the WebSDR management report selection screen. This functionally supports hundreds of variations in selection criteria, but employs a standard display format for all search results. The initial summary view provides a breakdown display by discrepancy code count and dollar value arrayed by action activity, submitter, or owner/manager as selected by the user. Users are able to drill down to a listing of SDRs applicable to any of the highlighted totals contained within the summary report. By selecting the grand total in the lower right corner of the report,
the management report will be converted to a listing of all the relevant SDRs displaying most of the content data. The WebSDR control number is hyperlinked to the composite view described in the above paragraph.

C17.3.20.1.6.4. Management reports may be viewed on-line or WebSDR will provide an encrypted e-mail to the user’s SAR e-mail address containing the requested report in EXCEL format. Note that the on-line display may not include all the selected SDRs due to size restrictions for display; however, the EXCEL report provided via e-mail will contain all applicable records.

C17.3.20.1.7. Maintain the DoD WebSDR as a value-added service to support submission, reply, and other functions related to SDR processing.

C17.3.20.1.8. Convert CCP-generated SDRs for e-mail distribution pending owner/manager ability to process electronically.

C17.3.20.2. WebSDR will edit SDR transactions prior to passing/routing to ensure minimal standards of acceptability. Reject to the generating activity SDR and follow-on transactions that do not meet the following conditions:

C17.3.20.2.1. SDR transactions must contain valid values as appropriate to the transaction purpose: discrepancy code, action code, and reply code. Reject with Disposition/Status Code (Reply) Code 915, 916, or 927. When populated, the materiel location on Security Assistance SDRs must contain a valid code (Reply Code 919).

C17.3.20.2.2. SDR must include materiel identification. Materiel identification may consist of the NSN, manufacturer’s part number and manufacturer’s CAGE, or as authorized under DLMS for unique business processes (e.g. “mixed” or “unknown” for transshipper SDRs and local catalog identification number). Where wrong item discrepancies are reported, materiel identification of the wrong item must be included. Wrong item received may be identified as previously indicated or by description alone (citing “UNKNOWN” as the wrong item part number). Reject with Disposition/Status (Reply) Code 931.

C17.3.20.2.3. SDRs reporting materiel received is not in the correct condition must include valid condition codes to identify the received conditions. Only valid condition codes will be permitted. The condition code must be appropriate for the discrepant materiel and associated action activity or source of supply (i.e., Supply Condition Code N, V, and T may not be directed to the DLA ICP). Reject with Disposition/Status (Reply) Code 928.

44 Refer to ADC 452, Implementation of DOD WebSDR Automated SDR Rejection Capability.
45 Refer to ADCs 282, CCP-Originated SDRs including Noncompliant WPM Procedures and Shipment Hold Code; 317, Revised Business Rules for Transshipper-Prepared SDRs; and 322, Addition of Local Catalog ID qualifier to Support Requirements for Theater Enterprise-Wide Logistics System (TEWLS) Requisitions. Local Catalog ID implementation delayed.
C17.3.20.2.4. SDRs coded to indicate narrative is required must provide applicable narrative. Reject with Disposition/Status (Reply) Code 924.

C17.3.20.2.5. SDRs must include minimal point-of-contact information to include name and phone/e-mail. Reject with Disposition/Status (Reply) Code 920 or 921.

C17.3.20.2.6. Only valid DoDAACs and RICs will be permitted. Reject with Disposition/Status (Reply) Code 929. Organizations identified must be authorized for the purpose identified by the transaction.

C17.3.20.2.6.1. SDRs may not be directed to RIC SGA (DAAS) or SD9 (DLA Vendor Shipment Module) or identify RIC SGA RIC SD9 as the shipper. (The only exception is for RIC SGA on SDR replies citing Reply Code 936 (Request DoD WebSDR provide an information copy of the original report).)

C17.3.20.2.6.2. New SDRs directed to DCMA as the initial action activity will be rejected with Reply Code 929 and remarks text indicating that the SDR must be submitted to the responsible Service/Agency action activity (e.g. ICP/IMM) whose the contract performance resulting in the reported discrepancy. DCMA may be identified as a distribution copy recipient.46

C17.3.20.2.6.3. WebSDR will reject storage activity-submitted SDRs (Document Types Codes 8, 9, R, A, N, and P) attempting to change the value of the owner or manager after original submission using Reply Code 929.

C17.3.20.2.7. Quantity fields will only allow entry of numeric values. Reject with Disposition/Status (Reply) Code 917 or 918.

C17.3.20.2.8. SDR replies coded to indicate that a ship-to/mail-to address or additional information is associated with the reply, must include the specified additional address or information as transaction data fields and must include narrative remarks to reflect the address (due to limited implementation of the separate address fields). Reject with Discrepancy Status/Disposition Code (Reply) 924.

C17.3.20.2.9. SDR follow-ups must comply with follow-up submission timeframes. Follow-ups submitted without allowing sufficient action activity response time will be rejected (see section C17.3.13. Reject with Discrepancy Status/Disposition Code 933 (implementation pending).

C17.3.20.2.10. SDR follow-ups and contested SDR/reconsideration requests will not be submitted against cancelled SDRs. Reject with Discrepancy Status/Disposition Code 907.

---

46 Refer to ADC 1005.
C17.3.20.2.11. SDR corrections and follow-ups will not be submitted when no valid corresponding SDR record is on file or when the original SDR was rejected. Reject with Discrepancy Status/Disposition Code 907.

C17.3.20.2.12. Reply with Discrepancy Status/Disposition Code 504 forwarding action may not be used to forward SDRs where incomplete information is available to construct the new forwarded SDR, or the SDR is otherwise not suitable for automated forwarding action. Reject with Discrepancy Disposition/Status (Reply) Code 935.

C17.3.20.2.13. WebSDR direct online application input and SDR transactions will be rejected for any SDR Document Type Code other than 7 or R, or any SDR using Reply Code 504 with any other reply code. Reject with Discrepancy Disposition/Status (Reply) Code 946.

C17.3.20.2.14. SDR document numbers and associated suffix codes must conform to MILSTRIP standards. A temporary exception is allowed for Air Force maintenance document numbers used between the Air Force item manager and the supporting depot. The full document number edit does not apply to transshipper SDRs (Document Type W) due to the potential for reporting against the shipment unit rather than a specific document number. For these SDRs, the document number must be filled and must be 14 positions. It may contain a 14 position purchase request number, the first 14 positions of the transportation control number, or a constructed document number based upon the DoDAAC of the port submitting the SDR. Reject with Discrepancy Status/Disposition Code 910.

C17.3.20.2.15. SDRs must contain valid transaction set purpose codes and document type codes as shown in the applicable DLMS IC. Reject with Discrepancy Disposition/Status (Reply) Code 938 and 939, respectively. Submitting system personnel will be notified of invalid transaction set purpose codes.

C17.3.20.2.16. SDRs associated with new procurement (Document Type 9 or P) must contain the applicable PIID and contractor-assigned shipment number. Reject with Discrepancy Disposition/Status (Reply) Code 940. New SDR submissions containing a thirteen position number with the F or M designation in the 9th position in the call/order number data field will be rejected using Reply Code 940 and clarifying remarks stating that the thirteen-position PIID Call/Order Number must be provided in the PIID (contract number) data field.

C17.3.20.2.17. Inter-Component SDR replies citing 200-series reply codes may be used only for Security Assistance SDRs. Reject with Discrepancy Disposition/Status (Reply) Code 941.
C17.3.20.2.18. The number of submitter follow-up transactions may not exceed the allowable maximum based upon the action activity response or lack of response, as applicable.47

C17.3.20.2.18.1. If the action activity has not provided a functionally significant reply after three follow-ups (this excludes acknowledgement of receipt and forwarding via Reply Code 504), DoD WebSDR will reject the fourth follow-up using Reply Code 701 with remarks text directing the submitter to contact the action activity directly.

C17.3.20.2.18.2. WebSDR will reject a fourth follow-up subsequent to interim Reply Code 521 using Reply Code 701 with remarks text directing the submitter to contact the action activity directly.

C17.3.20.2.19. The number of interim responses and submitter status update combinations may not exceed the allowable maximum based upon the action activity response or lack of response, as applicable.

C17.3.20.2.19.1. WebSDR will reject a fourth Reply Code 104 or 321 per SDR using Reply Code 701 with remarks text directing the submitter to contact the action activity directly.

C17.3.20.2.19.2. WebSDR will reject a fourth Reply Code 608 or 320 per SDR using Reply Code 701 with remarks text directing the submitter to contact the action activity directly.

C17.3.20.2.20. Duplicate SDRs defined as a new submission matching an existing SDR on WebSDR control number. Prior to WebSDR control number assignment, duplicate SDRs are defined as a new submission matching an existing valid SDR on all of the following: WebSDR status is not cancelled, document number/suffix, discrepancy code, (minimum of one matching value), SDR document type code, and transportation control number (if provided). Pending future system upgrade by DLA Distribution, the Distribution Standard System (DSS) Automated Discrepancy Reporting System (ADRS), and the depot control number (DCN) in conjunction with the submitting system RIC/DoDAAC also distinguishes unique SDRs to preclude rejection as a duplicate.48 Reject with Discrepancy Disposition/Status (Reply) Code 719.

C17.3.20.2.21. WebSDR will reject Historical SDRs (Transaction Set Purpose Code 49) containing Reply Code 501 (SDR assigned to DCMA for investigation). SDRs forwarded to DCMA must be processed using a reply transaction through WebSDR in order to maintain visibility of the transfer of action. WebSDR will

---

47 Refer to ADC 1044 Enhanced Interim SDR Reply Capability, Status Update, and Completion Notification.
48 Refer to ADC 1250.
use Reply Code 938 (Transaction rejected. Missing or invalid disposition/reply code) and include the appropriate narrative remarks.\(^{49}\)

C17.3.20.2.22. WebSDR will reject any SDR reply from DCMA that does not contain a 300-series forwarding reply. Use of the 300-series reply code is required to maintain visibility of the transfer of action back to the item manager(action activity). WebSDR will use Reply Code 927 (Transaction rejected. Missing or invalid disposition/reply code) and include the appropriate narrative remarks.\(^{50}\)

C17.3.20.2.23. WebSDR will reject attempted return of SDRs to the storage activity/initial action activity using Reply Code 526/527 when the identified Transfer-To party is not identified or consistent with SDR history (must be same action activity that received and processed the original SDR response) using Reply Code 945.\(^{51}\)

C17.3.20.3. WebSDR will edit SDR submissions via DoD WebSDR at the point of entry to improve the accuracy of the data content. All of the above criteria apply. In addition, web-specific functionality includes:

C17.3.20.3.1. The SDR submission process will be facilitated by the auto-population of data content based upon the shipment and cataloging data available to DAAS.

C17.3.20.3.2. Address information will be retrieved based upon DoDAAC and RICs. User generated updates to initiator’s address are permitted and will be passed to the receiving system for information, but will not impact SDR processing.

C17.3.20.3.3. SDR replies coded to indicate that an address or additional information is associated with the reply must include the specified additional address or information.

C17.3.20.3.4 New SDR submissions via direct web input will be edited to block identification of a DCMA activity as the initial action activity.\(^{52}\)

C17.3.20.4. DAAS will provide the support to SDR transaction exchange to facilitate DLMS processes.

C17.3.20.4.1. WebSDR will facilitate appropriate distribution when the action party receiving the initial distribution employs the Distribution/Status (Reply) Code 504 indicating the SDR must be forwarded to a new action activity. **WebSDR direct online application and SDR transactions will be edited to restrict the use of Reply Code 504 for use only for SDR Document Type Code 7 or R, and SDRs**

---

\(^{49}\) Refer to ADC 1181A.  
\(^{50}\) Refer to ADC 1181A.  
\(^{51}\) Refer to ADC 1217.  
\(^{52}\) Refer to ADC 1005.
using another reply code in conjunction with Reply Code 504 will be rejected with
Reply Code 949 - Transaction rejected. Reply Code 504 can only be used for SDR
Document Type Code 7 or R, and cannot be used with any other reply code.
Action Activities receiving SDRs (other than Type 7 or R) identified to the wrong
action activity will use Reply Code 612 to reject the SDR back to the submitter ILO
using Reply Code 504 to redirect it to another action activity. WebSDR will prepare
the forwarded SDR in an original SDR format (Transaction Set Purpose Code 00)
retaining all the information provided in the initial transmission plus the unique data
fields applicable to the forwarding action per the DLMS 842A/W. The submitter will
receive the reply transaction as notification of interim status. If an information copy
of the initial SDR was provided to the source of supply based upon Component rules,
WebSDR will prepare an information copy of the forwarded transaction using the
correction format (Transaction Set Purpose Code CO). When the source of supply
identified in the SDR correction is the same activity identified to receive the source of
supply copy of the SDR reply (Transaction Set Purpose Code 11), this reply transaction
will be suppressed as redundant to the correction. WebSDR will update the SDR
database to reflect the current action activity after this type of forwarding action and
ensure that subsequent transactions are properly transmitted to the new action activity
(rather than the original action activity).53

C17.3.20.4.2. If an SDR source of supply is updated to identify a
different source of supply (based upon DLA Distribution updating the owner,
manager, or source of supply field using a reply) after an information copy was
provided to the original, an SDR closure notification (Reply Code 450 - Administrative
Closure Notification. SDR information copy sent to wrong source of supply)
will be generated by WebSDR to the originally identified source of supply so that the open
record can be administratively closed. WebSDR will suppress any future Party to
Receive (Qualifier/Code PK) distribution copies (Transaction Set Purpose Code
22) to an activity that received the Reply Code 450 for only Document Type 7, and
R SDRs. WebSDR will also provide an information copy (Transaction Set Purpose
Code 22) of the original SDR to the newly identified source of supply (the information
copy will contain the updated RIC value rather than perpetuating the original value).54

C17.3.20.4.3. WebSDR will facilitate appropriate distribution when the
action party receiving the initial distribution employs distribution status codes in the 300
series indicating that the SDR must be sent to the source of supply for disposition. The
SDR reply will be sent to the designated source of supply by the responding activity and
WebSDR will prepare a reply to the SDR initiator for notification of interim status.
WebSDR will update the SDR database to reflect the current action activity after this
type of forwarding action and ensure that subsequent transactions are properly
transmitted to the new action activity (rather than the original action activity).

C17.3.20.4.4. WebSDR will forward SDR replies containing Reply Code
501 to DCMA for investigation. The SDR database will be updated to show DCMA as a

53 Refer to ADC 1066/1066A. Delayed implementation authorized for rerouting of follow-on transactions.
54 Ibid.
secondary action activity and as the current action activity. The activity forwarding the
SDR will be retained as the original action activity. Subsequent to the DCMA reply,
WebSDR will reassign the original action activity as the current action activity, and the
DCMA DoDAAC will be retained as a secondary action activity. Subsequent to
forwarding to DCMA, WebSDR will ensure that both DCMA and the original action
activity receive all follow-on transactions.\(^{55}\)

C17.3.20.4.5. WebSDR will respond to DAAS-directed rejected reply
transactions indicating no matching original report or information copy of the SDR is
found in the automated application (Reply Code 926), by providing an information copy
of the original report to the activity which rejected the reply. Unmatched requests for an
information copy will be returned by DAAS as rejected (Reply Code 926) to the sending
organization. DAAS will create and forward an information copy of the DLA source of
supply for all customer SDRs based upon the storage site reply where an information
copy was not previously provided.

C17.3.20.4.6. WebSDR will provide information copies of SDRs in
accordance with Component business rules and as designated by the initiator.

C17.3.20.4.6.1. WebSDR will ensure DLA Enterprise Business
System (EBS) receives an information copy of all SDRs routed to a distribution center
for initial action where EBS is the source of supply.

C17.3.20.4.6.2. All parties receiving an information copy of the
original SDR as designated by the initiator or by a Component business rule will receive
a copy of all changes, cancellation, and replies associated with the SDR.

C17.3.20.4.6.3 WebSDR will provide an information copy to DCMA
of all SDRs identifying DCMA as the CAO.\(^{56}\)

C17.3.20.4.6.4. WebSDR will provide an information copy to NAMI
(RIC AJ2) when SDRs are directed to the other Service/Agency source of supply and
the requisition cited NAMI funding (Signal = C Fund Code = Z9, and Supplementary
Address=W9046W)

C17.3.20.4.6.5. WebSDR will provide an information copy of the
SDR to the GIM when an SDR is forwarded by the LIM to the GIM for disposition
instructions after a logistics reassignment (Reply Code 506).

C17.3.20.4.7. WebSDR will accept and forward supporting
documentation associated with SDRs using DLMS attachment exchange procedures.

C17.3.20.4.7.1. SDR attachments may be uploaded directly to the
DoD WebSDR or exchanged electronically in association with the SDR transaction.

\(^{55}\) Refer to ADC 1005. Delayed implementation authorized (expected implementation April 2014).
\(^{56}\) Ibid.
C17.3.20.4.7.2. SDR attachments must be referenced/uploaded under a SDR Attachment File Name constructed in accordance with DLMS rules. Up to five attachments may be associated with a new SDR report and subsequent change, reply, request for reconsideration. Attachment file names must follow a specific naming convention to allow space for WebSDR or the submitting system to append a date/time stamp and other information to ensure uniqueness and to associate the attachment with the appropriate transaction. The user-assigned portion of the file name may be up to ten characters and should include key words to facilitate user recognition. When submitted to WebSDR, the submitting system must ensure that the file name contains no special characters other than the underscore ( _ ). The period may only be used once prior to the file extension. WebSDR supports the following file types: BMP, DOC, DOCX, GIF, JPEG, JPG, PDF, TXT, XLS, and XLSX.

C17.3.20.5. DoD WebSDR will restrict the use of inappropriate discrepancy status/disposition reply codes in responses to transshipper prepared SDRs.

C17.3.20.6. The DLMS SDR transaction supports various data fields that may include special characters (e.g. SDR remarks text). WebSDR will reject/fail to process transactions containing special characters that are unacceptable/reserved for use as XML parsers. Table C17.T3 defines allowable and unacceptable special characters. Any characters not specifically identified in these lists should not be used.

Note: The values listed in the third column are allowed in e-mail addresses; they are not recommended for other use. WebSDR will convert to text for XML-formatted transactions (rather than reject).

C17.3.20.8. DAAS will prepare and transmit the WebSDR Contractor Noncompliance Data Extract as an automated interface in support of contractor evaluation by Supplier Performance Risk System (SPRS). SDR records will be selected based upon inclusion of an SDR cause code indicating contractor/vendor noncompliance (Cause Codes CN, CP, or CS) in the final reply by the item manager for SDR Document Type Codes (6/9/P/W including Historical (49) SDRs). WebSDR will monitor SDR updates for changes to the cause code and transmit the SDR Data Extract to SPRS if a previously assigned contractor noncompliance Cause Code has been removed or new noncompliance cause code has been added or updated. Applicable data content for transmission is identified in Appendix 8.56. Transmission will occur on a daily basis containing only those SDRs validated since the previous transmission.

C17.4. MANAGEMENT EVALUATION

C17.4.1 Purpose. The SDR program is designed to promote evaluation, correction, and improvement of logistics operations. To accomplish this objective, discrepancies as specified in this publication must be reported and investigated in accordance with established policies and procedures. DoD Components must institute SDR quality programs that will include periodic reviews to assess the accuracy and quality of work processes applicable to supply discrepancy processing. In addition, DoD Components must require, as a minimum, semi-annual summary reporting to an appropriate headquarters for review and analysis. The DoD Components unable to support the full scope of the required data collection under legacy systems must incorporate this reporting requirement under business system modernization efforts. The DoD WebSDR management reports and canned queries may be used to supplement internally prepared reports. To facilitate management evaluation and corrective action, WebSDR will prepare and disseminate focused content reports to DoD Component representatives for specific areas requiring additional attention. Focused content reports include several reports highlighting discrepancies identified by transshippers and a report listing DLA Distribution Centers SDRs indicating lack of a PMR. DoD Components and USTRANSCOM must monitor SDR program performance applicable to transshipper SDRs. DCMA must monitor reported discrepancies applicable to

---

59 Refer to ADC 1181B
60 Refer to ADC 1181A.
procurement source shipments. Data collected must be sufficient to enable monitoring activities to:

C17.4.1.1. Identify trends.

C17.4.1.2. Establish volume and dollar values of SDRs.

C17.4.1.3. Bring management attention to problems with shipping activities as necessary.

C17.4.1.4. Prevent recurrence of discrepancies.

C17.4.1.5. Measure quality and responsiveness of action activities.

C17.4.1.6. Assess vendor performance to ensure compliance with contract requirements, identify and correct recurring issues, and incorporate SDR metrics during consideration of future contract awards.

C17.4.1.7. Promote timely QAR performance to prevent delays in processing of procurement source receipts.

C17.4.2. IMM/ICP Summary Reporting. As a minimum, the IMM/ICP and shipping activities must have visibility of detail/summary reports that show:

C17.4.2.1. The number of SDRs received during a particular timeframe by shipping activity, dollar value, and discrepancy type. Reports will measure compliance with SDR submission timeframes.

C17.4.2.2. The number of SDR responses processed during a particular timeframe by action activity, dollar value, and discrepancy type. Reports will show a breakdown of SDR actions taken to include dollar value of credit authorized and reshipped materiel. Reports will measure compliance with SDR processing timeframes and show age of ongoing investigations.

C17.4.3. Receiving Activity Reporting. As a minimum, the U.S. Government receiving activity and the ILCO must have visibility of detail/summary reports that show:

C17.4.3.1. The number of SDRs prepared during a particular timeframe by shipping activity, dollar value, and discrepancy type. Reports will measure compliance with SDR submission, processing, and follow up timeframes.

C17.4.3.2. Responses received from the responsible action activity, and dollar values recovered, either in the form of reshipped materiel or credit received.

C17.5. SECURITY ASSISTANCE DISCREPANCY REPORTS

C17.5.1. General. This section provides specific procedural guidance relevant to the processing of Security Assistance SDRs. Based upon United States of America Letter of Offer and Acceptance (LOA) agreements, Security Assistance customers will
use SDRs to report all supply, billing/financial, and product quality deficiencies/discrepancies associated with Security Assistance shipments. Supply discrepancies are identified under paragraph C17.3.2., Reporting Criteria, except as specifically excluded for Security Assistance and as supplemented below. In addition to the routine data content, Security Assistance SDRs will include the location of the discrepant materiel (in-country depot, freight forwarder, U.S. Government facility, or contractor facility) and the country that received the discrepant materiel. Security Assistance discrepancy reports below dollar limitations contained in the United States of America Department of State LOA controlling the case, or any other sales agreement with a Security Assistance purchaser, will not be accepted by the ILCO for subsequent processing by the DoD Components or participating Agencies unless a valid justification for the submission is also provided.

C17.5.1.1. All Security Assistance SDRs will be submitted directly to the applicable ILCO for initial screening and processing in accordance with this manual and DoD 5105.38-M, SDRs may be forwarded via SF 364, Report of Discrepancy, or authorized electronic/automated formats. Incorrect item SDRs must provide supporting documentation to include photographs of the wrong item received.

C17.5.1.2. Acceptable SDRs will be forwarded for further processing to DoD ICP/IMM, shipping depot, GSA, or other organization as applicable. ILCOs will submit SDRs using a DLMS-compliant SDR application or, pending full implementation, via direct DoD WebSDR input. Total non-receipt SDRs will normally be forwarded directly to the shipping depot. All responses to discrepancy reports will be returned to the ILCO.

C17.5.1.3. Responding action activities will provide the SDR reply for Security Assistance SDRs using a DLMS-compliant SDR application via DoD WebSDR or, pending full implementation, via direct DoD WebSDR input or authorized electronic/automated equivalent format. SDR replies must include, at a minimum, the applicable document number, the Security Assistance report number (item 2 of the SF 364), point of contact information, and pertinent information from the data blocks on the reverse side of the SF 364 or the expanded SDR data element code lists (Appendix 7.28).

C17.5.1.4. The DoD shipping activity will retain paper copies of the Security Assistance shipping documentation (signed carrier’s receipt and shipping document) at the shipping site for a period of 2 years following the shipping date. After this point, the DoD shipping activity will retain a copy of the Security Assistance shipping documentation in accordance with its NARA-approved Component record schedule as required by DoDI 5015.02, DoD Records Management Program. Billing documentation will be retained by the Military Departments and DoD agencies as specified in MILSBILLS procedures and DoD 7000.14-R, Vol. 15, Department of Defense Financial Management Regulation (Security Assistance Policy and Procedures).
C17.5.2. **Time Standards**

C17.5.2.1. **Time Standards for SDR Submission by Security Assistance Customers.** Discrepancy report preparation and submission time by the Security Assistance purchaser is limited to the time standards cited in the United States of America Department of State LOA, and amendments thereto, as explained in DoD 5105.38-M.

C17.5.2.2. **Security Assistance customers receiving misdirected shipments or shipments containing incorrect items that are identified as classified/sensitive materiel, and/or arms, arms parts, or explosives, must report within 24 hours of discovery regardless of dollar value for disposition.** Where estimated dollar values are unknown or fall below the minimum criteria, report using Action Code 1A, Disposition instructions for discrepant materiel requested; financial action not applicable.

C17.5.2.3. **ILCOs are permitted 15 calendar days from the time of discrepancy report receipt for processing prior to forwarding to the appropriate action activity.** Upon return of the SDR response from the action activity, ILCOs are permitted 15 calendar days for processing and forwarding to the Security Assistance customer.

C17.5.3. **Directed Returns**

C17.5.3.1. **Whenever materiel is directed for return to U.S. custody, the purchasing country will be instructed to reship the materiel using the same document number under which the materiel was originally shipped.** The country will be advised that they must return the materiel to U.S. Government custody within 180 calendar days from date of approval/instructions. However, the time standard allowed for the return of wrong item controlled/sensitive materiel or unidentified materiel is 30 calendar days from date of the ILCO reply. The ILCO will monitor directed returns and follow-ups with customers where controlled/sensitive materiel has not been returned. In those instances when materiel is to be returned to the United States at U.S. Government expense, every effort will be made to utilize the DTS for the return movement. Action activities will provide the Service/Agency transportation account code (TAC) chargeable to return the discrepant materiel to the appropriate U.S. Government activity or other designated location. In lieu of the TAC, the action activity may provide commercial package carrier account information. In addition, the source of supply will provide reimbursement for packing, crating, handling for directed returns under MILSBILLS procedures in DLM 4000.25, Volume 4, Finance. The source of supply will also provide reimbursement for in-country transportation of the original shipment to the Security Assistance customer (when a directed return applies) under procedures prescribed by DoD 5105.38-M, as amended. When appropriate, the action activity may direct the submitter to return an exhibit of the discrepant materiel. The activity requesting this action will pay for exhibit shipment costs. The exhibit will be returned to U.S. Government custody within 90 calendar days from the date of instructions. Action activities or the ILCO will furnish DD Form 1348-1A for materiel to be returned. A copy of the SDR and DD Form 1348-1A should be included with returned materiel and annotated as an “SDR RETURN.” Upon evidence of materiel being returned, a credit
adjustment will be processed for the return of the discrepant materiel if previously authorized. This evidence releases the Security Assistance customer of liability for the materiel.

C17.5.3.2. Discrepant Security Assistance materiel not being returned to the stocks of the Department of Defense or GSA, or retained, or sent to disposal by the foreign government at the direction of the ILCO, will be turned in to the nearest U.S. accountable military activity (regardless of the DoD Component responsible for the materiel). This is in accordance with the governing regulation serving as the authority for the turn-in. The local U.S. military activity will pick up the materiel up in stock as a gain to inventory and determine if materiel is required or is in excess to requirements. If materiel is required, it will be retained. If excess to requirements of the local military activity, the materiel must be reported under Chapter 12.

C17.5.4. Incorrect Items. Incorrect item SDRs are not permitted for authorized substitution, unless the substitute item does not meet fit, form, or function standards. DoD Components and GSA follow the policy of automatic shipment of an interchangeable item unless the requisition contains an appropriate advice code, in accordance with MILSTRIP, limiting the request to a specific item. Similarly, quantities may be adjusted to the unit pack quantity, when appropriate, unless restricted by the appropriate advice code in the customer requisition. Such adjustments resulting in quantity variance are not reportable as discrepant.

C17.5.5. Non-receipt. When an SDR is initiated for non-receipt, the Security Assistance customer is required to provide documentation from the freight forwarder indicating that no materiel has been received on the requisition and transportation control numbers that apply. The ILCO will deny any non-receipt SDRs received that do not have this documentation attached. The ILCO will return these SDRs to the customer as incomplete.

C17.5.6. Frustrated Shipments Located at the Freight Forwarder. The Security Assistance customer will report packaging and documentation discrepancies causing materiel to be frustrated at the freight forwarder location. Shipments frustrated at the freight forwarder's location due to packaging or documentation discrepancies attributed to the shipper may be submitted regardless of dollar value. Validated SDRs may direct return, disposal, repackaging with reimbursement of actual repackaging costs, or other action, as deemed appropriate by the item manager. Note that repackaging by the freight forwarder or a third party contracted by the freight forwarder is an optional approach to resolve the packaging discrepancy. The customer may request alternative action by the item manager if the SDR reply does not provide an acceptable solution for the customer. An estimated cost for repackaging may be requested prior to authorizing repackaging except for shipments below the FMS dollar threshold as the cost of obtaining an estimate may exceed the value of the shipment. In addition to the customer’s requested action, the ILCO and owner/manager will consider the estimated cost for corrective action prior to determining the most appropriate approach for

---

61 Refer to ADC 1203.
resolution. When the estimated cost exceeds the value of the shipment, the burden for corrective action must fall on the owner/manager and must not be delegated to the FMS customer/freight forwarder. This will eliminate the potential for credit reimbursement for repackaging to exceed the value of the original purchase of the materiel. When applicable, transactional exchange to support reimbursement for repackaging costs will follow normal procedures with additional steps as follows:

C17.5.6.1. Submitter creation of the SDR requesting disposition instructions. Use Action Code 2A and include estimated repackaging cost when available. If the materiel requires immediate repackaging (e.g., due to leakage) or if materiel cannot be returned to shipper in current condition without incurring repackaging costs, include this information in the SDR remarks and provide supporting evidence. The submitter must not employ a third party to provide a repackaging estimate if the shipment is valued below $200.

C17.5.6.2. Shipping activity transmission of an interim reply, when applicable, to validate the discrepancy and recommend credit using Reply Code 525. The shipping activity will forward the SDR to the item manager. This SDR reply will include the applicable 300-series forwarding reply code and a copy will be provided to the submitter.

C17.5.6.3. Item manager transmission of a final reply indicating planned resolution. The item manager may provide an interim reply either requesting a repackaging estimate if not already provided or authorizing repackaging by the freight forwarded (inclusive of a third party engaged by the freight forwarder to perform repacking and certification), when this action is acceptable to the customer. Authorization for repacking by the freight forwarder with subsequent reimbursement by the Government is only authorized once the owner/manager and the ILCO have determined this to be the most appropriate and cost effective resolution and reimbursement will not exceed the value of the purchase. This interim reply will include SDR Reply Code 131 and reply codes indicating additional information is required (Reply Code 104) and that no credit will be provided without evidence of actual repackaging cost (Reply Code 129).

C17.5.6.4. Submitter creation of an SDR correction to the owner manager upon completion of the repackaging including the actual repackaging cost and supporting documentation (e.g. invoice for repackaging). Other data content may be perpetuated from the original submission.

C17.5.6.5. Item manager review of documentation to validate repackaging costs and transmission of final reply authorizing credit using Reply Code 109. If there is a substantial difference between the estimated and actual repackaging cost, the item manager will consider further review to validate the claim and may request clarification for the difference. The item manager will provide credit in accordance with MILSBILLS procedures in DLM 4000.25, Volume 4, Finance.
C17.5.7. SDR Follow-Up. When the action activity does not respond to an SDR within the prescribed time standard specified in this chapter, the ILCO, acting on behalf of the Security Assistance customer, will submit an SDR follow-up. Prior to submitting a follow-up, the ILCO must first attempt to ascertain the status of the SDR using the DoD WebSDR query function. If there is no record of an action activity reply, a follow-up should be submitted. Follow-ups must be directed to the last identified action activity when the original SDR was forwarded by the original recipient. Cite the SDR report number of the original report. For transactional exchange, include the WebSDR-assigned control number when known.

C17.5.7.1. Follow-up transactions should include all data that was in the previous SDR submission. POC information for the follow-up and the follow-up date are required. A narrative entry is required to provide clarification for the follow-up.

C17.5.7.2. If no response is received to the follow-up within 30 calendar days, the ILCO may contact DLA Distribution for distribution center shipments or the source of supply to request assistance. Off-line communication with the action activity is recommended because electronic processing errors may have impeded timely response to the SDR and subsequent follow-up. DLA Distribution or the source of supply will ensure that a response with disposition or interim status is provided within 30 calendar days.

C17.5.8. Cancellation of an Original Report. When an SDR originator discovers a previously reported SDR is not valid or appropriate for any reason and should be withdrawn, an SDR cancellation must be prepared to cancel the original. The ILCO via the DoD WebSDR will forward to all parties that received the original submission. Cite the original report number and the WebSDR-assigned control number when known. Do not duplicate detail information from the original report except as indicated in the DLMS IC. Provide POC information. A brief narrative description of the reason for cancellation should be included.

C17.5.9. Contested Decisions and Requests for Reconsideration. These procedures allow the report originator to voice disagreement with disposition decisions. The Security Assistance purchaser has recourse through the ILCO to the ICP/IMM or GSA and, if still not satisfied, to the ILCO's Service focal point.

C17.5.9.1. Requests for Reconsideration

C17.5.9.1.1. The Security Assistance purchaser may ask the U.S. Government to reconsider the disposition for a reported supply discrepancy. Purchasers must send a Request for Reconsideration to the ILCO within 45 calendar days from the date of the ILCO final reply to the submitter concerning disposition, except when materiel/exhibit return to the customer is required subsequent to US Government-directed evaluation/testing/repair. This exception is applicable only when the materiel/exhibit must be re-inspected by the customer to confirm that the reported discrepancy/deficiency has been resolved and, therefore, additional transportation time is necessary for the return shipment. Under this scenario only, the SA purchaser is
authorized up to 90 days from the date of the final ILCO reply to submit the Request for Reconsideration to the ILCO. The ILCO will be responsible for monitoring that requests for reconsideration are submitted within the allowable time standards.

C17.5.9.1.2. The request for reconsideration will use the nonconformance number associated with the original report. When the submitter asks for reconsideration, the ILCO will add a Suffix Code R to the SDR number. The ILCO will convert the request for reconsideration to electronic transmission and forward to the appropriate DoD ICP/IMM or GSA action activity for reconsideration within 20 calendar days of receiving the request for reconsideration from the submitter. If relevant information is not accessible by the responsible activity, the ILCO may forward supporting documentation. The designated recipient of the request for reconsideration will review all data relating to the problem and provide a response to the reporting activity with information to all concerned parties within 45 calendar days (90 days for security assistance shipments where materiel was returned to country when previous SDR resubmission was closed)\(^{62}\). When the shipping depot is unable to respond to the contested SDR, the depot will forward the SDR to the source of supply for resolution (when the SDR is forwarded, the 45 calendar days for processing and evaluation will begin when the SDR is received by the source of supply).

C17.5.9.2. Second Request for Reconsideration (Contested Reconsideration Response). Security Assistance submitters may further contest the ICP/IMM or GSA decision given after the request for reconsideration. To do so, the submitter must send a written request to the ILCO within 45 calendar days from the date of the ILCO reply to the request for reconsideration. The submitter must indicate why the ICP/IMM or GSA decision is not satisfactory. Cite the nonconformance number on the original SDR. The ILCO will add a Suffix Code C to the report number, which will be used in all references to the SDR. The ILCO will convert the request to electronic transmission and forward the SDR, with an appropriate advice code, within 20 calendar days to the appropriate focal point who will review all the information and send the ILCO the final decision within 50 calendar days from the date of receipt of the ILCO information. A contested reconsideration may only be submitted transactionally to DoD WebSDR and will be forwarded to the original action activity(ies). Additional distribution may be accomplished manually. Pending full DLMS implementation, contested reconsideration requests may be forwarded manually. If relevant information is not accessible by the focal point, the ILCO may forward supporting documentation. The ILCO will ensure all interested parties receive the SDR resolution.

C17.5.10. Follow-up on Credit Adjustments on SDRs

C17.5.10.1. When an action activity has indicated that a credit adjustment has been authorized, reimbursement is normally provided to the fund code/line of accounting and bill-to address cited on the original requisition. When concerned about an apparent non-receipt of credit, the ILCO should consult with the appropriate finance office for verification. Allow a minimum of 60 calendar days from the date of the SDR

\(^{62}\) ADC 430, Timeframe Change for Security Assistance SDR Requests for Reconsideration
response before initiating a follow-up action. To facilitate research of supply and financial records, it is suggested that follow-up action for non-receipt of credit associated with the return of discrepant materiel occur within a reasonable period (e.g., not longer than 45 calendar days after the ILCO provides the action activity the initial notice with evidence of discrepant materiel return).

C17.5.10.2. When non-receipt of credit is confirmed, the ILCO will submit a request for billing adjustment as prescribed by MILSBILLS procedures under DLM 4000.25, Volume 4, Finance, using DLMS 812R (DIC FAE) and Billing Advice Code 26. Do not send a hardcopy of the SDR or reply, as this may create duplicate work for the finance centers and may cause improper processing of your request.

C17.5.11. Product Quality. Product quality deficiencies relative to Security Assistance shipments are reportable via SDR. If product quality is for latent defect, the Security Assistance customer must provide evidence that a receipt inspection was done and the defect could not be detected at that time and that the defect is present for reasons other than deterioration or damage incurred during storage or handling. Quality deficiencies include deficiencies in design, specifications materiel, manufacture, and/or workmanship. The submitter must identify by discrepancy code any quality deficiencies (including latent defects) that result in a safety hazard. Include the following information in the SDR, as applicable: manufacturer's name; contract/purchase order number; date of manufacture, pack, or expiration; lot/batch number; location of materiel; point of contact information (if other than the preparing official); along with a detailed description of the complaint if needed to supplement encoded information. Include the following information in all product quality SDR packages, as applicable: photographs, test data, and related documentation. When submitting a latent defect discrepancy code on the SDR, the report must include substantiating documentation to validate the latent defect such as the applicable test report used to identify the latent defect. Latent defects must be submitted to the ILCO with substantiating documentation. Following is a list of potentially applicable forms of substantiating documentation:

C17.5.11.1. Receipt tests conducted and test reports (including test equipment model, serial number and software version), or documentation of receipt tests not conducted, and justification for tests not conducted.

C17.5.11.2. Subsequent tests conducted and results including test equipment model, serial number, and software version along with test readings.

C17.5.11.3. Justification that initial receipt inspection and testing could not have detected the deficiency.

C17.5.11.4. Documentation of storage and handling of the item since receipt including type of storage.

C17.5.12. Billing Discrepancy. Billing discrepancies reported to the ILCO on a SDR will be converted to the appropriate transaction format per MILSBILLS procedures under DLM 4000.25, Volume 4, Finance, for the DLMS 812R (DIC FAE).
C17.5.13. Financial Discrepancy. Financial discrepancies reported to the ILCO on a SDR will be forwarded to DFAS-DE/I for processing.

C17.5.14. Management Evaluation. As a minimum, the ILCO must have visibility of detail/summary reports that show:

C17.5.14.1. The number of SDRs received during a particular time standard by customer with breakdown by shipping activity showing dollar value and discrepancy type. Reports will measure customer compliance with SDR submission time standards and ILCO compliance with SDR processing time standards.

C17.5.14.2. A breakdown of SDR action activity response showing actions taken to include dollar value of credit authorized and reshipped materiel.

C17.5.15. Responsibilities

C17.5.15.1. The ILCO will:

C17.5.15.1.1. Complete initial SDR screening in accordance with this manual and DoD 5105.38-M.

C17.5.15.1.2. Review all SDRs received for processing and determine proper course of action based on available case history data. Reject discrepancy reports that fail to meet Security Assistance time and dollar standards (with exception of those that require disposition instructions for wrong item received or misdirected shipments) or do not contain required data, unless such data is readily available, at the ILCO. Forward SDRs to the appropriate ICP/IMM, shipping depot, or GSA action activity.

C17.5.15.1.3. Forward the SDR and supporting documentation to the implementing agency’s Headquarters element for review and approval, prior to submission to DSCA, if recommending FMS administrative surcharge funds exceeding $50,000 be used to resolve an SDR. This is a manual process outside WebSDR transaction exchange.

C17.5.15.1.4. Reject duplicate SDRs, except those that are resubmitted to request reconsideration of previous decision.

C17.5.15.1.5. Review all requests for reconsideration that contest a reconsideration decision (second request for reconsideration). Reject those requests that lack sufficient justification or were not received within the established time standards.

C17.5.15.1.6. Process to the Security Assistance customer initial acknowledgement of receipt of SDR replies and/or denials.

C17.5.15.1.7. Report the disposition of SDRs applicable to materiel and services to the DFAS-DE/I as required in the DoD 7000.14-R, Volume 15.
C17.5.15.1.8. Review SDR replies from action activities for completeness and reject those that do not specify necessary information, (e.g. disposition instructions for discrepant materiel). Under DLMS transactional exchange, the ILCO reject transaction may be directed to the action activity to identify necessary corrections. A maximum of five ILCO rejections per SDR control number is allowed. However, after three ILCO reject transactions, it may be more appropriate for the ILCO to contact the action activity off-line to clarify the issues involved.

C17.5.15.1.9. Maintain records of all Security Assistance-related discrepancy reports to completion.

C17.5.16.1. The DoD ICP/IMM, shipping depot, or GSA will:

C17.5.16.1.1. Review all SDRs received for processing and determine proper course of action based on available supply records and the results of investigation.

C17.5.16.1.2. Furnish properly completed SDRs to the ILCO for further processing to the Security Assistance customer. The action activity will cite the appropriate reply code (Appendix 7.28).

C17.5.16.1.3. Based upon the validated SDR, request that DFAS authorize adjustment/credit in accordance with MILSBILLS procedures under DLM 4000.25, Volume 4, Finance.

C17.5.16.1.4. Provide signed evidence of shipment to the ILCO when non-receipt of materiel is involved. If this documentation cannot be provided, appropriate credit is required.

C17.5.16.1.5. Provide documentation that is matched to the quantity shipped for concealed shortages. Examples of such documentation are those that contain size, total weight, and cube accepted by the carrier. Credit is denied if the documentation, in conjunction with the unit weight, supports shipment of the total quantity billed. Otherwise, appropriate credit for the difference is required.
C18. CHAPTER 18

SMALL ARMS AND LIGHT WEAPONS SERIAL NUMBER REGISTRATION AND REPORTING

C18.1. SCOPE.

C18.1.1. Applicability. The provisions of this chapter apply to the DoD Components responsible for inventory management of small arms and light weapons (SA/LW) and other activities involved in the shipment, registration, or receipt of SA/LW.

C18.1.2. Transactions. This chapter addresses the procedures applicable to SA/LW serial number registration and reporting using the DLMS 140A and 888A transactions. The corresponding Military Standard Transaction Reporting and Accounting Procedures (MILSTRAP) legacy transaction functionality is identified for information purposes in a mixed Defense Logistics Standard System (DLSS)/Defense Logistics Management Standards (DLMS) environment. Other formats, such as DLMS Extensible Markup Language (XML), are also available. See the Defense Logistics Management Standards Website DLMS IC page for available formats.

C18.1.2.1. DLMS 140A, SA/LW Reporting, is used for the following transaction functions identified by the Accredited Standards Committee (ASC) X12 beginning segment (1/BGN/20) Transaction Type Code (BGN07) and, where applicable, Action Code (BGN08):

C18.1.2.1.1. SA/LW Control Reporting Transaction is identified by Transaction Type Code W4 – Weapons Control Report. This transaction provides MILSTRAP legacy Document Identifier Code (DIC) DSM functionality.

C18.1.2.1.2. SA/LW Receipt/Shipment Follow-up Transaction is identified by Transaction Type Code W4 – Weapons Control Report, with Action Code T – Status Query. This transaction provides MILSTRAP legacy DIC DSD functionality.

C18.1.2.1.3. SA/LW Reconciliation Transaction is identified by Transaction Type Code W5 – Weapons Control Report Reconciliation. This transaction provides MILSTRAP legacy DIC DSR functionality when DSR is used as reconciliation transaction.

C18.1.2.1.4. SA/LW Reject Transaction is identified by Transaction Type Code W5 – Weapons Control Report Reconciliation, with Action Code U – Reject. This transaction provides MILSTRAP legacy DIC DSR functionality when DSR is used to reject invalid/erroneous SA/LW transactions.

C18.1.2.1.5. SA/LW Reconciliation/Reject Follow-up Transaction is identified by Transaction Type Code W5 – Weapons Control Report Reconciliation, with
Action Code T – Status Query. This transaction provides MILSTRAP legacy DIC DSF functionality.

C18.1.2.1.6. SA/LW Correction Transaction is identified by Transaction Type Code W5 – Weapons Control Report Reconciliation, with Action Code AC – Acknowledge. This transaction provides MILSTRAP legacy DIC DSC functionality.

C18.1.2.2. DLMS 888A. SA/LW Data Change Transaction is identified by ASC X12 beginning segment (1/BGN07/15) Transaction Type Code W1 – Weapons Data Change. This transaction provides MILSTRAP legacy DIC DSA/DSB functionality.

C18.2. GENERAL REQUIREMENTS

C18.2.1. Purpose. This chapter provides procedures for reporting SA/LW serial number data between the DoD Components and the DoD SA/LW Registry (hereafter referred to in this chapter as the DoD Registry). SA/LW, as defined in Definitions and Terms, including those mounted on aircraft, vehicles, and vessels, that are accounted for in unclassified property records, will be reported (included will be foreign and commercial weapons, museum pieces with serial numbers, and captured, confiscated, or abandoned enemy SA/LW in the possession of the Department of Defense).

C18.2.2. List of Unique Item Identifiers (UII) and Serial Numbers in Shipments. In addition to the shipment requirements contained in this volume, the shipping activity will send a listing of the SA/LW UIIs and serial numbers contained in each shipment with the shipment documentation accompanying SA/LW shipments between the DoD Components. When shipments consist of multiple containers, the listing will identify which UIIs and serial numbers are within each container. Additionally, the shipping activity will format the Issue Release/Receipt Document (IRRD) (DD Form 1348-1A or DD Form 1348-2) continuation page in accordance with Volume 2, Appendix 1.36 to provide a machine-readable 2D bar code(s) containing each UII linked with the applicable serial number, and linear bar codes associated with the human readable serial numbers for each item.

C18.2.3. Small Arms and Light Weapons Without a National Stock Number and/or Serial Number. When discovered, SA/LW without a National Stock Number (NSN) and/or SA/LW (except museum pieces) with missing, obliterated, mutilated, or illegible serial numbers, will be reported to the DoD Registry by the Component Registry for review and assignment of a Management Control Number (MCN)/NSN and/or serial number. Assignment of Local Control Number (LCN) or MCN will not replace or be used in lieu of procedures to request assignment of an NSN where applicable. The Component Registry will report all SA/LW without an NSN and/or SA/LW serial number, by message or letter, for assignment of serial number and/or NSN in the format in Table C18.T1 below:
C18.2.4. **Management Control Number/Local Control Number.** MCNs/LCNs will be used by the DoD Components for weapon identification until a valid NSN can be obtained from the DoD Registry in accordance with C18.2.3, or notification that the MCN/LCN will not be assigned an NSN.

C18.2.5. **Lost, Abandoned, or Unclaimed Privately-Owned.** Lost, abandoned, or unclaimed privately-owned SA/LW that are processed through a Board of Officers for actions described in DoDM 4160.21, “Defense Materiel Disposition Manual,” Chapter 4, and later turned into a DLA Disposition Services Field Office, will be registered immediately when they come under U.S. Government control.

C18.2.6. **Nonappropriated Funded.** Nonappropriated funded SA/LW turned in to a DLA Disposition Service Field Office and privately owned weapons classified as claims property will be registered immediately when they come under the control of the Department of Defense. SA/LW that are claimed (private property whose title has passed to the Department of Defense as a result of a claim against the U.S. Government due to its damage in connection with U.S. Government activities, usually movement of household goods) and confiscated (private property whose title has passed to the Department of Defense as a result of being confiscated by appropriate authority, usually as a result of being abandoned and/or unauthorized for personal possession) by DoD activities will be reported immediately to the Component Registries.

C18.2.7. **Ceremonial/Training.** The DoD Components will obtain a new NSN (or currently assigned NSN) from the DoD Registry for modified weapons rendered inoperable that are used for ceremonial or training purposes. These weapons will be retained on the Component Registries as weapons subject to the reporting criteria.

C18.2.8. **Lost, Stolen, and/or Recovered.** The DoD Components will establish procedures to ensure reporting of lost, stolen, unaccounted, and/or recovered SA/LW under the provisions of DoDM 5100.76, “Physical Security of Sensitive Conventional Arms, Ammunition, and Explosives”.

C18.2.9. **Mobilization.** In the event of mobilization or other emergency, the DoD Registry and the Component Registries will continue to operate and be maintained. SA/LW Transaction Code J (Emergency Suspense Status) may be used in emergency situations as authorized by the individual DoD Components.

C18.2.10. **Enemy Small Arms and Light Weapons.** Captured, confiscated or abandoned enemy SA/LW in the possession of the Department of Defense as a result...
of military actions will be registered. SA/LW may be of foreign or domestic manufacture and may include recaptured US military SA/LW.

C18.2.11. Reporting Foreign Weapon Serial Numbers.

C18.2.11.1. When reporting foreign weapons' serial numbers that contain unidentifiable characters (non-English alpha characters/non-Arabic numerals) that can be translated into an alpha/numeric equivalent, the translated serial number will be permanently inscribed on the weapon. When the foreign-weapon serial number cannot be translated into alpha/numeric equivalents, the DoD Component will contact the DoD Registry for assignment of a serial number. Upon assignment of a serial number, the DoD Component will permanently inscribe the newly assigned serial number on the weapon.

C18.2.11.2. The translated or assigned serial number of the historical weapon must be reported to the Component and DoD Registries in accordance with reporting requirements of this document.

C18.2.11.3. Foreign weapons designated by their Component Registry as having historical value are exempt from the requirement to have translated or assigned serial numbers permanently inscribed, since inscription would destroy the historical value of the weapon.

C18.3. OBJECTIVES

C18.3.1. Establish continuous visibility over all SA/LW by serial number from the contractor to depot; in storage; in transit to requisitioners; in post, camp, and station custody; in the hands of users; during turn-ins; in renovation; and during disposal/demilitarization.

C18.3.2. Interface the SA/LW serial number reporting between the DoD Components using standard procedures.

C18.3.3. Provide follow up procedures for delinquent shipment/receipt transactions.

C18.3.4. Provide SA/LW records reconciliation procedures.

C18.3.5. Provide law enforcement agencies, within 72 hours, the identification of the last known accountable activity having a specific serial-numbered SA/LW.

C18.4. EXCLUSIONS

C18.4.1. Nonappropriated Funds Purchases. SA/LW purchased with non-appropriated funds and privately-owned weapons are exempt from being reported to the DoD Registry since these weapons are controlled by civil authorities under the Gun Control Act of 1968. This does not include weapons turned in for disposal (see paragraphs C18.2.5 and C18.2.6 above).
C18.4.2. **Classified Activities.** Classified activities that determine that specific SA/LW should not be registered under these procedures will request guidance through appropriate channels from the DoD Component.

C18.4.3. **Deviations.** Deviations from these requirements by DoD activities with small static inventories require concurrence of the Joint Small Arms/Light Weapons Coordinating Group (JSA/LWCG) and approval of the JSA/LWCG Chair. **Upon approval, submit a proposed DLMS change to the Enterprise Business Standards Office via electronic mail.**

C18.5. **DELINELATION OF RESPONSIBILITIES**

C18.5.1. **DoD Registry.** The DoD Registry will:

C18.5.1.1. Be operated and maintained by the Department of the Army.

C18.5.1.2. Provide a central repository of SA/LW serial numbers from the Component Registries, to include those on-hand, in transit, lost, stolen, demilitarized, or shipped outside the control of the Department of Defense.

C18.5.1.3. Provide law enforcement agencies, within 72 hours, the identification of the last known accountable activity (to include telephone number) having a specific serial-numbered weapon (see paragraph C18.7.6, below). Respond as expeditiously as possible to other inquiries, depending upon volume and existing workload.

C18.5.1.4. Enter all inquiries from law enforcement agencies and inquiries from appropriate military and civilian activities for weapons located in foreign countries on the DoD Registry file when no record exists on the active or inactive file. This will be accomplished by using DLMS 140A SA/LW Control Reporting Transaction (MILSTRAP DIC DSM function) with SA/LW Transaction Code I (Interrogation/Inquiry Record) and entering the message/inquiry form number in the transaction number (document number) field for cross-reference purposes.

C18.5.1.4.1. For weapons identified as belonging to a DoD Component, these entries will remain in the DoD active master file until the weapon is returned to DoD control and properly recorded on a Component Registry.

C18.5.1.4.2. Weapons identified as other than the Department of Defense in origin will be placed in the inactive file of the DoD registry.

C18.5.1.5. At minimum, identify duplicate serial numbers received from the Component Registries on a quarterly basis. The appropriate DoD Component will be contacted to verify duplicates and the DoD Registry will issue selected suffixes to modify affected serial number(s) for all but one of the duplicate numbers. To the extent possible, weapons with duplicate serial numbers located in the wholesale system will be modified first to maintain an audit trail for all modification actions:
C18.5.1.5.1. Provide appropriate corrective instructions to the Component Registries reporting duplicate serial numbers.

C18.5.1.5.2. Establish a complete historical cross-reference record (mechanical or hard copy).

C18.5.2. **Component Registries.** Component Registries will:

C18.5.2.1. Maintain and control a mechanized active, inactive, and history file to control SA/LW serial numbers for which they do or did maintain accountability.

C18.5.2.2. Update files based on transaction reporting (e.g., receipts, issues, turn-ins, and inter-DoD Component transfers). Perpetuate suffix codes from all receipt/issue/adjustment transactions when updating files.

C18.5.2.3. Use standard data elements and standard transactions (identified in paragraph C18.1.2) to interface between the Component Registries for reporting changes affecting the SA/LW status in the master file of the Component Registries.

C18.5.2.4. Provide monthly electronic file overlays to the DoD Registry showing active and inactive files in serial number sequence.

C18.5.2.5. Identify duplicate serial numbers on file and request altering instructions from the DoD Registry for all but one of the duplicate numbers. Suspend movement of these weapons pending verification of the record and/or receipt of instructions for modification of the serial number on the weapon.

C18.5.2.6. Provide available data upon receipt of an inquiry from a law enforcement agency within 72 hours, and initiate action as deemed appropriate.

C18.5.2.7. Perform an annual records verification utilizing the registry files to obtain records compatibility with depot files and inventory control point (ICP) files by stock number and quantity.

C18.5.2.8. Report lost, damaged, or destroyed weapons in accordance with DoD 7000.14-R, “Department of Defense Financial Management Regulations,” Volume 12, Chapter 7. SA/LW Transaction Code Q (Notification of Suspected Loss) is applicable for reporting potential lost or stolen SA/LW pending full investigation and preparation of a Financial Liability Investigation of Property Loss Report (DD Form 200). SA/LW Transaction Code U (Found or Recovered) is applicable for reporting if the missing weapon is found or recovered. Use the SA/LW Control Reporting Transaction for updating the registries.

C18.5.2.9. After all investigative requirements have been initiated, including preparation of a Financial Liability Investigation of Property Lost Report, identify lost or stolen weapons on the Component Registry using the SA/LW Control Reporting Transaction with SA/LW Transaction Code L (Inventory Adjustment - Loss). (Note: In accordance with DoDM 5100.76, the DoD Components are required to submit
semiannual reports to the chairperson, Physical Security Review Board for all SA/LW where theft, loss, and recovery occur.)

C18.5.2.10. Perform an annual SA/LW reconciliation with all activities recorded on the registry as having possession and/or accountability of reported SA/LW by serial number, stock number, and quantity. The reconciliation method will depend on the DoD Components' ability to use Defense Data Network transaction sets or listings. When listings are used to perform the annual reconciliation, they will be identified by the appropriate transaction set either as header information or shown with each line entry (see paragraph C18.7.8 below).

C18.5.2.11. Report all new weapons or devices that could be construed as SA/LW to the JSA/LWCG chairperson. The chairperson will determine the reportability and notify the DoD Component. Weapons or devices for which no determination can be made will be discussed by the full JSA/LWCG.

C18.5.3. JSA/LWCG. JSA/LWCG responsibilities are as set forth in DoDM 4140.01, "DoD Supply Chain Materiel Management Regulation".

C18.6. SAFEGUARDING AND PHYSICAL SECURITY OF AUTOMATIC DATA PROCESSING RECORDED DATA

C18.6.1. The SA/LW data contained in the Automatic Data Processing (ADP) records of the DoD Registry could produce classified data if the total number of serial numbers by weapon type were summarized. Consideration must be given to security of the SA/LW records due to their sensitive nature. Security of ADP records will be in accordance with DoDM 5200.01, "DoD Information Security Program," February 24, 2012.

C18.6.2. A determination to classify will be made when there is sound reason to believe that knowledge of the information would provide unfriendlies an insight into the war potential, war defense plans, or posture of the United States and could reasonably be expected to cause a degree of harm to the national security.

C18.6.3. The operation of this program does not relieve units/activities from the requirements for physical security of weapons in accordance with DoD Component regulations.

C18.7. OPERATING PROCEDURES

C18.7.1. The Component Registries will provide for electronic file transfer of their active and inactive files, in serial number sequence, to arrive at the DoD Registry not later than the 10th of each month. The format will be in accordance with the DLMS 140A SA/LW Control Reporting Transaction (MILSTRAP DIC DSM function). The DoD Registry will verify record counts as indicated on the files.

C18.7.2. The DoD Registry will combine the DoD Components' electronic files into a single file, in serial number sequence, not later than the 15th day of each month. At
minimum, the DoD Registry will identify duplicate serial numbers quarterly in accordance with subparagraph C18.5.1.5 above.

C18.7.2.1. If duplicate serial numbers appear during the next check, and are owned by a single DoD Component, the Component Registry will be notified to validate the serial numbers. If duplicate serial numbers remain after this validation, the Component Registry will request altering instructions from the DoD Registry to modify the affected serial number(s). The DoD Registry will issue modified serial numbers (using selected alpha suffix(es) and maintain a complete historical cross-reference record.

C18.7.2.2. If duplicate serial numbers appear during the next check, and are owned by more than one DoD Component, the DoD Registry will notify each Component Registry to validate its serial numbers. If duplicates remain after this validation process, the DoD Registry will issue modified serial numbers to one of the Component Registries (using selected alpha suffixes) and maintain a complete historical cross-reference record.

C18.7.3. Recovered Weapons. Weapons recovered by law enforcement agencies or foreign countries and returned to the custody of a DoD Component will be registered on the Component Registry using the SA/LW Control Reporting Transaction with SA/LW Transaction Code U (Found or Recovered).

C18.7.4. Inter-DoD Component Transfers. The SA/LW Control Reporting Transaction is used to report inter-DoD Component transfers between the Component Registries. The requirements for reporting shipments will be as follows:

C18.7.4.1. Shipments Between DoD Components:

C18.7.4.1.1. Shipping Registry. When weapons are selected for shipment by the shipping activity, SA/LW Control Reporting Transaction with SA/LW Transaction Code S (Shipment) will be sent to the shipping Component Registry. The shipping Component Registry enters the SA/LW data in the active file to indicate the in-transit shipment. The shipping Component Registry then sends the transaction to the destination Component Registry for all inter-DoD Component shipments.

C18.7.4.1.2. Receiving Registry. The receiving Component Registry enters the SA/LW data into the active file to open the record. This record is maintained until confirmation of weapon receipt is provided by the receiving activity.

C18.7.4.1.2.1. Receiving Activity Actions. The receiving activity verifies the **Ull and** serial number(s) and sends SA/LW Control Reporting Transaction with SA/LW Transaction Code R (Receipt) to its Component Registry. The receiving Component Registry matches the SA/LW data against the in-transit record. A match constitutes a reconciliation and completes the record.

C18.7.4.1.2.2. Discrepant Ull and/or Serial Numbers. The receiving activity will verify discrepant Ull and serial number(s) by electronic mail or
telephone and take corrective action as required. Additionally, the receiving activity will submit an SDR to the appropriate action activity in accordance with Chapter 17 procedures for IUID-related discrepancies.

C18.7.4.1.2.3. Receiving Registry. The receiving Component Registry provides SA/LW Control Reporting Transaction with SA/LW Transaction Code R to the shipping Component Registry.

C18.7.4.1.3. Maintenance Reporting. Weapons shipments from one DoD Component to another for maintenance purposes will also be reported to appropriate Component Registries. This requirement will be included in any maintenance support agreement.

C18.7.4.1.4. Shipping Timeframe. If 30 calendar days from date of shipment for continental United States (CONUS) and 90 calendar days for overseas is exceeded, the shipping Component Registry will initiate coordination to determine the status of the outstanding SA/LW Control Reporting Transactions with SA/LW Transaction Code S (see paragraph C18.8.2) (for receiving Component Registry procedures, see paragraph C18.8.3.). A monthly overage shipment listing will also be sent to the receiving Component Registry.

C18.7.4.2. Shipments from Procurement. When weapons are shipped from a contractor to activities within the Department of Defense, the contractor is required to prepare three SA/LW Control Reporting Transactions. SA/LW Transaction Code P (Procurement Gains) will be in the one transaction sent to the shipping Component Registry giving notification of shipment. The data are entered in the shipping Component Registry to open the record. This record will be held in suspense until confirmation of weapon receipt is provided by the receiving activity. The receiving activity will submit an SA/LW Control Reporting Transaction to update its Component Registry. The two remaining control reporting transactions will have the Routing Identifier Code (RIC) of the shipping Component Registry to which the confirmation of receipt will be provided. The SA/LW Control Reporting Transaction will accompany the shipment documentation. When shipments consist of multiple containers, a listing will identify which serial numbers are within each container.

C18.7.4.3. Shipments Outside the Control of the Department of Defense. When SA/LW are selected for shipment to Foreign Military Sales (FMS)/Grant Aid and other Agencies outside DoD control, or when a DoD agency assumes title and accountability for U.S. weapons purchased or produced under a DoD contract then shipped directly to Security Assistance or other customers outside the Department of Defense, the SA/LW Control Reporting Transactions for the weapons will be provided to the shipping Component Registry giving notification of shipment. The shipping Component Registry codes each weapon in the shipment using SA/LW Transaction Code N (Shipment to Other Agencies) or code F (Shipment to FMS/Grant Aid) depending upon type of shipment. The shipping Component Registry then enters the SA/LW shipment data into the inactive file. Weapons returned to the DoD supply
system from previous shipments to FMS/Grant Aid and other agencies outside DoD control will be registered by the receiving activity on its Component Registry.

C18.7.5. Shipment to DLA Disposition Services for Demilitarization.¹ Shipping activities will follow procedures as prescribed in this chapter for inter-DoD Component transfers. When DLA Disposition Services DEMIL Center, Anniston, Alabama receives SA/LW materiel, the DEMIL Center must identify the SA/LW by a valid NSN or DoD SA/LW Registry assigned management control number (MCN), in addition to a separate serial number for each individual weapon.

C18.7.5.1. Shipments of a partial weapon identified under the whole weapon NSN must include a missing parts list or signed statement certifying that the weapons have missing parts. In lieu of listing the missing parts, the owning Component may authorize including a signed statement certifying that the weapons have missing parts under MILSTRIP turn-in procedures. The signed statement must provide name and contact information of the authorizing official. If prepared electronically, a digital signature will be included. DLA Disposition Services will consider partial weapon turn-in lacking a missing parts list or certifying statement discrepant. DLA Disposition Services will send an SDR to the turn-in activity and attempt to contact the activity off-line. DLA Disposition Services will hold rejected serialized weapons/weapon parts in a segregated location pending resolution of the SDR. If the DLA Disposition Services does not receive a reply to the SDR with the updated documentation or is otherwise unable to resolve the discrepancy within 25 days, DLA Disposition Services will return the partial weapons to the turn-in activity. If DLA Disposition Services cannot locate the turn-in activity, DLA Disposition Services will contact DoD Registry for resolution/disposition instructions or referral to the owning Service.

C18.7.5.2. A weapon subcomponent, such as the upper receiver, butt stock assembly, barrel assembly, etc., turned in without its matching serialized receiver will NOT be accepted under its end item NSN and serial number/UII under any circumstance. When identifying the serialized receiver on a weapon, the term “serialized receiver” refers to the receiver that displays or holds the serial number of a particular weapon. DLA Disposition Services will receipt the subcomponent under the applicable materiel identification for the subcomponent(s) and submit an informational SDR to the turn-in activity. DLA Disposition Services will not send the Component Registry an SA/LW Control Reporting Transaction with SA/LW Transaction Code R (Receipt). The SDR will alert the turn-in activity to correct serialized item tracking registries as needed. It is the responsibility of the turn-in activity to correct serialized item tracking registries as needed. It is the responsibility of the turn-in activity to correct the SA/LW Registry and IUID Registry as applicable. DLA Disposition Services will mutilate and/or destroy nonserialized weapon parts consistent with the demilitarization code requirements, local policies, laws, and regulations.

C18.7.6. Demilitarization. When SA/LW are selected for destruction at the demilitarization activity, the demilitarization activity sends SA/LW Control Reporting Transaction with SA/LW Transaction Code V (Demilitarization) to the Component Registry. ¹ Refer to ADC 1175
Registry once the demilitarization has been completed. The Component Registry will code each of the demilitarized weapons and enter the SA/LW demilitarization data into the inactive file.

C18.7.7. Department of Defense Small Arms and Light Weapons Serialization Program. The DoD SA/LW Serialization Program is designed to provide investigative agencies, within 72 hours, the identification of the last accountable activity having a specific serial-numbered SA/LW. Investigative agencies will process all inquiries by electronic mail, message, letter, or telephone to the DoD Registry. The DoD Registry will identify the accountable Component Registry from the data contained in its master record and query that registry as to the last accountable activity for the specific serial-numbered weapon. Once the Component Registry identifies the last accountable activity, response is provided to the investigative agency through the DoD Registry.

C18.7.8. Invalid or Erroneous DLMS 140A Transactions. The Component Registry will reject invalid or erroneous DLMS 140A SA/LW transactions to the originator using the DLMS 140A SA/LW Reject Transaction (MILSTRAP DIC DSR function). (See paragraph C18.7.10 for rejecting DLMS 888A SA/LW Data Change Transaction with SA/LW Transaction Code K (Multi-Field Correction).) The rejecting Component Registry will cite the appropriate SA/LW Error Transaction Reject Codes in the SA/LW Reject Transaction. The code explanations identify required corrective action. In a DLMS environment, the SA/LW Reject Transaction may contain more than one SA/LW error transaction reject code, and activities will ensure that all error conditions are corrected prior to resubmission. Under the constraints of the 80 record position DLSS (MILSTRAP) environment, the reject advice code identifies only one error condition in the transaction, and activities will review all other fields of the rejected transactions prior to resubmission to ensure that all data entries are correct.

C18.7.8.1. Correction of Rejected Transactions. The Component Registry will hold rejected transactions in a suspense file until corrective action has been received from the DoD Component. DLMS 140A SA/LW Correction Transaction (MILSTRAP DIC DSC function) with the appropriate SA/LW error transaction reject code will be used to respond to rejected transactions.

C18.7.8.2. Follow-Up. If no corrective action is received by the Component Registry within 14 calendar days, the Component Registry will send a DLMS 140A SA/LW Reconciliation/Reject Follow-up Transaction (MILSTRAP DIC DSF function) to the DoD Component.

C18.7.9. Annual Reconciliation. The annual reconciliation of all SA/LW on the Component Registry will be performed using DLMS 140A SA/LW Reconciliation Transaction (MILSTRAP DIC DSR function) with SA/LW Transaction Code E (intra-DoD Component Reconciliation of SA/LW serial numbers, and inter-DoD Component reconciliation when reconciling with DLA Defense Distribution Centers). This is a bottoms-up records reconciliation (i.e., matching records from the activity having physical custody and/or accountability of the weapon to the Component Registry records). Matching records will be considered reconciled. Duplicate SA/LW serial
numbers detected during the reconciliation will require modification instructions from the DoD Registry. Component Registries that perform the annual reconciliation using other than transaction reporting will ensure that listings contain SA/LW Reconciliation Transaction in the heading. SA/LW Transaction Code E need not be identified on the listing or posted to the Component Registry.

C18.7.9.1. Registry Rejects. Unmatched records and weapons for which no reconciliation was received by the Component Registry will result in a SA/LW Reject Transaction with the appropriate SA/LW error transaction reject code(s) to the DoD Component.

C18.7.9.2. Follow up for Response to Reject. If corrective transactions and/or notification of a problem is not received from the DoD Component within 60 calendar days, the Component Registry will follow up using DLMS 140A SA/LW Reconciliation/Reject Follow-up Transaction (MILSTRAP DIC DSF function).

C18.7.11. Multi-field Corrections. Reporting activities will use DLMS 888A, SA/LW Data Change Transaction with SA/LW Transaction Code K (Multi-Field Correction) (MILSTRAP DIC DSA function) to change erroneous information on the Component Registry active/inactive file. The Component Registry will reject any SA/LW Data Change Transactions (with SA/LW Transaction Code K), that contain invalid data or do not match the file or.

C18.7.11.1. Preparation of Small Arms and Light Weapons Data Change Transaction. Reporting activities will prepare SA/LW Data Change Transaction with SA/LW Transaction Code K when the Component Registry contains erroneous information. Changes can be made to the NSN/MCN/LCN/DoDAAC/UIC of the accountable activity and serial number.

C18.7.11.2. Rejection of Small Arms and Light Weapons Data Change Transactions. SA/LW Data Change Transactions (with SA/LW Transaction Code K) received by the Component Registry that do not match the NSN/MCN/LCN, reporting activity DoDAAC/UIC, or serial number contained on the active/inactive file will be rejected to the reporting activity using DLMS 888A as a reject transaction. The rejected SA/LW Data Change Transaction (with SA/LW Transaction Code K) will contain the appropriate SA/LW error transaction reject code. Rejected transactions will be suspended in the Component Registry pending receipt of a corrected SA/LW Data Change Transaction (with SA/LW Transaction Code K). Under DLMS, more than one SA/LW error transaction reject code may be shown in the rejected SA/LW Data Change Transaction (with SA/LW Transaction Code K), and the reporting activity must review all invalid data before resubmitting the corrected transaction. In a DLSS (MILSTRAP)
environment, only one SA/LW error transaction reject code can be identified in the rejected transaction (MILSTRAP DIC DSA), and the reporting activity must review all entries for additional invalid data before submitting the corrected transaction.

C18.7.11.3. Small Arms and Light Weapons Transaction Code K Conversion.
The Component Registries will not include SA/LW Data Change Transactions (with SA/LW Transaction Code K) on their electronic file transfer overlay records to the DoD Registry. The Component Registry will convert the DLMS 888A SA/LW Data Change Transactions (with SA/LW Transaction Code K) received from the reporting activity to DLMS 140A SA/LW Control Reporting Transaction with SA/LW Transaction Code K and the old serial number cited for all changes to the serial number field for the monthly electronic file transfer.

C18.8. TIME STANDARDS FOR PROCESSING UPDATES AND FOLLOW-UPS FOR SHIPMENTS AND RECEIPTS

C18.8.1. Weapons Visibility. One objective of the SA/LW serial number registration and reporting procedures is to provide visibility of actual location of all weapons by the timely update of the Component Registries during the shipment or receipt process. The timeframe for processing DLMS 140A SA/LW Control Reporting Transaction (MILSTRAP DIC DSM function) for SA/LW Transaction Codes R and S is 10 calendar days from date of action.

C18.8.1.1. Notification of In-transit Shipment to Shipping Component Registry. Within 10 calendar days of selection for shipment, the shipping activity will send the SA/LW Control Reporting Transaction (with SA/LW Transaction Code S) to the shipping Component Registry to indicate which serial numbers are included in the in-transit shipment. activities that do not have mechanized capability will provide the SA/LW Control Reporting Transaction (with SA/LW Transaction Code S) or hard copy information to the shipping Component Registry by the fastest available means, leaving the shipping activity within 10 calendar days of selection for shipment.

C18.8.1.2. Update of Shipping Component Registry. Within 10 calendar days of receipt of the SA/LW Control Reporting Transaction (with SA/LW Transaction Code S) from the shipping activity, the shipping Component Registry will use the transaction to update its files, establish the in-transit record, and send the SA/LW Control Reporting Transaction to the receiving Component Registry for all inter-DoD Component shipments.

C18.8.1.3. Receiving Component Registry Verification. Within 10 calendar days of receipt of the weapon(s), the receiving activity will use the SA/LW Control Reporting Transaction data that accompanied the shipment to verify the received serial number(s) and provide the WSN transaction (with SA/LW Transaction Code R) to the receiving Component Registry. activities that do not have mechanized capability will provide the SA/LW Control Reporting Transaction (with SA/LW Transaction Code R) or hard-copy information, to the receiving Component Registry by the fastest available means.
C18.8.1.4. **Shipping Component Registry Verification.** Within 10 calendar days of receipt of the SA/LW Control Reporting Transaction (with SA/LW Transaction Code R) from the receiving activity, the receiving Component Registry will send SA/LW Control Reporting Transaction (with SA/LW Transaction Code R) to the shipping Component Registry to provide notification of weapons receipt. The 10-calendar day requirement for shipment/receipt notification also applies to SA/LW shipments from one DoD Component to another for maintenance purposes. This requirement will be included in any maintenance support agreements between the DoD Components.

C18.8.2. **Overage Shipments.** The shipping Component Registry will send a follow-up on all in-transit weapons (30 calendar days for CONUS shipments, and 90 calendar days for overseas shipments) from date of shipment, for which no confirmation of receipt (SA/LW Control Reporting Transaction with code R) has been received. The shipping Component Registry will send DLMS 140A SA/LW Receipt/Shipment Follow-up Transaction (MILSTRAP DIC DSD function) to the receiving Component Registry. Allow 10 calendar days for response to the follow-up transaction.

C18.8.2.1. **Weapon Received.** If the weapon has been received, the receiving Component Registry will submit a SA/LW Control Reporting Transaction with SA/LW Transaction Code R.

C18.8.2.2. **Weapon Not Received.** If the weapon has not been received, the receiving Component Registry will submit SA/LW Control Reporting Transaction with SA/LW Transaction Code A (Weapon Not Received).

C18.8.2.3. **No Response Received.** If no response is received, an electronic transmission (message) will be sent to the receiving Component Registry with an information copy to the receiving activity and its higher headquarters.

C18.8.2.4. **Negative/No Response Reporting.** Negative response or no response to the message will cause the shipping Component Registry reporting the weapon(s) as missing, lost, or stolen to its appropriate investigative agency and the DoD Registry (see subparagraphs C18.5.2.8. and C18.5.2.9. above).

C18.8.3. **Shipment Follow-Up Procedures.** Follow-up procedures will be initiated by the receiving Component Registry for all received weapons for which no DLMS 140A SA/LW Control Reporting Transaction (with SA/LW Transaction Code S) was provided by the shipping Component Registry. The follow-up procedure is necessary to confirm that the serial number(s) reported as received matches the serial number(s) selected and shipped. The receiving Component Registry will take the follow-up action with the shipping Component Registry using the SA/LW Receipt/Shipment Follow-up Transaction within 10 calendar days after a weapon(s) has been confirmed as received. Lack of response within 10 calendar days will cause an electronic transmission (message) to be sent to the shipping Component Registry with an information copy to the shipping activity and its higher headquarters.
C18.8.4. **Intra-DoD Component Timeframes.** The standard timeframes for inter-DoD Component submission of SA/LW Control Reporting Transaction with SA/LW Transaction Codes R and S as prescribed above also apply to intra-DoD Component shipments and receipts.

RESERVED
C20. CHAPTER 20

MEDICAL UNIT ASSEMBLY PROGRAM

C20.1. GENERAL. This chapter provides procedures supporting the DoD Medical Unit Assembly Program. This program is an integral part of the DoD Deployable Medical Systems (DEPMEDS). These procedures cover from issuance of the advance assembly build/release order through the actual building and packing of the assembled component. Included are receipts at the assembly activity (e.g., Distribution Standard System (DSS) assembly depot), from procurement and non-procurement sources and the reporting of those receipts to the assembly manager (e.g., United States Army Medical Materiel Agency (USAMMA), DLA Troop Support, Philadelphia, PA. Receipts under the USAMMA Prime Vendor Program are included.

C20.2. APPLICABILITY AND SCOPE. These procedures apply primarily to DLA and USAMMA, who issue/process transactions in support of the DoD Medical Unit Assembly Program. Other DoD Components who participate in this program or other similar programs will comply with these procedures.
