

870 Order Status Report

Functional Group=**RS**

Purpose: This Draft Standard for Trial Use contains the format and establishes the data contents of the Order Status Report Transaction Set (870) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to report on the current status of a requirement forecast, an entire purchase order, selected line items on a purchase order, selected products/services on a purchase order, or purchase orders for a specific customer in their entirety or on a selection basis. The transaction set can also be used to report on the current status of single or multiple requisitions. The report format allows for the inclusion of "reasons" relative to the status. This transaction set may also be used to update the supplier's scheduled shipment or delivery dates. This transaction set can result from either an inquiry or a prearranged schedule agreed to by the trading partners.

DLMS Note:

1. Organizations use this transaction set to provide status on Special Program Requirements and to notify the organization originating the transaction that the Federal Supply Classification (FSC) provided on the original transaction was incorrect. Use a single occurrence of this transaction set to transmit supply status to one or more organizations. Use one occurrence of this transaction set to transmit a single or multiple transactions.

a. Inventory Control Points (ICPs) or Integrated Material Managers (IMMs) use this transaction set to provide Special Program Requirements (SPR) status on SPR requests (corresponds to MILSTRAP Document Identifier Code (DIC) DYK functionality). Defense Automatic Addressing System (DAAS) uses this transaction set to notify the organization originating the SPR transaction that the transaction was rerouted or that the Federal Supply Classification (FSC) in the original transaction was revised (corresponds to MILSTRAP DIC DZ9 functionality).

b. ICPs or IMMs (source of supply) also use this transaction to provide status to a forecasting requirement (accept or reject) for a Demand Data Exchange (DDE) Projected Gross Demand Plan (GDP), or Army Supply Plan (ASP) (DLMS 830D transaction).

2. Users operating under the Defense Logistics Management Standards (DLMS) must reference the Unit of Issue and Purchase Unit Conversion Table which can be found on the Defense Enterprise Data Standards Office (DEDSO) Web site at www.dla.mil/does/DLMS.

3. This DLMS Implementation Convention (IC) contains:

a. Data associated with a DLMS enhancement which may not be received or understood by the recipient's automated processing system. DLMS procedures may not have been developed. Components must coordinate requirements and business rules with DEDSO prior to use.

b. Data associated with an Approved Change which may not have an established implementation date. This data may not be received or understood by the recipient's automated processing system. Components must coordinate implementation with DEDSO prior to use.

c. Defense Logistics Standard System (DLSS) data which must be retained in the DLMS for a transition period to support transaction conversion in a mixed DLSS/DLMS environment. This data will be streamlined out once full DLMS implementation is reached. Components may coordinate with DEDSO for early termination (or retention) of specific data requirements for users operating in a full DLMS environment.

d. Data elements which have an expanded files size above existing DLSS capability which may not be supported by the recipient's automated processing system. Components must coordinate implementation with DEDSO prior to use.

4. This revision to the DLMS IC incorporates Proposed DLMS Changes (PDC) and Approved DLMS Changes (ADC) listed. PDCs/ADCs listed are available from the DEDSO Web site <http://www.dla.mil/HQ/InformationOperations/DLMS/eLibrary/Changes/processchanges/>.

HL

Hierarchical Level

Pos: 10

Max: 1

Detail - Mandatory

Loop: HL

Elements: 2

User Option (Usage): Must use

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments

- Comments:**
1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
 2. The HL segment defines a top-down/left-right ordered structure.
 3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
 4. HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
 5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
 6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

DLMS Note:

The transaction set hierarchical data structure is for SPR transaction status only.

Pos: 180	Max: 1000
Detail - Optional	
Loop: PO1	Elements: 2

Purpose: To describe a product or process in coded or free-form format

1. C0403 - If PID04 is present, then PID03 is required.
2. R0405 - At least one of PID04 or PID05 is required.
3. C0703 - If PID07 is present, then PID03 is required.
4. C0804 - If PID08 is present, then PID04 is required.
5. C0905 - If PID09 is present, then PID05 is required.

1. Use PID03 to indicate the organization that publishes the code list being referred to.
2. PID04 should be used for industry-specific product description codes.
3. PID08 describes the physical characteristics of the product identified in PID04. A "Y" indicates that the specified attribute applies to this item; an "N" indicates it does not apply. Any other value is indeterminate.
4. PID09 is used to identify the language being used in PID05.

1. If PID01 equals "F", then PID05 is used. If PID01 equals "S", then PID04 is used. If PID01 equals "X", then both PID04 and PID05 are used.
2. Use PID06 when necessary to refer to the product surface or layer being described in the segment.
3. PID07 specifies the individual code list of the agency specified in PID03.

1. *This segment contains free form text which the DDE submitter may use to provide information of value to the collaboration participants. The submitter may also use this segment to provide information deemed useful to their planners during collaboration as it will be available for their viewing in the Collaborate tool. This segment is optional and informational in nature and can be viewed by all participants in the collaboration process.*
2. *Use to perpetuate optional field information provided by the originator via DLMS 830D. See ADC 1267.*
3. *On an interim basis, to accommodate DLA's DIC CDD format in a mixed DLMS/non-DLMS CDD environment, the free form text in the PID segment is limited to a total of 110 characters which maps to DIC CDD Optional fields 1 through 4 in record positions 953-1062. To accommodate DLA DIC CDD fixed format, this requires restricting use of 2/PID/180 segment to a maximum of 4 iterations, with maximum 20 characters each in 3 iterations and maximum of 50 characters in one iteration. This supports DLA DIC CDD which has 3 optional fields of 20 characters and 1 optional field of 50 characters. Use of PID segment, other than as described by this note, is a DLMS enhancement. See introductory DLMS note 3a.*

Recommend using in all requisitions.

1. Use to identify supplemental address/data.

2. During the DLSS/DLMS transition, this field will be used to perpetuate/populate the DLSS Supplementary Address (SUPAAD) field. During this time, field size is restricted to 6 positions; see introductory DLMS note 3d.

3. Expanded use of this field for supplemental data without size restriction is a DLMS enhancement; see introductory DLMS note 3a.
