## NSN Assignment Process Flow Guide

### Base/Unit Level Acquisition

A National/NATO Stock Number (NSN) must be assigned to any item subject to repetitive procurement, storage, distribution and/or issue, and all locally purchased, centrally managed items will be named, described, identified, classified, and numbered (cataloged) in the Federal Catalog System. Other locally purchased items may be cataloged based upon requirements; new item that is associated with the acquisition of a new End Item as a part of provisioning for that end-item; new item that is not involved in end-item provisioning, such as a new item replacing an existing item or a locally purchased item substituting for an existing item. 41 CFR Subpart 101-30.3 and DoDM 4100.39 (FLIS) – Cataloging Items of Supply, and DoDM 4140.01 – DoD Supply Chain Materiel Management Procedures.
