MEMORANDUM FOR RECORD

SUBJECT: BrucePac Recalls Ready-To-Eat Meat and Poultry Products Due to Possible *Listeria* Contamination

1. **REFERENCE:** DHA-MSR 6025.01/AR 40-660/ DLAR 6025.01/NAVSUPINST 10110.8D/AFI 48-161\_IP/MCO 10110.38D, DOD Hazardous Food & Nonprescription Drug Recall System, 6 September 2018.

2. **COMPANY ANNOUNCEMENT:** BrucePac, a Durant, Okla. establishment, is recalling approximately 9,986,245 pounds of ready-to-eat (RTE) meat and poultry products that may be adulterated with *Listeria monocytogenes*, the U.S. Department of Agriculture's Food Safety and Inspection Service (FSIS) announced today.

The ready-to-eat meat and poultry items were produced from June 19, 2024, to October 8, 2024. These products were shipped to other establishments and distributors nationwide then distributed to restaurants and institutions.

The problem was discovered after FSIS performed routine product testing of finished product containing RTE poultry products produced by BrucePac and confirmed those products positive for *Listeria monocytogenes*. Subsequent FSIS investigation identified BrucePac RTE chicken as the source of the *Listeria monocytogenes*. There have been no confirmed reports of adverse reactions due to consumption of these products. Anyone concerned about an illness should contact a healthcare provider.

Consumption of food contaminated with *L. monocytogenes* can cause listeriosis, a serious infection that primarily affects older adults, persons with weakened immune systems, and pregnant women and their newborns. Less commonly, persons outside these risk groups are affected. Listeriosis can cause fever, muscle aches, headache, stiff neck, confusion, loss of balance and convulsions sometimes preceded by diarrhea or other gastrointestinal symptoms. An invasive infection spreads beyond the gastrointestinal tract. In pregnant women, the infection can cause miscarriages, stillbirths, premature delivery or life-threatening infection of the newborn. In addition, serious and sometimes fatal infections in older adults and persons with weakened immune systems. Listeriosis is treated with antibiotics. Persons in the higher-risk categories who
