"3. Container Integrity Defects: All reworks due to and/or involving the presence of critical container integrity defects noted during the producer's end item inspection of finished product component lots and/or final assembly lots; noted during Government final lot end-item verification inspections; noted during Government or assembler receipt inspections of finished product component lots, or noted when the established action number/level (as cited in the contractor's QSP) is exceeded during the in-process assembly/subassembly operation must be approved by the applicable contracting officer. All containers exhibiting the same or other container integrity defects must be removed during a container rework and noted on the rework paperwork. Reworked lots will be inspected or re-inspected, as applicable, by the GQAR at the location of the rework using the next larger sample size in the case of tests and exams not assigned an AQL by a specification's sampling plan (for example, from 200 samples to 315, or if a second rework, from 315 samples to 500 samples), and using tightened inspection criteria in the case of tests and exams performed in accordance with a specification's sampling plan citing an AQL. Rework results must be included with other paperwork when the lot is presented for Government end item verification inspection.

NOTE: A contractor may submit a Standard Rework Procedure (SRP) to FTRC for approval and incorporation in the contractor's QSP."
